# PREFACE

**DON'T FORGET TO  
VISIT OUR WEBSITE  
AT  
WWW.WILEY.COM/CPA  
FOR SUPPLEMENTS  
AND UPDATES.**

**Passing the CPA exam upon your first attempt is possible!** The *Wiley CPAexcel Exam Review 2014 Study Guide July: Financial Accounting and Reporting* preparation materials provide you with the necessary materials (visit our website at [www.wiley.com/cpa](http://www.wiley.com/cpa) for more information). It's up to you to add the hard work and commitment. Together we can beat the pass rate on each section of about 50%. All Wiley CPAexcel products are continuously updated to provide you with the most comprehensive and complete knowledge base. Choose your products from the Wiley preparation materials and you can proceed confidently. You can select support materials that are exam-based and user-friendly. You can select products that will help you pass!

**Remaining current is one of the keys to examination success. Here is a list of what's new in this edition of the *Wiley CPAexcel Exam Review 2014 Study Guide July: Financial Accounting and Reporting* text.**

- The new AICPA Content Specification Outlines on Financial Accounting and Reporting for the computerized CPA Examination beginning in 2014
- AICPA questions released in 2014
- The new task-based simulations
- Complete coverage of standards, especially
  - The newest FASB accounting standards
  - International accounting standards
  - SEC reporting requirements

The objective of this work is to provide you with the knowledge to pass the Financial Accounting and Reporting portion of the Uniform Certified Public Accounting (CPA) Exam. The text is divided up into 14 areas of study called modules. Each module contains written text with discussion, examples, and demonstrations of the key exam concepts. Following each text area, actual American Institute of Certified Public Accountants (AICPA) unofficial questions and answers are presented to test your knowledge. We are indebted to the AICPA for permission to reproduce and adapt examination materials from past examinations. Author-constructed questions and simulations are provided for new areas or areas that require updating. All author-constructed questions and simulations are modeled after AICPA question formats. The multiple-choice questions are grouped into topical areas, giving candidates a chance to assess their areas of strength and weakness. Selection and inclusion of topical content is based upon current AICPA Content Specification Outlines. Only testable topics are presented. If the CPA exam does not test it, this text does not present it.

The CPA exam is one of the toughest exams you will ever take. It will not be easy. But if you follow our guidelines and focus on your goal, you will be thrilled with what you can accomplish.

Ray Whittington  
July 2014

## ABOUT THE AUTHOR

**Ray Whittington**, PhD, CPA, CMA, CIA, is the dean of the Driehaus College of Business at DePaul University. Prior to joining the faculty at DePaul, Professor Whittington was the Director of Accountancy at San Diego State University. From 1989 through 1991, he was the Director of Auditing Research for the American Institute of Certified Public Accountants (AICPA), and he previously was on the audit staff of KPMG. He previously served as a member of the Auditing Standards Board of the AICPA and as a member of the Accounting and Review Services Committee and the Board of Regents of the Institute of Internal Auditors. Professor Whittington has published numerous textbooks, articles, monographs, and continuing education courses.

## ABOUT THE CONTRIBUTOR

**Natalie T. Churyk**, PhD, CPA, is the Caterpillar Professor of Accountancy at Northern Illinois University. She teaches in the undergraduate and L.M.A.S. programs as well as developing and delivering continuing professional education in Northern Illinois University's CPA Review program. Professor Churyk has published in professional and academic journals. She serves on state and national committees relating to education and student initiatives and is a member of several editorial review boards. Professor Churyk is a coauthor of three textbooks: *Accounting and Auditing Research: Tools and Strategies*, *Mastering the Codification and eIFRS: A Case Approach*, and *Accounting and Auditing Research and Databases: Practitioner's Desk Reference*.

# INTRODUCTION

To maximize the efficiency of your review program, begin by studying (not merely reading) Chapters 1 through 5 of this volume. They have been carefully organized and written to provide you with important information to assist you in successfully completing the Financial Accounting and Reporting section of the CPA exam. Beyond providing a comprehensive outline to help you organize the material tested on the Financial Accounting and Reporting section of the exam, these chapters will assist you in organizing a study program to prepare for the Financial Accounting and Reporting portion. Self-discipline is essential.

<b>Chapter 1: Beginning Your CPA Review Program</b>	<b>3</b>
<b>Chapter 2: Examination Grading</b>	<b>17</b>
<b>Chapter 3: The Solutions Approach</b>	<b>19</b>
<b>Chapter 4: Taking the Examination</b>	<b>27</b>
<b>Chapter 5: Exam Content Overview</b>	<b>31</b>

# Chapter 1: Beginning Your CPA Review Program

## GENERAL COMMENTS ON THE EXAMINATION

The Uniform CPA Examination is delivered using computer-based testing (CBT). Computer-based testing has several advantages. You may take the exam one section at a time. As a result, your studies can be focused on that one section, improving your chances for success. In addition, you may take the exam on your schedule, eight months of the year, six days a week, and in the morning or in the afternoon.

Successful completion of the Uniform CPA Examination in Financial Accounting and Reporting is an attainable goal. Keep this point foremost in your mind as you study the first four chapters in this volume and develop your study plan.

### Purpose of the Examination<sup>1</sup>

The Uniform CPA Examination is designed to test the entry-level knowledge and skills necessary to protect the public interest. An entry-level CPA is defined as one who has fulfilled the applicable jurisdiction's educational requirements and has the knowledge and skills typically possessed by a person with up to two years of experience. These knowledge and skills were identified through a Practice Analysis performed in 2008, which served as a basis for the development of the content specifications for the exam beginning in 2014.

The CPA examination is one of many screening devices to assure the competence of those licensed to perform the attest function and to render professional accounting services. Other screening devices include educational requirements, ethics examinations, and work experience.

The examination appears to test the material covered in accounting programs of the better business schools. It also appears to be based upon the body of knowledge essential for the practice of public accounting and the auditor of a medium-sized client. Since the examination is primarily a textbook or academic examination, you should plan on taking it as soon as possible after completing your accounting education.

### Examination Content

Guidance concerning topical content of the Financial Accounting and Reporting section of the CPA exam can be found in a document prepared by the Board of Examiners of the AICPA entitled *Content and Skill Specifications for the Uniform CPA Exam*. We have included the content outlines for Financial Accounting and Reporting in Chapter 5. These outlines should be used as an indication of the topics' relative emphasis on the exam.

The Board's objective in preparing this detailed listing of topics tested on the exam is to help "in assuring the continuing validity and reliability of the Uniform CPA Examination." These outlines are an excellent source of guidance concerning the areas and the emphasis to be given each area on future exams.

The new Content and Skill Specification Outlines for the CPA examination, including the testing of International Financial Reporting Standards (IFRS), went into effect January 1, 2013. In addition, the AICPA adopted CBT-e, which is a new computer platform. The major change from your standpoint is that simulations are smaller in size and a larger number of these "task-based simulations" are included on the Auditing and Attestation, Financial Accounting and Reporting, and Regulation exams. In addition, all simulations that test writing skills have been moved to the Business Environment and Concepts exam.

New accounting and auditing pronouncements, including those in the governmental and not-for-profit areas, are tested in the testing window six months after the pronouncement's *effective* date. If early application is permitted, a pronouncement is tested six months after the *issuance* date; candidates are also responsible for the old pronouncement until it is superseded. The AICPA posts content changes regularly on its Internet site at [www.cpa-exam.org](http://www.cpa-exam.org).

### Nondisclosure and Computerization of Examination

Beginning May 1996, the Uniform CPA Examination became nondisclosed. For each exam section, candidates are required to agree to a *Statement of Confidentiality*, which states that they will not divulge the nature and content of any

---

<sup>1</sup>More information may be obtained from the AICPA's *Uniform CPA Examination Candidate Bulletin*, which you can find on the AICPA's website at [www.cpa-exam.org](http://www.cpa-exam.org).

exam question. The CPA exam is computer-based, and candidates take the exam at Prometric sites in the 55 jurisdictions in which the exam is offered. The CPA exam is offered continually during the testing windows shown below.

Testing Window (Exam Available)	January through February	April through May	July through August	October through November
AICPA Review and Update (Exam Unavailable)	March	June	September	December

One or more exam sections may be taken during any exam window, and the sections may be taken in any desired order. **However, no candidate will be allowed to sit for the same section more than once during any given testing window.** In addition, a candidate must pass all four sections of the CPA exam within a “rolling” eighteen-month period, which begins on the date he or she passes a section. In other words, you must pass the other three sections of the exam within eighteen months of when you pass the first section. If you do not pass all sections within the eighteen-month period, credit for any section(s) passed outside the eighteen-month period will expire and the section(s) must be retaken.

## Types of Questions

The computer-based Uniform CPA Examination consists of two basic question formats.

1. Multiple-Choice—questions requiring the selection of one of four responses to a short scenario.
2. Task-Based Simulations—short case studies that are used to assess knowledge and skills in a context approximating that found on the job through the use of realistic scenarios and tasks, and access to normally available and familiar resources.

The multiple-choice questions are much like the ones that have constituted a majority of the CPA examination for years. **And the good news is that these types of questions constitute 60% of the Financial Accounting and Reporting section.**

## Process for Sitting for the Examination

While there are some variations in the process from state to state, the basic process for sitting for the CPA examination may be described as follows:

1. Apply to take the examination (request, complete, and submit an application).
2. Payment of examination fees.
3. Review the tutorial and sample tests.
4. Receive your Notice to Schedule.
5. Schedule your examination.
6. Take your examination(s).
7. Receive your Score Report(s).

## Applying to Take the Examination

The right to practice public accounting as a CPA is governed by individual state statutes. While some rules regarding the practice of public accounting vary from jurisdiction to jurisdiction, all State Boards of Accountancy use the Uniform CPA Examination and AICPA advisory grading service as one of the requirements to practice public accounting. The State Boards of Accountancy determine the requirements to sit for the exam (e.g., education requirements and fees). For comparisons of requirements for various state boards and those policies that are uniform across jurisdictions, you should refer to the website of the National Association of State Boards of Accountancy (NASBA) at [www.nasba.org](http://www.nasba.org).

A frequent problem candidates encounter is failure to apply by the deadline. **Apply to sit for the examination early. Also, you should use extreme care in filling out the application and mailing required materials to your State Board of Accountancy.** If possible, have a friend review your completed application before mailing with check and other documentation. The name on your application must appear exactly the same as it appears on the identification you plan to use at the testing center. Candidates miss a particular CPA examination window simply because of minor technical details that were overlooked (checks not signed, items not enclosed, question not answered on application, etc.). **Because of the very high volume of applications received in the more populous states, the administrative staff does not have time to call or write to correct minor details and will simply reject your application.**

The NASBA website has links to the registration information for all 55 jurisdictions. It is possible for candidates to sit for the examination at a Prometric site in any state or territory. Candidates desiring to do so should refer to the registration information for the applicable State Board of Accountancy.

## International Applicants

International administration of the CPA Exam is currently offered in Brazil, Japan, Bahrain, Kuwait, Lebanon, and the United Arab Emirates. If you live in one of these testing locations, or other select countries, you may be able to take the Exam without traveling to the U.S. The Exam is only offered in English, and is the same computerized test as the one administered in the U.S. You are required to meet the same eligibility requirements and complete the same licensure requirements as your U.S. counterparts.

Applicants from countries other than the U.S. must follow the same basic steps as U.S. applicants. This means they must select the jurisdiction in which they wish to qualify and file an application with the board of accountancy (or its designated agent) in that jurisdiction. Any special instructions for candidates who have completed their education outside the U.S. are included in the board of accountancy requirements. For more information on the international administration of the CPA Examination, visit the International section of the NASBA website.

## Obtaining the Notice to Schedule

Once your application has been processed and you have paid all fees, you will receive a Notice to Schedule (NTS) from NASBA. The NTS will list the section(s) of the examination that you are approved to take. When you receive the NTS, verify that all information is correct. **Be certain that the name appearing on the NTS matches EXACTLY the name on the identification documents that you will use during check-in at the testing center. If the information is incorrect or the name does not match, immediately contact your board of accountancy or its designated agent to request a correction. You must bring your NTS with you to the examination.**

## Exam Scheduling

Once you have been cleared to take the exam by the applicable state board, you will receive by mail a Notice to Schedule (NTS) and may then schedule to sit for one or more sections of the exam.

You have the following two options for scheduling your examination:

1. **Visit [www.prometric.com/cpa](http://www.prometric.com/cpa) on the Internet**

This is the easiest and quickest way to schedule an examination appointment (or cancel and reschedule an appointment, if necessary). Simply go to the website, select “schedule your test,” and follow the directions. It is advised that you print and keep for your records the confirmation number for your appointment.

2. **Call 800-580-9648 (Candidate Services Call Center)**

Before you call, you must have your NTS in front of you, and have in mind several times, dates, and locations that would work for you. You will not receive written confirmation of your appointment. Be sure to write down the date, time, location, and confirmation number for each of your appointments.

You should also be aware that if you have to cancel or reschedule your appointment, you may be subject to a cancellation/rescheduling fee. The AICPA’s *Uniform CPA Examination Candidate Bulletin* lists the rescheduling and cancellation fees.

**To assure that you get your desired location and time period, it is imperative that you schedule early. To get your first choice of dates, you are advised to schedule at least 45 days in advance. You will not be scheduled for an exam fewer than 5 days before testing.**

## ATTRIBUTES OF EXAMINATION SUCCESS

Your primary objective in preparing for the Financial Accounting and Reporting section is to pass. Other objectives such as learning new and reviewing old material should be considered secondary. The six attributes of examination success discussed below are **essential**. You should study the attributes and work toward achieving/developing each of them **before** taking the examination.

1. **Knowledge of Material**

Two points are relevant to “knowledge of material” as an attribute of examination success. **First**, there is a distinct difference between being familiar with material and knowing the material. Frequently candidates confuse familiarity with knowledge. Can you remember when you just could not answer an examination question or did

poorly on an examination, but maintained to yourself or your instructor that you knew the material? You probably were only familiar with the material. On the CPA examination, familiarity is insufficient; you must know the material. Remember the exam will test your ability to analyze data, make judgments, communicate, perform research, and demonstrate understanding of the material. For example, you may be familiar with the concepts in accounting for leases (SFAS 13), but can you compute the present value of an annuity due under a lease agreement and record entries for the lessee and lessor? Once again, a major concern must be to know the material rather than just being familiar with it. Knowledgeable discussion of the material is required on the CPA examination. **Second**, the Financial Accounting and Reporting exam tests a literally overwhelming amount of material at a rigorous level. From an undergraduate point of view, the CPA examination in Financial Accounting and Reporting includes material from the following courses:

Intermediate Financial (usually two semesters)  
Advanced Financial

**Furthermore**, as noted earlier, the CPA exam will test new material, sometimes as early as six months after issuance. In other words, you are not only responsible for material in the above courses, but also for all new developments in each of these areas.

This text contains outlines of accounting topics from FASB pronouncements, financial accounting courses, etc. Return to the original material (e.g., FASB, your accounting textbooks, etc.) only if the outlines do not reinforce material you already know.

## 2. Commitment to Exam Preparation

Your preparation for the CPA exam should begin at least two months prior to the date you plan to schedule your seating for an exam section. If you plan to take more than one section, you should start earlier. Over the course of your preparation, you will experience many peaks and valleys. There will be days when you feel completely prepared and there will also be days when you feel totally overwhelmed. This is not unusual and, in fact, should be expected.

The CPA exam is a very difficult and challenging exam. How many times in your college career did you study months for an exam? Probably not too many. Therefore, candidates need to remain focused on the objective—succeeding on the CPA exam.

Develop a personal study plan so that you are reviewing material daily. Of course, you should schedule an occasional study break to help you relax, but don't schedule too many breaks. Candidates who dedicate themselves to studying have a much greater chance of going through this process only one time. On the other hand, a lack of focus and piecemeal preparation will only extend the process over a number of exam sittings.

## 3. Solutions Approach

The solutions approach is a systematic approach to solving the questions and simulations found on the CPA examination. Many candidates know the material fairly well when they sit for the CPA exam, but they do not know how to take the examination. Candidates generally neither work nor answer problems efficiently in terms of time or grades. The solutions approach permits you to avoid drawing “blanks” on CPA exam problems; using the solutions approach coupled with grading insights (see below) allows you to pick up a sizable number of points on test material with which you are not familiar. Chapter 3 outlines the solutions approach for multiple-choice questions and task-based simulations.

## 4. Grading Insights

Your score on each section of the exam is determined by the sum of points assigned to individual questions and simulations. Thus, you must attempt to maximize your points on each individual item.

The multiple-choice questions within each section are organized into three groups which are referred to as testlets. Each multiple-choice testlet is comprised of approximately 30 multiple-choice questions. The multiple-choice testlets vary in overall difficulty. A testlet is labeled either “medium difficult” or “difficult” based on its makeup. A “difficult” testlet has a higher percentage of hard questions than a “medium difficult” testlet. Every candidate's first multiple-choice testlet in each section will be a “medium difficult” testlet. If a candidate scores well on the first testlet, he or she will receive a “difficult” second testlet. Candidates that do not perform well on the first testlet receive a second “medium difficult” testlet. Because the scoring procedure takes the difficulty of the testlet into account, candidates are scored fairly regardless of the type of testlets they receive.

Each multiple-choice testlet contains “operational” and “pretest” questions. The operational questions are the only ones that are used to determine your score. Pretest questions are not scored; they are being tested for future use as operational questions. However, you have no way of knowing which questions are operational and which questions are pretest questions. Therefore, you must approach each question as if it will be used to determine your grade.

Task-based simulations include more extensive scenarios and requirements. For example, the requirements may involve calculations, spreadsheet completion, journal entries, or research. The points assigned to the requirements will vary according to their difficulty. The task-based simulations make use of a number of commonly used tools such as spreadsheets and electronic research databases. Therefore, you need to become proficient in the use of these tools to maximize your score on the simulations.

CPA Exam scores are reported on a scale from 0 to 99. The total score is not a percent correct score. It is a combination of scores from the multiple-choice and simulation portions of the exam considering the relative difficulty of the items. A total score of 75 is required to pass each section.

The AICPA includes a tutorial and sample examinations on its website that allow you to get experience with the use of the actual computer tools used on the CPA exam. Also, more experience with computer testing can be obtained by using *Wiley CPAexcel Exam Review Test Bank*.

#### 5. Examination Strategy

Prior to sitting for the examination, it is important to develop an examination strategy (i.e., an approach to working efficiently throughout the exam.). Your ability to cope successfully with the 4 hours of examination in Financial Accounting and Reporting can be improved by

- a. Recognizing the importance and usefulness of an examination strategy
- b. Using Chapter 4, Taking the Examination, and previous examination experience to develop a “personal strategy” for the exam
- c. Testing your “personal strategy” on example examination questions under conditions similar to those at the test centers (using similar tools and databases and with a time limit)

#### 6. Examination Confidence

You need confidence to endure the physical and mental demands of 4 hours of problem solving under tremendous pressure. Examination confidence results from proper preparation for the exam, which includes mastering the first five attributes of examination success. Examination confidence is necessary to enable you to overcome the initial frustration with problems for which you may not be specifically prepared.

This study manual, when properly used, contributes to your examination confidence. Build confidence by completing the questions contained herein.

### Common Candidate Mistakes

The CPA Exam is a formidable hurdle in your accounting career. With a pass rate of about 40% on each section, the level of difficulty is obvious. The good news, though, is that about 75% of all candidates (first-time and reexam) sitting for each examination eventually pass. The authors believe that the first-time pass rate could be higher if candidates would be more careful. Seven common mistakes that many candidates make are

1. Failure to understand the exam question requirements
2. Misunderstanding the supporting text of the problem
3. Lack of knowledge of material tested, especially recently issued pronouncements
4. Failure to develop proficiency with computer-based testing and practice tools such as electronic research databases and spreadsheets
5. Inability to apply the solutions approach
6. Lack of an exam strategy (e.g., allocation of time)
7. Sloppiness and logical errors

These mistakes are not mutually exclusive. Candidates may commit one or more of the above items. Remind yourself that when you decrease the number of common mistakes, you increase your chances of successfully becoming a CPA. Take the time to read carefully the exam question requirements. Do not jump into a quick start, only to later find out that you didn't understand what information the examiners were asking for. Read slowly and carefully. Take time to recall your knowledge. Respond to the question asked. Apply an exam strategy such as allocating your time among all question formats. Do not spend too much time on the multiple-choice testlets, leaving no time to spend on preparing your simulation responses. Answer questions quickly but precisely, avoid common mistakes, and increase your score.

### PURPOSE AND ORGANIZATION OF THIS REVIEW TEXTBOOK

This book is designed to help you prepare adequately for the Financial Accounting and Reporting examination. There is no easy way to prepare for the successful completion of the CPA Examination; however, through the use of this manual, your approach will be systematic and logical.

The objective of this book is to provide study materials supportive to CPA candidates. While no guarantees are made concerning the success of those using this text, this book promotes efficient preparation by

1. Explaining how to **maximize your score** through analysis of examination grading and illustration of the solutions approach.
2. **Defining areas tested** through the use of the content specification outlines. Note that predictions of future exams are not made. You should prepare yourself for all possible topics rather than gambling on the appearance of certain questions.
3. **Organizing your study program** by comprehensively outlining all of the subject matter tested on the examination in 14 easy-to-use study modules. Each study module is a manageable task which facilitates your exam preparation. Turn to Chapter 5 and peruse the contents to get a feel for the organization of this book.
4. **Providing CPA candidates with previous examination problems** organized by topic (e.g., consolidations, inventory, etc.) Questions have also been developed for new areas and in simulation format.
5. **Explaining the AICPA unofficial answers** to the examination questions included in this text. The AICPA publishes unofficial answers for all questions from exams administered prior to 1996 and for any released questions from exams administered on or after May 1996. However, no explanation is made of the approach that should have been applied to the examination questions to obtain these unofficial answers.

As you read the next few paragraphs which describe the contents of this book, flip through the chapters to gain a general familiarity with the book's organization and contents. Chapters 2, 3, and 4 are to help you maximize your score.

Chapter 2	Examination Grading
Chapter 3	The Solutions Approach
Chapter 4	Taking the Examination

Chapters 2, 3, and 4 contain material that should be kept in mind throughout your study program. Refer back to them frequently. Reread them for a final time just before you sit for the exam.

Chapter 5, Exam Content Overview, outlines and discusses the coverage of the Financial Accounting and Reporting section of the CPA examination. It also contains the AICPA Content Specification Outlines for all the Financial Accounting and Reporting topics tested in this section of the exam.

The Financial Accounting and Reporting Modules contain

1. AICPA Content Specification Outlines of the material tested on the Financial Accounting and Reporting section of the exam
2. Multiple-choice questions
3. Task-based simulations
4. AICPA unofficial answers with the author's explanations for the multiple-choice questions
5. Author's answers to task-based simulations

Also included at the end of this text is a complete Sample Financial Accounting and Reporting CPA Examination. The sample exam is included to enable candidates to gain experience in taking a "realistic" exam. While studying the modules, the candidate can become accustomed to concentrating on fairly narrow topics. By working through the sample examination near the end of their study programs, candidates will be better prepared for taking the actual examination. Because some task-based simulations require the use of research materials, it is useful to have the appropriate electronic research database (FASB Financial Accounting Research System or a printed copy of professional standards to complete the sample examination). **Remember that this research material will not be available to answer the multiple-choice questions.**

## Other Textbooks

This text is a comprehensive compilation of study guides and outlines; it should not be necessary to supplement them with accounting textbooks and other materials for most topics. You probably already have some of these texts or earlier editions of them. In such a case, you must make the decision whether to replace them and trade familiarity (including notes therein, etc.), with the cost and inconvenience of obtaining the newer texts containing a more updated presentation.

Before spending time and money acquiring new texts, begin your study program with *Wiley CPAexcel Exam Review 2014 Study Guide July: Financial Accounting and Reporting* to determine your need for supplemental texts.

## Ordering Other Textual Materials

You probably already have intermediate and advanced texts for financial accounting and reporting. If you cannot order desired texts through a local bookstore, write the publisher directly.

If you want to order AICPA materials, locate an AICPA educator member to order your materials, since educators are entitled to a discount and may place website or telephone orders.

AICPA (CPA2Biz)	
Telephone:	888-777-7077
Website:	www.CPA2Biz.com

A variety of supplemental CPA products are available from John Wiley & Sons, Inc. By using a variety of learning techniques, such as software, computer-based learning, and audio CDs, the candidate is more likely to remain focused during the study process and to retain information for a longer period of time. Visit our website at [www.wiley.com/cpa](http://www.wiley.com/cpa) for other products, supplements, and updates.

## Working CPA Questions

The AICPA Content Outlines, study outlines, etc., will be used to acquire and assimilate the knowledge tested on the examination. This, however, should be only **one-half** of your preparation program. The other half should be spent practicing how to work questions and problems. Some candidates probably spend over 90% of their time reviewing material tested on the CPA exam. Much more time should be allocated to working questions and problems **under exam conditions**. Working examination questions and problems serves two functions. First, it helps you develop a solutions approach as well as solutions that will maximize your score. Second, it provides the best test of your knowledge of the material. At a minimum, candidates should work one of the more complex and difficult problems and simulations (e.g., pensions, statement of cash flows, consolidated financial statement worksheet) in each area or module.

The multiple-choice questions and answers can be used in many ways. First, they may be used as a diagnostic evaluation of your knowledge. For example, before beginning to review deferred taxes you may wish to answer 10 to 15 multiple-choice questions to determine your ability to answer CPA examination questions on deferred taxes. The apparent difficulty of the questions and the correctness of your answers will allow you to determine the necessary breadth and depth of your review. Additionally, exposure to examination questions prior to review and study of the material should provide motivation. You will develop a feel for your level of proficiency and an understanding of the scope and difficulty of past examination questions. Moreover, your review materials will explain concepts encountered in the diagnostic multiple-choice questions.

Second, the multiple-choice questions can be used as a poststudy or postreview evaluation. You should attempt to understand all concepts mentioned (even in incorrect answers) as you answer the questions. Refer to the explanation of the answer for discussion of the alternatives even though you selected the correct response. Thus, you should read the explanation of the unofficial answer unless you completely understand the question and all of the alternative answers.

Third, you may wish to use the multiple-choice questions as a primary study vehicle. This is probably the quickest but least thorough approach in preparing for the exam. Make a sincere effort to understand the question and to select the correct response before referring to the unofficial answer and explanation. In many cases, the explanations will appear inadequate because of your unfamiliarity with the topic. Always refer back to an appropriate study source, such as the outlines and text in this volume, your accounting textbooks, FASB pronouncements, etc.

The multiple-choice questions outnumber the task-based simulations by greater than 10 to 1 in this book. This is similar to the content of the new computer-based examination. One problem with so many multiple-choice questions is that you may overemphasize them. Candidates generally prefer to work multiple-choice questions because they are

1. Shorter and less time-consuming
2. Solvable with less effort
3. Less frustrating than task-based simulations

Another problem with the large number of multiple-choice questions is that you may tend to become overly familiar with the questions. The result may be that you begin reading the facts and assumptions of previously studied questions into the questions on your examination. Guard against this potential problem by reading each multiple-choice question with **extra** care.

Beginning with the introduction of the computer-based examination, the AICPA began testing with simulations. Simulations released by the AICPA, prepared by the authors, and revised from prior CPA exam problems are incorporated in the modules to which they pertain. (See the listing of question material at the beginning of Chapter 5.)

The questions and solutions in this volume provide you with an opportunity to diagnose and correct any exam-taking weaknesses prior to sitting for the examination. Continually analyze your incorrect solutions to determine the cause of the error(s) during your preparation for the exam. Treat each incorrect solution as a mistake that will not be repeated (especially on the examination). Also attempt to generalize your weaknesses so that you may change, reinforce, or develop new approaches to exam preparation and exam taking.

After you have finished reviewing for the Financial Accounting and Reporting section of the exam, work the complete sample exam provided in Appendix B.

## SELF-STUDY PROGRAM

CPA candidates generally find it difficult to organize and to complete their own self-study programs. A major problem is determining **what** and **how** to study. Another major problem is developing the self-discipline to stick to a study program. Relatedly, it is often difficult for CPA candidates to determine how much to study (i.e., determining when they are sufficiently prepared).

The following suggestions will assist you in developing a **systematic, comprehensive, and successful** self-study program to help you complete the Financial Accounting and Reporting exam.

Remember that these are only suggestions. You should modify them to suit your personality, available study time, and other constraints. Some of the suggestions may appear trivial, but CPA candidates generally need all the assistance they can get to systemize their study programs.

### Study Facilities and Available Time

Locate study facilities that will be conducive to concentrated study. Factors that you should consider include

1. Noise distraction
2. Interruptions
3. Lighting
4. Availability (e.g., a local library is not available at 5:00 A.M.)
5. Accessibility (e.g., your kitchen table vs. your local library)
6. Desk or table space

You will probably find different study facilities optimal for different times (e.g., your kitchen table during early morning hours and local libraries during early evening hours).

Next review your personal and professional commitments from now until the exam to determine regularly available study time. Formalize a schedule to which you can reasonably commit yourself. At the end of this chapter, you will find a detailed approach to managing your time available for the exam preparation program.

### Self-Evaluation

The *Wiley CPAexcel Exam Review 2014 Study Guide July: Financial Accounting and Reporting* is partitioned into 14 topics or modules. Since each module is clearly defined and should be studied separately, you have the task of preparing for the Financial Accounting and Reporting section of the CPA exam by tackling 14 manageable tasks. Partitioning the overall project into 14 modules makes preparation psychologically easier, since you sense yourself completing one small step at a time rather than seemingly never completing one or a few large steps.

By completing the following “Preliminary Estimate of Your Knowledge of Subject” inventory, organized by the 14 modules in this program, you will tabulate your strong and weak areas at the beginning of your study program. This will help you budget your limited study time. Note that you should begin studying the material in each module by answering up to 1/4 of the total multiple-choice questions covering that module’s topics (see Step 4.A. in the next section). This “mini-exam” should constitute a diagnostic evaluation as to the amount of review and study you need.

- [18 hrs.] C. Work the remaining multiple-choice questions. Study the explanations of the multiple-choice questions you missed or had trouble answering.  
Time estimate: 3 minutes to answer each question and 2 minutes to study the answer explanation of each question missed.
- [8 hrs.] D. Work the task-based simulations.  
Time estimate: 15 minutes for each problem and 10 minutes to study the answer explanations for each item missed.
- [5 hrs.] E. Under simulated exam conditions, work the questions and simulations in Appendices C and D.  
Time estimate: 5 hrs.
- [7 hrs.] F. Work through the sample CPA examination presented in Appendix B. The exam should be taken in one sitting. Take the examination under simulated exam conditions (i.e., in a strange place with other people present [e.g., your local municipal library or a computer lab]). Apply your solutions approach to each problem and your exam strategy to the overall exam. You should limit yourself to the time that you will have when taking the actual CPA exam section (4 hours for the Financial Accounting and Reporting section). Spend time afterwards grading your work and reviewing your effort.  
Time estimate: 6–7 hours to take the exam and review it later.
5. The total suggested time of 80 hours is only an average. Allocation of time will vary candidate by candidate. Time requirements vary due to the diverse backgrounds and abilities of CPA candidates.  
Allocate your time so you gain the most proficiency in the least time. Remember that while 80 hours will be required, you should break the overall project down into 14 more manageable tasks. Do not study more than one module during each study session.

## Using Notecards

Below are one candidate's notecards on financial accounting and reporting topics which illustrate how key definitions, formulas, lists, etc. can be summarized on index cards for quick review. Since candidates can take these anywhere they go, they are a very efficient review tool.

<u>Business Combinations</u>
<ul style="list-style-type: none"> <li>• Must use purchase method</li> <li>• FMV, differential may have goodwill CNI from date of combination</li> </ul>

<u>Accounting Changes</u>	<u>Prospective</u>	<u>Restate</u>
	<u>treat.</u>	<u>ES</u>
$\Delta$ in estimate	Y	N
$\Delta$ in Principle	N	Y
$\Delta$ in reporting entity	N	Y

Prepared by Greg Graber, CPA, former student, Northern Illinois University

## Level of Proficiency Required

What level of proficiency must you develop with respect to each of the topics to pass the exam? You should work toward a minimum correct rate on the multiple-choice questions of 80%. Working towards these correct rates or higher ones for Financial Accounting and Reporting will allow for a margin.

Warning: Disproportional study time devoted to multiple-choice (relative to simulations) can be disastrous on the exam. You should work a substantial number of task-based simulations under exam conditions, even though multiple-choice questions are easier to work and are used to gauge your proficiency. The authors believe that practicing task-based simulations will also improve your proficiency on the multiple-choice questions.

## Multiple-Choice Feedback

One of the benefits of working through previous exam questions is that it helps you to identify your weak areas. Once you have graded your answers, your strong areas and weak areas should be clearly evident. Yet, the important point here is that you should not stop at a simple percentage evaluation. The percentage only provides general feedback about your knowledge of the material contained within that particular module. The percentage **does not** give you any specific feedback regarding the concepts which were tested. In order to get this feedback, you should look at the questions missed on an individual basis because this will help you gain a better understanding of **why** you missed the question.

This feedback process has been facilitated by the fact that within each module where the multiple-choice answer key appears, two blank lines have been inserted next to the multiple-choice answers. As you grade the multiple-choice questions, mark those questions which you have missed. However, instead of just marking the questions right and wrong, you should now focus on marking the questions in a manner which identifies **why** you missed the question. As an example, a candidate could mark the questions in the following manner: ✓ for math mistakes, x for conceptual mistakes, and ? for areas which the candidate was unfamiliar with. The candidate should then correct these mistakes by reworking through the marked questions.

The objective of this marking technique is to help you identify your weak areas and thus, the concepts which you should be focusing on. While it is still important for you to get between 75% and 80% correct when working multiple-choice questions, it is more important for you to understand the concepts. This understanding applies to both the questions answered correctly and those answered incorrectly. Remember, questions on the CPA exam will be different from the questions in the book, however, the concepts will be the same. Therefore, your preparation should focus on understanding concepts, not just getting the correct answer.

## Conditional Candidates

If you have received conditional status on the examination, you must concentrate on the remaining section(s). Unfortunately, many candidates do not study after conditioning the exam, relying on luck to get them through the remaining section(s). Conditional candidates will find that material contained in Chapters 1–5 and the information contained in the appropriate modules will benefit them in preparing for the remaining section(s) of the examination.

## PLANNING FOR THE EXAMINATION

### Overall Strategy

An overriding concern should be an orderly, systematic approach toward both your preparation program and your examination strategy. A major objective should be to avoid any surprises or anything else that would rattle you during the examination. In other words, you want to be in complete control as much as possible. Control is of paramount importance from both positive and negative viewpoints. The presence of control on your part will add to your confidence and your ability to prepare for and take the exam. Moreover, the presence of control will make your preparation program more enjoyable (or at least less distasteful). On the other hand, a lack of organization will result in inefficiency in preparing and taking the examination, with a highly predictable outcome. Likewise, distractions during the examination (e.g., inadequate lodging, long drive) are generally disastrous.

In summary, establishing a systematic, orderly approach to taking the examination is of paramount importance. Follow these six steps:

1. Develop an overall strategy at the beginning of your preparation program (see below)
2. Supplement your overall strategy with outlines of material tested on the Financial Accounting and Reporting exam (see Chapter 5)
3. Supplement your overall strategy with an explicitly stated set of problem-solving procedures—the solutions approach
4. Supplement your overall strategy with an explicitly stated approach to each examination session (see Chapter 4)
5. Evaluate your preparation progress on a regular basis and prepare lists of things “to do” (see Weekly Review of Preparation Program Progress later in this section).
6. RELAX: You can pass the exam. About 40 to 45% of the candidates taking a section of the CPA examination pass. But if you take out the individuals that did not adequately prepare, these percentages increase substantially. You will be one of those who pass if you complete an efficient preparation program and execute well (i.e., solutions approach and exam strategy) while taking the exam.

The following outline is designed to provide you with a general framework of the tasks before you. You should tailor the outline to your needs by adding specific items and comments.

#### A. Preparation Program (refer to Self-Study Program discussed previously)

1. Obtain and organize study materials
2. Locate facilities conducive for studying and block out study time
3. Develop your solutions approach (including solving task-based simulations as well as multiple-choice questions)

4. Prepare an examination strategy
5. Study the material tested recently and prepare answers to actual exam questions on these topics under examination conditions
6. Periodically evaluate your progress

#### B. Physical Arrangements

1. Apply to and obtain acceptance from your state board
2. Schedule your testing location and time

#### C. Taking the Examination (covered in detail in Chapter 4)

1. Become familiar with location of the test center and procedures
2. Implement examination strategies and the solutions approach

### Weekly Review of Preparation Program Progress

The following pages contain a hypothetical weekly review of program progress. You should prepare a similar progress chart. This procedure, which takes only about 5 minutes per week, will help you proceed through a more efficient, complete preparation program.

Make notes of materials and topics

1. That you have studied
2. That you have completed
3. That need additional study

Weeks to go	Comments on progress, "to do" items, etc.
12	<ol style="list-style-type: none"> <li>1) Read <i>Basic Theory and Financial Reporting Module</i></li> <li>2) Made notecards</li> <li>3) Worked the MC Questions and Task-based simulations, on a sample basis</li> <li>4) Need to work Task-based simulations using the solutions approach</li> </ol>
11	<ol style="list-style-type: none"> <li>1) Read <i>Fixed Assets and Stockholders' Equity Modules</i></li> <li>2) Made notecards</li> <li>3) Read the SFAS and APB outlines that correspond to these topics</li> <li>4) Briefly looked over the MC for both modules</li> </ol>

0	<ol style="list-style-type: none"> <li>1) Tried to relax and review topics</li> </ol>

### Time Management of Your Preparation

As you begin your CPA exam preparation, you obviously realize that there is a large amount of material to cover over the course of the next two to three months. Therefore, it is very important for you to organize your calendar, and maybe even your daily routine, so that you can allocate sufficient time to studying. An organized approach to your preparation is much more effective than a final week cram session. An organized approach also builds up the confidence necessary to succeed on the CPA exam.

An approach which we have already suggested is to develop weekly “to do” lists. This technique helps you to establish intermediate objectives and goals as you progress through your study plan. You can then focus your efforts on small tasks and not feel overwhelmed by the entire process. And as you accomplish these tasks you will see yourself moving one step closer to realizing the overall goal, succeeding on the CPA exam.

Note, however, that the underlying assumption of this approach is that you have found the time during the week to study and thus accomplish the different tasks. Although this is an obvious step, it is still a very important step. Your exam preparation should be of a continuous nature and not one that jumps around the calendar. Therefore, you should strive to find available study time within your daily schedule, which can be utilized on a consistent basis. For example, everyone has certain hours of the day which are already committed for activities such as jobs, classes, and, of course, sleep. There is also going to be the time you spend relaxing because CPA candidates should try to maintain some balance in their lives. Sometimes too much studying can be counterproductive. But there will be some time available to you for studying and working through the questions. Block off this available time and use it only for exam prep. Use the time to accomplish your weekly tasks and to keep yourself committed to the process. After a while your preparation will develop into a habit and the preparation will not seem as overwhelming as it once did.

**NOW IS THE TIME TO MAKE YOUR COMMITMENT**

## Chapter 2: Examination Grading

All State Boards of Accountancy use the AICPA advisory grading service. As your grade is to be determined by this process, it is very important that you understand the AICPA grading process and its **implications for your preparation program and for the solution techniques you will use during the examination.**

The AICPA has a full-time staff of CPA examination personnel under the supervision of the AICPA Board of Examiners, which has the responsibility for the CPA examination.

This chapter contains a description of the AICPA grading process, including a determination of the passing standard.

### Setting the Passing Standard of the Uniform CPA Examination

As a part of the development of any licensing process, the passing score on the licensing examination must be established. This passing score must be set to distinguish candidates who are qualified to practice from those who are not. After conducting a number of studies of methods to determine passing scores, the Board of Examiners decided to use candidate-centered methods to set passing scores for the computer-based Uniform CPA Examination. In candidate-centered methods, the focus is on looking at actual candidate answers and making judgments about which sets of answers represent the answers of qualified entry-level CPAs. To make these determinations, the AICPA convened panels of CPAs to examine candidate responses and set the passing scores for multiple-choice questions and simulations. The data from these panels provide the basis for the development of question and problem points (relative weightings). **As with the previous pencil-and-paper exam, a passing score on the computer-based examination is 75%.**

### Grading the Examination

All of the responses on the computer-based Financial Accounting and Reporting CPA exam are objective in nature. Obviously, this includes the responses to the multiple-choice questions. However, it also includes the responses to the requirements of simulations. Requirements of simulations include responses involving pull-down selection, entries into spreadsheets, form completion, graphical responses, and drag and drop. All of these responses are computer graded. Therefore, no consideration is given to any comments or explanations outside of the structured responses.

### Multiple-Choice Grading

Financial Accounting and Reporting exams contain three multiple-choice testlets of 30 questions each. A few of these questions will be pretest questions that will not be considered in the candidate's score, but there is no way of determining which are the pretest questions. Also, the possible score on a question and on a testlet will vary based on the difficulty of the questions. The makeup of the second testlet provided to a candidate will be determined based upon the candidate's performance on the first testlet, and the makeup of the third testlet will be determined by the candidate's performance on the first two testlets. Therefore, you should not be discouraged if you get a difficult set of questions; it may merely mean that you performed very well on the previous testlet(s). Also, you will receive more raw points for hard and medium questions than for easy questions.

Your grade on the multiple-choice questions is based on the total number of correct answers weighted by their difficulty (and with no penalty for incorrect answers). As mentioned earlier, several of the multiple-choice questions are pretest items that are not included in the candidate's grade.

### Task-Based Simulation Grading

As indicated previously, all of the responses to the simulations are computer graded. They will typically involve checking a box, selecting a response from a list, or dragging and dropping an answer.

### **Requesting a Score Review**

For an additional fee, you may request a score review. A score review is a verification of your score making certain that the approved answer key was used. Because the AICPA grades your exam at least twice as a part of its normal process, it is unlikely that you will get an adjustment to your score. You should contact the applicable board of accountancy to request a score review.

**NOW IS THE TIME TO MAKE YOUR COMMITMENT**

## Chapter 3: The Solutions Approach

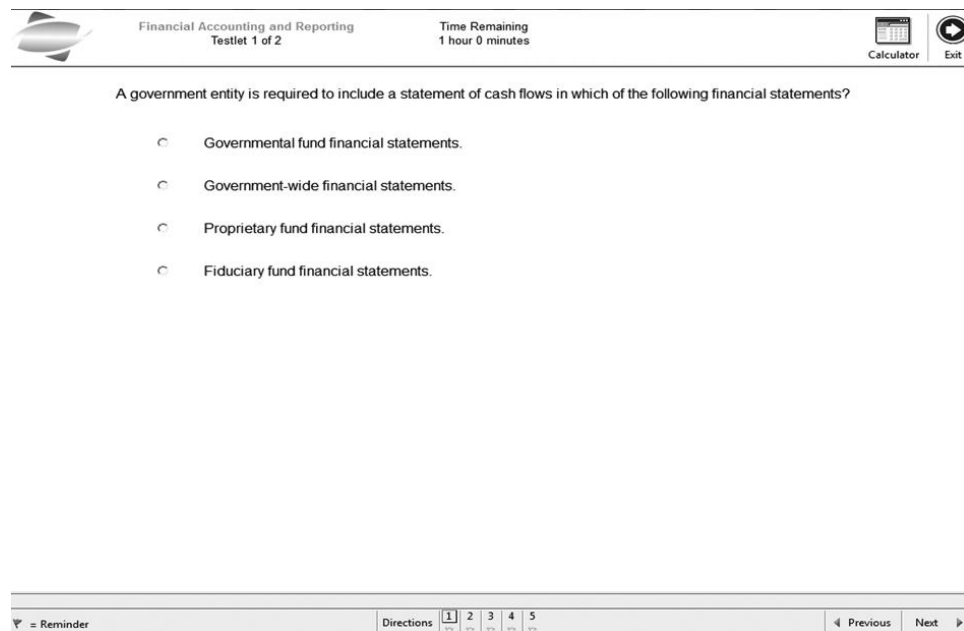

The **solutions approach** is a systematic problem-solving methodology. The purpose is to assure efficient, complete solutions to CPA exam questions, some of which are complex and confusing relative to most undergraduate accounting questions. This is especially true with regard to the new Simulation type problems. Unfortunately, there appears to be a widespread lack of emphasis on problem-solving techniques in accounting courses. Most accounting books and courses merely provide solutions to specific types of problems. Memorization of these solutions for examinations and preparation of homework problems from examples is “cookbooking.” “Cookbooking” is perhaps a necessary step in the learning process, but it is certainly not sufficient training for the complexities of the business world. Professional accountants need to be adaptive to a rapidly changing, complex environment. For example, CPAs have been called on to interpret and issue reports on new concepts such as price controls, energy allocations, and new taxes. These CPAs rely on their problem-solving expertise to understand these problems and to formulate solutions to them.

The steps outlined below are only one of many possible series of solution steps. Admittedly, the procedures suggested are **very** structured; thus, you should adapt the suggestions to your needs. You may find that some steps are occasionally unnecessary, or that certain additional procedures increase your problem-solving efficiency. Whatever the case, substantial time should be allocated to developing an efficient solutions approach before taking the examination. You should develop your solutions approach by working questions and problems.

Note that the steps below relate to any specific question or simulation; overall examination strategies are discussed in Chapter 4. Remember, the Financial Accounting and Reporting exam will consist of 3 multiple choice testlets containing 30 questions each, and 1 simulation testlet consisting of 7 task-based simulations.

### Multiple-Choice Screen Layout

The following is a computer screenshot that illustrates the manner in which multiple-choice questions will be presented:

As indicated previously, multiple-choice questions will be presented in three individual testlets of 30 questions. Characteristics of the testlets of multiple-choice questions include the following:

1. You may move freely within a particular testlet from one question to the next or back to previous questions until you click on the “Exit” button. Once you have indicated that you have finished the testlet by clicking on the “Exit” button and reconfirmed, you can never return to that set of questions.
2. The button on the screen will allow you to “flag” a question for review if you wish to come back to it later.

3. A four-function computer calculator with an electronic tape is available as a tool.
4. The time remaining for the entire exam section is shown on the screen.
5. The questions will be shown at the bottom of the screen. You may navigate between questions by simply clicking on the question number.
6. The “Help” button will provide you with help in navigating and completing the testlet.

The previous screenshot was obtained from the AICPA’s sample exam at [www.cpa-exam.org](http://www.cpa-exam.org). Candidates are urged to complete the tutorial and other example questions on the AICPA’s website to obtain additional experience with computer-based testing.

### Multiple-Choice Question Solutions Approach

1. **Work individual questions in order.**
  - a. If a question appears lengthy or difficult, skip it until you can determine that extra time is available. Mark it for review to remind you to return to a question that you have skipped or need to review.
2. **Read the stem of the question without looking at the answers.**
  - a. The answers are sometimes misleading and may cause you to misread or misinterpret the question.
3. **Read each question *carefully* to determine the topical area.**
  - a. Study the requirements **first** so you know which data are important.
  - b. Note keywords and important data.
  - c. Identify pertinent information.
  - d. Be especially careful to note when the requirement is an **exception** (e.g., “Which of the following is **not** characteristic of variables sampling?”).
  - e. If a set of data is the basis for two or more questions, read the requirements of each of the questions first before beginning to work the first question (sometimes it is more efficient to work the questions out of order).
  - f. Be alert to read questions as they are, not as you would like them to be. You may encounter a familiar looking item; do not jump to the conclusion that you know what the answer is without reading the question completely.
4. **Anticipate the answer before looking at the alternative answers.**
  - a. Recall the applicable principle (e.g., the criteria for identification of a capital lease).
5. **Read the answers and select the *best* alternative.**
6. **Click on the correct answer (or your educated guess).**
7. **After completing all of the questions including the ones flagged for review, click on the “Exit” button to close out the testlet. Remember, once you have closed out the testlet you can never return to it.**

### Multiple-Choice Question Solutions Approach Example

A good example of the multiple-choice solutions approach follows, using an actual multiple-choice question from a previous CPA Exam.

Inge Co. determined that the net value of its accounts receivable at December 31, 2008, based on an aging of the receivables, was \$325,000. Additional information is as follows:

Allowance for uncollectible accounts—1/1/08	\$30,000
Uncollectible accounts written off during 2008	18,000
Uncollectible accounts recovered during 2008	2,000
Accounts receivable at 12/31/08	350,000

For 2008, what would be Inge’s uncollectible accounts expense?

a. \$5,000		<b>AR</b>	<b>Allow.</b>
b. \$11,000			30
c. \$15,000			18
d. \$21,000		350	2
			25

*Step 3:*

Topical area? Bad debt expense

*Step 4A:*

Principle? Recognize that uncollectible accounts are debited to the allowance account

Currently, all multiple-choice questions are scored based on the number correct, weighted by a difficulty rating (i.e., there is no penalty for guessing). The rationale is that a “good guess” indicates knowledge. Thus, you should answer all multiple-choice questions.

## Task-Based Simulations

Simulations are case-based problems designed to

- Test integrated knowledge
- More closely replicate real-world problems
- Assess research, and other skills

Any of the following types of responses might be required on simulation parts:

- Drop-down selection
- Numeric and monetary inputs
- Formula answers
- Check box response
- Enter spreadsheet formulas
- Research results

The following screenshot illustrates a simulation that requires the candidate to complete a journal entry by selecting from a list of accounts and inputting amounts.

Financial Accounting and Reporting  
Testlet 2 of 2  
Time Remaining  
0 hours 46 minutes

Journal Entry | Authoritative Literature | Help

Cut Copy Paste

To prepare each entry:

- Double-click in the shaded cells in the Account name column and select from the list provided the appropriate account name. If no entry is needed, select “No entry required.” An account may be used once, or not at all for each entry.
- Enter the corresponding debit or credit amount in the appropriate column.
- Round all amounts to the nearest dollar.
- All rows may not be required to complete each entry.

Prepare the entry, if any, required to record WSM’s change in depreciation method from the double-declining balance method to the straight-line method, and the change in the estimated useful life of the the furniture.

Accounting Treatment Authoritative Literature Help

The QuickTab Co. is considering a number of events that may have an effect on the accounting treatments they use. For each of the events in the table below, double-click in the associated shaded cells and select from the lists provided the appropriate description and accounting treatment. Assume that all events are material in amount. A selection may be used once, more than once, or not at all.

Event	Description	Accounting treatment
Change in long-term construction contract from the completed-contract method to the percentage-of-completion method		
Write off of uncollectible receivables under the allowance method		
Change in salvage value of a depreciable asset		
Change in the useful life of a patent		

Reminder Directions 1 2 3 4 Previous Next

To complete the simulations, candidates are provided with a number of tools, including

- A four-function computer calculator with an electronic tape
- Scratch spreadsheet
- The ability to split windows horizontally or vertically to show two tabs on the screen (e.g., you can examine the situation tab in one window and a requirement tab in a second window)
- Access to professional literature databases to answer research requirements
- Copy and paste functions

In addition, the resource tab provides other resources that may be needed to complete the problem. For example, a resource tab might contain a present value table for use in answering a lease problem.

A window on the screen shows the time remaining for the entire exam and the “Help” button provides instructions for navigating the simulation and completing the requirements.

The AICPA has introduced a new simulation interface which is illustrated in this manual. You are urged to complete the tutorial and other sample tests that are on the AICPA’s website ([www.cpa-exam.org](http://www.cpa-exam.org)) to obtain additional experience with the interface and computer-based testing.

### Task-Based Simulations Solutions Approach

The following solutions approach is suggested for answering simulations:

1. **Review the entire background and problem.** Get a feel for the topical area and related concepts that are being tested. Even though the format of the question may vary, the exam continues to test your understanding of applicable principles or concepts. Relax, take a deep breath, and determine your strategy for conquering the simulation.
2. **Identify the requirements of the simulation.** This step will help you focus in more quickly on the solution(s) without wasting time reading irrelevant material.
3. **Study the items to be answered.** As you do this and become familiar with the topical area being tested, you should review the concepts of that area. This will help you organize your thoughts so that you can relate logically the requirements of the simulation with the applicable concepts.
4. **Use the scratch paper (which will be provided) and the spreadsheet and calculator tools to assist you in answering the simulation.**

The following screenshots explain how the spreadsheet operates.

### Numeric Entry

Many cells require numeric responses. You can enter a number directly in the cell or enter a formula to calculate your response. When one or more cells allow numeric entry, the spreadsheet displays a toolbar at the top, as shown in Figure 4 below.

Numbers can be typed directly in a cell or in the formula bar.

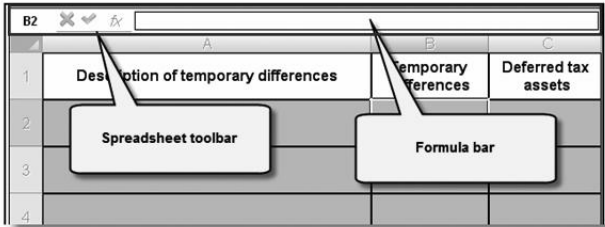

Figure 4

[Return to Top](#)

### Using Formulas

The spreadsheet allows the use of formulas. There are two tools available to help create a formula.

### The Formula Wizard

The **Formula Wizard** is similar to that found in Microsoft Excel. There is one major difference: the **Formula Wizard** is only available when typing in the formula bar. You can type formulas directly into cells, but the **Formula Wizard** will not be available.

The **Formula Wizard** is shown in the process of creating a formula in Figure 5 below.

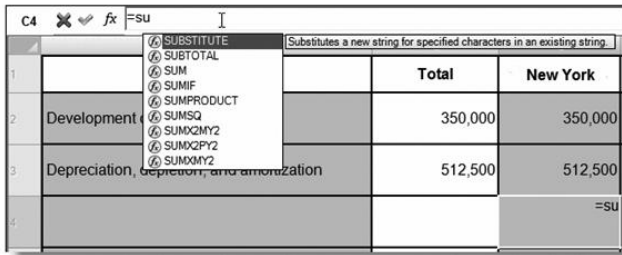

Figure 5

After the function is chosen, the cell locations can be typed in, or lassoed as shown in Figure 6 below.

## Research Simulations

One of the seven simulations on the Auditing and Attestation exam will be a research simulation. Research simulations require candidates to search the professional literature in electronic format and input the reference to the results. In the Financial Accounting and Reporting section the professional literature database includes

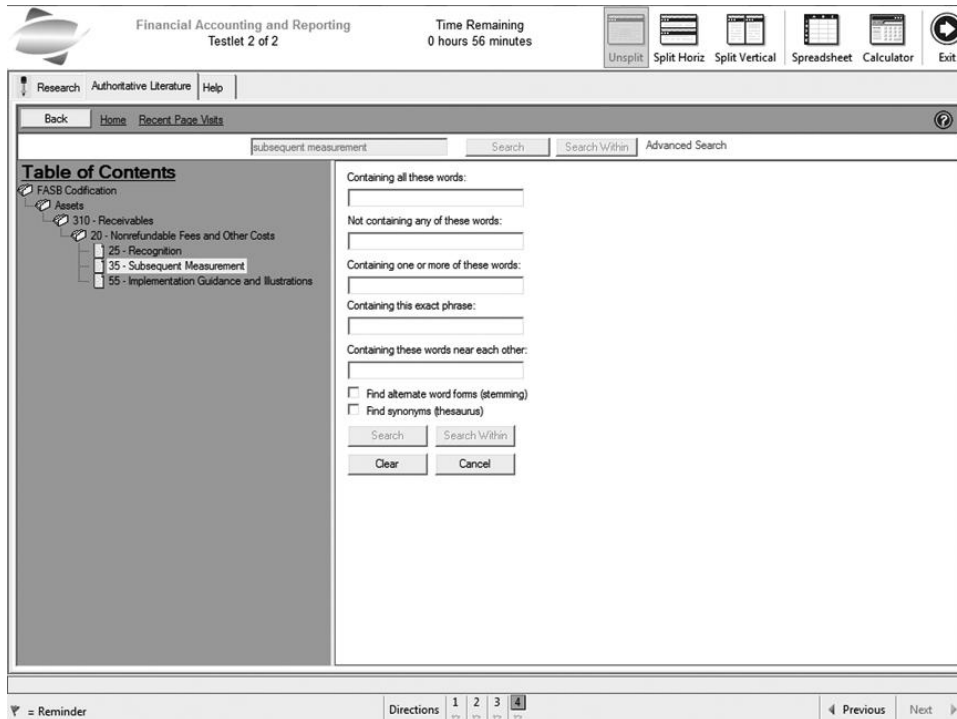

- The FASB Accounting Standards Codification

The following screenshot is from the research interface that was implemented in 2011.

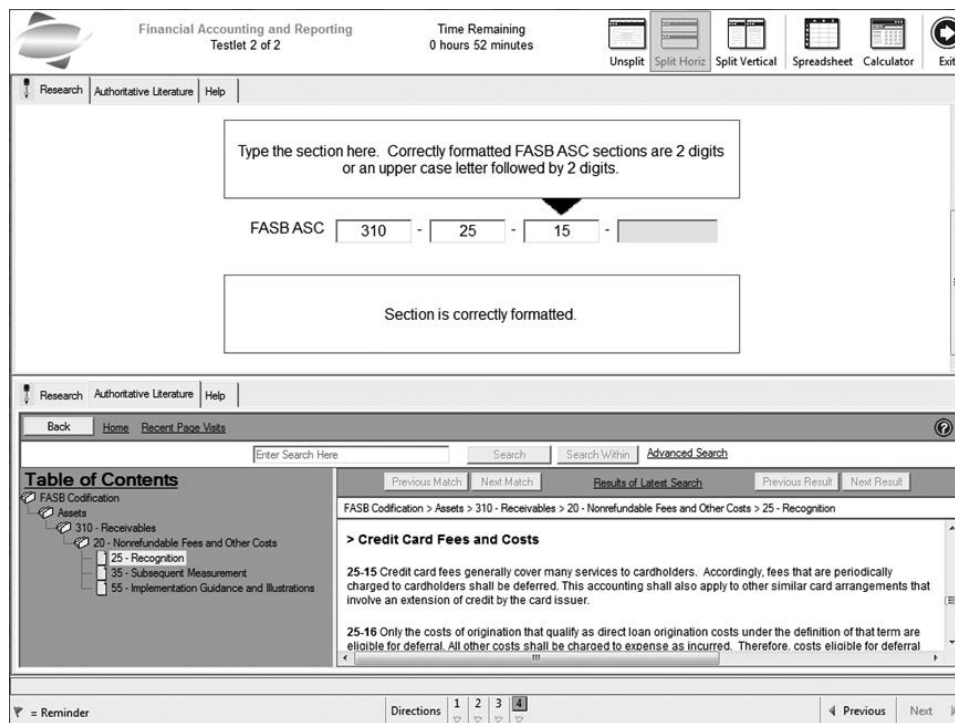

The professional literature may be searched using the table of contents, a keyword search, or an advanced search. **If you use the search function you must spell the term or terms correctly.** In using the table of contents, you simply click on the applicable standards and it expands to the next level of detail. By continuing to drill down you will get to the topic or professional standard that provides the solution to the requirement.

The following screenshot illustrates the advanced search function.

Once you have found the correct passage in the literature, you must input the citation in the answer box. To facilitate this process you should use the split screen function to view the literature in one screen and the answer box in the other as in the following screenshot.

If possible, it is important to get experience using the FASB Accounting Standards Codification System to sharpen your research skills. This database is available from the FASB and many colleges and universities have licenses for use online. In addition, CPA candidates can get a free six-month subscription to the online package of professional literature used in the computerized CPA examination. Other students and recent graduates may subscribe at a special price. Subscriptions are available at [www.cpa-exam.org](http://www.cpa-exam.org). If that is not available, you should use the printed copy of the professional standards to answer the research simulations in the manual.

Chapter 5 of this book contains guidance on how to perform research on the Accounting Standards Codification database.

## Time Requirements for the Solutions Approach

Many candidates bypass the solutions approach, because they feel it is too time-consuming. Actually, the solutions approach is a time-saver and, more importantly, it helps you prepare better solutions to all questions and simulations.

Without committing yourself to using the solutions approach, try it step-by-step on several questions and simulations. After you conscientiously go through the step-by-step routine a few times, you will begin to adopt and modify aspects of the technique which will benefit you. Subsequent usage will become subconscious and painless. The important point is that you must try the solutions approach several times to accrue any benefits.

In summary, the solutions approach may appear foreign and somewhat cumbersome. At the same time, if you have worked through the material in this chapter, you should have some appreciation for it. Develop the solutions approach by writing down the steps in the solutions approach at the beginning of this chapter, and keep them before you as you work CPA exam questions and problems. Remember that even though the suggested procedures appear **very structured** and **time-consuming**, integration of these procedures into your own style of problem solving will help improve **your** solutions approach. The next chapter discusses strategies for the overall examination.

**NOW IS THE TIME TO MAKE YOUR COMMITMENT**

## Chapter 4: Taking The Examination

This chapter is concerned with developing an examination strategy (e.g., how to cope with the environment at the Test Center, time management, etc.).

### EXAMINATION STRATEGIES

Your performance during the examination is final and not subject to revision. While you may sit for the examination again if you are unsuccessful, the majority of your preparation will have to be repeated, requiring substantial, additional amounts of time. Thus, examination strategies (discussed in this chapter) that maximize your exam-taking efficiency are very important.

#### Getting “Psyched Up”

The CPA exam is quite challenging and worthy of your best effort. Explicitly develop your own psychological strategy to get yourself “up” for the exam. Pace your study program such that you will be able to operate at peak performance when you are actually taking the exam. Many candidates give up because they have a bad day or encounter a rough problem. A significant advantage of the computerized exam is that if you have scheduled early in a testing window and do not feel well, you can reschedule your sitting. However, once you start the exam you cannot retake it in the same testing window, so do not leave the exam early. Do the best you can.

#### Lodging, Meals, Exercise

If you must travel to the test center, make advance reservations for comfortable lodging convenient to the test center. Do not stay with friends, relatives, etc. Both uninterrupted sleep and total concentration on the exam are a must. Consider the following in making your lodging plans:

1. Proximity to the test center
2. Availability of meals and snacks
3. Recreational facilities

Plan your meal schedule to provide maximum energy and alertness during the day and maximum rest at night. Do not experiment with new foods, drinks, etc., around your scheduled date. Within reasonable limits, observe your normal eating and drinking habits. Recognize that overconsumption of coffee during the exam could lead to a hyperactive state and disaster. Likewise, overindulgence in alcohol to overcome nervousness and to induce sleep the night before might contribute to other difficulties the following morning.

Tenseness should be expected before and during the examination. Rely on a regular exercise program to unwind at the end of the day. As you select your lodging for the examination, try to accommodate your exercise pleasure (e.g., running, swimming, etc.).

To relieve tension or stress while studying, try breathing or stretching exercises. Use these exercises before and during the examination to start and to keep your adrenaline flowing. Remain determined not to have to sit for the section another time.

In summary, the examination is likely to be both rigorous and fatiguing. Expect it and prepare for it by getting in shape, planning methods of relaxation during the exam and in the evening before, and finally, building the confidence and competence to successfully complete the exam.

#### Test Center and Procedures

If possible, visit the test center before the examination to assure knowledge of the location. Remember: no surprises. Having a general familiarity with the center will lessen anxiety prior to the examination. Talking to a recent veteran of the examination will give you background for the general examination procedures. **You must arrive at the test center 30 minutes before your scheduled time.**

Upon completion of check-in at the test location, the candidate

- Is seated at a designated workstation
- Begins the exam after proctor launches the session
- Is monitored by a Test Center Administrator
- Is videotaped

If you have any remaining questions regarding examination procedure, call or write your state board or go to Prometric's website at [www.prometric.com/cpa](http://www.prometric.com/cpa).

## Allocation of Time

Budget your time. Time should be carefully allocated in an attempt to maximize points per minute. While you must develop your own strategy with respect to time allocation, some suggestions may be useful. First, consider the Financial Accounting and Reporting examination, which is 240 minutes long. Allocate 5 minutes to reading the instructions. When you begin the exam you will be given an inventory of the total number of testlets and simulations, including the suggested times. Budget your time based on this inventory.

Plan on spending about 1½ to 2 minutes working each of the individual multiple-choice questions. The time allocated to the simulations will vary. Plan on spending about ¼ to 1½ hours on the simulations testlet.

## Techniques for Time Management

The Financial Accounting and Reporting section contains three testlets of multiple-choice questions with 30 questions each. As you complete each testlet keep track of how you performed in relation to the AICPA suggested times. The Financial and Reporting section will also have a testlet with seven task-based simulations. After you finish the multiple-choice testlets, budget your time for the simulations based on your remaining time and the AICPA suggested times. Remember that you alone control watching your progress towards successfully completing this exam.

## Examination Rules

1. Prior to the start of the examination, you will be required to accept a *Confidentiality and Break Policy Statement*.
2. You must not bring any personal/unauthorized items into the testing room. Such items include but are not limited to outerwear, hats, food, drinks, purses, briefcases, notebooks, pagers, watches, cellular telephones, recording devices, and photographic equipment. You will be asked to empty and turn your pockets inside out prior to every entry into the test room to confirm that you have no prohibited items. Lockers are provided for storage of personal items.
3. Breaks may be taken at any time between testlets. **However, your exam time continues to run while you take the break.**
4. If you need access to an item stored in the test center during a break such as food or medicine, you must inform the Test Center Administrator before you retrieve the item. You are not allowed to access a prohibited item.
5. Any reference during the examination to books or other materials or the exchange of information with other persons shall be considered misconduct sufficient to bar you from further participation in the examination.
6. Penalties will be imposed on any candidate who is caught cheating before, during, or after the examination. These penalties may include expulsion from the examination, denial of applications for future examinations, and civil or criminal penalties.
7. You may not leave the examination room with any notes about the examination.

Refer to the brochure CPA Candidate Bulletin for other rules.

## CPA EXAM CHECKLIST

### One week before you are scheduled to sit

- \_\_\_ 1. Look over major topical areas, concentrating on schedule formats and the information flow of the formats.  
For example:  
Accounting Changes and Error Correction  
Income Statement Format  
Long-Term Construction Accounting

Inventory Methods  
 Investments  
 Lessee-Lessor Accounting  
 Statement of Cash Flows  
 Derivatives and Hedging

- \_\_\_ 2. If time permits, work through a few questions in your weakest areas so that techniques/concepts are fresh in your mind.
- \_\_\_ 3. Assemble notecards and key outlines of major topical areas into a manageable “last review” notebook to be taken with you to the exam.

### What to bring

- \_\_\_ 1. **Notice to Schedule (NTS)**—You must bring the proper NTS with you.
- \_\_\_ 2. **Identification**—Bring two valid forms of ID. One must be government issued. The name on the ID must match exactly the name on the NTS. The CPA Candidate bulletin lists valid primary and secondary IDs.
- \_\_\_ 3. **Hotel confirmation**—(if you must travel).
- \_\_\_ 4. **Cash**—Payment for anything by personal check is rarely accepted.
- \_\_\_ 5. **Major credit card**—American Express, MasterCard, Visa, etc.
- \_\_\_ 6. **Alarm clock**—This is too important an event to trust to a hotel wake-up call that might be overlooked.
- \_\_\_ 7. **Clothing**—Should be comfortable and layered to suit the possible temperature range in the testing room.
- \_\_\_ 8. **Earplugs**—Even though examinations are being given, there may be constant activity in the testing room (e.g., people walking around, rustling of paper, clicking of keyboards, people coughing, etc.). The use of earplugs may block out some of this distraction and help you concentrate better.
- \_\_\_ 9. **Other**—Any “last review” materials.

### Evening before exam

1. Reviewing the evening before the exam could earn you the extra points needed to pass a section. Just keep this last-minute effort in perspective and **do not panic** yourself into staying up all night trying to cover every possible point. This could lead to disaster by sapping your body of the endurance needed to attack questions creatively during the next day.
2. Before taking the Financial Accounting and Reporting section, scan the general schedule formats to imprint the **flow** of information on your mind (e.g., income statement, statement of cash flows, and lease formats, etc.).
3. Read over **key** notecards or the most important outlines on topics in which you feel deficient.
4. Go over mnemonics and acronyms you have developed as study aids. Test yourself by writing out the letters on paper while verbally giving a brief explanation of what the letters stand for.
5. Scan outlines of SFAC 1, 2, 5, 6, 7 and any other notes pertinent to answering conceptual questions to imprint keywords.
6. **Set your alarm and get a good night’s rest!** Being well rested will permit you to meet the day’s challenge with a fresh burst of creative energy.

### Exam-taking strategy

1. Review the AICPA suggested times for the testlets to plan your time allocation during the exam.
2. Do not spend an excess amount of time on the introductory screens. If you take longer than 10 minutes on these screens, the test session will automatically terminate. If the exam session terminates, it will not be possible to restart the examination and you will have to reapply to take the section.
3. Report equipment/software issues to the test center staff immediately. Do not attempt to correct the problem yourself and do not use examination time thinking about it before reporting it. Remind the test center staff to file a report describing the problem. The test center staff should be able to handle any equipment or software problems. However, if you believe the problem was not handled appropriately, contact NASBA at [candidatecare@nasba.org](mailto:candidatecare@nasba.org).
4. Report any concerns about test questions to test center staff after you have completed the session. The members of the test center staff know nothing about the CPA Examination content. The test center staff can report the issues to the AICPA. You should also report concerns about the questions in writing to the AICPA (Fax to [609] 671-2922). If possible, the question and testlet numbers should be included in the fax.

5. In the event of a power outage or incident requiring a restart, the computer clock will stop and you will not lose examination time. Your responses up to the time of the restart will not be lost as responses are saved at frequent intervals throughout the examination.
6. If you have questions about the examination software functions (e.g., the transfer function), you should read the instructions and “Help” tab information. The test center staff is not familiar with the functioning of the examination software and, therefore, will not be able to help you.
7. The crucial technique to use for multiple-choice questions is to read through each question stem **carefully**, noting keywords such as “fair value,” “contingent,” “other comprehensive income,” etc. Then **read each choice** carefully before you start eliminating inappropriate answers. Often the first or second answer may **sound** correct, but a later answer may be more correct. Be discriminating! Reread the question and choose the **best** answer.
8. If you are struggling with questions beyond a minute or two, use the strategy of dividing multiple-choice questions into two categories.
  - a. Questions for which you know you lack knowledge to answer: Drawing from any responses you have, narrow answers down to as few as possible, then make an educated guess.
  - b. Questions for which you feel you should be getting the correct answer: Mark the question for review. Your mental block may clear, or you may spot a simple error in logic that will be corrected when you rereview the question.
9. Remember: **Never** change a first impulse answer later unless you are absolutely certain you are right. It is a proven fact that your subconscious often guides you to the correct answer.
10. Begin the tasked-based simulations, carefully monitoring your time. Read the information and requirement tabs and organize your thoughts around the concepts, mnemonics, acronyms, and buzzwords that are responsive to the requirements. Constantly compare your progress with the time remaining. Fight the urge to **complete** one simulation at the expense of others.
11. Each test may include a simulation requirement or question for which you may feel unprepared. Accept the challenge and go after the points! Draw from all your resources. Ask yourself how GAAP would be applied to similar situations, scan the simulation questions for clues, look for relationships in **all** the available resources given in the problem, try “backing into” the question from another angle, etc. Every simulation (no matter how impossible it may look at first glance) contains some points that are yours for the taking. Make your best effort. You may be on the right track and not even know it!
12. Constantly compare your progress with the time remaining. Never spend excessive amounts of time on one testlet or simulation.
13. The cardinal rule is **never**, but **never**, leave an answer blank.

### After taking the examination

1. Retain the Confirmation of Attendance form issued after the examination because it provides valuable contact information.
2. Report any examination incidents/concerns in writing, even if the issues were already reported to test center staff.
3. If you feel that the circumstances surrounding your test administration prevented you from performing at a level consistent with your knowledge and skills, immediately contact NASBA at [candidatecare@nasba.org](mailto:candidatecare@nasba.org).

**HAVE YOU MADE YOUR COMMITMENT?**

## Chapter 5: Exam Content Overview

This chapter is written to help you review intermediate and advanced accounting (financial accounting) for the Financial Accounting and Reporting section of the exam. The AICPA Content Specification Outline of financial accounting coverage appears below.

The chapter is organized along the lines of the traditional intermediate and advanced accounting texts. The topics are arranged per the 14 financial modules (as previously discussed). The objective is to provide you with the basic concepts, journal entries, and formulas for each topic and subtopic. Hopefully you will be able to expand, adapt, and apply the basics to specific problem situations as presented in multiple-choice questions and simulations appearing on the CPA exam. Keep in mind the importance of working questions and simulations under exam conditions as you study the basics set forth in this chapter. Refer to the multiple-choice questions, problems, and simulation problems on each of the financial accounting topics.

As you work through this chapter, remember that there are many possible series of journal entries and account titles that can be used in accounting for a specific type of economic transaction (e.g., long-term construction contracts). Reconcile the approach illustrated in the chapter with the approach you studied as an undergraduate per your intermediate or advanced text.

In this chapter, you will be referred frequently to the authoritative literature. As of July 1, 2009, the FASB Accounting Standards Codification is the single source of all US GAAP, except for the SEC authoritative literature. Task-based research simulations test research using the Accounting Standards Codification since 2011.

### AICPA CONTENT AND SKILLS SPECIFICATION

The AICPA Content and Skills Specifications for the Uniform CPA Exam set forth the coverage of topics on the Financial Accounting and Reporting exam. This outline was issued by the AICPA and is effective beginning in 2014. The first part of the outline describes the topical coverage of the Financial Accounting and Reporting exam, and the second part provides some insights into the skills tested on all sections of the Uniform CPA exam.

### Content Specification Outlines (CSOs)

The Financial Accounting and Reporting section tests knowledge and understanding of the financial reporting framework used by business enterprises, not-for-profit organizations, and governmental entities. The financial reporting frameworks that are included in this section are those issued by the standard setters identified in the references to these CSOs, which include standards issued by the Financial Accounting Standards Board, the International Accounting Standards Board, the US Securities and Exchange Commission, and the Governmental Accounting Standards Board. In addition to demonstrating knowledge and understanding of accounting principles, candidates are required to demonstrate the skills required to apply that knowledge in performing financial reporting and other tasks as certified public accountants. To demonstrate such knowledge and skills, candidates will be expected to perform the following tasks:

- Identify and understand the differences between financial statements prepared on the basis of accounting principles generally accepted in the United States of America (US GAAP) and International Financial Reporting Standards (IFRS).
- Prepare and/or review source documents including account classification, and enter data into subsidiary and general ledgers.
- Calculate amounts for financial statement components.
- Reconcile the general ledger to the subsidiary ledgers or underlying account details.
- Prepare account reconciliation and related schedules; analyze accounts for unusual fluctuations and make necessary adjustments.
- Prepare consolidating and eliminating entries for the period.
- Identify financial accounting and reporting methods and select those that are appropriate.
- Prepare consolidated financial statements, including balance sheets, income statements, and statements of retained earnings, equity, comprehensive income, and cash flows.
- Prepare appropriate notes to the financial statements.

- Analyze financial statements including analysis of accounts, variances, trends, and ratios.
- Exercise judgment in the application of accounting principles.
- Apply judgment to evaluate assumptions and methods underlying estimates, including fair value measures of financial statement components.
- Produce required financial statement filings in order to meet regulatory or reporting requirements (e.g. Form 10-Q, 10-K, Annual Report).
- Determine appropriate accounting treatment for new or unusual transactions and evaluate the economic substance of transactions in making the determinations.
- Research relevant professional literature.

The outline below specifies the knowledge in which candidates are required to demonstrate proficiency:

**I. Conceptual Framework, Standards, Standard Setting, and Presentation of Financial Statements (17%–23%)**

**A. Process by Which Accounting Standards are Set and Roles of Accounting Standard-Setting Bodies**

1. US Securities and Exchange Commission (SEC)
2. Financial Accounting Standards Board (FASB)
3. International Accounting Standards Board (IASB)
4. Governmental Accounting Standards Board (GASB)

**B. Conceptual Framework**

1. Financial reporting by business entities
2. Financial reporting by not-for-profit (nongovernmental) entities
3. Financial reporting by state and local governmental entities

**C. Financial Reporting, Presentation and Disclosures in General-Purpose Financial Statements**

1. Balance sheet
2. Income statement
3. Statement of comprehensive income
4. Statement of changes in equity
5. Statement of cash flows
6. Notes to financial statements
7. Consolidated and combined financial statements
8. First-time adoption of IFRS

**D. SEC Reporting Requirements (e.g. Form 10-Q, 10-K)**

**E. Other Financial Statement Presentations, including Other Comprehensive Bases of Accounting (OCBOA)**

1. Cash basis
2. Modified cash basis
3. Income tax basis
4. Personal financial statements
5. Financial statements of employee benefit plans/trusts

**II. Financial Statement Accounts: Recognition, Measurement, Valuation, Calculation, Presentation, and Disclosures (27%–33%)**

**A. Cash and Cash Equivalents**

**B. Receivables**

**C. Inventory**

**D. Property, Plant, and Equipment**

**E. Investments**

1. Financial assets at fair value through profit or loss
2. Available-for-sale financial assets
3. Held-to-maturity investments
4. Joint ventures
5. Equity method investments (investments in associates)
6. Investment property

**F. Intangible Assets—Goodwill and Other**

**G. Payables and Accrued Liabilities**

**H. Deferred Revenue**

- I. Long-Term Debt (Financial Liabilities)**
  - 1. Notes payable
  - 2. Bonds payable
  - 3. Debt with conversion features and other options
  - 4. Modifications and extinguishments
  - 5. Troubled debt restructurings by debtors
  - 6. Debt covenant compliance
- J. Equity**
- K. Revenue Recognition**
- L. Costs and Expenses**
- M. Compensation and Benefits**
  - 1. Compensated absences
  - 2. Deferred compensation arrangements
  - 3. Nonretirement postemployment benefits
  - 4. Retirement benefits
  - 5. Stock compensation (share-based payments)
- N. Income Taxes**
- III. Specific Transactions, Events and Disclosures: Recognition, Measurement, Valuation, Calculation, Presentation, and Disclosures (27%–33%)**
  - A. Accounting Changes and Error Corrections**
  - B. Asset Retirement and Environmental Obligations**
  - C. Business Combinations**
  - D. Consolidation (Including Off-Balance Sheet Transactions, Variable-Interest Entities and Noncontrolling Interests)**
  - E. Contingencies, Commitments, and Guarantees (Provisions)**
  - F. Earnings Per Share**
  - G. Exit or Disposal Activities and Discontinued Operations**
  - H. Extraordinary and Unusual Items**
  - I. Fair Value Measurements, Disclosures, and Reporting**
  - J. Derivatives and Hedge Accounting**
  - K. Foreign Currency Transactions and Translation**
  - L. Impairment**
  - M. Interim Financial Reporting**
  - N. Leases**
  - O. Distinguishing Liabilities from Equity**
  - P. Nonmonetary Transactions (Barter Transactions)**
  - Q. Related Parties and Related Party Transactions**
  - R. Research and Development Costs**
  - S. Risks and Uncertainties**
  - T. Segment Reporting**
  - U. Software Costs**
  - V. Subsequent Events**
  - W. Transfers and Servicing of Financial Assets and Derecognition**
- IV. Governmental Accounting and Reporting (8%–12%)**
  - A. Governmental Accounting Concepts**
    - 1. Measurement focus and basis of accounting
    - 2. Fund accounting concepts and applications
    - 3. Budgetary accounting
  - B. Format and Content of Comprehensive Annual Financial Report (CAFR)**
    - 1. Government-wide financial statements
    - 2. Governmental funds financial statements
    - 3. Proprietary funds financial statements
    - 4. Fiduciary funds financial statements
    - 5. Notes to financial statements

6. Management's discussion and analysis
  7. Required supplementary information (RSI) other than Management's Discussion and Analysis
  8. Combining statements and individual fund statements and schedules
  9. Deriving government-wide financial statements and reconciliation requirements
- C.** Financial Reporting Entity, Including Blended and Discrete Component Units
- D.** Typical Items and Specific Types of Transactions and Events: Recognition, Measurement, Valuation, Calculation, and Presentation in Governmental Entity Financial Statements
1. Net position and components thereof
  2. Fund balances and components thereof
  3. Capital assets and infrastructure assets
  4. General long-term liabilities
  5. Interfund activity, including transfers
  6. Nonexchange revenue transactions
  7. Expenditures
  8. Special items
  9. Encumbrances
- E.** Accounting and Reporting for Governmental Not-for-Profit Organizations
- V. Not-for-Profit (Nongovernmental) Accounting and Reporting (8%–12%)**
- A.** Financial Statements
1. Statement of financial position
  2. Statement of activities
  3. Statement of cash flows
  4. Statement of functional expenses
- B.** Typical Items and Specific Types of Transactions and Events: Recognition, Measurement, Valuation, Calculation, and Presentation in Financial Statements of Not-for-Profit Organizations
1. Support, revenues, and contributions
  2. Types of restrictions on resources
  3. Types of net assets
  4. Expenses, including depreciation and functional expenses
  5. Investments

- The IASB Conceptual Framework for Financial Reporting

## Skill Specification Outlines (SSOs)

The Skill Specification Outlines (SSOs) identify the skills to be tested on the Uniform CPA Examination. There are three categories of skills, and the weightings will be implemented through the use of different question formats in the exam. For each of the question formats, a different set of tools will be available as resources to the candidates, who will need to use those tools to demonstrate proficiency in the applicable skills categories.

### Weights

The percentage range assigned to each skill category will be used to determine the quantity of each type of question, as described below. The percentage range assigned to each skill category represents the approximate percentage to which that category of skills will be used in the different sections of the CPA Examination to assess proficiency. The ranges are designed to provide flexibility in building the examination, and the midpoints of the ranges for each section total 100%. No percentages are given for the bulleted descriptions included in these definitions. The presence of several groups within an area or several topics within a group does not imply equal importance or weight will be given to these bullets on an examination.

Skills Category	Weights (FAR, REG, AUD)	Weights (BEC)
Knowledge and Understanding	50%–60%	80%–90%
Application of the Body of Knowledge	40%–50%	—
Written Communication	—	10%–20%

*Knowledge and Understanding.* Multiple-choice questions will be used as the proxy for assessing knowledge and understanding and will be based upon the content topics as outlined in the CSOs. Candidates will not have access to the authoritative literature, spreadsheets, or database tools while answering these questions. A calculator will be accessible for the candidates to use in performing calculations to demonstrate their understanding of the principles or subject matter.

*Application of the Body of Knowledge.* Task-based simulations will be used as the proxy for assessing application of the body of knowledge and will be based upon the content topics as outlined in the CSOs. Candidates will have access to the authoritative literature, a calculator, spreadsheets, and other resources and tools which they will use to demonstrate proficiency in applying the body of knowledge.

*Written Communication* will be assessed through the use of responses to essay questions, which will be based upon the content topics as outlined in the CSOs. Candidates will have access to a word processor, which includes a spell-check feature.

### Outlines

The outlines below provide additional descriptions of the skills that are represented in each category.

**Knowledge and Understanding.** Expertise and skills developed through learning processes, recall, and reading comprehension. Knowledge is acquired through experience or education and is the theoretical or practical understanding of a subject; knowledge is also represented through awareness or familiarity with information gained by experience of a fact or situation. Understanding represents a higher level than simple knowledge and is the process of using concepts to deal adequately with given situations, facts, or circumstances. Understanding is the ability to recognize and comprehend the meaning of a particular concept.

**Application of the Body of Knowledge, Including Analysis, Judgment, Synthesis, Evaluation, and Research.** Higher-level cognitive skills that require individuals to act or transform knowledge in some fashion. These skills are inextricably intertwined and thus are grouped into this single skill area.

- Assess the Business Environment
  - Business Process Evaluation: Assessing and integrating information regarding a business’s operational structure, functions, processes, and procedures to develop a broad operational perspective; identify the need for new systems or changes to existing systems and/or processes.
  - Contextual Evaluation: Assessing and integrating information regarding client’s type of business or industry.
  - Strategic Analysis—Understanding the Business: Obtaining, assessing and integrating information on the entity’s strategic objectives, strategic management process, business environment, the nature of and value to customers, its products and services, extent of competition within its market space, etc.).

- Business Risk Assessment: Obtaining, assessing and integrating information on conditions and events that could impede the entity's ability to achieve strategic objectives.
- Visualize Abstract Descriptions: Organize and process symbols, pictures, graphs, objects, and other information.
- Research
  - Identify the appropriate research question.
  - Identify key search terms for use in performing electronic searches through large volumes of data.
  - Search through large volumes of electronic data to find required information.
  - Organize information or data from multiple sources.
  - Integrate diverse sources of information to reach conclusions or make decisions.
  - Identify the appropriate authoritative guidance in applicable financial reporting frameworks and auditing standards for the accounting issue being evaluated.
- Application of Technology
  - Using electronic spreadsheets to perform calculations, financial analysis, or other functions to analyze data.
  - Integration of technological applications and resources into work processes.
  - Using a variety of computer software and hardware systems to structure, utilize, and manage data.
- Analysis
  - Review information to determine compliance with specified standards or criteria.
  - Use expectations, empirical data, and analytical methods to determine trends and variances.
  - Perform appropriate calculations on financial and nonfinancial data.
  - Recognize patterns of activity when reviewing large amounts of data or recognize breaks in patterns.
  - Interpretation of financial statement data for a given evaluation purpose.
  - Forecasting future financial statement data from historical financial statement data and other information.
  - Integrating primary financial statements: using data from all primary financial statements to uncover financial transactions, inconsistencies, or other information.
- Complex Problem Solving and Judgment
  - Develop and understand goals, objectives, and strategies for dealing with potential issues, obstacles, or opportunities.
  - Analyze patterns of information and contextual factors to identify potential problems and their implications.
  - Devise and implement a plan of action appropriate for a given problem.
  - Apply professional skepticism, which is an attitude that includes a questioning mind and a critical assessment of information or evidence obtained.
  - Adapt strategies or planned actions in response to changing circumstances.
  - Identify and solve unstructured problems.
  - Develop reasonable hypotheses to answer a question or resolve a problem.
  - Formulate and examine alternative solutions in terms of their relative strengths and weaknesses, level of risk, and appropriateness for a given situation.
  - Develop creative ways of thinking about situations, problems, and opportunities to create insightful and sound solutions.
  - Develop logical conclusions through the use of inductive and deductive reasoning.
  - Apply knowledge of professional standards and laws, as well as legal, ethical, and regulatory issues.
  - Assess the need for consultations with other professionals when gray areas, or areas requiring specialized knowledge, are encountered.
- Decision Making
  - Specify goals and constraints.
  - Generate alternatives.
  - Consider risks.
  - Evaluate and select the best alternative.
- Organization, Efficiency, and Effectiveness
  - Use time effectively and efficiently.
  - Develop detailed work plans, schedule tasks and meetings, and delegate assignments and tasks.
  - Set priorities by determining the relevant urgency or importance of tasks and deciding the order in which they should be performed.
- File and store information so that it can be found easily and used effectively.

**Written Communication.** The various skills involved in preparing written communication, including

- Basic writing mechanics, such as grammar, spelling, word usage, punctuation, and sentence structure.
- Effective business writing principles, including organization, clarity, and conciseness.
- Exchange technical information and ideas with coworkers and other professionals to meet goals of job assignment.
- Documentation:
  - Prepare documents and presentations that are concise, accurate, and supportive of the subject matter.
  - Document and cross-reference work performed and conclusions reached in a complete and accurate manner.
- Assist client to recognize and understand implications of critical business issues by providing recommendations and informed opinions.
- Persuade others to take recommended courses of action.
- Follow directions.

## RESEARCHING FASB ACCOUNTING STANDARDS

Research components of simulations in the Financial Accounting and Reporting section will involve a research database. Beginning in 2011, that database will be the FASB Accounting Standards Codification (ASC)

### Database Searching

Searching a database consists of the following five steps:

1. Define the issue. What is the research question to be answered?
2. Choose appropriate search technique. Select keywords that will locate the needed information or use the table of contents.
3. Execute the search. Enter the keyword(s) or click on the table of contents item and complete the search.
4. Evaluate the results. Evaluate the research to see if an answer has been found. If not, try a new search.
5. Select an answer by clicking on one of the citations provided in the answer selections on the right-hand side of the screen.

### Advanced Searches

The advanced search screen allows you to use Boolean concepts to perform more precise searches. Examples of searches that can be performed in the advanced search mode include

1. Containing all these words—Allows you to retrieve sections that contain two or more specified words.
2. Not containing any of these words—Allows you to retrieve sections that do not contain specific words.
3. Containing one or more of these words—Allows you to retrieve sections that contain any one or more of the specified words.
4. Containing these words near each other—Allows you to retrieve sections that contain words near to each other.

The advanced search also allows you to select options for the search. One alternative allows you to retrieve alternative word terms. For example, using this approach with a search on the word “cost” would also retrieve sections containing the word “costing.” A synonyms option allows you to retrieve sections that contain words that mean the same as the specified word. You also have the option to only search on the selected sections of the literature.

# FINANCIAL ACCOUNTING AND REPORTING

As indicated previously, this manual consists of 14 modules designed to facilitate your study for the Financial Accounting and Reporting section of the Uniform CPA Examination. The table of contents at the right describes the content of each module.

<b>Module 9: Basic Theory and Financial Reporting</b>	<b>41</b>
<b>Module 10: Inventory</b>	<b>217</b>
<b>Module 11: Fixed Assets</b>	<b>267</b>
<b>Module 12: Monetary Current Assets and Current Liabilities</b>	<b>329</b>
<b>Module 13: Present Value</b>	<b>395</b>
<b>Module 14: Deferred Taxes</b>	<b>537</b>
<b>Module 15: Stockholders' Equity</b>	<b>577</b>
<b>Module 16: Investments</b>	<b>639</b>
<b>Module 17: Statement of Cash Flows</b>	<b>687</b>
<b>Module 18: Business Combinations and Consolidations</b>	<b>725</b>
<b>Module 19: Derivative Instruments and Hedging Activities</b>	<b>785</b>
<b>Module 20: Miscellaneous</b>	<b>825</b>
<b>Module 21: Governmental (State and Local) Accounting</b>	<b>897</b>
<b>Module 22: Not-for-Profit Accounting</b>	<b>983</b>

# Module 9: Basic Theory and Financial Reporting

## Overview

This module covers **basic concepts** such as the conceptual framework and revenue recognition, **error correction** such as counterbalancing and classification errors, **accounting changes** such as changes in principle and changes in estimates, and **financial statements** such as the income statement and balance sheet.

US GAAP is the basis for financial reporting but it does not constitute a cohesive body of accounting theory. Concept Statements were issued to provide a theoretical framework for accounting standard development and a basis for financial reporting.

As of July 1, 2009, the Accounting Standards Codification (ASC) became the single source for US GAAP. **The relevant Accounting Standards Codification topic is indicated in the discussion with a cross-reference to the previous accounting literature (i.e., ARB, APB, SFAS, and SFAC).**

Appendix A of this text includes outlines of the pre-Codification standards with a cross reference to the appropriate Codification topics to help candidates transition to the FASB's Accounting Standards Codification. Note these outlines appear in the following sequence: ARB, APB, SFAS, and SFAC. Turn to each outline as directed and study the outline while reviewing the related journal entries, computations, etc. The appendix also contains a brief summary of applicable ASUs issued since the Codification inception. Detailed information within each ASU can be found throughout the text.

The AICPA began testing International Financial Reporting Standards (IFRS) on January 1, 2011. Coverage of international standards and outlines of the differences between US GAAP and IFRS are located at the end of each module.

## A. Basic Concepts

Basic concepts include theory, income determination, accruals, deferrals, and revenue recognition.

### 1. Basic Accounting Theory

Effective July 1, 2009, the FASB's Accounting Standards Codification became the single source of US GAAP for nongovernmental entities.

- The Accounting Standards Codification (ASC) replaced all previously issued non-SEC accounting literature. The Codification did not change GAAP, but merely restructured the existing accounting standards to provide one cohesive set of accounting standards.

- Included in the Codification is all GAAP, as well as relevant literature issued by the SEC.
- The FASB issues Accounting Standards Updates (ASUs) to update the Codification.

**NOTE:** To help the CPA candidate transition to the Accounting Standards Codification, the Codification citation is shown first, and the cross-reference to previous GAAP citations are shown in parentheses.

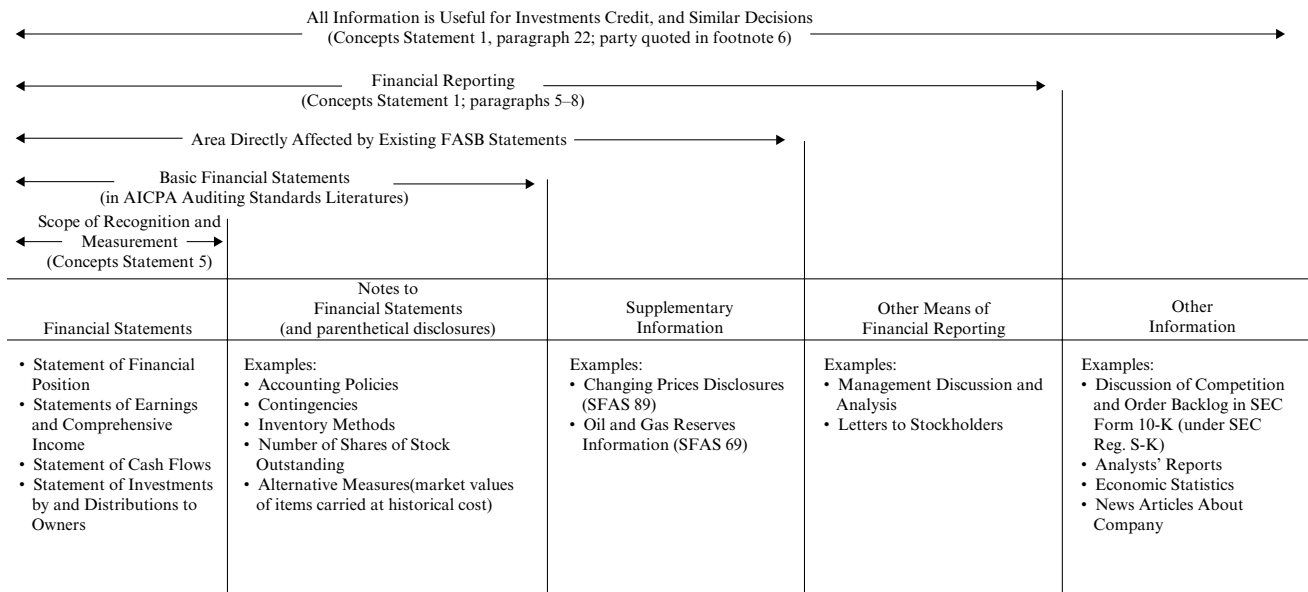

- b. Theory can be defined as a coherent set of hypothetical, conceptual, and pragmatic principles forming a general frame of reference for a field of inquiry; thus, accounting theory should be the basic principles of accounting rather than its practice (which GAAP describes or dictates).
- (1) Although GAAP is the current basis for financial reporting, it does not constitute a cohesive body of accounting theory. Generally, authoritative pronouncements have been the result of a problem-by-problem approach that have dealt with specific problems as they occur and are not predicated on an underlying body of theory.
  - (2) Accounting has a definite need for conceptual theoretical structure if an authoritative body such as the FASB is to promulgate consistent standards.
  - (3) A body of accounting theory should be the foundation of the standard-setting process and should provide guidance where no authoritative GAAP exists.
  - (4) The FASB issued concept statements to develop a theoretical framework. As of December 2011, the FASB had issued eight concept statements to develop a frame of reference.
    - (a) The purpose of the concept statements is “to set forth objectives and fundamental concepts that will be the basis for development of financial accounting and reporting guidance” (SFAC 8). In other words, the SFAC attempt to organize a framework that can serve as a reference point in formulating financial accounting standards.

**NOTE:** The SFAC do not constitute authoritative GAAP and therefore are not part of the Codification.

- (b) Three concept statements have been superseded by other concept statements: SFAC 1 and SFAC 2 were superseded by SFAC 8, and SFAC 3 was superseded by SFAC 6. The remaining concept statements are as follows: SFAC 4, *Objectives of Financial Reporting of Nonbusiness Organizations*; SFAC 5, *Recognition and Measurement in Financial Statements*; SFAC 6, *Elements of Financial Statements*; SFAC 7, *Using Cash Flow Information and Present Value in Accounting Measurements*; and SFAC 8, *Conceptual Framework for Financial Reporting*.
  - (c) SFAC 8 is the most recent attempt to develop accounting theory as a joint project between the FASB and the International Accounting Standards Board (IASB).
    - 1) SFAC 8 contains two chapters of the revised conceptual framework and replaces SFACs 1 and 2.
      - (a) Chapter 1, The Objective of General-Purpose Financial Reporting replaces SFAC 1.
      - (b) Chapter 3, Qualitative Characteristics of Useful Financial Information, replaces SFAC 2.
    - (d) As additional phases of the joint project between the FASB and the IASB are completed, the revised concept statements will be included as new chapters to SFAC 8.
- c. **Financial Reporting.** “The objective of general-purpose financial reporting is to provide financial information about the reporting entity that is useful to existing and potential investors, lenders, and other creditors in making decisions about providing resources to the entity” (SFAC 8).

**NOTE:** Not all informational needs are met by accounting or financial reporting.

(1) The following diagram from SFAC 5 describes the information spectrum.

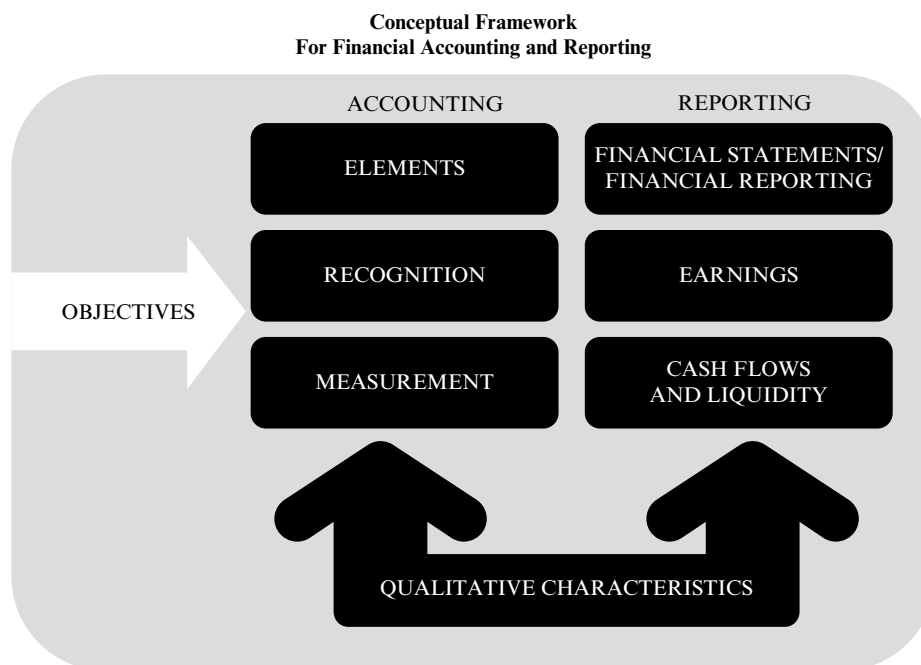

\*The SFAC 5 diagram has not been updated to reflect the issuance of SFAC 8.

d. **Components of the Conceptual Framework.** The components of the conceptual framework for financial accounting and reporting include objectives, qualitative characteristics, elements, recognition, measurement, financial statements, earnings, funds flow, and liquidity.

(1) The relationship between these components is illustrated in the following diagram from *Financial Statements and Other Means of Financial Reporting*, an FASB Invitation to Comment.

- (a) In the diagram below, components to the left are more basic and those to the right depend on components to their left. Components are closely related to those above or below them.
- (b) The most basic component of the conceptual framework is the objectives.

- (1) The objectives underlie the other phases and are derived from the needs of those for whom financial information is intended.
- (2) The objectives provide a focal point for financial reporting by identifying what types of information are relevant.

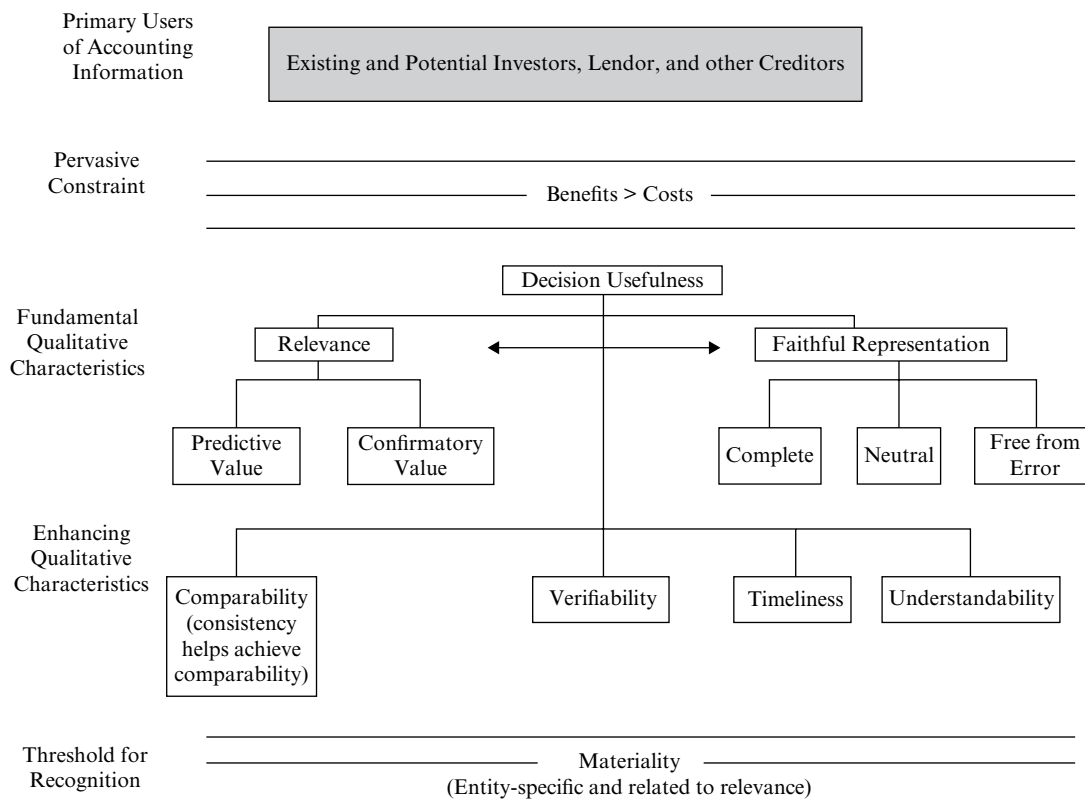

## Module 9: Basic Theory and Financial Reporting

- (c) The qualitative characteristics also underlie most of the other phases.
    - (1) They are the criteria to be used in choosing and evaluating accounting and reporting policies.
  - (d) Elements of financial statements are the components from which financial statements are created. They include assets, liabilities, equity, investments by owners, distributions to owners, comprehensive income, revenues, expenses, gains, and losses.
  - (e) In order to be included in financial statements, an element must meet criteria for recognition and possess an attribute which is relevant and can be reliably measured.
  - (f) Finally, reporting and display considerations are concerned with what information should be provided, who should provide it, and where it should be displayed.
  - (g) How the financial statements (financial position, earnings, and cash flow) are presented is the focal point of this part of the conceptual framework project.
- (2) **Objectives of Financial Reporting.** (See outline of SFAC 8, Chapter 1, in Appendix A.) The objectives of general-purpose financial reporting focus on users of financial information.
- (a) The primary users of financial reporting are investors, lenders, and other creditors who must rely on reporting entities to provide information to them.
    - (1) Although management is also interested in financial information, management does not rely on general-purpose reports because information can be obtained internally.
    - (2) In addition, although other parties such as regulators and members of the public may use financial information, they are not considered primary users according to SFAC 8.
  - (b) SFAC 8, Chapter 1, states that the objective of financial reporting is to provide
    - (1) Information that is useful to potential and existing investors, lenders, and other creditors (primary users)
    - (2) Information about the reporting entity's economic resources and claims against the reporting entity
    - (3) Changes in economic resources and claims
    - (4) Financial performance reflected by accrual accounting
    - (5) Financial performance reflected by past cash flow
    - (6) Changes in economic resources and claims not resulting from financial performance
- (3) **Qualitative Characteristics.** (See outline of SFAC 8, Chapter 3, in Appendix A.) The qualitative characteristics also underlie the conceptual framework, but in a different way. While the objectives provide an overall basis, the qualitative characteristics establish criteria for selecting and evaluating accounting alternatives which will meet the objectives. In other words, information must possess the qualitative characteristics if that information is to fulfill the objectives.
- (a) SFAC 8 views these characteristics as a hierarchy of accounting qualities, as represented in the diagram below.
    - (1) The diagram below reveals many important relationships. At the top is the cost-benefit constraint. If the benefits of information do not exceed the costs of providing that information, it would not be reported. At the bottom of the diagram is the materiality threshold. An item that is not material is not required to be disclosed. Although an item may possess the other qualitative characteristics for disclosure, it is not disclosed if it does not fall within the cost-benefit constraint or the materiality threshold.

## A HIERARCHY OF ACCOUNTING QUALITIES

- (b) The two fundamental qualitative characteristics of accounting information are relevance and faithful representation.
- (1) Relevant information is capable of making a difference in a user's decision. Financial information is relevant if it has predictive value, confirmatory value, or both.
    - (a) **Predictive value** requires that information be used to predict future outcomes.
    - (b) **Confirmatory value** requires that information either confirms or changes prior evaluations.
    - (c) An item is material if omitting it or misstating it could influence a user's decision. Therefore, the materiality threshold relates to the qualitative characteristic of relevance.
  - (2) Information has the quality of **faithful representation** if the information depicts what it purports to represent. A faithful representation should be complete, neutral, and free from error.
    - (a) Completeness requires that information is presented or depicted in a way that users can understand the item being depicted.
    - (b) Neutrality requires that the item is depicted without bias either favorably or unfavorably to users.
    - (c) Free from error means that there are no errors or omissions in the information reported.
- (c) The enhancing qualitative characteristics of accounting information are comparability, verifiability, timeliness, and understandability.
- (1) **Comparability** enables users to identify and understand similarities and differences between items.
    - (a) Consistency refers to the use of the same accounting methods in different periods. Consistency, therefore, helps achieve comparability because it helps the user make comparisons across different time periods.
  - (2) **Verifiability** occurs when different sources reach consensus or agreement on an amount of representation of an item. Direct verification occurs through direct observation; indirect verification occurs by using techniques such as checking formulas or recalculating amounts. Although forward-looking information cannot be verified, the underlying assumptions,

methods, facts, and circumstances can be disclosed to help users determine if the information is useful.

- (3) **Timeliness** requires that information is available to a decision maker when it is useful to make the decision.
  - (4) **Understandability** involves classifying, characterizing, and presenting information clearly and concisely. Understandability assumes that a user has a reasonable knowledge of business and economic activities to comprehend financial reports.
- (4) **Basic Elements.** (See outline of SFAC 6 in Appendix A.) Elements of financial statements are the ten basic building blocks from which financial statements are constructed. These definitions are based upon the objectives of SFAC 8. They are intended to assure that users will receive decision-useful information about enterprise resources (assets), claims to those resources (liabilities and equity), and changes therein (the other seven elements). In order to be included in the statements, an item must qualify as an element, meet recognition criteria, and be measurable.
- (a) The meaning of financial statement elements depends on the conceptual view of earnings which is adopted. Two basic views are the asset-liability view and the revenue-expense view.
    - (1) Under the **asset-liability view**, earnings are measured by the change (other than investments or withdrawals) in the net economic resources of an enterprise during a period. Therefore, definitions of assets and liabilities are the key under this view, and definitions of revenues, expenses, gains, and losses are secondary and are based on assets and liabilities.
    - (2) The **revenue-expense view** holds that earnings are a measure of an enterprise's effectiveness in using its inputs to obtain and sell outputs. Thus, definitions of revenues and expenses are basic to this view, and definitions of assets, liabilities, and other elements are derived from revenues and expenses.
  - (b) The definitions of all ten elements are contained in the outline of SFAC 6. Let us examine one definition in more detail.

#### EXAMPLE

“Assets are probable future economic benefits obtained or controlled by a particular entity as a result of past transactions or events.” This definition is based on the objectives and qualities of SFAC 8. The overall thrust of the objectives—predicting and evaluating future cash flows—is reflected in the phrase “probable future economic benefits.” “Control by a particular entity” is crucial if reporting an item as an asset is to have decision usefulness (or relevance). The quality of reliability is assured by the phrase “as a result of past transactions.” Information is more verifiable, valid, and neutral (the components of reliability) if based on past transactions. A similar analysis can be applied to liabilities, equity, investments by owners, distributions to owners, comprehensive income, revenues, expenses, gains and losses.

- (c) SFAC 6 also defines some other concepts in addition to the ten elements. Especially important among these eleven additional concepts are accrual accounting, realization, recognition, and matching.
    - (1) Realization and recognition are addressed by the FASB in SFAC 5.
    - (2) The definition of accrual accounting is important because SFAC 8 stated that accrual accounting should be used since it provides a better indication of future cash flows than the cash basis. This is true because accrual accounting records transactions with cash consequences (involving future cash flows) as they occur, not when the cash actually moves.
    - (3) Matching is referred to in most accounting literature as a principle, or fundamental law, of accounting.
- (5) **Recognition and Measurement.** (See outline of SFAC 5 in Appendix A.) Recognition principles establish criteria concerning when an element should be included in the statements, while measurement principles govern the valuation of those elements.
- (a) SFAC 5 established four fundamental recognition criteria: definitions, measurability, relevance, and reliability. If an item meets the definition of an element, can be reliably measured, is capable of making a difference in user decisions, and is verifiable, neutral, and representationally faithful, it should be included in the financial statements.

- (b) Five different attributes are used to measure assets and liabilities in present practice. These are discussed below in an excerpt from SFAC 5.
- (1) **Historical cost (historical proceeds).** Property, plant, and equipment and most inventories are reported at their historical cost, which is the amount of cash, or its equivalent, paid to acquire an asset, commonly adjusted after acquisition for amortization or other allocations. Liabilities that involve obligations to provide goods or services to customers are generally reported at historical proceeds, which is the amount of cash, or its equivalent, received when the obligation was incurred and may be adjusted after acquisition for amortization or other allocations.
  - (2) **Current cost.** Some inventories are reported at their current (replacement) cost, which is the amount of cash, or its equivalent, that would have to be paid if the same or an equivalent asset were acquired currently.
  - (3) **Current market value.** Some investments in marketable securities are reported at their current market value, which is the amount of cash or its equivalent, that could be obtained by selling an asset in orderly liquidation. Current market value is also generally used for assets expected to be sold at prices lower than previous carrying amounts. Some liabilities that involve marketable commodities and securities, for example, the obligations of writers of options or sellers of common shares who do not own the underlying commodities or securities, are reported at current market value. Current market value is now referred to as fair value.
  - (4) **Net realizable (settlement) value.** Short-term receivables and some inventories are reported at their net realizable value, which is the nondiscounted amount of cash, or its equivalent, into which an asset is expected to be converted in due course of business less direct costs, if any, necessary to make that conversion. Liabilities that involve known or estimated amounts of money payable at unknown future dates, for example, trade payables or warranty obligations, generally are reported at their net settlement value, which is the nondiscounted amount of cash, or its equivalent, expected to be paid to liquidate an obligation in the due course of business, including direct costs, if any, necessary to make that payment.
  - (5) **Present (or discounted) value of future cash flows.** Long-term receivables are reported at their present or discounted value (discounted at the implicit or historical rate), which is the present value of future cash inflows into which an asset is expected to be converted in due course of business less present values of cash outflows necessary to obtain those inflows. Long-term payables are similarly reported at their present or discounted value (discounted at the implicit or historical rate), which is the present or discounted value of future cash outflows expected to be required to satisfy the liability in due course of business.
- (c) SFAC 5 states that each of these attributes is appropriate in different situations and that all five attributes will continue to be used in the future.
- (d) Similarly, SFAC 5 states that nominal units of money will continue to be the measurement unit. However, if inflation increases to a level where the FASB feels that financial statements become too distorted, another unit (such as units of constant purchasing power) could be adopted.
- (e) SFAC 5 is based on the concept of financial capital maintenance. Two basic concepts of capital maintenance (financial and physical) can be used to separate return on capital (earnings) from return of capital (capital recovery). Remember, any capital which is “used up” during a period must be returned before earnings can be recognized. In other words, earnings is the amount an entity can distribute to its owners and be as well-off at the end of the year as at the beginning.
- (1) One way “well-offness” can be measured is in terms of *financial capital*. This concept of capital maintenance holds that the capital to be maintained is measured by the amount of cash (possibly restated into constant dollars) invested by owners. Earnings may not be recognized until the dollar investment in net assets, measured in units of money or purchasing power, is returned. The financial capital maintenance concept is the traditional view which is reflected in most present financial statements.
  - (2) An alternative definition of “well-offness” is expressed in terms of *physical capital*. This concept holds that the capital to be maintained is the physical productive capacity of the enterprise. Earnings may not be recognized until the current replacement costs of assets with the same productive capabilities of the assets used up are returned. The physical capital maintenance concept supports current cost accounting. Again, the physical productive capacity may be measured in nominal or constant dollars.

**EXAMPLE**

Suppose an enterprise invests \$10 in an inventory item. At year-end, the enterprise sells the item for \$15. In order to replace the item at year-end, they would have to pay \$12 rather than \$10. To further simplify, assume the increase in replacement cost is due to specific price changes, and there is no general inflation.

The **financial capital** concept would maintain that the firm is as well-off once the dollar investment (\$10) is returned. At that point, the financial capital is maintained and the remaining \$5 is a return **on** capital, or income. The **physical capital** concept maintains that the firm is not as well-off until the physical capacity (a similar inventory item) is returned. Therefore, the firm must reinvest \$12 to be as well-off. Then physical capital is maintained, and only the remaining \$3 is a return **on** capital or income.

- (f) SFAC 5 also gives specific guidance as to recognition of revenues and gains, and expenses and losses, as indicated below.
- (1) Recognize **revenues** when realized or realizable (when related assets received or held are readily convertible to known amounts of cash or claims to cash) and earned
  - (2) Recognize **gains** when realized or realizable
  - (3) Recognize **expenses** when economic benefits are consumed in revenue-earning activities, or when future economic benefits are reduced or eliminated
    - (a) When economic benefits are consumed during a period, the expense may be recognized by matching (such as cost of goods sold), immediate recognition (such as selling and administrative salaries), or systematic and rational allocation (such as depreciation).
  - (4) Recognize **losses** when future economic benefits are reduced or eliminated
- (g) Revenues, expenses, gains, and losses are used to compute **earnings**.
- (1) Earnings is the extent to which revenues and gains associated with cash-to-cash cycles substantially completed during the period exceed expenses and losses directly or indirectly associated with those cycles.
  - (2) Earnings adjusted for cumulative accounting adjustments and other nonowner changes in equity (such as foreign currency translation adjustments) is **comprehensive income**.
    - (a) Per SFAC 5, comprehensive income would reflect all changes in the equity of an entity during a period, except investments by owners and distributions to owners. However, accounting standards only go part way in implementing this concept.

**NOW REVIEW MULTIPLE-CHOICE QUESTIONS 1 THROUGH 17**

- (6) **Cash Flow Information and Present Value.** (See outline of SFAC 7 in Appendix A.) As discussed earlier, the attributes most often used to measure assets and liabilities include observable marketplace-determined amounts. These observable marketplace amounts (such as current cost) are generally more reliable and are determined more efficiently than measurements which employ estimates of future cash flows. However, when observable amounts are unavailable, accountants often turn to estimated cash flows to determine the carrying amount of an asset or liability. Since those cash flows often occur in one or more future periods, questions arise regarding whether the accounting measurement should reflect the present value or the undiscounted sum of those cash flows.
- (a) In February 2000, the FASB issued SFAC 7, *Using Cash Flow Information and Present Value in Accounting Measurements*.
    - (1) SFAC 7 provides a framework for using future cash flows as the basis of an accounting measurement.

**NOTE:** SFAC 7 addresses measurement issues, not recognition questions.

**EXAMPLE**

SFAC 7 does not specify **when** fresh-start measurements are appropriate. Fresh-start measurements are defined by the FASB as measurements in periods following initial recognition that establish a new carrying amount unrelated to previous amounts and accounting conventions.

- (2) SFAC 7 applies only to measurements at initial recognition, fresh-start measurements, and amortization techniques based on future cash flows.
- (3) SFAC 7 does not apply to measurements based on the amount of cash or other assets paid or received, or on observation of fair values in the marketplace.
  - (a) If such observations or transactions are present, the measurement would be based on them, not on future cash flows. The marketplace assessment of present value is already embodied in the transaction price.
- (b) The framework provides general principles governing the use of present value, especially when the amount of future cash flows, their timing, or both, are uncertain. The framework provided by SFAC 7 also describes the objective of present value in accounting measurements.
  - (1) The present value formula is a tool used to incorporate the time value of money in a measurement. Thus, it is useful in financial reporting whenever an item is measured using estimated future cash flows.
  - (2) The FASB defines present value as the current measure of an estimated future cash inflow or outflow, discounted at an interest rate for the number of periods between today and the date of the estimated cash flow.
  - (3) The objective of using present value in an accounting measurement is to capture, to the extent possible, the economic difference between sets of future cash flows.
- (c) Assets with the same cash flows are distinguished from one another by the timing and uncertainty of those cash flows.

**NOTE:** Accounting measurement based on undiscounted cash flows would measure assets with the same cash flows at the same amount.

**EXAMPLE**

An asset with a contractual cash flow of \$28,000 due in ten days would be equal to an asset with an *expected* cash flow of \$28,000 due in ten years.

- (1) Present value helps to distinguish between cash flows that might otherwise appear similar.
- (2) A present value measurement that incorporates the uncertainty in estimated cash flows always provides more relevant information than a measurement based on the undiscounted sum of those cash flows, or a discounted measurement that ignores uncertainty.
- (d) To provide relevant information for financial reporting, present value must represent some observable measurement attribute of assets or liabilities. This attribute is fair value. Fair value is “the price that would be received to sell an asset or paid to transfer a liability in an orderly transaction between market participants at the measurement date under market conditions.”
- (e) **The only objective of present value, when used in accounting measurements at initial recognition and fresh-start measurements, is to estimate fair value.**
  - (1) In the absence of observed transaction prices, accounting measurements at initial recognition and fresh-start measurements should attempt to capture the elements that taken together would comprise a market price if one existed.

- (a) Marketplace participants attribute prices to assets and liabilities. In doing so they distinguish the risks and rewards of one asset or liability from those of another. An observed market price encompasses the consensus view of all marketplace participants about an asset's or liability's utility, future cash flows, the uncertainties surrounding those cash flows, and the amount that marketplace participants demand for bearing those uncertainties.
- (b) While the expectations of an entity's management are often useful and informative in estimating asset and liability values, the marketplace is the final judge of asset and liability values. An entity is required to pay the market's price when it acquires an asset or settles a liability in a current transaction, regardless of the intentions or expectations of the entity's management. Therefore, for measurements at initial recognition or for fresh-start measurements, fair value provides the most complete and representationally faithful measurement of the economic characteristics of an asset or a liability.
- (f) A present value measurement that is able to capture the economic differences between various assets and liabilities would include the following elements according to SFAC 7:
- (1) An estimate of the future cash flow, or in more complex cases, series of future cash flows at different times.
  - (2) Expectations about possible variations in the amount or timing of those cash flows.
  - (3) The time value of money, represented by the risk-free rate of interest.
  - (4) The price for bearing the uncertainty inherent in the asset or liability.
  - (5) Other, sometimes unidentifiable factors, including illiquidity and market imperfections.
- (g) SFAC 7 contrasts two approaches to computing present value. Either approach may be used to estimate the fair value of an asset or a liability, depending on the circumstances.
- (1) In the expected cash flow approach only the time value of money, represented by the risk-free rate of interest, is included in the discount rate; the other factors cause adjustments in arriving at risk-adjusted expected cash flows.
  - (2) In a traditional approach to present value, adjustments for factors [2] – [5] are embedded in the discount rate.
- (h) While techniques used to estimate future cash flows and interest rates vary due to situational differences, certain general principles govern any application of present value techniques in measuring assets. These are discussed in the outline of SFAC 7.
- (i) Traditionally, accounting applications of present value have used a single set of estimated cash flows and a single interest rate, often described as “the rate commensurate with risk.”
- (1) The *discount rate adjustment approach* assumes that a single interest rate convention can reflect all of the expectations about future cash flows and the appropriate risk premium. While the traditional approach may be adequate for some simple measurements, the FASB found that it does not provide the tools needed to address more complex problems.
  - (2) The *expected cash flow (present value) approach* was found to be a more effective measurement tool than the discount rate adjustment approach in many situations. **The expected cash flow approach** uses all expectations about possible cash flows instead of the single most-likely cash flow. The expected cash flow approach focuses on direct analysis of the cash flows in question and on explicit assumptions about the range of possible estimated cash flows and their respective probabilities.

#### EXAMPLE

A cash flow might be \$100, \$200, or \$300 with probabilities of 10%, 60%, and 30%, respectively. The expected cash flow is \$220 ( $\$100 \times .1 + \$200 \times .6 + \$300 \times .3 = \$220$ ). However, the traditional approach would choose \$200 as the best estimate or most-likely amount.

- (3) When the timing of cash flows is uncertain, the expected cash flow approach allows present value techniques to be utilized. The following example is from SFAC 7.

**EXAMPLE**

A cash flow of \$1,000 may be received in one year, two years, or three years with probabilities of 10%, 60%, and 30%, respectively. Notice that the expected present value of \$892.36 differs from the traditional notion of a best estimate of \$902.73 (the 60% probability). The following shows the computation of expected present value:

Present value of \$1,000 in one year at 5%	\$952.38	
Probability	<u>10.00%</u>	\$95.24
Present value of \$1,000 in two years at 5.25%	\$902.73	
Probability	<u>60.00%</u>	541.64
Present value of \$1,000 in three years at 5.50%	\$851.61	
Probability	<u>30.00%</u>	<u>255.48</u>
Expected present value		<u>\$892.36</u>

- (a) An interest rate in a traditional present value computation is unable to reflect any uncertainties in the timing of cash flows.
- (b) By incorporating a range of possible outcomes (with their respective timing differences), the expected cash flow approach accommodates the use of present value techniques when the timing of cash flows is uncertain.
- (j) An estimate of fair value should include an adjustment for risk.
- (1) The risk adjustment is the price that marketplace participants are able to receive for bearing the uncertainties in cash flows.
  - (2) This assumes that the amount is identifiable, measurable, and significant.
  - (3) Present value measurements occur under conditions of uncertainty. In SFAC 7, the term **uncertainty** refers to the fact that the cash flows used in a present value measurement are estimates, rather than known amounts. Uncertainty has accounting implications because it has economic consequences. Business and individuals routinely enter into transactions based on expectations about uncertain future events. The outcome of those events will place the entity in a financial position that may be better or worse than expected, but until the uncertainties are resolved, the entity is **at risk**.
  - (4) In common usage, the word **risk** refers to any exposure to uncertainty in which that exposure has potential negative consequences. Risk is a relational concept. A particular risk can only be understood in context. In most situations, marketplace participants are said to be **risk adverse**. They prefer situations with less uncertainty relative to an expected outcome. Marketplace participants seek compensation for accepting uncertainty. This is referred to as a **risk premium**. They demand more compensation (a higher premium) to assume a liability with expected cash flows that are uncertain, than to assume a liability with cash flows of the same expected amount but no uncertainty. This phenomenon can be described with the financial axiom, “the greater the risk, the greater the return.” The objective of including uncertainty and risk in accounting measurements is to imitate, to the extent possible, the market’s behavior toward assets and liabilities with uncertain cash flows.
- (k) If prices for an asset or liability or an essentially similar asset or liability can be observed in the marketplace, there is no need to use present value measurements. The marketplace assessment of present value is already embodied in the price. However, if observed prices are unavailable, present value measurements are often the best available technique with which to estimate what a price would be.
- (l) The measurement of liabilities sometimes involves problems different from those encountered in the measurement of assets. Thus, measurement of liabilities may require different techniques in arriving at fair value. Liabilities can be held by individuals who sell their rights differently than they would sell other assets. Liabilities are sometimes settled through assumption by a third party. To estimate the liability’s fair value, accountants must estimate the price necessary to pay the third party to assume the liability.
- (1) The most relevant measure of a liability always reflects the credit standing of the entity obligated to pay. An entity’s credit standing affects the interest rate at which it borrows in the marketplace. The initial proceeds of a loan, therefore, always reflect the entity’s credit standing at that time. Likewise, the price at which others buy and sell the entity’s loan includes their assessment of the entity’s ability to repay. The failure to include changes in credit standing in the measurement of a liability ignores economic differences between liabilities.

- (m) Present value techniques are also used in periodic reporting conventions known collectively as **interest methods of allocation**. Financial statements usually attempt to represent changes in assets and liabilities from one period to the next. In principle, the purpose of all accounting allocations is to report changes in the value, utility, or substance of assets and liabilities over time.
- (1) Accounting allocations attempt to relate the change in an asset or liability to some observable real-world phenomenon. An interest method of allocation relates changes in the reported amount with changes in the present value of a set of future cash inflows or outflows. However, allocation methods are only representations. They are not measurements of an asset or liability. The selection of a particular allocation method and the underlying assumptions always involves a degree of arbitrariness. As a result, no allocation method can be demonstrated to be superior to others in all circumstances. The FASB will continue to decide whether to require an interest method of allocation on a project-by-project basis. Refer to the outline of SFAC 7 for further information regarding the interest method of allocation.

**NOW REVIEW MULTIPLE-CHOICE QUESTIONS 18 THROUGH 25**

**2. Income Determination** (See outlines of SFAC 5, 6, and 8 in Appendix A.)

- a. The primary objective of accounting is to measure income. Income is a measure of management's efficiency in combining the factors of production into desired goods and services.
- (1) Efficient firms with prospects of increased efficiency (higher profits) have greater access to financial capital and at lower costs. Their stock usually sells at a higher price-earnings ratio than the stock of a company with less enthusiastic prospects. The credit rating of the prospectively efficient company is probably higher than the prospectively less efficient company. Thus, the "cost of capital" will be lower for the company with the brighter outlook (i.e., lower stock dividend yield rates and/or lower interest rates).
- b. The entire process of acquiring the factors of production, processing them, and selling the resulting goods and services produces revenue. The acquisition of raw materials is part of the revenue-producing process, as is providing warranty protection.
- c. Under the accrual basis of accounting, revenue is generally recognized at the point of sale (ASC Topic 605) or as service is performed. The point of sale is when title passes: generally when seller ships (FOB shipping point) or when buyer receives (FOB destination).
- (1) Three exceptions exist to the general revenue recognition rule: during production, at the point where production is complete, and at the point of cash collection. The table below compares the three exceptions with the general revenue recognition rule (point of sale).

Recognition basis/ source of GAAP	Accounting method	Criteria for use of basis	Reason(s) for departing from sale basis
• <b>Point of sale/ ASC Topic 605</b>	• Transactions approach (sales basis)	<ul style="list-style-type: none"> <li>• Exchange has taken place</li> <li>• Earnings process is (virtually) complete</li> </ul>	
• <b>During production basis/ASC Topic 605</b>	• Percentage-of-completion	<ul style="list-style-type: none"> <li>• Long-term construction,* property, or service contract</li> <li>• Dependable estimates of extent of progress and cost to complete</li> <li>• Reasonable assurance of collectibility of contract price</li> </ul>	<ul style="list-style-type: none"> <li>• Availability of evidence of ultimate proceeds</li> <li>• Better measure of periodic income</li> <li>• Avoidance of fluctuations in revenues, expenses, and income</li> </ul>
• <b>Completion-of-production basis/ASC Topic 330</b>	• Net realizable value	<ul style="list-style-type: none"> <li>• Immediate marketability at quoted prices</li> <li>• Unit interchangeability</li> <li>• Difficulty of determining costs</li> </ul>	<ul style="list-style-type: none"> <li>• Known or determinable revenues</li> <li>• Inability to determine costs and thereby defer expense recognition until sale</li> </ul>

Recognition basis/ source of GAAP	Accounting method	Criteria for use of basis	Reason(s) for departing from sale basis
<ul style="list-style-type: none"> <li>• <b>Cash collection basis/ASC Topic 605</b></li> </ul>	<ul style="list-style-type: none"> <li>• Installment and cost recovery methods</li> </ul>	<ul style="list-style-type: none"> <li>• Absence of a reasonable basis for estimating degree of collectibility</li> </ul>	<ul style="list-style-type: none"> <li>• Level of uncertainty with respect to collection of the receivable precludes recognition of gross profit before cash is received</li> </ul>

\*Note that the “completed contract” method for construction contracts is not a departure from the sale basis.

SOURCE: Adapted from Henry R. Jaenicke, *Survey of Present Practices in Recognizing Revenues, Expenses, Gains, and Losses*, FASB, 1981.

- (2) Under accrual accounting, expenses are recognized as related revenues are recognized, that is, (product) expenses are matched with revenues. Some (period) expenses, however, cannot be associated with particular revenues. These expenses are recognized as incurred.
  - (a) **Product costs** are those which can be associated with particular sales (e.g., cost of sales). Product costs attach to a unit of product and become an expense only when the unit to which they attach is sold. This is known as associating “cause and effect.”
  - (b) **Period costs** are not particularly or conveniently assignable to a product. They become expenses due to the passage of time by
    - (1) Immediate recognition if the future benefit cannot be measured (e.g., advertising)
    - (2) Systematic and rational allocation if benefits are produced in certain future periods (e.g., asset depreciation)
  - (c) Thus, income is the net effect of inflows of revenue and outflows of expense during a period of time. The period in which revenues and expenses are taken to the income statement (recognized) is determined by the above criteria.
- (3) **Cash basis accounting**, in contrast to accrual basis accounting, recognizes income when cash is received and expenses when cash is disbursed. Cash basis accounting is subject to manipulation (i.e., cash receipts and expenses can be switched from one year to another by management). Another reason for adopting accrual basis accounting is that economic transactions have become more involved and multiperiod. An expenditure for a fixed asset may produce revenue for years and years.

**NOW REVIEW MULTIPLE-CHOICE QUESTIONS 26 THROUGH 28**

### 3. Accruals and Deferrals

- a. **Accrual**—accrual-basis recognition precedes (leads to) cash receipt/expenditure
  - (1) Revenue—recognition of revenue earned, but not received
  - (2) Expense—recognition of expense incurred, but not paid
- b. **Deferral**—cash receipt/expenditure precedes (leads to) accrual-basis recognition
  - (1) Revenue—postponement of recognition of revenue; cash is received, but revenue is not earned
  - (2) Expense—postponement of recognition of expense; cash is paid, but expense is not incurred
  - (3) A deferral postpones recognition of revenue or expense by placing the amount in liability or asset accounts.
  - (4) Two methods are possible for deferring revenues and expenses depending on whether real or nominal accounts are originally used to record the cash transaction.

<b>EXAMPLE</b>				
<b>BOOKKEEPING METHODS</b>				
<b>Deferrals of Expense</b>				
	<b>Expense method</b>		<b>Asset method</b>	
When paid	Insurance expense	xx	Prepaid insurance	xx
	Cash	xx	Cash	xx
Year-end	Prepaid insurance	xx	Insurance expense	xx
	Insurance expense	xx	Prepaid insurance	xx
Reverse	Yes		No	
<b>Deferrals of Revenue</b>				
	<b>Revenue method</b>		<b>Liability method</b>	
When received	Cash	xx	Cash	xx
	Rent revenue	xx	Unearned rent	xx
Year-end	Rent revenue	xx	Unearned rent	xx
	Unearned rent	xx	Rent revenue	xx
Reverse	Yes		No	
<b>Accruals</b>				
	<b>Expense</b>		<b>Revenue</b>	
Adjustment	Wages expense	xx	Interest receivable	xx
	Wages payable	xx	Interest revenue	xx
Reverse	Yes		Yes	

- c. Entries are reversed for bookkeeping expediency. If accruals are reversed, the subsequent cash transaction is reflected in the associated nominal account. If accruals are not reversed, the subsequent cash transaction must be apportioned between a nominal and real account.

Cash	(amount received)
Revenue	(earned in current period)
Revenue receivable	(accrual at last year-end)

- (1) Accruals do not have two methods, but can be complicated by failure to reverse adjusting entries (also true for deferrals initially recorded in nominal accounts).

#### 4. Cash to Accrual

- a. Many smaller companies use the **cash basis** of accounting, where revenues are recorded when cash is received and expenses are recorded when cash is paid (except for purchases of fixed assets, which are capitalized and depreciated). Often the accountant is called upon to convert cash basis accounting records to the accrual basis. This type of problem is also found on the CPA examination.
- b. When making journal entries to adjust from the cash basis to the accrual basis, it is important to identify two types of amounts:
- (1) The **current balance** in the given account (cash basis) and
  - (2) The **correct balance** in the account (accrual basis).

- (a) The journal entries must adjust the account balances from their current amounts to the correct amounts.
- c. It is also important to understand relationships between balance sheet accounts and income statement accounts.
  - (1) When adjusting a balance sheet account from the cash basis to the accrual basis, the other half of the entry will generally be to the related income statement account. Thus, when adjusting accounts receivable, the related account is sales; for accounts payable, purchases; for prepaid rent, rent expense; and so on.

**EXAMPLE**

Assume a company adjusts to the accrual basis every 12/31; during the year, they use the cash basis. The 12/31/Y1 balance in accounts receivable, after adjustment, is \$17,000. During year 2, whenever cash is collected, the company debits cash and credits sales. Therefore, the 12/31/Y2 balance in accounts receivable **before adjustment** is still \$17,000. Suppose the **correct** 12/31/Y2 balance in accounts receivable is \$28,000. The necessary entry is

Accounts receivable	11,000
Sales	11,000

This entry not only corrects the accounts receivable account, but also increases sales since unrecorded receivables means that there are also unrecorded sales. On the other hand, suppose the **correct** 12/31/Y2 balance of accounts receivable is \$12,500. The necessary entry is

Sales	4,500	
Accounts receivable	4,500	

Sales is debited because during year 2, \$4,500 more cash was collected on account than should be reported as sales. When cash is received on account the transaction is recorded as a credit to sales, not accounts receivable. This overstates the sales account.

**EXAMPLE**

Some problems do not require journal entries, but instead a computation of accrual amounts from cash basis amounts, as in the example below.

	12/31/Y1	12/31/Y2	Year 2
Rent payable	\$4,000	\$6,000	
Prepaid rent	8,000	4,500	
Cash paid for rent			\$27,000

The rent expense can be computed using either T-accounts or a formula.

T-accounts are shown next.

<table border="1" style="margin: auto;"> <tr><td colspan="2" style="text-align: center;">Rent Payable</td></tr> <tr><td style="width: 50%; text-align: right;">27,000</td><td style="width: 50%; text-align: left;">4,000 29,000</td></tr> <tr><td></td><td style="text-align: left;">6,000</td></tr> </table>	Rent Payable		27,000	4,000 29,000		6,000	→	<table border="1" style="margin: auto;"> <tr><td colspan="2" style="text-align: center;">Rent Expense</td></tr> <tr><td style="width: 50%; text-align: right;">29,000</td><td style="width: 50%; text-align: left;">3,500</td></tr> <tr><td></td><td style="text-align: left;">32,500</td></tr> </table>	Rent Expense		29,000	3,500		32,500
Rent Payable														
27,000	4,000 29,000													
	6,000													
Rent Expense														
29,000	3,500													
	32,500													
<table border="1" style="margin: auto;"> <tr><td colspan="2" style="text-align: center;">Prepaid Rent</td></tr> <tr><td style="width: 50%; text-align: right;">8,000</td><td style="width: 50%; text-align: left;">3,500</td></tr> <tr><td></td><td style="text-align: left;">4,500</td></tr> </table>	Prepaid Rent		8,000	3,500		4,500	→							
Prepaid Rent														
8,000	3,500													
	4,500													

The use of a formula is illustrated below.

Payments	+	Beginning	+	Ending	-	Ending	-	Beginning	=	Expense
\$27,000	+	8,000	+	6,000	-	4,500	-	4,000	=	\$32,500

(2) Formulas for conversion of various income statement amounts from the cash basis to the accrual basis are summarized in the following equations.

(a) Since the accrual-basis numbers can be derived with T-accounts, you should not have to memorize the formulas.

<i>Cash basis</i>		<i>Additions</i>		<i>Deductions</i>		<i>Accrual basis</i>
Collections from sales	+	$\left( \begin{array}{l} \text{Ending AR (a)} \\ \text{AR written off (b)} \end{array} \right)$	-	Beginning AR (c)	=	Sales
Collections from other revenues	+	$\left( \begin{array}{l} \text{Beginning unearned revenue (d)} \\ \text{Ending revenue receivable (e)} \end{array} \right)$	-	$\left( \begin{array}{l} \text{Ending unearned revenue (f)} \\ \text{Beginning revenue receivable (g)} \end{array} \right)$	=	Other revenues
Payments for purchases	+	$\left( \begin{array}{l} \text{Beginning inventory (h)} \\ \text{Ending AP (i)} \end{array} \right)$	-	$\left( \begin{array}{l} \text{Ending inventory (j)} \\ \text{Beginning AP (k)} \end{array} \right)$	=	Cost of goods sold
Payments for expenses	+	$\left( \begin{array}{l} \text{Beginning prepaid expense (l)} \\ \text{Ending accrued expenses payable (m)} \end{array} \right)$	-	$\left( \begin{array}{l} \text{Ending prepaid expenses (n)} \\ \text{Beginning accrued expenses payable (o)} \end{array} \right)$	=	Operating expenses*

\*Provision must also be made for depreciation expense and similar write-offs and bad debt expense.

- (a) Ending AR and related sales have not yet been recorded
- (b) AR written off reduced AR but did not result in cash collected
- (c) Beginning AR was collected and recorded as sale during the period but was sale of the prior period
- (d) Beginning unearned revenue was collected and recorded as revenue in the prior period but was earned in the current period
- (e) Ending revenue receivable was earned during the period but has not yet been recorded because it has not been collected
- (f) Ending unearned revenue was recorded upon collection as revenue but has not yet been earned
- (g) Beginning revenue receivable was recorded during the current period upon collection as revenue but was earned last period
- (h) Beginning inventory was sold during the period
- (i) Ending AP and related purchases have not yet been recorded
- (j) Ending inventory must be excluded from cost of goods sold
- (k) Beginning AP reflects purchases last period which were not paid for or recorded until the current period
- (l) Beginning prepaid expenses were recorded as expenses when paid in a prior period but are expenses of the current period
- (m) Ending accrued expenses payable have not yet been recorded
- (n) Ending prepaid expenses were recorded as expenses when paid this period but are expenses of future periods
- (o) Beginning accrued expenses payable were recorded currently as expenses when paid but are expenses of the prior period

**NOW REVIEW MULTIPLE-CHOICE QUESTIONS 29 THROUGH 53**

### 5. Installment Sales

- a. Revenue is recognized as cash is collected. Thus, revenue recognition takes place at the point of cash collection rather than the point of sale. Installment sales accounting can only be used where "collection of the sale price is not reasonably assured" (ASC Topic 605) (APB 10).
- b. Under the installment sales method, gross profit is deferred to future periods and recognized proportionately to collection of the receivables. Installment receivables and deferred gross profit accounts must be kept separate by year, because the gross profit rate usually varies from year to year.

#### EXAMPLE

Year	Sales	Cost of sales	Collections of	
			Year 1	Year 3
1	300,000	225,000*	80,000	--
2	--	--	120,000	--
3	200,000	160,000**	100,000	100,000

\*25% gross profit rate

\*\*20% gross profit rate

	Year 1	Year 2	Year 3
<b>To record sale</b>			
Install AR-1	300,000	--	--
Install AR-3	--	--	200,000
Install sales	300,000	--	200,000
<b>To record cash receipt</b>			
Cash	80,000	120,000	200,000
Install AR-1	80,000	120,000	100,000
Install AR-3	--	--	100,000
<b>To record CGS</b>			
Install cost of sales	225,000	--	160,000
Inventory (or Purchases)	225,000	--	160,000
<b>To defer gross profit</b>			
Install sales	300,000	--	200,000
Install cost of sales	225,000	--	160,000
Deferred install GP-1	75,000	--	--
Deferred install GP-3	--	--	40,000
<b>To recognize gross profit</b>			
Deferred install GP-1	20,000 <sup>a</sup>	30,000 <sup>b</sup>	25,000 <sup>c</sup>
Deferred install GP-3	--	--	20,000 <sup>d</sup>
GP realized on install method	20,000	30,000	45,000
<sup>a</sup> (25% × 80,000)	<sup>c</sup> (25% × 100,000)		
<sup>b</sup> (25% × 120,000)	<sup>d</sup> (20% × 100,000)		

c. Summary of accounts used in installment sales accounting for year 3

**BALANCE SHEET**

Cash		Installment AR—Year 1		Installment AR—Year 3	
(B)		Ending balance from year 1 sales	(B)	(A)	(B)
Inventory (or Purchases)		Deferred Gross Profit—Year 1		Deferred Gross Profit—Year 3	
	(C)	(E)	Ending balance from year 1 installment sales	(E)	(D)

**INCOME STATEMENT**

Cost of Installment Sales		Installment Sales	
(C)	(D)	(D)	(A)
Realized Gross Profit on Installment Sales		Income Summary	
(F)	(E)		(F)

**Explanation of Select Journal Entries**

- (A) To record installment sales year 3
- (B) To record cash collected from year one and year three installment receivables
- (C) To record cost of goods sold (perpetual or periodic) for year one and year three
- (D) To close installment sales and cost of installment sales accounts
- (E) To remove gross profit realized through collections from the deferred gross profit account  
(Gross profit rate for year one × Cash collections from year one receivables)  
(Gross profit rate for year three × Cash collections from year three receivables)
- (F) To close realized gross profit at year-end

## 6. Cost Recovery Method

- a. The cost recovery method is similar to the installment sales method in that gross profit on the sale is deferred. The difference is that no profit is recognized until the cumulative receipts exceed the cost of the asset sold.

### EXAMPLE

In our installment sales example, the entire profit from year one sales (\$75,000) would be recognized in year three. Profit on year three sales will be recognized in year four to the extent that in year four cash collections on year three sales exceed the \$60,000 (\$160,000 cost – \$100,000 cash collected) unrecovered cost on year three sales.

- b. If interest revenue was to be earned by the seller, it would likewise be deferred until the entire cost was recovered.
- c. The cost recovery method is used when the uncertainty of collection is so great that even use of the installment method is precluded.

### NOW REVIEW MULTIPLE-CHOICE QUESTIONS 54 THROUGH 66

## 7. Franchise Agreements

- a. ASC Topic 952 (SFAS 45—see outline in Appendix A) provides that the initial franchise fee be recognized as revenue by the franchiser **only** upon substantial performance of their initial service obligation.
- b. The amount and timing of revenue recognized depends upon whether the contract contains bargain purchase agreements, tangible property, and whether the continuing franchise fees are reasonable in relation to future service obligations.
- c. Direct franchise costs are deferred until the related revenue is recognized.

## 8. Real Estate Transactions

- a. Accounting treatment for real estate sales is provided by ASC Topics 360 and 976 (SFAS 66). Due to the variety of methods of financing real estate transactions, determining when the risks and rewards of ownership have been clearly transferred and when revenue should be recognized becomes very complex.
- b. Profit from real estate sales may be recognized in full, provided the profit is determinable and the earnings process is virtually complete. Additionally, the following four criteria must be met to recognize profit in full at the point of sale:
- (1) A sale is consummated.
  - (2) The buyer's initial and continuing investments are adequate to demonstrate a commitment to pay for the property.
  - (3) The seller's receivable is not subject to future subordination.
  - (4) The seller has transferred to the buyer the usual risks and rewards of ownership in a transaction that is, in substance, a sale and does not have a substantial continuing involvement in the property.
- c. Depending on which combination of criteria is met, the real estate sales will be recorded using one of the following methods:
- (1) Deposit.
  - (2) Cost recovery.
  - (3) Installment.
  - (4) Reduced profit.
  - (5) Percentage-of-completion.
  - (6) Full accrual.
- (a) The deposit and reduced profit methods require explanation. In accordance with the **deposit method**, payments received are recorded as a liability until the contract is canceled or a sale is achieved.
  - (b) Under the **reduced profit method**, the seller recognizes a portion of profit at the time of sale with the remaining portion recognized in future periods. Profit recognized at the time of sale is determined by

calculating the present value of the buyer's receivable and applying a formula. The reduced profit recognized at the time of sale is the gross profit less the present value of the receivable as determined above. The remaining profit is recognized in future periods. See the outline of SFAS 66 in Appendix A.

#### 9. Multiple-Deliverable Revenue Arrangements

Another exception to the general revenue recognition principles is for multiple-deliverable revenue arrangements.

- a. If an entity has revenue generating activities to provide multiple products or services at different times, the arrangement should be evaluated to determine if there are separate units being delivered. Two conditions must be met for an item to be considered a separate unit of accounting:
  - (1) The delivered item has value on a stand-alone basis (i.e., it can be sold separately by the vendor or customer) and
  - (2) If the arrangement includes a right of return for the delivered item, the undelivered item must be substantially in control of the vendor.
  - (3) If it meets both requirements, the revenue arrangement is divided into separate units based on the relative selling prices. Revenue recognition criteria are then applied to each of the separate units.

#### 10. Research or Development Accounted for on the Milestone Basis

- a. The **milestone method** of accounting may be used in accounting for research and development arrangements in which revenue (payments) to the vendor is contingent on achieving one or more substantive milestones related to deliverables or units of accounting.
  - (1) A substantive milestone is an uncertain event that can only be achieved based on the vendor's performance and
    - (a) It is commensurate with the vendor's performance or enhancement of value resulting from the vendor's performance.
    - (b) It relates solely to past performance.
    - (c) It is reasonable relative to all of the deliverables and payment terms.
  - (2) If all of these circumstances are met, the vendor may recognize the contingent revenue in its entirety in the period in which the milestone is achieved.
- b. The notes to the financial statements should disclose its accounting policy for the recognition of milestone payments. In addition the following should be disclosed:
  - (1) A description of the overall arrangement.
  - (2) A description of each milestone and related contingent consideration.
  - (3) A determination of whether each milestone is considered substantive.
  - (4) The factors considered in determining whether the milestones are substantive.
  - (5) The amount of consideration recognized during the period for the milestone or milestones.

#### 11. Software Revenue Recognition

- a. Software products that require significant production, modification, or customization should be accounted for using ASC Topic 605 (ARB 45, *Long-Term Construction-Type Contracts*).
  - (1) Software products that are included with tangible products (i.e., hardware) and are required for the product's functionality are excluded from these software revenue recognition rules.
- b. Software products that do not require significant production, modification, or customization should recognize revenue when all of the following criteria are met:
  - (1) Persuasive evidence of an arrangement exists.
  - (2) Delivery has occurred.
  - (3) Vendor's fee is fixed or determinable.
  - (4) Collectibility is probable.
- c. The portion of the fee allocated to an element should be recognized using the same list of criteria.
  - (1) Delivery of an element is considered not to have occurred if other elements essential to the functionality of it are undelivered.
  - (2) No portion of the fee meets the criterion of collectibility if the portion of the fee allocable to delivered elements is subject to forfeiture, refund, or other concession if undelivered elements are not delivered.

- d. Arrangement that includes multiple elements should allocate the fee to the elements based on vendor-specific objective evidence of fair value, regardless of stated prices in a contract.
- (1) Multiple elements
    - (a) Arrangements consisting of multiple software deliverables including
      - (1) Software products.
      - (2) Upgrades/enhancements.
      - (3) Postcontract customer service (PCS).
      - (4) Services.
      - (5) Elements deliverable on a when-and-if-available basis.
    - (2) Vendor-specific objective evidence of fair value
      - (a) Limited to
        - (1) Price charged when the same element is sold separately.
        - (2) Price established by management if not sold separately yet. It should be probable that the price will not change before being sold separately.
      - (b) Amount allocated to an undelivered element should not be adjusted. If it is probable that the amount allocated will result in a loss, ASC Topic 450, *Contingencies* (SFAS 5), should be followed.
    - (3) Insufficient vendor-specific objective evidence of fair value
      - (a) Defer revenue until whichever one of the following occurs first:
        - (1) Sufficient vendor-specific objective evidence does exist.
        - (2) All elements have been delivered.
      - (b) Exceptions
        - (1) The PCS is the only undelivered element—recognize entire fee ratably.
        - (2) Only undelivered element is services that don't require significant production, modification, or customization—recognize the entire fee over the period in which the services will be performed.
        - (3) Arrangement is a subscription in substance—recognize entire fee ratably.
        - (4) Fee based on the number of copies.
- e. Separate accounting for service element of an arrangement is required if both of following criteria met
- (1) Services not essential to functionality of any other element of the transaction.
  - (2) Services are described in the contract such that total price of the arrangement would be expected to vary as result of inclusion or exclusion of the services.

## 12. Sales Basis Criteria for Selected Transactions

- a. Under GAAP, specific rules have been developed which are stated in the form of conditions which must be met before it is acceptable to recognize profit from “a sale in the ordinary course of business.” Unfortunately, these rules represent a patchwork set of criteria for applying the sales basis of revenue recognition. This patchwork set of criteria contains many inconsistencies either in the results obtained or in the rationale justifying the criteria.
- b. The table below summarizes the criteria which have been devised for applying the sales basis to selected transactions involving the sale of assets.

Recognition issue/ source of GAAP	Factors to be considered before recognizing revenue on the sale basis	Conditions that cause recognition to be delayed beyond time of sale
<ul style="list-style-type: none"> <li>• <b>Sale with a right of return/ASC Topic 605 (SFAS 48)</b></li> </ul>	<ul style="list-style-type: none"> <li>• Whether economic substance of the transaction is a sale or a financing arrangement</li> <li>• Determination of sales price</li> <li>• Probability of collection of sales price</li> <li>• Seller's future obligations</li> <li>• Predictability of returns</li> </ul>	<ul style="list-style-type: none"> <li>• Sales price not fixed or determinable</li> <li>• Payment excused until product is sold</li> <li>• Payment excused if property stolen or damaged</li> <li>• Buyer without separate economic substance</li> <li>• Seller's obligation to bring about resale of the property</li> <li>• Inability to predict future returns</li> </ul>

Recognition issue/ source of GAAP	Factors to be considered before recognizing revenue on the sale basis	Conditions that cause recognition to be delayed beyond time of sale
<ul style="list-style-type: none"> <li>• <b>Product financing arrangement/ ASC Topic 470 (SFAS 49)</b></li> </ul>	<ul style="list-style-type: none"> <li>• Whether risks and rewards of ownership are transferred</li> </ul>	<ul style="list-style-type: none"> <li>• Agreement requires repurchase at specified prices or provides compensation for losses</li> </ul>
<ul style="list-style-type: none"> <li>• <b>Real estate sale/ ASC Topics 360 and 976 (SFAS 66)</b></li> </ul>	<ul style="list-style-type: none"> <li>• Probability of collection</li> <li>• Seller's continued involvement</li> <li>• Whether economic substance of the transaction is a sale of real estate or another type of transaction such as a service contract</li> </ul>	<ul style="list-style-type: none"> <li>• Inadequate buyer investment in the property</li> <li>• Seller's continuing obligations, such as participation in future losses, responsibility to obtain financing, construct buildings, or initiate or support operations</li> </ul>
<ul style="list-style-type: none"> <li>• <b>Sales-type lease/ ASC Topic 840 (SFAS 13)</b></li> </ul>	<ul style="list-style-type: none"> <li>• Transfer of benefits and risks of ownership</li> <li>• Probability of collection</li> <li>• Predictability of future unreimbursable costs</li> </ul>	<ul style="list-style-type: none"> <li>• Inability to meet conditions specified above for real estate sales</li> <li>• Inability to meet specified conditions (four criteria) indicating transfer of benefits and risks of ownership</li> <li>• Collectibility not predictable</li> <li>• Uncertainty about future unreimbursable costs</li> </ul>
<ul style="list-style-type: none"> <li>• <b>Sale of receivables with recourse/ ASC Topic 860 (SFAS 140)</b></li> </ul>	<ul style="list-style-type: none"> <li>• Isolation of transferred assets</li> <li>• Right to pledge or exchange transferred assets</li> <li>• Control of receivables</li> </ul>	<ul style="list-style-type: none"> <li>• Transferred assets can be reached by transferor or its creditors</li> <li>• Transferee's inability to pledge or exchange transferred assets</li> <li>• Control of receivables not surrendered due to repurchase or redemption agreement</li> </ul>
<ul style="list-style-type: none"> <li>• <b>Nonmonetary exchange/ ASC Topic 845 (APB 29 and SFAS 153)</b></li> </ul>	<ul style="list-style-type: none"> <li>• Transaction has commercial substance</li> </ul>	<ul style="list-style-type: none"> <li>• Fair value not determinable</li> <li>• Exchange transaction to facilitate sales to customers</li> <li>• Transaction lacks commercial substance</li> </ul>
<ul style="list-style-type: none"> <li>• <b>Sale-leaseback transaction/ ASC Topic 840 (SFAS 13)</b></li> </ul>	<ul style="list-style-type: none"> <li>• Substance of the transaction</li> <li>• Portion of property leased back</li> <li>• Length of leaseback period</li> </ul>	<ul style="list-style-type: none"> <li>• All sale-leaseback transactions are financing transactions and not sales transactions unless leaseback covers only a small part of the property or is for a short period of time</li> </ul>

SOURCE: Adapted from Henry R. Jaenicke, *Survey of Present Practices in Recognizing Revenues, Expenses, Gains, and Losses*, FASB, 1981.

### 13. Reporting Start-up Costs

ASC Topic 720-15 (Statement of Position (SOP) 98-5) provides the guidance for accounting for a company's start-up costs. These costs include those incurred during the course of undertaking one-time activities related to opening a new facility, introducing a new product or service, conducting business in a new territory, conducting business with a new class of customer or beneficiary, initiating a new process in an existing facility, commencing some new operation, or organizing a new entity. ASC Topic 720-15 requires start-up costs to be expensed rather than capitalized.

**NOW REVIEW MULTIPLE-CHOICE QUESTIONS 67 THROUGH 73**

### 14. Research Component—Accounting Standards Codification

- a. Basic concepts are included in the Financial Accounting Concepts (SFACs). However, the concept statements are not considered authoritative literature, and, therefore, are not included in the Accounting Standards Codification (ASC).
- b. The Accounting Standards Codification database uses the following categories on the main menu: Presentation, Assets, Liabilities, Equity, Revenue, Expenses, Broad Transactions, Industry, and Master Glossary. Under each of these main categories are Topics. Topics are further divided into subtopics, sections, and subsections.

- c. Citations in this text for information on a certain topic are cited as ASC Topic XXX. Complete citations for a specific rule are referenced by topic-subtopic-section-subsection. An example of a full research citation is ASC 350-10-25-1.
- d. The following table lists the topical areas within the Codification.

**Presentation**

- 105 *Generally Accepted Accounting Principles*
- 205 *Presentation of Financial Statements*
- 210 *Balance Sheet*
- 215 *Statement of Shareholder Equity*
- 220 *Comprehensive Income*
- 225 *Income Statement*
- 230 *Statement of Cash Flows*
- 235 *Notes to Financial Statements*
- 250 *Accounting Changes and Error Corrections*
- 255 *Changing Prices*
- 260 *Earnings per Share*
- 270 *Interim Reporting*
- 272 *Limited Liability Entities*
- 274 *Personal Financial Statements*
- 275 *Risks and Uncertainties*
- 280 *Segment Reporting*

**Assets**

- 305 *Cash and Cash Equivalents*
- 310 *Receivables*
- 320 *Investments—Debt and Equity Securities*
- 323 *Investments—Equity Method and Joint Ventures*
- 325 *Investments—Other*
- 330 *Inventory*
- 340 *Deferred Costs and Other Assets*
- 350 *Intangibles—Goodwill and Other*
- 360 *Property, Plant, and Equipment*

**Liabilities**

- 405 *Liabilities*
- 410 *Asset Retirement and Environmental Obligations*
- 420 *Exit or Disposal Cost Obligations*
- 430 *Deferred Revenue*
- 440 *Commitments*
- 450 *Contingencies*
- 460 *Guarantees*
- 470 *Debt*
- 480 *Distinguishing Liabilities from Equity*

**Equity**

- 505 *Equity*

**Revenue**

- 605 *Revenue*

**Expenses**

- 705 *Cost of Sales and Services*
- 710 *Compensation—General*
- 712 *Compensation—Nonretirement Postemployment Benefits*
- 715 *Compensation—Retirement Benefits*
- 718 *Compensation—Stock Compensation*
- 720 *Other Expenses*
- 730 *Research and Development*
- 740 *Income Taxes*

**Broad Transactions**

- 805 *Business Combinations*
- 810 *Consolidation*
- 815 *Derivatives and Hedging*
- 820 *Fair Value Measurements and Disclosures*
- 825 *Financial Instruments*
- 830 *Foreign Currency Matters*
- 835 *Interest*
- 840 *Leases*
- 845 *Nonmonetary Transactions*
- 850 *Related-Party Disclosures*
- 852 *Reorganizations*
- 855 *Subsequent Events*
- 860 *Transfers and Servicing*

**Industry**

- 905 *through 995*

**NOTE:** The accounting rules for development stage enterprises, franchising, not-for-profit entities, real estate, and software issues are located under “Industry” in the Codification. SEC content is included in each topic as appropriate and labeled “S.” The SEC content is provided for convenience and is not the complete SEC literature.

- e. Keywords for researching basic concepts are shown below.

Area franchise	Installment accounting	Sales type lease
Bargain purchase	Installment method	Sales value
Capital surplus	Net income	Security interest
Collectibility	Persuasive evidence arrangement	Seller obligation
Collection reasonably assured	Proceeds of sale	Services substantially performed
Consummated sale	Product financing	Significant customization
Consummation sale	Product financing arrangements	Significant production
Continuing franchise fees	Profit and loss	Software products
Continuing involvement	Profit on transactions	Specified prices resale
Culmination of earning process	Reasonable estimate returns	Sponsor purchase
Earned surplus	Recognizing revenue software	Sponsor repurchase
Fair value determinable	Related transaction purchase	Sponsor sells
Financial asset	Repurchase product	Substantial performance
Franchise fee revenue	Retained earnings	Substantially identical product
Franchisee	Return privilege expired	Transaction completed
Franchisor	Revenue recognized	Transfer financial asset
Full accrual method	Right of return	Unrealized profit
Initial franchise fee	Sales leaseback	Vendor specific evidence
Initial services	Sales price	

**15. International Financial Reporting Standards (IFRS)**

- a. The International Accounting Standards Committee (IASC) issued International Accounting Standards (IAS) from 1973 to 2001. In addition, the IASC created a Standing Interpretations Committee (SIC) that provided further interpretive guidance on accounting issues not addressed in the standards. In 2001, the International Accounting Standards Board (IASB) replaced the IASC. The IASB adopted the existing International Accounting Standards (IAS) and interpretations issued by the Standing Interpretations Committee (SIC). Since 2001, the IASB is responsible for issuing International Financial Reporting Standards (IFRS),

and the IFRS Interpretations Committee (IFRIC) is responsible for issuing interpretations of the standards. Therefore, the current international accounting guidelines are contained in the IAS and IFRS pronouncements, together with SIC and IFRIC interpretations.

- b. It is often said that US GAAP employs a “rules”-based approach. In other words, the standards are usually explicit as to precise rules that must be followed for recognition, measurement, and financial statement presentation. IFRS, on the other hand, is considered a “principles”-based approach because it attempts to set general principles for recognition, measurement and reporting, and allows professional judgment in applying these principles. This principles-based approach should focus on a true and fair view or a fair representation of the financial information.
- c. In 2002, the FASB and the IASB agreed to work toward convergence in the accounting standards. Therefore, you will find some IFRS accounting treatments identical, some similar, and others different from US GAAP. An effective study strategy is to study US GAAP and then learn the significant differences between US GAAP and IFRS. This compare/contrast strategy will help the candidate to remember which method is US GAAP and which method is IFRS. As you study this module, notice the differences in the following areas:
  - (1) **Vocabulary or definition differences.** Although the concepts of US GAAP and IFRS may be similar, vocabulary and definitions are often somewhat different.
  - (2) **Recognition and measurement differences.** Differences may exist in when and how an item is recognized in the financial statements. Alternative methods may be acceptable in US GAAP whereas only one method may be allowed for IFRS (or vice versa). In some instances, either IFRS or US GAAP may not require an item to be recognized in the financial statements. In addition, the amount recognized (measurement of the item) may be different in the two sets of standards.
  - (3) **Presentation and disclosure differences.** Presentation refers to the presentation of items on the financial statements, whereas disclosure refers to the additional information contained in the notes to financial statements. Again, differences exist as to whether an item must be presented in the financial statements or disclosed in the footnotes, as well as the types of information that must be disclosed.
  - (4) The table below highlights the major accounting differences between US GAAP and IFRS.

<b>Major Differences— US GAAP versus IFRS</b>	
<b>US GAAP</b>	<b>IFRS</b>
<b>Financial Statement Presentation</b>	
No specific requirement regarding comparative information.	Requires comparative information for prior year.
Comprehensive income may be presented as a stand-alone statement or at the bottom of the income statement and changes in equity may be presented in the notes.	Requires either a separate statement of comprehensive income and statement of changes in equity or a single statement of profit or loss and comprehensive income.
Presentation of certain items as extraordinary is required.	Extraordinary items are not allowed.
Deferred taxes are classified as current or noncurrent in the balance sheet based on the nature of the related asset.	Deferred taxes must be classified as noncurrent in the balance sheet.
Subsequent events evaluated through the financial statement issuance date.	Subsequent events evaluated through financial statement <b>authorization</b> to be issued date.
<b>Revenue Recognition</b>	
Construction contracts are accounted for using the percentage-of-completion method if certain criteria are met. Otherwise the completed-contract method is used.	Construction contracts are accounted for using the percentage-of-completion method if certain criteria are met. Otherwise, revenue recognition is limited to the costs incurred. The completed-contract method is not allowed.
<b>Consolidated Financial Statements</b>	
No exemption from consolidating subsidiaries in general-purpose financial statements.	Under certain restrictive situations a subsidiary (normally required to be consolidated) may be exempt from the requirement.
Noncontrolling interest measured at fair value including goodwill.	Noncontrolling interest may be measured either at fair value including goodwill or the proportionate share of the value of the identifiable assets and liabilities of the acquiree excluding goodwill.

US GAAP	IFRS
Fair value option allowed for equity method investments and joint ventures.	Fair value option prohibited for equity method investments and joint ventures.
<b>Monetary Current Assets and Current Liabilities</b>	
Short-term obligations expected to be refinanced can be classified as noncurrent if the entity has the intent and ability to refinance.	Short-term obligations expected to be refinanced can be classified as noncurrent only if the entity has entered into an agreement to refinance prior to the balance sheet date.
Contingencies that are probable ( $\geq 70\%$ ) and can be reasonably estimated are accrued.	Contingencies that are probable ( $> 50\%$ ) and measurable are considered provisions and accrued.
For contingencies, accrue minimum in a range if no amount is more likely than another.	For contingencies, accrue the midpoint in a range if no amount is more likely than another.
<b>Inventory</b>	
LIFO cost flow assumption is an acceptable method.	The LIFO cost flow assumption is not allowed.
Inventories are valued at lower of cost of market (between a floor and a ceiling).	Inventories are valued at lower of cost or net realizable value.
Any impairment write-downs create a new cost basis; previously recognized impairment losses are not reversed.	Previously recognized impairment losses are reversed.
<b>Fixed Assets</b>	
Revaluation not permitted.	Revaluation of assets is permitted as an election for an entire class of assets but must be done consistently.
No separate accounting for investment property.	Separate accounting is prescribed for investment property versus property, plant, and equipment.
Unless the assets are "held for sale" they are valued using the cost model.	Investment property may be measured at fair value.
Allowable borrowing cost capitalization is calculated using a weighted-average accumulated expenditure times a borrowing rate.	Allowable borrowing cost capitalization is calculated using actual borrowing costs less any earnings on investments of the borrowing.
Biological assets are not a separate category.	Biological assets are a separate category and not included in property, plant, and equipment.
There is no requirement to account for separate components of an asset.	If the major components of an asset have significantly different patterns of consumption or economic benefits, the entity must allocate the costs to the major components and depreciate them separately.
Two-step impairment approach.	One-step impairment approach.
Impairment is a function of fair value and carrying value.	Impairment is a function of the recoverable amount and carrying value.
Impairment losses are not reversed.	Impairment losses may be reversed in future periods.
<b>Intangible Assets</b>	
Unless specific ASC guidance exists (e.g. software), development costs are expensed.	Development costs may be capitalized if specific criteria are met.
Revaluation is not permitted.	Revaluation of intangible assets other than goodwill is permitted although uncommon.
Goodwill impairment may be qualitatively assessed to determine if two-step impairment test is necessary.	One-step impairment test for goodwill must be performed.
Impairment loss is a function of carrying value and fair value.	Impairment loss is a function of carrying value and the recoverable amount.
Impairment losses are not reversed	Impairment losses, except those related to goodwill, may be reversed.

US GAAP	IFRS
<b>Financial Investments</b>	
Compound (hybrid) financial instruments are not split into debt and equity components unless certain requirements are met, but they may be bifurcated into debt and derivative components.	Compound financial interests (e.g., convertible bonds) are split into debt, equity and, if applicable, derivative components.
Declines in fair value below cost may result in impairment loss solely based on a change in interest rate unless entity has the ability and intent to hold the debt till maturity.	Generally, only evidence of a credit default results in impairment loss for an available-for-sale debt instrument.
When impairment is recognized through the income statement, a new cost basis is established and such losses cannot be reversed.	Impairment losses in available-for-sale investments may be reversed in future periods.
Unless the fair value option is elected, loans and receivables are classified as either (1) held for investment, which is measured at amortized cost, or (2) held for sale, which is measured at lower of cost or fair value.	Loans and receivables are measured at amortized cost unless classified into the Fair Value Through Profit or Loss category or the Available-for-Sale category, both of which are carried at fair value.
Impairment losses related to AFS securities are recognized in the income statement and cannot be reversed.	Impairment losses for AFS securities are recognized in the statement of other comprehensive income and may be reversed.
<b>Leases</b>	
Operating leased assets are never recorded on the balance sheet.	Assets held by lessee under operating leases may be capitalized on the balance sheet if they meet certain requirements.
A lease for land and building that transfers ownership to the lessee or contains a bargain purchase option would be classified as a capital lease regardless of the relative value of the land. If the fair value of the land at inception represents 25% or more of the total fair value, the lessee must consider the components separately when evaluating the lease.	When land and buildings are leased, elements of the lease are considered separately when evaluating the lease unless the amount for the land element is immaterial.
<b>Pensions</b>	
Actuarial gains and losses are recognized through the corridor approach or recognized as they occur.	Actuarial gains and losses must be recognized in other comprehensive income immediately.
Prior service cost is initially deferred in other comprehensive income and recognized using the future years of service method or average remaining service period method.	Prior service cost is recognized immediately in income.
<b>Income Taxes</b>	
Deferred tax assets are recognized in full but valuation allowances reduce them to the amount that is more likely than not to be realized.	Deferred tax assets are recognized only to the extent it is probable that they will be realized.

#### d. Underlying Concepts—The IASB Framework

- (1) The *IASB Framework for the Preparation and Presentation of Financial Statements* establishes the underlying concepts for preparing financial statements.
- (2) This framework addresses the objectives of financial statements, underlying assumptions, qualitative characteristics of financial statement information, definitions, recognition, measurement, and capital maintenance concepts.
- (3) Although the *IASB Framework* contains information similar to the *Statement of Financial Accounting Concepts* by the US Financial Accounting Standards Board (FASB), several important differences exist.
  - (a) First, some terms and definitions are different.
  - (b) Second, the elements of financial statements are not identical.
  - (c) Candidates should become familiar with these subtle differences in the two sets of concepts.
- (4) The *IASB Framework* is not considered an accounting standard and therefore does not override any accounting treatment required by the International Accounting Standards (IAS) or International Financial Reporting Standards (IFRS). The *Framework* exists to assist in the development of future international

accounting standards and to assist preparers in accounting for topics that do not have guidance in an existing standard.

- (5) In September 2010, the IASB completed two chapters on a joint conceptual framework project with the FASB.
- The new conceptual framework contains Chapter 1, The Objective of General-Purpose Financial Reporting, and Chapter 3, Qualitative Characteristics of Useful Financial Information.
  - Because this is a joint project, the FASB and IASB chapters 1 and 3 are identical. You may refer to the information earlier in this chapter on those topics.
  - However, until the remaining parts of the joint project are completed, there are subtle differences between the two frameworks. The most significant differences are terms, definitions, and elements of financial statements.
- (6) FASB SFAC 6 contains ten elements of financial statements: assets, liabilities, equity, investments by owners, distributions to owners, comprehensive income, revenues, expenses, gains, and losses. The IASB *Framework* contains only five elements: assets, liabilities, equity, income, and expense.

**NOTE:** There are several significant vocabulary differences regarding the elements of financial statements. With US GAAP, the term “income” is not a financial statement element. In US GAAP, the term income is used to describe a calculation of some type (e.g., income from continuing operations, net income) or to designate a specific type of income such as interest income. However, with IFRS, the term income is a financial statement element, and the items that are considered “income” are revenues and gains. IFRS uses the term “profit” whereas US GAAP uses the term “net income.”

- (7) The IASB *Framework*'s formal definitions of the five elements are shown below.

<b>IASB <i>Framework</i>—Elements of Financial Statements</b>	
Asset	An asset is a resource controlled by the entity as a result of past events and from which future economic benefits are expected to flow to the entity.
Liability	A liability is a present obligation of the entity arising from past events, the settlement of which is expected to result in an outflow from the entity of resources embodying economic benefits.
Equity	Equity is the residual interest in the assets of the entity after deducting all its liabilities.
Income	Income is increases in economic benefits during the accounting period in the form of inflows or enhancements of assets or decreases of liabilities that result in increases in equity, other than those relating to contributions from equity participants.
Expenses	Expenses are decreases in economic benefits during the accounting period in the form of outflows or depletions of assets or incurrence of liabilities that result in decreases in equity, other than those relating to distributions to equity participants.

- An important point to understand is that the definition of income includes both revenue and gains. Revenues arise in the normal course of business and are often referred to as sales, fees, interest, dividends, royalties, and rent. Gains are other items that meet the definition of income, which may or may not arise in the normal course of business. The IASB *Framework* indicates that gains are increases in economic benefits and are no different in nature from revenues. Therefore, they are not regarded as a separate element in the *Framework*. The *Framework* treats losses in the same way, as no different in nature from other expenses. However, the *Framework* also indicates that when gains or losses are reported in the income statement, they are usually displayed separately because this knowledge may be useful to the decision maker. Gains may be reported net of their related expenses, and losses may be reported net of their related income.
- (8) The IASB *Framework* provides for capital maintenance adjustments. When assets or liabilities are revalued or restated, and there is a corresponding increase or decrease to equity, the definition of income or expense may not be met. Therefore, certain items may be included in equity as revaluation reserves.

- (9) The IASB *Framework* defines recognition as the process of incorporating into the balance sheet or income statement an item that meets the definition of an element and satisfies the criteria for recognition.
- (a) The two criteria for recognition are (1) it is probable that a future economic benefit will flow to the entity, and (2) the item has a cost or value that can be measured reliably.
- (10) The *Framework* also outlines various bases of measurement such as historical cost, current cost, realizable (settlement) value, and present value. Current cost is the amount of cash or cash equivalent that would be paid if the same or equivalent asset were acquired currently. Realizable (settlement) value is the amount of cash that could be currently obtained by settling (e.g., selling) the asset in an orderly disposal. Although the measurement basis is commonly historical cost, certain accounts use different measurement methods.
- e. **Revenue Recognition.** As indicated above, revenue is the gross inflow of economic benefits resulting from an entity's ordinary activities. These inflows must increase equity and not increase the contribution of owners or equity participants. Revenue is generated from the sale of goods, the rendering of services, and the use of an entity's assets by others. Various titles are used for revenue including sales, fees, interest, dividends, and royalties. Revenue is measured at the fair value of the consideration received or the receivable, net of trade discounts or rebates.
- (1) Revenue is recognized from the sale of goods if all five of the following criteria are met:
- (a) The significant risks and rewards of ownership of the goods are transferred to the buyer,  
 (b) The entity does not retain either a continuing managerial involvement or control over the goods,  
 (c) The amount of revenue can be measured reliably,  
 (d) It is probable that economic benefits will flow to the entity from the transaction, and  
 (e) The costs incurred can be measured reliably.
- (2) Revenue can be recognized from rendering services when the outcome of rendering services can be estimated reliably. This method is often referred to as the percentage-of-completion method.

**NOTE:** Progress payments or advances from customers are not used to determine the state of completion. The outcomes can be estimated reliably if all the following criteria are met:

1. The amount of revenue can be measured reliably,
2. It is probable that economic benefits will flow to the entity,
3. The stage of completion at the end of the reporting period can be measured reliably, and
4. The costs incurred and the costs to complete the transaction can be measured reliably.

(a) If the outcomes cannot be estimated reliably, then revenue should be recognized using the cost recovery method.

- (1) The cost recovery method recognizes revenue only to the extent that the expenses recognized are recoverable.

**NOTE:** IFRS does not permit use of the completed-contract method, which is allowed for US GAAP.

- (3) Barter transactions are not recognized if the exchanged goods are similar in nature and value. If the goods are dissimilar, revenue is recognized at fair value of the goods received. If the fair value of the goods received cannot be measured, revenue is recognized at the fair value of goods or services given up.
- (4) Interest income is recognized using the effective interest method. Royalties should be accrued as provided for in the contractual agreement. Dividends should be recognized when the shareholder has a right to receive the dividend payment.

- f. **First-Time Adoption of IFRS.** There are a number of options available upon first-time adoption of IFRS, as described below.
- (1) Generally the adoption involves restating assets, liabilities, and equity using IFRS principles. The “date of transition to IFRS” is defined as the beginning of the earliest period for which an entity presents full comparative information under IFRSs in its first IFRS financial statements. The “first IFRS reporting period” is defined as the latest reporting period covered by an entity’s first IFRS financial statements.
  - (2) **Business combinations.** With respect to business combinations, the first-time adopter has the option of retrospectively adopting IFRS 3 for all periods presented, or adjusting the assets and liabilities through retained earnings in the period of adoption.
  - (3) **Plant, property, and equipment.** Unless an entity decides to use a fair value election, it will need to recalculate the life-to-date depreciation or amortization of any PPE or intangible assets under IFRS. This can be quite time-consuming. Alternatively, the entity may use various methods to determine the fair value of the assets and use those amounts as the deemed cost at the time of adoption. IFRS would then be used going forward. The fair value election may be applied on an individual item basis.

**NOW REVIEW MULTIPLE-CHOICE QUESTIONS 74 THROUGH 83**

## KEY TERMS

**Accounting Standards Codification (ASC).** The single source for all US GAAP.

**Accrual.** Recognition precedes cash receipt/expenditure.

**Accrual basis.** Expenses are recognized as related revenues are recognized.

**Cash basis.** Recognizes income when cash is received and expenses when cash is disbursed.

**Current cost.** The amount of cash, or its equivalent, that would be paid if the same asset were to be acquired currently.

**Current market value.** The amount of cash, or its equivalent, that could be obtained by selling an asset in orderly liquidation.

**Deferral.** Cash receipt/expenditure precedes accrual-basis recognition.

**Fair value.** The price that would be received to sell an asset or paid to transfer a liability in an orderly transaction between market participants at the measurement date under current market conditions.

**Historical cost.** The amount of cash, or its equivalent, paid to acquire an asset.

**Installment sales.** Revenue is recognized as cash is collected.

**Net realizable value.** The nondiscounted amount of cash, or its equivalent, into which an asset is expected to be converted during the normal course of business less direct costs to make the conversion.

**Period costs.** Costs not particularly or conveniently assignable to a product.

**Present value.** The current measure of an estimated future cash inflow or outflow, discounted at an interest rate for the number of period between today and the date of the estimated cash outflow.

**Product costs.** Costs which can be associated with particular sales.

**Public business entity.** An entity required to file with the SEC or a business entity that is required to prepare and make publicly available U.S. GAAP financial statements.

**Realized (realizable).** When related assets received or held are readily convertible into known amounts of cash or claims to cash.

**Risk adverse.** Market place participants prefer situations with less uncertainty relative to an expected outcome.

**Start-up costs.** The costs incurred during the course of undertaking on-time activities related to opening a new facility.

## Multiple-Choice Questions (1–83)

### A.1. Basic Accounting Theory

1. What are the Statements of Financial Accounting Concepts intended to establish?

- Generally accepted accounting principles in financial reporting by business enterprises.
- The meaning of “Present fairly in accordance with generally accepted accounting principles.”
- The objectives and concepts for use in developing standards of financial accounting and reporting.
- The hierarchy of sources of generally accepted accounting principles.

2. According to the FASB conceptual framework, the objectives of financial reporting for business enterprises are based on

- Generally accepted accounting principles.
- Reporting for regulators.
- The need for conservatism.
- The needs of the users of the information.

3. According to the FASB conceptual framework, the relevance of providing information in financial statements is subject to the constraint of

- Comparability.
- Cost-benefit.
- Reliability.
- Faithful representation.

4. The enhancing qualitative characteristics of financial reporting are

- Relevance, reliability, and faithful representation.
- Cost-benefit and materiality.
- Comparability, verifiability, timeliness, and understandability.
- Completeness, neutrality, and freedom from error.

5. According to Statements of Financial Accounting Concepts, neutrality is an ingredient of

	Faithful representation	Relevance
a.	Yes	Yes
b.	Yes	No
c.	No	Yes
d.	No	No

6. According to the FASB conceptual framework, which of the following is an enhancing quality that relates to both relevance and faithful representation?

- Comparability.
- Confirmatory value.
- Predictive value.
- Freedom from error.

7. According to the FASB conceptual framework, the process of reporting an item in the financial statements of an entity is

- Allocation.
- Matching.
- Realization.
- Recognition.

8. Under FASB Statement of Financial Accounting Concepts 5, which of the following items would cause earnings to differ from comprehensive income for an enterprise in an industry **not** having specialized accounting principles?

- Unrealized loss on investments classified as available-for-sale securities.
- Unrealized loss on investments classified as trading securities.
- Loss on exchange of similar assets.
- Loss on exchange of dissimilar assets.

9. Under FASB Statement of Financial Accounting Concepts 5, comprehensive income excludes changes in equity resulting from which of the following?

- Loss from discontinued operations.
- Prior period error correction.
- Dividends paid to stockholders.
- Unrealized loss on securities classified as available-for-sale.

10. The fundamental qualitative characteristic of faithful representation has the components of

- Predictive value and confirmatory value.
- Comparability, consistency, and confirmatory value.
- Understandability, predictive value, and reliability.
- Completeness, neutrality, and freedom from error.

11. According to the FASB conceptual framework, which of the following statements conforms to the realization concept?

- Equipment depreciated was assigned to a production department and then to product unit costs.
- Depreciated equipment was sold in exchange for a note receivable.
- Cash was collected on accounts receivable.
- Product unit costs were assigned to cost of goods sold when the units were sold.

12. What is the underlying concept that supports estimating a fixed asset impairment charge?

- Substance over form.
- Consistency.
- Matching.
- Faithful representation.

13. What is the concept that supports the issuance of interim reports?

- Relevance.
- Materiality.
- Consistency.
- Faithful representation.

14. FASB's conceptual framework explains both financial and physical capital maintenance concepts. Which capital maintenance concept is applied to currently reported net income, and which is applied to comprehensive income?

	Currently reported net income	Comprehensive income
a.	Financial capital	Physical capital
b.	Physical capital	Physical capital
c.	Financial capital	Financial capital
d.	Physical capital	Financial capital

15. According to the FASB conceptual framework, an entity's revenue may result from

- A decrease in an asset from primary operations.
- An increase in an asset from incidental transactions.
- An increase in a liability from incidental transactions.
- A decrease in a liability from primary operations.

16. According to the FASB conceptual framework, which of the following is an essential characteristic of an asset?

- The claims to an asset's benefits are legally enforceable.
- An asset is tangible.
- An asset is obtained at a cost.
- An asset provides future benefits.

17. According to the FASB conceptual framework, which of the following attributes would **not** be used to measure inventory?

- Historical cost.
- Replacement cost.
- Net realizable value.
- Present value of future cash flows.

### ***A.1.d.(6) Cash Flow Information and Present Value***

18. According to SFAC 7, *Using Cash Flow Information and Present Value in Accounting Measurements*, the most relevant measurement of an entity's liabilities at initial recognition and fresh-start measurements should always reflect

- The expectations of the entity's management.
- Historical cost.
- The credit standing of the entity.
- The single most-likely minimum or maximum possible amount.

19. Which of the following is **not** covered by SFAC 7, *Using Cash Flow Information and Present Value in Accounting Measurements*?

- Measurements at initial recognition.
- Interest method of amortization.
- Expected cash flow approach.
- Determining when fresh-start measurements are appropriate.

20. In calculating present value in a situation with a range of possible outcomes all discounted using the same interest rate, the expected present value would be

- The most-likely outcome.
- The maximum outcome.
- The minimum outcome.
- The sum of probability-weighted present values.

21. A cash flow of \$200,000 may be received by Lydia Nickels, Inc. in one year, two years, or three years, with probabilities of 20%, 50%, and 30%, respectively. The rate of interest on default risk-free investments is 5%. The present value factors are

PV of 1, at 5%, for 1 year is	.95238
PV of 1, at 5%, for 2 years is	.90703
PV of 1, at 5%, for 3 years is	.86384

What is the expected present value of Lydia Nickels' cash flow (in whole dollars)?

- \$181,406
- \$180,628
- \$90,703
- \$89,925

22. Which of the following statements regarding interest methods of allocations is **not** true?

- The term "interest methods of allocation" refers both to the convention for periodic reporting and to the several approaches to dealing with changes in estimated future cash flows.
- Interest methods of allocation are reporting conventions that use present value techniques in the absence of a fresh-start measurement to compute changes in the carrying amount of an asset or liability from one period to the next.
- Interest methods of allocation are grounded in the notion of current cost.
- Holding gains and losses are generally excluded from allocation systems.

23. Which of the following is **not** an objective of using present value in accounting measurements?

- To capture the value of an asset or a liability in the context of a particular entity.
- To estimate fair value.
- To capture the economic difference between sets of future cash flows.
- To capture the elements that taken together would comprise a market price if one existed.

24. On December 31, year 1, Brooks Co. decided to end operations and dispose of its assets within three months. At December 31, year 1, the net realizable value of the equipment was below historical cost. What is the appropriate measurement basis for equipment included in Brooks' December 31, year 1 balance sheet?

- Historical cost.
- Current reproduction cost.
- Net realizable value.
- Current replacement cost.

25. Which of the following accounting literature is **not** included in the FASB Accounting Standards Codification?

- AICPA Statements of Position.
- FASB Statements.
- Accounting Research Bulletins.
- Statements of Auditing Standards.

### A.2. Income Determination

26. On October 1, year 1, Acme Fuel Co. sold 100,000 gallons of heating oil to Karn Co. at \$3 per gallon. Fifty thousand gallons were delivered on December 15, year 1, and the remaining 50,000 gallons were delivered on January 15, year 2. Payment terms were: 50% due on October 1, year 1, 25% due on first delivery, and the remaining 25% due on second delivery. What amount of revenue should Acme recognize from this sale during year 1?

- \$75,000
- \$150,000
- \$225,000
- \$300,000

27. Amar Farms produced 300,000 pounds of cotton during the year 1 season. Amar sells all of its cotton to Brye Co., which has agreed to purchase Amar's entire production at the prevailing market price. Recent legislation assures that the market price will not fall below \$.70 per pound during the next two years. Amar's costs of selling and distributing the cotton are immaterial and can be reasonably estimated. Amar reports its inventory at expected exit value. During year 1, Amar sold and delivered to Brye 200,000 pounds at the market price of \$.70. Amar sold the remaining 100,000 pounds during year 2 at the market price of \$.72. What amount of revenue should Amar recognize in year 1?

- \$140,000
- \$144,000
- \$210,000
- \$216,000

28. Lin Co., a distributor of machinery, bought a machine from the manufacturer in November year 1 for \$10,000. On December 30, year 1, Lin sold this machine to Zee Hardware for \$15,000, under the following terms: 2% discount if paid within thirty days, 1% discount if paid after thirty days but within sixty days, or payable in full within ninety days if not paid within the discount periods. However, Zee had the right to return this machine to Lin if Zee was unable to resell the machine before expiration of the ninety-day payment period, in which case Zee's obligation to Lin would be canceled. In Lin's net sales for the year ended December 31, year 1, how much should be included for the sale of this machine to Zee?

- \$0
- \$14,700
- \$14,850
- \$15,000

### A.3. Accruals and Deferrals

29. Under a royalty agreement with another company, Wand Co. will pay royalties for the assignment of a patent for three years. The royalties paid should be reported as expense

- In the period paid.
- In the period incurred.
- At the date the royalty agreement began.
- At the date the royalty agreement expired.

30. Clark Co.'s advertising expense account had a balance of \$146,000 at December 31, year 1, before any necessary year-end adjustment relating to the following:

- Included in the \$146,000 is the \$15,000 cost of printing catalogs for a sales promotional campaign in January year 2.
- Radio advertisements broadcast during December year 1 were billed to Clark on January 2, year 2. Clark paid the \$9,000 invoice on January 11, year 2.

What amount should Clark report as advertising expense in its income statement for the year ended December 31, year 1?

- \$122,000
- \$131,000
- \$140,000
- \$155,000

31. An analysis of Thrift Corp.'s unadjusted prepaid expense account at December 31, year 2, revealed the following:

- An opening balance of \$1,500 for Thrift's comprehensive insurance policy. Thrift had paid an annual premium of \$3,000 on July 1, year 1.
- A \$3,200 annual insurance premium payment made July 1, year 2.
- A \$2,000 advance rental payment for a warehouse Thrift leased for one year beginning January 1, year 3.

In its December 31, year 2 balance sheet, what amount should Thrift report as prepaid expenses?

- \$5,200
- \$3,600
- \$2,000
- \$1,600

32. Roro, Inc. paid \$7,200 to renew its only insurance policy for three years on March 1, year 1, the effective date of the policy. At March 31, year 1, Roro's unadjusted trial balance showed a balance of \$300 for prepaid insurance and \$7,200 for insurance expense. What amounts should be reported for prepaid insurance and insurance expense in Roro's financial statements for the three months ended March 31, year 1?

	Prepaid insurance	Insurance expense
a.	\$7,000	\$300
b.	\$7,000	\$500
c.	\$7,200	\$300
d.	\$7,300	\$200

33. Aneen's Video Mart sells one- and two-year mail order subscriptions for its video-of-the-month business. Subscriptions are collected in advance and credited to sales. An analysis of the recorded sales activity revealed the following:

	Year 1	Year 2
Sales	\$420,000	\$500,000
Less cancellations	<u>20,000</u>	<u>30,000</u>
Net sales	<u>\$400,000</u>	<u>\$470,000</u>

Subscriptions expirations:

Year 1	\$120,000	
Year 2	155,000	\$130,000
Year 3	<u>125,000</u>	200,000
Year 4		<u>140,000</u>
	<u>\$400,000</u>	<u>\$470,000</u>

In Aneen's December 31, year 2 balance sheet, the balance for unearned subscription revenue should be

- a. \$495,000
- b. \$470,000
- c. \$465,000
- d. \$340,000

34. Regal Department Store sells gift certificates, redeemable for store merchandise, that expire one year after their issuance. Regal has the following information pertaining to its gift certificates sales and redemptions:

Unredeemed at 12/31/Y1	\$75,000
Year 2 sales	250,000
Year 2 redemptions of prior year sales	25,000
Year 2 redemptions of current year sales	175,000

Regal's experience indicates that 10% of gift certificates sold will not be redeemed. In its December 31, year 2 balance sheet, what amount should Regal report as unearned revenue?

- a. \$125,000
- b. \$112,500
- c. \$100,000
- d. \$50,000

35. Wren Corp.'s trademark was licensed to Mont Co. for royalties of 15% of sales of the trademarked items. Royalties are payable semiannually on March 15 for sales in July through December of the prior year, and on September 15 for sales in January through June of the same year. Wren received the following royalties from Mont:

	March 15	September 15
Year 1	\$10,000	\$15,000
Year 2	12,000	17,000

Mont estimated that sales of the trademarked items would total \$60,000 for July through December year 2. In Wren's year 2 income statement, the royalty revenue should be

- a. \$26,000
- b. \$29,000
- c. \$38,000
- d. \$41,000

36. In year 1, Super Comics Corp. sold a comic strip to Fantasy, Inc. and will receive royalties of 20% of future revenues associated with the comic strip. At December 31, year 2, Super reported royalties receivable of \$75,000 from Fantasy. During year 3, Super received royalty payments of \$200,000. Fantasy reported revenues of \$1,500,000 in year 3 from the comic strip. In its year 3 income statement, what amount should Super report as royalty revenue?

- a. \$125,000
- b. \$175,000

- c. \$200,000
- d. \$300,000

37. Rill Co. owns a 20% royalty interest in an oil well. Rill receives royalty payments on January 31 for the oil sold between the previous June 1 and November 30, and on July 31 for oil sold between December 1 and May 31. Production reports show the following oil sales:

June 1, year 1 – November 30, year 1	\$300,000
December 1, year 1 – December 31, year 1	50,000
December 1, year 1 – May 31, year 2	400,000
June 1, year 2 – November 30, year 2	325,000
December 1, year 2 – December 31, year 2	70,000

What amount should Rill report as royalty revenue for year 2?

- a. \$140,000
- b. \$144,000
- c. \$149,000
- d. \$159,000

38. Decker Company assigns some of its patents to other enterprises under a variety of licensing agreements. In some instances advance royalties are received when the agreements are signed, and in others, royalties are remitted within sixty days after each license year-end. The following data are included in Decker's December 31 balance sheet:

	Year 1	Year 2
Royalties receivable	\$90,000	\$85,000
Unearned royalties	60,000	40,000

During year 2 Decker received royalty remittances of \$200,000. In its income statement for the year ended December 31, year 2, Decker should report royalty income of

- a. \$195,000
- b. \$215,000
- c. \$220,000
- d. \$225,000

39. Cooke Company acquires patent rights from other enterprises and pays advance royalties in some cases, and in others, royalties are paid within ninety days after year-end. The following data are included in Cooke's December 31 balance sheets:

	Year 1	Year 2
Prepaid royalties	\$55,000	\$45,000
Royalties payable	80,000	75,000

During year 2 Cooke remitted royalties of \$300,000. In its income statement for the year ended December 31, year 2, Cooke should report royalty expense of

- a. \$295,000
- b. \$305,000
- c. \$310,000
- d. \$330,000

40. The premium on a three-year insurance policy expiring on December 31, year 3, was paid in total on January 1, year 1. The original payment was initially debited to a prepaid asset account. The appropriate journal entry has been recorded on

December 31, year 1. The balance in the prepaid asset account on December 31, year 1, should be

- Zero.
- The same as it would have been if the original payment had been debited initially to an expense account.
- The same as the original payment.
- Higher than if the original payment had been debited initially to an expense account.

**41.** On January 1, year 1, Sip Co. signed a five-year contract enabling it to use a patented manufacturing process beginning in year 1. A royalty is payable for each product produced, subject to a minimum annual fee. Any royalties in excess of the minimum will be paid annually. On the contract date, Sip prepaid a sum equal to two years' minimum annual fees. In year 1, only minimum fees were incurred. The royalty prepayment should be reported in Sip's December 31, year 1 financial statements as

- An expense only.
- A current asset and an expense.
- A current asset and noncurrent asset.
- A noncurrent asset.

**42.** A retail store received cash and issued gift certificates that are redeemable in merchandise. The gift certificates lapse one year after they are issued. How would the deferred revenue account be affected by each of the following transactions?

	Redemption of certificates	Lapse of certificates
a.	No effect	Decrease
b.	Decrease	Decrease
c.	Decrease	No effect
d.	No effect	No effect

**43.** Jersey, Inc. is a retailer of home appliances and offers a service contract on each appliance sold. Jersey sells appliances on installment contracts, but all service contracts must be paid in full at the time of sale. Collections received for service contracts should be recorded as an increase in a

- Deferred revenue account.
- Sales contracts receivable valuation account.
- Stockholders' valuation account.
- Service revenue account.

#### A.4. Cash to Accrual

**44.** Ward, a consultant, keeps her accounting records on a cash basis. During year 2, Ward collected \$200,000 in fees from clients. At December 31, year 1, Ward had accounts receivable of \$40,000. At December 31, year 2, Ward had accounts receivable of \$60,000, and unearned fees of \$5,000. On an accrual basis, what was Ward's service revenue for year 2?

- \$175,000
- \$180,000
- \$215,000
- \$225,000

**45.** Zeta Co. reported sales revenue of \$4,600,000 in its income statement for the year ended December 31, year 2. Additional information is as follows:

	12/31/Y1	12/31/Y2
Accounts receivable	\$1,000,000	\$1,300,000
Allowance for uncollectible accounts	(60,000)	(110,000)

Zeta wrote off uncollectible accounts totaling \$20,000 during year 2. Under the cash basis of accounting, Zeta would have reported year 2 sales of

- \$4,900,000
- \$4,350,000
- \$4,300,000
- \$4,280,000

**46.** Marr Corp. reported rental revenue of \$2,210,000 in its cash basis federal income tax return for the year ended November 30, year 2. Additional information is as follows:

Rents receivable—November 30, year 2	\$1,060,000
Rents receivable—November 30, year 1	800,000
Uncollectible rents written off during the fiscal year	30,000

Under the accrual basis, Marr should report rental revenue of

- \$1,920,000
- \$1,980,000
- \$2,440,000
- \$2,500,000

**47.** The following information pertains to Eagle Co.'s year 1 sales:

Cash sales	
Gross	\$80,000
Returns and allowances	4,000
Credit sales	
Gross	120,000
Discounts	6,000

On January 1, year 1, customers owed Eagle \$40,000. On December 31, year 1, customers owed Eagle \$30,000. Eagle uses the direct writeoff method for bad debts. No bad debts were recorded in year 1. Under the cash basis of accounting, what amount of net revenue should Eagle report for year 1?

- \$76,000
- \$170,000
- \$190,000
- \$200,000

**48.** The following balances were reported by Mall Co. at December 31, year 2 and year 1:

	12/31/Y2	12/31/Y1
Inventory	\$260,000	\$290,000
Accounts payable	75,000	50,000

Mall paid suppliers \$490,000 during the year ended December 31, year 2. What amount should Mall report for cost of goods sold in year 2?

- a. \$545,000
- b. \$495,000
- c. \$485,000
- d. \$435,000

49. Class Corp. maintains its accounting records on the cash basis but restates its financial statements to the accrual method of accounting. Class had \$60,000 in cash-basis pretax income for year 2. The following information pertains to Class's operations for the years ended December 31, year 2 and year 1:

	Year 2	Year 1
Accounts receivable	\$40,000	\$20,000
Accounts payable	15,000	30,000

Under the accrual method, what amount of income before taxes should Class report in its December 31, year 2 income statement?

- a. \$25,000
- b. \$55,000
- c. \$65,000
- d. \$95,000

50. On February 1, year 1, Tory began a service proprietorship with an initial cash investment of \$2,000. The proprietorship provided \$5,000 of services in February and received full payment in March. The proprietorship incurred expenses of \$3,000 in February, which were paid in April. During March, Tory drew \$1,000 against the capital account. In the proprietorship's financial statements for the two months ended March 31, year 1, prepared under the cash basis method of accounting, what amount should be reported as capital?

- a. \$1,000
- b. \$3,000
- c. \$6,000
- d. \$7,000

51. Compared to the accrual basis of accounting, the cash basis of accounting understates income by the net decrease during the accounting period of

	Accounts receivable	Accrued expenses
a.	Yes	Yes
b.	Yes	No
c.	No	No
d.	No	Yes

52. White Co. wants to convert its year 1 financial statements from the accrual basis of accounting to the cash basis. Both supplies inventory and office salaries payable increased between January 1, year 1, and December 31, year 1. To obtain year 1 cash basis net income, how should these increases be added to or deducted from accrual-basis net income?

	Supplies inventory	Office salaries payable
a.	Deducted	Deducted
b.	Deducted	Added

c.	Added	Deducted
d.	Added	Added

53. Before year 2, Droit Co. used the cash basis of accounting. As of December 31, year 2, Droit changed to the accrual basis. Droit cannot determine the beginning balance of supplies inventory. What is the effect of Droit's inability to determine beginning supplies inventory on its year 2 accrual-basis net income and December 31, year 2 accrual-basis owners' equity?

	Year 2 net income	12/31/Y2 owners' equity
a.	No effect	No effect
b.	No effect	Overstated
c.	Overstated	No effect
d.	Overstated	Overstated

### A.5. Installment Sales

54. Gant Co., which began operations on January 1, year 1, appropriately uses the installment method of accounting. The following information pertains to Gant's operations for year 1:

Installment sales	\$500,000
Regular sales	300,000
Cost of installment sales	250,000
Cost of regular sales	150,000
General and administrative expenses	50,000
Collections on installment sales	100,000

In its December 31, year 1 balance sheet, what amount should Gant report as deferred gross profit?

- a. \$250,000
- b. \$200,000
- c. \$160,000
- d. \$75,000

55. Since there is no reasonable basis for estimating the degree of collectibility, Astor Co. uses the installment method of revenue recognition for the following sales:

	Year 2	Year 1
Sales	\$900,000	\$600,000
Collections from:	100,000	200,000
Year 1 sales	300,000	--
Year 2 sales		
Accounts written off:	150,000	50,000
Year 1 sales	50,000	--
Year 2 sales		
Gross profit percentage	40%	30%

What amount should Astor report as deferred gross profit in its December 31, year 2 balance sheet for the year 1 and year 2 sales?

- a. \$150,000
- b. \$160,000
- c. \$225,000
- d. \$250,000

56. Luge Co., which began operations on January 2, year 1, appropriately uses the installment sales method of accounting. The following information is available for year 2:

Installment accounts receivable, December 31, year 2	\$800,000
Deferred gross profit, December 31, year 2 (before recognition of realized gross profit for year 2)	560,000
Gross profit on sales	40%

For the year ended December 31, year 2, cash collections and realized gross profit on sales should be

	Cash collections	Realized gross profit
a.	\$400,000	\$320,000
b.	\$400,000	\$240,000
c.	\$600,000	\$320,000
d.	\$600,000	\$240,000

57. Dolce Co., which began operations on January 1, year 1, appropriately uses the installment method of accounting to record revenues. The following information is available for the years ended December 31, year 1 and year 2:

	Year 1	Year 2
Sales	\$1,000,000	\$2,000,000
Gross profit realized on sales made in:		
Year 1	150,000	90,000
Year 2	--	200,000
Gross profit percentages	30%	40%

What amount of installment accounts receivable should Dolce report in its December 31, year 2 balance sheet?

- a. \$1,225,000
- b. \$1,300,000
- c. \$1,700,000
- d. \$1,775,000

58. On December 31, year 1, Mill Co. sold construction equipment to Drew, Inc. for \$1,800,000. The equipment had a carrying amount of \$1,200,000. Drew paid \$300,000 cash on December 31, year 1, and signed a \$1,500,000 note bearing interest at 10%, payable in five annual installments of \$300,000. Mill appropriately accounts for the sale under the installment method. On December 31, year 2, Drew paid \$300,000 principal and \$150,000 interest. For the year ended December 31, year 2, what total amount of revenue should Mill recognize from the construction equipment sale and financing?

- a. \$250,000
- b. \$150,000
- c. \$120,000
- d. \$100,000

59. On January 2, year 1, Blake Co. sold a used machine to Cooper, Inc. for \$900,000, resulting in a gain of \$270,000. On that date, Cooper paid \$150,000 cash and signed a \$750,000 note bearing interest at 10%. The note was payable in three annual installments of \$250,000 beginning January 2, year 2. Blake appropriately accounted for the sale under the installment method. Cooper made a timely payment of the first

installment on January 2, year 2, of \$325,000, which included accrued interest of \$75,000. What amount of deferred gross profit should Blake report at December 31, year 2?

- a. \$150,000
- b. \$172,500
- c. \$180,000
- d. \$225,000

60. For financial statement purposes, the installment method of accounting may be used if the

- a. Collection period extends over more than twelve months.
- b. Installments are due in different years.
- c. Ultimate amount collectible is indeterminate.
- d. Percentage-of-completion method is inappropriate.

61. According to the installment method of accounting, gross profit on an installment sale is recognized in income

- a. On the date of sale.
- b. On the date the final cash collection is received.
- c. In proportion to the cash collection.
- d. After cash collections equal to the cost of sales have been received.

62. Income recognized using the installment method of accounting generally equals cash collected multiplied by the

- a. Net operating profit percentage.
- b. Net operating profit percentage adjusted for expected uncollectible accounts.
- c. Gross profit percentage.
- d. Gross profit percentage adjusted for expected uncollectible accounts.

63. It is proper to recognize revenue prior to the sale of merchandise when

- I. The revenue will be reported as an installment sale.
  - II. The revenue will be reported under the cost recovery method.
- a. I only.
  - b. II only.
  - c. Both I and II.
  - d. Neither I nor II.

### A.6. Cost Recovery Method

64. The following information pertains to a sale of real estate by Ryan Co. to Sud Co. on December 31, year 1:

Carrying amount	\$2,000,000
Sales price:	
Cash	\$300,000
Purchase money mortgage	<u>2,700,000</u> 3,000,000

The mortgage is payable in nine annual installments of \$300,000 beginning December 31, year 2, plus interest of 10%. The December 31, year 2 installment was paid as scheduled, together with interest of \$270,000. Ryan uses the cost recovery method to account for the sale. What amount of

income should Ryan recognize in year 2 from the real estate sale and its financing?

- \$570,000
- \$370,000
- \$270,000
- \$0

65. Wren Co. sells equipment on installment contracts. Which of the following statements **best** justifies Wren's use of the cost recovery method of revenue recognition to account for these installment sales?

- The sales contract provides that title to the equipment only passes to the purchaser when all payments have been made.
- No cash payments are due until one year from the date of sale.
- Sales are subject to a high rate of return.
- There is no reasonable basis for estimating collectibility.

66. According to the cost recovery method of accounting, gross profit on an installment sale is recognized in income

- After cash collections equal to the cost of sales have been received.
- In proportion to the cash collections.
- On the date the final cash collection is received.
- On the date of sale.

### A.7. Franchise Agreements

67. On December 31, year 1, Rice, Inc. authorized Graf to operate as a franchisee for an initial franchise fee of \$150,000. Of this amount, \$60,000 was received upon signing the agreement and the balance, represented by a note, is due in three annual payments of \$30,000 each beginning December 31, year 2. The present value on December 31, year 1, of the three annual payments appropriately discounted is \$72,000. According to the agreement, the nonrefundable down payment represents a fair measure of the services already performed by Rice; however, substantial future services are required of Rice. Collectibility of the note is reasonably certain. In Rice's December 31, year 1 balance sheet, unearned franchise fees from Graf's franchise should be reported as

- \$132,000
- \$100,000
- \$90,000
- \$72,000

68. Each of Potter Pie Co.'s twenty-one new franchisees contracted to pay an initial franchise fee of \$30,000. By December 31, year 1, each franchisee had paid a nonrefundable \$10,000 fee and signed a note to pay \$10,000 principal plus the market rate of interest on December 31, year 2, and December 31, year 3. Experience indicates that one franchisee will default on the additional payments. Services for the initial fee will be performed in year 2. What amount of net unearned franchise fees would Potter report at December 31, year 1?

- \$400,000
- \$600,000
- \$610,000
- \$630,000

### A.8. Real Estate Transactions

69. In which of the following examples of real estate transactions would the seller **not** transfer the usual risks and rewards of ownership?

- The buyer can compel the seller to repurchase the property.
  - The seller guarantees the return of the buyer's investment.
  - The seller is required to support operations of the buyer and will be reimbursed on a cost plus 5% basis.
- I.
  - II.
  - III.
  - I and II.

70. Esker Inc. specializes in real estate transactions other than retail land sales. On January 1, year 1, Esker consummated a sale of property to Kame Ltd. The amount of profit on the sale is determinable and Esker is not obligated to perform any additional activities to earn the profit. Kame's initial and continuing investments were adequate to demonstrate a commitment to pay for the property. However, Esker's receivable may be subject to future subordination. Esker should account for the sale using the

- Deposit method.
- Reduced recovery method.
- Cost recovery method.
- Full accrual method.

### A.9. Multiple-Deliverable Revenue Arrangements

71. Which of the following is one of the conditions that must exist for a company to recognize revenue on separate units under a multiple-deliverables arrangement?

- The delivered item has value on a stand-alone basis and can be sold separately.
- The delivered item is not returnable.
- Collection has occurred for all of the separate units.
- The separate units must be delivered within 90 days of the end of the accounting period.

### A.10. Research or Development Accounted for on the Milestone Basis

72. The milestone method of accounting may be used to recognize revenue for

- Multiple-deliverable products or services.
- Research and development arrangements.
- Long-term construction contracts.
- Franchise arrangements.

73. The milestone method of revenue recognition provides that if a substantive milestone is achieved, what amount of revenue is recognized?

- Revenue is recognized up to the amount of cash collected.
- A provisions rata share of revenue based upon the percentage delivered to date.
- Contingent revenue is recognized in its entirety.
- A percentage of total revenue based on the separate units delivered.

### A.15. *International Financial Reporting Standards (IFRS)*

74. Which of the following organizations is responsible for setting International Financial Reporting Standards?
- Financial Accounting Standards Board.
  - International Accounting Standards Committee.
  - Financial Accounting Committee.
  - International Accounting Standards Board.
75. According to the IASB *Framework for the Preparation and Presentation of Financial Statements*, the fundamental qualitative characteristic of relevance includes
- Predictive value and feedback value.
  - Verifiability, neutrality, and representational faithfulness.
  - Predictive value and confirmatory value.
  - Comparability and timeliness.
76. According to the IASB *Framework*, the financial statement element that is defined as increases in economic benefits during the accounting period in the form of inflows or enhancements of assets or decreases of liabilities that result in increases in equity, other than those relating to contributions from equity participants, is
- Revenue.
  - Income.
  - Profits.
  - Gains.
77. According to the IASB *Framework*, the two criteria required for incorporating items into the income statement or statement of financial position are that
- It meets the definition of relevance and faithful representation.
  - It meets the definition of an element and can be measured reliably.
  - It satisfies the criteria of capital maintenance.
  - It meets the requirements of comparability and consistency.
78. If the outcome of rendering services cannot be estimated reliably, IFRS requires the use of which revenue recognition method?
- Percentage-of-completion method.
  - Completed contract method.
  - Cost recovery method.
  - Installment method.
79. Which of the following is **not** one of the criteria for revenue recognition for sales of goods under IFRS?
- The significant risks and rewards of ownership of goods are transferred.
  - Payment has been received.
  - The entity does not retain either a continuing managerial involvement or control over the goods.
  - The costs incurred can be measured reliably.
80. Upon first-time adoption of IFRS, an entity may elect to use fair value as deemed cost for
- Biological assets related to agricultural activity for which there is **no** active market.
  - Intangible assets for which there is **no** active market.
  - Any individual item of property, plant, and equipment.
  - Financial liabilities that are **not** held for trading.
81. Under IFRS, which of the following is the first step within the hierarchy of guidance to which management refers, and whose applicability it considers, when selecting accounting policies?
- Consider the most recent pronouncements of other standard-setting bodies to the extent they do **not** conflict with the IFRS or the IASB *Framework*.
  - Apply a standard from IFRS if it specifically relates to the transaction, other event, or condition.
  - Consider the applicability of the definitions, recognition criteria, and measurement concepts in the IASB *Framework*.
  - Apply the requirements in IFRS dealing with similar and related issues.
82. On July 1, year 2, a company decided to adopt IFRS. The company's first IFRS reporting period is as of and for the year ended December 31, year 2. The company will present one year of comparative information. What is the company's date of transition to IFRS?
- January 1, year 1.
  - January 1, year 2.
  - July 1, year 2.
  - December 31, year 2.
83. How should a first-time adopter of IFRS recognize the adjustments required to present its opening IFRS statement of financial position?
- All of the adjustments should be recognized in profit or loss.
  - Adjustments that are capital in nature should be recognized in retained earnings and adjustments that are revenue in nature should be recognized in profit or loss.
  - Current adjustments should be recognized in profit or loss and noncurrent adjustments should be recognized in retained earnings.
  - All of the adjustments should be recognized directly in retained earnings or, if appropriate, in another category of equity.

### Explanations

**1. (c)** The Statements of Financial Accounting Concepts (SFAC) were issued to establish a framework from which financial accounting and reporting standards could be developed. The SFAC provide the theory behind accounting and reporting and provide guidance when no GAAP exists. The SFAC are not included as GAAP.

**2. (d)** Per SFAC 8, the objectives of financial reporting focus on providing present and potential investors and creditors with information useful in making investment decisions. Financial statement users do not have the authority to prescribe the data they desire. Therefore, they must rely on external financial reporting to satisfy their information needs, and the objectives must be based on the needs of those users.

**3. (b)** The FASB conceptual framework has identified the cost-benefit constraint to the relevance of providing financial reports. Information is **not** disclosed if the costs of disclosure outweigh the benefits of providing the information. Comparability is an enhancing qualitative characteristic. Reliability is no longer part of the conceptual framework according to SFAC 8. Faithful representation is a fundamental qualitative characteristic.

**4. (c)** The enhancing qualitative characteristics of financial reporting are comparability (including consistency), verifiability, timeliness, and understandability. Answer (a) is incorrect because relevance and faithful representation are fundamental qualitative characteristics of financial information. Reliability is no longer listed as a fundamental quality. Answer (b) is incorrect because cost-benefit is a constraint, and materiality is a threshold for reporting useful information. Answer (d) is incorrect because completeness, neutrality, and freedom from error are characteristics of faithful representation, a fundamental qualitative characteristic.

**5. (b)** SFAC 8 defines neutrality as the quality of information which requires freedom from bias toward a predetermined result. Unbiased information would always be more faithfully represented than biased information. Other components of faithful representation include information to be verifiable and free from error. Neutrality is not an ingredient of relevance because relevance requires information to have predictive value and confirmatory value, or both.

**6. (a)** Per SFAC 8, comparability is an enhancing quality of financial reporting which relates to both relevance and faithful representation. Confirmatory value and predictive value only relate to relevance. Freedom from error only relates to faithful representation.

**7. (d)** Per SFAC 5, recognition is the process of formally recording or incorporating an item into the financial statements as an asset, liability, revenue, expense, or the like. According to SFAC 6, allocation is the process of assigning or distributing an amount according to a plan or formula, matching is the simultaneous recognition of revenues with expenses that are related directly or jointly to the same transactions or events, and realization is the process of converting noncash resources and rights into money.

**8. (a)** Per SFAC 5, earnings and comprehensive income have the same broad components—revenues, expenses, gains, and losses—but are not the same because certain classes of gains and losses are excluded from earnings. Changes in market values of investments in marketable equity securities classified as available-for-sale securities are included in comprehensive income, but are excluded from earnings until realized. Answers (b), (c), and (d) are incorrect because they would be included in both earnings and comprehensive

income. Note that unrealized gains and losses on marketable equity securities classified as trading securities are included in earnings. This treatment is in accordance with SFAS 115.

**9. (c)** Per SFAC 6, comprehensive income includes all changes in equity during a period except those resulting from investments by owners and distributions to owners. Dividends paid to stockholders is a change in equity resulting from a distribution to owners, so it is excluded from comprehensive income. Answers (a), (b), and (d) are all included in comprehensive income because they **are** changes in equity, but are **not** investments by, or distributions to, owners.

**10. (d)** The fundamental qualitative characteristic of faithful representation has the components of completeness, neutrality, and freedom from error. Answer (a) is incorrect because predictive value and confirmatory value are the components of relevance. Answer (b) is incorrect because comparability and consistency are enhancing characteristics, and confirmatory value is a component of relevance. Answer (c) is incorrect, because understandability is an enhancing characteristic, predictive value is a component of relevance, and reliability is no longer a characteristic in the concept statements.

**11. (b)** According to SFAC 6, realization is the process of converting noncash resources and rights into money through the sale of assets for cash or claims to cash. When equipment is sold for a note receivable, money is realized since a note qualifies as a claim to cash. Answers (a) and (d) relate to cost allocation. Answer (c) is incorrect because accounts receivable represents a claim to cash. Realization occurs at the time of sale rather than when cash is collected.

**12. (d)** An estimate of an impairment charge to a fixed asset can only be a faithful representation if the entity has applied impairment rules properly, disclosed the process of arriving at the impairment estimate and disclosed any uncertainties that affect the impairment estimate. Assuming the above is true, and no other estimate is better than the derived estimate, then the estimate is comprised of the best available information. Therefore, it is a faithful representation.

**13. (a)** Relevant financial information is capable of making a difference if it has predictive value, confirmatory, value, or both. Predictive value requires information to be used to predict future outcomes. Confirmatory value requires that information either confirm or change prior expectations. An interim report provides both predictive value and confirmatory value because it provides a basis to forecast future earnings and it provides feedback about prior performance expectations. Therefore, interim reporting is relevant.

**14. (c)** Per SFAC 6, the major difference between financial and physical capital maintenance is related to the effects of price changes on assets held and liabilities owed during a period. The financial capital concept is applied in current GAAP. Under this concept, the effects of the price changes described above are considered “holding gains and losses,” and are included in computing return on capital. Comprehensive income, which is described in SFAC 5, is “the change in equity of a business enterprise during a period from transactions and other events and circumstances from nonowner sources.” It is also a measure of return on **financial** capital. The concept

of physical capital maintenance seeks to measure the effects of price changes that are not currently captured under GAAP (e.g., replacement costs of nonmonetary assets). Under this concept, holding gains and losses are considered “capital maintenance adjustments” which would be included directly in equity and excluded from return on capital.

**15. (d)** Per SFAC 6, revenues are inflows of assets or settlements of liabilities, or both, during a period as a result of an entity’s major or primary operations. Two essential characteristics of revenues are that revenues (1) arise from a company’s primary earnings activities and (2) are recurring or continuing in nature. Therefore, answer (d) is correct because it meets the above criteria. Answers (b) and (c) are incorrect because they result from incidental transactions. Answer (a) is incorrect because a decrease of an asset is not a revenue.

**16. (d)** Per SFAC 6, the common quality shared by all assets is “service potential” or “future economic benefit.” Per SFAC 6, assets commonly have other distinguishing features, such as being legally enforceable, tangible or acquired at a cost. These features, however, are not essential characteristics of assets.

**17. (d)** Per SFAC 5, five different attributes are used to measure assets and liabilities in present practice: historical cost, current (replacement) cost, current market value, net realizable value, and present value of future cash flows. Three of these (historical cost, replacement cost, and net realizable value) are used in measuring inventory at lower of cost or market. Present value of future cash flows is not used to measure inventory.

**18. (c)** The most relevant measure of a liability always reflects the credit standing of the entity obligated to pay, according to SFAC 7. Those who hold the entity’s obligations as assets incorporate the entity’s credit standing in determining the prices they are willing to pay.

**19. (d)** SFAC 7 provides a framework for using future cash flows as the basis for accounting measurements at initial recognition or fresh-start measurements and for the interest method of amortization. **FASB limited SFAC 7 to measurement issues (how to measure) and chose not to address recognition questions (when to measure).** SFAC 7 introduces the expected cash flow approach, which differs from the traditional approach by focusing on explicit assumptions about the range of possible estimated cash flows and their respective probabilities.

**20. (d)** The expected cash flow approach uses all expectations about possible cash flows in developing a measurement, rather than just the single most-likely cash flow. By incorporating a range of possible outcomes (with their respective timing differences), the expected cash flow approach accommodates the use of present value techniques when the timing of cash flows is uncertain. Thus, the expected cash flow is likely to provide a better estimate of fair value than the minimum, most-likely, or maximum taken alone. According to SFAC 7, expected present value refers to the sum of probability-weighted present values in a range of estimated cash flows, all discounted using the same interest rate convention.

**21. (b)** The computation of expected present value using a single interest rate is as follows:

PV of \$200,000 in one year at 5%	\$190,476	
Probability	<u>20%</u>	\$38,095
PV of \$200,000 in two years at 5%	\$181,406	
Probability	<u>50%</u>	90,703
PV of \$200,000 in three years at 5%	\$172,768	
Probability	<u>30%</u>	<u>51,830</u>
		<u>\$180,628</u>

According to SFAC 7, expected present value refers to the sum of probability-weighted present values in a range of estimated cash flows, all discounted using the same interest rate convention.

**22. (c)** Like depreciation and amortization conventions, interest methods are grounded in notions of historical cost, not current cost.

**23. (a)** According to SFAC 7, the objective of using present value in an accounting measurement is to capture, to the extent possible, the economic difference between sets of future cash flows. The objective of present value, when used in accounting measurements at initial recognition and fresh-start measurements, is to estimate fair value. Stated differently, present value should attempt to capture the elements that taken together would comprise a market price, if one existed, that is fair value. Value-in-use and entity-specific measurements attempt to capture the value of an asset or liability in the context of a particular entity. An entity-specific measurement substitutes the entity's assumptions for those that marketplace participants would make.

**24. (c)** The Codification provides guidance on the determination of gain or loss on disposal of a component of a business. According to this guidance, such determination should be based on estimates of the net realizable value of the component. Since Brooks Co. plans to discontinue its entire operations, the appropriate measurement basis for its equipment is net realizable value. Historical cost and current reproduction and replacement costs are not appropriate measurement bases for assets once an entity has decided to discontinue its operations because these amounts do not reflect the entity's probable future benefit, which is a characteristic of assets per SFAC 6.

**25. (d)** The FASB Accounting Standards Codification includes all previous level A–D GAAP. The Codification includes the authoritative literature of the Financial Accounting Standards Board, the Emerging Issues Task Force Abstracts, Accounting Principles Board Opinions, Accounting Research Bulletins, Accounting Interpretations, AICPA Statements of Position, AICPA Audit and Accounting Guides, and Practice Bulletins. The FASB Accounting Standards Codification does not include the AICPA Statements of Auditing Standards. The auditing standards are included in the Professional Standards issued by the AICPA.

**26. (b)** Generally, sales revenue is recognized at the date of delivery, because that generally is the time at which a sale has occurred. At that point the two criteria for revenue recognition were met; the revenue is (1) realized or realizable and (2) it is

earned (SFAC 6). Therefore, the amount of sales revenue recognized in year 1 is \$150,000 ( $50,000 \times \$3 = \$150,000$ ).

**27. (c)** Income generally accrues only at the time of sale, and gains may not be anticipated by reflecting assets at their **current** sales prices. Exception to this general rule is granted, however, for agricultural products that are homogenous and have an immediate marketability at quoted prices such as the cotton in this problem (ASC 905-330-30-1). When these inventories are stated at sales prices, they should be reduced by expenditures to be incurred in disposal. Amar Farms should, therefore, recognize revenue on the entire 300,000 pound crop in year 1 at the guaranteed (and prevailing) market price of \$.70 per pound. This amounts to \$210,000 ( $300,000 \text{ pounds} \times \$0.70 \text{ per pound} = \$210,000$ ). Note that the additional \$.02 per pound for the cotton sold in year 2 would be recognized in year 2, since its selling price exceeded the current (year 1) market price.

**28. (a)** Revenue from the sale of a product may be recognized at the time of sale only if **all** of the following conditions are met:

1. The seller's price is fixed or readily determinable.
2. The buyer has paid the seller or is obligated to pay the seller, the obligation not being contingent on resale of the product.
3. The buyer's obligation to the seller remains unchanged in the event of damage or destruction of the product.
4. The buyer is independent from the seller.
5. The seller does not have any significant obligations regarding resale of the product by the buyer.
6. The amount of future returns can be reasonably estimated.

Because the buyer, Zee, has the right to return the machine to the seller, Lin, condition (2) above has not been met. Therefore, the recognition of sales revenue and cost of sales is not allowable for this transaction.

**29. (b)** Under accrual accounting, events that change an entity's financial position are recorded in the period in which the events occur. This means revenues are recognized when earned rather than when cash is received, and expenses are recognized when incurred rather than when cash is paid. Therefore, when the royalties are paid, Wand should debit an asset account (prepaid royalties) rather than an expense account. The royalties paid should be reported as expense in the period incurred (by debiting royalty expense and crediting prepaid royalties).

**30. (c)** The balance in the advertising expense account on 12/31/Y1 before adjustment is \$146,000. Since the sales promotional campaign is to be conducted in January, any associated costs are an expense of year 2. Thus, the \$15,000 cost of printing catalogs should be removed from the advertising expense account and recorded as a prepaid expense as of 12/31/Y1. In addition, advertising expense must be increased by the \$9,000 cost of December's radio advertisements, which are an expense of year 1 even though they were not billed to Clark or paid until year 2. The \$9,000 must be accrued as an expense and a liability at 12/31/Y1. Therefore, year 1 advertising expense should total \$140,000 ( $\$146,000 - \$15,000 + \$9,000$ ).

**31. (b)** The opening balance in prepaid expenses (\$1,500) results from a one-year insurance premium paid on 7/1/Y1. Since this policy would have expired by 6/30/Y2, no part of the \$1,500 is included in 12/31/Y2 prepaid expenses. The insurance premium paid on 7/1/Y2 (\$3,200) would be partially expired (6/12) by 12/31/Y2. The remainder ( $6/12 \times \$3,200 = \$1,600$ ) would be a prepaid expense at year-end. The entire advance rental payment (\$2,000) is a prepaid expense at 12/31/Y2 because it applies to year 3. Therefore, total 12/31/Y2 prepaid expenses are \$3,600.

Prepaid insurance ( $\$3,200 \times 6/12$ )	\$1,600
Prepaid rent	<u>2,000</u>
Total prepaid expenses	<u>\$3,600</u>

**32. (b)** Apparently Roro records policy payments as charges to insurance expense and records prepaid insurance at the end of the quarter through an adjusting entry. The unadjusted trial balance amounts at 3/31/Y1 must represent the final two months of the old policy (\$300 of prepaid insurance) and the cost of the new policy (\$7,200 of insurance expense). An adjusting entry must be prepared to reflect the correct 3/31/Y1 balances. Since the new policy has been in force one month (3/1 through 3/31), thirty-five months remain unexpired. Therefore, the balance in prepaid insurance should be \$7,000 ( $\$7,200 \times 35/36$ ). Insurance expense should include the cost of the last two months of the old policy and the first month of the new policy [ $\$300 + (\$7,200 \times 1/36) = \$500$ ]. Roro's adjusting entry would transfer \$6,700 from insurance expense to prepaid insurance to result in the correct balances.

**33. (c)** At 12/31/Y2, the liability account unearned subscription revenue should have a balance which reflects all unexpired subscriptions. Of the year 1 sales, \$125,000 expires during year 3 and would still be a liability at 12/31/Y2. Of the year 2 sales, \$340,000 ( $\$200,000 + \$140,000$ ) expires during year 3 and year 4, and therefore is a liability at 12/31/Y2. Therefore, the total liability is \$465,000 ( $\$125,000 + \$340,000$ ). This amount would have to be removed from the sales account and recorded as a liability in a 12/31/Y2 adjusting entry.

**34. (d)** Regal's unredeemed gift certificates at 12/31/Y1 are \$75,000. During year 2, these certificates are either redeemed (\$25,000) or expire by 12/31/Y2 ( $\$75,000 - \$25,000 = \$50,000$ ). Therefore, none of the \$75,000 affects the 12/31/Y2 unearned revenue amount. During year 2, additional certificates totaling \$250,000 were sold. Of this amount, \$225,000 is expected to be redeemed in the future [ $\$250,000 - (10\% \times \$250,000)$ ]. Since \$175,000 of year 2 certificates were redeemed in year 2, 12/31/Y2 unearned revenue is \$50,000 ( $\$225,000 - \$175,000$ ).

**35. (a)** The requirement is to calculate Wren's royalty revenue for year 2. The 3/15/Y2 royalty receipt (\$12,000) would not affect year 2 revenue because this amount pertains to revenues earned for July through December of year 1 and would have been accrued as revenue on 12/31/Y1. On 9/15/Y2, Wren received \$17,000 in royalties for the first half of year 2. Royalties for the second half of year 2 will not be received until 3/15/Y3. However, the royalty payment to be received for the second six months ( $15\% \times \$60,000 = \$9,000$ ) has been earned and should be accrued at 12/31/Y2. Therefore, year 2 royalty revenue is \$26,000 ( $\$17,000 + \$9,000$ ).

**36. (d)** The agreement states that Super is to receive royalties of 20% of revenues associated with the comic strip. Since Fantasy's year 3 revenues from the strip were \$1,500,000, Super's royalty revenue is \$300,000 ( $\$1,500,000 \times 20\%$ ). The other information in the problem about the receivable and cash payments is not needed to compute revenues. Super's year 3 summary entries would be

Cash	200,000	
Royalties rec.	75,000	
Royalty revenue	125,000	(\$200,000 - \$75,000)
Royalties rec.	175,000	
Royalty revenue	175,000	(\$300,000 - \$125,000)

**37. (c)** Royalty revenues should be recognized when earned, regardless of when the cash is collected. Royalty revenue earned from 12/1/Y1 to 5/31/Y2 is \$80,000 ( $\$400,000 \times 20\%$ ). Of this amount, \$10,000 ( $\$50,000 \times 20\%$ ) was earned in December of year 1, so the portion earned in the first five months of year 2 is \$70,000 ( $\$80,000 - \$10,000$ ). Royalty revenue earned from 6/1/Y2 to 11/30/Y2 is \$65,000 ( $\$325,000 \times 20\%$ ). The amount earned from 12/1/Y2 to 12/31/Y2, which would be accrued at 12/31, is \$14,000 ( $\$70,000 \times 20\%$ ). Therefore, year 2 royalty revenue is \$149,000.

1/1/Y2 - 5/31/Y2	\$70,000
6/1/Y2 - 11/30/Y2	65,000
12/1/Y2 - 12/31/Y2	<u>14,000</u>
	<u>\$149,000</u>

**38. (b)** The requirement is to calculate the amount of royalty income to be recognized in year 2. Cash collected for royalties totaled \$200,000 in year 2. However, this amount must be adjusted for changes in the related accounts, as follows:

Year 2 cash received	\$200,000
Royalties receivable 12/31/Y1	(90,000)
Royalties receivable 12/31/Y2	85,000
Unearned royalties 12/31/Y1	60,000
Unearned royalties 12/31/Y2	<u>(40,000)</u>
Royalty income	<u>\$215,000</u>

The beginning receivable balance (\$90,000) is subtracted because that portion of the cash collected was recognized as revenue last year. The ending receivable balance (\$85,000) is added because that amount is year 2 revenue, even though it has not yet been collected. The beginning balance of unearned royalties (\$60,000) is added because that amount is assumed to be earned during the year. Finally, the ending balance of unearned royalties (\$40,000) is subtracted since this amount was collected, but not earned as revenue, by 12/31/Y2.

**39. (b)** The requirement is to determine the amount of royalty expense to be recognized in year 2. Cash paid for royalties totaled \$300,000 in year 2. However, this amount must be adjusted for changes in the related accounts, as follows:

Year 2 cash paid	\$300,000
Royalties payable 12/31/Y1	(80,000)
Royalties payable 12/31/Y2	75,000
Prepaid royalties 12/31/Y1	55,000
Prepaid royalties 12/31/Y2	<u>(45,000)</u>
	<u>\$305,000</u>

The beginning payable balance (\$80,000) is subtracted because that portion of the cash paid was recognized as expense during the previous year. The ending payable balance (\$75,000) is added because that amount has been accrued as year 2 expense, even though it has not yet been paid. The beginning balance of prepaid royalties (\$55,000) is added because that amount is assumed to have expired during the year. Finally, the ending balance of prepaid royalties (\$45,000) is subtracted since this amount was paid, but not incurred as an expense, by 12/31/Y2.

**40. (b)** When the insurance policy was initially purchased, the entire balance was debited to a prepaid asset account (i.e., prepaid insurance). The adjusting entry at December 31, year 1, to recognize the expiration of one year of the policy would be

Insurance expense	(1/3 of original pymt.)
Prepaid insurance	(1/3 of original pymt.)

After the adjusting entry, the prepaid asset account would contain 2/3 of the original payment. If the original payment had instead been debited to an expense account (i.e., insurance expense), then the adjusting entry at December 31, year 1 would be

Prepaid insurance	(2/3 of original pymt.)
Insurance expense	(2/3 of original pymt.)

This alternate approach would also result in 1/3 of the original payment being expensed in year 1 and 2/3 of the original payment being carried forward as a prepaid asset. Thus, answer (b) is correct. Answer (a) is incorrect because the premium paid was for a three-year policy, 2/3 of which had not yet expired and would therefore be carried forward in the prepaid asset account. Answer (c) is incorrect because 1/3 of the original payment was already expensed. Answer (d) is incorrect because the amount would be the same as it would have been if the original payment had been debited initially to an expense account (as explained for answer (b) above).

**41. (b)** Current assets are identified as resources that are reasonably expected to be realized in cash or sold or **consumed** during the normal operating cycle of the business. These resources include prepaid expenses such as royalties. Since the balance remaining in Sip Co.'s royalty prepayment (the payment relating to year 2 royalties) will be consumed within the next year, it should be reported as a current asset. Additionally, the payment relating to year 1 should be reported as an expense.

**42. (b)** At the time the gift certificates were issued, the following entry was made, reflecting the store's future obligation to honor the certificates:

Cash	xx
Deferred revenue	xx

Upon redemption of the certificates, the obligation recorded in the deferred revenue account becomes satisfied and the revenue is earned. Similarly, as the certificates expire, the store is no longer under any obligation to honor the certificates and the deferred revenue should be taken into income. In both instances, the deferred revenue account must

be reduced (debited) to reflect the earning of revenue. This is done through the following entry:

Deferred revenue	xx
Revenue	xx

**43. (a)** The revenues from service contracts should be recognized on a pro rata basis over the term of the contract. This treatment allocates the contract revenues to the period(s) in which they are earned. Since the sale of a service contract does not culminate in the completion of the earnings process (i.e., does not represent the seller's performance of the contract), payments received for such a contract should be recorded initially in a deferred revenue account.

**44. (c)** The following formula is used to adjust service revenue from the cash basis to the accrual basis:

$$\text{Cash fees collected} + \text{End. AR} - \text{Beg. AR} + \text{Beg. unearned fees} - \text{End. unearned fees} = \text{Accrual basis service revenue}$$

$$\$200,000 + \$60,000 - \$40,000 + 0 - \$5,000 = \$215,000$$

As an alternative, T-accounts can be used.

Service Revenue		Acct. Receivable		
5,000	220,000	40,000	200,000	
	215,000	220,000		Cash received
		60,000		
			Unearned Revenue	
			0	1/1/Y1
			5,000	
			5,000	12/31/Y1

**45. (d)** To determine cash basis revenue, the solutions approach is to prepare a T-account for accounts receivable.

	Accounts Receivable		
12/31/Y1	1,000,000		
Sales	4,600,000	20,000	Write-offs
		?	Collections
12/31/Y2	1,300,000		

The missing amount for cash collections is \$4,280,000. Another approach is to use the following formula:

$$\text{Sales} + \text{Decrease (-increase) in AR} - \text{Write-offs} = \text{Collections}$$

$$\$4,600,000 - \$300,000 - \$20,000 = \$4,280,000$$

The increase in receivables (\$300,000) means that cash collected during the period was less than sales during the period and therefore is deducted from sales revenue. The write-offs (\$20,000) represent recognized sales that will never be collected in cash and therefore must also be deducted to compute collections.

46. (d) To determine rental revenue, the solutions approach is to prepare a T-account for rents receivable and rent revenues.

Rent Receivable		Rent Revenues	
11/30/Y1	800,000 <sup>a</sup>	800,000 <sup>a</sup>	2,210,000
	800,000		
1,090,000 <sup>b</sup>	30,000 <sup>c</sup>		1,090,000 <sup>b</sup>
Bal 1,060,000	1,060,000 + 30,000		Bal 2,500,000

<sup>a</sup> To remove year 1 revenue from the \$2,210,000 of cash collected and relieve rent receivable of collections from year 1 receivables.

<sup>b</sup> To recognize unrecorded rent earned including write-offs.

<sup>c</sup> To recognize write-offs. Debit would be to the allowance account.

47. (d) Under the cash basis method of accounting, revenue is recognized as it is collected. Cash sales after returns and allowances totaled \$76,000 (\$80,000 – \$4,000). Net credit sales for year 1 were \$114,000 (\$120,000 credit sales – \$6,000 discounts). As made evident by the following T-account, cash collections from credit sales must equal \$124,000 (\$40,000 + \$114,000 – \$30,000), since \$10,000 in excess of current credit sales was received and reduced Accounts Receivable by this amount.

Accounts Receivable		
Bal. 1/1	40,000	
Net credit sales	114,000	?
Bal. 12/31	<u>30,000</u>	
		Collections

A summary journal entry would be

Cash	124,000	
Sales discounts	6,000	
Accounts receivable		130,000

Total cash basis revenue for year 1 is \$200,000 as shown below.

Cash sales (\$80,000 – \$4,000)	\$76,000
Collections of credit sales [(\$40,000 + \$120,000 – \$30,000) – \$6,000]	
	<u>124,000</u>
Total cash received	<u>\$200,000</u>

48. (a) Cost of goods sold is computed as follows:

$$\text{Beg. inv.} + \text{Net purchases} - \text{End. inv.} = \text{CGS}$$

Net purchases must be computed from the information given using a T-account or a formula.

AP		
	50,000	12/31 Y1
Payments	490,000	?
		Purchases
	75,000	12/31 Y2

The missing amount for purchases is \$515,000. Another approach is to use the following formula:

$$\text{Payments} + \text{Ending AP} - \text{Beginning AP} = \text{Purchases}$$

$$\$490,000 + \$75,000 - \$50,000 = \$515,000$$

This amount can be used to determine cost of goods sold

Beg. inventory	\$290,000
+ Net purchases	<u>515,000</u>
Cost of goods available	805,000
- End. inventory	<u>260,000</u>
Cost of goods sold	<u>\$545,000</u>

49. (d) Cash-basis income of \$60,000 must be adjusted for changes in accounts receivable and accounts payable to compute accrual income

Cash-basis income	\$60,000
12/31 Y1 AR	(20,000)
12/31 Y2 AR	40,000
12/31 Y1 AP	30,000
12/31 Y2 AP	<u>(15,000)</u>
Accrual income	<u>\$95,000</u>

The beginning AR (\$20,000) is subtracted because although this amount was collected in year 2, it is properly accrued as year 1 revenue. The ending AR is added because although not collected in year 2, it should be accrued as year 2 revenue. The beginning AP is added because although this amount was paid in year 2, it is properly accrued as year 1 expense. The ending AP is subtracted because although not paid in year 2, it should be accrued as year 2 expense.

50. (c) The ending balance in Tory's capital account on either the accrual or cash basis is computed as follows:

$$\text{Beginning capital} + \text{Investments} + \text{Income} - \text{Drawings} = \text{Ending capital}$$

Tory's beginning capital is his initial cash investment of \$2,000. No other investments were made. Under the cash basis method of accounting, income is the excess of cash revenues (\$5,000) over cash expenses (\$0, since the expenses were not paid until after March 31). Therefore, cash basis income is \$5,000. Drawings are \$1,000. Therefore, ending capital is \$6,000 (\$2,000 + \$0 + \$5,000 – \$1,000).

51. (d) The requirement of this question is to determine if a decrease in accounts receivable and/or a decrease in accrued expenses would result in **cash-basis income** being **lower** than accrual-basis income.

A decrease in the accounts receivable balance would generally mean that cash was collected. In accordance with the cash basis of accounting when cash is received it is recorded as revenue (Dr. Cash, Cr. Revenue), whereas under the accrual basis the revenue would have been recorded when the receivable was recorded (Dr. AR, Cr. Revenue). Thus, a decreased accounts receivable balance would result in increased revenue/income. Therefore, the answer for this account is No.

A decrease in the accrued expenses account would generally mean cash was paid on some expenses. Under the cash basis, when the cash is paid the expense is recorded (Dr. Expense, Cr. Cash), whereas under the accrual basis the expense would have been recorded when the accrued expense was recorded (Dr. Expense, Cr. Accrued Expense). Thus, a decreased accrued expenses account would result in increased

expenses/lower income for the cash basis. Thus, the answer for this account is Yes.

**52. (b)** When a company operates on the accrual basis, supplies are inventoried and expensed as they are used. Under the cash method, however, supplies are expensed as they are paid for. Therefore if White Co. experiences an increase in supplies inventory during the year, this increase must be deducted from accrual income to get to the cash basis, because the cost of the supplies would be expensed at the time of purchase.

Office salaries payable works the opposite way. Under the accrual method, a liability would have been established resulting in additional expense over the amount of cash paid to employees. Under the cash method, no liability is accrued and the unpaid salaries are not expensed. Therefore, the increase must be added to the accrual basis net income.

**53. (c)** Prior to year 2, Droit Co. used the cash basis of accounting. Accordingly, Droit would have expensed all purchases of supplies as incurred. In contrast, under the accrual basis of accounting, the cost of unused supplies at each year-end would have been carried as an asset and, therefore, excluded from the current year's supplies expense. In year 2, the year Droit adopted the accrual basis of accounting, Droit would have inventoried unused supplies at December 31 and excluded those costs from year 2 net income. Since the cost of year 2's beginning balance of supplies was expensed during year 1, even though the supplies were not used until year 2, Droit's inability to determine the beginning supplies inventory would result in an understatement of supplies expense and overstatement of year 2 net income. However, since Droit properly inventoried supplies at December 31, year 2, its cumulative (inception-to-date) supplies expense would be properly stated. Therefore, Droit's inability to determine year 2's beginning supplies expense would have no impact on Droit's December 31, year 2 retained earnings.

**54. (b)** Under the installment method, gross profit is deferred at the time of sale and is recognized by applying the gross profit rate to subsequent cash collections. At the time of sale, gross profit of \$250,000 is deferred (\$500,000 installment sales less \$250,000 cost of installment sales). The gross profit rate is 50% (\$250,000 ÷ \$500,000). Since year 1 collections on installment sales were \$100,000, gross profit of \$50,000 (50% × \$100,000) is recognized in year 1. This would decrease the deferred gross profit account to a 12/31/Y1 balance of \$200,000 (\$250,000 – \$50,000). Note that regular sales, cost of regular sales, and general and administrative expenses do not affect the deferred gross profit account.

**55. (d)** Under the installment sales method, gross profit is deferred to future periods and recognized proportionately to collection of the receivables. Therefore, at each year-end, deferred gross profit can be computed by multiplying the gross profit percentage by the accounts receivable balance, as indicated below.

	Year 2	Year 1
Sales	\$900,000	\$600,000
Year 1 Collections		(200,000)
Year 2 Collections	(300,000)	(100,000)
Year 1 Write-offs		(50,000)

Year 2 Write-offs	(50,000)	(150,000)
12/31/Y2 AR	\$550,000	\$100,000
Gross profit %	× 40%	× 30%
12/31/Y2 Deferred GP	<u>\$220,000</u>	<u>\$30,000</u>

Thus, total deferred gross profit at 12/31/Y2 is \$250,000 (\$220,000 + \$30,000).

**56. (d)** Under the installment sales method, gross profit is deferred to future periods and is recognized proportionately as cash is collected. To determine cash collections in this case, first compute the year 2 installment sales by dividing deferred gross profit by the gross profit percentage (\$560,000 × 40% = \$1,400,000). Then, the 12/31/Y2 installment accounts receivable is subtracted to determine cash collections (\$1,400,000 – \$800,000 = \$600,000). Realized gross profit is then computed by multiplying cash collections by the gross profit percentage (\$600,000 × 40% = \$240,000).

**57. (c)** When using the installment method, gross profit realized is computed as indicated below.

$$\text{Cash collections} \times \text{GP\%} = \text{GP realized}$$

This equation can be rearranged as follows:

$$\text{GP realized} \div \text{GP\%} = \text{Cash collections}$$

Therefore, cash collected to date on year 1 sales is \$800,000 [(\$150,000 + \$90,000) ÷ 30%], and on year 2 sales is \$500,000 (\$200,000 ÷ 40%). Installment accounts receivable at 12/31/Y2 is computed by subtracting cash collections from the original sales amount.

Installment AR – year 1 (\$1,000,000 – \$800,000)	\$200,000
Installment AR – year 2 (\$2,000,000 – \$500,000)	<u>1,500,000</u>
Total 12/31/Y2 installment AR	<u>\$1,700,000</u>

**58. (a)** The equipment sale is accounted for using the installment method. The gross profit percentage on the sale is 33 1/3% (\$600,000 profit ÷ \$1,800,000 selling price). Since \$300,000 of the sales price is collected in year 2, gross profit of \$100,000 is recognized (33 1/3% × \$300,000). The **total** revenue recognized is \$250,000 (\$100,000 gross profit + \$150,000 interest revenue).

**59. (a)** The machine sale is accounted for using the installment method, where gross profit is deferred and recognized in proportion to cash collected. Initially, the entire \$270,000 gain is deferred. In year 1, \$150,000 of the sales price was collected, and the gross profit percentage is 30% (\$270,000 ÷ \$900,000), so gross profit recognized was \$45,000 (30% × \$150,000). In year 2, \$250,000 of the sales price was collected, so gross profit recognized was \$75,000 (30% × \$250,000). Therefore, at 12/31/Y2, deferred gross profit is \$150,000 (\$270,000 – \$45,000 – \$75,000). As a shortcut, you can compute the 12/31/Y2 note receivable balance (\$750,000 – \$250,000 = \$500,000), and multiply by the 30% gross profit percentage (30% × \$500,000 = \$150,000). Note that the **interest** collected (\$75,000) does not affect the computation because it is not a collection of sales price.

**60. (c)** The profit on a sale in the ordinary course of business is considered to be realized at the time of sale unless it is uncertain whether the sale price will be collected. The Board concluded that use of the installment method of accounting is not acceptable unless this uncertainty exists. Answers (a), (b), and (d) are incorrect because they do not involve the element of uncertainty regarding the collectibility of the sale price.

**61. (c)** According to the **installment method** of accounting, gross profit on an installment sale is recognized in income in proportion to the cash collection. The cash collected from a given year's sales is multiplied by that year's gross profit percentage to compute the amount of gross profit to be recognized. Answer (a) describes the **point-of-sale** recognition basis, while answer (d) describes the **cost recovery** method. Answer (b) does not describe any recognition basis currently used.

**62. (c)** The installment method of accounting is used when there is a high degree of uncertainty regarding the collectibility of the sale price. Under this method, sales revenues and the related cost of goods sold are recognized in the period of the sale. However, the gross profit is deferred to the periods in which cash is collected. Income recognized in the period of collection is generally computed by multiplying the cash collected by the gross margin percentage. The installment method is based upon deferral of the gross profit, not the net operating profit. The installment method is generally only applicable when the reporting company is unable to estimate the amount of uncollectible accounts.

**63. (d)** Under the installment method (case I) revenue (gross profit) is recognized **after** the sale, in proportion to cash collected. Under the cost recovery method (case II), revenue (gross profit) is again recognized **after** the sale, when cumulative receipts exceed the cost of the asset sold. Therefore, revenue is not recognized prior to the sale of merchandise in either case I or case II.

**64. (d)** Under the cost recovery method **no profit of any type** is recognized until the cumulative receipts (principal and interest) exceed the cost of the asset sold. This means that the entire gross profit ( $\$3,000,000 - \$2,000,000 = \$1,000,000$ ) and the year 2 interest received ( $\$270,000$ ) will be deferred until cash collections exceed  $\$2,000,000$ . Therefore, no income is recognized in year 2.

**65. (d)** The **installment method** is used when collection of the selling price is not reasonably assured. However, when the uncertainty of collection is so great that even the use of the installment method is precluded, then the cost recovery method may be used. Having no reasonable basis for estimating collectibility would provide a great enough uncertainty to use the cost recovery method. It is important to note that anytime the installment method is used, some risk of 100% collection exists, but the risk must be extreme before the cost recovery method is employed.

**66. (a)** Installment methods of recognizing revenue are appropriate only when "collection of the sale price is not reasonably assured." Under the cost recovery method, gross profit is deferred and recognized only when the cumulative receipts exceed the cost of the asset sold.

**67. (d)** Franchise fee revenue is recognized when all material services have been substantially performed by the

franchiser. Substantial performance means the franchiser has performed substantially all of required initial services and has no remaining obligation to refund any cash received. The  $\$60,000$  nonrefundable down payment applies to the initial services already performed by Rice. Therefore, the  $\$60,000$  may be recognized as revenue in year 1. The three remaining  $\$30,000$  installments relate to substantial future services to be performed by Rice. The present value of these payments ( $\$72,000$ ) is recorded as unearned franchise fees and recognized as revenue once substantial performance of the future services has occurred.

Cash	60,000	
Notes receivable	90,000	
Discount on notes receivable		18,000
Franchise revenue		60,000
Unearned franchise fees		72,000

**68. (c)** Initial franchise fees are not recognized as revenue until the franchisor makes substantial performance of the required services, and collection is reasonably assured. Since Potter Pie has not yet performed the required services, the initial franchise fee ( $21 \times \$30,000 = \$630,000$ ) is reported as **unearned franchise fees** at 12/31/Y1. The estimated uncollectible amount ( $\$20,000$ ) normally would be recorded as a debit to **bad debt expense** and a credit to **allowance for uncollectible accounts**. However, since no revenue has yet been recognized, it is inappropriate to record bad debt expense. Instead, **unearned franchise fees** is debited, because an unearned revenue should not be recorded when, in effect, no related asset has been received. Therefore, the **net** unearned franchise fees is  $\$610,000$  ( $\$630,000 - \$20,000$ ).

**69. (d)** Items I and II do not transfer the risks and rewards of ownership to the buyer since both scenarios entitle the buyer to a return of his/her initial investment. Thus, the risks of ownership still remain with the seller. The economic substance of such arrangements is that of financing, leasing, or profit-sharing transactions. Item III transfers the risks and rewards of ownership since the seller will be reimbursed for cost plus a 5% profit on the support provided. Therefore, the seller is not required to support operations of the property at its **own** risk.

**70. (c)** The problem states that the sale has been consummated and that Kame's initial and continuing investments are adequate to demonstrate a commitment to pay for the property. However, the fact that Esker's receivable is subject to future subordination precludes recognition of the profit in full. Instead, the cost recovery method must be used to account for the sale. The deposit method is to be used

1. Until the sale is consummated, when all activities necessary for closing have been performed.
2. If the buyer's initial and continuing investments are not adequate to demonstrate a commitment to pay for the property and the seller is not reasonably assured of recovering the cost of the property if the buyer defaults.

The problem states that the sale has been consummated and that Kame's initial and continuing investments are adequate. Therefore, the deposit method will not be used to account for the sale. The reduced profit method is used only when the initial investment is adequate to demonstrate

a commitment to pay for the property but the continuing investments are not. The continuing investments must also meet certain additional requirements for the reduced profit method to be used. Since Kame's continuing investments are adequate, the reduced profit method will not be used to account for the sale. The full accrual method may be used only if profit on the sale is determinable, the earning process is virtually complete, and all of the following:

1. A sale is consummated.
2. The buyer's initial and continuing investments are adequate to demonstrate a commitment to pay for the property.
3. The seller's receivable is not subject to future subordination.
4. The seller has transferred to the buyer the usual risks and rewards of ownership in a transaction that is, in substance, a sale and does not have a substantial continuing involvement in the property.

**71. (a)** The requirement is to identify the condition that must be met to apply separate accounting. For a multiple-deliverables arrangement, two conditions must be met for an item to be considered a separate unit of accounting: (1) The delivered item has value on a stand-alone basis, and (2) if the arrangement includes a right of return for the delivered item, the undelivered item must be substantially in the control of the vendor. Therefore answer (a) is correct.

**72. (b)** The requirement is to identify the subject matter of milestone accounting. Answer (b) is correct because the milestone method of accounting may be used to recognize revenue for research and development arrangements. Note that the milestone method is an option, but it is not required.

**73. (c)** The requirement is to identify the amount of revenue recognized under the milestone method. Answer (c) is correct because contingent revenue may be recognized in its entirety in the period the milestone is achieved.

**74. (d)** The requirement is to identify the body that sets international accounting standards. Answer (d) is correct because the International Accounting Standards Board (IASB) issues International Financial Reporting Standards.

**75. (c)** The requirement is to identify the qualitative characteristics of relevance. Answer (c) is correct because the IASB *Framework* provides that relevance includes the qualities of predictive value and confirmatory value. Answer (a) is incorrect because feedback value is not a characteristic of relevance. Answer (b) is incorrect because these qualities are the characteristics of reliability in FASB Concept Statement 1, which is superseded by SFAC 8. Answer (d) is incorrect because comparability and timeliness are enhancing characteristics in the IASB *Framework*.

**76. (b)** The requirement is to identify the element that is defined as increases in economic benefits in the form of inflows or enhancements of assets or decreases of liabilities that result in increases in equity other than those resulting from contributions from equity participants. Answer (b) is correct because the IASB *Framework* has five elements: asset, liability, equity, income, and expense. The definition given is that of income. Note that income includes both revenues and gains.

**77. (b)** The requirement is to identify the criteria under IFRS that must be met for an item to be included in financial statements. Answer (b) is correct because in order for an item to be recognized in the financial statements, IFRS requires that it meet the definition of an element and can be measured reliably.

**78. (c)** The requirement is to identify the revenue recognition method that must be used if the outcome of rendering services cannot be estimated reliably. Answer (c) is correct because if the outcome of rendering services cannot be measured reliably, IFRS requires use of the cost recovery method. Answer (a) is incorrect because the percentage-of-completion method is used when reliable estimates can be made. Answer (b) is incorrect because the completed contract method is not permissible under IFRS. Answer (d) is incorrect because the installment method is a revenue recognition method used under US GAAP, not IFRS.

**79. (b)** The requirement is to identify the item that is not one of the criteria for revenue recognition for sales of goods under IFRS. Answer (b) is correct because it is not required that payment has been received.

**80. (c)** The requirement is to identify the assets for which the entity may use fair value as deemed cost upon adoption of IFRS. Answer (c) is correct because the entity may use fair value as deemed cost for any individual item of property plant and equipment.

**81. (b)** The requirement is to identify the first step within the hierarchy of guidance to which management refers when selecting accounting policies. Answer (b) is correct because the highest level in the hierarchy is an IFRS standard applicable to the transaction. Answer (a), (c), and (d) are incorrect because they all represent lower levels in the hierarchy.

**82. (a)** The requirement is to identify the transition date. Answer (a) is correct because the "date of transition to IFRS" is defined as the beginning of the earliest period for which an entity presents full comparative information under IFRS.

**83. (d)** The requirement is to identify how adjustments are reflected upon adoption of IFRS. Answer (d) is correct because upon first-time adoption of IFRS, any adjustments required to present the opening balances of the statement of financial position should be recognized directly in retained earnings or, if appropriate, in another category of equity.

Accrual Basis Worksheet		
	Authoritative Literature	Help

The following information pertains to Baron Flowers, a calendar-year sole proprietorship, which maintained its books on the cash basis during the year.

*Baron Flowers*  
**TRIAL BALANCE**  
*December 31, year 2*

	Dr.	Cr.
Cash	\$25,600	
Accounts receivable, 12/31/Y1	16,200	
Inventory, 12/31/Y1	62,000	
Furniture & fixtures	118,200	
Land improvements	45,000	
Accumulated depreciation, 12/31/Y1		\$32,400
Accounts payable, 12/31/Y1		17,000
Baron, Drawings		
Baron, Capital, 12/31/Y1		124,600
Sales		653,000
Purchases	305,100	
Salaries	174,000	
Payroll taxes	12,400	
Insurance	8,700	
Rent	34,200	
Utilities	12,600	
Living expenses	13,000	
	<u>\$827,000</u>	<u>\$827,000</u>

Baron has developed plans to expand into the wholesale flower market and is in the process of negotiating a bank loan to finance the expansion. The bank is requesting year 2 financial statements prepared on the accrual basis of accounting from Baron. During the course of a review engagement, Muir, Baron's accountant, obtained the following additional information.

1. Amounts due from customers totaled \$32,000 at December 31, year 2.
2. An analysis of the above receivables revealed that an allowance for uncollectible accounts of \$3,800 should be provided.
3. Unpaid invoices for flower purchases totaled \$30,500 and \$17,000, at December 31, year 2, and December 31, year 1, respectively.
4. The inventory totaled \$72,800 based on a physical count of the goods at December 31, year 2. The inventory was priced at cost, which approximates market value.
5. On May 1, year 2, Baron paid \$8,700 to renew its comprehensive insurance coverage for one year. The premium on the previous policy, which expired on April 30, year 2, was \$7,800.
6. On January 2, year 2, Baron entered into a twenty-five-year operating lease for the vacant lot adjacent to Baron's retail store for use as a parking lot. As agreed in the lease, Baron paved and fenced in the lot at a cost of \$45,000. The improvements were completed on April 1, year 2, and have an estimated useful life of fifteen years. No provision for depreciation or amortization has been recorded. Depreciation on furniture and fixtures was \$12,000 for year 2.
7. Accrued expenses at December 31, year 1 and year 2, were as follows:

**Module 9: Basic Theory and Financial Reporting**

	<b>Year 1</b>	<b>Year 2</b>
Utilities	\$900	\$1,500
Payroll taxes	<u>1,100</u>	<u>1,600</u>
	<u>\$2,000</u>	<u>\$3,100</u>

8. Baron is being sued for \$400,000. The coverage under the comprehensive insurance policy is limited to \$250,000. Baron's attorney believes that an unfavorable outcome is probable and that a reasonable estimate of the settlement is \$300,000.

9. The salaries account includes \$4,000 per month paid to the proprietor. Baron also receives \$250 per week for living expenses.

Using the worksheet below, prepare the adjustments necessary to convert the trial balance of Baron Flowers to the accrual basis of accounting for the year ended December 31, year 2. Formal journal entries are not required to support your adjustments. However, use the numbers given with the additional information to cross-reference the postings in the adjustment columns on the worksheet.

Revenue and Expense Recognition	Authoritative Literature	
	Help	

Emco has the following transactions in year 1. Indicate the amount of revenue or expense recognized in year 1, year 2, and year 3 for each of these items. You may show expense recognitions in parentheses (xx).

#### Amounts to be recognized

Year 1      Year 2      Year 3

- Emco sells \$5,000 of goods to a customer, FOB shipping point on 12/30/Y1.
- Emco sells three pieces of equipment on a contract over a three-year period. The sales price of each piece of equipment is \$10,000. Delivery of each piece of equipment is on February 10 of each year. In year 1, the customer paid a \$20,000 down payment, and paid \$5,000 per year in year 2 and year 3. Collectibility is reasonably assured.
- In 1/1/Y1, Emco pays \$9,000 for a membership to Wholesalers Association for a two-year membership in the trade association.
- On 6/1/Y1, Emco signs a contract for \$20,000 for goods to be sold on account. Payment is to be made in two installments of \$10,000 each on 12/1/Y2 and 12/1/Y3. The goods are delivered on 10/1/Y1. Collection is reasonably assured, and the goods may not be returned.
- Emco sells goods to a customer on July 1, year 1, for \$50,000. If the customer does not sell the goods to retail customers by December 31, year 2, the goods can be returned to Emco. The customer sells the goods to retail customers on October 1, year 2.

### *Explanations of adjustments*

[1] To convert year 2 sales to accrual basis.

Accounts receivable balances:

December 31, year 2	\$32,000
December 31, year 1	<u>16,200</u>
Increase in sales	<u>\$15,800</u>

[2] To record provision for uncollectible accounts.

[3] To convert year 2 purchases to accrual basis.

Accounts payable balances:

December 31, year 2	\$30,500
December 31, year 1	<u>17,000</u>
Increase in purchases	<u>\$13,500</u>

[4] To record increase in inventory from 12/31/Y1 to 12/31/Y2.

Inventory balances:

December 31, year 2	\$72,800
December 31, year 1	<u>62,000</u>
Increase in inventory	<u>\$10,800</u>

[5] To adjust prepaid insurance.

Prepaid balances:

December 31, year 2 ( $\$8,700 \times 4/12$ )	\$2,900
December 31, year 1 ( $\$7,800 \times 4/12$ )	<u>2,600</u>
Decrease in insurance expense	<u>\$300</u>

The quality of information that helps users to increase the likelihood of correctly forecasting the outcome of past or present events.	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input checked="" type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>
10. A performance measure concerned primarily with cash-to-cash cycles.	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input checked="" type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>

### *Explanations*

1. **(E)** SFAC 5 states that "Relevance is a primary qualitative characteristic. To be relevant, information about an item must have feedback value or predictive value (or both) for users and must be timely."
2. **(G)** SFAC 6 states that "Gains are increases in equity (net assets) from peripheral or incidental transactions of an entity and from all other transactions and other events and circumstances affecting the entity except those that result from revenues or investments by owners."
3. **(J)** SFAC 5 states that "Revenues and gains are realized when products (goods or services), merchandise, or other assets are exchanged for cash or claims to cash."
4. **(F)** SFAC 8 states that "Comparability, including consistency, is an enhancing quality that interacts with relevance and faithful representation to contribute to the usefulness of information."
5. **(A)** SFAC 5 states that "Recognition is the process of formally recording or incorporating an item into the financial statements of an entity as an asset, liability, revenue, expense, or the like." SFAC 5 continues the recognition concept by stating, "An item and information about it should meet four fundamental recognition criteria to be recognized and should be recognized when the criteria are met, subject to a cost-benefit constraint and a materiality threshold."
6. **(B)** SFAC 5 states that "Comprehensive income is a broad measure of the effects of transactions and other events on an entity, comprising all recognized changes in equity (net assets) of the entity during a period from transactions and other events and circumstances except those resulting from investments by owners and distributions to owners."
7. **(D)** SFAC 6 defines revenues as "inflows or other enhancements of assets of an entity or settlements of its liabilities (or a combination of both) from delivering or producing goods, rendering services, or other activities that constitute the entity's ongoing major or central operations."
8. **(L)** SFAC 5 defines current market value as "the amount of cash, or its equivalent, that could be obtained by selling an asset in orderly liquidation."
9. **(E)** Predictive value is the quality of information that helps users to increase the likelihood of correctly forecasting the outcome of past or present events (SFAC 8).
10. **(I)** SFAC 5 states that "Earnings is a measure of performance during a period that is concerned primarily with the extent to which asset inflows associated with cash-to-cash cycles substantially completed (or completed) during the period exceed (or are less than) asset outflows associated, directly or indirectly, with the same cycles."

Revenue and Expense Recognition	Authoritative Literature	Help

	Amounts to be recognized		
	Year 1	Year 2	Year 3
1. Emco sells \$5,000 of goods to a customer, FOB shipping point on 12/30/Y1.	5,000	--	--
2. Emco sells three pieces of equipment on a contract over a three-year period. The sales price of each piece of equipment is \$10,000. Delivery of each piece of equipment is on February 10 of each year. In year 1, the customer paid a \$20,000 down payment, and paid \$5,000 per year in year 2 and year 3. Collectibility is reasonably assured.	10,000	10,000	10,000
3. In 1/1/Y1, Emco pays \$9,000 for a membership to Wholesalers Association for a two-year membership in the trade association.	(4,500)	(4,500)	--
4. On 6/1/Y1, Emco signs a contract for \$20,000 for goods to be sold on account. Payment is to be made in two installments of \$10,000 each on 12/1/Y2 and 12/1/Y3. The goods are delivered on 10/1/Y1. Collection is reasonably assured, and the goods may not be returned.	20,000	--	--
5. Emco sells goods to a customer on July 1, year 1, for \$50,000. If the customer does not sell the goods to retail customers by December 31, year 2, the goods can be returned to Emco. The customer sells the goods to retail customers on October 1, year 2.	--	50,000	--

### Explanations

- When goods are sold FOB shipping point, title passes at the time the goods are shipped. Therefore, Emco may recognize revenue on 12/30/Y1 at the time the goods are shipped.
- Revenue is recognized when earned and realizable. This sale is not complete until each piece of equipment is delivered. Therefore, Emco should recognize \$10,000 each year as the equipment is delivered, regardless of payment terms.
- Emco should match expenses to the year in which the benefits are received, which is over the two-year period.
- Because Emco delivered the goods in year 1, and collectibility is reasonably assured, Emco should recognize all revenue in year 1.
- Because there is a sale with a right of return, and the buyer may return the merchandise if it is not sold to a retail customer, recognition should be delayed until the right of return has expired.

**B. Error Correction**

1. Accountants must be in a position to anticipate, locate, and correct errors in their functions of systems and procedures design, controllership, and attestation.
  - a. Errors which are discovered in the same year that they are made are corrected by
    - (1) Determining the entry that was made
    - (2) Determining the correct entry
    - (3) Analyzing increases or decreases needed in affected accounts
    - (4) Making the correct entry
  - b. Errors in classification (e.g., sales expense instead of R&D expense) affect only one period.
  - c. Nonsystematic errors in adjusting entries (e.g., an error in ending inventory of one period) affect two periods and are known as self-correcting (counterbalancing) errors.

**EXAMPLE**  
 Overstating ending inventory of year 1 will overstate the income of year 1 and understate the income of year 2.

- d. Other errors will affect the income of several periods, such as misrecording the cost of a long-lived asset (i.e., depreciation will be misstated for all periods).
2. The chart below shows four examples of counterbalancing errors.

**Errors Which Will Self-Correct After Two Years**

**Omitting Accruals**

<b>Case #1</b>			
	<b>12/31/Y1</b>	<b>12/31/Y2</b>	<b>1/1/Y3</b>
Expense (wages)	Understated	Overstated	Correct
Net income	Overstated	Understated	Correct
Payable (wages)	Understated	Correct	Correct
Retained earnings	Overstated	Correct	Correct
<b>Case #2</b>			
Revenue (interest)	Understated	Overstated	Correct
Net income	Understated	Overstated	Correct
Receivable (interest)	Understated	Correct	Correct
Retained earnings	Understated	Correct	Correct

**Omitting Deferrals (Prepays)**

<b>Case #3</b>			
Expense (insurance)	Overstated	Understated	Correct
Net income	Understated	Overstated	Correct
Prepaid asset	Understated	Correct	Correct
Retained earnings	Understated	Correct	Correct
<b>Case #4</b>			
Revenue (unearned)	Overstated	Understated	Correct
Net income	Overstated	Understated	Correct
Liability (un. rev.)	Understated	Correct	Correct
Retained earnings	Overstated	Correct	Correct

**NOTE:** In all four cases the income statement errors have the opposite effect in year 1 and year 2. Also notice that by the end of year 2 the balance sheet accounts are correct. Therefore, even if the error is not discovered, the financial statements will be correct by the beginning of the third year.

3. When an error is discovered in a period subsequent to the period when the error occurred, an entry must be made to correct the accounts as if the error had not been made.

#### EXAMPLE

Assume the entry to accrue wage expense in the amount of \$10,000 is omitted on 12/31/Y1. The effects that would be caused by such an omission may be categorized as follows:

	Year 1	Year 2	Year 3
Expense	Understated	Overstated	Correct
Income	Overstated	Understated	Correct
Wages payable	Understated	Correct	Correct
Retained earnings	Overstated	Correct	Correct

If the company follows the policy of reversing adjusting entries for accruals, then correction of the error any time during year 2 will require

Adjustment to correct error	10,000	
Wage expense		10,000

The adjustment account, when closed to retained earnings, will correct for the 1/1/Y2 overstatement in retained earnings due to the overstatement of year 1 income. The credit to wage expense will reduce the expense account for year 2 to an amount equal to year 2 wages.

If the error was discovered in year 3, no entry would be required since the error self-corrects during year 2. The year 3 balances would be the same with or without the error.

**NOTE:** The requirements of error analysis questions vary considerably. When asked for the effect of errors, be careful to determine the effect rather than the correction; they are opposite. The effect of revenue overstatement on income is over or plus; therefore, the correction to income is to subtract. Also distinguish between correcting/adjusting entries (which can be made in the accounts to correct the current period) and “worksheet entries” which adjust amounts reported in prior periods (i.e., journal entries are not recorded to correct nominal accounts of prior periods).

4. Accounting errors are errors in recognition, measurement, presentation, or disclosure in the financial statements. An error can occur from mathematical mistakes, mistakes in applying GAAP, or oversight of facts that existed when the financial statements were prepared. A change in accounting principle from non-GAAP to GAAP is also a correction of an error.
  - a. An error in the financial statements is treated as a prior period adjustment by restating the prior period financial statements. The cumulative effect of the error is reflected in the carrying value of assets and liabilities at the beginning of the first period presented, with an offsetting adjustment to the opening balance in retained earnings for that period. Financial statements for each period are then adjusted to reflect the correction of the period-specific effects of the error.

- b. Footnote disclosures should disclose that the previously issued financial statements were restated, along with a description of the error. The line item effects of the error and any per share amounts must also be disclosed for each period presented. The gross effects and net effects from applicable income taxes on the net income of the prior period must be disclosed, as well as the effects on retained earnings and net income. Footnote disclosures must also indicate the cumulative effect of the change on retained earnings or other components of equity or net assets at the beginning of the earliest period presented. Once the correction of the error is disclosed, the financial statements of subsequent years do not need to repeat the disclosures.

**EXAMPLE**

<b>Income Statement Effects</b>			
	<u>Year 1</u>	<u>Year 2</u>	<u>Year 3</u>
Wages expense	- \$10,000	+ \$10,000	-0-
Income tax expense	+ 3,000	- 3,000	-0-
Net income	+ <u>7,000</u>	- <u>7,000</u>	-0-

<b>Comparative Income Statement</b> Issued in Year 3, for Year 2 and Year 3		
	<u>Year 2</u> <u>Restated</u>	<u>Year 3</u>
Wages expense	( \$ xxxx - <u>10,000</u> )	\$ xxxx —
Income tax expense	( \$ xxx+ <u>3,000</u> )	\$ xxxx —
Net income	( \$ xxx+ <u>7,000</u> )	\$ <u>xxxx</u>

<b>Balance Sheet</b>			
	<u>Year 1</u>	<u>Year 2</u>	<u>Year 3</u>
Wages payable	- \$10,000	-0-	-0-
Taxes payable	+ 3,000	-0-	-0-
Retained earnings	+ 7,000	-0-	-0-

<b>Comparative Retained Earnings Statement</b> Issued in Year 3, for Year 2 and Year 3		
	<u>Year 2</u> <u>as restated</u>	<u>Year 3</u>
Beginning balance	\$ xxxx	\$ xxxx
Prior period adjustment—Understatement of wages expense (net of tax \$3,000)	- <u>7,000</u>	—
Retained earnings as adjusted	\$ xxxx	\$ xxxx
Net income as corrected	xxxx	xxxx
Dividends	(xxxx)	(xxxx)
Ending retained earnings	\$ <u>xxxx</u>	\$ <u>xxxx</u>

5. Inventory errors have an impact on both the balance sheet and the income statement.
- Inventory errors include a misstatement of the ending inventory balance, which is followed by a misstatement of the beginning balance for the next period, or an inventory error could be a misstatement of purchases for the period.
  - The analysis of inventory errors in a periodic inventory system is facilitated by setting up a statement of cost of goods sold. The statement of cost of goods sold shows the relationship between the inventory and purchases accounts and the impact of incorrect amounts.
  - The four examples shown below use the statement of cost of goods sold format to analyze different inventory errors. Items that are correct are identified by an “OK,” while items that are incorrect are listed as overstated (over) or understated (under).

**EXAMPLE****INVENTORY ERRORS**

	<b>Case #1</b> <b>(Overstated Inventory Count)</b>		<b>Case #2</b> <b>(Understated Inventory Count)</b>	
	<b>Year 1</b>	<b>Year 2</b>	<b>Year 1</b>	<b>Year 2</b>
Beginning inventory	OK	Over	OK	Under
+ <u>Purchases</u>	<u>OK</u>	<u>OK</u>	<u>OK</u>	<u>OK</u>
Goods available for sale	OK	Over	OK	Under
- <u>Ending inventory*</u>	<u>Over</u>	<u>OK</u>	<u>Under</u>	<u>OK</u>
Cost of goods sold	Under	Over	Over	Under
Net income	Over	Under	Under	Over
Retained earnings	Over	OK	Under	OK
Accounts payable	OK	OK	OK	OK
	<b>Case #3</b> <b>(Overstated Purchases**)</b>		<b>Case #4</b> <b>(Understated Purchases***)</b>	
	<b>Year 1</b>	<b>Year 2</b>	<b>Year 1</b>	<b>Year 2</b>
Beginning inventory	OK	OK	OK	Under
+ <u>Purchases</u>	<u>Over</u>	<u>Under</u>	<u>Under</u>	<u>Over</u>
Goods available for sale	Over	Under	Under	OK
- <u>Ending inventory*</u>	<u>OK</u>	<u>OK</u>	<u>Under</u>	<u>OK</u>
Cost of goods sold	Over	Under	OK	OK
Net income	Under	Over	OK	OK
Retained earnings	Under	OK	OK	OK
Accounts payable	Over	OK	Under	OK

\* Determined by physical count.

\*\* Vendor shipped goods FOB destination. Goods were not received by 12/31, but recorded as purchases and not included in physical inventory count.

\*\*\* Vendor shipped goods FOB shipping point prior to 12/31, but not recorded as purchases or included in physical inventory count.

## 6. Research Component—Accounting Standards Codification

ASC Topic 250, found in the Presentation area of the Codification, outlines the accounting rules for accounting changes and error corrections. Keywords for researching accounting errors are shown below.

Correction error	Period-specific effects	Prior period adjustments error
Disclosure correction error	Prior period adjustment	Reporting correction error

## 7. International Financial Reporting Standards (IFRS)

Accounting for error correction is similar to US GAAP. A prior period error includes arithmetic mistakes, mistakes in applying accounting policies, and mistakes in recognition, measurement, presentation or disclosures in the financial statements. IFRS requires the entity to correct the error by restating the comparative amounts for prior periods. If the error occurred before the earliest period presented, then the opening balances of assets, liabilities, and equity should be restated for the earliest period presented. Similar to US GAAP, if it is impracticable to determine the periodic effects of the error, comparative information is restated from the earliest date practicable.

**NOW REVIEW MULTIPLE-CHOICE QUESTIONS 1 THROUGH 15**

## Multiple-Choice Questions (1–15)

### B. Error Correction

1. Loeb Corp. frequently borrows from the bank in order to maintain sufficient operating cash. The following loans were at a 12% interest rate, with interest payable maturity. Loeb repaid each loan on its scheduled maturity date.

Date of loan	Amount	Maturity date	Term of loan
11/1/Y1	\$5,000	10/31/Y2	1 year
2/1/Y2	15,000	7/31/Y2	6 months
5/1/Y2	8,000	1/31/Y3	9 months

Loeb records interest expense when the loans are repaid. As a result, interest expense of \$1,500 was recorded in year 2. If no correction is made, by what amount would year 2 interest expense be understated?

- \$540
  - \$620
  - \$640
  - \$720
2. During year 3, Paul Company discovered that the ending inventories reported on its financial statements were incorrect by the following amounts:

Year 1	\$60,000 understated
Year 2	75,000 overstated

Paul uses the periodic inventory system to ascertain year-end quantities that are converted to dollar amounts using the FIFO cost method. Prior to any adjustments for these errors and ignoring income taxes, Paul's retained earnings at January 1, year 3, would be

- Correct.
  - \$15,000 overstated.
  - \$75,000 overstated.
  - \$135,000 overstated.
3. Tack, Inc. reported a retained earnings balance of \$150,000 at December 31, year 1. In June year 2, Tack discovered that merchandise costing \$40,000 had not been included in inventory in its year 1 financial statements. Tack has a 30% tax rate. What amount should Tack report as adjusted beginning retained earnings in its statement of retained earnings at December 31, year 2?
- \$190,000
  - \$178,000
  - \$150,000
  - \$122,000
4. Conn Co. reported a retained earnings balance of \$400,000 at December 31, year 1. In August, year 2, Conn determined that insurance premiums of \$60,000 for the

three-year period beginning January 1, year 1, had been paid and fully expensed in year 1. Conn has a 30% income tax rate. What amount should Conn report as adjusted beginning retained earnings in its year 2 statement of retained earnings?

- \$420,000
  - \$428,000
  - \$440,000
  - \$442,000
5. Lore Co. changed from the cash basis of accounting to the accrual basis of accounting during year 2. The cumulative effect of this change should be reported in Lore's year 2 financial statements as a
- Prior period adjustment resulting from the correction of an error.
  - Prior period adjustment resulting from the change in accounting principle.
  - Component of income before extraordinary item.
  - Component of income after extraordinary item.

6. Bren Co.'s beginning inventory at January 1, year 1, was understated by \$26,000, and its ending inventory was overstated by \$52,000. As a result, Bren's cost of goods sold for year 1 was

- Understated by \$26,000.
  - Overstated by \$26,000.
  - Understated by \$78,000.
  - Overstated by \$78,000.
7. On January 2, year 2, Air, Inc. agreed to pay its former president \$300,000 under a deferred compensation arrangement. Air should have recorded this expense in year 1 but did not do so. Air's reported income tax expense would have been \$70,000 lower in year 1 had it properly accrued this deferred compensation. In its December 31, year 2 financial statements, Air should adjust the beginning balance of its retained earnings by a
- \$230,000 credit.
  - \$230,000 debit.
  - \$300,000 credit.
  - \$370,000 debit.

8. Net income is understated if, in the first year, estimated salvage value is excluded from the depreciation computation when using the

	Straight-line method	Production or use method
a.	Yes	No
b.	Yes	Yes
c.	No	No
d.	No	Yes

9. At the end of year 1, Ritzcar Co. failed to accrue sales commissions earned during year 1 but paid in year 2. The error

was not repeated in year 2. What was the effect of this error on year 1 ending working capital and on the year 2 ending retained earnings balance?

	Year 1 ending working capital	Year 2 ending retained earnings
a.	Overstated	Overstated
b.	No effect	Overstated
c.	No effect	No effect
d.	Overstated	No effect

10. On December 31, year 1, special insurance costs were incurred and unpaid, but were not recorded. If these insurance costs were related to a particular job order in work in process that was not completed during the period, what is the effect of the omission on accrued liabilities and retained earnings in the December 31, year 1 balance sheet?

	Accrued liabilities	Retained earnings
a.	No effect	No effect
b.	No effect	Overstated
c.	Understated	No effect
d.	Understated	Overstated

11. Which of the following errors could result in an overstatement of both current assets and stockholders' equity?

- An understatement of accrued sales expenses.
- Noncurrent note receivable principal is misclassified as a current asset.
- Annual depreciation on manufacturing machinery is understated.
- Holiday pay expense for administrative employees is misclassified as manufacturing overhead.

12. Galaxy Corporation had the following financial statement information:

	Year 2	Year 1
Revenue	\$135,000	\$100,000
Expenses	98,000	65,000
Net income	37,000	35,000
	<b>12/31/Y2</b>	<b>12/31/Y1</b>
Total assets	\$157,000	\$105,000
Total liabilities	50,000	35,000
Total owners' equity	107,000	70,000

Galaxy failed to record \$12,000 of accrued wages at the end of year 1. The wages were recorded and paid in January year 2. Assuming that the correct accruals were made on December 31, year 2, what are the corrected balances in the year 1 and year 2 restated financial statements?

	Year 1 net income	Dec. 31, year 1 total liabilities	Dec. 31, year 2 total owners' equity
a.	\$23,000	\$23,000	\$95,000
b.	\$47,000	\$47,000	\$107,000
c.	\$23,000	\$35,000	\$95,000
d.	\$23,000	\$47,000	\$107,000

13. Justin Corporation discovered an error in their year 1 financial statements after the statements were issued. This requires that

- The cumulative effect of the error is reported on the year 2 income statement as a cumulative effect of change in accounting principle.
- The cumulative effect of the error is reported in the year 2 beginning balance of each related account.
- The financial statements are restated to reflect the correction of period-specific effects of the error.
- An adjustment is made to beginning retained earnings in year 2 with a footnote disclosure describing the error.

14. During year 2, Kelly Corporation discovered that ending inventory reported in its year 1 financial statements was understated by \$10,000. How should Kelly account for this understatement?

- Adjust the beginning inventory balance in year 2 by \$10,000.
- Restate the financial statements with corrected balances for all periods presented.
- Adjust the ending balance in the year 2 retained earnings account.
- Make no entry because the error will self-correct.

15. Jackson Company uses IFRS to report its financial results. During the current year, the company discovered it had overstated sales in the prior year. How should the company handle this issue?

- Adjust sales for the current period.
- Spread the adjustment over the current and future periods.
- Present the cumulative effect of the overstatement as an item in the current period income statement.
- Restate the prior year financial statements presented for comparative purposes.

Multiple-Choice Answers and Explanations

Answers

1. a	— —	5. a	— —	8. b	— —	11. d	— —	14. b	— —
2. c	— —	6. c	— —	9. d	— —	12. d	— —	15. d	— —
3. b	— —	7. b	— —	10. c	— —	13. c	— —	1st: ___/15 = ___%	
4. b	— —							2nd: ___/15 = ___%	

Explanations

1. (a) The correct amount of year 2 interest expense is \$2,040, as computed below.

11/1/Y1 note		
Interest from 1/1/Y2 to 10/31/Y2		
(\$5,000 × 12% × 10/12)		\$500
2/1/Y2 note		
Interest from 2/1/Y2 to 7/31/Y2		
(\$15,000 × 12% × 6/12)		900
5/1/Y2 note		
Interest from 5/1/Y2 to 12/31/Y2		
(\$8,000 × 12% × 8/12)		<u>640</u>
Total year 2 interest		<u>\$2,040</u>

Since interest expense of \$1,500 was recorded, year 2 interest expense was understated by \$540 (\$2,040 – \$1,500).

2. (c) The error in understating the year 1 ending inventory would have self-corrected by 1/1/Y3 (year 1 income understated by \$60,000; year 2 income overstated by \$60,000). The error in overstating the year 2 ending inventory would not have been corrected by 1/1/Y3. This error overstates both year 2 income and the 1/1/Y3 retained earnings balance by \$75,000.

3. (b) A correction of an error is treated as a prior period adjustment, recorded in the year the error is discovered, and is reported in the financial statements as an adjustment to the beginning balance of retained earnings. The adjustment is reported net of the related tax effect. In this case the net-of-tax effect is \$28,000 [\$40,000 – (\$30% × \$40,000)]. This should increase beginning retained earnings because the understatement of 12/31/Y1 inventory would have resulted in an overstatement of cost of goods sold and therefore an understatement of retained earnings. Thus, the adjustment 1/1/Y2 retained earnings is \$178,000 (\$150,000 + \$28,000). Tack’s journal entry to record the adjustment is

Inventory	40,000	
Retained earnings		28,000
Taxes payable		12,000

4. (b) A correction of an error is treated as a prior period adjustment and is reported in the financial statements as an adjustment to the beginning balance of retained earnings in the year the error is discovered. The adjustment is reported net of the related tax effect. In year 1, insurance expense of

\$60,000 was recorded. The correct year 1 insurance expense was \$20,000 (\$60,000 × 1/3). Therefore, before taxes, 1/1/Y2 retained earnings is understated by \$40,000. The net of tax effect is \$28,000 [\$40,000 – (30% × \$40,000)], so the adjusted beginning retained earnings is \$428,000 (\$400,000 + \$28,000).

5. (a) A change in accounting principle is a change from one generally accepted principle to another generally accepted principle. A correction of an error is the correction of a mathematical mistake, a mistake in the application of an accounting principle, an oversight or misuse of existing facts, or a change from an unacceptable principle to a generally accepted one. Therefore, a switch from the cash basis (unacceptable) to the accrual basis (acceptable) is a correction of an error reported as a prior period adjustment.

6. (c) The requirement is to determine the effect of inventory errors on cost of goods sold. The effect of the errors on Bren’s year 1 cost of goods sold (CGS) is illustrated below.

BI	– \$26,000	CGS understated \$26,000
+ P		
GAFS	(+ \$52,000)	<u>CGS understated 52,000</u>
– EI		
<u>CGS</u>		<u>CGS understated \$78,000</u>

Beginning inventory is the starting point for the CGS computation, so BI errors have a direct effect on CGS. The understatement of BI (\$26,000) causes an understatement of goods available for sale (GAFS) and thus of CGS. Ending inventory is subtracted in the CGS computation, so EI errors have an inverse effect on CGS. The overstatement of EI (\$52,000) means that too much was subtracted in the CGS computation, causing another understatement of CGS. Therefore, CGS is understated by a total of \$78,000.

7. (b) The failure to record the \$300,000 of deferred compensation expense in year 1 is considered an error. The profession requires that the correction of an error be treated as a prior period adjustment. Thus, the requirement is to determine the retroactive adjustment that should be made to the beginning balance of the retained earnings for year 2 (including any income tax effect). The net adjustment to beginning retained earnings would be a debit for \$230,000 (\$300,000 less the income tax benefit of \$70,000).

8. (b) The depreciable base used to compute depreciation expense under both the straight-line and production methods is equal to the cost less estimated salvage value of

the asset. Depreciation expense is overstated and net income is, therefore, understated when the estimated salvage value is excluded from the depreciation computation under both of these methods.

9. (d) The entry Ritzcar should have made to accrue sales commissions earned but unpaid at the end of its year 1 fiscal year is

Commission expense	xxx	
Commissions payable		xxx

Since Commissions payable is a current liability, the year 1 ending working capital is overstated due to Ritzcar's failure to record this entry. Since this error was not repeated at the end of Ritzcar's year 2 fiscal year, the income impact of the year 1 error "self-corrected" during year 2, when Ritzcar recorded both the earned but unpaid year 1 commissions plus the year 2 earned commissions. Therefore, the year 2 ending retained earnings would not be impacted by the error.

10. (c) A liability is accrued when an obligation to pay or perform services has been incurred. This is the case even if the liability will not be satisfied until a future date. Therefore, accrued liabilities will be understated on the December 31, year 1 balance sheet because the special insurance costs were not recorded. However, there will be no effect on the December 31, year 1 balance of retained earnings because these costs relate to work in process, and work in process does not affect net income currently. Please note that if the special insurance costs related to goods that were sold, cost of goods sold would have been understated that would have caused both net income and retained earnings to be overstated.

11. (d) The classification of holiday pay expense for administrative employees as manufacturing overhead would result in the capitalization of some or all of these costs as a component of ending inventory, while these costs should be expensed as incurred. This error could overstate ending inventory, a current asset. The overstatement of ending inventory also understates the cost of goods sold (Beginning inventories + Net purchases – Ending inventories = Cost of goods sold), and overstates net income and stockholders' equity. The understatement of accrued sales expenses would not affect current assets. The misclassification of the noncurrent note receivable principal as a current asset would have no impact on stockholders' equity. The understatement of depreciation on **manufacturing** machinery would understate the overhead added to inventories, a current asset.

12. (d) The entry for the 12/31/year 1 wage accrual should have been

Wages expense	12,000	
Wages payable		12,000

Failure to accrue wage expense results in an understatement of wage expense and an understatement of wages payable by \$12,000 in year 1. As a result, net income and retained earnings are overstated by \$12,000 in year 1. The wages were expensed and paid in year 2. Therefore, wage expense for year 2 is overstated, and year 2 net income is understated by \$12,000. This is a counterbalancing error,

and ending retained earnings in year 2 would be correct.

Although this is a self-correcting error, the financial statements must be restated with period-specific effects. The restated financial statements are

**Galaxy Corporation**  
**RESTATED FINANCIAL STATEMENTS**

	Year 2	Year 1
Revenue	\$135,000	\$100,000
Expenses	86,000	77,000
Net income	49,000	23,000
Total assets	\$157,000	\$105,000
Total liabilities	50,000	47,000
Total owners' equity	107,000	58,000

13. (c) The financial statements of all periods should be restated and corrections made to reflect any period-specific effects of the error. Answer (a) is incorrect because this is an error, not a change in accounting principle. Answer (b) is incorrect because although the asset accounts may be adjusted to reflect correction of an error, income statement effects must also be disclosed. Answer (d) is incorrect because the financial statements must be restated for all periods presented.

14. (b) The financial statements must be restated for all periods presented with period-specific effects disclosed. Answer (a) is incorrect because although beginning inventory may be adjusted, prior years' financial statements must also be restated. Answer (c) is incorrect because correcting the balance of ending retained earnings is not sufficient disclosure for error correction. Answer (d) is incorrect because even though it is a self-correcting error, financial statements must be restated with period-specific effects of the error.

15. (d) The requirement is to identify how an overstatement of sales in prior year financial statement should be treated under IFRS. Answer (d) is correct because the overstatement is an error which must be accounted for by restating the prior year financial statements.

## Simulations

### Task-Based Simulation 1

Corrected Financial Statements	Authoritative Literature	Help

#### Situation

Cord Corp., a nonpublic enterprise, requires audited financial statements for credit purposes. After making normal adjusting entries, but before closing the accounting records for the year ended December 31, year 2, Cord's controller prepared the following financial statements for year 2:

*Cord Corp.*  
**STATEMENT OF FINANCIAL POSITION**  
*December 31, year 2*

<i>Assets</i>	
Cash	\$1,225,000
Marketable equity securities	125,000
Accounts receivable	460,000
Allowance for doubtful accounts	(55,000)
Inventories	530,000
Property and equipment	620,000
Accumulated depreciation	(280,000)
Total assets	<u>\$2,625,000</u>
<i>Liabilities and Stockholders' Equity</i>	
Accounts payable and accrued liabilities	\$1,685,000
Income tax payable	110,000
Common stock, \$20 par	300,000
Additional paid-in capital	75,000
Retained earnings	455,000
Total liabilities and stockholders' equity	<u>\$2,625,000</u>

*Cord Corp.*  
**STATEMENT OF INCOME**  
*For the Year Ended December 31, year 2*

Net sales	\$1,700,000
Operating expenses:	
Cost of sales	570,000
Selling and administrative	448,000
Depreciation	42,000
Total operating expenses	<u>1,060,000</u>
Income before income tax	640,000
Income tax expense	192,000
Net income	<u>\$448,000</u>

Cord's tax rate for all income items was 30% for all affected years, and it made estimated tax payments when due. Cord has been profitable in the past and expects results in the future to be similar to year 2. During the course of the audit, the following additional information (not considered when the above statements were prepared) was obtained:

- The investment portfolio consists of short-term investments, classified as available-for-sale, for which total market value equaled cost at December 31, year 1. On February 2, year 2, Cord sold one investment with a carrying value of \$100,000 for \$130,000. The total of the sale proceeds was credited to the investment account.
- At December 31, year 2, the market value of the remaining securities in the portfolio was \$142,000.

3. The \$530,000 inventory total, which was based on a physical count at December 31, year 2, was priced at cost. Subsequently, it was determined that the inventory cost was overstated by \$66,000. At December 31, year 2, the inventory's market value approximated the adjusted cost.
4. Pollution control devices costing \$48,000, which is high in relation to the cost of the original equipment, were installed on December 29, year 2, and were charged to repairs in year 1.
5. The original equipment referred to in Item 4, which had a remaining useful life of six years on December 29, year 1, is being depreciated by the straight-line method for both financial and tax reporting.
6. A lawsuit was filed against Cord in October year 2 claiming damages of \$250,000. Cord's legal counsel believes that an unfavorable outcome is probable, and a reasonable estimate of the court's award to the plaintiff is \$60,000, which will be paid in year 3 if the case is settled.
7. Cord determined that its projected benefits obligation under the pension plan exceeded the fair value of plan assets by \$40,000 at December 31, year 2. Cord has unrecognized prior service cost of \$50,000 at December 31, year 2. Cord funds the total pension expense each year.

Complete the following amounts in the corrected financial statements for Cord Corp.

<i>Cord Corp.</i> <b>STATEMENT OF FINANCIAL POSITION</b> <i>December 31, year 2</i>	
<b>Assets</b>	
Cash	
Marketable equity securities	
Accounts receivable	
Allowance for doubtful accounts	
Inventories	
Deferred tax asset	
Property and equipment	
Accumulated depreciation	
Total assets	
<b>Liabilities and Stockholders' Equity</b>	
Accounts payable and accrued liabilities	
Income tax payable	
Estimated liability from lawsuit	
Pension liability	
Common stock, \$20 par	
Additional paid-in capital	
Retained earnings	
Other comprehensive income	
Total liabilities and stockholders' equity	
Net sales	
Operating expenses:	
Cost of sales	
Selling and administrative	
Depreciation	
Pension cost

| 5. A change in the useful lives of assets in calculating depreciation is treated as an accounting error and accumulated depreciation is adjusted to reflect this error. | <input type="radio"/>            | <input checked="" type="radio"/> |

### Explanations

- False.** Accounting errors require an adjustment to the beginning of the year retained earnings in the current year financial statements.
- False.** A self-correcting error would require an adjustment to correct comparative year financial statements. Adjustments to comparative years should be made to reflect retroactive application of the prior period adjustment to the accounts affected.
- False.** A change in depreciation method is treated as accumulative effect of change in accounting principle.
- True.** Correction of errors involve restatements of prior periods.
- False.** A change in the useful lives of an asset is treated on a prospective basis, and depreciation for the current year is calculated based on book value divided by the estimated number of years remaining.

**Explanations**

- Cardiff should have debited Accounts Receivable and credited Sales. Therefore, accounts receivable is understated, and retained earnings is understated.
- Cardiff has overstated ending inventory, which understates cost of goods sold. Understating cost of goods sold results in income being overstated for the period. Net income flows into retained earnings, and thus, retained earnings is also overstated in the current period.
- Cardiff should have debited Depreciation Expense and credited Accumulated Depreciation. By not making this entry, depreciation expense is too low, overstating net income, and overstating retained earnings. Accumulated depreciation is also too low, which overstates assets.
- The entry would be to debit Utility Expense and credit Accounts Payable. Failing to make this entry would understate expenses, which results in overstated net income, overstated retained earnings, and understated liabilities.
- The unrealized gain on available-for-sale securities is not recognized in net income, but is recognized as an unrealized gain in other comprehensive income. Failing to mark to market when an available-for-sale security has increased in value would result in understating assets and understating other comprehensive income for the period.
- The journal entry to accrue wages is to debit Wage Expense and credit Wages Payable. Failure to accrue wages results in expenses being understated, which in turn, overstates net income and overstates retained earnings for the period. Failure to accrue wages also results in liabilities being understated.
- The unrealized gains and losses from trading securities should be included in net income for the period. Failure to mark to market and recognize the loss would result in assets being overstated, net income being overstated, and retained earnings being overstated for the period.

### C. Accounting Changes

Accounting changes include a change in accounting principle, a change in estimate, or a change in the reporting entity. The correction of an error in previous financial statements is not an accounting change. The statement further defines two important terms: restatement and retrospective application. A **restatement** is the process of revising previously issued financial statements to correct an error. A **retrospective application** is the application of a different accounting principle to previously issued financial statements, as if that principle had always been used. Retrospective application is required for changes in accounting principle and changes in reporting entity.

#### 1. Changes in Accounting Principles

- a. An entity may change accounting principle only if the change is required by a newly issued accounting pronouncement, or if the entity can justify the use of the alternative accounting principle because it is **preferable**.
- b. A change in accounting principle is accounted for through retrospective application of the new accounting principle to all prior periods, unless it is impracticable to do so. Retrospective changes require the following:
  - (1) The cumulative effects of the change are presented in the carrying amounts of assets and liabilities as of **the beginning of the first period presented**.
  - (2) An offsetting adjustment is made to the opening balance of retained earnings for that period (the beginning of the first period presented).
  - (3) Financial statements for each individual prior period presented are adjusted to reflect the **period-specific effects** of applying the new accounting principle.
    - (a) Only the **direct effects** of the change are recognized in prior periods. An example of a direct effect is an adjustment to an inventory balance due to a change in inventory valuation method. Related changes, such as the effect on deferred taxes or an impairment adjustment, are also considered direct effects and must be recognized in prior periods.
    - (b) **Indirect effects** are any changes to current or future cash flows that result from making a change in accounting principle. An example of an indirect effect is a change in a profit sharing or royalty payment based on revenue or net income. Any indirect effects of the change are reported in the period in which the accounting change is made.
    - (c) If the cumulative effect of applying the accounting change can be determined but the period-specific effects on all prior periods cannot be determined, the cumulative effect is applied to the carrying amounts of assets and liabilities at the beginning of the earliest period to which it can be applied or calculated. An offsetting adjustment is then made to the opening balance of retained earnings for that period.

#### EXAMPLE

Wagner Corporation began operations on January 1, year 1. On January 1, year 3, Wagner changes from the weighted-average method of accounting for inventory to the FIFO method. Wagner provides a profit-sharing plan for its employees. The bonus or profit-sharing plan allows all employees to share in a 5% bonus based on earnings before income taxes and bonus. The income tax rate for all periods is 30%. Assume there are no book/tax differences or deferred taxes. All taxes and bonuses are accrued at the end of each year on December 31 and paid in January of the following year.

Assume that Wagner's accounting records are adequate to determine the effects of the change in accounting principle for each year. Ending inventory for the weighted-average and FIFO methods are shown below.

**Ending Inventory**

	Weighted-average method	FIFO method
12-31-Y1	1,000	1,200
12-31-Y2	2,000	2,500
12-31-Y3	2,400	3,200

The income statements for year 1 through year 3 calculated using weighted-average method are shown below.

**Wagner Corporation  
Income Statements**

	For the period ending 12-31-Y3 (before change)	For the period ending 12-31-Y2 (before change)	For the period ending 12-31-Y1 (before change)
Sales	\$15,000	\$12,000	\$8,000
Less: Cost of good sold	(8,900)	(7,000)	(5,000)
Gross profit	6,100	5,000	3,000
Sales, general & admin. expenses	(3,500)	(3,000)	(2,000)
Earnings before bonus and income taxes	2,600	2,000	1,000
Bonus compensation expense	(130)	(100)	(50)
Earnings before income taxes	2,470	1,900	950
Income tax expense	(741)	(570)	(285)
Net income	\$ 1,729	\$ 1,330	\$ 665

Balance sheets calculated using the weighted-average inventory method before the change to FIFO for year 1-year 3 are shown below.

**Wagner Corporation  
Balance Sheets**

	Dec. 31, year 3 (before change)	Dec. 31, year 2 (before change)	Dec. 31, year 1 (before change)
Cash	\$ 1,900	\$ 1,000	\$ 1,000
Inventory	2,400	2,000	1,000
Plant, property, and equipment	<u>11,000</u>	<u>10,000</u>	<u>10,000</u>
Total assets	15,300	13,000	12,000
Accounts payable	1,370	1,000	1,665
Accrued bonus liability	130	100	50
Income tax liability	<u>741</u>	<u>570</u>	<u>285</u>
Total liabilities	2,241	1,670	2,000
Common stock	500	500	500
Additional paid-in capital	8,835	8,835	8,835
Retained earnings	<u>3,724</u>	<u>1,995</u>	<u>665</u>
Total liabilities and owners' equity	\$15,300	\$13,000	\$12,000

To account for the change in accounting for inventory, the new accounting method is applied retrospectively. Retrospective application requires restatement of the financial statements for the period-specific effects. The period-specific effects for Wagner include the direct effects on inventory, cost of goods sold, income tax expense, and income tax liability for each period. The change in bonus compensation expense and accrued bonus liability are indirect effects and are accounted for in the year of the change, which is the current year, year 3.

To calculate the adjustments in inventory and cost of goods sold for each year, use a T-account. First, calculate the purchases for each year using the weighted-average method.

Inventory (Weighted-average method)			
1-1-Y1	-0-	5,000	CGS
Purchases	6,000		
12-31-Y1	1,000	7,000	CGS
Purchases	8,000		

12-31-Y2	2,000	8,900	CGS
Purchases	9,300		
12-31-Y3	2,400		

Then, using the amount of purchases for each period and the information given in the problem for ending inventory using the FIFO method, calculate the adjusted cost of goods sold for each period using the FIFO method.

Inventory (FIFO method)			
1-1-Y1	-0-	4,800	CGS
Purchases	6,000		
12-31-Y1	1,200	6,700	CGS
Purchases	8,000		
12-31-Y2	2,500	8,600	CGS
Purchases	9,300		
12-31-Y3	3,200		

After you have calculated the period-specific effects on ending inventory and cost of goods sold, prepare an adjusted income statement for each period.

The adjusted income statement for the period ending December 31, year 1, is shown below.

**Wagner Corporation—Income Statement  
For the year ending 12-31-Y1**

	For the period ending 12-31-Y1 as originally reported	For the period ending 12-31-Y1 as adjusted	Effect of the change
Sales	\$8,000	\$8,000	\$-
Less: Cost of good sold	(5,000)	(4,800)	(200)
Gross profit	3,000	3,200	200
Sales, general & admin. expenses	(2,000)	2,000	=
Earnings before bonus and income taxes	1,000	1,200	200
Bonus compensation expense*	(50)	(50)*	=
Earnings before income taxes	950	1,150	200
Income tax expense	(285)	(345)	(60)
Net income	\$ 665	\$ 805	\$140

\*Bonus expense is an indirect effect of the change; therefore, bonus expense is not adjusted retrospectively. Instead, the indirect effects of the bonus are adjusted in the current year, year 3.

**Wagner Corporation—Income Statement  
For the year ending 12-31-Y2**

	For the period ending 12-31-Y2 as originally reported	For the period ending 12-31-Y2 as adjusted	Effect of the change
Sales	\$12,000	\$12,000	\$--
Less: Cost of good sold	(7,000)	(6,700)	(300)
Gross profit	5,000	5,300	300
Sales, general & admin. expenses	(3,000)	3,000	--
Earnings before bonus and income taxes	2,000	2,300	300

Bonus compensation expense*	(100)	(100)*	--
Earnings before income taxes	1,900	2,200	300
Income tax expense	(570)	(660)	(90)
Net income	\$ 1,330	\$ 1,540	\$210

\*Bonus expense is an indirect effect of the change; therefore, it is adjusted and expensed in the current year, year 3.

**Wagner Corporation—Income Statement**  
For the year ending 12-31-Y3

	For the period ending 12-31-Y3 current year before adjustment	For the period ending 12- 31-Y3 as adjusted
Sales	\$15,000	\$15,000
Less: Cost of good sold	<u>(8,900)</u>	<u>(8,600)</u>
Gross profit	6,100	6,400
Sales, general & admin. expenses	<u>(3,500)</u>	<u>(3,500)</u>
Earnings before bonus and income taxes	2,600	2,900
Bonus compensation expense*	<u>(130)</u>	<u>(170)*</u>
Earnings before income taxes	2,470	2,730
Income tax expense	<u>(741)</u>	<u>819</u>
Net income	\$ 1,729	\$ 1,911

\*Bonus compensation expense for year 3 is calculated as follows:

Year 3	Earnings before bonus and taxes	\$2,900	× 5%	\$145
Year 2	Adjustment to earnings before bonus and taxes	300	× 5%	15
Year 1	Adjustment to earnings before bonus and taxes	200	× 5%	<u>10</u>
	Total bonus compensation expense for year 3 (adjusted for effects of the accounting change)			\$170

The adjusted income statements for year 1 through year 3, presented on a comparative basis are shown below.

**Wagner Corporation**  
**Income Statement**

	For the period ending 12-31-Y3	For the period ending 12-31-Y2 as adjusted	For the period ending 12-31-Y1 as adjusted
Sales	\$15,000	\$12,000	\$8,000
Less: Cost of good sold	<u>(8,600)</u>	<u>(6,700)</u>	<u>(4,800)</u>
Gross profit	6,400	5,300	3,200
Sales, general & admin. expenses	<u>(3,500)</u>	<u>(3,000)</u>	<u>(2,000)</u>
Earnings before bonus and income taxes	2,900	2,300	1,200
Bonus compensation expense	<u>(170)</u>	<u>(100)</u>	<u>(50)</u>
Earnings before income taxes	2,730	2,200	1,150
Income tax expense	<u>(819)</u>	<u>(660)</u>	<u>(345)</u>
Net income	\$ 1,911	\$ 1,540	\$ 805

The balance sheet is presented on a comparative basis for two years. Therefore, the assets and liabilities must be retroactively adjusted for the period-specific effects as of December 31, year 2, the first year presented. In addition, any previous years' adjustment are shown as an adjustment to retained earnings for the earliest year presented.

**Wagner Corporation—Balance Sheet**  
December 31, year 2

	Dec. 31, year 2 as originally reported	Dec. 31, year 2 as adjusted
Cash	\$ 1,000	\$ 1,000
Inventory	2,000	2,500
Plant, property, and equipment	<u>10,000</u>	<u>10,000</u>
Total assets	13,000	13,500
Accounts payable	1,000	1,000
Accrued bonus liability	100	100
Income tax liability	<u>570</u>	<u>720*</u>
Total liabilities	1,670	1,820
Common stock	500	500
Additional paid-in capital	8,835	8,835
Retained earnings	<u>1,995</u>	<u>2,345**</u>
Total liabilities and owners' equity	\$13,000	\$13,500

\*Tax liability is adjusted for the increase in income tax expense and income tax liability for year 1 and year 2 (\$60 in year 1 and \$90 in year 2, for a total of \$150 increase in income tax liability).

\*\*Retained earnings is adjusted as follows:

Retained earnings (with adjustments)		
665		NI year 1, as originally reported
140		Adjustment to NI for year 1
805		Bal. in R/E, 12-31-Y1 adjusted
1,330		NI year 2, as originally reported
210		Adjustment to NI for year 2
2,345		Bal. in R/E, 12-31-Y2 after adjustments
1,911		Net income in year 3 using FIFO method
4,256		Bal. in R/E, 12-31-Y3

The balance sheet presented on a comparative basis for two years, is as follows:

**Wagner Corporation**  
**Comparative Balance Sheets**

	Dec. 31, year 3	Dec. 31, year 2 (as adjusted)
Cash	\$ 1,900	\$ 1,000
Inventory	3,200	2,500
Plant, property, and equipment	<u>11,000</u>	<u>10,000</u>
Total assets	16,100	13,500
Accounts payable	1,370	1,000
Accrued bonus liability	170*	100
Income tax liability	<u>969**</u>	<u>720**</u>
Total liabilities	2,509	1,820
Common stock	500	500
Additional paid-in capital	8,835	8,835
Retained earnings	<u>4,256</u>	<u>2,345**</u>
Total liabilities and owners' equity	\$16,100	\$13,500

\*Bonus liability calculation

Bonus liability will be accrued in year 3 and paid in year 4. Therefore, the bonus liability at the end of December 31, year 3, is calculated as follows:

Year 3	Earnings before bonus and taxes	\$2,900	× 5%	\$145
Year 2	Adjustment to earnings before bonus and taxes	300	× 5%	15
Year 1	Adjustment to earnings before bonus and taxes	200	× 5%	10
	Total bonus compensation liability as of 12-31-Y3 (adjusted for effects of the accounting change)			\$170

\*\*Tax liability calculation

Because the change in accounting method occurred in year 3, the tax liability resulting from the change will be accrued in year 3 and paid in January, year 4. The tax liability on the balance sheet is calculated as follows:

Year 3	Earnings before income taxes	\$2,730	× 30%	\$819
Year 2	Adjustment to earnings before income taxes	300	× 30%	90
Year 1	Adjustment to earnings before income taxes	200	× 30%	<u>60</u>
	Total tax liability for year 3 (adjusted for effects of the accounting change)			\$969

- c. If it is impracticable to determine the cumulative effect to any of the prior periods, the new accounting principle is applied as if the change was made prospectively at the earliest date practicable. It is considered impracticable only if one of the following three conditions is met:
- (1) After making every reasonable effort to apply the new principle to the previous period, the entity is unable to do so.
  - (2) Retrospective application requires assumptions about management's intentions in a prior period that cannot be independently substantiated.
  - (3) Retrospective application requires significant estimates, and it is impossible to obtain objective information about the estimates.
- d. Notes to the financial statements to describe a change in accounting principle must include
- (1) The nature and reason for the change, and explanation as to why the new method is preferable
  - (2) The method of applying the change
  - (3) A description of the prior period information that is retrospectively adjusted
  - (4) The effect of the change on income from continuing operations, net income, and any other affected financial statement line item, and any affected per share amounts for the current period and all periods adjusted retrospectively
  - (5) The cumulative effect of the change on retained earnings or other components of equity or net assets as of the earliest period presented
  - (6) If retrospective application is impracticable, the reason, and a description of how the change was reported
  - (7) A description of the indirect effects of the change, including amounts recognized in the current period, and related per share amounts
  - (8) Unless impracticable, the amounts of the indirect effects of the change and the per share amounts for each prior period presented
- e. Disclosures are also required for interim periods. In the year of the change to the new accounting principle, interim financial statements should disclose the effect of the change on income from continuing operations, net income, and related per share amounts for the postchange interim periods.
- f. Once the change in method is disclosed, financial statements in subsequent periods do not need to repeat the disclosures.

**NOW REVIEW MULTIPLE-CHOICE QUESTIONS 1 THROUGH 18**

**2. Changes in Accounting Estimates**

- a. Changes in accounting estimates are accounted for on a prospective basis. The financial statements are not restated or retrospectively adjusted. The change is accounted for in the current period and future periods.
  - b. If a change in accounting estimate is effected by a change in principle (e.g., a change in depreciation method), it is treated as a change in estimate.
- (1) In cases where an entity effects a change in estimate by changing an accounting principle, the footnote disclosures required by a change in accounting principle apply and must be included in the notes to the financial statements.

**EXAMPLE**

Gonzalez Corporation acquires equipment on January 1, year 1, for \$100,000. Gonzalez depreciates the equipment using the double-declining balance method. The equipment has a ten-year life and a \$20,000 salvage value. In January, year 3, Gonzalez changes its depreciation method to straight-line.

This change in depreciation method is considered a change in estimate effected by a change in accounting principle. According to ASC Topic 250, it is accounted for in the current year and future years.

Step 1: Calculate accumulated depreciation and book value at the beginning of the year of the change in depreciation method.

*Double declining balance method*

The double-declining rate is  $\frac{1}{10} \times 2 = 20\%$

Year	Book value at beginning of year	Depreciation rate	Depreciation expense
Year 1	\$100,000	20%	\$20,000
Year 2	\$80,000	20%	<u>16,000</u>
Accum. Depr. Jan. 1, year 3			\$36,000

To calculate book value on January 1, year 3:

Historical cost	\$100,000
– Accum. depr.	<u>36,000</u>
Book value 1-1-Y3	\$ 64,000

Step 2: Calculate depreciation expense for current year and future years using the new method.

$(\$64,000 \text{ BV} - \$20,000 \text{ salvage value}) \div 8 \text{ years remaining life} = \$5,500 \text{ depreciation expense per year}$

**Journal entry for year 3**

In year 3 and in future years, the following depreciation entry is recorded:

Depreciation expense	5,500	
Accumulated depreciation		5,500

### 3. Changes in Reporting Entities

- a. Another type of accounting change is a change in reporting entity. A change in reporting entity occurs when a change in the structure of the organization is made which results in financial statements that represent a different or changed entity.
- (1) Some examples of a change in reporting entity include presenting consolidated statements in place of individual statements, a change in subsidiaries, or a change in the use of the equity method for an investment.
- b. When there is a change in reporting entity, the change is retrospectively applied to the financial statements of all prior periods presented. Previously issued interim statements are also presented on a retrospective basis. Footnote disclosures for change in reporting entity include the nature and reason for the change, net income, other comprehensive income, and any related per share amounts for all periods presented.

### 4. Correction of an Error

- a. A correction of an error in previously issued financial statements requires a prior period adjustment by restating the financial statements. Prior period adjustments are covered in the previous section of this module.

#### TYPES OF ACCOUNTING CHANGES

Type of accounting change	Definition	Financial statement treatment	Financial statement disclosure
1. Change in accounting principle	Change from the use of one generally accepted accounting principle to another generally accepted accounting principle	<b>Retrospective application:</b> Report cumulative effect of change in the carrying amounts of assets and liabilities as of the beginning of the first period presented, with an offsetting adjustment to the opening balance of retained earnings for that period. Financial statements for each period are adjusted to reflect period-specific effects of the change for direct effects.	Disclose the nature and reason for the change; method of applying the change; description of prior period information that is retrospectively adjusted; effect of the change on income from continuing operations, net income, and any other financial statement line item; per share amounts for current period and adjusted periods; and a description of the indirect effects of the change and related per share amounts.
2. Change in estimate	Change of estimated FS amount based on new information or experience	<b>Prospective:</b> Report in the period of the change and future periods. Do not adjust financial statements of previous periods.	Disclose the effect on income from continuing operations, net income, and related per share amounts if the change affects several future periods.
3. Change in reporting entity	Change that results in the financial statements representing a different entity	<b>Retrospective application :</b> Report financial statements of all periods to show financial information for the new reporting entity for those periods.	Disclose the type of change and the reasons for the change, the related effects on income before extraordinary items, net income, other comprehensive income, and related per share effects on EPS for all periods presented.

**NOW REVIEW MULTIPLE-CHOICE QUESTIONS 19 THROUGH 26**

**5. International Financial Reporting Standards (IFRS)**

a. **Change in accounting principle.** The rules for accounting changes are also similar to US GAAP.

(1) Accounting changes may occur only when a change is required by an IFRS, or there is a voluntary change in accounting methods.

(a) In the case of a new IFRS pronouncement, the transition rules in the new IFRS statement should be followed.

(b) A voluntary change in accounting method may only be made if it provides reliable and more relevant information about the transactions, entity's financial position, performance, or cash flows.

(1) A voluntary change in accounting method is given retrospective application by applying the policy as if the new policy had always been applied. Retrospective application provides that the opening balance of equity is adjusted for the earliest period presented, and that other amounts are disclosed for each prior period as if the new accounting policy had always been applied.

(2) If it is impracticable to determine the effects of the change, then the change may be applied on a prospective basis.

(2) Disclosures include the title of the IFRS requiring the change, the nature of the change, the amount of the adjustments to each financial statement line item, and effects on earnings per share.

b. **Change in accounting estimate.** A change in accounting estimate occurs due to uncertainties in measuring items on the financial statements. Changes in estimates include changes in estimates for bad debts, inventory obsolescence, the fair value of financial assets or liabilities, the useful life of a depreciable asset, or warranty obligations. A change in estimate is accounted for on a prospective basis in the period of the change (current period) and future periods.

**NOW REVIEW MULTIPLE-CHOICE QUESTIONS 27 THROUGH 29**

**KEY TERMS**

**Prospective application.** The change is accounted for in the current period and future periods.

**Restatement.** The process of revising previously issued financial statements to correct an error.

**Retrospective application.** The application of a different accounting principle to previously issued financial statements, as if that principle had always been used.

## Multiple-Choice Questions (1–29)

### C.1. Changes in Accounting Principles

1. On January 1, year 1, Bray Company purchased for \$240,000 a machine with a useful life of ten years and no salvage value. The machine was depreciated by the double-declining balance method and the carrying amount of the machine was \$153,600 on December 31, year 2. Bray changed to the straight-line method on January 1, year 3. Bray can justify the change. What should be the depreciation expense on this machine for the year ended December 31, year 3?

- \$15,360
- \$19,200
- \$24,000
- \$30,720

Items 2 and 3 are based on the following:

On January 1, year 1, Warren Co. purchased a \$600,000 machine, with a five-year useful life and no salvage value. The machine was depreciated by an accelerated method for book and tax purposes. The machine's carrying amount was \$240,000 on December 31, year 2. On January 1, year 3, Warren changed to the straight-line method for financial reporting purposes. Warren can justify the change. Warren's income tax rate is 30%.

2. In its year 3 income statement, what amount should Warren report as the cumulative effect of this change?

- \$120,000
- \$84,000
- \$36,000
- \$0

3. On January 1, year 3, what amount should Warren report as deferred income tax liability as a result of the change?

- \$120,000
- \$72,000
- \$36,000
- \$0

4. On January 2, year 3, to better reflect the variable use of its only machine, Holly, Inc. elected to change its method of depreciation from the straight-line method to the units of production method. The original cost of the machine on January 2, year 1, was \$50,000, and its estimated life was ten years. Holly estimates that the machine's total life is 50,000 machine hours.

Machine hours usage was 8,500 during year 1 and 3,500 during year 2.

Holly's income tax rate is 30%. Holly should report the accounting change in its year 3 financial statements as a(n)

- Cumulative effect of a change in accounting principle of \$2,000 in its income statement.
- Entry for current year depreciation expense on the income statement and treated on a prospective basis.
- Cumulative effect of a change in accounting principle of \$1,400 in its income statement.
- Adjustment to beginning retained earnings of \$1,400.

5. The effects of a change in accounting principle should be recorded on a prospective basis when the change is from the

- Cash basis of accounting for vacation pay to the accrual basis.
- Straight-line method of depreciation for previously recorded assets to the double-declining balance method.
- Presentation of statements of individual companies to their inclusion in consolidated statements.
- Completed-contract method of accounting for long-term construction-type contracts to the percentage-of-completion method.

6. When a company changes from the straight-line method of depreciation for previously recorded assets to the double-declining balance method, which of the following should be used?

	Cumulative effects of change in accounting principle	Retrospective application
a.	No	No
b.	No	Yes
c.	Yes	Yes
d.	Yes	No

Items 7 and 8 are based on the following:

During year 3, Orca Corp. decided to change from the FIFO method of inventory valuation to the weighted-average method. Inventory balances under each method were as follows:

	FIFO	Weighted-average
January 1, year 3	\$71,000	\$77,000
December 31, year 3	79,000	83,000

Orca's income tax rate is 30%.

7. In its year 3 financial statements, what amount should Orca report as the gain or loss on the cumulative effect of this accounting change?

- \$2,800
- \$4,000
- \$4,200
- \$0

8. In accordance with the Codification, Orca should report the effect of this accounting change as a(n)

- Prior period adjustment.
- Component of income from continuing operations.
- Retrospective application to previous year's financial statements.
- Component of income after extraordinary items.

9. On January 1, year 3, Roem Corp. changed its inventory method to FIFO from LIFO for both financial and income tax reporting purposes. The change resulted in a \$500,000 increase

in the January 1, year 3 inventory, which is the only change that could be calculated from the accounting records. Assume that the income tax rate for all years is 30%. Retrospective application would result in

- An increase in ending inventory in the year 2 balance sheet.
- A decrease in ending inventory in the year 3 balance sheet.
- A decrease in net income in year 2.
- A gain from cumulative effect of change on the income statement in year 3.

**10.** Which of the following would receive treatment as a cumulative effect on an accounting change on the income statement?

	LIFO to weighted-average	FIFO to weighted-average
a.	Yes	Yes
b.	Yes	No
c.	No	No
d.	No	Yes

**11.** On August 31, year 3, Harvey Co. decided to change from the FIFO periodic inventory system to the weighted-average periodic inventory system. Harvey is on a calendar year basis. The cumulative effect of the change is determined

- As of January 1, year 3.
- As of August 31, year 3.
- During the eight months ending August 31, year 3, by a weighted-average of the purchases.
- As of the earliest period presented if practicable.

**12.** In year 3, Brighton Co. changed from the individual item approach to the aggregate approach in applying the lower of FIFO cost or market to inventories. The change should be reported in Brighton's financial statements as a

- Change in estimate on a prospective basis.
- Cumulative effect of change in accounting principle on the current year income statement.
- Retrospective application to the earliest period presented if practicable.
- Prior period adjustment with a separate disclosure.

**13.** On January 1, year 3, Poe Construction, Inc. changed to the percentage-of-completion method of income recognition for financial statement reporting but not for income tax reporting. Poe can justify this change in accounting principle. As of December 31, year 2, Poe compiled data showing that income under the completed-contract method aggregated \$700,000. If the percentage-of-completion method had been used, the accumulated income through December 31, year 2, would have been \$880,000. Assuming an income tax rate of 40% for all years, the cumulative effect of this accounting change should be reported by Poe as

- An increase in construction-in-progress for \$180,000 in the year 2 balance sheet.
- A decrease in the beginning balance of retained earnings for \$108,000 in year 3.
- A cumulative effect adjustment of \$108,000 on the year 3 income statement.

- An increase in ending retained earnings of \$180,000 in year 2.

**14.** The effect of a change in accounting principle that is inseparable from the effect of a change in accounting estimate should be reported

- By restating the financial statements of all prior periods presented.
- As a correction of an error.
- As a component of income from continuing operations, in the period of change and future periods if the change affects both.
- As a separate disclosure after income from continuing operations, in the period of change and future periods if the change affects both.

**15.** Which of the following is considered a direct effect of a change in accounting principle?

- Deferred taxes.
- Profit sharing.
- Royalty payments.
- None of the above.

**16.** Indirect effects from a change in accounting principle should be reported

- Retrospectively to the earliest period presented.
- As a cumulative change in accounting principle in the current period.
- In the period in which the accounting change occurs.
- As a prior period adjustment.

**17.** If it is impracticable to determine the cumulative effect of an accounting change to any of the prior periods, the accounting change should be accounted for

- As a prior period adjustment.
- On a prospective basis.
- As a cumulative effect change on the income statement.
- As an adjustment to retained earnings in the first period presented.

**18.** If the cumulative effect of applying an accounting change can be determined but the period-specific effects on all periods cannot be determined, the cumulative effect of the change should be applied to

- The end balance of retained earnings of the earliest period presented.
- Net income of the current year.
- Retained earnings of the current year.
- The carrying value of the assets and liabilities at the beginning of the earliest period to which it can be applied.

## C.2. Change in Accounting Estimates

**19.** On January 1, year 1, Taft Co. purchased a patent for \$714,000. The patent is being amortized over its remaining legal life of fifteen years expiring on January 1, year 16. During year 4, Taft determined that the economic benefits of the patent would not last longer than ten years from the date of

acquisition. What amount should be reported in the balance sheet for the patent, net of accumulated amortization, at December 31, year 4?

- a. \$428,400
- b. \$489,600
- c. \$504,000
- d. \$523,600

20. On January 1, year 1, Flax Co. purchased a machine for \$528,000 and depreciated it by the straight-line method using an estimated useful life of eight years with no salvage value. On January 1, year 4, Flax determined that the machine had a useful life of six years from the date of acquisition and will have a salvage value of \$48,000. An accounting change was made in year 4 to reflect these additional data. The accumulated depreciation for this machine should have a balance at December 31, year 4, of

- a. \$292,000
- b. \$308,000
- c. \$320,000
- d. \$352,000

21. How should the effect of a change in accounting estimate be accounted for?

- a. By restating amounts reported in financial statements of prior periods.
- b. By reporting pro forma amounts for prior periods.
- c. As a prior period adjustment to beginning retained earnings.
- d. In the period of change and future periods if the change affects both.

22. During year 2, Krey Co. increased the estimated quantity of copper recoverable from its mine. Krey uses the units of production depletion method. As a result of the change, which of the following should be reported in Krey's year 2 financial statements?

	Cumulative effect of a change in accounting principle	Pro forma effects of retroactive application of new depletion base
a.	Yes	Yes
b.	Yes	No
c.	No	No
d.	No	Yes

23. Oak Co. offers a three-year warranty on its products. Oak previously estimated warranty costs to be 2% of sales. Due to a technological advance in production at the beginning of year 3, Oak now believes 1% of sales to be a better estimate of warranty costs. Warranty costs of \$80,000 and \$96,000 were reported in year 1 and year 2, respectively. Sales for year 3 were \$5,000,000. What amount should be presented in Oak's year 3 financial statements as warranty expense?

- a. \$50,000
- b. \$88,000
- c. \$100,000
- d. \$138,000

24. For year 1, Pac Co. estimated its two-year equipment warranty costs based on \$100 per unit sold in year 1. Experience during year 2 indicated that the estimate should have been based on \$110 per unit. The effect of this \$10 difference from the estimate is reported

- a. In year 2 income from continuing operations.
- b. As an accounting change, net of tax, below year 2 income from continuing operations.
- c. As an accounting change requiring year 1 financial statements to be restated.
- d. As a correction of an error requiring year 1 financial statements to be restated.

### C.3. Change in Reporting Entities

25. A company has included in its consolidated financial statements this year a subsidiary acquired several years ago that was appropriately excluded from consolidation last year. This should be reported as

- a. An accounting change that should be reported prospectively.
- b. An accounting change that should be reported retrospectively.
- c. A correction of an error.
- d. Neither an accounting change nor a correction of an error.

26. Which of the following statements is correct regarding accounting changes that result in financial statements that are, in effect, the statements of a different reporting entity?

- a. Cumulative-effect adjustments should be reported as separate items on the financial statements pertaining to the year of change.
- b. No restatements or adjustments are required if the changes involve consolidated methods of accounting for subsidiaries.
- c. No restatements or adjustments are required if the changes involve the cost or equity methods of accounting for investments.
- d. The financial statements of all prior periods presented are adjusted retrospectively.

### C.5. International Financial Reporting Standards (IFRS)

27. IFRS requires changes in accounting principles to be reported

- a. On a prospective basis.
- b. On a retrospective basis.
- c. By restating the financial statements.
- d. By a cumulative adjustment on the income statement.

28. Under IFRS, changes in accounting policies are

- a. Permitted if the change will result in a more reliable and more relevant presentation of the financial statements.

- b. Permitted if the entity encounters new transactions, events, or conditions that are substantively different from existing or previous transactions.
  - c. Required for material transactions, if the entity had previously accounted for similar, though immaterial, transactions under an unacceptable accounting method.
  - d. Required if an alternate accounting policy gives rise to a material change in assets, liabilities, or the current year net income.
- 29.** Under IFRS, a voluntary change in accounting method may only be made by a company if
- a. A new standard mandates the change in method.
  - b. Management prefers the new method.
  - c. The new method provides reliable and more relevant information.
  - d. There is no prohibition of the method in the standards.

### Explanations

**1. (b)** A change in depreciation method is a change in method that is not distinguishable from a change in estimate, and is accounted for as a change in estimate. The change is reported on a prospective basis in the current year and future years. Book value as of 1/1/Y3 = \$153,600/8 years remaining = \$19,200 depreciation expense in year 3.

**2. (d)** Zero. A change in depreciation method is a change in method that is not distinguishable from a change in estimate, and is accounted for as a change in estimate. The change is reported on a prospective basis in the current year and future years. A change in depreciation method is no longer given cumulative effect treatment on the income statement.

**3. (d)** Zero. A change in depreciation method is a change in method that is not distinguishable from a change in estimate, and is accounted for as a change in estimate. The change is reported on a prospective basis in the current year and future years. Because a change in depreciation method is no longer given cumulative effect treatment on the income statement, there are no deferred income tax liability effects.

**4. (b)** A change in depreciation method is a change in method that is not distinguishable from a change in estimate, and is accounted for as a change in estimate. The change is reported on a prospective basis in the current year and future years.

**5. (b)** The requirement is to determine which accounting change should be reported on a prospective basis. A change in depreciation method is a change in principle that is not distinguishable from a change in estimate, and is accounted for as a change in estimate. The change is reported on a prospective basis in the current year and future years. A change from the cash basis to the accrual basis of accounting is a change from non-GAAP to GAAP accounted for as the correction of an error. A change in reporting entity requires retrospective application to the earliest year presented if practicable. A change in the method of accounting for long-term contracts requires retrospective application to the earliest year presented if practicable.

**6. (a)** The requirement is to determine whether a change in depreciation method from straight-line to double-declining balance should be reported as a cumulative effect of a change in accounting principle and receive retrospective application. A change in depreciation method is a change in method that is not distinguishable from a change in estimate, and is

accounted for as a change in estimate. The change is reported on a prospective basis in the current year and future years. Therefore, it does not receive cumulative effect treatment or retrospective treatment.

**7. (d)** A change in inventory method no longer receives cumulative effect treatment on the income statement. Instead, the accounting change is given retrospective application to the earliest period presented, if practicable. Therefore, the answer is zero.

**8. (c)** A change in inventory method no longer receives cumulative effect treatment on the income statement. Instead, the accounting change is given retrospective application to the earliest period presented, if practicable.

**9. (a)** Retrospective application requires applying the new principle to the earliest period presented if practicable. Because year 3 beginning inventory is the previous year's ending inventory, the new principle can be applied to the year 2 financial statements. This would result in an increase in ending inventory in the balance sheet for year 2, a decrease in cost of goods sold in year 2, and an increase in the beginning inventory, which would result in a higher cost of goods sold and a lower net income for year 3.

**10. (c)** A change in inventory method is given retrospective application to the earliest period presented, if practicable.

**11. (d)** Retrospective application requires the change to be calculated for the earliest period presented if practicable.

**12. (c)** A change in inventory method no longer receives cumulative effect treatment on the income statement. The accounting change is given retrospective application to the earliest period presented, if practicable.

**13. (a)** The requirement is to indicate how a change in accounting principle from the completed-contract method to the percentage-of-completion method should be reported. A change in the method of accounting for long-term contracts requires retrospective application to the earliest year practicable. This results in a \$180,000 increase in income for year 2. The assets would be adjusted for the earliest period affected, and construction-in-progress would increase by \$180,000. Net income for year 2 would increase by \$108,000 (\$180,000 less 40% tax effects), and the deferred tax liability account would increase in year 2 by \$72,000.

- 14. (c)** The effect of a change in accounting principle which is inseparable from the effect of a change in accounting estimate should be accounted for as a change in accounting estimate. Changes in estimate should be accounted for in the period of change and also in any affected future periods as a component of income from continuing operations. Financial statements are only restated for changes due to an error. Errors include mathematical mistakes, mistakes in applying accounting principles, oversights or misuse of available facts, and changes from unacceptable accounting principles to GAAP. The situation described in this question does not meet the description of an error.
- 15. (a)** Deferred taxes is a direct effect from the change in accounting principle, and its effects should be recorded in the earliest period presented, if practicable. Profit sharing and royalty payments are indirect effects and should be reported in the period of the change.
- 16. (c)** Indirect effects of a change in accounting principle should be reported in the period in which the accounting change occurs. Direct effects are reported retrospectively to the earliest period presented, if practicable. Answers (b) and (d) are incorrect since accounting changes are no longer treated as cumulative effect changes or prior period adjustments.
- 17. (b)** If it is impracticable to determine the cumulative effect of an accounting change to any of the prior periods, the accounting change should be accounted for on a prospective basis. Answer (a) is incorrect because accounting changes are no longer treated as prior period adjustments. Answer (c) is incorrect because accounting changes are no longer treated as cumulative effect changes on the income statement. Answer (d) is incorrect because the change would not be to retained earnings in the first period presented.
- 18. (d)** If the cumulative effect of applying an accounting change can be determined, but the period-specific effects on all periods cannot be determined, the cumulative effect of the change should be applied to the carrying value of the assets and liabilities at the beginning of the earliest period to which it can be determined.
- 19. (b)** This situation is a change in accounting estimate and should be accounted for currently and prospectively. From 1/1/Y1 to 12/31/Y3, patent amortization was recorded using a fifteen-year life. Yearly amortization was \$47,600 ( $\$714,000 \div 15$ ), accumulated amortization at 12/31/Y3 was \$142,800 ( $\$47,600 \times 3$ ), and the book value of the patent at 12/31/Y3 was \$571,200 ( $\$714,000 - \$142,800$ ). Beginning in year 4, this book value must be amortized over its remaining useful life of 7 years (10 years – 3 years). Therefore, year 4 amortization is \$81,600 ( $\$571,200 \div 7$ ) and the 12/31/Y4 book value is \$489,600 ( $\$571,200 - \$81,600$ ).
- 20. (a)** From 1/1/01 to 12/31/Y3, depreciation was recorded using an eight-year life. Yearly depreciation was \$66,000 ( $\$528,000 \div 8$ ), and accumulated depreciation at 12/31/Y1 was \$198,000 ( $3 \times \$66,000$ ). In year 4, the estimated useful life was changed to six years total with a salvage value of \$48,000. Therefore, the 12/31/Y3 book value ( $\$528,000 - \$198,000 = \$330,000$ ) is depreciated down to the \$48,000 salvage value over a remaining useful life of three years (six years total – three years already recorded). Depreciation expense for year 4 is \$94,000 [ $(\$330,000 - \$48,000) \div 3$ ], increasing accumulated depreciation to \$292,000 ( $\$198,000 + \$94,000$ ).
- 21. (d)** Changes in accounting estimate are to be accounted for in the period of change and in future periods if the change affects both (i.e., **prospectively**). Pro forma amounts are presented for changes in accounting principle accounted for using the **current** (cumulative effect) approach. Answers (a) and (c) are incorrect because they apply to **retroactive**-type changes in principle and error correction, respectively.
- 22. (c)** The effect of a change in accounting estimate should be accounted for in (a) the period of change if the change affects that period only, or (b) the period of change and future periods if the change affects both. The Codification further states that a change in an estimate should not be accounted for by restating amounts reported in financial statements of prior periods or by reporting pro forma amounts for prior periods.
- 23. (a)** A change in estimated warranty costs due to technological advances in production qualifies as a change in accounting estimate. Changes in estimate are treated prospectively; there is no retroactive restatement, and the new estimate is used in current and future years. Therefore, in year 3, Oak should use the new estimate of 1% and report warranty expense of \$50,000 ( $\$5,000,000 \times 1\%$ ).
- 24. (a)** A change in equipment warranty costs based on additional information obtained through experience qualifies as a change in accounting estimate. Changes in estimate should be accounted for in the period of change as a component of income from continuing operations and in future periods if necessary. No restatement is required for a change in estimate.
- 25. (b)** An accounting change that is a change in reporting entity is given retrospective application to the earliest period presented, if practicable. The term “restatement” refers only to correction of errors in previously issued financial statements.
- 26. (d)** An accounting change that is a change in reporting entity is given retrospective application to the earliest period presented, if practicable. The term “restatement” refers only to correction of errors in previously issued financial statements.
- 27. (b)** The requirement is to identify the item that describes how changes in accounting principles are reported under IFRS. Answer (b) is correct because IFRS requires changes in accounting principles to be reported by giving retrospective application to the earliest period presented. Answer (a) is incorrect because a change in accounting estimate is accounted for on a prospective basis in the current and future periods. Answer (c) is incorrect because restatement is required for errors in the financial statements. Answer (d) is incorrect because cumulative adjustments on the income statement are not permitted.
- 28. (a)** The requirement is to select the item that describes when changes in accounting policies are permitted or required. Answer (a) is correct because changes are permitted if it will result in a more reliable and more relevant presentation of the financial statements.
- 29. (c)** The requirement is to identify the circumstances that may justify a voluntary change in accounting method. Answer (c) is correct because the new method must provide reliable and more relevant information.

	List A Treatment				List B Approach		
	(A)	(B)	(C)	(D)	(X)	(Y)	(Z)
7. During year 3, Quo determined that an insurance premium paid and entirely expensed in year 2 was for the period January 1, year 2, through January 1, year 4.	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>

As a result of its increased investment, Quo changed its method of accounting for investment in subsidiary from the cost adjusted for fair value method to the equity method. Quo did not elect to use the fair value method to report its 30% investment in Worth.	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>

**Task-Based Simulation 2**

<b>Calculations</b>		
	<b>Authoritative Literature</b>	<b>Help</b>

Kent has \$500,000 in equipment and machinery that was acquired on January 2, year 1. Kent has been using the double-declining balance method to depreciate the equipment over an estimated 10-year economic life with no salvage. On January 1, year 3, Kent decides to change to the straight-line method with no salvage. Kent has a 40% tax rate.

Calculate the following amounts:

1. Accumulated depreciation as of 12/31/Y2
2. Depreciation expense for year 3
3. Accumulated depreciation as of 12/31/Y3
4. Indicate the amount of the accounting change shown net of tax if appropriate

<b>Classification/ Disclosure</b>		
	<b>Authoritative Literature</b>	<b>Help</b>

Clark made the following changes in its accounting policies.

- Clark changed its depreciation method for its production machinery from the double-declining balance method to the straight-line method effective January 1, year 3.
- Clark appropriately changed the salvage values used in computing depreciation for its office equipment.
- Clark appropriately changed the specific subsidiaries constituting the group of companies for which consolidated financial statements are presented.

For each of the items that Clark changed, identify whether Clark should show the following by choosing Yes or No in the appropriate columns.

Change item	Cumulative effect of change in principle in net income of the period of change		Pro forma effects of retroactive application for all prior periods presented currently		Retrospective application to financial statements of all prior periods presented currently	
	Yes	No	Yes	No	Yes	No

Accounting Treatment	Authoritative Literature	Help

**Situation**

Falk Co. began operations in January, year 2. On January 2, year 3, Falk Co. hired a new controller. During the year, the controller, working closely with Falk’s president and outside accountants, made changes in existing accounting policies, instituted new accounting policies, and corrected several errors dating from prior to year 3.

Falk’s financial statements for the year ended December 31, year 3, will not be presented in comparative form with its year 2 financial statements.

List A represents possible classifications of these transactions as a change in accounting principle, a change in accounting estimate, correction of an error in previously presented financial statements, or neither an accounting change nor an error correction.

List B represents the general accounting treatment required for these transactions. These treatments are

- Retrospective application approach—Apply the new accounting principle to all prior periods presented showing the cumulative effect of the change in the carrying value of assets and liabilities at the beginning of the first period presented, and adjust financial statements presented to reflect period-specific effects of the change.
- Retroactive restatement approach—Adjust year 3 beginning retained earnings if the error or change affects a period prior to year 3.
- Prospective approach—Report year 3 and future financial statements on the new basis, but do not adjust beginning retained earnings or include the cumulative effect of the change in the year 3 income statements.

## List A—Type of change (Select one)

- A. Change in accounting principle.  
 B. Change in accounting estimate.  
 C. Correction of an error in previously presented financial statements.  
 D. Neither an accounting change nor an error correction.

## List B—General accounting treatment (Select one)

- X. Retroactive application approach.  
 Y. Retroactive restatement approach.  
 Z. Prospective approach.

For Items 1 and 2, select a classification for each transaction from List A and the general accounting treatment required to report the change from List B.

	(A)	List A Type of change			List B Accounting treatment		
		(B)	(C)	(D)	(X)	(Y)	(Z)
1. Falk manufactures customized equipment to customer specifications on a contract basis. Falk changed its method of accounting for these long-term contracts from the completed-contract method to the percentage-of-completion method because Falk is now able to make reasonable estimates of future construction costs.	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>
2. Based on improved collection procedures, Falk changed the percentage of credit sales used to determine the allowance for uncollectible accounts from 2% to 1%.	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>

## Task-Based Simulation 6

Accounting Change	Authoritative Literature	Help

On January 1, year 3, Posey changed from the average cost method to the FIFO method to account for its inventory. Ending inventory for each method was as follows:

Year	Average cost	FIFO
Year 2	\$5,000	\$7,000
Year 3	\$9,000	\$14,000

Posey's income statement information calculated by the average cost method was as follows:

<i>Posey Corporation</i> INCOME STATEMENT		
	Before adjustments for the year ending 12-31-Y3	Before adjustment for the year ending 12-31-Y2
Sales	\$130,000	\$100,000
Cost of goods sold	<u>90,000</u>	<u>70,000</u>
Gross profit	40,000	30,000
Operating expense	<u>20,000</u>	<u>17,000</u>
Earnings before taxes	20,000	13,000
Tax expense	<u>8,000</u>	<u>5,200</u>
Net income	12,000	7,800

Assume that Posey has no book/tax differences or deferred taxes. Posey accrues tax expense on December 31 of each year and pays the tax in January of the following year. The income tax rate is 40%.

Prepare an adjusted income statement for year 3 and year 2 after the change to the FIFO inventory method.

*Posey Corporation*  
**INCOME STATEMENT**

	<b>Adjusted for the year ending 12-31-Y3</b>	<b>Adjusted for the year ending 12-31-Y2</b>
Sales		
Cost of goods sold		
Gross profit		
Operating expense		
Earnings before taxes		
Tax expense		
Net income		

Indicate the adjusted balances on the December 31 balance sheet for each year.

	<b>December 31, year 3</b>	<b>December 31, year 2</b>
Inventory		
Income tax liability		
Retained earnings

## Simulation Solutions

### Task-Based Simulation 1

Accounting Changes	Authoritative Literature	Help
--------------------	--------------------------	------

	List A Treatment				List B Approach		
	(A)	(B)	(C)	(D)	(X)	(Y)	(Z)
1. Quo manufactures heavy equipment to customer specifications on a contract basis. On the basis that it is preferable, accounting for these long-term contracts was switched from the completed-contract method to the percentage-of-completion method.	●	○	○	○	●	○	○
2. As a result of a production breakthrough, Quo determined that manufacturing equipment previously depreciated over fifteen years should be depreciated over twenty years.	○	●	○	○	○	○	●
3. The equipment that Quo manufactures is sold with a five-year warranty. Because of a production breakthrough, Quo reduced its computation of warranty costs from 3% of sales to 1% of sales.	○	●	○	○	○	○	●
4. Quo changed from LIFO to FIFO to account for its finished goods inventory.	●	○	○	○	●	○	○
5. Quo changed from FIFO to average cost to account for its raw materials and work in process inventories.	●	○	○	○	●	○	○
6. Quo sells extended service contracts on its products. Because related services are performed over several years, in year 3 Quo changed from the cash method to the accrual method of recognizing income from these service contracts.	○	○	●	○	○	●	○
7. During year 3, Quo determined that an insurance premium paid and entirely expensed in year 2 was for the period January 1, year 2, through January 1, year 4.	○	○	●	○	○	●	○
8. Quo changed its method of depreciating office equipment from an accelerated method to the straight-line method to more closely reflect costs in later years.	○	●	○	○	○	○	●
9. Quo instituted a pension plan for all employees in year 3 and adopted the accounting standards related to pensions. Quo had not previously had a pension plan.	○	○	○	●	○	○	●
10. During year 3, Quo increased its investment in Worth, Inc. from a 10% interest, purchased in year 2, to 30%, and acquired a seat on Worth's board of directors. As a result of its increased investment, Quo changed its method of accounting for investment in subsidiary from the cost adjusted for fair value method to the equity method.	○	○	○	●	○	●	○

**Explanations**

1. (A, X) This situation represents a change in the method of accounting for long-term construction-type contracts and requires retrospective application for all periods presented.
2. (B, Z) This situation is not a change in accounting principle but is a change in an estimate and should be handled prospectively.
3. (B, Z) This situation is a change in an estimate. The change in the percentage of warranty costs is not a change in accounting principle. Changes in estimate are handled prospectively.
4. (A, X) This situation is a change from one acceptable accounting principle to another and requires retrospective application.
5. (A, X) This situation is a change from one acceptable accounting method to another and requires the retrospective application approach.
6. (C, Y) The use of the cash method is considered an error since that method is generally **not** acceptable. The switch to an acceptable method (accrual) is considered the correction of an error and requires the retroactive restatement approach.
7. (C, Y) The write-off of the insurance premium was an error. Since comparative financial statements are prepared, past years must be corrected using the retroactive restatement approach even though this error is self-correcting after two years.
8. (B, Z) This situation is a change in method which is considered a change in estimate effected by a change in principle. Per SFAS 154, a change in depreciation method requires prospective application.
9. (D, Z) Since the company did not previously account for pensions this situation is simply the adoption of an appropriate accounting principle for pensions. No change in principle occurs.
10. (D, Y) Quo's increase in ownership interest (10% to 30%) and its acquisition of a seat on Worth's board of directors has given Quo the ability to exercise significant influence in the operating decisions of Worth. If Quo does not elect to use the fair value option to report its 30% investment in Worth, Quo will use the equity method to account for its investment in Worth. The cost adjusted for fair value method is no longer applicable due to the change in Quo's investment in Worth. However, the change from the cost adjusted for fair value method to the equity method is not a change in accounting principle. A change in accounting principle occurs when an accounting principle different from the one used previously for reporting purposes is adopted. For a change to occur, a choice between two or more accounting principles must exist. In this case, the change in Quo's situation allows the equity method to account for the investment. Quo's current economic situation is clearly different and this necessitates the adoption of a different accounting principle. Consequently, this is not an accounting change. However, the investment account should be retroactively restated to reflect balances as if the equity method had always been used.

**Task-Based Simulation 2**

<b>Calculations</b>		
	<b>Authoritative Literature</b>	<b>Help</b>

- |    |  |           |
|----|--|-----------|
| 1. | Accumulated depreciation as of 12/31/Y2                                      | \$180,000 |
| 2. | Depreciation expense for year 3  | \$40,000  |
| 3. | Accumulated depreciation as of 12/31/Y3                                      | \$220,000 |
| 4. | Indicate the amount of the accounting change shown net of tax if appropriate | \$0       |

**Explanations**

1. Before change, Kent used double-declining balance and 10-year life

Year 1	1/10 × 2 × \$500,000 book value	=	\$100,000	depreciation expense
Year 2	1/10 × 2 × \$400,000 new book value	=	\$ <u>80,000</u>	depreciation expense
	Accumulated depreciation 12/31/Y1		\$180,000	

2. To calculate depreciation expense for year 3:

Historical cost	\$500,000
– Accum. depreciation	(180,000)
Book value	\$320,000

$(\$320,000 - \$0 \text{ salvage}) \div 8 \text{ years remaining life} = \$40,000 \text{ depreciation expense}$

3. To calculate accumulated depreciation as of 12/31/Y3:

Year 1	\$100,000
Year 2	80,000
Year 3	<u>40,000</u>
Accum. depr. 12/31/Y3	\$220,000

4. Accounting change net of tax—zero. Accounting standards treat changes in depreciation method as a change in estimate effected by a change in method. Therefore, a change in depreciation is accounted for on a prospective basis.

### Task-Based Simulation 3

Classification/ Disclosure		
	Authoritative Literature	Help

Change item	Cumulative effect of change in principle in net income of the period of change		Pro forma effects of retroactive application for all prior periods presented currently		Retrospective application to financial statements of all prior periods presented currently	
	Yes	No	Yes	No	Yes	No
1. Clark changed its depreciation method for its production machinery from the double-declining balance method to the straight-line method effective January 1, year 3.	<input type="radio"/>	<input checked="" type="radio"/>	<input type="radio"/>	<input checked="" type="radio"/>	<input type="radio"/>	<input checked="" type="radio"/>
2. Clark appropriately changed the salvage values used in computing depreciation for its office equipment.	<input type="radio"/>	<input checked="" type="radio"/>	<input type="radio"/>	<input checked="" type="radio"/>	<input type="radio"/>	<input checked="" type="radio"/>
3. Clark appropriately changed the specific subsidiaries constituting the group of companies for which consolidated financial statements are presented.	<input type="radio"/>	<input checked="" type="radio"/>	<input type="radio"/>	<input checked="" type="radio"/>	<input checked="" type="radio"/>	<input type="radio"/>

### Explanations

1. (N, N, N) Clark's change in depreciation method is a change in accounting estimate effected by a change in accounting principle. This change would be accounted for on a prospective basis in the current year and future periods.

2. (N, N, N) Clark's change in salvage values is a change in accounting estimate. Clark would not report a cumulative effect, nor pro forma effects, nor would prior period financial statements be restated.

3. (N, N, Y) Clark’s change in the specific subsidiaries constituting the group of companies for which consolidated financial statements are presented is a change in reporting entity. The change in reporting entity requires the change to be retrospectively applied to the financial statements of all prior periods presented to show financial information for the new reporting entity.

**Task-Based Simulation 5**

Accounting Treatment	Authoritative Literature	Help

	List A Type of Change			List B Accounting Treatment			
	(A)	(B)	(C)	(D)	(X)	(Y)	(Z)
1. Falk manufactures customized equipment to customer specifications on a contract basis. Falk changed its method of accounting for these long-term contracts from the completed-contract method to the percentage-of-completion method because Falk is now able to make reasonable estimates of future construction costs.	●	○	○	○	●	○	○
2. Based on improved collection procedures, Falk changed the percentage of credit sales used to determine the allowance for uncollectible accounts from 2% to 1%.	○	●	○	○	○	○	●

**Explanations**

- (A, X) Changing from using the completed-contract method to the percentage-of-completion method is a change in accounting principle. Therefore, retrospective application to all periods presented is required.
- (B, Z) The percentage of net credit sales used in determining the amount to be added to the allowance for uncollectible accounts is an estimate made by management. Changing the percentage is a change in accounting estimate, which is treated prospectively.

**Task-Based Simulation 6**

Accounting Change	Authoritative Literature	Help

**Posey Corporation  
INCOME STATEMENT**

	Adjusted for the year ending 12-31-Y3	Adjusted for the year ending 12-31-Y2
Sales	\$130,000	\$100,000
Cost of goods sold	<u>87,000</u>	<u>68,000</u>
Gross profit	43,000	32,000
Operating expenses	<u>20,000</u>	<u>17,000</u>
Earnings before taxes	23,000	15,000
Income tax expense (40%)	<u>9,200</u>	<u>6,000</u>
Net income	13,800	9,000

	December 31, year 3	December 31, year 2
Inventory	\$14,000	\$7,000
Income tax liability	10,000	6,000

**Explanations**

To calculate cost of goods sold using FIFO method, you must first calculate purchases using the average cost method. Using T-accounts for analysis, the amounts are as shown below.

Inventory (Weighted-average method)			
1-1-Y2	-0-	70,000	CGS
Purchases	<input type="text" value="75,000"/>		
12-31-Y2	5,000	90,000	CGS
Purchases	<input type="text" value="94,000"/>		
12-31-Y3	9,000		

Inventory (FIFO method)			
1-1-Y2	-0-		CGS
Purchases	75,000	<input type="text" value="68,000"/>	
12-31-Y2	7,000		CGS
Purchases	94,000	<input type="text" value="87,000"/>	
12-31-Y3	14,000		

Income tax liability for December 31, year 3, is calculated as

Year 3 earnings before taxes $23,000 \times 40\% =$	\$ 9,200
Year 2 adjustment to earnings before taxes $2,000 \times 40\%$	+ <u>800</u>
Total income tax liability at 12-31-Y3	\$10,000

Retained earnings as of December 31, year 3, is calculated as

Adjusted NI year 2	\$ 9,000
Adjusted NI year 3	13,800
Retained earnings 12/31/Y3	\$22,800

**D. Financial Statements****1. Income and Retained Earnings Statement Formats**

Income statements may be prepared using a multiple-step or single-step form. The income (earnings) and comprehensive income statement illustrated below for Totman Company includes separate categories for continuing operations, discontinued operations, and extraordinary items. The purpose of these separate categories is to enable users to assess future cash flows. Retrospective application is required for all changes in accounting principle. Other comprehensive income is required and may be disclosed in several methods (covered later in this module).

- a. The Totman Company statement is a combined statement of income and comprehensive income.

**EXAMPLE**

*Totman Company*  
**STATEMENT OF EARNINGS AND COMPREHENSIVE INCOME**  
*For the Year Ended December 31, Year 2*

	Sales		\$2,677
	Cost of goods sold		<u>1,489</u>
	Gross margin on sales		1,188
See Note #5 below	Operating expenses		
	Selling expenses	\$ 220	
	Administrative expenses	<u>255</u>	<u>475</u>
	Operating income		713
	Other revenues and gains		
	Interest revenue	\$ 5	
	Equity in Huskie Co earnings	15	
	Gain on sale of available-for-sale securities	<u>45</u>	65
	Other expenses and losses		
	Interest expense	(60)	
	Loss from permanent impairment of value of manufacturing facilities	<u>(120)</u>	<u>(180)</u>
	Income from continuing operations before provision for income taxes		598
	Provision for income taxes		
	Current	\$ 189	
	Deferred	<u>50</u>	<u>239</u>
	Income from continuing operations		359(a)
	<i>Discontinued operations</i>		
	Loss from operations of discontinued Division Z including loss on disposal of \$230	(1,265)	
	Income tax benefit	<u>(466)</u>	<u>(799)(b)</u>
	Income (loss) before extraordinary item		(440)
	Extraordinary item: Loss due earthquake (less applicable income taxes of \$30)		<u>(45)(b)</u>
	Net earnings (loss)		(485)(a)
	<i>Other comprehensive income</i>		
	Foreign currency translation adjustments (less applicable income taxes of \$6)		26
	Unrealized gains on securities		
	Unrealized holding gains arising during period (Less applicable income taxes of \$43)	179	
	Less: reclassification adjustment (less applicable income taxes of \$10) for gain included in net income	<u>(35)</u>	144
	Other comprehensive income		<u>170</u>
	Comprehensive income		\$ (315)

**Notes:**

- Assumes a tax rate of 40% on applicable items
- (a) indicates where earnings per share (EPS) amounts would be necessary on the face of the IS. (b) EPS may be shown on the face of the income statement or in the notes. On the CPA exam, rather than memorizing these, simply calculate an EPS number for all numbers starting with income from continuing operations through net earnings.
- Footnote explanations would also be required for many of the above events and transactions.
- In the multiple-step format above, the Securities and Exchange Commission (SEC) requires that public companies place impairment losses in operating income instead of under "Other expenses and losses."
- This is the format for a multiple-step income statement. A single-step income statement would differ only for the portion of the statement shown below. Otherwise, the single-step statement format is the same.

<b>Revenues</b>		
Sales	\$2,677	
Interest	5	
Gain on sale of available-for-sale securities	45	
Equity in Huskie Co. earnings	<u>15</u>	
Total revenues		\$2,742
<b>Expenses</b>		
Cost of goods sold	1,489	
Selling expenses	220	
Administrative expenses	255	
Interest expense	60	
Loss from permanent impairment of value of manufacturing facilities	<u>120</u>	
Total expenses		<u>2,144</u>
Income from continuing operations before provision for income taxes		598

- b. The following chart summarizes the various category definitions and their placement on the income statement and retained earnings statement. These categories are all discussed in various parts of this module.

#### Income Statement and Retained Earnings Statement Categories

Description	Definition	Placement on income statement or statement of retained earnings
<b>1. Unusual or Infrequent Items</b>	An unusual or infrequent event considered to be material that does not qualify as extraordinary	Placed as part of income from continuing operations after normal recurring revenues and expenses
<b>2. Discontinued Operations*</b>	Results from disposal of a business component	Placed as a separate category after income from continuing operations
<b>3. Extraordinary Items*</b>	An unusual and infrequent nonrecurring event which has material effects	Placed as a separate category after discontinued operations
<b>4. Change in Accounting Principle:</b>	Change from one generally accepted accounting principle to another	No longer on income statement. <b>Retrospective application:</b> Report cumulative effect of change in the carrying amounts of assets and liabilities as of the beginning of the first period presented, with an offsetting adjustment to the opening balance of retained earnings for that period. Financial statements for each period are adjusted to reflect period-specific effects of the change for direct effects.
<b>5. Correction of an Error</b>	A correction of a material error from a prior period	Report as prior period adjustment by restating the prior-period financial statements. Cumulative effect of the error on prior periods is reflected in the carrying value of assets and liabilities at the beginning of the first period, with an offsetting adjustment made to the opening balance of retained earnings for that period. Financial statements are adjusted to reflect correction of period-specific effects of the error.

\* These items are all presented net of applicable income tax effects.

#### 2. Unusual or Infrequent Items

- a. Items that are unusual or infrequent but not both should not be presented as extraordinary items. However, they are often presented in a separate section in the income statement above income before extraordinary items. A common example of such items is a “restructuring charge.”

- (1) A restructuring is a program that is planned and controlled by management and materially changes either the scope of the business undertaken by the company, or the manner in which that business is conducted. Examples include
  - (a) Sale or termination of a line of business
  - (b) Closure of business activities in a particular location
  - (c) Relocation of business activities from one location to another
  - (d) Changes in management structure, or
  - (e) Fundamental reorganizations that affect the nature and focus of operations
- (2) Another unusual or infrequent item is accounting for the costs of exit and disposal activities (which include, among other items, restructurings). A liability for a cost associated with an exit or disposal activity should be recognized and measured initially at fair value in the period in which the liability is incurred. The fair value is usually determined as the present value of the estimated future payments discounted at the credit-adjusted, risk-free rate of interest.
  - (a) In the unusual circumstance when fair value cannot be reasonably estimated, the liability shall be initially recognized in the period in which fair value can be reasonably estimated. Examples of such liabilities include
    - (1) Onetime termination benefits provided to current employees that are involuntarily terminated
    - (2) Costs to terminate a contract that is not a capital lease
    - (3) Costs to consolidate facilities or relocate employees
  - (b) The recognition of the liability and expense for onetime termination benefits depends on whether the employees are required to provide services beyond the minimum retention period. If so, the expense is recognized over the period that the services are provided. If they are not required to provide future services, the liability is recognized when the plan is communicated to the employees.
  - (c) In periods subsequent to initial measurement, changes to the liability shall be measured using the credit-adjusted risk-free rate that was used to measure the liability initially.
  - (d) Costs associated with an exit or disposal activity that does not involve discontinued operations shall be included in income from continuing operations before income taxes. The footnotes to the financial statements should provide extensive disclosure of the activities.

### 3. Discontinued Operations

- a. As shown on the Totman Co. income statement, “Discontinued operations” is broken out separately. The “Loss from discontinued operations” includes the loss or income of the component for the period, and the gain or loss on its disposal. Income taxes or tax benefit are deducted from or added to that amount to determine the gain or loss after taxes.
- b. To qualify for treatment as discontinued operations the assets must comprise a component of the entity with operations and cash flows that are clearly distinguished, operationally and for financial reporting purposes, from the rest of the entity. A component may be a reportable or operating segment, a reporting unit, a subsidiary, or an asset group.
- c. To be reported as discontinued operations, two requirements must be met: (1) the operations and cash flows of the component have been (or will be) eliminated from the ongoing operations of the entity as a result of the disposal, and (2) the entity will not have any significant involvement in the operations of the component after disposal.
- d. Many of the assets disposed of as discontinued operations are long-lived assets. Accordingly, the component is classified as discontinued operations in the first period that it meets the criteria as being “held for sale”:
  - (1) Management commits to a plan of disposal.
  - (2) The assets are available for sale.
  - (3) An active program to locate a buyer has been initiated.
  - (4) The sale is probable.
  - (5) The asset is being actively marketed for sale at a fair price.
  - (6) It is unlikely that the disposal plan will significantly change.
  - (a) Long-lived assets classified as “held for sale” are reported at the lower of their carrying amounts or fair values less costs to sell. Therefore, the gain or loss on disposal of discontinued operations is the actual gain or loss if disposal occurs in the same period that the component meets the criteria to be classified as “held for sale.”

- (b) If the criteria to classify the component as “held for sale” is met in a period before it is disposed of, the amount of the loss (if applicable) on disposal is an estimated loss resulting from the write-down of the group of assets to their estimated fair values. Estimated gains cannot be initially recognized.
- (c) However, if the component is held for sale over several reporting periods, estimated gains can be recognized based on new information but are limited to the amount of losses previously recognized.
- (d) Thus, the assets can be written up but not above their carrying amounts when they met the criteria as being held for sale.
- e. When “discontinued operations” are disclosed in a comparative income statement, the income statement presented for each previous year must be adjusted retroactively to enhance comparability with the current year’s income statement. Accordingly, the revenues, cost of goods sold, and operating expenses (including income taxes) for the discontinued component are removed from the revenues, cost of goods sold, and operating expenses of continuing operations and are netted into one figure, that is, “Income (loss) from discontinued operations.”
- (1) The following excerpt from a comparative income statement shows the proper disclosure (year 1 figures assumed).

	Year 2	Year 1
Discontinued operations:		
Loss from operations of discontinued Division Z, including loss on disposal in year 2 of \$230	\$699	\$990
Income tax benefit	466	300

**NOW REVIEW MULTIPLE-CHOICE QUESTIONS 1 THROUGH 32**

#### 4. Comprehensive Income

- a. **Reporting.** Comprehensive income is the sum of net earnings (loss) and other comprehensive income. It requires disclosure of **changes during a period** of the following components of other comprehensive income: unrealized gains and losses on available-for-sale investments and foreign currency items, including any reclassification adjustments and any adjustments necessary to recognize the funding status of pension plans or other postemployment benefits.
- b. This standard allows the management of an enterprise two choices for presenting **other comprehensive income**. These are as follows:
- (1) At the bottom of income statement, continue from net income to arrive at a comprehensive income. An entity shall present the following:
    - (a) A total amount for net income and its components.
    - (b) A total amount for other comprehensive income and its components.
    - (c) Total comprehensive income.
  - (2) In a separate statement that may start with net income, (illustrated below) and that **directly** follows the statement of income. An entity shall present the following:
    - (a) Net income and its components in the statement of net income.
    - (b) Comprehensive and its components along with total comprehensive income.

The accumulated (total) comprehensive income shall be presented separately from retained earnings and additional paid in capital in the statement of financial position. The changes in the accumulated balances are to be presented in the notes to the financial statements or on the face of the financial statements. (See the balance sheet on the following page and the statement of changes in stockholders’ equity at the beginning of Module 15). Each component of other comprehensive income and reclassifications shall be presented separately.
- c. **Reclassification adjustments.** As unrealized gains (losses) recorded and reported in other comprehensive income for the current or prior periods are later realized, they are recognized and reported in net income. To

avoid double counting it is necessary to reverse the unrealized amounts that have been recognized. An entity must separately disclose information about net income reclassification out of other comprehensive income effects either on the face of the financial statement containing net income or in a separate disclosure in the notes. For items **not** required to be reclassified in entirety to net income, cross-reference to related disclosures is required.

**EXAMPLE**

Assume that an available-for-sale security was sold April 1, year 2, for a \$45 gain. Assume that Totman did not elect the fair value option. There was \$30 of unrealized gain that arose in years prior to year 2 and is in **accumulated other** comprehensive income. The other \$15 unrealized gain was reported in the first quarter statements and is part of the \$179 reported below under other comprehensive income for year 2.

*Totman Company***STATEMENT OF EARNINGS AND COMPREHENSIVE INCOME***For the Year Ended December 31, year 2*

Sales			\$2,677
	Omitted line items		
Operating income			713
Other revenues and gains			
Interest revenue		\$5	
Equity in Huskie Co. earnings		15	
Gain on sale of available-for-sale securities		<u>45</u>	65
Other expenses and losses			
Interest expense		(60)	
Loss from permanent impairment of value of manufacturing facilities		<u>(120)</u>	<u>(180)</u>
Income from continuing operations before provision for income taxes			598
Provision for income taxes			
Current		\$189	
Deferred		<u>50</u>	<u>239</u>
Income from continuing operations			359
	Omitted line items		
Net earnings (loss)			(485)
<i>Other comprehensive income:</i>			
Foreign currency translation adjustments (less applicable income taxes of \$6)			26
Unrealized gains on securities:			
Unrealized holding gains arising during period (less applicable income taxes of \$43)		179	
Less: Reclassification adjustment (less applicable income taxes of \$10) for gain included in net income		<u>(35)</u>	<u>144</u>
Other comprehensive income			<u>170</u>
Comprehensive income			<u><u>\$(315)</u></u>

The reclassification adjustment to avoid double counting is \$45 less a tax effect of \$10 or \$35 net. Since the \$45 was realized in the current period, a realized gain of \$45 was reported in the income from continuing operations under other revenues and gains above before provisions for income taxes of \$598. The \$10 of income tax on the \$45 is reported as part of provision for income taxes in the current portion of income tax expense of \$189. Recall that all items reported above the provision for income taxes are reported "gross," not net of taxes as in the case of items such as discontinued operations. Also, note the tax effects reported under other comprehensive income are **deferred** since the unrealized components are not recognized for tax purposes until realized.

- d. **Balance sheet.** Accumulated other comprehensive income is reported in the stockholders' equity section of the balance sheet. When an entity has components of other comprehensive income, the total of these is closed to the balance sheet account entitled **accumulated other comprehensive income**, not retained earnings. In the case above, the other comprehensive income of \$170 for the period would need to be closed to accumulated other comprehensive income, not retained earnings. The net loss is closed to retained earnings.

**NOW REVIEW MULTIPLE-CHOICE QUESTIONS 33 THROUGH 46**

**5. Balance Sheets (Statements of Financial Position)**

- a. Balance sheets or statements of financial position present assets, liabilities, and stockholders' equity. The balance sheet reports the effect of transactions at a point in time, whereas the statement of earnings (income) and comprehensive income, statement of retained earnings, and statement of cash flows report the effect of transactions over a period of time. An example of balance sheet classification and presentation is illustrated by the comprehensive balance sheet on the previous page.
- b. Distinction between current and noncurrent assets and liabilities is almost universal.
- (1) **Current assets**—Current assets is used to designate cash and other assets or resources commonly identified as those that are reasonably expected to be realized in cash or sold or consumed during the normal operating cycle of the business.
- (2) **Current liabilities**—Current liabilities is used principally to designate obligations whose liquidation is reasonably expected to require the use of existing resources properly classifiable as current assets, or the creation of other current liabilities.

**EXAMPLE**

*Totman Company*  
**BALANCE SHEET**  
*December 31, Year 2*

*Assets*

*Current assets:*

Cash and bank deposits:			
Restricted to current bond maturity	\$xxx		
Unrestricted	xxx	\$xxx	
Short-term investments:			
Marketable securities (Trading)	xxx		
Refundable income taxes	xxx		
Receivables from affiliates	xxx		
Accounts receivable	xxx		
Less allowance for doubtful accounts	(xxx)	xxx	
Notes receivable due in year 3	xxx		
Installment notes due in year 3	xxx		
Interest receivable	xxx		
Creditors' accounts with debit balances	xxx		
Advances to employees	xxx		
Inventories (carried at lower of cost or market by FIFO)			
Finished goods	xxx		
Work in process	xxx		
Raw materials	xxx	xxx	

*Liabilities and Stockholders' Equity*

*Current liabilities:*

Commercial paper and other short-term notes			\$xxx
Accounts payable		xxx	
Salaries, wages, and commissions		xxx	
Taxes withheld from employees		xxx	
Income taxes payable		xxx	
Dividends payable		xxx	
Rent revenue collected in advance		xxx	
Other advances from customers		xxx	
Current portion of long-term debt		xxx	
Current obligations under capital leases		xxx	
Deferred tax liability		xxx	
Short-term portion of accrued warranty		xxx	
Other accrued liabilities		xxx	
Total current liabilities			\$xxx

*Noncurrent liabilities:*

Notes payable due after year 3			xxx
Plus unamortized note premium		xxx	\$xxx
Long-term bonds:			

Prepaid expenses:		10% debentures due in year 13	xxx	
Prepaid rent	xxx	9-1/2% collateralized obligations		
Prepaid insurance	<u>xxx</u>	maturing serially to year 5		
	xxx		xxx	
Total current assets	\$xxx	8% convertible subordinated		
		debentures due in year 18		
			xxx	
<i>Long-term investments:</i>		Less unamortized discounts net of	(xxx)	xxx
		premiums		
Investments in marketable securities		Accrued pension cost		xxx
(available-for-sale)		Obligations under capital		
	xxx	leases		xxx
Investments in bonds (held-to-maturity)	xxx	Deferred tax liability		xxx
Investments in unused land	xxx	Long-term portion of accrued warranty	<u>xxx</u>	
Cash surrender value of officers' life		Total noncurrent liabilities		\$xxx
insurance policies		Total liabilities		<u>xxx</u>
	xxx			
Sinking fund for bond retirement	xxx	<i>Capital stock:</i>		
Plant expansion fund				
	<u>xxx</u>			
Total long-term investments	\$xxx	\$12.50 convertible preferred stock,		
		\$100 stated value, 200,000 shares		
		authorized, 175,000 outstanding		
			xxx	
<i>Property, plant, and equipment:</i>		12% cumulative preferred stock, \$100

amortization				
Total property, plant, and	\$xxx	<i>Additional paid-in capital:</i>		
equipment		From 12% cumulative preferred	xxx	
		From common stock	xxx	
<i>Intangible assets net of amortization:</i>		From treasury stock transactions	xxx	
Goodwill	xxx	From stock dividends	xxx	
Patents	xxx	From expiration of stock options	xxx	
Trademarks	<u>xxx</u>	Warrants outstanding	<u>xxx</u>	xxx
Total intangible assets, net	\$xxx			
<i>Other assets:</i>		<i>Retained earnings:</i>		
Installment notes due after year 3	xxx	Appropriated for bond indebtedness	xxx	
Unamortized bond issue costs	xxx	Free and unappropriated	<u>xxx</u>	xxx
Equipment to be disposed of	<u>xxx</u>			
Total other noncurrent assets	\$xxx	<i>Accumulated other comprehensive</i>		<u>xxx</u> *
		<i>income:</i>		
Total assets	\$xxx	Total stockholders' equity		
		Less: Treasury stock at cost		
		Total liabilities and stockholders' equity		

\*Assumes components thereof are disclosed either in a statement of changes in stockholders' equity or in the notes to FS.

**NOTE:** Current assets include those expected to be

1. Realized in cash
2. Sold
3. Consumed

Current liabilities are those expected to

1. Use current assets
2. Create other current liabilities

The operating cycle is the average time between acquisition of materials and final cash realization.

**NOW REVIEW MULTIPLE-CHOICE QUESTIONS 47 THROUGH 53**

**6. Other Financial Statement Concepts**

- a. **Disclosures.** Related-party disclosures are covered by ASC Topic 850 (SFAS 57). Additional disclosures required for specific situations were specified at the end of most pronouncements.
- b. **Accounting policies** must be set forth as the initial footnote to the statements. Disclosures are required of
  - (1) Accounting principles used when alternatives exist
  - (2) Principles peculiar to a particular industry
  - (3) Unusual or innovative applications of accounting principles
- c. **Subsequent events.** Subsequent events are those occurring after the balance sheet date but before the financial statements are issued or available to be issued. Financial statements are issued when they are distributed to shareholders and other users. Financial statements are “available to be issued” when they are in a form and format that is complete and complies with GAAP and all necessary approvals for issuance have been obtained.
  - (1) An entity that is an SEC filer or is a conduit bond obligor for conduit debt securities traded in a public market must evaluate subsequent events through the date the financial statements are issued. All other entities must evaluate subsequent events through the date that the financial statements are available to be issued. There are two types of subsequent events: recognized and nonrecognized.
  - (2) A recognized subsequent event is one in which the condition existed at the balance sheet date and, therefore, is recognized in the financial statements.

**EXAMPLE**

Recognized events include an estimate for warranty liability, an estimate of a contingent liability due to a lawsuit, or an estimate of allowance for uncollectible accounts.

- (a) If a recognized subsequent event is settled after the balance sheet date but before the financial statements are issued or available to be issued, then the settlement amounts should be used as the liability in the balance sheet.
- (3) A nonrecognized subsequent event is one in which the condition did **not** exist at the balance sheet date, but arose **after** the balance sheet date. In such cases, the event is **not** recognized in the financial statements. However, if the event is such that the financial statements would be misleading, then a footnote disclosure should be made indicating the nature of the event and an estimate of the financial statement effects.
- (4) An entity that is an SEC filer is not required to disclose the date through which subsequent events are evaluated. However, a non-SEC filer must also disclose the date through which the subsequent events were evaluated and whether that date is the date the financial statements are issued or available to be issued. The provisions of ASC Topic 855 apply both interim and annual reports for all subsequent events that are not addressed by other areas of the Codification.

**NOW REVIEW MULTIPLE-CHOICE QUESTIONS 54 THROUGH 64**

- d. **Fair value measurements.** Fair value measurements are required for certain assets and liabilities (investments, derivatives, asset impairments, asset retirement obligations, goodwill, business combinations, troubled debt restructuring).
- (1) Applying the fair value measurement approach involves the following six steps:
    - (a) Identify the asset or liability to be measured.
    - (b) Determine the principal or most advantageous market.
    - (c) Determine the valuation premise.
    - (d) Determine the appropriate valuation technique (*market, income, or cost approach*).
    - (e) Obtain inputs for valuation (*Level 1, Level 2, or Level 3*).
    - (f) Calculate the fair value of the asset.
  - (2) Fair value is the price that would be received to sell an asset or paid to transfer a liability in an orderly transaction between market participants at the measurement date (at exit price) under current market conditions. An orderly transaction is a transaction that allows for normal marketing activities that are usual and customary. In other words, it is not a forced transaction or sale.
  - (3) The fair value measurement assumes that the asset or liability is sold or transferred in the principal market, or if no principal market exists, the most advantageous market. The **principal market** is a market in which the greatest volume and level of activity occurs. The **most advantageous market** maximizes price received for the asset or minimizes the amount paid to transfer the liability. Market participants in the principal or most advantageous market should have the following characteristics:
    - (a) Be independent of the reporting entity (not related parties),
    - (b) Be knowledgeable,
    - (c) Able to transact, and
    - (d) Willing to transact (i.e., motivated, but not compelled to transact).
  - (4) The price in the principal or most advantageous market shall **not** be adjusted for transaction costs, such as costs to sell. However, the cost to sell is used to determine which market is the most advantageous. If location is a characteristic of the asset or liability, the price **is adjusted** for costs necessary to transport the asset or liability to the market.

**EXAMPLE**

(Adapted from ASC 820-10-55-42 through 45A)

Company A is valuing a trading security to fair value at year-end. The stock is traded on two stock exchanges, the NYSE and NASDAQ. The price quoted on December 31, year 1, on the NYSE is \$50 per share, and the brokerage fees are \$4 per share. The price quoted on the NASDAQ is \$48 per share with brokerage fees of \$1 per share.

- a. Assume the NYSE is the principal market. The fair value would be \$50 because the FV is the price in the principal market for the asset.
- b. Assume that there is no principal market, and the stock is exchanged equally on both markets. The fair value would be the price in the most advantageous market. The NYSE price would allow Company A to receive \$46 per share for the stock (\$50 – \$4). The NASDAQ price would allow company A to receive \$47 per share for the stock (\$48 – \$1 per share). Therefore, the NASDAQ price would maximize the price received for the asset, and the NASDAQ market would be considered the most advantageous market. The fair value of \$48 per share would be the fair value of the stock.

**NOTE:** Although the selling fees may be used to determine the most advantageous market, selling costs or brokerage fees are **not** used in calculating the fair value.

**EXAMPLE 2**

(Adapted from SFAS 157, Appendix A)

Company B is valuing a commodity at year-end. The commodity is traded on an open-exchange, and the price quoted at December 31, year 1, is \$10,000. Transportation costs to deliver the goods to market are \$500. The fair value of the commodity is \$9,500 (\$10,000 less the cost to transfer the goods to market of \$500).

- (5) Fair value measurement also assumes the highest and best use of the nonfinancial asset.

**NOTE:** For financial assets and financial liabilities, the highest and best use concept is not relevant since they do not have alternative uses and their fair values do not depend upon their use within a group.

The **highest and best use** will maximize the value of the asset or group of assets. The use of the asset must be physically possible, legally permissible, and financially feasible at the measurement date. The highest and best use of the asset is then used to determine the valuation premise used to measure fair value as follows:

- (a) If the asset provides maximum value by using it with other assets as a group. The fair value of the asset is the price that would be received to sell the asset assuming the asset is used with other assets as a group.
  - (b) If the asset provides maximum value on a stand-alone basis, the fair value of the asset is the price that would be received in a current transaction to sell the asset stand-alone.
- (6) Three valuation techniques can be used to measure fair value: the market approach, the income approach, and the cost approach. The **market approach** uses prices and relevant information from market transactions for identical or comparable assets or liabilities. The **income approach** converts future amounts to a single current (discounted) amount. The **cost approach** relies on the current replacement cost to replace the asset with a comparable asset, adjusted for obsolescence.
- (a) If a firm changes its valuation technique or approach for measuring fair value, the change is accounted for as a change in accounting estimate and treated on a prospective basis. The disclosure provisions for a change in accounting estimate are not required for revisions or changes to valuation techniques used in fair value measurements.
  - (b) Applying the market approach, income approach, and the cost approach requires gathering information to value the asset or liability. A fair value hierarchy is used to prioritize the inputs to valuation techniques. The fair value hierarchy is referred to as Level 1, Level 2, and Level 3, with the fair value hierarchy based on the lowest level of input. The lowest level that is practical should be used to value the asset or liability.
    - (1) Level 1 uses quoted prices (unadjusted prices) from active markets for identical assets or liabilities. Quoted prices in active markets provide the most reliable evidence of fair value and should be used without adjustment whenever available. Examples of Level 1 inputs are stock quotations from the New York Stock Exchange, quotations from dealer markets such as NASDAQ or the market from US Treasury securities, brokered markets wherein brokers match buyers and sellers, and principal-to-principal markets. The fair value of a security measured within Level 1 is the quoted price times the quantity held, and it is not adjusted for the quantity of shares (blockage factor) held.
    - (2) Level 2 inputs are directly or indirectly observable inputs other than quoted prices of Level 1. Examples of Level 2 inputs include quoted prices for similar assets or liabilities in active markets, quoted prices for identical or similar assets that are in markets where few transactions occur, the prices are not current, or prices vary substantially over time. Level 2 inputs also include observable inputs such as yield curves, bank prime rates, interest rates, volatilities, prepayment speeds, loss severities, credit risks, and default rates.

- (3) Level 3 inputs are unobservable inputs. Level 3 inputs may only be used to measure fair value if observable inputs are not available (i.e., there is little market activity for the asset or liability). These unobservable inputs may reflect the reporting entity's own assumptions about the market and are based on the best information available. Example of Level 3 inputs would include pricing a three-year option using the historical volatility on shares, valuing an asset retirement obligation using expected cash flows estimated by the company, or valuing a reporting unit using a firm's financial forecasts for cash flows or earnings.
- e. **The fair value option for reporting financial assets and financial liabilities.** An election can be made to value certain financial assets and financial liabilities at fair value. A financial asset is cash, evidence of an ownership interest in an entity, or a contract that conveys a right to receive cash or another financial instrument or to exchange financial instruments on favorable terms. A financial liability is a contract that imposes an obligation to deliver cash or another financial instrument.
- (1) The fair value option applies to all financial assets including available-for-sale, held-to-maturity, and equity method investments. The fair value option also applies to certain financial liabilities, firm commitments that involve financial instruments, written loan commitments, nonfinancial insurance contracts that can be settled by paying a third party, warranties that can be settled by paying a third party, and a host financial instrument that is an embedded nonfinancial derivative instrument separated from a nonfinancial hybrid instrument.
  - (2) The fair value method does **not** apply to consolidations, pensions, share-based payments, stock options, other postemployment benefits (OPEB), exit or disposal activities, leases, or financial instruments that are a component of equity.
  - (3) The fair value is the price that would be received to sell an asset or paid to transfer a liability in an orderly transaction between market participants at the measurement date under current market conditions.
  - (4) A company can elect to measure the applicable financial assets or financial liabilities at fair value on the date an eligible item is first recognized, the date the entity enters into a firm commitment, the date financial assets cease to qualify for fair value treatment due to specialized accounting rules.
    - (a) For companies using the equity method of accounting, a company can elect to measure the investment at fair value on the date the percentage of ownership changes and the entity is no longer required to consolidate.
    - (b) For debt modifications, the fair value option can be elected on the date the debt is modified. **Once the fair value option is elected, it is irrevocable.**
  - (5) The fair value election can be made on an instrument-by-instrument basis. For example, a company has two available-for-sale securities, Security A and Security B. The company can account for Security A using the cost adjusted fair value method for available-for-sale securities and it can elect the fair value option and account for Security B at fair value. **However, if the fair value option is elected, it must be applied to the entire instrument and not a portion of the instrument.** For example, if there are multiple advances to a borrower for a single contract, it must be applied to the entire balance of the contract. If the fair value option is applied to an investment in an entity that would normally use the equity method, it must be applied to all debt and equity interests in that entity.
    - (a) Similarly, if the fair value option is elected for insurance contracts, it must be applied to all claims and obligations for that contract.
    - (b) If the fair value option is elected, any unrealized gains and losses are reported in earnings for the period. Therefore, any unrealized gains and losses on an available-for-sale security would be reported on the income statement rather than in other comprehensive income. For a held-to-maturity security, the company would no longer report the investment at amortized cost. Instead, the held-to-maturity security would be marked to fair value at the end of the period, and the resulting unrealized gain or loss would be reported on the income statement. The rules remain in effect for classifying items on the statement of cash flows as operating or investing activities.
  - (6) If a reporting entity holds a group of financial assets and financial liabilities that are exposed to market and credit risks of counterparties, the reporting entity may apply fair value to the net position if the following conditions are met:
    - (a) The group of financial assets and financial liabilities are managed on the basis of net exposure;
    - (b) Information about the group is provided on a net basis; and
    - (c) The reporting entity has elected or is required to measure the group at fair value.

- (7) Additional financial statement disclosures are required if the fair value option is elected. Two methods are permissible for balance sheet disclosure: (1) present the aggregate fair value and non-fair value amounts in the same line with amounts measured at fair value parenthetically disclosed, or (2) present two separate line items for fair value and non-fair value carrying amounts.

f. **Disclosures for fair value measurements.** Additional footnote disclosures are required for fair value measurements. Fair value measurements are reported by class of assets or liabilities. The class is determined on the basis of the nature and risks of the assets or liability.

- (1) For assets and liabilities that are measured at fair value on a **recurring** basis, the following disclosures are required for each major class of assets and liabilities:
- (a) The fair value measurement at the end of the reporting date.
  - (b) The level within the fair value hierarchy used, segregating the fair value measurements, which use Levels 1, 2, and 3 inputs.
  - (c) The amount of any transfers between Level 1 and Level 2 of the fair value hierarchy and the reason for the transfer along with the entity's transfer policy. Transfers into and out of each level are disclosed separately.
  - (d) For fair value measures using significant other observable inputs (Level 2) and significant unobservable inputs (Level 3), a description of valuation techniques used, the inputs used to determine fair values of each class of assets or liabilities. If there is a change in valuation techniques, the reason for the change must be disclosed.
  - (e) For fair value measurements using unobservable inputs (Level 3) a reconciliation of the beginning and ending balance, showing
    - (1) Total gains and losses for the period realized and unrealized, presenting gains and losses in earnings and gains and losses in other comprehensive income, and a description of where those gains or losses are included in the income statement, or in other comprehensive income.
    - (2) Purchases, sales, issues, and settlements shown separately.
    - (3) Transfers in and out of Level 3 are shown separately with reasons for the transfers, along with the entity's transfer policy.
  - (f) For fair value measurements using unobservable inputs (Level 3) the amount of total gains or losses for the period included in earnings from unrealized gains and losses for those assets and liabilities still held at the end of the reporting period and the line item in the statement of income (or activities) where the gains and losses are recognized.
  - (g) For fair value measurements using unobservable inputs (Level 3) a description of the valuation processes (policies, procedures, and analyses of change from period to period), the sensitivity of the measurement, and any interrelationships.
  - (h) For fair value measurements, a description of nonfinancial assets with a current use differing from the highest and best use.
- (2) For assets and liabilities that are measured at fair value on a **nonrecurring** basis, the following information must be disclosed in interim and annual period financial statements:
- (a) The fair value measurement at the end of the reporting period and the reasons for the measurement.
  - (b) The level within the fair value hierarchy, Level 1, 2, and 3.
  - (c) For fair value measurements categorized within Level 2 or Level 3 of the fair value hierarchy, the inputs and valuation techniques used to measure fair value.
  - (d) For fair value measurements using significant unobservable inputs (Level 3), a description of valuation processes (policies, procedures, and analyses of change from period to period).
  - (e) For fair value measurements a description of nonfinancial assets with a current use differing from the highest and best use.

**NOW REVIEW MULTIPLE-CHOICE QUESTIONS 65 THROUGH 76**

- g. **Development stage enterprise accounting** should follow generally accepted accounting principles. The only additional disclosure required is that cumulative amounts from inception of losses, revenues, expenses, and cash flows should be shown in the income statement and statement of cash flows. Furthermore, the stockholders' equity section of the balance sheet should include cumulative net losses termed "deficit accumulated during development stage." These statements should be identified as those of a development stage enterprise. (More detailed coverage appears in Module 11.)
- h. **Constant dollar accounting.** The accounting standards encourage, but do not require, a business enterprise that prepares its financial statements in US dollars and in accordance with US generally accepted accounting principles to disclose supplementary information on the effects of changing prices. This statement presents requirements to be followed by enterprises that voluntarily elect to disclose this information.
- (1) Constant dollar accounting is a method of reporting financial statement elements in dollars which have the same purchasing power. This method is often described as accounting in units of current purchasing power.
- (a) Purchasing power indicates the ability of a dollar to command goods and services.

**EXAMPLE**

If the inflation rate during a given year for a group of items is 10%, then 110 end-of-year dollars are needed to purchase the same group of items which cost \$100 at the beginning of the year. Similarly, a machine purchased at the beginning of that year for \$1,000 would be presented in a year-end constant dollar balance sheet at a restated cost of \$1,100. This represents the basic thrust of constant dollar accounting: the adjustment of historical data (nominal dollars) for changes in the general price level.

- (2) The adjustment of nominal dollar data is facilitated by the use of the Consumer Price Index, which reflects the average change in the retail prices of a wide variety of consumer goods. The adjustment is made by multiplying historical cost by the TO/FROM ratio.

$$\text{Historical cost (nominal dollars)} \times \frac{\text{Price level adjusting to}}{\text{Price level adjusting from}} = \text{Restated historical cost (constant dollar)}$$

**EXAMPLE**

An asset was purchased on 12/31/Y1 for \$20,000 and the Consumer Price Index was 100 on 12/31/Y1, 110 on 12/31/Y2, and 120 on 12/31/Y3. Restatement for end-of-year balance sheets would be

12/31/Y1	\$20,000	×	$\frac{100}{100}$	=	\$20,000
12/31/Y2	\$20,000	×	$\frac{110}{100}$	=	\$22,000
12/31/Y3	\$20,000	×	$\frac{120}{100}$	=	\$24,000
or					
	\$22,000	×	$\frac{120}{110}$	=	\$24,000

- (3) The preparation of constant dollar financial statements requires the classification of balance sheet items as either monetary or nonmonetary.

- (a) Items are monetary if their amounts are fixed by statute or contract in terms of numbers of dollars. Examples include cash, accounts and notes receivable, accounts and notes payable, and bonds payable.
  - (1) By contract or statute, these items are already stated in current dollars and require no restatement.
- (b) Nonmonetary items, on the other hand, do require restatement to current dollars. Inventory, property, plant, and equipment, and unearned service revenue are examples of nonmonetary items.
  - (1) Under some increasingly popular loan arrangements, when the repayment of loan principal is adjusted by an index, the receivable/payable is classified as a nonmonetary item.

**NOTE:** The holding of a nonmonetary asset such as land during a period of inflation need not result in a loss of purchasing power because the value of that land can “flow” with the price level (hence, the need for restatement). However, if a monetary asset such as cash is held during a period of inflation with no interest, purchasing power is lost because the cash will be able to purchase less goods and services at year-end than at the beginning of the year. This type of loss is simply called a “purchasing power loss.” Holding a monetary liability has the opposite effect. Therefore, if a firm’s balance sheet included more monetary liabilities than monetary assets throughout a given year, a purchasing power **gain** would result, since the firm could pay its liabilities using cash which is “worth less” than the cash it borrowed.

- (c) A simple example can illustrate both the restatement process and the effect of holding monetary assets. Assume that the Static Company has the following balance sheet at the beginning of period 1:

**EXAMPLE**

<b>Static Co.</b>			
<b>End of Period 1</b>			
<b>Consumer Price Index = 110</b>			
	Cash	\$1,000	Common Stock
			\$2,200 <sup>b</sup>
	Land	<u>1,000</u>	
		<u>\$2,000</u>	<u>\$2,000</u>

Further assume

- Index increases to 110 by the end of year 1
- No transactions have taken place, land and common stock would be restated to end-of-year dollars.
- Cash is still stated at \$1,000.
- To have the same level of purchasing power that was present at the beginning of the year, Static Co. should also have cash of \$1,100 at year-end. The fact that the company held \$1,000 cash throughout the year has resulted in a \$100 purchasing power loss. The balance sheet at the end of period 1 would therefore be

<b>Static Co.</b>			
<b>End of Period 1</b>			
<b>Consumer Price Index = 110</b>			
	Cash	\$1,000	Common Stock
			\$2,200 <sup>b</sup>
	Land	<u>1,100<sup>a</sup></u>	Retained Earnings
		<u>\$2,100</u>	<u>(100)<sup>c</sup></u>
			<u>\$2,100</u>

<sup>a</sup>  $\$1,000 \times \frac{110}{100}$      
 <sup>b</sup>  $\$2,000 \times \frac{110}{100}$      
 <sup>c</sup> *Purchasing power loss*  $\$1,000 - \left( \$1,000 \times \frac{110}{100} \right)$

What if the entity had acquired equipment costing \$1,000 at the beginning of the year by issuing a \$1,000 note payable? At the end of the year, under constant dollar accounting, the equipment would be carried at \$1,100 and the note payable would be still reported at \$1,000. What would the net purchasing power gain (loss) be? The answer is zero because the loss of \$100 is offset by a \$100 gain from holding the note payable.

- i. **Current cost accounting** is a method of valuing and reporting assets, liabilities, revenues, and expenses at their current cost at the balance sheet date or at the date of their use or sale.
- (1) It is important to distinguish between constant dollar and current cost accounting. Constant dollar accounting is concerned only with changes in the unit of measure—from nominal dollars to units of general purchasing power. Current cost accounting discards historical cost as a reporting model.
  - (2) Preparation of a current cost income statement requires an understanding of certain basic current cost concepts. **Current cost income from continuing operations** is sales revenue less expenses on a current cost basis. **Realized holding gains** (the difference between current cost and historical cost of assets consumed) are then added to arrive at **realized income**, which will always be equal to historical cost net income. Finally, **unrealized holding gains** (increases in the current cost of assets held throughout the year) are included to result in **current cost net income**.

**EXAMPLE**

Bell Company went into business on 1/1/Y1. Year 1 sales revenue was \$200,000 and purchases totaled \$150,000. Inventory with a historical cost of \$100,000 was sold when its current cost was \$160,000. Ending inventory (historical cost, \$50,000) had a year-end current cost of \$80,000. No other revenue was realized or expenses incurred during year 1. Historical and current cost income statements for year 1 are presented below.

<i>Bell Company</i>			
INCOME STATEMENTS			
Historical cost		Current cost	
Sales	\$200,000	Sales	\$200,000
Less CGS	(100,000)	Less CGS	(160,000)
		Cur. cost income from cont. oper.	40,000
		Realized holding gains (160,000 – 100,000)	60,000
Net income	<u>\$100,000</u>	Realized income	100,000
		Unrealized holding gains (80,000 – 50,000)	30,000
		Current cost net income	<u>\$130,000</u>

Year 1 journal entries for Bell Company in current cost system would be as follows:

a) Inventory	150,000	d) Cost of goods sold	160,000
Cash		Inventory	160,000
		Realizable holding gain	90,000
b) Inventory	90,000	Realized holding gain	
Realizable holding gain		Unrealized holding gain	
			60,000
			30,000
c) Cash	200,000		
Sales revenue	200,000		

- (3) In general, sales and some expense amounts (salaries, rent, etc.) will be the same under historical and current cost systems. However, whenever an expense represents the use or consumption of an asset whose current cost has changed since its acquisition (as with the inventory in the Bell Company example), that expense must be expressed at the current cost of the asset when used. Realized holding gains are computed by comparing the current cost of assets when used or consumed with their historical cost. Unrealized holding gains for the period are determined by identifying changes in the current cost of assets held throughout the year (not used or consumed).

**NOTE:** Holding gains do not reflect changes in the general purchasing power. In other words, holding gains are not reported net of general inflation when the reporting model is current cost/nominal dollar.

- (4) **Current cost/constant dollars.** The relationship measured is current cost, but the measuring unit is restated dollars. Changes in both the general and specific price levels are separately recorded.

**NOW REVIEW MULTIPLE-CHOICE QUESTIONS 77 THROUGH 87**

- j. **Risks and uncertainties.** Disclosure is required in financial statements about the risks and uncertainties existing as of the date of those statements. The four areas of disclosure are

- (1) Nature of operations
- (a) Major products/services and principal markets served.
  - (b) Industries operating within and relative importance of each industry, including basis of determination (assets, revenue, or earnings).

**NOTE:** Quantification not required and words such as predominantly, equally, major, or other may be used.

- (2) Use of estimates in preparation of financial statements.
- (a) This fact must be disclosed by an explanation that management must use estimates.
  - (b) The purpose is to alert users clearly to pervasiveness of estimates.
- (3) Certain significant estimates:
- (a) Potential impact of estimates to value assets, liabilities, gains, or losses when
    - (1) Reasonably possible the estimate will change in the near term.
    - (2) Effect of change would be material to financial statements.

**NOTE:** Near term is defined as not to exceed one year from date of financial statements.

- (b) Contingencies.
  - (c) Disclosure of factors causing the estimate to be sensitive to change is encouraged, but not required.
  - (d) Materiality is measured by the effect that using a different estimate would have on the financial statements.
- (4) Current vulnerability due to concentrations.
- (a) Before issuance of financial statements, management knows that concentrations:
    - (1) Exist at balance sheet date.
    - (2) Make entity vulnerable to risk of near-term severe impact.
    - (3) Reasonably possible events could cause severe impact in near future.

**NOTE:** Severe impact is defined as higher than materiality and would have a significant financially disruptive effect on the normal functioning of the entity.

- (b) Examples are concentrations in
  - (1) Volume of business transacted with a particular customer, supplier, lender, grantor, or contributor.
  - (2) Revenue from particular products, services, or fund-raising events.

- (3) Available sources of supply of materials, labor, or services, or of licenses or other rights used in the entity's operations.
- (4) Market or geographical area in which an entity conducts its operations.
- (c) Disclose the percentage of labor covered by a collective bargaining agreement and the percentage covered whose agreement expires within one year.
- (d) Describe for operations outside of home country, the carrying value of net assets and location.

#### 7. Comparative Financial Statements

The Totman Company balance sheet and income statement illustrated in this module are presented for a single year. Most companies present comparative financial statements. Comparative financial statements present not only the current year's information, but prior periods also. The purpose of comparative financial statements is to enable users to evaluate trends which may reveal information about the company's future performance. The SEC requires that a two-year comparative balance sheet and a three-year comparative income statement and statement of cash flows be presented.

#### 8. Other Comprehensive Bases of Accounting (OCBOA)

- a. Financial statements may be prepared in conformity with a comprehensive basis of accounting other than generally accepted accounting principles (GAAP) or international accounting standards. The four types of OCBOA include
  - (1) **Cash-basis** financial statements—In pure cash-basis financial statements the only asset is cash; revenue is recognized when cash is received; and expenses are recognized when they are paid. The pure basis is rarely used.
  - (2) **Modified cash-basis** financial statements—Modified cash basis financial statements are cash basis statements with modifications that have substantial support. For example, fixed assets, inventories, and the related liabilities are typically recorded in modified cash-basis financial statements. Modifications that have substantial support involve presenting the items as they would be in GAAP financial statements providing that the presentation is not illogical. As an example, an illogical modification would involve recording inventories but not recording the accounts payable related to the inventories.
  - (3) **Tax-basis** financial statements—Tax-basis financial statements are statements prepared on the basis of tax laws and regulations. When financial statements are prepared on an income tax basis, the financial statements should not simply repeat items and amounts reported in the tax return. Thus, items such as nontaxable municipal interest and the nondeductible portion of travel and entertainment expense should be **fully** reflected in the tax-basis income statement.
  - (4) **Regulatory-basis** financial statements—Regulatory financial statements are prepared based on rules established by a regulatory agency.
- b. OCBOA financial statements should not include titles such as “balance sheet” and “statement of income” (unmodified) because these terms are reserved for GAAP-basis statements. Titles such as “balance sheet—tax basis,” “statement of revenues and expenses—income tax basis,” “statement of assets and liabilities—modified cash basis,” and “statement of cash receipts and disbursements” are appropriate. In addition, the notes to the financial statements should disclose the differences between the OCBOA- and GAAP-basis financial statements, as well as the other information normally included in GAAP-basis financial statements.

#### 9. Liquidation Basis of Accounting

- a. The liquidation basis of accounting is to be used when liquidation is imminent (remote likelihood the entity will return from liquidation and if either of the following exist: (a) an approved liquidation plan with remote likelihood of being blocked or (b) an outside force imposed plan).
- b. Measurement
  - (1) Assets are to be presented at the amounts reflecting expected cash proceeds.
    - (a) Assets should include sellable items not previously recognized under US GAAP (e.g. trademarks).
  - (2) Liabilities are to be presented using current US GAAP guidance.
  - (3) Accrue expected liquidation period costs and income.
- c. Disclosure
  - (1) The plan for liquidation.
  - (2) Measurement methods and assumptions.

- (3) Expected liquidation period costs and income.
- (4) Expected liquidation time frame.

## 10. Prospective Financial Information

### a. Definitions

- (1) **Prospective financial information**—any financial information about the future.
- (2) **Responsible party**—person(s), usually management, who are responsible for assumptions underlying the information.
- (3) Users of prospective financial information
  - (a) General—use of financial statements by parties with whom responsible party is not negotiating directly.
  - (b) Limited use—use of prospective financial information by the responsible party only or by responsible party and third parties with whom responsible party is negotiating directly.
- (4) **Financial forecast**—prospective FS that present the knowledge and belief of responsible party in terms of expected financial position, results of operations, and cash flows
  - (a) May be prepared for **general** or **limited** use.
  - (b) Monetary amounts are expressed as a single-point estimate of results or range.
- (5) **Financial projection**—prospective FS that present the knowledge and belief of responsible party, based on one or more **hypothetical** assumptions, the enterprise's financial position, results of operations, and cash flows.
  - (a) Assumptions **not necessarily** expected to occur.
  - (b) May contain a single-point estimate of results or a range of dollars.
  - (c) May be prepared only for **limited** use.

### b. Reasons for preparation are to

- (1) Obtain external financing.
- (2) Consider a change in accounting or operations.
- (3) Prepare budgets.

### c. Process for preparing forecasts and projections may consist of any of the following:

- (1) Formal system.
- (2) Carrying out a work program that outlines steps followed in preparation.
- (3) Documented procedures, methods, and practices used in preparation.

### d. Financial forecasts and projections should reflect **a reasonably objective basis** as a result of preparing them

- (1) In good faith.
- (2) With due care by qualified personnel.
- (3) In accordance with GAAP.
- (4) With the highest quality information that is reasonably available.
- (5) Using information that is in accordance with plans of the entity.
- (6) Identifying key factors as basis for assumptions.
  - (a) Key factors are important matters for which outcomes are expected to depend.
- (7) Using appropriate assumptions.
  - (a) Quality of these is crucial.
  - (b) **Hypothetical** assumptions used in projections do **not** need to meet a strict reasonableness test; they must, however, be appropriate in light of the purpose of the projection.
- (8) Providing ways to determine relative effect of variations in main assumptions (i.e., sensitivity analysis).
- (9) Documenting forecast/projection and process used.
- (10) Providing for comparison of forecast/projection with attained results.
- (11) Providing adequate review of the responsible party at appropriate levels of authority in the organization.
- (12) Prospective financial statement disclosures include.
  - (a) Summary of significant accounting policies.
  - (b) Summary of significant assumptions.

**NOW REVIEW MULTIPLE-CHOICE QUESTIONS 88 THROUGH 98**
**11. SEC Reporting Requirements**

- a. Unless exempt by regulation, companies with assets of more than \$10 million and 500 or more shareholders and securities that trade on a national securities exchange or an over-the-counter market must have the securities registered.
- b. Companies with registered securities (termed issuers) must follow SEC rules and regulations. Securities regulations include, but are not limited to
  - (1) **Regulation S-X** describes the form and content of financial statements filed with the SEC.
  - (2) **Regulation S-K** describes the requirements for information and forms required by Regulation S-X.
  - (3) **Regulation AB** describes reporting requirements for asset-backed securities.
  - (4) **Regulation Fair Disclosure (Reg FD)** mandates that publicly traded companies disclose material information to all investors simultaneously.
- c. Companies with registered securities (termed issuers) must file the following reports with the SEC:
  - (1) **Form S-1/F-1**-registration statement for US/ foreign companies.
  - (2) **Form 8-K/6-K**-information about material events for US/foreign companies.
  - (3) **Form 10-K/20F**-annual report for US/foreign companies.
    - (a) A foreign registrant can omit the reconciliation between US GAAP and home-country GAAP (e.g. IFRS) if the foreign-based company follows IFRS as issued by the IASB.
  - (4) **Form 10-Q**-quarterly reports.
  - (5) **Schedule 14A**-proxy statement.
- d. Information statements (**Form 8-K**) provide information about material events that affect the company, such as mergers and acquisitions, changes in directors or CEO, other major changes in operations or status, changes in auditors, etc. The Form 8-K must be filed within 4 business days of the occurrence of the events.
  - (1) The 8-K includes the following information (*Italicized items may be omitted*):

**EXAMPLE**
**ITEM 7.01. REGULATION FD DISCLOSURE\***

On May 26, 2011, management of Rand Logistics, Inc. ("Rand") presented to institutional investors a summary of Rand's business, historical financial performance, and future earnings guidance at the CJS Securities 2nd Annual Midwest Investor Conference. The presentation is attached as Exhibit 99.1 and is incorporated by reference herein.

\*SEC Edgar Filing

- (a) Item 1.01, *Entry into a Material Definitive Agreement.*
- (b) Item 1.02, *Termination of a Material Definitive Agreement.*
- (c) Item 1.03, *Bankruptcy or Receivership.*
- (d) Item 2.01, *Completion of Acquisition or Disposition of Assets.*
- (e) Item 2.02, *Results of Operations And Financial Condition.*
- (f) Item 2.03, *Creation of A Direct Financial Obligation or an Obligation Under an Off-Balance Sheet Arrangement of a Registrant.*
- (g) Item 2.04, *Triggering Events That Accelerate or Increase a Direct Financial Obligation or an Obligation Under an Off-Balance Sheet Arrangement.*
- (h) Item 2.05, *Costs Associated with Exit or Disposal Activities.*
- (i) Item 2.06, *Material Impairments.*
- (j) Item 3.01, *Notice of Delisting or Failure to Satisfy a Continued Listing Rule or Standard; Transfer of Listing.*
- (k) Item 3.02, *Unregistered Sales of Equity Securities.*

- (l) Item 3.03, *Material Modification to Rights of Security Holders.*
  - (m) Item 4.01, *Changes in Registrant’s Certifying Accountant.*
  - (n) Item 4.02, *Non-Reliance on Previously Issued Financial Statements or a Related Audit Reports or Completed Interim Review.*
  - (o) Item 5.01, *Changes in Control of Registrant.*
  - (p) Item 5.02, *Departure of Directors or Principal Officers; Election of Directors; Appointment of Principal Officers.*
  - (q) Item 5.03, *Amendments to Articles of Incorporation or Bylaws; Change in Fiscal Year.*
  - (r) Item 5.04, *Temporary Suspension of Trading Under Registrant’s Employee Benefit Plans; and*
  - (s) Item 5.05, *Amendments to the Registrant’s Code of Ethics, or Waiver of a Provision of the Code of Ethics.*
  - (t) Item 5.06, *Change in Shell Company Status.*
  - (u) Item 5.07, *Submission of Matters to a Vote of Security Holders.*
  - (v) Item 6.01, *ABS Informational and Computational Material.*
  - (w) Item 6.02, *Change of Servicer or Trustee.*
  - (x) Item 6.03, *Change In Credit Enhancement or Other External Support.*
  - (y) Item 6.04, *Failure to Make a Required Distribution.*
  - (z) Item 6.05, *Securities Act Updating Disclosure.*
  - (aa) Item 7.01, *Regulation FD Disclosure.*
  - (bb) Item 8.01, *Other Events.*
  - (cc) Item 9, *Financial Statements and Exhibits.*
- e. A quarterly report (**Form 10-Q**) provides quarterly information similar to that in the 10-K but is less detail. It includes quarterly financial statements that are reviewed (not audited) by public accountants. The company files three Form 10-Qs every year and the Form 10-K contains the quarterly results for the fourth quarter. Form 10-Qs are due 40 days after the end of the fiscal quarter for accelerated filers and 45 days after the end of the fiscal quarter for all other companies.
- f. An annual report (**Form 10-K**) provides a comprehensive picture of a company’s performance, including audited financial statements. The 10-K includes the following sections:

	Item No.	Reg. S-K No. (unless otherwise noted)	Description
<b>Part I</b>			
	1	101	Business
	1A	503(c)	Risk factors
	2	102	Properties
	3	103	Legal proceedings
	4	104	Removed
<b>Part II</b>			
	5	201, 701, 703	Market for common equity and related matters
	6	301	Selected financial data
	7	303	Management’s discussion and analysis
	7A	305	Quantitative and qualitative disclosures about market risk
	8	302	Financial statements and supplementary data
	9	304 (b)	Changes in and disagreement with auditors
	9A	307, 308	Controls and procedures

<b>Part III</b>			
	10	401, 405, 406, 407(c)(3), (d)(4), (d)(5)	Directors and executive officers (may be omitted)
	11	402	Executive compensation (may be omitted)
	12	201(d)	Security ownership of owners and management (may be omitted)
	13	404	Relationships and related transactions (may be omitted)
	14	9 (e) of Schedule 14A	Principal accountant fees and services
<b>Part IV</b>			
	15	302 and 601 of Reg. S-K, Reg. S-X	Exhibits, financial statement schedules
<b>Other</b>			
		Reg. AB1112(b), 1114(b), 1117, 1119, 1122, 1123	Substitute information to be included

SOURCE: Modified by Natalie T. Churyk, NIU CPA Review

Form 10-Ks are due 60 days after the end of the fiscal year for large accelerated filers (more than \$700 million of aggregate worldwide market value of voting and nonvoting common stock), 75 days after the end of the fiscal year for accelerated files (between \$70 million of aggregated worldwide market value of voting and nonvoting common stock), and 90 days after the end of the fiscal year for all other companies.

- g. SEC releases and administrative interpretations include, but are not limited to, the following:
- (1) Accounting and Auditing Enforcement Releases (AAERs) that announce enforcement actions of the SEC's reporting and disclosure requirements.
  - (2) Accounting Series Releases (ASRs), issued from 1937-1982, are the predecessor of Financial Reporting Releases. The ASRs still in effect are codified.
  - (3) Financial Reporting Releases (FRRs) update the SEC Codification of Financial Reporting Policies and Regulations S-K and S-X.
  - (4) \*Staff Accounting Bulletins (SABs) are unofficial interpretations relating to accounting and disclosure practices. SEC staff follow SABs when administering disclosure requirements.
  - (5) \*Staff Legal Bulletins summarize the Commission staff's views related to SEC regulations and federal securities laws.
  - (6) \*Staff no-action, Interpretive, and Exemptive letters are published SEC staff responses to interpretation inquiries.
- \*Items (4), (5) and (6) are not legally binding.

## 12. Financial Statements of Trusts

- a. Trusts are entities formed to hold assets for the benefit of the beneficiaries. They are administered by trustees. Trusts generally present the following financial statements:
  - (1) A statement of assets and liabilities.
  - (2) A statement of operations.
  - (3) A statement of changes in net assets.
- b. The financial statements of a trust are generally presented on the accrual basis and the assets are generally presented at their fair values.

**NOW REVIEW MULTIPLE-CHOICE QUESTIONS 99 THROUGH 107**

### 13. Research Component—Accounting Standards Codification

- a. The rules for presentation of financial statements are located in the category labeled “Presentation” in the Accounting Standards Codification. The topics are numbered in the 200 series. Note that discontinued operations are included under the rules of Topic 205. Treatment of extraordinary items is found in Topic 225. Below is a list of topics related to financial statement disclosures:

#### **Presentation**

205	<i>Presentation of Financial Statements</i>
210	<i>Balance Sheet</i>
215	<i>Statement of Shareholder Equity</i>
220	<i>Comprehensive Income</i>
225	<i>Income Statement</i>
230	<i>Statement of Cash Flows</i>
235	<i>Notes to Financial Statements</i>
250	<i>Accounting Changes and Error Corrections</i>
255	<i>Changing Prices</i>
260	<i>Earnings Per Share</i>
270	<i>Interim Reporting</i>
275	<i>Risks and Uncertainties</i>
280	<i>Segment Reporting</i>

- b. Other topics covered in the module are located under the category “Broad Transactions” and include the following topics:

#### **Broad Transactions**

820	<i>Fair Value Measurements and Disclosures</i>
825	<i>Financial Instruments</i>
850	<i>Related-Party Disclosures</i>
855	<i>Subsequent Events</i>

- c. Keywords for research financial statements and related disclosures are shown below.

Accounting policies	Disposal of segment	Period-specific effects
Balance sheet	Earned surplus	Principal market
Capital stock	External revenue	Prior period adjustments
Capital surplus	Extraordinary items	Pro forma amounts
Cash flow estimation	Fair value hierarchy	Pro forma effects
Change in accounting	Fair value option	Profit and loss
Change in principle	Financial position	Purchasing power gain/loss
Changes in entity	Highest and best use	Reclassification adjustments
Changes in equity	Impairment loss	Reconciliations of totals
Changes in estimates	Inclusive net income	Recurring operations
Classifications net income	Income approach	Reportable segment
Comparative financial statements	Income statement	Results of operations
Comparative purposes	Infrequency of occurrence	Retroactive adjustment
Component held for sale	Interim period information	Retrospective application
Component of an entity	Market approach	Segment item
Comprehensive income	Measure impairment loss	Surplus statement
Correction of error	Monetary asset	Translation adjustment
Cost approach	Monetary liability	Unusual nature
Current assets	Nature products services	Valuation techniques
Current cost purchasing power	Net income period	Working capital
Current liabilities	Obligations operating cycle	
Disclosure accounting policies	Operating cycle	
Discontinued operation	Operating segment	
Disposal activity	Other comprehensive income	

#### 14. International Financial Reporting Standards (IFRS)

a. **Financial statements.** IAS 1 provides that a complete set of financial statements must be prepared annually. A complete set of financial statements includes a statement of financial position, a statement of comprehensive income, a statement of changes in equity, a statement of cash flows, and notes containing significant accounting policies and explanations.

- (1) The headings on the financial statements should include the name of the entity, the title of the statement, and the date of the statement.
- (2) The financial statements should present a “true and fair view” of the company. IFRS must be used unless there is a rare circumstance where the use of IFRS would produce misleading financial statements.
- (3) Whenever an entity retrospectively applies an accounting policy, retrospectively restates its financial statements, or reclassifies items, three years of statements of financial position are required for comparative purposes. Presentation and classification of items on the financial statements should be consistent for the periods presented.
- (4) The accrual basis of accounting is used to prepare the financial statements, with the assumption that the entity is a going concern.
  - (a) Assets and liabilities may not be offset against each other unless specifically permitted by an IFRS.
  - (b) Similarly, income and expenses may not be offset unless specifically permitted.
  - (c) Offsets may be used for valuation purposes, such as contra accounts (allowance for uncollectible accounts or accumulated depreciation).
  - (d) Items on the financial statements should be presented separately for each material class of similar items. If an item is not material, it may be aggregated with other items.
- (5) Subsequent events are considered through the date the financial statements are authorized to be issued, unlike US GAAP, which considers subsequent events through the financial statement issuance date.

#### b. Statement of financial position.

- (1) Assets are classified as current and noncurrent.
  - (a) An asset is current if it is expected to be realized or held for consumption in the normal course of the entity’s operating cycle, held primarily for trading purposes, expected to be realized within 12 months of the end of the period, or is cash or a cash equivalent that is not restricted.
  - (b) Noncurrent assets include tangible, intangible, operating, and financial assets that are long term, such as held-to-maturity investments, investment property, property and equipment, intangible assets, assets held for sale, and miscellaneous assets.
- (2) Liabilities are classified as current and noncurrent.
  - (a) A liability is current if it is expected to be settled in the normal course of business during the operating cycle, due to be settled within 12 months, held primarily for trading purposes, or does not have an unconditional right to defer settlement beyond 12 months.
    - (1) However, certain payables such as trade payables and accruals for operating costs are classified as current liabilities regardless of the settlement date.
  - (b) Interest-bearing liabilities are classified based upon whether they are due within 12 months.
    - (1) However, if an agreement to refinance the liability on a long-term basis is executed prior to the financial statement date, the liability may be classified as noncurrent.

**NOTE:** This is different from US GAAP, where if there is the intent and ability to refinance before the issuance of the financial statements, reclassification is permitted.

- (a) An executed agreement prior to the balance sheet is not required.
- (2) For IFRS, if the agreement to refinance is made after the balance sheet date, then the liability must be classified as current at the balance sheet date. Similar to US GAAP, if a long-term debt becomes callable due to violation of a loan covenant, the liability must be classified as a current liability.

- (3) For shareholders' equity the financial statements must disclose the number of shares of common stock authorized, issued, and outstanding. If there are preference shares (e.g., preferred stock), they must be reported separately including the number of shares authorized, issued, and outstanding. Preference shares that are redeemable at the option of the holder must be classified as liabilities. Treasury shares repurchased are stated at cost and shown as a reduction to shareholders' equity. Accumulated other comprehensive income is reported in the shareholder's equity section of the balance sheet, and noncontrolling interests are disclosed as a separate item in the equity section of the balance sheet.
- (4) Although IAS 1 does not require a specific format for the statement of financial position, the following categories should be displayed:
- (a) Property, plant, and equipment
  - (b) Investment property
  - (c) Intangible assets
  - (d) Financial assets
  - (e) Investments accounted for using the equity method
  - (f) Biological assets
  - (g) Inventories
  - (h) Trade and other receivables
  - (i) Cash and cash equivalents
  - (j) The total assets classified as held for sale and assets included in disposal groups classified as held for sale under IFRS 5
  - (k) Trade and other payables
  - (l) Provisions
  - (m) Financial liabilities
  - (n) Liabilities and assets for current tax
  - (o) Deferred tax liabilities and deferred tax assets
  - (p) Liabilities included in disposal groups classified as held for sale
  - (q) Noncontrolling interest
  - (r) Issued capital and reserves attributable to owners of the parent
- c. **The income statement.** IAS 1 requires that at a minimum, the following items should be included on an income statement:
- (1) Revenue (referred to as income)
  - (2) Finance costs (interest expense)
  - (3) Share of profits and losses of associates and joint ventures accounted for using equity method
  - (4) Tax expense
  - (5) Discontinued operations
  - (6) Profit or loss
  - (7) Noncontrolling interest in profit and loss
  - (8) Net profit (loss) attributable to equity holders in the parent
    - (a) If an entity acquires less than 100% of a subsidiary, the income statement should indicate the profit or loss attributable to the noncontrolling interest and the owners of the parent.
    - (b) A significant difference between US GAAP and IFRS is that IFRS does not permit the classification of items as "extraordinary items" on the income statement. Any gains or losses should be reported as income or expense.
      - (1) In addition, operating expenses may be classified either by nature or by function. Classification by nature is based on the character of the expense, such as salaries and wages, raw materials used, interest expense, tax expense, and depreciation of assets. Classification by function is based on the purpose of the expenditure, such as manufacturing, distribution, or administration. If the entity classifies expenses by function, cost of sales must be stated separately from other expenses. (Note that in US GAAP, expenses are classified by function, e.g., cost of goods sold, operating expenses, etc.).
      - (2) For IFRS, finance costs (interest expense) must be identified separately regardless of which classification scheme is used.
  - (c) Operating expenses are normally classified as distribution costs (selling expenses) and general and administrative expenses.

- (1) If an item is material in amount and of such a size, nature, or incidence that disclosure is important to understand the performance of the entity, then the item should be disclosed separately.

**EXAMPLE**

Examples of those disclosures include write-downs of inventories; write-downs of plant, property, and equipment; restructuring costs; costs of litigation settlements; and reversals of provisions.

- (d) The treatment of discontinued operations is similar to US GAAP. If an asset is classified as held for sale or is part of a disposal group, it is valued at the lower of carrying value or fair value less costs to sell. The write-down net of tax is included in discontinued operations in the income statement. For discontinued operations, several calculations are required.
  - (1) First, the revenues, expenses, pretax profit or loss, and the related income tax expense are calculated.
  - (2) Second, the gain or loss on disposal or remeasurement is calculated with the related income tax expense.
  - (3) Finally, the total of these two amounts is determined (net of tax) and must be disclosed on the income statement.
  - (4) The footnote disclosures must include the pretax profit or loss, gain or loss on disposal, and tax effects, as well as the net cash flows from operating, investing, and financing activities.
- d. **Statement of comprehensive income.** The statement of comprehensive income may be presented in either one statement or in two statements.
  - (1) The two-statement approach presents a separate income statement, and then presents a second statement, which begins with profit or loss and displays the components of comprehensive income.
    - (a) Items that are included in comprehensive income are changes in revaluation surplus for plant, property, and equipment, actuarial gains and losses on defined benefit plans, gains and losses from foreign currency translations, gains and losses on remeasuring available-for-sale financial assets, and the effective portion of gains and losses on hedging instruments used as cash flow hedges.
    - (b) Each component of comprehensive income should be stated separately on the statement of comprehensive income.
- e. **Statement of cash flows.** The accounting rules for the Statement of Cash Flows are similar to US GAAP. For IFRS, cash flows include the inflows and outflows of both cash and cash equivalents. Cash equivalents include cash on hand, bank balances for immediate use, other demand deposits, and short-term investments with maturities of three months or less. Both the direct method and indirect method are acceptable methods for preparing the statement of cash flows. However, for the indirect method, operating activities may be presented using a modified approach. This modified indirect method shows revenues and expenses in operating activities, and then reports the changes in working capital accounts.
  - (1) As in US GAAP, the statement of cash flows is divided into three parts: operating, investing, and financing activities. At the bottom of the statement of cash flows, a reconciliation must be made with the amounts in the statement of cash flows and the cash and cash equivalents reported in the statement of financial position.
  - (2) The most significant difference between IFRS and US GAAP is where certain items are presented on the statement of cash flows.

**EXAMPLE**

Interest and dividends received may be reported on the statement of cash flows as operating or investing activities. Interest and dividends paid may be reported either in the operating activities or the financing activities sections.

- (a) Although the entity has discretion on where interest and dividends are reported, it must be reported on a consistent basis.
- (b) Cash from the purchase and sale of trading securities are classified as operating activities.
- (c) Cash advances and loans (bank overdrafts) are also usually classified as operating activities.
- (d) Taxes paid on income must be disclosed separately in operating activities. However, cash flows from certain taxes may be classified elsewhere if they are related to investing or financing activities.
- (e) In addition, the effects of noncash transactions are not reported on the statement of cash flows. Instead, significant noncash activities must be disclosed in the notes to the financial statements.

**NOW REVIEW MULTIPLE-CHOICE QUESTIONS 108 THROUGH 117**

## KEY TERMS

**Accounting Series Releases (ASRs).** The predecessor of Financial Reporting Releases.

**Active market.** A market in which transactions for the asset or liability take place with sufficient frequency and volume to provide pricing information on an ongoing basis.

**Cash basis financial statement.** The only asset is cash, revenue is recognized when cash is received; and expenses are recognized when they are paid.

**Change in accounting principle.** Change from one generally accepted accounting principle to another.

**Constant dollar accounting.** A method of reporting financial statement elements in dollar which have the same purchasing power.

**Correction of an error.** A correction of a material error from a prior period.

**Cost approach.** A valuation technique that reflects the amount that would be required currently to replace the service capacity of an asset.

**Current assets.** Cash and other assets or resources that are reasonably expected to be realized in cash or sold or consumed during the normal operating cycle of the business.

**Current cost accounting.** A method of valuing and reporting assets, liabilities, revenues, and expenses at their current cost at the balance sheet date or at the date of their use or sale.

**Current liabilities.** Obligations whose liquidation is reasonably expected to require the use of existing resources properly classifiable as current assets, or the creation of other current liabilities.

**Discontinued operation.** Results from disposal of a business component.

**Discount rate adjustment technique.** A present value technique that uses a risk-adjusted discount rate and contractual, promised, or most likely cash flows.

**Expected cash flow.** The probability-weighted average of possible future cash flows.

**Extraordinary items.** An unusual and infrequent event which has material effects.

**Fair value.** The price that would be received to sell an asset or paid to transfer a liability in an orderly transaction between market participants at the measurement date under current market conditions.

**Fair value option for reporting financial assets and financial liabilities.** An election can be made to value certain financial assets and financial liabilities at fair value.

**Financial forecast.** Prospective financial statements that present the knowledge and belief of responsible party in terms of expected financial position, results of operations, and cash flows.

**Financial projection.** Prospective financial statements that present the knowledge and belief of responsible party, based on one or more **hypothetical** assumptions, the enterprise's financial position, results of operations, and cash flows.

**Financial Reporting Releases (FRRs).** Update the SEC Codification of Financial Reporting Policies and Regulations S-K and S-X.

**Form S-1/F-1.** Registration statement for US/foreign companies.

**Form 8-K/6-K.** Information about material events for US/foreign companies.

**Form 10-K/20F.** Annual report for US/foreign companies.

**Form 10-Q.** Quarterly reports.

**Highest and best use.** The use of a nonfinancial asset by market participants that would maximize the value of the asset or the group of assets and liabilities within which the asset would be used.

**Income approach.** A valuation technique that converts future amounts to a single current amount. The fair value measurement is determined on the basis of the value indicated by current market expectations about those future amounts.

**Level 1 inputs.** Quoted prices in active markets for identical assets or liabilities that the reporting entity can access at the measurement date.

**Level 2 inputs.** Inputs other than quoted prices included in Level 1 that are observable for the asset or liability, either directly or indirectly.

**Level 3 inputs.** Unobservable inputs for the asset or liability.

**Market approach.** A valuation technique that uses prices and other relevant information generated by market transactions involving identical or comparable assets, liabilities, or a group of assets and liabilities, such as a business.

**Modified cash-basis financial statements.** Cash basis financial statements with modifications that have substantial support.

**Most advantageous market.** The market that maximizes the price that would be received to sell the asset or minimizes the amount to be paid to transfer the liability taking into account transaction costs and transportation cost.

**Observable inputs.** Inputs that are developed using market data and that reflect the assumptions that market participants would use when pricing the asset or liability.

**Present value.** A tool used to link future amounts to a present amount using a discount rate.

**Principle market.** A market in which the greatest volume and level of activity occurs.

**Prospective financial information.** Any financial information about the future.

**Realized holding gains.** The difference between current cost and historical cost of asset consumed.

**Regulation AB.** Describes reporting requirements for asset-backed securities.

**Regulation Fair Disclosure (Reg FD).** Mandates that publicly traded companies disclose material information to all investors simultaneously.

**Regulation S-X.** Describes the form and content of financial statements filed with the SEC.

**Regulation S-K.** Describes the requirements for information and forms required by Regulation S-X.

**Regulatory-basis financial statements.** Based on rules established by a regulatory agency.

**Responsible party.** Person(s), usually management, who are responsible for assumptions underlying the information.

**Restructuring.** A program that is planned and controlled by management and materially changes either (1) the scope of the business or (2) the manner in which the business is conducted.

**Risk premium.** Compensation sought by risk-averse market participants for bearing the uncertainty inherent in the cash flows of an asset or a liability.

**Schedule 14A.** Proxy statement.

**Staff Accounting Bulletin.** Unofficial interpretations relating to accounting and disclosure practices.

**Staff Legal Bulletins.** Summarize the Commission staff's views related to SEC regulations and federal securities laws.

**Staff no-action, Interpretive, and Exemptive letters.** Published SEC staff responses to interpretation inquiries.

**Subsequent events.** Events occurring after the balance sheet date but before the financial statements are issued or available to be issued.

**Systematic risk.** The common risk shared by an asset or a liability with the other items in a diversified portfolio.

**Tax-basis financial statements.** Prepared on the basis of tax laws and regulations.

**Unrealized holding gains.** Increases in the current cost of assets held throughout the year.

**Unsystematic risk.** The risk specific to a particular asset or liability.

**Unusual or infrequent items.** An unusual or infrequent event considered to be material that does not qualify as extraordinary.

## Multiple-Choice Questions (1–117)

### D.1. Income and Retained Earnings Statements

1. In Baer Food Co.'s year 1 single-step income statement, the section titled "Revenues" consisted of the following:

Net sales revenue	\$187,000	
Results from discontinued operations:		
Loss from discontinued component Z including loss on disposal of \$1,200	\$16,400	
Less tax benefit	<u>4,000</u>	(12,400)
Interest revenue		10,200
Gain on sale of equipment		4,700
Extraordinary gain		<u>1,500</u>
Total revenues		\$191,000

In the revenues section of the year 1 income statement, Baer Food should have reported total revenues of

- a. \$216,300
- b. \$215,400
- c. \$203,700
- d. \$201,900

Items 2 and 3 are based on the following:

Vane Co.'s trial balance of income statement accounts for the year ended December 31, year 2, included the following:

	Debit	Credit
Sales		\$575,000
Cost of sales	\$240,000	
Administrative expenses	70,000	
Loss on sale of equipment	10,000	
Sales commissions	50,000	
Interest revenue		25,000
Freight out	15,000	
Loss on early retirement of long-term debt	20,000	
Uncollectible accounts expense	<u>15,000</u>	
Totals	<u>\$420,000</u>	<u>\$600,000</u>

#### Other information

Finished goods inventory:

January 1, year 2	\$400,000
December 31, year 2	360,000

Vane's income tax rate is 30%. In Vane's year 2 multiple-step income statement,

2. What amount should Vane report as the cost of goods manufactured?

- a. \$200,000
- b. \$215,000
- c. \$280,000
- d. \$295,000

3. What amount should Vane report as income after income taxes from continuing operations?

- a. \$126,000
- b. \$129,500
- c. \$140,000
- d. \$147,000

4. Brock Corp. reports operating expenses in two categories: (1) selling, and (2) general and administrative. The adjusted trial balance at December 31, year 1, included the following expense and loss accounts:

Accounting and legal fees	\$120,000
Advertising	150,000
Freight-out	80,000
Interest	70,000
Loss on sale of long-term investment	30,000
Officers' salaries	225,000
Rent for office space	220,000
Sales salaries and commissions	140,000

One-half of the rented premises is occupied by the sales department.

Brock's total selling expenses for year 1 are

- a. \$480,000
- b. \$400,000
- c. \$370,000
- d. \$360,000

5. The following costs were incurred by Griff Co., a manufacturer, during year 1:

Accounting and legal fees	\$25,000
Freight-in	175,000
Freight-out	160,000
Officers salaries	150,000
Insurance	85,000
Sales representatives salaries	215,000

What amount of these costs should be reported as general and administrative expenses for year 1?

- a. \$260,000
- b. \$550,000
- c. \$635,000
- d. \$810,000

6. Which of the following should be included in general and administrative expenses?

	Interest	Advertising
a.	Yes	Yes
b.	Yes	No
c.	No	Yes
d.	No	No

7. In Yew Co.'s year 1 annual report, Yew described its social awareness expenditures during the year as follows:

The Company contributed \$250,000 in cash to youth and educational programs. The Company also gave \$140,000

to health and human service organizations, of which \$80,000 was contributed by employees through payroll deductions. In addition, consistent with the Company's commitment to the environment, the Company spent \$100,000 to redesign product packaging.

What amount of the above should be included in Yew's income statement as charitable contributions expense?

- a. \$310,000
- b. \$390,000
- c. \$410,000
- d. \$490,000

8. During year 1 both Raim Co. and Cane Co. suffered losses due to the flooding of the Mississippi River. Raim is located two miles from the river and sustains flood losses every two to three years. Cane, which has been located fifty miles from the river for the past twenty years, has never before had flood losses. How should the flood losses be reported in each company's year 1 income statement?

	Raim	Cane
a.	As a component of income from continuing operations	As an extraordinary item
b.	As a component of income from continuing operations	As a component of income from continuing operations
c.	As an extraordinary item	As a component of income from continuing operations
d.	As an extraordinary item	As an extraordinary item

9. Witt Co. incurred the following infrequent losses during year 1:

- \$175,000 from a major strike by employees.
- \$150,000 from an earthquake (unusual).
- \$125,000 from the abandonment of equipment used in the business.

In Witt's year 1 income statement, the total amount of infrequent losses **not** considered extraordinary should be

- a. \$275,000
- b. \$300,000
- c. \$325,000
- d. \$450,000

10. Kent Co. incurred the following infrequent losses during year 1:

- A \$300,000 loss was incurred on disposal of one of four dissimilar factories.
- A major currency devaluation caused a \$120,000 exchange loss on an amount remitted by a foreign customer.
- Inventory valued at \$190,000 was made worthless by a competitor's unexpected product innovation.

In its year 1 income statement, what amount should Kent report as losses that are **not** considered extraordinary?

- a. \$610,000
- b. \$490,000

- c. \$420,000
- d. \$310,000

11. Midway Co. had the following transactions during year 1:

- \$1,200,000 pretax loss on foreign currency exchange due to a major unexpected devaluation by the foreign government.
- \$500,000 pretax loss from discontinued operations of a division.
- \$800,000 pretax loss on equipment damaged by a hurricane. This was the first hurricane ever to strike in Midway's area. Midway also received \$1,000,000 from its insurance company to replace a building, with a carrying value of \$300,000, that had been destroyed by the hurricane.

What amount should Midway report in its year 1 income statement as extraordinary loss before income taxes?

- a. \$100,000
- b. \$1,300,000
- c. \$1,800,000
- d. \$2,500,000

12. Ocean Corp.'s comprehensive insurance policy allows its assets to be replaced at current value. The policy has a \$50,000 deductible clause. One of Ocean's waterfront warehouses was destroyed in a winter storm. Such storms occur approximately every four years. Ocean incurred \$20,000 of costs in dismantling the warehouse and plans to replace it. The following data relate to the warehouse:

Current carrying amount	\$300,000
Replacement cost	1,100,000

What amount of gain should Ocean report as a separate component of income before extraordinary items?

- a. \$1,030,000
- b. \$780,000
- c. \$730,000
- d. \$0

13. Purl Corporation's income statement for the year ended December 31, year 1, shows the following:

Income before income tax and extraordinary item	\$900,000
Gain on life insurance coverage—included in the above \$900,000 income amount	100,000
Extraordinary item—loss due to earthquake damage	300,000

Purl's tax rate for year 1 is 40%. How much should be reported as the provision for income tax in Purl's year 1 income statement?

- a. \$200,000
- b. \$240,000
- c. \$320,000
- d. \$360,000

14. Thorpe Co.'s income statement for the year ended December 31, year 2, reported net income of \$74,100. The auditor raised questions about the following amounts that had been included in net income:

Unrealized loss on decline in market value of noncurrent investments in stock classified as available-for-sale (net of tax)	\$(5,400)
Gain on early retirement of bonds payable (net of \$11,000 tax effect)	22,000
Adjustment to profits of prior years for errors in depreciation (net of \$3,750 tax effect)	(7,500)
Loss from fire (net of \$7,000 tax effect)	\$(14,000)

The loss from the fire was an infrequent but not unusual occurrence in Thorpe's line of business. Thorpe's December 31, year 2 income statement should report net income of

- a. \$65,000
- b. \$66,100
- c. \$81,600
- d. \$87,000

15. On January 1, year 1, Brecon Co. installed cabinets to display its merchandise in customers' stores. Brecon expects to use these cabinets for five years. Brecon's year 1 multistep income statement should include

- a. One-fifth of the cabinet costs in cost of goods sold.
- b. One-fifth of the cabinet costs in selling, general, and administrative expenses.
- c. All of the cabinet costs in cost of good sold.
- d. All of the cabinet costs in selling, general, and administrative expenses.

16. A material loss should be presented separately as a component of income from continuing operations when it is

- a. An extraordinary item.
- b. A discontinued component of the business.
- c. Unusual in nature and infrequent in occurrence.
- d. Not unusual in nature but infrequent in occurrence.

17. During year 1, Peg Construction Co. recognized substantial gains from

- An increase in value of a foreign customer's remittance caused by a major foreign currency revaluation.
- A court-ordered increase in a completed long-term construction contract's price due to design changes.

Should these gains be included in continuing operations or reported as an extraordinary item in Peg's year 1 income statement?

	<b>Gain from major currency revaluation</b>	<b>Gain from increase in contract's price</b>
a.	Continuing operations	Continuing operations
b.	Extraordinary item	Continuing operations
c.	Extraordinary item	Extraordinary item
d.	Continuing operations	Extraordinary item

18. An extraordinary item should be reported separately on the income statement as a component of income

	<b>Net of income taxes</b>	<b>Before discontinued operations of a component of a business</b>
a.	Yes	Yes
b.	Yes	No
c.	No	No
d.	No	Yes

19. In year 5, hail damaged several of Toncan Co.'s vans. Hailstorms had frequently inflicted similar damage to Toncan's vans. Over the years, Toncan had saved money by not buying hail insurance and either paying for repairs, or selling damaged vans and then replacing them. In year 5, the damaged vans were sold for less than their carrying amount. How should the hail damage cost be reported in Toncan's year 5 financial statements?

- a. The actual year 5 hail damage loss as an extraordinary loss, net of income taxes.
- b. The actual year 5 hail damage loss in continuing operations, with **no** separate disclosure.
- c. The expected average hail damage loss in continuing operations, with **no** separate disclosure.
- d. The expected average hail damage loss in continuing operations, with separate disclosure.

### D.2. Unusual or Infrequent Items

20. A transaction that is unusual in nature and infrequent in occurrence should be reported separately as a component of income

- a. After cumulative effect of accounting changes and before discontinued operations.
- b. After cumulative effect of accounting changes and after discontinued operations.
- c. Before cumulative effect of accounting changes and before discontinued operations.
- d. Before cumulative effect of accounting changes and after discontinued operations.

21. In year 1, Teller Co. incurred losses arising from its guilty plea in its first antitrust action, and from a substantial increase in production costs caused when a major supplier's workers went on strike. Which of these losses should be reported as an extraordinary item?

	<b>Antitrust action</b>	<b>Production costs</b>
a.	No	No
b.	No	Yes
c.	Yes	No
d.	Yes	Yes

22. In open market transactions, Gold Corp. simultaneously sold its long-term investment in Iron Corp. bonds and purchased its own outstanding bonds. The broker remitted the net cash from the two transactions. Gold's gain on the purchase of its own bonds exceeded its loss on the sale of the Iron bonds. Gold should report the

- a. Net effect of the two transactions as an extraordinary gain.
- b. Net effect of the two transactions in income before extraordinary items.
- c. Effect of its own bond transaction gain in income before extraordinary items, and report the Iron bond transaction as a loss in income before extraordinary items.
- d. Effect of its own bond transaction as an extraordinary gain, and report the Iron bond transaction loss in income before extraordinary items.

23. Under ASC 220, *Comprehensive Income*, corrections of errors are reported in

- Other comprehensive income.
- Other income/(expense).
- Retained earnings.
- Stockholders' equity.

24. Service Corp. incurred costs associated with relocating employees in a restructuring of its operations. How should the company account for these costs?

- Measured at fair value and recognized over the next two years.
- Measured at fair value and recognized when the liability is incurred.
- Recognized when the costs are paid.
- Measured at fair value and treated as a prior period adjustment.

### D.3. Discontinued Operations

25. On January 1, year 1, Deer Corp. met the criteria for discontinuance of a business component. For the period January 1 through October 15, year 1, the component had revenues of \$500,000 and expenses of \$800,000. The assets of the component were sold on October 15, year 1, at a loss for which no tax benefit is available. In its income statement for the year ended December 31, year 1, how should Deer report the component's operations from January 1 to October 15, year 1?

- \$500,000 and \$800,000 should be included with revenues and expenses, respectively, as part of continuing operations.
- \$300,000 should be reported as part of the loss on operations and disposal of a component.
- \$300,000 should be reported as an extraordinary loss.
- \$500,000 should be reported as revenues from operations of a discontinued component.

26. Which of the following criteria is **not** required for a component's results to be classified as discontinued operations?

- Management must have entered into a sales agreement.
- The component is available for immediate sale.
- The operations and cash flows of the component will be eliminated from the operations of the entity as a result of the disposal.
- The entity will not have any significant continuing involvement in the operations of the component after disposal.

27. On November 1, year 2, management of Herron Corporation committed to a plan to dispose of Timms Company, a major subsidiary. The disposal meets the requirements for classification as discontinued operations. The carrying value of Timms Company was \$8,000,000 and management estimated the fair value less costs to sell to be \$6,500,000. For year 2, Timms Company had a loss of \$2,000,000. How much should Herron Corporation present as loss from discontinued

operations before the effect of taxes in its income statement for year 2?

- \$0
- \$1,500,000
- \$2,000,000
- \$3,500,000

28. On December 1, year 2, Greer Co. committed to a plan to dispose of its Hart business component's assets. The disposal meets the requirements to be classified as discontinued operations. On that date, Greer estimated that the loss from the disposition of the assets would be \$700,000 and Hart's year 2 operating losses were \$200,000. Disregarding income taxes, what net gain (loss) should be reported for discontinued operations in Greer's year 2 income statement?

- \$0
- \$(200,000)
- \$(700,000)
- \$(900,000)

29. A component of Ace, Inc. was discontinued during year 2. Ace's loss on disposal should

- Exclude the associated employee relocation costs.
- Exclude operating losses for the period.
- Include associated employee termination costs.
- Exclude associated lease cancellation costs.

30. When a component of a business has been discontinued during the year, this component's operating losses of the current period should be included in the

- Income statement as part of revenues and expenses.
- Income statement as part of the loss on disposal of the discontinued component.
- Income statement as part of the income (loss) from continuing operations.
- Retained earnings statement as a direct decrease in retained earnings.

31. When a component of a business has been discontinued during the year, the loss on disposal should

- Include operating losses of the current period.
- Exclude operating losses during the period.
- Be an extraordinary item.
- Be an operating item.

32. On January 1, year 2, Shine Co. agreed to sell a business component on March 1, year 2. The gain on the disposal should be

- Presented as an extraordinary gain.
- Presented as an adjustment to retained earnings.
- Netted with the loss from operations of the component as a part of discontinued operations.
- None of the above.

### D.4. Comprehensive Income

33. What is the purpose of reporting comprehensive income?

- To report changes in equity due to transactions with owners.

- b. To report a measure of overall enterprise performance.
- c. To replace net income with a better measure.
- d. To combine income from continuing operations with income from discontinued operations and extraordinary items.

34. During year 1, the “other revenues and gains” section of Totman Company’s Statement of Earnings and Comprehensive Income contains \$5,000 in interest revenue, \$15,000 equity in Harpo Co. earnings, and \$25,000 gain on sale of available-for-sale securities. Assuming the sale of the securities increased the current portion of income tax expense by \$10,000, determine the amount of Totman’s reclassification adjustment to other comprehensive income.

- a. \$5,000
- b. \$2,500
- c. \$35,000
- d. \$15,000

35. Which of the following is **not** an acceptable option of reporting other comprehensive income and its components?

- I. In a separate statement of comprehensive income.
- II. In a statement of earnings and comprehensive income.
- III. In a statement of changes in stockholders’ equity.

- a. I only.
- b. II only.
- c. III only.
- d. I and II.

36. Accumulated other comprehensive income should be reported on the balance sheet as a component of

	Retained earnings	Additional paid-in capital
a.	No	Yes
b.	Yes	Yes
c.	Yes	No
d.	No	No

37. Which of the following changes during a period is **not** a component of other comprehensive income?

- a. Unrealized gains or losses as a result of a debt security being transferred from held-to-maturity to available-for-sale.
- b. Stock dividends issued to shareholders.
- c. Foreign currency translation adjustments.
- d. Pension liability adjustments.

38. A company buys ten shares of securities at \$2,000 each on December 31, year 1. The securities are classified as available for sale. The company does not elect to use the fair value option for reporting its available-for-sale securities. The fair value of the securities increases to \$2,500 on December 31, year 2, and to \$2,750 on December 31, year 3. On December 31, year 3, the company sells the securities. Assume no dividends are paid and that the company has a tax rate of 30%. What is the amount of the reclassification adjustment for other comprehensive income on December 31, year 3?

- a. \$7,500
- b. \$(7,500)

- c. \$5,250
- d. \$(5,250)

39. A company buys ten shares of securities at \$1,000 each on January 15, year 1. The securities are classified as available-for-sale. The fair value of the securities increases to \$1,250 per share as of December 31, year 1. The company does not elect to use the fair value option for reporting available-for-sale securities. Assume no dividends are paid and that the company has a 30% tax rate. What is the amount of the holding gain arising during the period that is classified in other comprehensive income for the period ending December 31, year 1?

- a. 0
- b. \$1,750
- c. \$2,500
- d. \$7,500

40. Searles does not elect the fair value option for recording financial assets and liabilities. What amount of comprehensive income should Searles Corporation report on its statement of income and comprehensive income given the following net of tax figures that represent changes during a period?

Pension liability adjustment recognized in OCI	\$(3,000)
Unrealized gain on available-for-sale securities	15,000
Reclassification adjustment, for securities gain included in net income	(2,500)
Stock warrants outstanding	4,000
Net income	77,000

- a. \$86,500
- b. \$89,000
- c. \$89,500
- d. \$90,500

41. If \$(2,450) net of tax is the reclassification adjustment included in other comprehensive income in the year the securities are sold, what is the gain (loss) that is included in income from continuing operations before income taxes? Assume a 30% tax rate.

- a. \$(2,450)
- b. \$(3,500)
- c. \$2,450
- d. \$3,500

42. Which of the following changes during a period is **not** a component of other comprehensive income?

- a. Pension liability adjustment for funded status of plan.
- b. Treasury stock, at cost.
- c. Foreign currency translation adjustment.
- d. Reclassification adjustment, for securities gain included in net income.

43. Which of the following is true?

- a. Separate EPS amounts must be presented for both other comprehensive income and comprehensive income.
- b. Separate EPS amounts must be presented for other comprehensive income but not for comprehensive income.

- c. Separate EPS amounts must be presented for comprehensive income but not for other comprehensive income.
- d. Separate EPS amounts are not required to be presented for either other comprehensive income or comprehensive income.

44. Which of the following options for displaying comprehensive income is (are) allowed by FASB?

- I. A continuation from net income at the bottom of the income statement.
- II. A separate statement that begins with net income.
- III. In the statement of changes in stockholders' equity.
- a. I only.
- b. II only.
- c. II and III.
- d. I and II.

45. Assume a company does not elect the fair value option for reporting financial assets and liabilities. Which of the following is not classified as other comprehensive income?

- a. An adjustment to pension liability to record the funded status of the plan.
- b. Subsequent decreases of the fair value of available-for-sale securities that have been previously written down as impaired.
- c. Decreases in the fair value of held-to-maturity securities.
- d. None of the above.

46. When a full set of general-purpose financial statements are presented, comprehensive income and its components should

- a. Appear as a part of discontinued operations, extraordinary items, and cumulative effect of a change in accounting principle.
- b. Be reported net of related income tax effect, in total and individually.
- c. Appear in a supplemental schedule in the notes to the financial statements.
- d. Be displayed in a financial statement that has the same prominence as other financial statements.

### D.5. Balance Sheets (Statements of Financial Position)

Items 47 through 49 are based on the following:

The following trial balance of Mint Corp. at December 31, year 1, has been adjusted except for income tax expense.

	Dr.	Cr.
Cash	\$600,000	
Accounts receivable, net	3,500,000	
Cost in excess of billings on long-term contracts	1,600,000	
	Dr.	Cr.
Billings in excess of costs on long-term contracts		\$700,000
Prepaid taxes	450,000	

Property, plant, and equipment, net	1,480,000	
Note payable—noncurrent		1,620,000
Common stock		750,000
Additional paid-in capital		2,000,000
Retained earnings—unappropriated		900,000
Retained earnings—restricted for note payable		160,000
Earnings from long-term contracts		6,680,000
Costs and expenses		
	<u>5,180,000</u>	<u>          </u>
	<u>\$12,810,000</u>	<u>\$12,810,000</u>

Other financial data for the year ended December 31, year 1, are

- Mint uses the percentage-of-completion method to account for long-term construction contracts for financial statement and income tax purposes. All receivables on these contracts are considered to be collectible within twelve months.
- During year 1, estimated tax payments of \$450,000 were charged to prepaid taxes. Mint has not recorded income tax expense. There were no temporary or permanent differences, and Mint's tax rate is 30%.

In Mint's December 31, year 1 balance sheet, what amount should be reported as

47. Total retained earnings?

- a. \$1,950,000
- b. \$2,110,000
- c. \$2,400,000
- d. \$2,560,000

48. Total noncurrent liabilities?

- a. \$1,620,000
- b. \$1,780,000
- c. \$2,320,000
- d. \$2,480,000

49. Total current assets?

- a. \$5,000,000
- b. \$5,450,000
- c. \$5,700,000
- d. \$6,150,000

50. Mirr, Inc. was incorporated on January 1, year 1, with proceeds from the issuance of \$750,000 in stock and borrowed funds of \$110,000. During the first year of operations, revenues from sales and consulting amounted to \$82,000, and operating costs and expenses totaled \$64,000. On December 15, Mirr declared a \$3,000 cash dividend, payable to stockholders on January 15, year 2. No additional activities affected owners' equity in year 1. Mirr's liabilities increased to \$120,000 by December 31, year 1. On Mirr's December 31, year 1 balance sheet, total assets should be reported at

- a. \$885,000
- b. \$882,000
- c. \$878,000
- d. \$875,000

51. The following changes in Vel Corp.'s account balances occurred during year 1:

	Increase
Assets	\$89,000
Liabilities	27,000
Capital stock	60,000
Additional paid-in capital	6,000

Except for a \$13,000 dividend payment and the year's earnings, there were no changes in retained earnings for year 1. What was Vel's net income for year 1?

- a. \$4,000
- b. \$9,000
- c. \$13,000
- d. \$17,000

52. When preparing a draft of its year 1 balance sheet, Mont, Inc. reported net assets totaling \$875,000. Included in the asset section of the balance sheet were the following:

Treasury stock of Mont, Inc. at cost, which approximates market value on December 31	\$24,000
Idle machinery	11,200
Cash surrender value of life insurance on corporate executives	13,700
Allowance for decline in market value of non-current equity investments	8,400

At what amount should Mont's net assets be reported in the December 31, year 1 balance sheet?

- a. \$851,000
- b. \$850,100
- c. \$842,600
- d. \$834,500

53. In analyzing a company's financial statements, which financial statement would a potential investor primarily use to assess the company's liquidity and financial flexibility?

- a. Balance sheet.
- b. Income statement.
- c. Statement of retained earnings.
- d. Statement of cash flows.

### D.6.a. Disclosures

54. During year 1, Jones Company engaged in the following transactions:

Salary expense to key employees who are also principal owners	\$100,000
Sales to affiliated enterprises	250,000

Which of the two transactions would be disclosed as related-party transactions in Jones' year 1 financial statements?

- a. Neither transaction.
- b. The \$100,000 transaction only.
- c. The \$250,000 transaction only.
- d. Both transactions.

55. Dean Co. acquired 100% of Morey Corp. prior to year 2. During year 2, the individual companies included in their financial statements the following:

	Dean	Morey
Officers' salaries	\$75,000	\$50,000
Officers' expenses	20,000	10,000
Loans to officers	125,000	50,000
Intercompany sales	150,000	--

What amount should be reported as related-party disclosures in the notes to Dean's year 2 consolidated financial statements?

- a. \$150,000
- b. \$155,000
- c. \$175,000
- d. \$330,000

56. Which type of material related-party transaction requires disclosure?

- a. Only those not reported in the body of the financial statements.
- b. Only those that receive accounting recognition.
- c. Those that contain possible illegal acts.
- d. All those other than compensation arrangements, expense allowances, and other similar items in the ordinary course of business.

57. Financial statements shall include disclosures of material transactions between related parties **except**

- a. Nonmonetary exchanges by affiliates.
- b. Sales of inventory by a subsidiary to its parent.
- c. Expense allowance for executives which exceed normal business practice.
- d. A company's agreement to act as surety for a loan to its chief executive officer.

58. Dex Co. has entered into a joint venture with an affiliate to secure access to additional inventory. Under the joint venture agreement, Dex will purchase the output of the venture at prices negotiated on an arm's-length basis. Which of the following is(are) required to be disclosed about the related-party transaction?

- I. The amount due to the affiliate at the balance sheet date.
  - II. The dollar amount of the purchases during the year.
- a. I only.
  - b. II only.
  - c. Both I and II.
  - d. Neither I nor II.

59. What is the purpose of information presented in notes to the financial statements?

- a. To provide disclosures required by generally accepted accounting principles.
- b. To correct improper presentation in the financial statements.
- c. To provide recognition of amounts **not** included in the totals of the financial statements.
- d. To present management's responses to auditor comments.

**D.6.b. Accounting Policies**

**60.** Which of the following information should be included in Melay, Inc.'s year 1 summary of significant accounting policies?

- Property, plant, and equipment is recorded at cost with depreciation computed principally by the straight-line method.
- During year 1, the Delay component was sold.
- Business component year 1 sales are Alay \$1M, Belay \$2M, and Celay \$3M.
- Future common share dividends are expected to approximate 60% of earnings.

**61.** Which of the following information should be disclosed in the summary of significant accounting policies?

- Refinancing of debt subsequent to the balance sheet date.
- Guarantees of indebtedness of others.
- Criteria for determining which investments are treated as cash equivalents.
- Adequacy of pension plan assets relative to vested benefits.

**62.** Swift Corp. prepares its financial statements for its fiscal year ending December 31, year 1. Swift estimates that its product warranty liability is \$28,000 at December 31, year 1. On February 12, year 2, before the financial statements were issued, Swift received information about a product defect that will require a recall of all units sold in year 1. It is expected the product recall will cost an additional \$40,000 in warranty repairs. What should Swift present in its December 31, year 1 financial statements?

- A footnote disclosure explaining the product recall.
- A footnote disclosure listing the estimated amount of \$40,000 in warranty repairs and an explanation of the recall.
- An estimated warranty liability of \$68,000.
- No disclosure is necessary.

**63.** Colter Corp. has a fiscal year-end of December 31, year 1. On that date, Colter reported total assets of \$600,000. On February 1, year 2, before the year 1 financial statements were issued, Colter lost \$250,000 of inventory due to a fire. The inventory was a total loss and was uninsured. How should Colter present this information in its December 31, year 1 financial statements?

- Colter should disclose the loss in a footnote to its year 1 financial statements.
- Colter should report an extraordinary loss in its year 1 income statement.
- Colter should report an allowance for lost inventory in its year 1 balance sheet.
- Colter should not report the loss.

**64.** Which of the following is a true statement regarding disclosures for subsequent events?

- Recognize a loss for all recognized and unrecognized subsequent events in the current year financial statements.

- Recognize a gain or loss for any recognized subsequent event in the current year financial statements.
- Recognize a loss for a recognized subsequent event in the financial statements in the year when the subsequent event occurs.
- Recognize a loss for a recognized subsequent event in the current year financial statements.

**D.6.d. Fair Value Measurements**

**65.** The fair value of an asset should be based upon

- The replacement cost of an asset.
- The price that would be received to sell the asset at the measurement date under current market conditions.
- The original cost of the asset plus an adjustment for obsolescence.
- The price that would be paid to acquire the asset.

**66.** Which of the following describes a principal market for establishing fair value of an asset?

- The market that has the greatest volume and level of activity for the asset.
- Any broker or dealer market that buys or sells the asset.
- The most observable market in which the price of the asset is minimized.
- The market in which the amount received would be maximized.

**67.** Which of the following is true for valuing an asset to fair value?

- The price of the asset should be adjusted for transaction costs.
- The fair value of the asset should be adjusted for costs to sell.
- The fair value price is based upon an entry price to purchase the asset.
- The price should be adjusted for transportation costs to transport the asset to its principal market.

**68.** Which of the following would meet the qualifications as market participants in determining fair value?

- A liquidation market in which sellers are compelled to sell.
- A subsidiary of the reporting unit interested in purchasing assets similar to those being valued.
- An independent entity that is knowledgeable about the asset.
- A broker or dealer that wishes to establish a new market for the asset.

**69.** Which of the following is an assumption used in fair value measurements?

- The asset must be in-use.
- The asset must be considered in-exchange.
- The most conservative estimate must be used.
- The asset is in its highest and best use.

70. The fair value of an asset at initial recognition is
- The price paid to acquire the asset.
  - The price paid to acquire the asset less transaction costs.
  - The price paid to transfer or sell the asset.
  - The book value of the asset acquired.
71. Which of the following is **not** a valuation technique used in fair value estimates?
- Income approach.
  - Residual value approach.
  - Market approach.
  - Cost approach.
72. Valuation techniques for fair value that include the Black-Scholes-Merton formula, a binomial model, or discounted cash flows are examples of which valuation technique?
- Income approach.
  - Market approach.
  - Cost approach.
  - Exit value approach.
73. The market approach valuation technique for measuring fair value requires which of the following?
- Present value of future cash flows.
  - Prices and other relevant information of transactions from identical or comparable assets.
  - The price to replace the service capacity of the asset.
  - The weighted-average of the present value of future cash flows.
74. A change in valuation techniques used to measure fair value should be reported as
- A change in accounting principle with retrospective restatement.
  - An error correction with restatement of the financial statements of previous periods.
  - A change in accounting estimate reported on a prospective basis.
  - An extraordinary item on the current year's income statement.
75. When measuring fair value, which level has the highest priority for valuation inputs?
- Level 1.
  - Level 2.
  - Level 3.
  - Level 4.
76. Which of the following are observable inputs used for fair value measurements?
- Bank prime rate.
  - Default rates on loans.
  - Financial forecasts.
- I only.
  - I and II only.
  - I and III only.
  - I, II and III.

**D.6.h. Constant Dollar Accounting**

77. A company that wishes to disclose information about the effect of changing prices should report this information in
- The body of the financial statements.
  - The notes to the financial statements.
  - Supplementary information to the financial statements.
  - Management's report to shareholders.

78. Lewis Company was formed on January 1, year 1. Selected balances from the historical cost balance sheet at December 31, year 2, were as follows:

Land (purchased in year 1)	\$120,000
Investment in nonconvertible bonds (purchased in year 1, and expected to be held to maturity)	60,000
Long-term debt	80,000

The average Consumer Price Index was 100 for year 1, and 110 for year 2. In a supplementary constant dollar balance sheet (adjusted for changing prices) at December 31, year 2, these selected account balances should be shown at

	Land	Investment	Long-term debt
a.	\$120,000	\$60,000	\$88,000
b.	\$120,000	\$66,000	\$88,000
c.	\$132,000	\$60,000	\$80,000
d.	\$132,000	\$66,000	\$80,000

79. The following items were among those that appeared on Rubi Co.'s books at the end of year 1:

Merchandise inventory	\$600,000
Loans to employees	20,000

What amount should Rubi classify as monetary assets in preparing constant dollar financial statements?

- \$0
- \$20,000
- \$600,000
- \$620,000

80. In its financial statements, Hila Co. discloses supplemental information on the effects of changing prices. Hila computed the increase in current cost of inventory as follows:

Increase in current cost (nominal dollars)	\$15,000
Increase in current cost (constant dollars)	\$12,000

What amount should Hila disclose as the inflation component of the increase in current cost of inventories?

- \$3,000
- \$12,000
- \$15,000
- \$27,000

81. When computing purchasing power gain or loss on net monetary items, which of the following accounts is classified as nonmonetary?

- Advances to unconsolidated subsidiaries.
- Allowance for uncollectible accounts.
- Unamortized premium on bonds payable.
- Accumulated depreciation of equipment.

82. During a period of inflation in which a liability account balance remains constant, which of the following occurs?
- A purchasing power gain, if the item is a nonmonetary liability.
  - A purchasing power gain, if the item is a monetary liability.
  - A purchasing power loss, if the item is a nonmonetary liability.
  - A purchasing power loss, if the item is a monetary liability.

### D.6.i. Current Cost Accounting

83. The following information pertains to each unit of merchandise purchased for resale by Vend Co.:

March 1, year 1	
Purchase price	\$8
Selling price	\$12
Price level index	110
December 31, year 1	
Replacement cost	\$10
Selling price	\$15
Price level index	121

Under current cost accounting, what is the amount of Vend's holding gain on each unit of this merchandise?

- \$0
  - \$0.80
  - \$1.20
  - \$2.00
84. Kerr Company purchased a machine for \$115,000 on January 1, year 1, the company's first day of operations. At the end of the year, the current cost of the machine was \$125,000. The machine has no salvage value, a five-year life, and is depreciated by the straight-line method. For the year ended December 31, year 1, the amount of the current cost depreciation expense which would appear in supplementary current cost financial statements is
- \$14,000
  - \$23,000
  - \$24,000
  - \$25,000

85. At December 31, year 1, Jannis Corp. owned two assets as follows:

	Equipment	Inventory
Current cost	\$100,000	\$80,000
Recoverable amount	\$95,000	\$90,000

Jannis voluntarily disclosed supplementary information about current cost at December 31, year 1. In such a disclosure, at what amount would Jannis report total assets?

- \$175,000
- \$180,000
- \$185,000
- \$190,000

86. Could current cost financial statements report holding gains for goods sold during the period and holding gains on inventory at the end of the period?

	Goods sold	Inventory
a.	Yes	Yes
b.	Yes	No
c.	No	Yes
d.	No	No

87. Manhof Co. prepares supplementary reports on income from continuing operations on a current cost basis. How should Manhof compute cost of goods sold on a current cost basis?

- Number of units sold times average current cost of units during the year.
- Number of units sold times current cost of units at year-end.
- Number of units sold times current cost of units at the beginning of the year.
- Beginning inventory at current cost plus cost of goods purchased less ending inventory at current cost.

### D.6.j. Risks and Uncertainties

88. Which of the following are examples of concentrations that create vulnerabilities and therefore would require disclosure of risks and uncertainties?

- Market in which an entity conducts its operations.
  - Available sources of supply of materials used in operations of an entity.
  - Volume of business transacted with a certain contributor.
- I and II.
  - II and III.
  - I and III.
  - I, II, and III.

89. Which of the following is required to be disclosed regarding the risks and uncertainties that exist?

- Factors causing an estimate to be sensitive.
- The potential impact of estimates about values of assets and liabilities when it is reasonably possible that the estimate will change in the near future.
- The potential impact of estimates about values of assets and liabilities when it is remotely possible that the estimate will change in the near future.
- A description of the operations both within and outside of the home country.

### D.8. Other Comprehensive Bases of Accounting (OCBOA)

90. Which of the following accounting bases may be used to prepare financial statements in conformity with a comprehensive basis of accounting other than generally accepted accounting principles?

- Basis of accounting used by an entity to file its income tax return.
- Cash receipts and disbursements basis of accounting.

- a. I only.
- b. II only.
- c. Both I and II.
- d. Neither I nor II.

91. Income tax basis financial statements differ from those prepared under GAAP in that income tax basis financial statements

- a. Do **not** include nontaxable revenues and nondeductible expenses in determining income.
- b. Include detailed information about current and deferred income tax liabilities.
- c. Contain **no** disclosures about capital and operating lease transactions.
- d. Recognize certain revenues and expenses in different reporting periods.

92. In financial statements prepared on the income tax basis, how should the nondeductible portion of expenses such as meals and entertainment be reported?

- a. Included in the expense category in the determination of income.
- b. Included in a separate category in the determination of income.
- c. Excluded from the determination of income but included in the determination of retained earnings.
- d. Excluded from the financial statements.

93. If a company uses the modified cash basis of accounting, the modifications from the pure cash basis should have substantial support. In this context substantial support requires

- a. The financial statements have only minor modifications from GAAP.
- b. The modifications must be the same as those required by tax law.
- c. The modifications must be the same as GAAP and not illogical.
- d. No modifications are allowed.

### D.9 Liquidation Basis of Accounting

94. The liquidation basis of accounting is to be used when:

- a. Liquidation is remote.
- b. Liquidation is forthcoming.
- c. Liquidation is imminent.
- d. Liquidation is probable.

### D.10 Prospective Financial Information

95. Which of the following is false?

- a. Prospective financial information may be prepared for general or limited users.
- b. The responsible party is the only limited user.
- c. The financial projection may contain assumptions not necessarily expected to occur.
- d. The financial projection may be expressed as a range of dollars.

96. Prospective financial information is defined as

- a. Any financial information about the past, present, or future.
- b. Any financial information about the present or future.
- c. Any financial information about the future related to the day-to-day operations.
- d. Any financial information about the future.

97. To achieve a reasonably objective basis, financial forecasts and projections should be prepared

- I. In accordance with GAAP.
  - II. Using information that is in accordance with the plans of the entity.
  - III. With due professional care.
- a. I and III.
  - b. II and III.
  - c. I, II, and III.
  - d. I and II.

98. Which of the following disclosures should prospective financial statements include?

	Summary of significant accounting policies	Summary of significant assumptions
a.	Yes	Yes
b.	Yes	No
c.	No	Yes
d.	No	No

### D.11 SEC Reporting Requirements

99. Which of the following is the SEC form used by issuer companies to file as an annual report with the SEC?

- a. Form 10-Q.
- b. Form 8-K.
- c. Form 10-K.
- d. Form S-1.

100. Which of the following **best** describes the content of the SEC Form 10-Q?

- a. Quarterly audited financial information and other information about the company.
- b. Annual audited financial information and nonfinancial information about the company.
- c. Disclosure of material events that affect the company.
- d. Quarterly reviewed financial information and other information about the company.

101. Which of the following is the SEC form used by issuer companies to file as a quarterly report with the SEC?

- a. Form 10-Q.
- b. Form 8-K.
- c. Form 10-K.
- d. Form S-1.

102. A company is required to file quarterly financial statements with the United States Securities and Exchange Commission on Form 10-Q. The company operates in an industry that is not subject to seasonal fluctuations that could have a significant

impact on its financial condition. In addition to the most recent quarter-end, for which of the following periods is the company required to present balance sheets on Form 10-Q?

- The end of the corresponding fiscal quarter of the preceding fiscal year.
- The end of the preceding fiscal year and the end of the corresponding fiscal quarter of the preceding fiscal years.
- The end of the preceding fiscal year.
- The end of the preceding fiscal year and the end of the prior two fiscal years.

**103.** A company is an accelerated filer that is required to file Form 10-K with the United States Securities and Exchange Commission (SEC). What is the maximum number of days after the company's fiscal year-end that the company has to file Form 10-K with the SEC?

- 60 days.
- 75 days.
- 90 days.
- 120 days.

**104.** SEC's regulation S-X describes

- The requirements for information and forms required by other regulations.
- The reporting requirements for asset backed securities.
- The form and content of financial statements to be filed with the SEC.
- A mandate that publicly traded companies disclose material information to all investors simultaneously.

**105.** Crafty Inc is a publicly traded company. Recently, Crafty entered into a material long-term lease agreement. Which SEC form discloses information about material events?

- Form S-1
- Form 8-K
- Form 10-K
- Form 10Q

## D.12. Financial Statements of Trust

**106.** Which financial statements should be presented for a trust?

- Statement of assets and liabilities.
- Statement of operations.
- Statement of cash flows.
- Statement of changes in net assets.

- I only.
- I and II only.
- I, II, and IV.
- I, III and IV.

**107.** What is the basis of accounting and at what amount are assets measured on the financial statements of a trust?

	Basis of accounting	Measurement
a.	Cash	Cost
b.	Cash	Fair value
c.	Accrual	Cost
d.	Accrual	Fair value

## D.14. International Financial Reporting Standards (IFRS)

**108.** Galaxy Corporation prepares its financial statements in accordance with IFRS. Galaxy intends to refinance a \$10,000 note payable due on February 20, year 2. The company expects the note to be refinanced for a period of five years. Under what circumstances can Galaxy report the note payable as a noncurrent liability on its December 31, year 1 statement of financial position?

- If Galaxy has the intent and ability to refinance before December 31, year 1.
- If Galaxy has executed an agreement to refinance before December 31, year 1.
- If Galaxy has executed an agreement to refinance prior to the issuance of the financial statements in March year 2.
- If Galaxy has the intent and ability to refinance before the issuance of the financial statements in March year 2.

**109.** Largo Corporation prepares its financial statements in accordance with IFRS. Which of the following items is required disclosure on the income statement?

- Revenues, cost of goods sold, and advertising expense.
- Finance costs, tax expense, and income.
- Operating expenses, nonoperating expenses, and extraordinary items.
- Gross profit, operating profits, and net profits.

**110.** Which of the following may **not** be disclosed on the income statement for a company that prepares its financial statements in accordance with IFRS?

- Gain or loss.
- Tax expense.
- Gain or loss from extraordinary items.
- Gain or loss from discontinued operations.

**111.** Glenda Corporation prepares its financial statements in accordance with IFRS. Glenda must report finance costs on the statement of cash flows

- In operating activities.
- Either in operating activities or financing activities.
- In financing activities.
- In investing activities or financing activities.

**112.** Larimer Corporation prepares its financial statements in accordance with IFRS. Larimer acquired equipment by issuing 5,000 shares of its common stock. How should this transaction be reported on the statement of cash flows?

- As an outflow of cash from investing activities and inflow of cash from financing activities.
- As an inflow of cash from financing activities and an outflow of cash from operating activities.
- At the bottom of the statement of cash flows as a significant noncash transaction.
- In the notes to the financial statements as a significant noncash transaction.

**113.** For IFRS purposes, cash advances and loans from bank overdrafts should be reported on the statement of cash flows as

- a. Operating activities.
- b. Investing activities.
- c. Financing activities.
- d. Other significant noncash activities.

**114.** Which of the following are acceptable methods for reporting comprehensive income under IFRS?

- I. One comprehensive income statement.
- II. Two statements: an income statement and a comprehensive income statement.
- III. In the statement of owner's equity.
  - a. I only.
  - b. I and II only.
  - c. I, II, and III.
  - d. I and III only.

**115.** Which of the following is true about financial statement requirements under IFRS?

- a. Prior year comparative financial statements are required.
- b. Income statements for three years are required.
- c. Balance sheets for three years are required.
- d. There are no specific requirements regarding comparative financial statements.

**116.** Under IFRS, operating expenses on the income statement may be classified by

	<b>Nature</b>	<b>Function</b>
a.	Yes	Yes
b.	Yes	No
c.	No	Yes
d.	No	No

**117.** Under IFRS, the statement of cash flows may be presented on the

	<b>Direct Basis</b>	<b>Indirect Basis</b>
a.	Yes	Yes
b.	Yes	No
c.	No	Yes
d.	No	No

### Explanations

**1. (d)** Baer Food's year 1 revenues should include net sales revenue (\$187,000), interest revenue (\$10,200), and gain on sale of equipment (\$4,700), for a total of \$201,900. Discontinued operations (loss of \$12,400) and the extraordinary gain (\$1,500) are both special items that should be reported as separate components of income, after **income from continuing operations**. Therefore, these items should **not** be included in the revenues section of the income statement (which is placed **before** income from continuing operations).

**2. (a)** To directly compute cost of goods manufactured (CGM), the formula is

$$\begin{array}{r}
 \text{Beginning work in process} \\
 + \text{Direct materials used} \\
 + \text{Direct labor} \\
 + \text{Factory overhead} \\
 - \text{Ending work in process} \\
 \hline
 \text{Cost of goods manufactured}
 \end{array}$$

However, none of these elements are given in this problem, so CGM must be computed indirectly, using the cost of sales formula

$$\begin{array}{r}
 \text{Beginning finished goods} \quad \$400,000 \\
 + \text{Cost of goods manufactured} \quad + \text{CGM} \\
 - \text{Ending finished goods} \quad -360,000 \\
 \hline
 \text{Cost of sales} \quad \$240,000
 \end{array}$$

Solving for the missing amount, CGM is \$200,000.

**3. (a)** All of the revenues, gains, expenses, and losses given in this problem are components of income from continuing operations. Income before income taxes is \$180,000, as computed below.

$$\begin{array}{r}
 \text{Revenues } (\$575,000 + \$25,000) \quad \$600,000 \\
 \text{Expenses and losses } (\$240,000 + \$70,000 + \\
 \quad \$10,000 + \$50,000 + \$15,000 + \$15,000 \\
 \quad + \$20,000) \quad \underline{420,000} \\
 \text{Income before income taxes} \quad \underline{\$180,000}
 \end{array}$$

To compute income from continuing operations (after taxes), income taxes (\$180,000 × 30% = \$54,000) must also be deducted (\$180,000 – \$54,000 = \$126,000).

**4. (a)** The requirement is to compute the amount of expenses to be included in selling expenses for year 1. Advertising (\$150,000) and sales salaries and commissions (\$140,000) are clearly selling expenses, as is the rent for the office space occupied by the sales department (\$220,000 × 1/2 = \$110,000). Additionally, freight-out (\$80,000) is a selling expense because shipping the goods **from** the point of sale to the customer is the final effort in the selling process. The total selling expense is, therefore, \$480,000 (\$150,000 + \$140,000 + \$110,000 + \$80,000). The remaining expenses given are general and administrative expenses, except for interest and the loss on sale of long-term investment, which are nonoperating items (other expenses and losses).

5. (a) Operating expenses are usually divided into two categories, **selling expenses** and **general and administrative (G&A) expenses**. Selling expenses are related to the sale of a company's products, while G&A expenses are related to the company's general operations. Therefore, Griff should include the following costs in G&A expense:

Accounting and legal fees	\$25,000
Officers' salaries	150,000
Insurance	<u>85,000</u>
G&A expense	<u>\$260,000</u>

Freight-in (\$175,000) is an inventoriable cost which should be reflected in cost of goods sold and ending inventory. Freight-out, the cost of delivering goods to customers (\$160,000), is included in selling expenses. Sales representatives salaries (\$215,000) is also a selling expense.

6. (d) Interest expense is generally considered to be a non-operating item and is therefore included in **other expenses and losses**. Operating expenses are usually divided into two categories, **selling expenses** and **general and administrative expenses**. Since advertising expense is directly related to the sale of the company's products, it is included in selling expenses. Therefore, neither of the expenses given are general and administrative expenses.

7. (a) Charitable contributions expense should include all expenses incurred in year 1 by Yew Co. which involve charitable contributions to other entities. The total charitable contributions expense is \$310,000, consisting of the \$250,000 donated to youth and educational programs and the \$60,000 (\$140,000 – \$80,000) donated to health and human service organizations. The other \$80,000 was given to these organizations **by the employees**, with the company merely acting as an agent collecting that amount through payroll deductions and forwarding it on to the organizations. The expenditure for redesigning product packaging (\$100,000) would be properly classified as research and development expense.

8. (a) Extraordinary items are material gains or losses which are both **unusual** in nature and **infrequent** in occurrence. For Raim Co., which sustains flood losses every two to three years, the year 1 flood loss is not infrequent, and should be recognized as a component of income from continuing operations. For Cane Co., the year 1 flood loss is both unusual and infrequent, so it should be recognized as an extraordinary item.

9. (b) Extraordinary items are material items which are **both unusual** in nature and **infrequent** in occurrence. The effect of a strike (\$175,000) and a gain or loss from sale or abandonment of equipment (\$125,000) is **not** considered extraordinary. The loss from the earthquake would be considered unusual and infrequent. Therefore the \$150,000 loss is extraordinary, and the total amount of infrequent losses **not** considered extraordinary is \$300,000 (\$175,000 + \$125,000).

10. (a) Extraordinary items are material items which are **both unusual** in nature and **infrequent** in occurrence. Disposals of plant assets, foreign currency losses, and inventory losses are not considered to be unusual in nature, and thus

are not extraordinary. Items that may qualify as extraordinary items include some casualties, expropriations, and prohibitions under a new law. In Kent Co.'s year 1 income statement, losses not considered extraordinary amount to \$610,000. The factory disposal (\$300,000) is classified as discontinued operations because the operations carried on there are dissimilar from operations carried on at the other factories. The \$120,000 foreign currency loss and \$190,000 inventory loss are not extraordinary because they are not unusual in nature.

11. (a) Extraordinary items are material gains or losses which are both **unusual** in nature and **infrequent** in occurrence. Foreign currency losses (\$1,200,000) and losses due to discontinued operations (\$500,000) are not considered to be unusual in nature and thus are not extraordinary. Items that may qualify as extraordinary include some casualties, expropriations, prohibitions under a new law, and extinguishment of debt. Midway's casualty loss appears to be extraordinary because the hurricane was the first ever to strike in Midway's area. The net pretax loss was \$100,000 [\$800,000 equipment loss – \$700,000 building gain (\$1,000,000 – \$300,000)].

12. (c) A gain (loss) must be recognized when a nonmonetary asset is involuntarily converted into monetary assets even if the company reinvests the monetary assets in replacement nonmonetary assets. The gain or loss is the difference between the insurance proceeds (\$1,100,000 replacement cost – \$50,000 deductible = \$1,050,000) and the carrying amount of the assets destroyed or used up as a result of the casualty loss. The warehouse (carrying amount of \$300,000) was destroyed, and cash of \$20,000 was used to cover removal costs. Therefore, the gain is \$730,000 [\$1,050,000 – (\$300,000 + \$20,000)]. It is **not** an extraordinary item because storms similar to the one that destroyed the warehouse occur frequently (every four years).

13. (c) In this situation, the provision for income tax (income tax expense) will be the amount of the tax liability to the government determined without including the extraordinary loss. This amount is determined by applying the 40% tax rate to pretax accounting income before extraordinary items adjusted for any permanent differences. Accounting income before taxes is \$900,000, but that amount includes a gain on life insurance coverage (\$100,000). A gain on life insurance coverage is a **permanent** difference because it is included in accounting income but will **never** be included in taxable income. Therefore, the amount of accounting income which will be subject to taxes is \$800,000 (\$900,000 – \$100,000), and the provision for income taxes is \$320,000 (\$800,000 × 40%). The tax savings from the extraordinary loss (\$300,000 × 40% = \$120,000) will not affect the provision for income taxes because the extraordinary item must be reported together with its tax effect (extraordinary loss of \$180,000; net of tax).

14. (d) Net income as reported (\$74,100) properly included the gain on early retirement of bonds payable (\$22,000) and the loss from fire (\$14,000). The fact that the gain and loss were reported net of taxes in the income statement was incorrect, but does not cause the net income amount to be in error. However, the other two items should **not** be reported in the income statement at all. An unrealized loss

on **noncurrent** investments in stock (\$5,400) is reported in other comprehensive income, not in net income. A correction of an error (\$7,500) is treated as a prior period adjustment. It is reported in the financial statements as an adjustment to the beginning balance of retained earnings, rather than in the income statement. Since both of these items were subtracted in the computation of reported net income, they must be added back to compute the correct net income of \$87,000 (\$74,100 + \$5,400 + \$7,500).

**15. (b)** In year 1, Brecon Co. would report one fifth of the cabinet costs as depreciation expense in selling, general, and administrative expenses. Four fifths of the cabinet cost would remain capitalized as fixed assets at the end of year 1. The cabinets are considered fixed assets and not a part of cost of goods sold.

**16. (d)** A material gain or loss that is unusual in nature or infrequent in occurrence, but not both, should be presented as a separate component of income or loss from continuing operations. Both discontinued operations and extraordinary items are reported separately **after** income from continuing operations.

**17. (a)** For an item to qualify as an extraordinary item it must be **both** unusual in nature and infrequent in occurrence. The above criteria must take into account the environment in which the entity operates. An entity with sales in different countries will experience foreign currency revaluations on a regular basis, so a currency revaluation would not be infrequent in occurrence and it is not an extraordinary item. Gains from increases in contract prices are neither infrequent nor unusual, so they cannot qualify as extraordinary items.

**18. (b)** Extraordinary items are reported **net of income taxes** as a separate component of income **after** discontinued operations.

**19. (b)** Extraordinary items are events and transactions that are distinguished by both their unusual nature and the infrequency of their occurrence. Losses from hail damage are both common and frequent for Toncan. Estimates of the losses would not be presented in the financial statements. No amount is recorded until a loss actually occurs.

**20. (d)** A transaction that is unusual in nature and infrequent in occurrence is considered an extraordinary item. An extraordinary item is reported **after** discontinued operations.

**21. (c)** Extraordinary items are events and transactions that are distinguished by both their unusual nature and the infrequency of their occurrence. Teller Co.'s loss arising from its **first** antitrust action meets both of these criteria (particularly since they pleaded guilty) and should therefore be reported as an extraordinary item. The strike against Teller's major supplier, however, should not be reported as an extraordinary item because it is usual in nature but may be expected to recur as a consequence of customary and continuing business activities.

**22. (c)** Extraordinary items are material items which are **both unusual** in nature and **infrequent** in occurrence. Therefore, the loss on sale of a bond investment is not extraordinary. Neither item is treated as extraordinary.

**23. (c)** Corrections of errors shall continue to be reported net of tax in retained earnings as an adjustment of the beginning balance.

**24. (b)** Costs of exit activities (including restructuring charges) should be measured and recognized at fair value when they are incurred.

**25. (b)** The operating loss of \$300,000 (\$500,000 revenues less \$800,000 expenses) relates to a discontinued component, so it is part of discontinued operations, **not** continuing operations. It is combined with the loss from disposal on the income statement. **Discontinued operations** is a category distinct from **extraordinary items**.

**26. (a)** Management is not required to have entered into a sales agreement. It is sufficient if management is committed to a disposal plan that is reasonable. The other items are all required for presentation as discontinued operations.

**27. (d)** In discontinued operations, presentation of the income or loss from operations of the component and the gain or loss on disposal is required. Since the company met the requirements for "held for sale" status in year 2, the subsidiary should be written down to its fair value less cost to sell. This would result in a loss of \$1,500,000 (\$8,000,000 carrying amount – \$6,500,000 fair value). Therefore, the loss from discontinued operations would be \$3,500,000 (\$2,000,000 loss from operations + \$1,500,000 loss on planned disposal).

**28. (d)** The loss from discontinued operations would equal the loss from operations plus the estimated loss from disposal of the component.

**29. (c)** Costs of termination benefits, lease termination, and consolidating facilities or relocating employees related to a disposal activity that involves discontinued operations should be included in the results of discontinued operations.

**30. (b)** The requirement is to determine how a discontinued component's operating losses for the current period should be classified in the financial statements. The "income (loss) from operations" is combined with the loss on disposal.

**31. (a)** Gains or losses from the operation of a discontinued business component realized for the period are combined with the loss of disposal to determine the loss from discontinued operations.

**32. (c)** Discontinued operations should include the gain or loss on disposal plus the results of operations during the period.

**33. (b)** The purpose of reporting comprehensive income is to report a measure of overall enterprise performance by displaying all changes in equity of an enterprise that result from recognized transactions and other economic events of the period other than transactions with owners in their capacity as owners. An enterprise should continue to display an amount for net income with equal prominence to the comprehensive income amount displayed.

**34. (d)** Once unrealized items recorded and reported in the current or prior period are recognized as realized and reported in net income, it is necessary to reverse them out of other

comprehensive income. The reclassification adjustment is to avoid double counting. The reclassification adjustment in this situation is \$15,000 (\$25,000 gain on AFS securities, net of \$10,000 tax).

35. (d) The FASB allows two presentation formats [answer choices (I) and (II)].

36. (d) The accumulated balance of other comprehensive income should be reported as a component of equity, separate from retained earnings and additional paid-in capital.

37. (b) Comprehensive income is defined as the change in equity of a business during a period from transactions of nonowner sources. Stockholders are owners of the corporation or entity, therefore, transactions between the entity and shareholder are not a component of comprehensive income.

38. (d) Assuming the fair value option is not elected, the calculation of holding gains recognized in other comprehensive income is as follows:

	Before tax	Income tax	Net of tax
Year ended 12/31/Y2	\$5,000	\$1,500	\$3,500
Year ended 12/31/Y3	2,500	750	1,750
Total gain	\$7,500	\$2,250	\$5,250

The reclassification adjustment should be shown net of tax, so (\$5,250) is the adjustment amount. \$5,250 had been previously added to other comprehensive income when the gains occurred. The \$5,250 needs to be taken out in order to avoid counting the gains twice. The securities have been sold so the gains are now realized and will be part of net income.

39. (b) The gain for the period is 10 shares times the increase in fair value, which is \$250. This gain of \$2,500 must be shown net of tax, so the holding gain is \$1,750.

40. (a) Comprehensive income is computed as follows:

Net income		77,000
Other comprehensive income net of tax:		
Unrealized gain on securities	15,000	
Less: Reclassification adjustment	(2,500)	
		12,500
Pension liability adjustment	(3,000)	
Other comprehensive income		9,500
Comprehensive income		<u>86,500</u>

Notice that stock warrants outstanding are not included as part of comprehensive income.

41. (d) If \$2,450 (net of tax) is being deducted from other comprehensive income as a reclassification adjustment, \$2,450 must be the amount of unrealized gains (net of tax) that have been recognized in other comprehensive income. The realized gains will then be recognized in income from continuing operations before tax. The gains before tax effects are \$3,500 ( $\$2,450 \div 70\%$ ).

42. (b) Comprehensive income disclosures include the changes during a period of the following components of

other comprehensive income: unrealized gains and losses on available-for-sale investments and foreign currency items, including any reclassification adjustments, and the pension liability adjustment required to recognize the funded status of the plan. Treasury stock is deducted from stockholders' equity and **not** a component of other comprehensive income.

43. (d) Separate EPS calculations are not required for other comprehensive income or comprehensive income.

44. (d) The FASB allows comprehensive income to be shown at the bottom of the income statement as a continuation of net income or in a separate statement beginning with net income. Presenting comprehensive income in the statement of changes in stockholders' equity is not an allowable method.

45. (c) If the fair value option is not elected, held-to-maturity securities are reported at amortized cost. Any decreases or increases in fair value are reported neither in net income nor as part of other comprehensive income. Answers (a) and (b) are incorrect because an adjustment to pension liability to record the funded status of the plan, and subsequent decreases of the fair value of available-for-sale securities that have been previously written down as impaired are included in other comprehensive income. Answer (d) is incorrect because decreases in the fair value of held-to-maturity securities are not part of other comprehensive income.

46. (d) Comprehensive income (net income plus other comprehensive income) should be displayed in a financial statement that has the same prominence as other financial statements. Answer (a) is incorrect because the FASB prefers that comprehensive income be displayed either at the bottom of the income statement, continuing from net income to arrive at a comprehensive income figure (equals net income plus other comprehensive income), or in a separate statement of comprehensive income. Answer (b) is incorrect because components of other comprehensive income may be displayed net of related tax effects or before related tax effects with one amount shown for the aggregate income tax effect. Answer (c) is incorrect because comprehensive income can be displayed in the two methods preferred by the FASB (mentioned above) or in the statement of changes in stockholders' equity.

47. (b) Total retained earnings includes both unappropriated retained earnings and restricted retained earnings. Therefore, before closing entries, total retained earnings is \$1,060,000 (\$900,000 + \$160,000). Before computing year 1 net income, tax expense must be recorded. Earnings (\$6,680,000) less costs and expenses (\$5,180,000) result in pretax income of \$1,500,000. Since the tax rate is 30%, tax expense is \$450,000 ( $30\% \times \$1,500,000$ ). Therefore, an adjustment is necessary to debit **income tax expense** and credit **prepaid taxes** for \$450,000. After the adjustment, net income is \$1,050,000 ( $\$6,680,000 - \$5,180,000 - \$450,000$ ). After closing entries, total retained earnings is \$2,110,000 ( $\$1,060,000 + \$1,050,000$ ).

48. (a) The only liabilities included in the trial balance are billings in excess of costs on long-term contracts (\$700,000) and note payable-noncurrent (\$1,620,000). Only the note is noncurrent. Billings in excess of costs on long-term contracts

is similar to unearned revenue and is always reported as a current liability.

**49. (c)** Current assets listed in the trial balance are cash (\$600,000), accounts receivable (\$3,500,000), cost in excess of billings on long-term contracts (\$1,600,000) and prepaid taxes (\$450,000). However, income tax expense has not yet been recorded. Earnings (\$6,680,000) less costs and expenses (\$5,180,000) result in pretax income of \$1,500,000. Since the tax rate is 30%, tax expense is \$450,000 (30% × \$1,500,000). Therefore, an adjustment is necessary to debit **income tax expense** and credit **prepaid taxes** for \$450,000. Total current assets, after this adjustment, are \$5,700,000.

Cash	\$ 600,000
Accounts receivable	3,500,000
Cost in excess of billings	<u>1,600,000</u>
	<u>\$5,700,000</u>

**50. (a)** Mirr began operations on 1/1/Y1 with the following balance sheet elements:

Assets	=	Liabilities	+	Owners' equity
\$860,000	=	\$110,000	+	\$750,000

During year 1, liabilities increased to \$120,000, and owners' equity increased to \$765,000 [\$750,000 beginning balance + \$18,000 net income (\$82,000 revenues – \$64,000 expenses) – \$3,000 dividends declared]. Therefore, 12/31/Y1 assets must be \$885,000.

Assets	=	Liabilities	+	Owners' equity
Assets	=	\$120,000	+	\$765,000
Assets	=	\$885,000		

**51. (b)** The requirement is to determine the net income for year 1 by analyzing changes in the balance sheet. Recall the accounting equation: Assets – Liabilities = Stockholders' equity. By inserting the changes given into this formula, we find an increase of \$62,000 exists in the entire stockholders' equity section (\$89,000 – \$27,000 = \$62,000). Stockholders' equity is composed of capital stock, additional paid-in capital and retained earnings. Because increases in the other two balances are given that total \$66,000 (\$60,000 + \$6,000), the retained earnings balance must have decreased by \$4,000 (\$66,000 – \$62,000). When dividends are paid, this reduces retained earnings, while Vel Corp. net income increases the balance of retained earnings. For the equation to balance, the changes in retained earnings account must reduce total stockholders' equity by \$4,000. Therefore, if \$13,000 in dividends are paid, which reduce retained earnings, and total retained earnings are to be reduced by \$4,000, then net income, which increases retained earnings, must be \$9,000. This creates the \$4,000 difference needed to make the equation balance (\$89,000 – \$27,000 = \$66,000 – \$4,000). The following shows the analysis of the retained earnings account:

Retained earnings (beg.)	\$ xxx
Net income (plug)	<b>9,000</b>
Dividends	<u>(13,000)</u>
Retained earnings (decrease)	<u>\$(4,000)</u>

**52. (a)** Idle machinery (\$11,200) and cash surrender value of life insurance (\$13,700) are both assets. The allowance for decline in market value of noncurrent marketable equity securities (\$8,400) is a contra asset that is properly included in the asset section of the balance sheet (as a deduction). The only item listed which should **not** be included in the asset section of the balance sheet is the treasury stock (\$24,000). Although the treasury stock account has a debit balance, it is not an asset; instead, it is reported as a contra equity account. Therefore, the \$24,000 must be excluded from the asset section, reducing the net asset amount to \$851,000 (\$875,000 – \$24,000).

**53. (a)** Although the statement of cash flows provides information about liquidity, solvency, and financial flexibility, a potential investor would **primarily** use the balance sheet to assess liquidity and financial flexibility. The balance sheet helps users analyze the company's ability to use current assets to pay current liabilities (liquidity) and the company's ability to alter the amounts and timing of future cash flows to adapt to unexpected needs or to take advantage of opportunities (flexibility).

**54. (c)** Financial statements must include disclosures of material transactions between related parties. Compensation arrangements in the ordinary course of business, however, are specifically excluded from this disclosure requirement. Therefore, only the \$250,000 sale to affiliated enterprises must be disclosed.

**55. (c)** Disclosure of material transactions between related parties is required except for (1) compensation agreements, expense allowances, and other similar items in the ordinary course of business, and (2) transactions which are eliminated in the preparation of consolidated or combined financial statements. The officers' salaries and officers' expenses fall into category (1), while the intercompany sales fall into category (2). Therefore, only the loans to officers (\$125,000 + \$50,000 = \$175,000) are reported as related-party disclosures.

**56. (d)** Disclosure of material transactions between related parties is required except for (1) compensation agreements, expense allowances, and other similar items in the ordinary course of business and (2) transactions eliminated in the preparation of consolidated or combined financial statements.

**57. (b)** Disclosure of any material related-party transactions is required except

1. Compensation agreements, expense allowances, and similar items in the ordinary course of business.
2. Transactions that are eliminated in the preparation of consolidated or combined financial statements.

Since sales of inventory between subsidiary and parent are eliminated in preparing consolidated financial statements, such sales need not be disclosed as a related-party transaction. Nonmonetary exchanges by affiliates are not specifically exempted from disclosure, and therefore must be disclosed as related-party transactions. Compensation arrangements, expense allowances, and similar items in the ordinary course of business need not be disclosed as related-party transactions. However, in this case the allowances are in excess of normal business practice and therefore must be disclosed. Surety

and guaranty agreements between related parties are not specifically exempted from disclosure and therefore must be disclosed as related-party transactions.

**58. (c)** Disclosures of material transactions shall include (1) nature of relationship(s), (2) description of transaction(s), including those assigned zero or nominal amounts, (3) dollar amounts of transactions for each income statement period and effect of any change in method of establishing terms, and (4) amounts due to/from related parties, including terms and manner of settlement.

**59. (a)** The users of the information are the focus of financial reporting. GAAP requires disclosures in the notes to facilitate the users' understanding of the financial statements. Answer (b) is incorrect because the financial statements should be properly presented in accordance with GAAP; thus no improper presentation should exist. Answer (c) is incorrect because the totals of the financial statements should include all items; thus, no items would be excluded. Answer (d) is incorrect because management's responses to the auditor's comments would be contained in the management letter, which is a separate report typically presented to the audit committee or the board of directors.

**60. (a)** The requirement is to determine which information should be included in the summary of significant accounting policies. Disclosure of accounting policies should identify and describe the accounting principles followed by the reporting entity and methods of applying those principles. Answer (a) is correct because the method of recording and depreciating assets is an example of such a required disclosure. Answers (b) and (c) are incorrect because both represent detail presented elsewhere in the financial statements. Answer (d) is incorrect because it is an estimate of earnings rather than an accounting policy.

**61. (c)** Disclosure of accounting policies should identify and describe the accounting principles followed by the reporting entity and methods of applying those principles. The criteria for determining which investments are treated as cash equivalents is an example of how the entity applies accounting principles. These disclosures should not duplicate details presented elsewhere as part of the financial statements. Answers (a), (b), and (d) are not disclosures of accounting policies, and also would be presented elsewhere in the financial statements.

**62. (c)** This is a recognized subsequent event in the financial statement because Swift records an estimate for warranty liability. Prior to issuing the financial statements, Swift must make an adjustment for warranty liability for the product recall. Therefore, warranty liability should be \$68,000 on the year 1 balance sheet.

**63. (a)** This is an unrecognized subsequent event that did not exist as of the balance sheet date of December 31, year 1. Therefore, there should be no adjustment of the year 1 financial statements. However, since the inventory loss is material in amount and the loss is uninsured, to prevent the financial statements from being misleading, Colter should disclose the loss in a footnote to the year 1 financial statements.

**64. (d)** A loss for a recognized subsequent event should be reported in the current year financial statements. Therefore, answer (d) is correct. Answer (a) is incorrect because a loss would not be recognized in the current year for an unrecognized subsequent event. However, a footnote disclosure would be required for the unrecognized subsequent event if the event is material and the financial statements would be misleading if the event were not disclosed. Answer (b) is incorrect because gains are not recognized until realized. Answer (c) is incorrect because recognized subsequent events result in a loss recognized in the current year and a corresponding adjustment to record the liability.

**65. (b)** The definition of fair value is the price that would be received to sell an asset in an orderly transaction between market participants at the measurement date under current market conditions. Answer (a) is incorrect because it is an entry price, not an exit price. Answer (c) is incorrect because assets that require to be revalued to fair value should be based on an exit value, not an adjusted historic cost. Answer (d) is incorrect because the price paid to acquire the asset is an entry price, not an exit price.

**66. (a)** The principal market is the market in which the reporting entity would sell the asset or transfer the liability with the greatest volume and level of activity for the asset or liability. Answers (b) and (c) are incorrect because they do not meet the definition of principal market. Answer (d) is incorrect because it describes the most advantageous market.

**67. (d)** If location is an attribute of the asset, the price in the principal market should be adjusted for costs to transport the asset to its principal or most advantageous market. Answers (a) and (b) are incorrect because prices are not adjusted for transaction costs such as selling costs. Answer (c) is incorrect because fair values are not based upon entry prices to the market.

**68. (c)** Market participants are buyers and sellers in the principal market or most advantageous market for the asset or liability. Market participants should be independent, knowledgeable, able to transact for the asset, and willing to transact (i.e., motivated but not compelled to do so). Answer (a) is incorrect because market participants should not be compelled to sell. Answer (b) is incorrect because it is not an independent, unrelated party. Answer (d) is incorrect because the dealer is establishing a new market and is not in the principal market that exists for the asset.

**69. (d)** A fair value measurement assumes the highest and best use of the asset that is physically possible, legally permissible, and financially feasible. Answers (a) and (b) are incorrect because to determine the valuation premise, the asset can be classified as either in-use or in-exchange. Answer (c) is incorrect because for valuation purposes, the highest and best use would maximize the value of the asset.

**70. (a)** The fair value at initial recognition is the transaction price that represents the price paid to acquire the asset (an entry price). Answer (b) is incorrect because transaction costs are not included. Answer (c) is incorrect because it is an exit price. Answer (d) is incorrect because it is not a fair value measure.

- 71. (b)** There are three approaches to valuation techniques for fair value: the market approach, the income approach, and the cost approach. There is no technique called the residual value approach.
- 72. (a)** The income approach uses valuation techniques to convert future amounts to a single present value amount. Therefore, Black-Scholes-Merton, binomial models, or discounted cash flow models are examples of the income approach. Answers (b) and (c) are incorrect because these approaches do not use present value techniques. Answer (d) is incorrect because there is no exit value approach.
- 73. (b)** The market approach valuation technique uses prices and other relevant information generated by market transactions involving identical or comparable assets or liabilities. Answer (a) is incorrect because it refers to the income approach. Answer (c) is incorrect because it refers to the cost approach. Answer (d) is incorrect because it is not a technique for any of the permissible valuation techniques.
- 74. (c)** A change in valuation technique used to measure fair value should be reported as a change in accounting estimate. The change is reported on a prospective basis; however, the disclosures for change in accounting estimate are not required for a change in valuation technique. Answers (a), (b), and (d) are incorrect.
- 75. (a)** The fair value hierarchy prioritizes the inputs to valuation techniques into three levels: Level 1, Level 2, and Level 3. The highest priority is given to Level 1 inputs, which are quoted prices in active markets for identical assets and liabilities. Answers (b) and (c) are incorrect, because these levels are lower priority than Level 1. Answer (d) is incorrect because there is no Level 4 input.
- 76. (b)** The bank prime rate and the default rates are both observable inputs. A financial forecast is developed by an entity and is an unobservable input or Level 3 input. Therefore, answers (a), (c), and (d) are incorrect.
- 77. (c)** The Codification encourages, but does not require, business enterprises to disclose **supplementary information** on the effects of changing prices. The statement presents requirements to be followed by enterprises that voluntarily elect to disclose this information. Answers (a) and (b) are incorrect because the information is not reported in the body of the financial statements or in the notes to the financial statements. Answer (d) is incorrect because management's report to shareholders identifies management's responsibilities, including responsibilities for the internal control system, and would not include information about changing prices.
- 78. (c)** The requirement is to determine the amounts to be reported for three balance sheet accounts in a supplementary **constant dollar** balance sheet. In a constant dollar balance sheet, **nonmonetary** items are restated to the current price level, while monetary items are **not** restated because they are already stated in current dollars. The investment in bonds and the long-term debt are monetary items since their amounts are fixed by contract in terms of number of dollars. Therefore, these items are not restated and are reported at \$60,000 and \$80,000, respectively. The land, however, is a nonmonetary item and its cost (\$120,000) must be restated to current dollars by using the TO/FROM ratio (110/100), resulting in an adjusted amount of \$132,000 ( $\$120,000 \times 110/100$ ).
- 79. (b)** The account "loans to employees" is a monetary asset account since its payment amount is fixed at some point in the future. Conversely, merchandise inventory is considered a nonmonetary asset account since its value will change based on relative price levels in the future. The total value of monetary assets is the balance of the loans to employees account, or \$20,000.
- 80. (a)** The increase in current cost (nominal dollars) of \$15,000 is the **total** increase in current cost, including any increase caused by inflation. The effect of changes in the general price level is **not** separated from the effect of changes in specific value. The increase in current cost (constant dollars) of \$12,000 is the increase in current cost after eliminating any increase caused by inflation. Therefore, the inflation component of the increase in current cost of inventories is \$3,000 ( $\$15,000 - \$12,000$ ).
- 81. (d)** The requirement is to determine which item is classified as nonmonetary when computing the purchasing power gain or loss on net monetary items. A monetary item is one that is fixed or determinable without reference to future prices. Accumulated depreciation is not a monetary item. Advances to unconsolidated subsidiaries, allowance for doubtful accounts, and unamortized premium on bonds payable are all monetary items.
- 82. (b)** A purchasing power gain or loss is the net gain or loss determined by restating in units of constant purchasing power the opening and closing balances of, and transactions in, **monetary** assets and liabilities. During a period of rising prices, monetary liabilities give rise to purchasing power gains because they will be settled with cash which can be used to purchase relatively fewer goods or services at a future time.
- 83. (d)** Current cost accounting is a method of valuing and reporting assets, liabilities, revenues, and expenses at their current cost at the balance sheet date or at the date of their use or sale. A holding gain is recorded as an increase in an item's value. At December 31, year 1, Vend Co. is holding merchandise which is currently valued at \$10 per unit (replacement cost), while the original recorded value of the merchandise was \$8 per unit (purchase price). Therefore, the holding gain is \$2 per unit.
- 84. (c)** The requirement is to calculate the amount of current cost depreciation expense which would appear in supplementary current cost financial statements. Depreciation is to be measured based on the **average** current cost of the asset during the period of use. The average current cost of this machine during year 1 is \$120,000 [ $(\$115,000 + \$125,000) \div 2$ ]. Therefore, year 1 depreciation expense is \$24,000 ( $\$120,000 \div 5\text{-year useful life}$ ).
- 85. (a)** Current cost for inventories and equipment is measured at the lower of current cost or recoverable amount. For equipment, recoverable amount (\$95,000) is lower than

current cost; for inventory, current cost (\$80,000) is lower than recoverable amount. Therefore, the total amount to be reported for these assets is \$175,000 (\$95,000 + \$80,000).

**86. (a)** Increases or decreases in the current cost of inventory result from the difference between the measures of assets at their entry dates (beginning of year or purchase date) and measures of assets at their exit dates (end of year or date of use/sale). Based on this definition, holding gains would be reported both when inventory is sold during the year (realized gains), and when inventory is held at the end of the year (unrealized gains).

**87. (a)** The current cost of goods sold is computed by multiplying the average cost of units produced or purchased during the year times the number of units sold.

**88. (d)** The market in which an entity conducts its operations, the available sources of supply of materials used in operations of an entity, and the volume of business transacted with a certain contributor are all examples of concentrations that create vulnerabilities that are required to be disclosed.

**89. (b)** The potential impact of estimates about values of assets and liabilities when it is reasonably possible that the estimate will change in the near future is a required disclosure regarding significant risks and uncertainties. Factors causing an estimate to be sensitive is not a required disclosure, only recommended. The potential impact of estimates about values of assets and liabilities when it is remotely possible that the estimate will change in the near future is not a required disclosure. It is only a required disclosure if it is reasonably possible that the estimates will change in the near future. Only a description of operations outside the home country is a required disclosure.

**90. (c)** Other than generally accepted accounting principles, the only other bases which may be used to prepare financial statements in conformity with a comprehensive basis of accounting are the **cash basis** and a **basis of accounting used to file an income tax return**.

**91. (d)** When financial statements are prepared using an income tax basis, two accounting methods can be used: (1) modified cash basis—hybrid method of IRS and (2) accrual basis—IRS. The modified cash basis reflects the use of accrual basis for inventories, cost of goods sold, sales, and depreciation, if these are significant. The accrual basis uses accruals and deferrals with several exceptions (e.g., prepaid income, warranty expense). When financial statements are prepared on an income tax basis, the financial statements should not simply repeat items and amounts reported in the tax return. Thus, items such as nontaxable municipal interest and the nondeductible portion of travel and entertainment expense should be fully reflected in the income statement on the basis used for tax purposes, with footnote disclosure of the differences between the amounts reported in the income statements and tax return.

**92. (a)** In financial statements prepared on the income tax basis, the nondeductible portion of meals and entertainment expense should be included with the deductible portion as a total amount of travel and entertainment expense. Additionally,

the nondeductible portion should be footnoted. Answer (a) is the best answer among the alternatives given, although it does not indicate that a footnote is required.

**93. (c)** The requirement is to identify the statement that best describes appropriate modifications in cash basis financial statements. Answer (c) is correct because the modifications should be the same as GAAP and not illogical. Answer (a) is incorrect because modified cash basis financial statements may have substantial modifications from GAAP. Answer (b) is incorrect because the modifications are not required to be the same as those required by tax law. Answer (d) is incorrect because modifications are allowed.

**94. (c)** The liquidation basis of accounting is to be used when liquidation is imminent.

**95. (b)** The responsible party is not the only limited user. Third parties with whom the responsible party is negotiating directly are also limited users. Answer (a) is incorrect because prospective financial information may be prepared for general or limited use. Answer (c) is incorrect because it is true that assumptions not necessarily expected to occur may be included in the financial projection. Answer (d) is incorrect because the financial projection may be expressed as a range of dollars.

**96. (d)** Prospective financial information is defined as any financial information about the future.

**97. (c)** Financial forecasts and projections must be prepared in accordance with GAAP, with the plans of the entity, and with due professional care in order to achieve a reasonably objective basis.

**98. (a)** Prospective financial statements include information on the purpose of the statements, assumptions, and significant accounting policies.

**99. (c)** The requirement is to identify the form used to file as an annual report with the SEC. Answer (c) is correct because Form 10-K is the title of the annual report required to be filed annually by issuer companies. Answer (a) is incorrect because this is the title of the quarterly financial report. Answer (b) is incorrect because Form 8-K is the information report that may be filed any time during the year. Answer (d) is incorrect because a Form S-1 is an initial registration form for securities under the Securities Act of 1933.

**100. (d)** The requirement is to identify the content of the SEC Form 10-Q. Answer (d) is correct because the Form 10-Q presents reviewed quarterly information and other information about the company. Answer (a) is incorrect because the information is reviewed, not audited. Answer (b) is incorrect because this describes the Form 10-K. Answer (c) is incorrect because this describes the Form 8-K.

**101. (a)** The requirement is to identify the form used to file as a quarterly report with the SEC. Answer (a) is correct because Form 10-Q is the title of the quarterly report required to be filed by issuer companies.

**102. (c)** The requirement is to identify the balance sheet required in the Form 10-Q. Answer (c) is correct because the SEC requires that a Form 10-Q contain an interim balance

sheet as of the end of the most recent fiscal quarter and a balance sheet as of the end of the preceding fiscal year. An interim balance sheet for the fiscal quarter of the preceding year does not need to be provided unless it is necessary for understanding the impact of seasonal fluctuations.

**103. (b)** The requirement is to identify the deadline for filing a Form 10-K for an accelerated filer. Answer (b) is correct because the maximum number of days for an accelerated filer to file a 10-K with the SEC is 75 days after the company's fiscal year-end. However, a large accelerated filer with \$700 million of public float has a deadline of 60 days, and nonaccelerated filers have a deadline of 90 days.

**104. (c)** Answer (c) is correct because SEC's regulation S-X describes the form and content of financial statements to be filed with the SEC. Answer (a) is incorrect because Regulation S-K describes the requirements for information and forms required by Regulation S-X. Answer (b) is incorrect because Regulation AB describes the reporting requirements for asset-backed securities. Answer (d) is incorrect because Regulation FD mandates that publicly traded companies disclose material information to all investors simultaneously.

**105. (b)** Answer (b) is correct because Form 8-K discloses information about material events for US Companies. Answer (a) is incorrect because an S-1 is a registration statement for US Companies. Answer (c) is incorrect because Form 10-K is an annual report for US Companies. Answer (d) is incorrect because Form 10-Q is a quarterly report.

**106. (c)** The requirement is to identify the financial statements of a trust. A statement of assets and liabilities, a statement of operations, and a statement of changes in net assets are generally presented for a trust.

**107. (d)** The requirement is to identify the accounting and measurement bases for a trust. The financial statements of a trust should be presented on the accrual basis and the assets are generally measured at their fair values.

**108. (b)** The requirement is to identify the circumstances in which Galaxy may present the note as a noncurrent liability. Answer (b) is correct because IFRS requires that Galaxy must have executed an agreement to refinance at the balance sheet date in order to classify the debt as a noncurrent liability. Inasmuch as no agreement existed at the balance sheet date, the note payable must be classified as a current liability. Therefore, answers (a), (c), and (d) are incorrect.

**109. (b)** The requirement is to identify the item required to be disclosed on the income statement. The correct answer is (b) because the income statement may be prepared by presenting expenses either by nature or by function. The minimum required disclosures on the income statement include income, finance costs, share of profits and losses using the equity

method, tax expense, discontinued operations, profit or loss, noncontrolling interests in profits and losses, and the net profit (loss) attributable to equity holders of the parent. Therefore, answers (a), (c), and (d) are incorrect.

**110. (c)** The requirement is to identify the item that may not be disclosed on the income statement under IFRS. Answer (c) is correct because gain or loss from extraordinary items is not allowed on an income statement prepared using IFRS. Answers (a), (b), and (d) are items that are disclosed on the income statement.

**111. (b)** The requirement is to identify where the finance costs are presented in the statement of cash flows. Answer (b) is correct because under IFRS finance costs (interest expense) may be reported in either the operating or financing section of the statement of cash flows. However, once it is disclosed in a particular section, it must be reported on a consistent basis. Therefore, answers (a), (c), and (d), are incorrect.

**112. (d)** The requirement is to identify how the transaction should be reported on the statement of cash flows. Answer (d) is correct because this transaction did not involve an exchange of cash; therefore, it is not included on the statement of cash flows. IFRS requires that significant noncash transactions be reported in the notes to the financial statements. (Note that for US GAAP, if there are only a few significant noncash transactions, they may be reported at the bottom of the statement of cash flows, or they may be reported in a separate schedule in the notes to the financial statements.)

**113. (a)** The requirement is to identify how cash advances and loans from bank overdrafts should be reported on the statement of cash flows. Answer (a) is correct because IFRS requires cash advances and loans from bank overdrafts to be classified as operating activities.

**114. (b)** The requirement is to identify the acceptable methods for presenting other comprehensive income. Answer (b) is correct because IFRS provides that comprehensive income may be presented in either one statement or in two statements. (US GAAP allows the presentation in all three ways.)

**115. (a)** The requirement is to identify the true statement about IFRS requirements for financial statements. Answer (a) is correct because IFRS requires the presentation of prior year financial statements for comparative purposes.

**116. (a)** The requirement is to identify the manner in which operating expenses may be classified on the income statement under IFRS. Answer (a) is correct because they may be classified by nature or function.

**117. (a)** The requirement is to identify how the statement of cash flows may be presented. Answer (a) is correct because the statement may be presented on the direct or the indirect basis.

## Simulations

### Task-Based Simulation 1

Concepts	Authoritative Literature	Help
----------	--------------------------	------

#### Situation

Lim Corporation is preparing its financial statements and has given the project to its new entry-level accountant, Sam. Indicate whether each of the following statements made by Sam is True or False.

	True	False
1. The gain or loss from discontinued operations is placed in a separate category under other income or loss.	<input type="radio"/>	<input type="radio"/>
2. The gain or loss from infrequent or unusual items is given extraordinary treatment and disclosed on the income statement after discontinued operations.	<input type="radio"/>	<input type="radio"/>
3. Exit and disposal activities are classified as discontinued operations.	<input type="radio"/>	<input type="radio"/>
4. A component of a company can be classified as discontinued in the first period that it meets the criteria as being held for sale.	<input type="radio"/>	<input type="radio"/>
5. A correction of an error is included in the cumulative effect of change in accounting principle on the income statement.	<input type="radio"/>	<input type="radio"/>
6. Other comprehensive income may be presented at the bottom of the income statement.	<input type="radio"/>	<input type="radio"/>
7. Separate earnings per share amounts must be presented for both other comprehensive income and comprehensive income.	<input type="radio"/>	<input type="radio"/>
8. Prospective financial information includes information on the purpose of the statements, assumptions, and significant accounting policies.	<input type="radio"/>	<input type="radio"/>

### Task-Based Simulation 2

Financial Statement Classification	Authoritative Literature	Help
------------------------------------	--------------------------	------

The outline presented below represents the various classifications suggested by the chief accountant for the balance sheet.

Assets	Liabilities	Owner's equity	Other
A. Current	G. Current	J. Preferred stock	N. Items excluded from the balance sheet
B. Investments	H. Long-term	K. Common stock	X. Contra valuation account
C. Plant and equipment	I. Other liabilities	L. Paid-in capital excess of par	
D. Intangibles		M. Retained earnings	
E. Deferred charges			
F. Other assets			

Items 1 through 18 represent accounts of the Craven Corporation. Determine how each account would be classified from the list above. If the account is a contra or valuation account, mark "X" before the letter. For example: "Allowance for Doubtful Accounts" would be "X-A." An answer may be selected once, more than once, or not at all.

	Assets (A-F)	Liabilities (G, H, I)	Owner's equity (J, K, L, M)	Other (N or X)
1. Dividend payable (on Craven's preferred stock).				
2. Plant construction in progress by the company.				
3. Factory building (retired from use and held for sale).				
4. Land (held for possible future building site).				

- |     | Assets<br>(A-F) | Liabilities<br>(G, H, I) | Owner's equity<br>(J, K, L, M) | Other<br>(N or X) |
|-----|-----------------|--------------------------|--------------------------------|-------------------|
| 5.  |                 |                          |                                |                   |
| 6.  |                 |                          |                                |                   |
| 7.  |                 |                          |                                |                   |
| 8.  |                 |                          |                                |                   |
| 9.  |                 |                          |                                |                   |
| 10. |                 |                          |                                |                   |
| 11. |                 |                          |                                |                   |
| 12. |                 |                          |                                |                   |
| 13. |                 |                          |                                |                   |

<b>Balance Sheet</b>		
	<b>Authoritative Literature</b>	<b>Help</b>

#### Situation

You have been asked to assist the chief accountant of the Stephen King Corporation in the preparation of a balance sheet. Presented below is the balance sheet of Stephen King Corporation for the current year, year 2.

*Stephen King Corporation*  
**BALANCE SHEET**  
*December 31, Year 2*

Current assets		\$435,000
Investments		640,000
Property, plant, and equipment		1,720,000
Intangible assets		<u>305,000</u>
		<u>\$3,100,000</u>
Current liabilities	\$330,000	
Long-term liabilities	1,000,000	
Stockholders' equity	<u>1,770,000</u>	
	<u>\$3,100,000</u>	

Consider the following information:

- The current assets section includes: cash \$100,000, accounts receivable \$170,000 less \$10,000 for allowance for doubtful accounts, inventories \$180,000, and unearned revenue \$5,000. The cash balance is composed of \$114,000, less a bank overdraft of \$14,000. Inventories are stated on the lower of FIFO cost or market.
- The investments section includes: the cash surrender value of a life insurance contract \$40,000; investment in common stock, short-term (trading) \$80,000 and long-term (available-for-sale) \$270,000; and bond sinking fund \$250,000. The cost and fair value of investments in common stock are the same.

3. Property, plant, and equipment includes: buildings \$1,040,000 less accumulated depreciation \$360,000; equipment \$450,000 less accumulated depreciation \$180,000; land \$500,000; and land held for future use \$270,000.
4. Intangible assets include: a franchise \$165,000; goodwill \$100,000; and discount on bonds payable \$40,000.
5. Current liabilities include: accounts payable \$90,000; notes payable—short term \$80,000 and long-term \$120,000; and taxes payable \$40,000.
6. Long-term liabilities are composed solely of 10% bonds payable due in year 11.
7. Stockholders' equity has: preferred stock, no par value, authorized 200,000 shares, issued 70,000 shares for \$450,000; and common stock, \$1.00 par value, authorized 400,000 shares, issued 100,000 shares at an average price of \$10. In addition, the corporation has retained earnings of \$320,000.
8. The company's management does **not** elect to use the fair value option for any of its financial assets or liabilities.

Complete the corrected balance sheet. To make it a more realistic exam experience use Excel.

<b>Journal Entries</b>	<b>Authoritative Literature</b>	<b>Help</b>

**Situation**

Hillside had the following selected account balances as of December 31, year 1.

Accounts receivable	\$250,000
Notes receivable	75,000
Prepaid rent	168,000
Supplies	60,000
Inventory	420,000
Equipment (historical cost)	640,000
Accounts payable	176,000
Salaries payable	15,000
Accumulated depreciation	174,000

The following information was received from Hillside's accountant. Adjusting entries have not yet been made.

1. It is estimated that \$16,000 of accounts will not be collectible. A provision for uncollectible accounts has never been made by Hillside.
2. Supplies remaining at the end of the year were \$37,000.
3. Equipment is depreciated over 20 years with a \$60,000 salvage value.
4. Accrued salaries at 12/31/Y1 were \$37,500.
5. The note receivable was signed by the customer on November 1, year 1. It is a 6-month note with an interest rate of 12%, with the principle and interest paid at maturity.
6. Rent was paid on August 1, year 1, for 24 months and recorded in a prepaid rent account.
7. Hillside does not elect to use the fair value option for any of its financial assets or liabilities.

Prepare the adjusting journal entries necessary for each item. If no entry is necessary, write "no entry."

Classification/ Disclosures		
	Authoritative Literature	Help

Griffin Co. is in the process of preparing its financial statements for the year ended December 31, year 4.

Items 1 through 6 represent various transactions that occurred during year 4. The following two responses are required for each item:

Compute the amount of gain, loss, or adjustment to be reported in Griffin’s year 4 financial statements. Disregard income taxes. On the CPA exam, a list of numeric answer choices would be provided to select from.

Select from the list below the financial statement category in which the gain, loss, or adjustment should be presented. A category may be used once, more than once, or not at all.

**Financial Statement Categories**

- A. Income from continuing operations.
- B. Extraordinary item.
- C. Cumulative effect of change in accounting principle.
- D. Prior period adjustment to beginning retained earnings.
- E. Separate component of other comprehensive income.

- |  | Amount |  | (A)                   | (B)                   | (C)                   | (D)                   | (E)                   |
|--|--------|--|-----------------------|-----------------------|-----------------------|-----------------------|-----------------------|
| <p>1. On June 30, year 4, after paying the semiannual interest due and recording amortization of bond discount, Griffin redeemed its fifteen-year, 8% \$1,000,000 par bonds at 102. The bonds, which had a carrying amount of \$940,000 on January 1, year 4, had originally been issued to yield 10%. Griffin uses the effective interest method of amortization, and had paid interest and recorded amortization on June 30. Compute the amount of gain or loss on redemption of the bonds and select the proper financial statement category.</p> |        |  | <input type="radio"/> | <input type="radio"/> | <input type="radio"/> | <input type="radio"/> | <input type="radio"/> |
| <p>2. As of January 1, year 4, Griffin decided to change the method of computing depreciation on its sole piece of equipment from the sum-of-the-years’ digits method to the straight-line method. The equipment, acquired in January year 1 for \$520,000, had an estimated life of five years and a salvage value of \$20,000. Compute the amount of depreciation expense for year 4 and select the proper financial statement category.</p>   |        |  | <input type="radio"/> | <input type="radio"/> | <input type="radio"/> | <input type="radio"/> | <input type="radio"/> |

- |  |               |            |            |            |            |            |
|--|---------------|------------|------------|------------|------------|------------|
|  | <b>Amount</b> | <b>(A)</b> | <b>(B)</b> | <b>(C)</b> | <b>(D)</b> | <b>(E)</b> |
|--|---------------|------------|------------|------------|------------|------------|
3. In October year 4, Griffin paid \$375,000 to a former employee to settle a lawsuit out of court. The lawsuit had been filed in year 3, and at December 31, year 3, Griffin recorded a liability from the lawsuit based on legal counsel's estimate that the loss from the lawsuit would be between \$250,000 and \$750,000. Compute the amount of gain or loss from settlement of the lawsuit and select the proper financial statement category.
 

	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>
--	-----------------------	-----------------------	-----------------------	-----------------------	-----------------------
  4. In November year 4, Griffin purchased two marketable securities, I and II, which it bought and held principally to sell in the near term by February 28, year 5. Relevant data is as follows:

	Cost	Fair value						
		12/31/Y4	2/28/Y5		<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>
<b>I</b>	\$125,000	\$145,000	\$155,000		<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>
<b>II</b>	235,000	205,000	230,000		<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>

Compute the amount of holding gain or loss at December 31, year 4, and select the proper financial statement category, assuming Griffin classifies the securities as trading securities.

5. During year 4, Griffin received \$1,000,000 from its insurance company to cover losses suffered during a hurricane. This was the first hurricane ever to strike in Griffin's area. The hurricane destroyed a warehouse with a carrying amount of \$470,000, containing equipment with a carrying amount of \$250,000, and inventory with a carrying amount of \$535,000 and a fair value of \$600,000. Compute the amount of gain or loss from the financial statement category.
 

	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>
--	-----------------------	-----------------------	-----------------------	-----------------------	-----------------------
6. At December 31, year 4, Griffin prepared the following worksheet summarizing the translation of its wholly owned foreign subsidiary's financial statements into dollars. Griffin purchased the foreign subsidiary for \$324,000 on January 2, year 4. On that date, the carrying amounts of the subsidiary's assets and liabilities equaled their fair values.

	Foreign currency amounts	Applicable exchange rates	Dollars
Net assets January 2, year 4 (date of purchase)	720,000	\$.45	\$324,000
Net income, year 4	<u>250,000</u>	.42	<u>105,000</u>
Net assets at December 31, year 4	<u>970,000</u>		<u>\$429,000</u>
Net assets at December 31, year 4	<u>970,000</u>	.40	<u>\$388,000</u>

Compute the amount of the foreign currency translation adjustment and select the proper financial statements category.

#### Situation

Presented below is information related to American Horse Company for year 2.

Retained earnings balance, January 1, year 2	\$980,000
Sales for the year	25,000,000
Cost of goods sold	17,000,000
Interest revenue	70,000

Selling and administrative expenses	4,700,000
Write-off of goodwill (not tax deductible)	820,000
Income taxes for year 2	905,000
Gain on the sale of investments (normal recurring)	110,000
Loss due to flood damage—extraordinary item (net of tax)	390,000
Loss on the disposition of the wholesale division	615,000
Loss on operations of the wholesale division	200,000
Income tax benefit from discontinued wholesale division	285,000
Dividends declared on common stock	250,000
Dividends declared on preferred stock	70,000

American Horse Company decided to discontinue its entire wholesale operations and to retain its manufacturing operations. On September 15, American Horse sold the wholesale operations to Rogers Company. During year 2, there were 300,000 shares of common stock outstanding all year.

Prepare a multistep income statement.

<i>American Horse Company</i> <b>INCOME STATEMENT</b> <i>For the Year Ended December 31, Year 2</i>		
Sales		\$25,000,000
Net income		
Earnings per share

Financial Statement Classification		
	Authoritative Literature	Help

Select from the list of financial statement categories below the category in which the item should be presented. A financial statement category may be selected once, more than once, or not at all. Assume management does not elect to use the fair value option for any financial assets or liabilities.

#### Financial Statement Categories

- Income from continuing operations, with **no** separate disclosure.
- Income from continuing operations, with separate disclosure (either on the face of statement or in the notes).
- Other comprehensive income for the period.
- Extraordinary items.
- Separate component of stockholders' equity.
- None of the above categories include this item.

Item	(A)	(B)	(C)	(D)	(E)	(F)
1. An increase in the unrealized excess of cost over market value of marketable equity securities classified as trading-type securities.	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>
2. The accumulated amount of the unrealized excess of cost over market value of available-for-sale marketable equity securities.	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>
3. Income from operations of a discontinued component in the component's disposal year.	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>
4. A gain on remeasuring a foreign subsidiary's financial statements from the local currency into the functional currency.	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>
5. A loss on translating a foreign subsidiary's financial statements from the functional local currency into the reporting currency during this period.	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>
6. A loss caused by a major earthquake in an area previously considered to be subject to only minor tremors.	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>
7. The probable receipt of \$1,000,000 from a pending lawsuit.	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>
8. The purchase of research and development services. There were no other research and development activities.	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>

Calculate Net Income and Earnings Per Share		
	Authoritative Literature	Help

**Situation**

Rap Corp. has 100,000 shares of common stock outstanding. In year 2, the company reports income from continuing operations before taxes of \$1,210,000.

Additional transactions **not** considered in the \$1,210,000 are as follows:

1. In year 2, Rap Corp. sold equipment for \$40,000. The machine had originally cost \$80,000 and had accumulated depreciation of \$36,000. The gain or loss is considered ordinary.
2. The company discontinued operations of one of its subsidiaries during the current year at a loss of \$190,000 before taxes. Assume that this transaction meets the criteria for discontinued operations. The loss of operations of the discontinued subsidiary was \$90,000 before taxes; the loss from disposal of the subsidiary was \$100,000 before taxes.
3. In year 2, the company reviewed its accounts receivable and determined that \$26,000 of accounts receivable that had been carried for years appeared unlikely to be collected.
4. An internal audit discovered that amortization of intangible assets was understated by \$35,000 (net of tax) in a prior period. The amount was charged against retained earnings.
5. The company sold its only investment in common stock during the year at a gain of \$145,000. The gain is taxed at a total effective rate of 40%. Assume that the transaction meets the requirements of an extraordinary item.

Complete the table below for the calculation of net income and earnings per share. Assume the income tax rate is 38% for income from continuing operations.

### *Explanations*

1. **(F)** Discontinued operations are placed in a separate category after income from continuing operations and before extraordinary items.
2. **(F)** An item must be **both** infrequent and unusual to be treated as an extraordinary item.
3. **(F)** Exit and disposal activities that are not in connection with a component of the entity that qualifies for discontinued operations or extraordinary treatment should be reported as unusual or infrequent income/loss in income from continuing operations before income taxes.
4. **(T)** A component must be classified as discontinued when it meets the criteria.
5. **(F)** A correction of an error requires restatement of the financial statements.
6. **(T)** Flexibility is allowed for presentation.
7. **(F)** Separate EPS amounts are only required for gains/losses from continuing operations, discontinued operations, extraordinary items, and cumulative effect of accounting changes.
8. **(T)** The notes to prospective financial statements must include those disclosures.

## Task-Based Simulation 2

Financial Statement Classification	Authoritative Literature	Help

	Assets (A–F)	Liabilities (G, H, I)	Owner's equity (J, K, L, M)	Other (N or X)
1. Dividend payable (on Craven's preferred stock).		G		
2. Plant construction in progress by the company.	C			
3. Factory building (retired from use and held for sale).	F			
4. Land (held for possible future building site).	B			
5. Merchandise inventory (held by Craven Corporation on consignment).				N
6. Stock dividend distributable (in common stock to common stockholders and to be issued at par).			K	
7. Office supplies inventory.	A			
8. Sinking fund cash (First National Bank, Trustee).	B			
9. Installment sales accounts receivable (average collection period eighteen months). All sales are installment sales.	A			
10. Temporary decline in inventory value.				N
11. Advances to officers (indefinite repayment date).	F			
12. Estimated warranty costs. The warranty costs are for a one-year warranty on parts and labor.		G		
13. Inventory of small tools used in the business.	C			
14. Treasury stock under par value method.				X-K
15. Common stock subscribed (Craven Corporation's stock).			K	
16. Convertible bonds.		H		
17. Securities held as collateral.				N
18. Bank overdraft (only account with bank).		G		

*Explanations*

- (G) When a corporation declares a cash or property dividend, the amount to be paid becomes a liability of the corporation. The dividends payable amount would be classified as a current liability on the balance sheet. It is important to note that dividends payable represent the amount distributed to stockholders as a return on their investment. Dividends are not expenses.
- (C) When an item of property, plant, or equipment is being constructed by the company that intends to use it, all of the relevant costs related to the construction should be included in the asset. The asset would be classified as plant and equipment.
- (F) A factory building that has been retired from use and held for sale should be classified as an **other asset** rather than as property, plant and equipment. The property, plant and equipment account should include only those tangible assets that are being used in operations.
- (B) Land that is held for speculative or investment purposes should be classified as an investment rather than as property, plant, and equipment. The property, plant, and equipment account should represent only those assets being used in current operations.
- (N) Consigned inventory is excluded from the balance sheet because it is not owned by Craven. Consigned inventory represents an arrangement whereby the owner of the goods transfers physical possession to an agent (Craven). The agent (consignee) will attempt to sell the goods on the owner's behalf. The inventory remains an asset of its owner.
- (K) A stock dividend distributable represents a dividend to be distributed to shareholders in the form of additional shares of the corporation's stock. Each shareholder will receive a proportional share of additional stock. The declaration of a stock dividend does not result in a liability, as it does not result in any of the corporation's assets being paid. Thus, a stock dividend distributable would be classified as an addition in the stockholders' equity section in the common stock account.
- (A) Current assets represent cash or other assets that are expected to be used within the operating cycle. Office supplies inventory represents an asset that could be expected to be used within the operating cycle.
- (B) Generally, a fund is a group of assets set aside for a future nonoperating purpose. A sinking fund contains assets to be used in the future to retire bonds. These assets are generally invested while waiting to be used and are noncurrent.

- 9. (A)** An installment sales accounts receivable results when the corporation makes a sale to a customer and does not receive payment in full on the date of sale. Since this company normally sells on the installment basis, its operating cycle becomes eighteen months. Its receivables are current assets because their average life falls within the operating cycle.
- 10. (N)** Temporary decline in inventory value is a loss and appears on the income statement.
- 11. (F)** Advances to officers are considered nontrade receivables. These types of receivables should be reported separately on the balance sheet as other assets.
- 12. (G)** A warranty is a guarantee made by the seller to the purchaser against defects in the product's quality. Estimated warranty expense for a given period can be estimated as a percentage of sales. The percentage is based on past warranty experience. The estimated warranty cost represents the warranty expenditures in the future for past sales and is a current liability.
- 13. (C)** Property, plant, and equipment consists of items used in the normal operations of a business. The inventory of small tools represents tools **used** in the business and are not for sale.
- 14. (X-K)** Treasury stock is a corporation's own stock which has been issued and reacquired by the corporation. Treasury stock may be accounted for under the cost or par value method. When the par value method is used, treasury stock would be recorded on the balance sheet as a reduction or contra to the common stock account.
- 15. (K)** Common stock subscribed represents stock subscriptions that have not been fully paid. The stock is not considered to be issued until the full price is paid. This account should be classified as an increase in the common stock and it is offset in stockholders' equity by a contra account for the balance of the subscription due.
- 16. (H)** A convertible bond is a bond which may be converted to another form of the corporation's securities during a specified time frame. A bond is typically classified as a long-term liability on the balance sheet.
- 17. (N)** Corporations do not own securities they hold as collateral. The corporation will retain the securities only in the event of a default on the receivable the securities are collateralizing. Thus, the securities are excluded from the balance sheet of Craven and they appear on the balance sheets of their owners.
- 18. (G)** A bank overdraft occurs when a check is written for a greater amount than the balance in the bank account. A bank overdraft should be classified as a current liability. It should not be offset against other cash account balances unless the cash account is in the same bank.

	168,000 ÷ 24 mo. = 7,000 per month × 5 months = 35,000		

## Task-Based Simulation 6

Calculations	Authoritative Literature	Help

Accounts receivable (net)	234,000	(1)
Notes receivable	75,000	(2)
Prepaid rent	133,000	(3)
Supplies	37,000	(4)
Inventory	420,000	(5)
Equipment (historical cost)	640,000	(6)
Accounts payable	176,000	(7)
Salaries payable	52,500	(8)
Accumulated depreciation	203,000	(9)

*Explanations*

1.  $\$250,000 - \$16,000$  allowance for uncollectible accounts =  $\$234,000$
2. No change. Interest receivable is recorded in a separate account.
3.  $\$168,000 - \$35,000 = \$133,000$
4. Given in the problem.
5. No adjustments were made to inventory.
6. Equipment is at historical cost.
7. No change.
8.  $\$15,000 + \$37,500 = \$52,500$
9.  $\$174,000 + \$29,000 = \$203,000$

## Task-Based Simulation 7

Classification/ Disclosures	Authoritative Literature	Help

1. (**\$73,000, A**) The net carrying amount of the bonds redeemed is determined by adjusting the carrying amount of the bonds at the beginning of the year for any partial year amortization of corresponding premiums or discounts and for any unamortized issue costs. In this example, Griffin would determine its discount amortization by computing the difference between its bond interest expense and its bond interest paid as of June 30, year 4.

$$\begin{array}{l}
 \begin{array}{c} \textit{Bond interest expense} \\ \left( \begin{array}{c} \text{Carrying amount of bonds} \\ \text{at beginning of period} \end{array} \times \begin{array}{c} \text{Effective} \\ \text{interest rate} \end{array} \right) \\ \left( \$940,000 \times 10\% \times 1/2 \right) \end{array} \\
 - \\
 \begin{array}{c} \textit{Bond interest paid} \\ \left( \begin{array}{c} \text{Face value of} \\ \text{bonds} \end{array} \times \begin{array}{c} \text{Stated} \\ \text{interest rate} \end{array} \right) \\ \left( \$1,000,000 \times 8\% \times 1/2 \right) \end{array} \\
 = \\
 \text{Amortization} \\
 \text{amount} \\
 = \\
 \$7,000
 \end{array}$$

This amount is added to the carrying amount of the bonds at the beginning of the year to determine the net carrying amount:  $\$940,000 + \$7,000 = \$947,000$ . This amount is subtracted from the reacquisition price to determine the loss on redemption:  $\$1,020,000 (\$1,000,000 \times 1.02) - \$947,000 = \underline{\$73,000}$ . Gains or losses from early redemption of bonds are treated as gains or losses in determining net income. Early extinguishment of debt is not generally considered an extraordinary item.

2. (**\$50,000, A**) The accounting change is accounted for on a prospective basis. Therefore, it is necessary to calculate the book value of the asset as of the beginning of the year of the change.

<b>SYD</b>		
Year 1	$\$500,000 \times 5/15 =$	\$166,667
Year 2	$\$500,000 \times 4/15 =$	\$133,333
Year 3	$\$500,000 \times 3/15 =$	<u>\$100,000</u>
		\$400,000

On January 1, year 4, the book value is calculated as follows:

Historical cost	\$520,000
– Accumulated depreciation	(400,000)
Book value 1/1/Y4	\$120,000

Straight-line depreciation for year 4 and future years is calculated as

$$(\$120,000 \text{ BV} - \$20,000 \text{ salvage value}) \div 2 \text{ years remaining life} = \$50,000 \text{ per year}$$

The depreciation expense would be shown as a part of the calculation of income from continuing operations.

3. (**[\$125,000], A**) Since an accrual was made for Griffin's contingent liability in year 3, one must first determine the amount of the liability recorded. If a range of possible losses exists and no amount within the range is more likely than any other amount, an accrual should be made for the minimum amount of the loss, in this case \$250,000. As Griffin accrued a \$250,000 liability and loss in year 3, the year 4 loss would be \$125,000 ( $\$250,000 - \$375,000$ ). Such a loss would be classified under income from continuing operations as it is incurred in conjunction with ordinary operations (amount paid to employee). Such a loss would not be extraordinary as it does not meet the criteria of being both unusual in nature and infrequent in occurrence.

4. (**[\$10,000], A**) Trading securities are securities that are bought and held principally for the purpose of selling them in the near term. As Griffin purchased these securities to sell in the near term, any unrealized holding gain or loss would appear as income from continuing operations on the income statement. The holding gain or loss from marketable equity securities held in the trading portfolio is computed as of December 31, year 4, by comparing the cost of the securities at the purchase date with the fair market value at the end of the year.

	<b>Cost</b>	<b>FV 12/31/Y4</b>	<b>Gain (loss)</b>
I	\$125,000	\$145,000	\$20,000
II	235,000	205,000	<u>(30,000)</u>
			<u>\$ (10,000)</u>

5. (**[\$255,000], B**) The amount of gain or loss from the hurricane would be computed by adding the carrying amounts of the assets destroyed and comparing this amount with the amount of insurance recovery. For Griffin, an extraordinary loss would result as follows:

Insurance recovery	<u>\$1,000,000</u>
Warehouse	470,000
Equipment	250,000
Inventory	<u>535,000</u>
Total carrying value	<u>\$1,255,000</u>
Extraordinary loss	\$ <u>(255,000)</u>

As this hurricane is unusual in that it is not related to the normal activities of the entity and infrequent in occurrence in that it is not expected to occur again in the foreseeable future (this was the first hurricane ever in Griffin's area), the \$255,000 loss would be classified as an extraordinary loss.

6. (**\$41,000, E**) To compute the translation adjustment for year 4, both net asset figures in dollars must be compared. The \$429,000 represents the translation at the date of purchase plus the translation of net income at a weighted-average exchange rate. The \$388,000 represents the net assets at the translated rate at the balance sheet date. The \$41,000 difference is the translation adjustment necessary to make the balance sheet balance. This translation adjustment should not be included in net income, but shall be reported as a separate component of other comprehensive income.

### Explanations

- (G) The acquisition of assets does not necessitate that the same method of depreciation be used for the newly acquired assets as for the existing assets. Therefore, no change in accounting principle has occurred because the previously recorded assets will continue to be depreciated using the straight-line method.
- (A) Accounting for the acquisition of a 100% owned subsidiary is properly accounted for as a change in reporting entity.
- (B) All corrections of errors should be treated as a restatement of the prior period financial statements. This requires prompt recording of the error in the year in which the error was discovered, and reporting the effects of the error in the financial statements as an adjustment to the carrying value of the assets and liabilities as of the beginning of the first period presented with

an offsetting adjustment to the opening balance of retained earnings for that period. Financial statements for each individual period are adjusted to reflect the correction of the period-specific effects of the error.

4. **(H)** For an item to qualify as an extraordinary item it must be both unusual in nature and infrequent in occurrence. Clearly, the write-down of inventory due to obsolescence does not qualify for extraordinary treatment; therefore, it should be disclosed separately in the income statement before extraordinary items.
5. **(I)** Gains or losses on the disposal of net assets is included in the calculation of gain or loss on disposal of discontinued operations. Therefore, the total gain or loss on disposal should consist of the following two calculations: the net asset gain or loss mentioned above and the income or loss from operations from the measurement date to the disposal date (the phaseout period).
6. **(B)** The use of the gross profit method to determine year-end inventory balances is not proper GAAP. Therefore, if a situation such as this existed, it should be treated as a correction of an error.
7. **(C)** The change from one generally accepted accounting principle to another is considered a change in accounting principle. Since both the completed contract method and the percentage-of-completion methods are recognized GAAP, the change from one to the other is properly accounted for as a change in accounting principle, and accounted for on a retrospective basis.
8. **(D)** When it is impossible to determine whether a change in accounting principle or a change in estimate has occurred, the change should be considered as a change in estimate.
9. **(H)** Gains or losses on extinguishment of debt are no longer treated as extraordinary items.
10. **(F)** Income or loss from operations is properly included in the calculation of the gain or loss on the discontinued operations. Therefore, this calculation includes both the income or loss from operations and the gain or loss on the disposal of net assets. The gain or loss on the disposal should also be disclosed parenthetically or in the notes to the financial statements.

Multistep Income Statement	Authoritative Literature	Help

<i>American Horse Company</i> <b>INCOME STATEMENT</b> <i>For the Year Ended December 31, Year 1</i>		
Sales		\$25,000,000
Less cost of goods sold		(17,000,000)
Gross profit		\$8,000,000
Less selling and administrative expenses		(4,700,000)
Income from operations		\$3,300,000
Other revenue and gains		
Interest revenue	\$70,000	
Gain on the sale of investments	110,000	\$180,000
Other expenses and losses		
Write-off of goodwill		(820,000)
Income from continuing operations before income taxes		\$2,660,000
Income taxes		(905,000)
Income from continuing operations		\$1,755,000

Discontinued operations		
Loss on discontinued wholesale division, including loss on disposal of \$200,000	\$815,000	
Income tax benefit	(285,000)	
Loss on discontinued operation (net of tax)		(530,000)
Income before extraordinary item		<u>\$1,225,000</u>
Extraordinary loss from flood damage, net of tax		(390,000)
Net income		\$ <u>835,000</u>
Earnings per share		
Income from continuing operations		\$5.62 <sup>a</sup>
Discontinued operations:		(1.77)
Income before extraordinary item		3.85 <sup>b</sup>
Extraordinary loss (net of tax)		(1.30)
Net income		<u>\$2.55<sup>c</sup></u>

a  $\frac{\$1,755,000 - \$70,000}{300,000 \text{ shares}} = \$5.62$

b  $\frac{\$1,225,000 - \$70,000}{300,000 \text{ shares}} = \$3.85$

c  $\frac{\$835,000 - \$70,000}{300,000 \text{ shares}} = \$2.55$

**Explanations**

- (B)** Changes in the market value of (trading type) marketable securities shall be included in the determination of income from continuing operations of the period in which the change in market value occurs.
- (E)** The accumulated changes in the valuation (unrealized excess of cost over market value) of **available-for-sale** marketable equity securities shall be reported as accumulated other comprehensive income.
- (F)** Results of operations of a component that has been or will be discontinued should be reported **separately** as a component of income, after income from continuing operations but before extraordinary items.
- (B)** A foreign subsidiary must **remeasure** its financial statements when its functional currency (the currency of the primary economic environment in which the entity operates) is different from its local currency (the currency currently used by the entity). The effect of the remeasurement process (gain or loss) should be recognized currently in income. Aggregate gain or loss for the period should also be disclosed either in the financial statements or in the notes.
- (C)** When translating a foreign subsidiary's financial statements from functional currency to reporting currency, a translation adjustment will result. The translation adjustment is not included in net income but is reported as a component of comprehensive income and called other comprehensive income.
- (D)** Extraordinary items are events and transactions that are **both** unusual and infrequent. The earthquake in this problem occurred in an area previously considered subject to only minor tremors. Therefore, the earthquake would be considered an extraordinary event. Extraordinary items should be shown separately on the income statement, after income from continuing operations.
- (F)** The question indicates that it is probable that the company will **receive** \$1,000,000 from a pending lawsuit. Thus, the \$1,000,000 is a **gain** contingency. Contingencies that may result in **gains** are not reflected in the accounts, as doing so might result in the recognition of revenue before its realization. Adequate disclosure of the gain contingency should be made, but care should be taken to avoid misleading implications as to the likelihood of realization.
- (B)** The cost of research and development services performed by others on behalf of the enterprise are included in R&D costs. R&D costs are charged to expense when incurred and thus are included in income from continuing operations of that period. In addition, separate disclosure of the total R&D costs for the period should be made either in the financial statements or in the notes.

# Module 10: Inventory

## Overview

Inventory is defined as tangible personal property (1) held for sale in the ordinary course of business, (2) in the process of production for such sale, or (3) to be used currently in the production of items for sale.

Inventory is tested on the Financial Accounting and Reporting section of the exam. The primary topics covered by questions on the exam are

1. **Ownership of goods:** The determination of which items are to be included in inventory taking into account items such as shipping terms and consignments.
2. **Cost:** The determination of which costs are to be assigned to inventory such as freight and overhead.
3. **Cost flow assumptions:** The determination of costs assigned to cost of goods sold and inventory under the various cost flow methods such as LIFO and FIFO.
4. **Valuation:** The determination of how and when inventories should reflect their market values using rules such as LCM.

## A. Determining Inventory and Cost of Goods Sold

1. The primary basis of accounting for inventories is cost, which includes the cash or other fair value of consideration given in exchange for it. Inventory cost is a function of two variables
  - a. The number of units included in inventory, and
  - b. The costs attached to those units.
2. The units to be included in inventory are those which the firm owns; ownership is usually determined by legal title.
3. The costs to be included in inventory include all costs necessary to prepare the goods for sale. Normal costs for freight-in, handling costs, and normal spoilage are included in inventory.
  - a. For a manufacturing entity, the cost of inventory includes direct materials, direct labor, and both direct and indirect factory overhead. These costs are then allocated to the work in progress and finished goods inventory account. Variable production overhead is allocated to each unit of production based on the actual use of the production facilities. Fixed overhead is allocated based on the normal capacity of the production facilities. The normal capacity of the production facility is the production expected to be achieved over a number of periods or seasons under normal circumstances, taking into account the loss of capacity resulting from planned maintenance. The range of normal capacity will vary based on business and industry-specific factors. The actual level of production may be used if it approximates normal capacity. Unallocated fixed overhead costs are recognized as an expense in the period in which they are incurred.
    - (1) Any abnormal costs for freight-in, handling costs, and spoilage are treated as current period expenses, and are not allocated to inventory.
    - (2) Interest on inventories routinely produced, or repetitively produced in large quantities, is not capitalized as part of inventory cost.

- b. For a merchandising concern, the costs to be included in inventory include the purchase price of the goods, freight-in, insurance, warehousing, and any other costs incurred in the preparation of these goods for sale. The amount used as a purchase price for the goods will vary depending upon whether the gross or net method is used in the recording of purchases.
- (1) If the gross method is used to record the purchases, then any subsequent discount taken is shown as purchase discount which is netted against the purchases account in determining cost of goods sold.
  - (2) If the net method is used to record purchases, then any purchase discounts offered are assumed taken and the purchase account reflects the net price. If subsequent to the recording of the purchases the discount is not taken (i.e., payment is tendered after the discount period has elapsed), a purchase discounts lost account is debited. The balance in the purchase discounts lost account does **not** enter into the determination of cost of goods sold; this amount is treated as a period expense.

**NOTE:** Regardless of the method used, purchases are always recorded net of any allowable **trade discounts**. These are discounts that are allowed to the entity because of its being a wholesaler, a good customer, or merely the fact that the item is on sale at a reduced price.

**NOTE:** Interest paid to vendors is not included in the cost of inventory.

4. The determination of cost of goods sold and inventory under each of the cost flow assumptions depends upon the method used to record the inventory: periodic or perpetual.
- a. **Periodic system.** Inventory is counted periodically and then priced. The ending inventory is usually recorded in the cost of goods sold (CGS) entry.

Ending inventory (EI)	xx	
CGS	(plug)	
Beginning inventory (BI)		xx
Purchases		xx

- (1)  $CGS = Purchases - (\text{the change in inventory})$ . For example, if ending inventory decreases, all of the purchases and some of the beginning inventory have been sold. If ending inventory increases, not all of the purchases have been sold.
- b. **Perpetual system.** A running total is kept of the units on hand (and possibly their value) by recording all increases and decreases as they occur. When inventory is purchased, the inventory account, rather than purchases, is debited. As inventory is sold, the following entry is recorded.

CGS	(cost)	
Inventory		(cost)

**NOW REVIEW MULTIPLE-CHOICE QUESTIONS 1 THROUGH 13**

## B. Inventory Valuation and Cost-Flow Methods

1. Specific identification
2. Weighted-average
3. Simple average
4. Moving average
5. Lower of cost or market
6. Losses on purchase commitments
7. First-in, first-out (FIFO)
8. Last-in, first-out (LIFO)
9. Dollar-value LIFO
10. Gross profit
11. Standard costs
12. Direct (variable) costing
13. Market
14. Cost apportionment by relative sales value

### 1. Specific Identification

- a. The seller determines which item is sold.

**EXAMPLE**

A seller has for sale four identical machines costing \$260, \$230, \$180, and \$110. Since the machines are identical, a purchaser will have no preference as to which machine s/he receives when purchased.

**NOTE:** The seller is able to manipulate income as s/he can sell any machine (and charge the appropriate amount to CGS). Significant dollar value items are frequently accounted for by specific identification.

- b. The use of the specific identification method is appropriate when there is a relatively small number of significant dollar value items in inventory.

**2. Weighted-Average**

- a. The seller averages the cost of all items on hand and purchased during the period. The units in ending inventory and units sold (CGS) are costed at this average cost.

**EXAMPLE**

	<b>Cost</b>	<b>Units</b>	
Beginning inventory	\$200	100	(\$2.00 unit)
Purchase 1	315	150	(\$2.10 unit)
Purchase 2	<u>85</u>	<u>50</u>	(\$1.70 unit)
	\$600	300	
Weighted-average cost \$600/300 = \$2.00 unit			

**3. Simple Average**

- a. The seller does not weight the average for units purchased or in beginning inventory (e.g., the above \$2.00, \$2.10, and \$1.70 unit costs would be averaged to \$1.93).
- b. The method is fairly accurate if all purchases, production runs, and beginning inventory quantities are equal.

**4. Moving Average**

- a. The average cost of goods on hand must be recalculated any time additional inventory is purchased at a unit cost different from the previously calculated average cost of goods on hand.

**EXAMPLE**

	<b>Dollar cost of units on hand</b>	<b>Units on hand</b>	<b>Inventory unit cost</b>
Beginning inventory	\$200	100	\$2.00
Sale of 50 units @ \$2.00 = \$100	100	50	2.00
Purchase of 150 units for \$320	420	200	2.10
Sale of 50 units @ \$2.10 = \$105	315	150	2.10
Purchase of 50 units for \$109	424	200	2.12

**NOTE:** Sales do not change the unit price because they are taken out of inventory at the average price.

- b. Moving average may only be used with perpetual systems which account for changes in value with each change in inventory (and not with perpetual systems only accounting for changes in the number of units).

**NOW REVIEW MULTIPLE-CHOICE QUESTIONS 14 THROUGH 17**

**5. Lower of Cost or Market**

- a. "A departure from the cost basis of pricing the inventory is required when the utility of the goods is no longer as great as its cost." The following steps should be used to apply the lower of cost or market rule:
- (1) Determine market
    - (a) **Market is replacement cost limited to**
      - 1] **Ceiling**—which is net realizable value (selling price less selling costs and costs to complete).
      - 2] **Floor**—which is net realizable value less normal profit.

**NOTE:** If replacement cost is greater than net realizable value, market equals net realizable value. Likewise, market equals net realizable value minus normal profit if replacement cost is less than net realizable value minus normal profit.

- (2) Determine cost

**NOTE:** The floor and ceiling have nothing to do with cost

- (3) Select the lower of cost or market either for each individual item or for inventory as a whole (compute total market and total cost, and select lower).

**EXAMPLE**

**LOWER OF COST OR MARKET EXAMPLE**

Item	Cost	Replacement cost	Selling price	Selling cost	Normal profit
A	\$10.50	\$10.25	\$15.00	\$2.50	\$2.50
B	5.75	5.25	8.00	1.50	1.00
C	4.25	4.75	5.50	1.00	1.50

Item	Replacement cost	NRV (ceiling)	NRV-Profit (floor)	Designated market value	Cost	LCM
A	\$10.25	\$12.50	\$10.00	\$10.25	\$10.50	\$10.25
B	5.25	6.50	5.50	5.50	5.75	5.50
C	4.75	4.50	3.00	4.50	4.25	4.25

Item A—Market is replacement cost, \$10.25, because it is between the floor (\$10.00) and the ceiling (\$12.50). Lower of cost or market is \$10.25.

Item B—Market is limited to the floor, \$5.50 (\$8.00 – \$1.50 – \$1.00) because the \$5.25 replacement cost is beneath the floor. Lower of cost or market is \$5.50.

Item C—Market is limited to the ceiling, \$4.50 (\$5.50 – \$1.00) because the \$4.75 replacement cost is above the ceiling. Lower of cost or market is \$4.25.

- b. Observations about the lower of cost or market rule

- (1) The floor limitation on market prevents recognition of more than normal profit in future periods (if market is less than cost).

- (2) The ceiling limitation on market prevents recognition of a loss in future periods (if market is less than cost).
  - (3) Cost or market applied to individual items will always be as low as, and usually lower than, cost or market applied to the inventory as a whole. They will be the same when all items at market or all items at cost are lower.
  - (4) Once inventory has been written down there can be no recovery from the write-down until the units are sold. Recall that this differs from marketable securities where recoveries of prior write-downs are required to be taken into the income stream.
- c. Methods of recording the write-down
- (1) If market is less than cost at the end of any period, there are two methods available to record the market decline. The entry to establish the ending inventory can be made using the market figure. The difficulty with this procedure is that it forces the loss to be included in the cost of goods sold, thus overstating the cost of goods sold by the amount of the loss.

**NOTE:** Under this method the loss is not separately disclosed.

- (2) An alternative treatment is to debit the inventory account for the actual cost (not market) of goods on hand, and then to make the following entry to give separate recognition to the market decline.

Loss due to market decline	xx	
Inventory		xx

**NOW REVIEW MULTIPLE-CHOICE QUESTIONS 18 THROUGH 22**

**6. Losses on Purchase Commitments**

- a. **Purchase commitments (PC)** result from legally enforceable contracts to purchase specific quantities of goods at fixed prices in the future. When there is a decline in market value below the contract price at the balance sheet date and the contracts are noncancellable, an unrealized loss has occurred and, if material, should be recorded in the period of decline.

Estimated loss on PC		(excess of PC over mkt.)
Accrued loss on PC		(excess of PC over mkt.)

- b. If further declines in market value are estimated to occur before delivery is made, the amount of the loss to be accrued should be increased to include this additional decline in market value. The loss is taken to the income statement; the accrued loss on PC is a liability account and shown on the balance sheet. When the goods are subsequently received

Purchases	xx	
Accrued loss on PC		xx
Cash		xx

- c. If a partial or full recovery occurs before the inventory is received, the accrued loss account would be reduced by the amount of the recovery. Likewise, an income statement account, "Recovery on Loss of PC," would be credited.

**NOW REVIEW MULTIPLE-CHOICE QUESTIONS 23 THROUGH 24**

### 7. First-In, First-Out (FIFO)

- a. The goods from beginning inventory and the earliest purchases are assumed to be the goods sold first.
- b. In a period of rising prices, cost of goods sold is made up of the earlier, lower-priced goods resulting in a larger profit (relative to LIFO). The ending inventory is made up of more recent purchases and thus represents a more current value (relative to LIFO) on the balance sheet.

**NOTE:** This cost-flow assumption may be used even when it does not match the physical flow of goods.

- c. Whenever the FIFO method is used, the results of inventory and cost of goods sold are the same at the end of the period under either a perpetual or a periodic system.

### 8. Last-In, First-Out (LIFO)

- a. Under this cost-flow method, the most recent purchases are assumed to be the first goods sold; thus, ending inventory is assumed to be composed of the oldest goods. Therefore, the cost of goods sold contains relatively current costs (resulting in the matching of current costs with sales).

**NOTE:** This cost-flow assumption usually does not parallel the physical flow of goods.

- b. LIFO is widely adopted because it is acceptable for tax purposes and because in periods of rising prices it reduces tax liability due to the lower reported income (resulting from the higher cost of goods sold).
- c. LIFO smoothes out fluctuations in the income stream relative to FIFO because it matches current costs with current revenues.
- d. A primary disadvantage of LIFO is that it results in large profits if inventory decreases because earlier, lower valued layers are included in the cost of goods sold. This is generally known as a LIFO liquidation.
  - (1) Another disadvantage is the cost involved in maintaining separate LIFO records for each item in inventory.
- e. If LIFO is used for tax purposes, it must be used for financial reporting purposes. This is known as the **LIFO conformity rule**.
  - (1) Under current tax law, inventory layers may be added using the (1) earliest acquisition costs, (2) weighted-average unit cost for the period, or (3) latest acquisition costs.

**NOTE:** In solving questions on the CPA Exam, use the earliest acquisition costs unless you are instructed to use one of the other alternatives.

- f. When a company uses LIFO for external reporting purposes and another inventory method for internal purposes, a **LIFO Reserve** account is used to reduce inventory from the internal valuation to the LIFO valuation. LIFO Reserve is a contra account to inventory, and is adjusted up or down at year-end with a corresponding increase or decrease to **Cost of Goods Sold**.

### 9. Dollar-Value LIFO

- a. Dollar-value LIFO is LIFO applied to **pools** of inventory items rather than to **individual** items. Thus, the cost of keeping inventory records is less under dollar-value LIFO than under unit LIFO.
  - (1) Because the LIFO conformity rule (if LIFO is used for tax, it must also be used for external financial statements) also applies to dollar-value LIFO, companies using dollar-value LIFO define their LIFO pools so as to conform with IRS regulations.
  - (2) Under these regulations, a LIFO pool can contain all of the inventory items for a natural business unit, or a multiple pool approach can be elected whereby a business can group similarly used inventory items into several groups or pools.
- b. The advantage of using inventory pools is that an involuntary liquidation of LIFO layers is less likely to occur because of the increased number of items in the pool (if the level of one item decreases it can be offset

by increases in the levels of other items), and because the pools can be adjusted for changes in product composition or product mix.

- c. Like unit LIFO, dollar-value LIFO is a layering method. Unlike unit LIFO, dollar-value LIFO determines increases or decreases in ending inventory in terms of dollars of the same purchasing power rather than in terms of units. Dollar-value LIFO seeks to determine the real dollar change in inventory.

- (1) Ending inventory is deflated to base-year cost by dividing ending inventory by the current year's conversion price index and comparing the resulting amount with the beginning inventory, which has also been stated in base-year dollars. The difference represents the layer which, after conversion, must be added or subtracted to arrive at the appropriate value of ending inventory.

**NOTE:** The individual layers in a dollar-value LIFO inventory are valued as follows:

$$\text{\$ value LIFO} = \text{Inventory at base-year prices} \times \text{Conversion price index}$$

- d. In applying dollar-value LIFO, manufacturers develop their own indexes while retailers and wholesalers use published figures. In computing the conversion price index, the **double-extension technique** is used, named so because each year the ending inventory is extended at both base-year prices and current-year prices. The index, computed as follows, measures the change in the inventory prices since the base year.

$$\frac{\text{EI at end-of-year prices}}{\text{EI at base-year prices}} = \text{Conversion price index}$$

**EXAMPLE 1**

To illustrate the computation of the index, assume that the base-year price of products A and B is \$3 and \$5, respectively, and at the end of the year, the price of product A is \$3.20 and B, \$5.75, with 2,000 and 800 units on hand, respectively. The index for the year is 110%, computed as follows:

	EI at end-of-year prices	÷	EI at base-year prices	=	Conversion price index
Product A	2,000 @ \$3.20 = \$ 6,400		2,000 @ \$3 = \$ 6,000		
Product B	800 @ \$5.75 = \$ 4,600		800 @ \$5 = \$ 4,000		
	\$11,000		\$10,000		1.10 (or 110%)

- e. Steps in dollar-value LIFO

**Manufacturers**

1. Compute the conversion price index
2. Compare BI at base-year prices to EI at base-year prices to determine the
  - a. New inventory layer added, or
  - b. Old inventory layer removed (LIFO liquidation)
3. If there is an increase at base-year prices, value this new layer by multiplying the layer (stated in base-year dollars) by the conversion price index. If there is a decrease at base-year prices, the remaining layers are valued at the index in effect when the layer was first added.

**Retailers and wholesalers**

1. Determine index from appropriate published source
2. Divide EI by conversion price index to restate to base-year prices
3. Same as 2 for manufacturers
4. Same as 3 for manufacturers

**EXAMPLE**

Assume the following:

	<b>EI at end-of-year prices</b>	<b>Conversion price index</b>	=	<b>EI at base-year prices</b>	<b>Change as measured in base-year dollars</b>
Year 1 (base)	\$100,000	1.00		\$100,000	
Year 2	121,000	1.10		110,000	> \$10,000
Year 3	150,000	1.20		125,000	> 15,000
Year 4	135,000	1.25		108,000	> (17,000)

In both year 2 and year 3, ending inventory in terms of base-year dollars increased 10,000 and 15,000 base-year dollars, respectively. Since layers are added every year that ending inventory at base-year prices is greater than the previous year's ending inventory at base-year prices, the ending inventory for year 3 would be computed as follows:

**Ending inventory, Year 3**

	<b>Base-year prices</b>	×	<b>Index</b>	=	<b>EI at dollar-value LIFO cost</b>
Year 1 (base)	\$100,000		1.00		\$100,000
Year 2 layer	10,000		1.10		11,000
Year 3 layer	<u>15,000</u>		1.20		<u>18,000</u>
Ending inventory	<u>\$125,000</u>				<u>\$129,000</u>

**NOTE:** Each layer added is multiplied by the conversion price index in effect when the layer was added. Thus, the year 2 layer is multiplied by the year 2 index of 1.10 and the year 3 layer is multiplied by the year 3 index of 1.20.

In year 4, ending inventory decreased by 17,000 base-year dollars. Therefore, a LIFO liquidation has occurred whereby 17,000 base-year dollars will have to be removed from the previous year's ending inventory. Because LIFO is being used, the liquidation affects the most recently added layer first and then, if necessary, the next most recently added layer(s). Ending inventory in year 4 is composed of

	<b>Base-year prices</b>	×	<b>Index</b>	=	<b>EI at dollar-value LIFO cost</b>
Year 1 (base)	\$100,000		1.00		\$100,000
Year 2 layer	<u>8,000</u>		1.10		<u>8,800</u>
Ending inventory	<u>\$108,000</u>				<u>\$108,800</u>

**NOTE:** The liquidation of 17,000 base-year dollars in year 4 caused the entire year 3 layer of 15,000 base-year dollars to be liquidated as well as 2,000 base-year dollars from year 2. Also note that the remaining 8,000 base-year dollars in the year 2 layer is still multiplied by the year 2 index of 1.10.

- f. **Link-chain technique.** The computations for application of the double-extension technique can become very arduous even if only a few items exist in the inventory. Also, consider the problems that arise when there is a constant change in the inventory mix or in situations in which the breadth of the inventory is large.
- (1) The link-chain method was originally developed for (and limited to) those companies that wanted to use LIFO but, because of a substantial change in product lines over time, were unable to recreate or keep the historical records necessary to make accurate use of the double-extension method.
  - (2) The link-chain method is the process of developing a single cumulative index. Technological change is allowed for by the method used to calculate each current year index. The index is derived by double extending a representative sample (generally thought to be between 50% and 75% of the dollar value

of the pool) at both beginning-of-year prices and end-of-year prices. This annual index is then applied (multiplied) to the previous period's cumulative index to arrive at the new current year cumulative index.

**EXAMPLE**

How the links and cumulative index are computed.

End of period	Ratio of end of period prices to beginning prices*	Cumulative index number**
0	--	1.000
1	1.10	1.100
2	1.05	1.155
3	1.07	1.236

$$* \quad \frac{\text{End of period prices}}{\text{Beginning of period prices}} = \text{Index number for this period only}$$

\*\* Multiply the cumulative index number at the beginning of the period by the ratio computed with the formula shown above.

- (a) The ending inventory is divided by the cumulative index number to derive the ending inventory at base period prices. An increase (layer) in base period dollars for the period is priced using the newly derived index number.

**NOW REVIEW MULTIPLE-CHOICE QUESTIONS 25 THROUGH 35**

**10. Gross Profit**

- a. Ending inventory is estimated by using the gross profit (GP) percentage to convert sales to cost of goods presumed sold.
- b. Since ending inventory is only estimated, the gross method is not acceptable for either tax or annual financial reporting purposes.
- c. Its major uses are to estimate ending inventory for internal use, for use in interim financial statements, and for establishing the amount of loss due to the destruction of inventory by fire, flood, or other catastrophes.

**EXAMPLE**

Suppose the inventory of the Luckless Company has been destroyed by fire and the following information is available from duplicate records stored at a separate facility: beginning inventory of \$30,000, purchases for the period of \$40,000, sales of \$60,000, and an average GP percentage of 25%. The cost of the inventory destroyed is computed as follows:

Beginning inventory	\$30,000
+ Purchases	<u>40,000</u>
Goods available	70,000
- Cost of goods sold	<u>45,000*</u>
Inventory destroyed	\$25,000

\* Cost of goods sold is computed as (1) sales of \$60,000 - (\$60,000 × 25%) or (2) sales of \$60,000 × 75%.

- d. If you need to convert a GP rate on cost to a markup (MU) rate on the selling price, divide the GP rate on cost by 1 plus the GP rate on cost, that is, if the GP rate on cost is 50%, then  $.50/(1 + .50) = 33 \frac{1}{3}\%$  is the MU rate on the selling price.
- e. If you need to convert a MU rate on the selling price to a GP rate on cost, divide the MU rate on the selling price by 1 minus the MU rate on the selling price, that is, if the MU rate on the selling price is 20%, then  $.20/(1 - .20) = 25\%$  GP rate on cost.
- f. Always be cautious about gross profit rates (on cost or the selling price).

#### 11. Standard Costs

- a. Standard costs are predetermined costs in a cost accounting system, generally used for control purposes.
- b. Inventory may be costed at standard only if variances are reasonable (i.e., not large).
  - (1) Large debit (unfavorable) variances would indicate inventory (and cost of sales) were undervalued, whereas large credit (favorable) variances would indicate inventory is overvalued.

#### 12. Direct (Variable) Costing

- a. Direct costing is not an acceptable method for valuing inventory (ARB 43, chap 4).
- b. Direct costing considers only variable costs as product costs and fixed production costs as period costs. In contrast, absorption costing considers both variable and fixed manufacturing costs as product costs.

#### 13. Market

- a. Inventory is usually valued at market value when market is lower than cost. However, occasionally, inventory will be valued at market even if it is above cost. This usually occurs with
  - (1) Precious metals with a fixed market value
  - (2) Industries such as meatpacking where costs cannot be allocated and
    - (a) Quoted market prices exist
    - (b) Goods are interchangeable (e.g., agricultural commodities)

#### 14. Cost Apportionment by Relative Sales Value

- a. Basket purchases and similar situations require cost allocation based on relative value.

#### EXAMPLE

A developer may spend \$400,000 to acquire land, survey, curb and gutter, pave streets, etc. for a subdivision. Due to location and size, the lots may vary in selling price. If the total of all selling prices were \$600,000, the developer could cost each lot at  $\frac{2}{3}$  ( $400/600$ ; COST/RETAIL ratio) of its selling price.

**NOW REVIEW MULTIPLE-CHOICE QUESTIONS 36 THROUGH 37**

#### C. Items to Include in Inventory

1. Goods shipped FOB shipping point which are in transit should be included in the inventory of the buyer since title passes to the buyer when the carrier receives the goods.
2. Goods shipped FOB destination should be included in the inventory of the seller until the goods are received by the buyer since title passes to the buyer when the goods are received at their final destination.

**NOTE:** The more complicated UCC rules concerning transfer of title should be used for the law portion, not the financial accounting and reporting portion, of the exam.

#### D. Consignments

1. Consignors consign their goods to consignees who are sales agents of the consignors. Consigned goods remain the property of the consignor until sold. Therefore, any unsold goods (including a proportionate share of freight costs incurred in shipping the goods to the consignee) must be included in the consignor's inventory.

2. Consignment sales revenue should be recognized by the consignor when the consignee sells the consigned goods to the ultimate customer. Therefore, no revenue is recognized at the time the consignor ships the goods to the consignee.

**NOTE:** Sales commission made by the consignee would be reported as a selling expense by the consignor and would **not** be netted against the sales revenue recognized by the consignor.

**NOTE:** The UCC rules concerning consignments should be used for the law portion, not the financial accounting and reporting portion, of the exam.

### E. Ratios

The two ratios below relate to inventory.

1. **Inventory turnover**—Measures the number of times inventory was sold and reflects inventory order and investment policies

$$\frac{\text{Cost of goods sold}}{\text{Average inventory}}$$

2. **Number of days' supply in average inventory**—Number of days inventory is held before sale; reflects on efficiency of inventory policies

$$\frac{365}{\text{Inventory turnover}}$$

**NOW REVIEW MULTIPLE-CHOICE QUESTIONS 38 THROUGH 50**

### F. Long-Term Construction Contracts

1. Long-term contracts are accounted for by two methods: completed-contract method and percentage-of-completion method.
- a. **Completed-contract method**—Recognition of contract revenue and profit at contract completion. All related costs are deferred until completion and then matched to revenues.
    - (1) The completed-contract method is preferable in circumstances in which estimates cannot meet the criteria for reasonable dependability or one of the above conditions does not exist.
    - (2) The advantage of the completed-contract method is that it is based on results, not estimates, and the disadvantage is that current performance is not reflected and income recognition may be irregular.
  - b. **Percentage-of-completion**—Recognition of contract revenue and profit during construction based on expected total profit and estimated progress towards completion in the current period. All related costs are recognized in the period in which they occur.
    - (1) The use of the percentage-of-completion method depends on the ability to make reasonably dependable estimates of contract revenues, contract costs, and the extent of progress toward completion. For entities which customarily operate under contractual arrangements and for whom contracting represents a significant part of their operations, the **presumption** is that they have the ability to make estimates that are sufficiently dependable to justify the use of the percentage-of-completion method of accounting.
    - (2) The percentage-of-completion method is **preferable** in circumstances in which reasonably dependable estimates can be made and in which all of the following conditions exist:
      - (a) Contracts executed by the parties normally include provisions that clearly specify the enforceable rights regarding goods or services to be provided and received by the parties, the consideration to be exchanged, and the manner and terms of settlement.
      - (b) The buyer can be expected to satisfy obligations under the contract.
      - (c) The contractor can be expected to perform contractual obligation.

- (3) The advantage of percentage-of-completion is periodic recognition of income, and the disadvantage is dependence on estimates.
- (4) In practice, various procedures are used to measure the extent of progress toward completion under the percentage-of-completion method, but the most widely used one is **cost-to-cost** which is based on the assumed relationship between a unit of input and productivity. Under cost-to-cost, either revenue and/or profit to be recognized in the current period can be determined by the following formula:

$$\text{Revenue (profit)} = \left( \frac{\text{Cost to date}}{\text{Total expected cost based on latest estimate}} \times \text{Contract price (Expected profit)} \right) - \text{Revenue (profit) recognized in previous periods}$$

**NOTE:** Revenue and profit are two different terms. Profit is calculated by subtracting construction expenses from revenue. Revenue is the contract price. Therefore, pay particular attention to what item the CPA exam asks you to calculate.

2. The ledger account titles used in the following discussion are unique to long-term construction contracts. In practice, there are numerous account titles for the same item (e.g., “billings on LT contracts” vs. “partial billings on construction in progress”) and various methodologies for journalizing the same transactions (e.g., separate revenue and expense control accounts in lieu of an “income on LT contracts” account). The following example has been simplified to highlight the main concepts.

#### EXAMPLE 1

Assume a 3-year contract at a contract price of \$500,000 as well as the following data:

	Year 1	Year 2	Year 3
Cost incurred this year	\$135,000	\$225,000	\$ 45,000
Prior years' costs	-0-	135,000	360,000
Estimated costs to complete	<u>\$315,000</u>	<u>40,000</u>	<u>-0-</u>
Total costs	<u>\$450,000</u>	<u>400,000</u>	<u>\$405,000</u>
Progress billings made during the year	\$200,000	\$200,000	\$100,000
Collection of billings each year	\$175,000	\$200,000	\$125,000

From the above information, the following may be determined.

**Percent of completion** (costs to date/total costs)

Year 1: \$135,000/\$450,000 = 30%

Year 2: \$360,000/\$400,000 = 90%

Year 3: \$405,000/\$405,000 = 100%

Total revenue	\$ 500,000	\$ 500,000	\$ 500,000
× <u>Percent of completion</u>	× <u>30%</u>	× <u>90%</u>	× <u>100%</u>
Total revenue to be recognized by end of year	\$ 150,000	\$ 450,000	\$ 500,000
– <u>Revenue recognized in prior periods</u>	--	(150,000)	\$(450,000)
Current year's revenue (to be recognized)	<u>\$ 150,000</u>	<u>\$ 300,000</u>	<u>\$ 50,000</u>
Contract price	\$500,000	\$ 500,000	\$ 500,000
– <u>Total estimated costs</u>	<u>(450,000)</u>	<u>(400,000)</u>	<u>(405,000)</u>
Estimated profit	\$ 50,000	\$ 100,000	\$ 95,000
× <u>Percent of completion</u>	× <u>30%</u>	× <u>90%</u>	× <u>100%</u>
Total profit to be recognized by end of year	\$ 15,000	\$ 90,000	\$ 95,000
– <u>Profit recognized in prior periods</u>	--	(15,000)	(90,000)
Current year's profit (to be recognized)	<u>\$ 15,000</u>	<u>\$ 75,000</u>	<u>\$ 5,000</u>

		Percentage-of-completion		Completed-contract	
Year 1 Costs	Construction in progress	135,000		135,000	
	Cash		135,000		135,000
Year 1 Progress billings	Accounts receivable	200,000		200,000	
	Billings on LT contracts		200,000		200,000
Year 1 Cash collected	Cash	175,000		175,000	
	Accounts receivable		175,000		175,000
Year 1 Profit recognition	Construction expenses	135,000		none	
	Construction in progress	15,000			
	Construction revenue		150,000		
<hr/>					
Year 2 Costs	Construction in progress	225,000		225,000	
	Cash		225,000		225,000
Year 2 Progress billings	Accounts receivable	200,000		200,000	
	Billings on LT contracts		200,000		200,000
Year 2 Cash collected	Cash	200,000		200,000	
	Accounts receivable		200,000		200,000
Year 2 Profit recognition	Construction expenses	225,000		none	
	Construction in progress	75,000			
	Construction revenue		300,000		
<hr/>					
Year 3 Costs	Construction in progress	45,000		45,000	
	Cash		45,000		45,000
Year 3 Progress billings	Accounts receivable	100,000		100,000	
	Billings on LT contracts		100,000		100,000
Year 3 Cash collected	Cash	125,000		125,000	
	Accounts receivable		125,000		125,000
Year 3 Profit recognition and closing of special accounts	Construction expenses	45,000			
	Construction in progress	5,000			
	Construction revenue		50,000		
	Billings on LT contracts	500,000			
	Const. in progress		500,000		
	Construction expenses			405,000	
Const. in progress				405,000	
Billings on LT contracts				500,000	
Construction revenue				500,000	

3. The “construction in progress” (CIP) account is a cost accumulation account similar to “work in process” for job-order costing, except that the percentage-of-completion method includes interim profits in the account. The “billings on LT contracts” account is similar to an unearned revenue account. At each financial statement date, the “construction in progress” account should be netted against the “billings on LT contracts” account on a project-by-project basis, resulting in a net current asset and/or a net current liability.

**EXAMPLE**

Under the percentage of completion method in the above example, a net current asset of \$50,000  $[(\$135,000 + \$15,000 + \$225,000 + \$75,000) - (\$200,000 + \$200,000)]$  would be reported at the end of year 2. A net current liability of \$40,000 would result under the completed-contract method  $[(\$200,000 + \$200,000) - (\$135,000 + \$225,000)]$  for the same year.

**SUMMARY OF ACCOUNTS USED IN CONSTRUCTION ACCOUNTING  
(NO LOSS EXPECTED OR INCURRED)**

Balance sheet		Income statement	
Construction in Progress	A/P, Materials, etc.	Construction Revenue	
(A)   (E)	(A)	(D)	
(F)   (G)		(F)	
		Construction Expenses	
Accounts Receivable	Billings on LT Contracts		
(B)   (C)	(D)   (B)	(E)	
	(G)	(F)	
Cash			
(C)			

Both methods	Explanation of Journal Entries Completed-contract method	Percentage-of-completion method
(A) To record accumulated costs	(D) To record revenue upon completion and to close billings account	(F) To record recognition of interim revenue and expense
(B) To record progress billings	(E) To record expenses upon completion and to close construction in progress account	(G) To close construction-in-progress and billings accounts at project completion
(C) To record cash collections		

**Balance Sheet Classification\***

Current asset	Current liability
Projects where CIP at year-end** > Billings	Projects where billings > CIP at year-end** Estimated loss on uncompleted contract***

\* Evaluate and classify on a project-by-project basis.

\*\* Construction in progress including income (when percentage-of-completion method is used) or loss recognized.

\*\*\* When recognizing and reporting losses, it is necessary to use a current liability account instead of reducing CIP in those cases in which a contract's billings exceed its accumulated costs.

#### 4. Contract losses

- a. In any year when a **percentage-of-completion** contract has an expected loss on the entire contract, the amount of the loss reported in that year is the total expected loss on the entire contract **plus** all profit previously recognized.

#### EXAMPLE

If the expected costs yet to be incurred at the end of year two were \$147,000, the total expected loss is \$7,000 [ $\$500,000 - (\$135,000 + \$225,000 + \$147,000)$ ] and the total loss reported in year two would be \$22,000 ( $\$7,000 + \$15,000$ ).

- b. Similarly, under the **completed-contract** method, total expected losses on the entire contract are recognized as soon as they are estimated. The loss recognized is similar to that for percentage-of-completion except the amount is for the expected loss on the entire contract.

**EXAMPLE**

In the aforementioned example, the loss to be recognized is only \$7,000 (the entire loss on the contract expected in year two) because interim profits have not been recorded.

- c. Journal entries and a schedule for profit or loss recognized on the contract under the percentage-of-completion method follow.

**EXAMPLE**

Journal entry at end of year 2	Percentage-of-completion	Completed-contract
Construction expenses	227,000*	
Construction in progress (loss)	22,000	
Construction revenue	205,000**	
Loss on uncompleted LT contracts		7,000
Construction in progress (loss)		7,000
* Year 2 costs		\$225,000
Loss attributable to year 3:		
Year 3 revenue (\$500,000 – \$150,000 – \$205,000)	\$145,000	
Year 3 costs (expected)	<u>147,000</u>	<u>2,000</u>
Total		<u>\$227,000</u>

\*\*  $(\$360,000/\$507,000)$  (Costs to date/Total estimated costs) = 71% (rounded);  $(71\% \times \$500,000) - \$150,000 = \$205,000$

**PERCENTAGE-OF-COMPLETION METHOD**

	Year 1	Year 2	Year 3
Contract price:	<u>\$500,000</u>	<u>\$500,000</u>	<u>\$500,000</u>
Estimated total costs:			
Costs incurred this year	\$135,000	\$225,000	\$144,000***
Prior year's costs	–	135,000	360,000
Estimated cost yet to be incurred	<u>315,000</u>	<u>147,000</u>	–
Estimated total costs for the three-year period, actual for year 3	<u>\$450,000</u>	<u>\$507,000</u>	<u>\$504,000</u>
Estimated total income (loss) for three-year period, actual for year 3	<u>\$ 15,000</u>	<u>\$ (7,000)</u>	<u>\$ (4,000)</u>
Income (loss) on entire contract previously recognized	–	<u>15,000</u>	<u>(7,000)</u>
Amount of estimated income (loss) recognized in the current period, actual for year 3	<u>\$ 15,000</u>	<u>\$ (22,000)</u>	<u>\$ 3,000</u>

\*\*\* Assumed

**NOW REVIEW MULTIPLE-CHOICE QUESTIONS 51 THROUGH 61**

**G. Research Component—Accounting Standards Codification**

1. The authoritative literature for inventory is found primarily in two places in the Codification: Topic 330 and Topic 605.
  - a. Topic 330 contains the definition of inventory, the significance of inventories, the basis of accounting, cost flows, and application of lower of cost or market.

- b. Topic 605 focuses on long-term construction contracts and the percentage-of-completion and completed-contract methods.
- c. Although the weighted-average, moving-average, and gross profit methods of accounting for inventory are acceptable methods, few, if any, references are made to these methods in the accounting literature.
- (1) The only references to methods are first-in first-out, average and last-in first-out.
- d. A list of keywords that may be helpful in your research is shown below.

**NOTE:** Typing the keywords with correct hyphenation should produce faster and more accurate results.

Accumulated costs billings	Expected losses contract	Mark-up inventory
Basis consistently applied	Finished goods	Net realizable value
Clearly reflects income	Firm purchase commitments	Percentage-of-completion method
Completed-contract method	First-in first-out	Physical deterioration
Contract costs loss	Held for sale	Raw materials
Contracts in process	Inventory obsolescence	Utility of goods
Cost or market	Last-in first-out	Work in process
Cost principle inventories	Lower of cost or market	

## H. International Financial Reporting Standards (IFRS)

- IFRS accounting for inventory differs from US GAAP in three areas: cost flow assumption, valuation of inventory at year-end, and capitalization of interest.
  - With IFRS, the LIFO cost flow assumption is not permissible. Specific ID is required for inventory of goods that are not interchangeable, or goods that are produced and segregated for specific projects. FIFO and weighted-average methods are acceptable methods under IFRS for other types of inventory. The retail method may only be used for certain industries. In addition, the gross profit method can be used to estimate ending inventory when a physical count is not possible.
  - Inventories are carried at the lower of cost or net realizable value (LCNRV). An exception to the LCNRV rule applies to agricultural inventories (biological assets) which are carried at fair value less costs to sell at the point of harvest.
    - Recall that in US GAAP, lower of cost or market (LCM) is used to value inventories. Market is defined as replacement cost, subject to a ceiling and floor. The ceiling is net realizable value (NRV), and the floor is NRV less a normal profit margin. Once inventory is written down, a loss may not be recovered.
    - Although IFRS uses a similar valuation concept, IFRS values inventory at the lower of cost or net realizable value (LCNRV). Note that the calculations are different from US GAAP. NRV is calculated as estimated selling price less estimated costs of completion and sale. Generally, LCNRV is applied on an item-by-item basis. However, under IFRS if there are groups of items that have similar characteristics, they may be grouped for the application of LCNRV.

### EXAMPLE

Assume the following facts for an inventory:

Historical cost	\$100
Estimated selling price	90
Estimated costs to complete and sell	<u>5</u>
NRV	<u>\$ 85</u>

To apply LCNRV to this example, you compare the cost of \$100 to the estimated selling price less estimated costs to complete and sell (\$90 – \$5). NRV is \$85. Therefore, the LCNRV is \$85. The inventory would be written down to \$85 with a corresponding expense on the income statement. If the inventory value at the end of Year 2 was \$90, a recovery of the loss would be recorded by debiting Inventory and crediting an income account.

**NOTE:** If LCM were applied under US standards, additional information would be needed. Specifically, US GAAP would require the replacement cost and the normal profit margin in order to arrive at the ceiling and the floor.

- c. Rules for capitalization of interest are also different.
- (1) US GAAP allows no capitalization of interest for inventories that are routinely manufactured or otherwise produced in quantities on a repetitive basis.
  - (2) Similar to US GAAP, IFRS does not allow interest or financing costs to be capitalized as an inventory cost if it is paid under normal credit terms. However, IFRS allows interest costs to be capitalized if there is a lengthy production period to prepare the goods for sale.

**NOW REVIEW MULTIPLE-CHOICE QUESTIONS 62 THROUGH 68**

## KEY TERMS

**Absorption costing.** Considers both variable and fixed manufacturing costs as product costs.

**Ceiling.** Which is net realizable value (selling price less selling costs and costs to complete).

**Completed-contract method.** Recognition of contract revenue and profit at contract completion.

**Direct (Variable) costing.** Considers only variable costs as product costs and fixed production costs as period costs.

**Dollar-value LIFO.** LIFO applied to pools of inventory items rather than to individual items.

**First-In, First-Out (FIFO).** The goods from beginning inventory and the earliest purchases are assumed to be the goods sold first.

**Floor.** Which is net realizable value less normal profit.

**FOB destination.** Title passes to the buyer when the goods are received at their final destination.

**FOB shipping point.** Title passes to the buyer when the carrier receives the goods.

**Gross method.** Any subsequent discount taken is shown as purchase discount which is netted against the purchases account in determining cost of goods sold.

**Inventory turnover.** Measures the number of times inventory was sold and reflects inventory order and investment policies.

**Last-In, First-Out (LIFO).** The most recent purchases are assumed to be the first goods sold; thus, ending inventory is assumed to be composed of the oldest goods.

**LIFO conformity rule.** If LIFO is used for tax purposes, it must be used for financial reporting purposes.

**LIFO reserve.** The account used to reduce inventory from the internal valuation to the LIFO valuation.

**Moving-average.** The average cost of goods on hand must be recalculated any time additional inventory is purchased at a unit cost different from the previously calculated average cost of goods on hand.

**Net method.** Any purchase discounts offered are assumed taken and the purchase account reflects the net price.

**Number of days' supply in average inventory.** Number of days inventory is held before sale; reflects on efficiency of inventory policies.

**Percentage-of-completion.** Recognition of contract revenue and profit during construction based on expected total profit and estimated progress towards completion in the current period.

**Periodic system.** Inventory is counted periodically and then priced.

**Perpetual system.** A running total is kept of the units on hand (and possibly their value) by recording all increases and decreases as they occur.

**Purchase commitments.** Result from legally enforceable contracts to purchase specific quantities of goods at fixed prices in the future.

**Simple average.** The seller does not weight the average for units purchased or in beginning inventory.

**Specific identification.** The seller determines which item is sold.

**Standard costs.** Predetermined costs in a cost accounting system, generally used for control purposes.

**Trade discounts.** These are discounts that are allowed to the entity because of its being a wholesaler, a good customer, or merely the fact that the item is on sale at a reduced price.

**Weighted-average.** The seller averages the cost of all items on hand and purchased during the period. The units in ending inventory and units sold (CGS) are costed at this average cost.

### Multiple-Choice Questions (1–68)

#### A. Determining Inventory and Cost of Goods Sold

1. The following information applied to Fenn, Inc. for year 2:

Merchandise purchased for resale	\$400,000
Freight-in	10,000
Freight-out	5,000
Purchase returns	2,000

Fenn's year 2 inventoriable cost was

- a. \$400,000  
 b. \$404,000  
 c. \$408,000  
 d. \$413,000
2. On December 28, year 2, Kerr Manufacturing Co. purchased goods costing \$50,000. The terms were FOB destination. Some of the costs incurred in connection with the sale and delivery of the goods were as follows:

Packaging for shipment	\$1,000
Shipping	1,500
Special handling charges	2,000

These goods were received on December 31, year 2. In Kerr's December 31, year 2 balance sheet, what amount of cost for these goods should be included in inventory?

- a. \$54,500  
 b. \$53,500  
 c. \$52,000  
 d. \$50,000
3. On June 1, year 2, Pitt Corp. sold merchandise with a list price of \$5,000 to Burr on account. Pitt allowed trade discounts of 30% and 20%. Credit terms were 2/15, n/40 and the sale was made FOB shipping point. Pitt prepaid \$200 of delivery costs for Burr as an accommodation. On June 12, year 2, Pitt received from Burr a remittance in full payment amounting to
- a. \$2,744  
 b. \$2,940  
 c. \$2,944  
 d. \$3,140

4. The following information was taken from Cody Co.'s accounting records for the year ended December 31, year 2:

Decrease in raw materials inventory	\$ 15,000
Increase in finished goods inventory	35,000
Raw material purchased	430,000
Direct labor payroll	200,000
Factory overhead	300,000
Freight-out	45,000

There was no work in process inventory at the beginning or end of the year. Cody's year 2 cost of goods sold is

- a. \$895,000  
 b. \$910,000

- c. \$950,000  
 d. \$955,000

5. The following information pertains to Deal Corp.'s year 2 cost of goods sold:

Inventory, 12/31/Y1	\$90,000
Year 2 purchases	124,000
Year 2 write-off of obsolete inventory	34,000
Inventory, 12/31/Y2	30,000

The inventory written off became obsolete due to an unexpected and unusual technological advance by a competitor. In its year 2 income statement, what amount should Deal report as cost of goods sold?

- a. \$218,000  
 b. \$184,000  
 c. \$150,000  
 d. \$124,000
6. How should the following costs affect a retailer's inventory?

	Freight-in	Interest on inventory loan
a.	Increase	No effect
b.	Increase	Increase
c.	No effect	Increase
d.	No effect	No effect

7. According to the net method, which of the following items should be included in the cost of inventory?

	Freight costs	Purchase discounts not taken
a.	Yes	No
b.	Yes	Yes
c.	No	Yes
d.	No	No

8. The following information pertained to Azur Co. for the year:

Purchases	\$102,800
Purchase discounts	10,280
Freight in	15,420
Freight out	5,140
Beginning inventory	30,840
Ending inventory	20,560

What amount should Azur report as cost of goods sold for the year?

- a. \$102,800  
 b. \$118,220  
 c. \$123,360  
 d. \$128,500
9. When allocating costs to inventory produced for the period, fixed overhead should be based upon
- a. The actual amounts of goods produced during the period.  
 b. The normal capacity of production facilities.  
 c. The highest production levels in the last three periods.  
 d. The lowest production level in the last three periods.

10. Per the Codification, what is considered the normal capacity of production facilities?

- a. The average production over the previous five-year period.
- b. Actual production for the period.
- c. Actual production for the period plus loss of capacity for planned maintenance.
- d. A range that may vary based on business and industry-specific factors.

11. How should unallocated fixed overhead costs be treated?

- a. Allocated to finished goods and cost of goods sold based on ending balances in the accounts.
- b. Allocated to raw materials, work in process, and finished goods, based on the ending balances in the accounts.
- c. Recognized as an expense in the period in which they are incurred.
- d. Allocated to work in process, finished goods, and cost of goods sold based on ending balances in the accounts.

12. When manufacturing inventory, what is the accounting treatment for abnormal freight-in costs?

- a. Charge to expense for the period.
- b. Charge to the finished goods inventory.
- c. Charge to raw materials inventory.
- d. Allocate to raw materials, work in process, and finished goods.

13. On December 15, year 2, Flanagan purchased goods costing \$100,000. The terms were FOB shipping point. Costs incurred by Flanagan in connection with the purchase and delivery of the goods were as follows:

Normal freight charges	\$3,000
Handling costs	2,000
Insurance on shipment	500
Abnormal freight charges for express shipping	1,200

The goods were received on December 17, year 2. What is the amount that Flanagan should charge to inventory and to current period expense?

	Inventory	Current period expense
a.	\$3,000	\$3,700
b.	\$5,000	\$1,700
c.	\$5,500	\$1,200
d.	\$6,700	\$0

**B. Inventory Valuation and Cost-Flow Methods**

14. Bach Co. adopted the dollar-value LIFO inventory method as of January 1, year 2. A single inventory pool and an internally computed price index are used to compute Bach's LIFO inventory layers. Information about Bach's dollar value inventory follows:

Date	Inventory	
	At base year cost	At dollar value LIFO
1/1/Y1	\$90,000	\$90,000
Year 1 layer	20,000	30,000
Year 2 layer	40,000	80,000

What was the price index used to compute Bach's year 2 dollar value LIFO inventory layer?

- a. 1.09
- b. 1.25
- c. 1.33
- d. 2.00

15. Nest Co. recorded the following inventory information during the month of January:

	Units	Unit cost	Total cost	Units on hand
Balance on 1/1	2,000	\$1	\$2,000	2,000
Purchased on 1/8	1,200	3	3,600	3,200
Sold on 1/23	1,800			1,400
Purchased on 1/28	800	5	4,000	2,200

Nest uses the LIFO method to cost inventory. What amount should Nest report as inventory on January 31 under each of the following methods of recording inventory?

	Perpetual	Periodic
a.	\$2,600	\$5,400
b.	\$5,400	\$2,600
c.	\$2,600	\$2,600
d.	\$5,400	\$5,400

**B.2. Weighted-Average**

16. The weighted-average for the year inventory cost flow method is applicable to which of the following inventory systems?

	Periodic	Perpetual
a.	Yes	Yes
b.	Yes	No
c.	No	Yes
d.	No	No

**B.4. Moving Average**

17. During January year 2, Metro Co., which maintains a perpetual inventory system, recorded the following information pertaining to its inventory:

	Units	Unit cost	Total cost	Units on hand
Balance on 1/1/Y2	1,000	\$1	\$1,000	1,000
Purchased on 1/7/Y2	600	3	1,800	1,600
Sold on 1/20/Y2	900			700
Purchased on 1/25/Y2	400	5	2,000	1,100

Under the moving-average method, what amount should Metro report as inventory at January 31, year 2?

- a. \$2,640
- b. \$3,225
- c. \$3,300
- d. \$3,900

### B.5. Lower of Cost or Market

18. Based on a physical inventory taken on December 31, year 2, Chewy Co. determined its chocolate inventory on a FIFO basis at \$26,000 with a replacement cost of \$20,000. Chewy estimated that, after further processing costs of \$12,000, the chocolate could be sold as finished candy bars for \$40,000. Chewy's normal profit margin is 10% of sales. Under the lower of cost or market rule, what amount should Chewy report as chocolate inventory in its December 31, year 2 balance sheet?

- a. \$28,000
- b. \$26,000
- c. \$24,000
- d. \$20,000

19. Reporting inventory at the lower of cost or market is a departure from the accounting principle of

- a. Historical cost.
- b. Consistency.
- c. Conservatism.
- d. Full disclosure.

20. The original cost of an inventory item is below both replacement cost and net realizable value. The net realizable value less normal profit margin is below the original cost. Under the lower of cost or market method, the inventory item should be valued at

- a. Replacement cost.
- b. Net realizable value.
- c. Net realizable value less normal profit margin.
- d. Original cost.

21. Which of the following statements are correct when a company applying the lower of cost or market method reports its inventory at replacement cost?

- I. The original cost is less than replacement cost.
  - II. The net realizable value is greater than replacement cost.
- a. I only.
  - b. II only.
  - c. Both I and II.
  - d. Neither I nor II.

22. The original cost of an inventory item is above the replacement cost and the net realizable value. The replacement cost is below the net realizable value less the normal profit margin. As a result, under the lower of cost or market method, the inventory item should be reported at the

- a. Net realizable value.
- b. Net realizable value less the normal profit margin.

- c. Replacement cost.
- d. Original cost.

### B.6. Losses on Purchase Commitments

23. On January 1, year 2, Card Corp. signed a three-year noncancelable purchase contract, which allows Card to purchase up to 500,000 units of a computer part annually from Hart Supply Co. at \$.10 per unit and guarantees a minimum annual purchase of 100,000 units. During year 2, the part unexpectedly became obsolete. Card had 250,000 units of this inventory at December 31, year 2, and believes these parts can be sold as scrap for \$.02 per unit. What amount of probable loss from the purchase commitment should Card report in its year 2 income statement?

- a. \$24,000
- b. \$20,000
- c. \$16,000
- d. \$8,000

24. Thread Co. is selecting its inventory system in preparation for its first year of operations. Thread intends to use either the periodic weighted-average method or the perpetual moving-average method, and to apply the lower of cost or market rule either to individual items or to the total inventory. Inventory prices are expected to generally increase throughout year 2, although a few individual prices will decrease. What inventory system should Thread select if it wants to maximize the inventory carrying amount at December 31, year 2?

Inventory method	Cost or market application
a. Perpetual	Total inventory
b. Perpetual	Individual item
c. Periodic	Total inventory
d. Periodic	Individual item

### B.7. and B.8. First-In, First-Out (FIFO); and Last-In, First-Out (LIFO)

25. Marsh Company had 150 units of product A on hand at January 1, year 2, costing \$21 each. Purchases of product A during the month of January were as follows:

	Units	Unit cost
Jan. 10	200	\$22
18	250	23
28	100	24

A physical count on January 31, year 2, shows 250 units of product A on hand. The cost of the inventory at January 31, year 2, under the LIFO method is

- a. \$5,850
- b. \$5,550
- c. \$5,350
- d. \$5,250

26. During January year 2, Metro Co., which maintains a perpetual inventory system, recorded the following information pertaining to its inventory:

	Units	Unit cost	Total cost	Units on hand
Balance on 1/1/Y2	1,000	\$1	\$1,000	1,000
Purchased on 1/7/Y2	600	3	1,800	1,600
Sold on 1/20/Y2	900			700
Purchased on 1/25/Y2	400	5	2,000	1,100

- |    | FIFO | LIFO |
|----|------|------|
| a. | Yes  | No   |
| b. | Yes  | Yes  |
| c. | No   | Yes  |
| d. | No   | No   |

Under the LIFO method, what amount should Metro report as inventory at January 31, year 2?

- a. \$1,300
- b. \$2,700
- c. \$3,900
- d. \$4,100

27. Drew Co. uses the average cost inventory method for internal reporting purposes and LIFO for financial statement and income tax reporting. At December 31, year 2, the inventory was \$375,000 using average cost and \$320,000 using LIFO. The unadjusted credit balance in the LIFO Reserve account on December 31, year 2, was \$35,000. What adjusting entry should Drew record to adjust from average cost to LIFO at December 31, year 2?

	Debit	Credit
a. Cost of goods sold	\$55,000	
Inventory		\$55,000
b. Cost of goods sold	\$55,000	
LIFO reserve		\$55,000
c. Cost of goods sold	\$20,000	
Inventory		\$20,000
d. Cost of goods sold	\$20,000	
LIFO reserve		\$20,000

28. A company decided to change its inventory valuation method from FIFO to LIFO in a period of rising prices. What was the result of the change on ending inventory and net income in the year of the change?

	Ending inventory	Net income
a.	Increase	Increase
b.	Increase	Decrease
c.	Decrease	Decrease
d.	Decrease	Increase

29. Generally, which inventory costing method approximates most closely the current cost for each of the following?

	Cost of goods sold	Ending inventory
a.	LIFO	FIFO
b.	LIFO	LIFO
c.	FIFO	FIFO
d.	FIFO	LIFO

30. During periods of rising prices, a perpetual inventory system would result in the same dollar amount of ending inventory as a periodic inventory system under which of the following inventory cost flow methods?

**B.9. Dollar-Value LIFO**

31. On January 1, year 1, Poe Company adopted the dollar-value LIFO inventory method. Poe's entire inventory constitutes a single pool. Inventory data for year 1 and year 2 are as follows:

Date	Inventory at current year cost	Inventory at base year cost	Relevant price index
1/1/Y1	\$150,000	\$150,000	1.00
12/31/Y1	220,000	200,000	1.10
12/31/Y2	276,000	230,000	1.20

Poe's LIFO inventory value at December 31, year 2, is

- a. \$230,000
- b. \$236,000
- c. \$241,000
- d. \$246,000

32. Brock Co. adopted the dollar-value LIFO inventory method as of January 1, year 1. A single inventory pool and an internally computed price index are used to compute Brock's LIFO inventory layers. Information about Brock's dollar-value inventory follows:

Date	At base year cost	Inventory At current year cost	At dollar value LIFO
1/1/Y1	\$40,000	\$40,000	\$40,000
Year 1 layer	<u>5,000</u>	<u>14,000</u>	<u>6,000</u>
12/31/Y1	45,000	54,000	46,000
Year 2 layer	<u>15,000</u>	<u>26,000</u>	<u>?</u>
12/31/Y2	<u>\$60,000</u>	<u>\$80,000</u>	<u>?</u>

What was Brock's dollar-value LIFO inventory at December 31, year 2?

- a. \$80,000
- b. \$74,000
- c. \$66,000
- d. \$60,000

33. Estimates of price-level changes for specific inventories are required for which of the following inventory methods?

- a. Conventional retail.
- b. Dollar-value LIFO.
- c. Weighted-average cost.
- d. Average cost retail.

34. When the double-extension approach to the dollar-value LIFO inventory method is used, the inventory layer added in the current year is multiplied by an index number. Which of the following correctly states how components are used in the calculation of this index number?

- a. In the numerator, the average of the ending inventory at base year cost and at current year cost.
- b. In the numerator, the ending inventory at current year cost, and, in the denominator, the ending inventory at base year cost.
- c. In the numerator, the ending inventory at base year cost, and, in the denominator, the ending inventory at current year cost.
- d. In the denominator, the average of the ending inventory at base year cost and at current year cost.

**35.** Jones Wholesalers stocks a changing variety of products. Which inventory costing method will be **most** likely to give Jones the lowest ending inventory when its product lines are subject to specific price increases?

- a. Specific identification.
- b. Weighted-average.
- c. Dollar-value LIFO.
- d. FIFO periodic.

### B.10. Gross Profit

**36.** Dart Company's accounting records indicated the following information:

Inventory, 1/1/Y2	\$500,000
Purchases during year 2	2,500,000
Sales during year 2	3,200,000

A physical inventory taken on December 31, year 2, resulted in an ending inventory of \$575,000. Dart's gross profit on sales has remained constant at 25% in recent years. Dart suspects some inventory may have been taken by a new employee. At December 31, year 2, what is the estimated cost of missing inventory?

- a. \$25,000
- b. \$100,000
- c. \$175,000
- d. \$225,000

### B.14. Cost Apportionment by Relative Sales Value

**37.** On July 1, year 2, Casa Development Co. purchased a tract of land for \$1,200,000. Casa incurred additional cost of \$300,000 during the remainder of year 2 in preparing the land for sale. The tract was subdivided into residential lots as follows:

Lot class	Number of lots	Sales price per lot
A	100	\$24,000
B	100	16,000
C	200	10,000

Using the relative sales value method, what amount of costs should be allocated to the Class A lots?

- a. \$300,000
- b. \$375,000

- c. \$600,000
- d. \$720,000

### C. Items to Include in Inventory

**38.** Herc Co.'s inventory at December 31, year 2, was \$1,500,000 based on a physical count priced at cost, and before any necessary adjustment for the following:

- Merchandise costing \$90,000, shipped FOB shipping point from a vendor on December 30, year 2, was received and recorded on January 5, year 3.
- Goods in the shipping area were excluded from inventory although shipment was not made until January 4, year 3. The goods, billed to the customer FOB shipping point on December 30, year 2, had a cost of \$120,000.

What amount should Herc report as inventory in its December 31, year 2 balance sheet?

- a. \$1,500,000
- b. \$1,590,000
- c. \$1,620,000
- d. \$1,710,000

**39.** Kew Co.'s accounts payable balance at December 31, year 2, was \$2,200,000 before considering the following data:

- Goods shipped to Kew FOB shipping point on December 22, year 2, were lost in transit. The invoice cost of \$40,000 was not recorded by Kew. On January 7, year 3, Kew filed a \$40,000 claim against the common carrier.
- On December 27, year 2, a vendor authorized Kew to return, for full credit, goods shipped and billed at \$70,000 on December 3, year 2. The returned goods were shipped by Kew on December 28, year 2. A \$70,000 credit memo was received and recorded by Kew on January 5, year 3.
- Goods shipped to Kew FOB destination on December 20, year 2, were received on January 6, year 3. The invoice cost was \$50,000.

What amount should Kew report as accounts payable in its December 31, year 2 balance sheet?

- a. \$2,170,000
- b. \$2,180,000
- c. \$2,230,000
- d. \$2,280,000

**40.** Lewis Company's usual sales terms are net sixty days, FOB shipping point. Sales, net of returns and allowances, totaled \$2,300,000 for the year ended December 31, year 2, before year-end adjustments. Additional data are as follows:

- On December 27, year 2, Lewis authorized a customer to return, for full credit, goods shipped and billed at \$50,000 on December 15, year 2. The returned goods were received by Lewis on January 4, year 3, and a \$50,000 credit memo was issued and recorded on the same date.
- Goods with an invoice amount of \$80,000 were billed and recorded on January 3, year 3. The goods were shipped on December 30, year 2.

- Goods with an invoice amount of \$100,000 were billed and recorded on December 30, year 2. The goods were shipped on January 3, year 3.

Lewis' adjusted net sales for year 2 should be

- a. \$2,330,000
- b. \$2,280,000
- c. \$2,250,000
- d. \$2,230,000

41. On January 1, year 2, Dell, Inc. contracted with the city of Little to provide custom built desks for the city schools. The contract made Dell the city's sole supplier and required Dell to supply no less than 4,000 desks and no more than 5,500 desks per year for two years. In turn, Little agreed to pay a fixed price of \$110 per desk. During year 2, Dell produced 5,000 desks for Little. At December 31, year 2, 500 of these desks were segregated from the regular inventory and were accepted and awaiting pickup by Little. Little paid Dell \$450,000 during year 2. What amount should Dell recognize as contract revenue in year 2?

- a. \$450,000
- b. \$495,000
- c. \$550,000
- d. \$605,000

**D. Consignments**

42. On October 20, year 2, Grimm Co. consigned forty freezers to Holden Co. for sale at \$1,000 each and paid \$800 in transportation costs. On December 30, year 2, Holden reported the sale of ten freezers and remitted \$8,500. The remittance was net of the agreed 15% commission. What amount should Grimm recognize as consignment sales revenue for year 2?

- a. \$7,700
- b. \$8,500
- c. \$9,800
- d. \$10,000

43. The following items were included in Opal Co.'s inventory account at December 31, year 2:

Merchandise out on consignment, at sales price, including 40% markup on selling price	\$40,000
Goods purchased, in transit, shipped FOB shipping point	36,000
Goods held on consignment by Opal	27,000

By what amount should Opal's inventory account at December 31, year 2, be reduced?

- a. \$103,000
- b. \$67,000
- c. \$51,000
- d. \$43,000

44. On December 1, year 2, Alt Department Store received 505 sweaters on consignment from Todd. Todd's cost for the sweaters was \$80 each, and they were priced to sell at \$100. Alt's commission on consigned goods is 10%. At December 31, year 2, five sweaters remained. In its

December 31, year 2 balance sheet, what amount should Alt report as payable for consigned goods?

- a. \$49,000
- b. \$45,400
- c. \$45,000
- d. \$40,400

45. Southgate Co. paid the in-transit insurance premium for consignment goods shipped to Hendon Co., the consignee. In addition, Southgate advanced part of the commissions that will be due when Hendon sells the goods. Should Southgate include the in-transit insurance premium and the advanced commissions in inventory costs?

	Insurance premium	Advanced commissions
a.	Yes	Yes
b.	No	No
c.	Yes	No
d.	No	Yes

46. Jel Co., a consignee, paid the freight costs for goods shipped from Dale Co., a consignor. These freight costs are to be deducted from Jel's payment to Dale when the consignment goods are sold. Until Jel sells the goods, the freight costs should be included in Jel's

- a. Cost of goods sold.
- b. Freight-out costs.
- c. Selling expenses.
- d. Accounts receivable.
- e. Ratios

**E. Ratios**

47. Heath Co.'s current ratio is 4:1. Which of the following transactions would normally increase its current ratio?

- a. Purchasing inventory on account.
- b. Selling inventory on account.
- c. Collecting an account receivable.
- d. Purchasing machinery for cash.

48. During year 2, Rand Co. purchased \$960,000 of inventory. The cost of goods sold for year 2 was \$900,000, and the ending inventory at December 31, year 2, was \$180,000. What was the inventory turnover for year 2?

- a. 6.4
- b. 6.0
- c. 5.3
- d. 5.0

49. In a comparison of year 2 to year 1, Neir Co.'s inventory turnover ratio increased substantially although sales and inventory amounts were essentially unchanged. Which of the following statements explains the increased inventory turnover ratio?

- a. Cost of goods sold decreased.
- b. Accounts receivable turnover increased.
- c. Total asset turnover increased.
- d. Gross profit percentage decreased.

50. Selected data pertaining to Lore Co. for the calendar year 2 is as follows:

Net cash sales	\$ 3,000
Cost of goods sold	18,000
Inventory at beginning of year	6,000
Purchases	24,000
Accounts receivable at beginning of year	20,000
Accounts receivable at end of year	22,000

Lore would use which of the following to determine the average days' sales in inventory?

Numerator	Denominator
a. 365	Average inventory
b. 365	Inventory turnover
c. Average inventory	Sales divided by 365
d. Sales divided by 365	Inventory turnover

### F. Long-Term Construction Contracts

51. Cord Builders, Inc. has consistently used the percentage-of-completion method of accounting for construction-type contracts. During year 1 Cord started work on a \$9,000,000 fixed-price construction contract that was completed in year 3. Cord's accounting records disclosed the following:

	December 31	
	Year 1	Year 2
Cumulative contract costs incurred	\$3,900,000	\$6,300,000
Estimated total cost at completion	7,800,000	8,100,000

How much income would Cord have recognized on this contract for the year ended December 31, year 2?

- \$100,000
- \$300,000
- \$600,000
- \$700,000

52. State Co. recognizes construction revenue and expenses using the percentage-of-completion method. During year 1, a single long-term project was begun, which continued through year 2. Information on the project follows:

	Year 1	Year 2
Accounts receivable from construction contract	\$100,000	\$300,000
Construction expenses	105,000	192,000
Construction in progress	122,000	364,000
Partial billings on contract	100,000	420,000

Profit recognized from the long-term construction contract in year 2 should be

- \$50,000
- \$108,000
- \$128,000
- \$228,000

53. Lake Construction Company has consistently used the percentage-of-completion method of recognizing income. During year 1, Lake entered into a fixed-price contract to construct an office building for \$10,000,000. Information relating to the contract is as follows:

	At December 31,	
	Year 1	Year 2
Percentage of completion	20%	60%
Estimated total cost at completion	\$7,500,000	\$8,000,000
Income recognized (cumulative)	500,000	1,200,000

Contract costs incurred during year 2 were

- \$3,200,000
- \$3,300,000
- \$3,500,000
- \$4,800,000

54. Hansen Construction, Inc. has consistently used the percentage-of-completion method of recognizing income. During year 2, Hansen started work on a \$3,000,000 fixed-price construction contract. The accounting records disclosed the following data for the year ended December 31, year 2:

Costs incurred	\$ 930,000
Estimated cost to complete	2,170,000
Progress billings	1,100,000
Collections	700,000

How much loss should Hansen have recognized in year 2?

- \$230,000
- \$100,000
- \$30,000
- \$0

Items 55 and 56 are based on the following data pertaining to Pell Co.'s construction jobs, which commenced during year 2:

	Project 1	Project 2
Contract price	\$420,000	\$300,000
Costs incurred during year 2	240,000	280,000
Estimated costs to complete	120,000	40,000
Billed to customers during year 2	150,000	270,000
Received from customers during year 2	90,000	250,000

55. If Pell used the completed contract method, what amount of gross profit (loss) would Pell report in its year 2 income statement?

- \$(20,000)
- \$0
- \$340,000
- \$420,000

56. If Pell used the percentage-of-completion method, what amount of gross profit (loss) would Pell report in its year 2 income statement?

- a. \$(20,000)
- b. \$20,000
- c. \$22,500
- d. \$40,000

57. Which of the following is used in calculating the income recognized in the fourth and final year of a contract accounted for by the percentage-of-completion method?

	Actual total costs	Income previously recognized
a.	Yes	Yes
b.	Yes	No
c.	No	Yes
d.	No	No

58. A company used the percentage-of-completion method of accounting for a five-year construction contract. Which of the following items will the company use to calculate the income recognized in the third year?

	Progress billings to date	Income previously recognized
a.	Yes	No
b.	No	Yes
c.	No	No
d.	Yes	Yes

59. The calculation of the income recognized in the third year of a five-year construction contract accounted for using the percentage-of-completion method includes the ratio of

- a. Total costs incurred to date to total estimated costs.
- b. Total costs incurred to date to total billings to date.
- c. Cost incurred in year three to total estimated costs.
- d. Costs incurred in year three to total billings to date.

60. When should an anticipated loss on a long-term contract be recognized under the percentage-of-completion method and the completed-contract method, respectively?

	Percentage-of-completion	Completed-contract
a.	Over life of project	Contract complete
b.	Immediately	Contract complete
c.	Over life of project	Immediately
d.	Immediately	Immediately

61. In accounting for a long-term construction contract using the percentage-of-completion method, the progress billings on contracts account is a

- a. Contra current asset account.
- b. Contra noncurrent asset account.
- c. Noncurrent liability account.
- d. Revenue account.

### H. International Financial Reporting Standards (IFRS)

62. Brady Corporation values its inventory at the lower of cost or net realizable value as required by IFRS. Brady has the following information regarding its inventory:

Historical cost	\$1,000
Estimated selling price	900
Estimated costs to complete and sell	50
Replacement cost	800

What is the amount for inventory that Brady should report on the balance sheet under the lower of cost or net realizable value method?

- a. \$1,000
- b. \$900
- c. \$850
- d. \$750

63. A company determined the following values for its inventory as of the end of its fiscal year:

Historical cost	\$100,000
Current replacement cost	70,000
Net realizable value	90,000
Net realizable value less a normal profit margin	85,000
Fair value	95,000

Under IFRS, what amount should the company report as inventory on its balance sheet?

- a. \$70,000
- b. \$85,000
- c. \$90,000
- d. \$95,000

64. Under IFRS, which of the following inventory items are **not** valued at the lower of cost or net realizable value?

- a. Manufactured inventory items.
- b. Retail inventory items.
- c. Biological inventory items.
- d. Industrial inventory items.

65. Under IFRS, the specific identification method of accounting for inventory is required for

- a. All inventory items.
- b. Inventory items which are interchangeable.
- c. Inventory items that are not interchangeable and goods that are produced and segregated for specific projects.
- d. Biological (agricultural) inventories.

66. The information provided below is for an item in Harris Corporation's inventory at year end. Harris presents its financial statements in accordance with IFRS:

Historical cost	\$1,200
Estimated selling price	1,300
Estimated completion and selling costs	150
Replacement cost	1,100

What should be the value of this inventory item in the company's financial statements?

- a. \$1,100
- b. \$1,150
- c. \$1,200
- d. \$1,300

67. Which of the following is **not** true about accounting for inventory under IFRS?

- a. FIFO is allowed.
- b. Interest costs may be capitalized if there is a lengthy production period to prepare goods for sale.
- c. The weighted-average method is acceptable.
- d. Inventories are always valued at net realizable value.

68. Which of the following methods of accounting for inventory is **not** allowed under IFRS?

- a. LIFO.
- b. Specific identification.
- c. FIFO.
- d. Weighted-average.

Multiple-Choice Answers and Explanations

Answers

1. c	15. b	29. a	43. d	57. a

14. d	28. c	42. d	56. b	2nd: $\frac{\quad}{68} = \frac{\quad}{\%}$

Explanations

1. (c) Inventoriable costs include all costs necessary to prepare goods for sale. For a merchandising concern these costs include the purchase price of the goods, freight-in, insurance, warehousing, and any costs necessary to get the goods to the point of sale (except interest on any loans obtained to purchase the goods). In this problem, inventoriable costs total \$408,000.

Purchase price less returns (\$400,000 – \$2,000)	\$398,000
Freight-in	10,000
	<u>\$408,000</u>

Note that freight-out is a selling expense, not an inventoriable cost, as the diagram below indicates.

2. (d) When the shipping terms are FOB destination, the seller bears all costs of transporting the goods to the buyer. Therefore, the seller is responsible for the payment of packaging costs (\$1,000), shipping costs (\$1,500), and the special handling charges (\$2,000). The only amount to be included as the buyer’s cost of the inventory purchased is the purchase price (\$50,000).

3. (c) Purchases are always recorded net of trade discounts. When more than one trade discount is applied to a list price, it is called a chain discount. Chain discounts are applied in steps; each discount applies to the previously discounted price. The cost, net of trade discounts, is \$2,800 [ $5,000 - (30\% \times 5,000) = 3,500$ ; and  $3,500 - (20\% \times 3,500) = 2,800$ ]. Payment was made within the discount period, so the net purchase price is \$2,744 [ $2,800 - (2\% \times 2,800)$ ]. The remittance from Burr would also include reimbursement of the \$200 of delivery costs. Since the terms were FOB

shipping point, Burr is responsible for paying this amount, and must reimburse Pitt, who prepaid the freight. Thus, the total remittance is \$2,944 (\$2,744 + \$200).

4. (b) Three computations must be performed: raw materials used, cost of goods manufactured, and cost of goods sold.

(1) Raw materials purchased	\$430,000	
Decrease in RM inventory	15,000	
Raw materials used	<u>\$445,000</u>	←
(2) Beginning WIP	\$ --	
RM used (from above)	445,000	←
Direct labor	200,000	
Factory overhead	300,000	
Cost to account for	945,000	
Ending WIP	--	
Cost of goods manuf.	<u>\$945,000</u>	←
(3) Cost of goods manuf.	\$945,000	
Increase in FD inventory	35,000	

The decrease in RM inventory is added when computing RM used because RM were used in excess of those purchased. The increase in FG inventory is deducted when computing cost of goods sold because it represents the portion of goods manufactured which were not sold. The freight-out is irrelevant for this question because freight-out is a selling expense and therefore does not affect cost of goods sold.

5. (c) To compute cost of goods sold, the solutions approach is to set up a T-account for inventory

	Inventory		
12/31/Y1	90,000		
Purchases	124,000	34,000	Write-off
		?	Cost of goods sold
12/31/Y2	30,000		

Purchases increase inventory, while the write-off and cost of goods sold decrease inventory. Cost of goods sold can

be computed as \$150,000 using the T-account. An alternate solutions approach is to use the CGS computation

BI	\$ 90,000	
+ Purchases	<u>124,000</u>	
CGAS	214,000	
- EI	<u>(30,000)</u>	
	<u>\$184,000</u>	
		\$34,000 recognized as inventory loss *
		\$150,000 recognized as CGS

\* Theoretically correct treatment.

**6. (a)** The cost of inventory should include all expenditures (direct and indirect) incurred to bring an item to its existing condition and location. Freight-in charges are thus appropriately included in inventory costs. Interest cost shall not be capitalized for assets that are in use or ready for their intended use in the earnings activities of the enterprise. Thus, interest on an inventory loan should not be included in inventory (it should be expensed as incurred).

**7. (a)** The cost of inventory should include all expenditures (direct and indirect) incurred to bring an item to its existing condition and location. Freight charges are thus appropriately included in inventory costs. Under the net purchase method, purchase discounts not taken are recorded in a Purchase Discounts Lost account. When this method is used, purchase discounts lost are considered a financial (i.e., "other") expense, and are thus excluded from the cost of inventory.

**8. (b)** Azur should report cost of goods sold calculated as

Cost of goods sold (CGS) = Beg. Inventory + Net purchases\* + Freight in – Ending Inventory

$$\text{CGS} = \$30,840 + \$92,520^{**} + \$15,420 - \$20,560$$

$$\text{CGS} = \$118,220$$

Freight out is a selling expense and does not enter the calculation of cost of goods sold.

\* Net purchase = Purchases – Purchase returns and allowances – Purchase discounts

\*\* (\$102,800 – \$10,280)

**9. (b)** Fixed overhead is allocated based on the normal capacity of the production facilities. Normal capacity is the production expected to be achieved over a number of periods or seasons under normal circumstances, taking into account the loss of capacity resulting from planned maintenance. Answer (a) is incorrect, because the actual amount of production may only be used if it approximates normal capacity. Answers (c) and (d) are incorrect because the accounting standards do not specify a formula to calculate normal capacity.

**10. (d)** Normal capacity refers to a range in production levels that will vary based on business and industry-specific factors. Normal capacity is the production expected to be achieved over a number of periods or seasons under normal circumstances, taking into account the loss of capacity resulting from planned maintenance. Answer (a) is incorrect because the Codification does not specify a formula for calculating normal capacity. Answers (b) and (c) are incorrect because actual production may only be used if it approximates normal capacity.

**11. (c)** Unallocated fixed overhead costs are recognized as an expense in the period in which they are incurred. Therefore, answers (a), (b), and (d) are incorrect.

**12. (a)** Any abnormal costs for freight, handling costs, and wasted material are required to be treated as current period charges, and not a part of inventory cost. Therefore, answers (b), (c), and (d) are incorrect.

**13. (c)** Inventoriable costs include all costs necessary to prepare goods for sale. For a merchandising concern, these include the purchase price of the goods, freight-in, insurance, warehousing, and any costs necessary to get the goods to the point of sale. Abnormal freight and handling should be charged to expense of the period. Therefore, the normal costs for inventory are \$5,500 (\$3,000 + \$2,000 + \$500) and the abnormal freight of \$1,200 is charged to current expense of the period.

**14. (d)** Ending inventory at dollar value LIFO is calculated as the base year inventory times the index. Therefore, the index used can be calculated as  $2.00 = (\$80,000 \text{ EI at dollar value LIFO} / \$40,000 \text{ base year cost})$ .

**15. (b)** The inventory valuations are calculated as follows:

Valuations of ending inventory under LIFO perpetual

1,400 units at \$1.00	=	\$1,400
800 units at \$5.00	=	<u>4,000</u>
Total		<u>\$5,400</u>

Value of ending inventory under LIFO periodic

2,000 units at \$1.00	=	\$2,000
200 units at \$3.00	=	<u>600</u>
Total		<u>\$2,600</u>

**16. (b)** The requirement is to determine whether the weighted-average inventory method is applicable to a periodic and/or a perpetual inventory system. The weighted-average method computes a weighted-average unit cost of inventory for the entire period and is used with periodic records. The moving-average method requires that a new unit of cost be computed each time new goods are purchased and is used with perpetual records.

**17. (b)** The moving-average method requires that a new unit cost be computed each time goods are purchased. The new unit cost is used to cost all sales of inventory until the next purchase. After the 1/7/Y2 purchase, Metro owns 1,600 units (1,000 + 600) at a total cost of \$2,800 (\$1,000 + \$1,800). Therefore, the moving-average unit cost at that time is \$1.75 (\$2,800 ÷ 1,600 units). After the 1/20/Y2 sale of 900 units (at a unit of cost of \$1.75), Metro owns 700 units at a unit cost of \$1.75 (700 × \$1.75 = \$1,225). The 1/25/Y2 purchase of 400 units at a total cost of \$2,000 increases inventory to its 1/31/Y2 balance of \$3,225 (\$1,225 + \$2,000). The new unit cost (not required) is \$2.93 (\$3,225 ÷ 1,100).

**18. (c)** The lower of cost or market (LCM) is used for financial reporting of inventories. The market value of inventory is defined as the replacement cost (RC), as long as it is less than the ceiling (net realizable value, or NRV) and more than the

floor (NRV less a normal profit, or  $NRV - NP$ ). In this case, the amounts are

Ceiling: $NRV =$	$\$40,000$ est. sell. price	
	$-\$12,000$ disp. cost =	$\$28,000$
Floor: $NRV - NP =$	$\$28,000 - (10\% \times \$40,000)$	$\$24,000$
RC:		$\$20,000$

Since RC falls below the floor, the floor ( $NRV - NP$ ) is the designated market value. Once market value is designated, LCM can be determined by simply determining the lower of cost ( $\$26,000$ ) or market ( $\$24,000$ ). Therefore, inventory is reported at  $\$24,000$ .

**19. (a)** SFAC 5 establishes five different attributes on which assets can be measured. The attribute used should be determined by the nature of the item and the relevance and reliability of the attribute measured. The five attributes are historical cost, current cost, current market value, net realizable value, and present value. Historical cost is defined as the amount of cash, or its equivalent, paid to acquire an asset. Reporting inventory at lower of cost or market is a departure from the historical cost principle as the inventory could potentially be carried at the market value if lower. Although, reporting inventory at lower of cost or market does not create a departure from conservatism as this method carries at inventory the lowest or most conservative value. The use of LCM does not violate the principle of consistency either, as it would be reported on this basis continually. Finally the use of LCM would not violate the principle of full disclosure as its use would be discussed in the footnotes.

**20. (d)** Inventory is to be valued at the lower of cost or market. Under this method, market is replacement cost provided that replacement cost is lower than net realizable value (ceiling) and higher than net realizable value less the normal profit margin (floor). The question does not specify whether replacement cost is above or below net realizable value, but since the original cost is below **both** of these values, that information is irrelevant.

Either NRV or RC will be designated as the market value of the inventory, and since the original cost is below **both** of these values, the inventory will be valued at its original cost. Answer (c) is incorrect because  $NRV - NP$  represents the market floor. Answers (a) and (b) are incorrect because they are both **above** the original cost.

**21. (b)** Lower of cost or market (LCM) is used for financial reporting of inventories. The market value of inventory is defined as the replacement cost (RC) as long as it is less than the ceiling (net realizable value, or NRV) and more than the floor (NRV less a normal profit, or  $NRV - NP$ ). Therefore, if inventory is reported at RC, RC must be less than original cost (meaning statement I is **not** correct), and RC must be less than NRV (meaning statement II is correct) and greater than  $NRV - NP$ .

**22. (b)** Inventory is priced at market when market value is less than cost. Market value is defined as current replacement cost, subject to a ceiling of net realizable value (NRV) and a floor of net realizable value minus a normal profit margin.

In this situation, replacement cost lies outside of (below) the floor and ceiling limitations. Therefore,  $NRV$  less a normal profit margin (the floor), will be used as the market to determine LCM. Since original cost is greater than market, market will be used to price the inventory for the period.

**23. (c)** The requirement is to determine the amount of probable loss from the purchase commitment that Card should report in its year 2 income statement. When there is a decline in market value below the contract price at the balance sheet date and the contract is noncancelable, an unrealized loss should be recorded in the period of decline and reported in the income statement. In this case, Card has a contract to purchase a minimum of 100,000 units both in year 3 and year 4 at  $\$.10$  per unit. The  $\$20,000$  loss ( $200,000 \times \$.10$ ) on these obsolete units should be reduced by the amount Card believes is realizable from the sale of these units. Therefore, the loss on **purchase commitment** is  $\$16,000$  [ $\$20,000 - (200,000 \times .02)$ ]. Additionally, Card Corp. would need to record a loss of  $\$20,000$  ( $\$.08 \times 250,000$ ) from **inventory obsolescence**.

**24. (a)** To maximize its inventory carrying amount at December 31, year 2, Thread should use the perpetual moving-average method with the lower of cost or market rule applied to the total inventory. First, when using the perpetual moving-average method, the cost of sales throughout the year are determined using the average cost of purchases up to the time of the sale. On the other hand, under the periodic weighted-average method, the cost of each item is the weighted-average of **all** units purchased during the year. During a period of rising prices, the perpetual moving-average method results in a lower cost of goods sold and a higher ending inventory because the cost of items sold throughout the year is the average of the earlier, lower prices. Second, the application of the lower of cost or market rule to the total inventory will result in a higher ending inventory because market values lower than cost are offset against market values higher than cost.

**25. (c)** The requirement is to determine the cost of the 1/31/Y2 inventory, using the LIFO method. LIFO stands for last-in, first-out; this means that the cost of the units purchased most recently are included in cost of goods sold. Therefore, the 1/31/Y2 inventory consists of the 250 units that were purchased at the earliest date(s). Thus, the 1/31/Y2 inventory would consist of the 150 units on hand at 1/1/Y2 ( $150 \times \$21 = \$3,150$ ) plus an additional 100 units purchased at the earliest purchase date in January (January 10;  $100 \times \$22 = \$2,200$ ). The total value of the inventory at 1/31/Y2 would be  $\$5,350$  ( $\$3,150 + \$2,200$ ).

**26. (b)** LIFO stands for last-in, first-out; this means that it is assumed that any units sold are the units most recently purchased. In a perpetual system, LIFO is applied at the time of each sale rather than once a year as in a periodic system. Using LIFO, the 900 units sold on 1/20/Y2 would consist of the 600 units purchased on 1/7/Y2 and 300 of the 1,000 units in the 1/1/Y2 balance. This would leave in inventory 700 units from the 1/1/Y2 balance. After the 1/25/Y2 purchase, inventory included those 700 units plus the 400 units purchased on 1/25/Y2. Therefore, ending inventory is \$2,700 [(700 × \$1) + (400 × \$5)].

**27. (d)** When a company uses LIFO for external reporting purposes and another inventory method for internal purposes, a **LIFO Reserve** account is used to reduce inventory from the internal valuation to the LIFO valuation. LIFO Reserve is a contra account to inventory, and is adjusted up or down at year-end with a corresponding increase or decrease to **Cost of Goods Sold**. In this case, the LIFO Reserve account must be adjusted from a balance of \$35,000 to a balance of \$55,000 (\$375,000 – \$320,000). Therefore, LIFO Reserve is credited for \$20,000 (\$55,000 – \$35,000) with a corresponding debit to Cost of Goods Sold.

**28. (c)** In a change to LIFO, no recognition is given to any cumulative effect associated with the change because it is usually not determinable. Thus, the effect on ending inventory and net income is the result solely of current year effects. In a period of rising prices, LIFO will result in a **lower ending inventory** amount than FIFO because the earlier lower costs are assumed to remain in ending inventory. LIFO will also result in a **lower net income** because the more recent higher costs are assigned to cost of goods sold.

**29. (a)** The inventory costing method which most closely approximates the current cost for cost of goods sold is LIFO, while the method which more accurately reflects ending inventory is FIFO. Under LIFO, the most recent purchases are assumed to be the first goods sold; thus, cost of goods sold contains relatively current costs. On the other hand, since FIFO assumes that the goods from beginning inventory and the earliest purchases are sold first, the ending inventory is made up of more recent purchases and thus represents a more current value.

**30. (a)** Under the FIFO method, the first goods purchased are considered to be the first goods used or sold. Ending inventory is thus made up of the latest (most recent) purchases. Whenever the FIFO method is used, the ending inventory is the same whether a perpetual or periodic system is used. This is true even during periods of rising or falling prices because the inventory flow is always in chronological order. Under the LIFO method, the latest (most recent) purchases are considered to be the first goods used or sold. Ending inventory is thus made up of the first (oldest) purchases. When a periodic method is used, the first/last purchase determination is made only at the end of the year, based upon the actual chronological order of all purchases. When a perpetual method is used, however, the first/last purchase determination is made continuously throughout the year. When inventory levels get low under the perpetual method, early purchase costs will often be assigned to goods sold, a situation that is much less likely to

occur in a periodic system. Therefore, in times of either rising or falling prices, LIFO ending inventory is usually different under a periodic system than under a perpetual system.

**31. (c)** When using dollar-value LIFO, the ending inventory at current year cost must first be converted to base year cost. This amount is given at 12/31/Y2 (\$230,000), but it could be computed as follows:  $\$276,000 \div 1.20 = \$230,000$ . The next step is to determine the incremental LIFO layers at base year cost. The 1/1/Y1 (base year) layer is \$150,000, the year 1 layer is \$50,000 ( $\$200,000 - \$150,000$ ), and the year 2 layer is \$30,000 ( $\$230,000 - \$200,000$ ). Finally, the LIFO layers are restated using the price index in effect at the time each layer was added.

	<b>Base cost</b>		<b>Ending inventory at DV LIFO cost</b>
1/1/Y1 layer	\$150,000	× 1.00 =	\$150,000
Year 1 layer	50,000	× 1.10 =	55,000
Year 2 layer	<u>30,000</u>	× 1.20 =	<u>36,000</u>
	<u>\$230,000</u>		<u>\$241,000</u>

**32. (c)** When using dollar-value LIFO, the ending inventory at current year cost must first be converted to base year cost. The 12/31/Y2 inventory at base year cost is given as \$60,000. Since the 12/31/Y1 inventory at base year cost was \$45,000 (\$40,000 base layer and \$5,000 year 1 layer), a new layer of \$15,000 was added in year 2 ( $\$60,000 - \$45,000$ ). This layer must be restated using the year 2 price index. The year 2 price index is computed using the double-extension technique, as illustrated below.

$$\frac{\text{EI at year-end prices}}{\text{EI at base year prices}} = \frac{\$80,000}{\$60,000} = \underline{1.33}$$

Therefore, the 12/31/Y2 inventory using dollar-value LIFO is \$66,000 as computed below.

	<b>Base cost</b>		<b>DV LIFO</b>
Base layer	\$40,000		\$40,000
Year 1 layer	5,000		6,000
Year 2 layer	15,000	× 1.33	<u>20,000</u>
			<u>\$66,000</u>

**33. (b)** The requirement is to determine which inventory method requires estimates of price level changes for specific inventories. In accordance with the dollar-value LIFO method, the ending inventory is first converted to the base year cost so that the incremental layers can be determined. The incremental layers are then restated using the price index which was in effect at the time each of the layers were added to the inventory. Thus, the specific layers of the ending inventory are adjusted to the current price level. Therefore, answer (b) is correct. Answers (a), (c), and (d) are incorrect because these methods do not specifically adjust for price level changes.

**34. (b)** The requirement is to determine the appropriate use of ending inventory at current year cost and ending inventory at base year cost in calculating the dollar-value LIFO index. The index number used to convert the current year's inventory layer is calculated as follows:

$$\text{Index} = \frac{\text{Ending inventory at current year cost}}{\text{Ending inventory at base year cost}}$$

This index indicates the relationship between current and base year prices as a percentage, and when multiplied by the new layer (which is the increase in inventory in base year dollars), it will convert the layer to current dollars.

**35. (c)** During periods of rising prices, the inventory costing methods which will give Jones the lowest ending inventory balance are LIFO methods, because inventory items that were purchased at the earliest date (when prices were lower) will remain in inventory and the most recently purchased and more expensive items will be expensed through cost of goods sold. Any FIFO method will produce a higher ending inventory balance during inflation since the items purchased earliest (at lower prices) will be expensed through CGS, while the more expensive items remain in inventory. Answers (a) and (b) are incorrect because neither will give Jones a lower ending inventory balance than dollar-value LIFO, particularly as Jones' inventory changes (because dollar-value LIFO allows the LIFO "layers" to be made up of similar, not necessarily identical, items).

**36. (a)** The gross profit method can be used to estimate the cost of missing inventory. The first step is to compute the cost of goods available for sale.

Beginning inventory	\$ 500,000
Purchases	<u>2,500,000</u>
Cost of goods available for sale	<u>\$3,000,000</u>

The second step is to estimate cost of goods sold based on the gross profit percentage.

Sales	\$3,200,000
Estimated gross profit (\$3,200,000 × 25%)	<u>(800,000)</u>
Cost of goods sold (\$3,200,000 × 75%)	<u>\$2,400,000</u>

Note that a shortcut is to realize that if gross profit is 25% of sales, cost of goods sold must be 75% of sales. The third step is to compute estimated ending inventory.

Cost of goods available for sale	\$ 3,000,000
Estimated cost of goods sold	<u>(2,400,000)</u>
Estimated ending inventory	<u>\$ 600,000</u>

Since the actual count of ending inventory at December 31 was only \$575,000, the estimated shortage in inventory is \$25,000 (\$600,000 – \$575,000).

**37. (c)** The total cost of acquiring the land and preparing it for sale (\$1,200,000 + \$300,000 = \$1,500,000) should be allocated to the residential lots based on their relative sales value, as computed below.

Lot class	# of lots	Sales price	Total sales value
A	100	× \$24,000	= \$2,400,000
B	100	× 16,000	= 1,600,000
C	200	× 10,000	= <u>2,000,000</u>
			<u>\$6,000,000</u>
		<b>Fraction allocated to Class A</b>	<b>Allocated cost</b>
<b>Total cost</b>	\$1,500,000	× (\$2,400/\$6,000)	= \$600,000

**38. (d)** Before adjustment, the inventory based on a physical count was \$1,500,000. The \$90,000 of merchandise shipped FOB shipping point by a vendor on 12/30/Y2 should also be included in Herc's 12/31/Y2 inventory because Herc, the buyer, owns the goods while in transit under these terms. The goods in the shipping area (cost, \$120,000) are also owned by Herc because they were not shipped until year 3 and Herc still retains the risks of ownership until that point. Therefore, 12/31/Y2 inventory is \$1,710,000 (\$1,500,000 + \$90,000 + \$120,000).

**39. (a)** Before adjustment, the balance in the Accounts Payable account is \$2,200,000. The \$40,000 of goods lost in transit from a vendor were shipped FOB shipping point. This means the buyer owns the goods while they were in transit; therefore, Kew should record the purchase and accounts payable in year 2. Kew, not the vendor, is ultimately responsible for the lost goods (note that Kew, not the vendor, is suing the common carrier). The \$70,000 return that was recorded on 1/5/Y3 should have been recorded in year 2 when the return was authorized (December 27, year 2). Therefore, Kew should reduce 12/31/Y2 Accounts Payable by \$70,000. The \$50,000 of goods received on 1/6/Y3 were properly recorded in year 3, since the terms were FOB destination (the buyer does not own the goods until they are physically received). Therefore, no adjustment is necessary for this amount. Kew should report 12/31/Y2 Accounts Payable at \$2,170,000 (\$2,200,000 + \$40,000 – \$70,000).

**40. (d)** Net sales is \$2,300,000, subject to three possible adjustments. The goods returned (\$50,000) should be recorded as a return in year 2, when Lewis authorized the return. Since this return was not recorded until year 3, year 2 sales must be adjusted downward. The goods shipped on 12/30/Y2 (\$80,000) were recorded as a sale in year 3. Since the terms were FOB shipping point, the sale must be recorded in year 2 when the goods were shipped; therefore, year 2 sales must be adjusted upward. The goods shipped on 1/3/Y3 (\$100,000) should not be recorded as a sale until year 3. Since the sale was recorded in year 2, year 2 sales must be adjusted downward. Therefore, adjusted net sales for year 2 should be \$2,230,000 (\$2,300,000 – \$50,000 + \$80,000 – \$100,000).

**41. (c)** Generally, goods are considered sold when legal title to the goods passes to the buyer. In certain situations, however, the transfer of title criteria does not reflect the underlying economics of the situation. In this situation, although transfer of legal title may not have occurred for the 500 segregated desks, the economic substance of the transaction is that the seller no longer retains the risks of ownership. Therefore, all 5,000 desks (including the 500 segregated and accepted desks) are considered sold in year 2, and revenue of \$550,000 is recognized (5,000 × \$110). Note that the amount of cash collected (\$450,000) does not affect the amount of revenue recognized in this case.

**42. (d)** A consignor recognizes sales revenue from consignments when the consignee sells the consigned goods to the ultimate customer. Sales commissions earned by the consignee (\$10,000 × 15% = \$1,500) are reported as a selling expense by the consignor and are **not** netted against sales revenue. Therefore, sales revenue is reported at the total selling price of \$10,000 (10 × \$1,000). Note that the transportation costs

(\$800) do not affect sales either; one-fourth (10/40) is reflected in cost of goods sold and three-fourths (30/40) is included in ending inventory.

**43. (d)** No adjustment is necessary for the goods in transit (\$36,000). The goods were shipped **FOB shipping point**, which means the buyer (Opal) owns the goods while in transit. Therefore, Opal properly included these goods in 12/31/Y2 inventory. The merchandise **out** on consignment is owned by the consignor (Opal) and should be included in Opal's inventory **at cost** [ $\$40,000 - (40\% \times \$40,000) = \$24,000$ ]. Therefore, inventory must be reduced by \$16,000 for this item ( $\$40,000 - \$24,000$ ). The goods **held** on consignment (\$27,000) are owned by the consignor, not Opal; therefore, inventory must be reduced \$27,000 for this item. The total reduction in inventory is \$43,000 ( $\$16,000 + \$27,000$ ).

**44. (c)** Alt sold 500 of the consigned sweaters (505 - 5) at \$100 each, resulting in total sales of \$50,000 ( $500 \times \$100$ ). Alt must report a payable to Todd for this amount, less Alt's commission [ $\$50,000 - (10\% \times \$50,000) = \$45,000$ ]. Alt does not owe Todd anything for the unsold sweaters until they are sold.

**45. (c)** Inventoriable costs include all costs necessary to prepare goods for sale. These costs include the purchase price or manufacturing cost of the goods, freight, and any other costs necessary to get the goods to the point of sale. The in-transit insurance premium would therefore be included in inventory costs. Commissions paid to the consignee are selling expenses in the period the consigned goods are sold that are not required to ready the goods for sale. These costs, therefore, are not included in inventory.

**46. (d)** In a consignment, the manufacturer or wholesaler is referred to as the consignor and the dealer or retailer is referred to as the consignee. In such an arrangement, title to the goods remains with the consignor until they are sold to a third party. Jel's payment of reimbursable freight costs results in an account receivable from Dale, which Jel will subtract from the sale proceeds it remits to Dale. Answers (a), (b), and (c) are incorrect because the consignee, Jel, generally does not bear any costs associated with the sale of consigned goods.

**47. (b)** The formula to compute the current ratio is

$$\text{Current ratio} = \frac{\text{Current assets}}{\text{Current liabilities}}$$

The following entries would be recorded when inventory is sold on account:

Accounts receivable sales	}	Sales price of merchandise
Cost of goods sold inventory	}	Cost of merchandise

Since the selling price (increase to AR) is normally higher than the cost of the merchandise sold (decrease to merchandise inventory) the sale would normally cause a net increase in current assets, and therefore, a net increase in the current ratio. When the existing current ratio is greater than one, increases of equal amounts to the numerator (inventory, a component of current assets) and denominator (accounts payable, a

component of current liabilities) will reduce the ratio. When an account receivable is collected, cash (a current asset) is increased by the same amount that accounts receivable (another current asset) is decreased. Thus, the transaction has no impact on the current ratio. When machinery (a non-current asset) is purchased for cash (a current asset), there is a **decrease** in the current ratio.

**48. (b)** The formula for inventory turnover is

$$\frac{\text{Cost of goods sold}}{\text{Average inventory}}$$

Average inventory is equal to beginning inventory plus ending inventory, divided by two. Since beginning inventory is not given, it must be computed using the cost of goods sold relationship

Cost of goods sold	\$ 900,000
+ Ending inventory	<u>180,000</u>
Cost of goods available for sale	\$1,080,000
- Purchases	<u>-960,000</u>
Beginning inventory	<u>\$ 120,000</u>

Therefore, average inventory is \$150,000 [ $(\$120,000 + \$180,000) \div 2$ ], and inventory turnover is 6.0 times ( $\$900,000 \div 150,000$ ).

**49. (d)** The solutions approach is to create a numerical example that conforms to the facts given in the question. The inventory turnover ratio is calculated as follows:

$$\frac{\text{Cost of goods sold}}{\text{Average inventory}}$$

If we assume that cost of goods sold has increased from 100 to 150 and average inventory has remained unchanged at 50 then the following ratios result:

$$\frac{\text{Cost of goods sold}}{\text{Average inventory}} = \frac{100}{50} = 2 \qquad \frac{150}{50} = 3$$

Thus, if cost of goods sold increases while inventory remains unchanged, then the inventory turnover ratio will increase.

In addition, we must examine the effects of the increase in cost of goods sold on the gross profit percentage when sales remain constant. Assuming the same facts as above, and sales of \$200, we get the following results:

Sales	200	200
- Cost of goods sales	<u>-100</u>	<u>-150</u>
Gross profit	<u>100</u>	<u>50</u>

Thus, as cost of goods sold increases, the gross profit and the gross profit percentage will decrease.

Answer (a) is incorrect because a decrease in cost of goods sold will cause the inventory ratio to increase. Answers (b) and (c) are incorrect because they are not related to inventory turnover.

**50. (b)** Average days' sales in inventory measures the number of days inventory is held before sale; it reflects on

efficiency of inventory policies. It is computed using the following formula:

$$\frac{365}{\text{Inventory turnover}}$$

51. (a) The total expected income on the contract at 12/31/Y2 is \$900,000 (\$9,000,000 – \$8,100,000). The formula for recognizing profit under the percentage-of-completion method is

$$\frac{\text{Cost to date}}{\text{Total expected costs}} \times \text{Expected profit} = \text{Profit recognized to date}$$

$$\frac{\$6,300,000}{\$8,100,000} \times \$900,000 = \$700,000$$

This result is the **total** profit on the contract in year 1 and year 2. The year 1 profit recognized must be subtracted from \$700,000 to determine the year 2 profit. At 12/31/Y1, the total expected income on the contract was \$1,200,000 (\$9,000,000 – \$7,800,000). The income recognized in year 1 was \$600,000, as computed below.

$$\frac{\$3,900,000}{\$7,800,000} \times \$1,200,000 = \$600,000$$

Therefore, year 2 income is \$700,000 less \$600,000, or \$100,000.

52. (a) Profit to be recognized using the percentage-of-completion method is generally computed as follows:

$$\left( \frac{\text{Cost to date}}{\text{Total expected cost}} \times \text{Expected profit} \right) - \text{Profit recognized in previous periods}$$

Not enough information is given in this problem to perform this computation, so year 2 profit must be computed indirectly. Since only construction expenses and profit are debited to the construction-in-progress (CIP account), year 1 profit must have been \$17,000 (\$122,000 CIP less \$105,000 const. exp.). Cumulative profit recognized by the end of year 2 must be \$67,000 [\$364,000 CIP less \$297,000 cumulative const. exp. (\$105,000 + \$192,000)]. Therefore, year 2 profit was \$50,000 (\$67,000 - \$17,000).

	CIP		
Year 1 Exp.	105,000		
Year 1 Profit	?		Year 1 Profit = \$17,000
Year 1 End. bal	122,000		
Year 2 Exp.	192,000		
Year 2 Profit	?		Year 2 Profit = \$50,000
Year 2 End. bal.	364,000		

53. (b) Based on the information given, it must be assumed that costs incurred are used to measure the extent of progress toward project completion. At 12/31/Y1, the project was 20% complete and total estimated costs were \$7,500,000. Therefore, costs incurred as of 12/31/Y1 were 20% of \$7,500,000, or \$1,500,000. At 12/31/Y2, the project

was 60% complete and total estimated costs were \$8,000,000. Therefore, costs incurred as of 12/31/Y2 are 60% of \$8,000,000 or \$4,800,000. The costs incurred during year 2 were \$4,800,000 less \$1,500,000, or \$3,300,000.

54. (b) The requirement is to determine the amount of loss to recognize in year 2 on a long-term, fixed-price construction contract. Under both the percentage-of-completion method and the completed-contract method, an expected **loss** on a contract must be recognized in **full** in the period in which the expected loss is discovered. Therefore, Hanson must recognize a loss of \$100,000 in year 2.

Expected contract revenue	\$3,000,000
Expected contract costs (\$930,000 + \$2,170,000)	<u>3,100,000</u>
Expected loss	\$ <u>(100,000)</u>

55. (a) The expected income on project 1 [\$420,000 – (\$240,000 + \$120,000) = \$60,000] is not recognized until the project is completed under the completed contract method. However, under the completed contract method, an expected loss on a contract must be recognized in full in the period in which it is discovered. Project 2 has an expected loss of (\$20,000) [\$300,000 - (\$280,000 + \$40,000)] which must be recognized immediately in year 2.

56. (b) Construction companies that use the percentage-of-completion method in accounting for long-term construction contracts usually recognize gross profit according to the cost-to-cost method.

$$\frac{\text{Costs to date}}{\text{Total estimated costs}} \times \text{Estimated profit} = \text{Gross profit to date}$$

Pell would recognize gross profit of \$40,000 on project 1

$$\frac{\$240,000}{\$240,000 + \$120,000} \times [\$420,000 - (\$240,000 + \$120,000)] = \$40,000$$

Note that prior years' gross profit need not be subtracted from \$40,000 because the project commenced during year 2. Under both the percentage-of-completion method and the completed-contract method, an expected **loss** must be recognized in full in the period in which the expected loss is discovered. Project 2 has an expected loss of (\$20,000) [\$300,000 – (\$280,000 + \$40,000)] which must be recognized in full in year 2. The net gross profit recognized on the two projects is \$20,000 (\$40,000 profit less (\$20,000) loss).

57. (a) In the **final year** of a contract accounted for by the percentage-of-completion method, the percentage of completion is 100%, since costs to date equal total costs. Therefore, the formula to calculate income to be recognized in the final year is simply

$$\underbrace{(\text{Contract price} - \text{Actual costs})}_{\text{Actual income}} - \left[ \text{Income previously recognized} \right]$$

Therefore both **actual total costs** and **income previously recognized** are used in calculating income.

**58. (b)** Under the percentage-of-completion method of accounting for long-term contracts, the cost-to-cost formula is used to compute the amount of income to be recognized in a particular year. The formula to calculate current income is as follows:

$$\left( \frac{\text{Cost to date}}{\text{Total expected cost}} \times \text{Expected profit} \right) - \text{Profit recognized in previous periods}$$

Progress billings do not impact the amount of income recognized.

**59. (a)** The requirement is to determine the ratio to be used to calculate income in the third year using the percentage-of-completion method. Income may be recognized on a cost-to-cost basis when the percentage-of-completion method is used.

$$\left( \frac{\text{Cost to date}}{\text{Total expected cost}} \times \text{Expected profit} \right) - \text{Profit recognized in previous periods}$$

Answers (b) and (d) are incorrect because billings to date are not used as a basis for recognizing revenues. Answer (c) is incorrect as the cost-to-cost calculation requires a cumulative calculation so changes in expected costs and expected income can be adjusted for; thus, costs incurred in year three would be an incorrect basis for recognition of income.

**60. (d)** An anticipated loss on a long-term contract should be recognized immediately under **both** the percentage-of-completion and the completed-contract methods.

**61. (a)** The requirement is to determine the proper classification for the progress billings on contracts account under the percentage-of-completion method. In the construction industry, operating cycles for construction contracts generally exceed one year. Therefore, the predominant practice is to classify all contract-related assets and liabilities as current. On the balance sheet, the Construction in Progress (CIP) account is netted with the contra account, progress billings. If CIP exceeds billings, the excess is reported as a current asset [answer (a)]. If billings exceed CIP, the excess is reported as a current liability. Answers (b) and (c) are incorrect because the accounts related to construction contracts are classified as current. Answer (d) is incorrect because progress billings is not used as a basis for recognizing revenues.

**62. (c)** The requirement is to calculate the amount that should be presented for inventory. Answer (c) is correct because the lower of cost or net realizable value method requires net realizable value to be calculated as the estimated selling price less estimated costs of completion and estimated costs to sell. Therefore, the NRV is \$850 (\$900 – \$50). The lower of cost or net realizable value is determined by comparing the cost of \$1,000 to the NRV of \$850, and using the lower amount. Inventory should be reported at \$850.

**63. (c)** The requirement is to determine the amount that should be reported as inventory. Answer (c) is correct because under IFRS inventory is reported at the lower of cost or net realizable value. Therefore, the amount is \$90,000, which is the lower of \$100,000 cost or \$90,000 net realizable value.

**64. (c)** The requirement is to identify the inventory items that are **not** valued at the lower of cost or net realizable value under IFRS. Answer (c) is correct because biological inventory items are valued at fair value less the cost to sell at the point of harvest.

**65. (c)** The requirement is to identify when the specific identification method is required under IFRS. Answer (c) is correct because the specific identification method is required for inventory items that are not interchangeable and goods that are produced and segregated for specific projects.

**66. (b)** The requirement is to determine the value of the inventory item under IFRS. Answer (b) is correct because under IFRS, inventory is presented at the lower of cost (\$1,200) or net realizable value (\$1,300 selling price – \$150 estimated completion and selling costs). Therefore, the item should be valued at \$1,050.

**67. (d)** The requirement is to identify the statement that is not correct about accounting for inventories under IFRS. Answer (d) is correct because inventories are not always valued at net realizable value. They are valued at the lower of cost or net realizable value.

**68. (a)** The requirement is to identify the method of accounting that is not allowed under IFRS. Answer (a) is correct because the LIFO method is not allowed under IFRS. All of the other methods are allowed.

## Simulations

### Task-Based Simulation 1

<b>Concepts</b>		
	<b>Authoritative Literature</b>	<b>Help</b>

Indicate whether each of the following is included in the cost of inventory.

	<b>Included</b>	<b>Not included</b>
1. Merchandise purchased for resale	<input type="radio"/>	<input type="radio"/>
2. Freight-out	<input type="radio"/>	<input type="radio"/>
3. Direct materials	<input type="radio"/>	<input type="radio"/>
4. Sales returns	<input type="radio"/>	<input type="radio"/>
5. Packaging for shipment to customer	<input type="radio"/>	<input type="radio"/>
6. Factory overhead	<input type="radio"/>	<input type="radio"/>

### Task-Based Simulation 2

<b>Journal Entries</b>		
	<b>Authoritative Literature</b>	<b>Help</b>

Blaedon uses the periodic inventory method for inventories. Prepare the journal entries for each of the following transactions. Blaedon uses the gross method for recording inventory transactions.

1. On January 5, year 2, purchased \$17,000 of garden tillers on account from Bestbuilt Tillers, terms 2/10, n/30, FOB destination. Freight charges were \$200.
2. On January 10, year 2, returned garden tillers worth \$2,000 to Bestbuilt Tillers due to defects.
3. On January 14, year 2, paid for the remaining tillers purchased in 1.
4. On January 28, year 2, purchased \$30,000 of lawn mowers from Lawn Giant, terms 3/10, n/30, FOB shipping point. The freight charges were \$820.
5. On February 6, year 2, paid for the lawn mowers purchased in part 4. from Lawn Giant.

### Task-Based Simulation 3

<b>Calculations</b>		
	<b>Authoritative Literature</b>	<b>Help</b>

### *Situation*

A client, Blaedon Co., sells lawn mowers and garden tillers. The garden tillers are purchased from Bestbuilt Tillers and sold to customers without modification. The lawn mowers, however, are purchased from several contractors. Blaedon then makes ongoing design refinements to the mowers before selling them to customers.

The lawn mowers cost \$200. Blaedon then makes the design refinements at a cost of \$85 per lawn mower. Blaedon stores the lawn mowers in its own warehouse and sells them directly to retailers at a list price of \$500. Blaedon uses the FIFO inventory method. Approximately two-thirds of new lawn mower sales involve trade-ins. For each used lawn mower traded in and returned to Blaedon, retailers receive a \$40 allowance regardless of whether the trade-in was associated with a sale of a year 2 or year 3 model. Blaedon's net realizable value on a used lawn mower averages \$25.

At December 31, year 2, Blaedon's inventory of new lawn mowers includes both year 2 and year 3 models. When the year 3 model was introduced in September year 2, the list price of the remaining year 2 model lawn mowers was reduced below cost. Blaedon is experiencing rising costs.

Blaedon has contacted your firm for advice on how to report the carrying value of inventory, the impact of the decline in value on the year 2 models, and the effects of using the FIFO method on their December 31, year 2 financial statements.

Assume that Blaedon had the following information regarding the garden tiller inventory:

Purchases	\$210,000
Purchase discounts	38,000
Purchase returns	17,500
Freight-in	12,100
Freight-out	18,000
Beginning inventory	42,900
Ending inventory	34,250

Calculate the following items:

1. Goods available for sale
2. Costs of goods sold

### Task-Based Simulation 5

Calculation of Gross Profit	Authoritative Literature	Help

### Situation

London, Inc. began operation of its construction division on October 1, year 1, and entered into contracts for two separate projects. The Beta project contract price was \$600,000 and provided for penalties of \$10,000 per week for late completion. Although during year 2 the Beta project had been on schedule for timely completion, it was completed four weeks late in August year 3. The Gamma project's original contract price was \$800,000. Change orders during year 3 added \$40,000 to the original contract price.

The following data pertains to the separate long-term construction projects in progress:

	Beta	Gamma
As of September 30, year 2:		
Costs incurred to date	\$360,000	\$410,000
Estimated costs to complete	40,000	410,000
Billings	315,000	440,000
Cash collections	275,000	365,000
As of September 30, year 3:		
Costs incurred to date	450,000	720,000
Estimated costs to complete	–	180,000
Billings	560,000	710,000
Cash collections	560,000	625,000

**Additional information**

- London accounts for its long-term construction contracts using the percentage-of-completion method for financial reporting purposes and the completed-contract method for income tax purposes.
- Enacted income tax rates are 25% for year 2 and 30% for future years.
- London’s income before income taxes from all divisions, before considering revenues from long-term construction projects, was \$300,000 for the year ended September 30, year 2. There were no other temporary or permanent differences.

Prepare a schedule showing London’s gross profit (loss) recognized for the years ended September 30, year 2, and year 3, under the percentage-of-completion method.

**London Inc.**  
**SCHEDULE OF GROSS PROFIT (LOSS)**

	<i>Beta</i>		<i>Gamma</i>

Cost Flow Concepts	Authoritative Literature	Help

Below are statements describing inventory and cost flow methods. Identify which method matches each description by clicking on the correct term and placing it in the space provided. You may use a method once, more than once, or not at all.

**Methods**

- Specific identification
- Weighted-average
- Simple average
- Moving-average
- First-in, first-out
- Last-in, first-out
- Dollar-value LIFO
- Gross profit

	<b>Method</b>
1. During a period of rising prices, this method results in a higher net income.	_____
2. This method most closely matches the physical flow of inventory.	_____
3. Method that uses historical sales margins to estimate ending inventory.	_____
4. Method that is appropriate when there is a relatively small number of significant dollar value items in inventory.	_____
5. Average cost must be calculated each time additional inventory is purchased.	_____
6. Method that averages the cost of all items on hand and purchased during the period.	_____
7. This method results in the lowest ending inventory in a period of rising prices.	_____
8. Method that uses a price index to measure changes in inventory.	_____
9. If used for tax purposes, this method must also be used for financial reporting purposes.	_____
10. The cost of goods sold balance is the same whether a perpetual or periodic inventory system is used.	_____

### Task-Based Simulation 10

<b>Schedule of Ending Inventory</b>		
	<b>Authoritative Literature</b>	<b>Help</b>

#### *Situation*

York Co. sells one product, which it purchases from various suppliers. York's trial balance at December 31, year 2, included the following accounts:

Sales (33,000 units @ \$16)	\$528,000
Sales discounts	7,500
Purchases	368,900
Purchase discounts	18,000
Freight-in	5,000
Freight-out	11,000

York Co.'s inventory purchases during year 2 were as follows:

	<b>Units</b>	<b>Cost per unit</b>	<b>Total cost</b>
Beginning inventory, January 1	8,000	\$8.20	\$ 65,600
Purchases, quarter ended March 31	12,000	8.25	99,000
Purchases, quarter ended June 30	15,000	7.90	118,500
Purchases, quarter ended September 30	13,000	7.50	97,500
Purchases, quarter ended December 31	<u>7,000</u>	7.70	<u>53,900</u>
	<u>55,000</u>		<u>\$434,500</u>

#### *Additional information*

York's accounting policy is to report inventory in its financial statements at the lower of cost or market, applied to total inventory. Cost is determined under the last-in, first-out (LIFO) method.

York has determined that, at December 31, year 2, the replacement cost of its inventory was \$8 per unit and the net realizable value was \$8.80 per unit. York's normal profit margin is \$1.05 per unit.

From this information, complete the following schedules.

*York Co.*  
**SUPPORTING SCHEDULE OF ENDING INVENTORY**  
*December 31, Year 2*

Inventory at cost (LIFO):

	Units	Cost per unit	Total cost
Beginning inventory, January 1			
Purchases, quarter ended March 31			
Purchases, quarter ended June 30			
Totals			

*York Co.*  
**SCHEDULE OF COST OF GOODS SOLD**  
*For the Year Ended December 31, Year 2*

Beginning inventory		
Add: Purchases		
Less: Purchase discounts		
Add: Freight-in		
Goods available for sale		
Less: Ending inventory		
Cost of goods sold

## Simulation Solutions

### Task-Based Simulation 1

<b>Concepts</b>		
	<b>Authoritative Literature</b>	<b>Help</b>

	Included	Not included
1. Merchandise purchased for resale	<input checked="" type="radio"/>	<input type="radio"/>
2. Freight-out	<input type="radio"/>	<input checked="" type="radio"/>
3. Direct materials	<input checked="" type="radio"/>	<input type="radio"/>
4. Sales returns	<input type="radio"/>	<input checked="" type="radio"/>
5. Packaging for shipment to customer	<input type="radio"/>	<input checked="" type="radio"/>
6. Factory overhead	<input checked="" type="radio"/>	<input type="radio"/>
7. Interest on inventory loan	<input type="radio"/>	<input checked="" type="radio"/>
8. Purchase discounts not taken	<input type="radio"/>	<input checked="" type="radio"/>
9. Freight-in	<input checked="" type="radio"/>	<input type="radio"/>
10. Direct labor	<input checked="" type="radio"/>	<input type="radio"/>

### *Explanations*

- (I) Merchandise purchased for resale is a part of inventory.
- (N) Freight-out is part of selling expense.
- (I) Direct materials are part of work in process, which is an inventory account for manufacturers.
- (N) Sales returns are a contra account to sales, and are not part of inventory.
- (N) Packaging for shipment to customer is part of selling expenses.
- (I) Factory overhead is part of work in process, which is an inventory account for manufacturing firms.
- (N) Interest on inventory loan is an operating expense. Interest cost should not be capitalized for assets that are in use or ready for their intended use in the earnings activities of the enterprise.
- (N) Purchase discounts lost are considered a financing expense and are excluded from the cost of inventory.
- (I) Freight-in is part of getting the goods in place to sell and should be included in inventory.
- (I) Direct labor is part of work in process, and is an inventory account for manufacturing firms.

### Task-Based Simulation 2

<b>Journal Entries</b>		
	<b>Authoritative Literature</b>	<b>Help</b>

- On January 5, year 2, purchased \$17,000 of garden tillers on account from Bestbuilt Tillers, terms 2/10, n/30, FOB destination. Freight charges were \$200.

Purchases	17,000	
Accounts payable		17,000

- On January 10, year 2, returned garden tillers worth \$2,000 to Bestbuilt Tillers due to defects.

Accounts payable	2,000	
Purchase returns		2,000

3. On January 14, year 2, paid for the remaining tillers purchased in 1.

Accounts payable	15,000	
Purchase discounts		300*
Cash		14,700

\*  $15,000 \times .02 = 300$

4. On January 28, year 2, purchased \$30,000 of lawn mowers from Lawn Giant, terms 3/10, n/30, FOB shipping point. The freight charges were \$820.

Purchases	30,000	
Freight-in	820	
Accounts payable		30,820

5. On February 6, year 2, paid for the lawn mowers purchased in part 4. from Lawn Giant.

Accounts payable	30,000	
Purchase discounts		900
Cash		29,100

(This assumes the freight bill is paid separately to the freight company)

Costs incurred to date	\$360,000	\$410,000
Total costs	400,000	820,000
Percent complete	90%	50%
Gross profit (loss) recognized	<u>\$180,000</u>	<u>\$(20,000)</u>
<b>For the Year Ended September 30, Year 3:</b>		
Estimated gross profit (loss):		
Contract price	\$560,000	\$840,000
Less total costs	450,000	900,000
Estimated gross profit (loss)	<u>\$110,000</u>	<u>\$(60,000)</u>
Percent complete:		
Costs incurred to date	\$450,000	\$720,000
Total costs	450,000	900,000
Percent complete	100%	80%
Gross profit (loss) recognized	110,000	(60,000)
Less gross profit (loss) recognized in prior year	<u>180,000</u>	<u>(20,000)</u>
Gross profit (loss) recognized	<u>\$(70,000)</u>	<u>\$(40,000)</u>

### Explanations

- This problem consists of three related requirements concerning long-term construction contracts. The candidates must compute gross profit recognized for two years using the percentage-of-completion method, compute balances in various accounts, and reconcile financial statement income and taxable income.
- Using the percentage-of-completion method, gross profit is recognized periodically based on progress toward completion of the project using the following formula.

$$\frac{\text{Costs to date}}{\text{Total estimated costs}} \times \frac{\text{Estimated profit}}{\text{profit}} = \frac{\text{Gross profit}}{\text{to date}}$$

For the Beta project, London would recognize gross profit of \$180,000 the first year.

$$\frac{\$360,000}{(\$360,000 + \$40,000)} \times [\$600,000 - (\$360,000 + \$40,000)] = \$180,000$$

The estimates available at 9/30/Y2 are used above.

- By the end of the second year, the Beta project is complete and has resulted in actual gross profit of \$110,000 (\$560,000 revenues less \$450,000 costs). Since gross profit of \$180,000 was recognized the first year, a loss of \$70,000 must be recognized the second year [ $\$110,000 - \$180,000 = \$(70,000)$ ]. The loss of \$70,000 is in effect an adjustment of the excessive gross profit recognized the first year. Instead of restating the prior period, the prior period misstatement is absorbed in the current period, as is appropriate for a change in estimate.
- Under both the percentage-of-completion method and the completed contract method, for financial accounting purposes, an expected **loss** on a contract must be recognized in full in the period in which the expected loss is discovered. At the end of the first year, London has an expected loss on the Gamma contract [ $\$800,000 - (\$410,000 + \$410,000) = \$(20,000)$ ] that must be recognized immediately.
- By the end of the second year, the expected loss on the Gamma contract has increased to \$60,000 [ $\$840,000 - (\$720,000 + \$180,000)$ ]. Since a loss of \$20,000 was recognized the first year, an additional loss of \$40,000 must be recognized in the second year to bring the cumulative loss recognized up to the new estimate of \$60,000.
- Financial Statement Disclosures require the computation of the 9/30/Y2 balances of accounts receivable, costs and estimated earnings in excess of billings, and billings in excess of costs and estimated earnings. At 10/1/Y1, the balances in all three accounts were \$0 since the construction division began operations on that date.

### Task-Based Simulation 6

Construction in progress	\$540,000	
Less: Billings	<u>315,000</u>	
Costs and estimated earnings in excess of billings		225,000
Billings in excess of costs and estimated earnings		30,000
Estimated loss on contract		20,000

### Explanations

- This problem consists of three related requirements concerning long-term construction contracts. The candidates must compute gross profit recognized for two years using the percentage-of-completion method, compute balances in various accounts, and reconcile financial statement income and taxable income.
- Using the percentage-of-completion method, gross profit is recognized periodically based on progress toward completion of the project using the following formula.

$$\frac{\text{Costs to date}}{\text{Total estimated costs}} \times \text{Estimated profit} = \text{Gross profit to date}$$

For the Beta project, London would recognize gross profit of \$180,000 the first year.

$$\frac{\$360,000}{(\$360,000 + \$40,000)} \times [\$600,000 - (\$360,000 + \$40,000)] = \$180,000$$

The estimates available at 9/30/Y2 are used above.

- By the end of the second year, the Beta project is complete and has resulted in actual gross profit of \$110,000 (\$560,000 revenues less \$450,000 costs). Since gross profit of \$180,000 was recognized the first year, a loss of \$70,000 must be recognized the second year [ $\$110,000 - \$180,000 = \$(70,000)$ ]. The loss of \$70,000 is in effect an adjustment of the excessive gross profit recognized the first year. Instead of restating the prior period, the prior period misstatement is absorbed in the current period, as is appropriate for a change in estimate.
- Under both the percentage-of-completion method and the completed contract method, for financial accounting purposes, an expected **loss** on a contract must be recognized in full in the period in which the expected loss is discovered. At the end of the

first year, London has an expected loss on the Gamma contract [ $\$800,000 - (\$410,000 + \$410,000) = \$(20,000)$ ] that must be recognized immediately.

- By the end of the second year, the expected loss on the Gamma contract has increased to \$60,000 [ $\$840,000 - (\$720,000 + \$180,000)$ ]. Since a loss of \$20,000 was recognized the first year, an additional loss of \$40,000 must be recognized in the second year to bring the cumulative loss recognized up to the new estimate of \$60,000.
- Financial Statement Disclosures require the computation of the 9/30/Y2 balances of accounts receivable, costs and estimated earnings in excess of billings, and billings in excess of costs and estimated earnings. At 10/1/Y1, the balances in all three accounts were \$0 since the construction division began operations on that date.
- **Accounts receivable** is increased by billings

Accounts receivable

Billings on LT contracts

It is decreased by cash collections

Cash

Accounts receivable

Therefore, 9/30/Y2 AR is computed by adding the billings on the two projects ( $\$315,000 + \$440,000 = \$755,000$ ) and subtracting the collections on the two projects ( $\$275,000 + \$365,000 = \$640,000$ ). The 9/30/Y2 balance is \$115,000 ( $\$755,000 - \$640,000$ ).

- **Construction-in-progress** is debited for costs incurred and profit recognized. **Billings on LT contracts** is credited for billings made. In the balance sheet, the two accounts are netted on a project-by-project basis, resulting in a net current asset and/or a net current liability. At 9/30/Y2, the costs incurred on the Beta project ( $\$360,000$ ) and the estimated earnings ( $\$180,000$  from item two of this solution guide) exceed billings ( $\$315,000$ ) by \$225,000.
- On the Gamma project billings ( $\$440,000$ ) exceed costs ( $\$410,000$ ) by \$30,000. There is no estimated earnings on this project because it is expected, at 9/30/Y2, to result in a \$20,000 loss. This estimated loss does not affect the excess of billings over costs and estimated earnings because it is reported separately as a current liability.

13. Under the LIFO method, the cost of goods sold balance would be the same whether a perpetual or periodic inventory system is used.	<input type="radio"/>	<input checked="" type="radio"/>

### ***Explanations***

1. **(T)** The gross margin method uses historical margins on sales to estimate the cost of inventory. This method is typically used for interim reporting only because it may not be precise enough for the year-end financial statements.
2. **(T)** The dollar-value LIFO method groups inventory into layers and charges the most recent items to cost of goods sold before using older layers which have older inventory costs.
3. **(T)** Inventory should be carried at the lower of cost or market. In determining the lower of cost or market it may be based on the values of individual items, item categories, or even total inventory.
4. **(T)** When the market price of a contract to purchase goods falls below the contract price and it is foreseeable that the contract will result in a loss, then a loss on the purchase commitment should be recorded.
5. **(T)** The dollar-value LIFO method measures changes in inventory layers based upon the total dollar value change in the layer.
6. **(T)** The link-chain method uses a cumulative index to compute the base cost of inventory. The cumulative index is equal to the current year's prices divided by the prior year's prices, multiplied by the prior year's cumulative index. The link-chain method is only used in limited circumstances.
7. **(T)** A price index provides a measure of the changes in price between base year and the current year. The price index is generally used to compute changes in inventory levels.
8. **(T)** In a period of rising prices, a liquidation of older inventory, which carries lower costs, will result in a decline in the cost of goods sold and higher profits.
9. **(F)** A holding gain results from holding an item while the market value **increases**. Thus, the holding gain would be equal to the current market value less the value on the books.
10. **(F)** During a period of rising prices, the LIFO method will result in higher priced items being charged to cost of goods sold, thus lowering net income. It is the FIFO method which would produce a higher net income because the cost of goods sold would reflect the older or lower cost goods.
11. **(T)** A change from FIFO to LIFO will tend to result in a decrease in net income and working capital. This is because the LIFO method will put the more recent/higher priced items on the income statement (last in) and the older/less expensive goods will be carried in inventory. Thus, net income will be lower due to higher cost of goods sold, and working capital will be lower due to the lower inventory asset balance.
12. **(T)** The LIFO method results in the most recently purchased inventory items being expensed first. In a period of rising prices this would result in a lower net income and thus a lower taxes payable. The IRS allows the use of LIFO for tax only if it is also used for external reporting purposes as well.
13. **(F)** The cost of goods sold would be different because a periodic system will compute the cost of goods sold based on the total goods sold and total purchases for a period, whereas a perpetual one will match each good sold with the most recent purchase on an ongoing basis.

### Task-Based Simulation 9

Cost Flow Concepts	Authoritative Literature	Help

1. During a period of rising prices, this method results in a higher net income.
2. This method most closely matches the physical flow of inventory.
3. Method that uses historical sales margins to estimate ending inventory.
4. Method that is appropriate when there is a relatively small number of significant dollar value items in inventory.
5. Average cost must be calculated each time additional inventory is purchased.
6. Method that averages the cost of all items on hand and purchased during the period.
7. This method results in the lowest ending inventory in a period of rising prices.
8. Method that uses a price index to measure changes in inventory.
9. If used for tax purposes, this method must also be used for financial reporting purposes.
10. The cost of goods sold balance is the same whether a perpetual or periodic inventory system is used.

Schedule of Ending Inventory	Authoritative Literature	Help

*York Co.*  
**SUPPORTING SCHEDULE OF ENDING INVENTORY**  
*December 31, Year 2*

Inventory at cost (LIFO):

	Units	Cost per unit	Total cost
Beginning inventory, January 1	8,000	\$8.20	\$ 65,600
Purchases, quarter ended March 31	12,000	8.25	99,000
Purchases, quarter ended June 30	<u>2,000</u>	7.90	<u>15,800</u>
	<u>22,000</u>		<u>\$180,400</u>

*York Co.*  
**SCHEDULE OF COST OF GOODS SOLD**  
*For the Year Ended December 31, Year 2*

Beginning inventory	\$ 65,600	
Add: Purchases	368,900	

Less: Purchase discounts	(18,000)	
Add: Freight-in	<u>5,000</u>	
Goods available for sale	421,500	
Less: Ending inventory	(176,000)	[1]
Cost of Goods Sold	<u>\$245,500</u>	

[1] Inventory at market: 22,000 units @ \$8 = \$176,000

**Explanations**

- This problem requires preparation of a cost of goods sold (CGS) schedule with a supporting schedule of ending inventory at lower of cost or market (LCM). York uses the direct method for LCM, which means the LCM amount is used directly in the CGS computation with no separate disclosure of any LCM loss.
- The cost of goods sold schedule can be prepared first, leaving the last two lines (ending inventory and CGS) blank for now. The computation starts with **beginning inventory** plus **cost of goods purchased** equals **cost of goods available for sale** (cost of goods purchased is **purchases less purchase discounts plus freight-in**). **Freight-out** is a selling expense which does not affect CGS.
- When determining LCM, the market value of inventory is defined as the **replacement cost**, as long as it is less than the ceiling [**net realizable value (NRV)**] and more than the floor (**NRV less a normal profit**).
- There are 22,000 units in ending inventory (55,000 units available less 33,000 units sold). Using LIFO, the earliest units in are assumed to remain in ending inventory. Therefore, ending inventory consists of the 8,000 units from beginning inventory, plus the 12,000 units purchased in the first quarter, plus 2,000 more units from second quarter purchases to get up to the 22,000 unit total. The cost of ending inventory is \$180,400 [(8,000 × \$8.20) + (12,000 × \$8.25) + (2,000 × \$7.90)].
- The replacement cost of the inventory is \$176,000 (22,000 × \$8).
- The ceiling (NRV) is \$193,600 (22,000 × \$8.80).
- The floor (NRV less a normal profit) is \$170,500 [22,000 × (\$8.80 – \$1.05)].
- Because replacement cost (\$176,000) falls between the floor (\$170,500) and the ceiling (\$193,600), the replacement cost of \$176,000 is the designated market value.
- Since the designated market value of \$176,000 is less than cost (\$180,400), the LCM valuation of ending inventory is \$176,000. This amount can be put into the cost of goods sold schedule, resulting in CGS of \$245,500.
  - Value inventory at LCM
    - Market is replacement with limits
    - Market must ≤ NRV and
    - Market must ≥ NRV – normal profit
  - Market is replacement cost in this situation
  - Replacement cost (\$176,000) falls between above limits
  - Inventory reported at market because < cost

# Module 11: Fixed Assets

## Overview

Fixed assets are defined as the capitalized amount of expenditures made to acquire tangible property which will be used for a period of more than one year. Tangible property includes property that physically exists. Intangible assets are nonphysical assets.

Fixed and intangible asset concepts are tested on the Financial Accounting and Reporting section of the exam. The primary topics covered include

1. Fixed and intangible asset acquisitions including the costs to be capitalized.
2. Self-constructed assets including capitalization of interest.
3. Asset exchanges including how to account for exchanges that lack commercial substance or include some monetary amount.
4. Asset cost allocation including depreciation, amortization, and depletion methods and impairment.

<b>A. Acquisition Cost</b>	<b>267</b>
<b>B. Capitalization of Interest</b>	<b>268</b>
<b>C. Nonmonetary Exchanges</b>	<b>271</b>
<b>D. Purchase of Groups of Fixed Assets (Basket Purchase)</b>	<b>277</b>
<b>E. Capital vs. Revenue Expenditures</b>	<b>278</b>
<b>F. Depreciation</b>	<b>278</b>
<b>G. Disposals and Impairment of Value</b>	<b>282</b>

<i>Multiple-Choice Questions</i>	<b>294</b>
<i>Multiple-Choice Answers and Explanations</i>	<b>306</b>
<i>Simulations</i>	<b>316</b>
<i>Simulation Solutions</i>	<b>322</b>

## A. Acquisition Cost

1. **Fixed assets** represent the capitalized amount of expenditures made to acquire tangible property which will be used for a period of more than one year. Their cost, therefore, is deferred to future periods in compliance with the matching principle.
2. **Tangible property** includes land, buildings, equipment, or any other property that physically exists.
  - a. All of the costs necessary to get the asset to the work site and to prepare it for use are capitalized, including the cost of negotiations, sales taxes, finders' fees, razing an old building, shipment, installation, preliminary testing, and so forth.
    - (1) When capitalizing such costs it is necessary to associate them with the asset which is being prepared for use. Thus, the cost of razing an old building is added to the cost of acquiring the land on which the building stood.

3. Charges for self-constructed fixed assets include direct materials, direct construction labor, variable overhead, and a fair share of fixed overhead.
4. Assets received through donation should be recorded at fair value with a corresponding credit to revenue; if fair value is not determinable, book value should be used.
  - a. If the entity incurs a liability associated with future retirement of the asset, the fair value (present value) of that obligation should be added to the carrying value of the asset.

### B. Capitalization of Interest

1. The capitalization of interest is part of the cost of certain assets. Only assets which require a period of time to be prepared for use qualify for interest capitalization.
  - a. These include assets constructed for sale produced as discrete projects (e.g., ships) and assets constructed for a firm's own use, whether by the entity itself or by an outsider.
    - (1) Other assets that do **not** qualify include those in use or ready for use and ones not being used in the earnings activities of a firm (e.g., idle land).

#### EXAMPLE

A building purchased by an entity **would not** qualify, but one constructed over a period of time **would**.

2. The amount of interest to be capitalized is the amount which could have been avoided if the project had not been undertaken. This amount includes amortization of any discount, premium, or issue costs; but, it shall not exceed the actual interest incurred during the period. The amount of "avoidable" interest is computed as
 
$$\text{Average accumulated expenditures during construction} \times \text{Interest rate} \times \text{Construction period}$$
3. The interest rate used is the rate on specific borrowings for the asset, or a weighted-average of other borrowings when a specific rate is not available. Capitalized interest should be compounded.
  - a. This is usually accomplished by including the interest capitalized in a previous period in the calculation of average accumulated expenditures of subsequent periods.
  - b. Furthermore, noninterest-bearing payables (e.g., trade payables and accruals) are excluded in determining these expenditures.
  - c. In practice, both the weighted-average interest rate and the average accumulated expenditures have been computed on the following bases: monthly, quarterly, semiannual, and annual.
4. The interest capitalization period begins when, and continues as long as, all three of the following conditions are met:
  - a. Expenditures for the asset have been made
  - b. Activities necessary to get the asset ready for its intended use are in progress
  - c. Interest cost is being incurred
5. The period ends when the asset is substantially complete. Brief interruptions and delays do not suspend interest capitalization, while suspension of the activities will.

**NOTE:** In no case should the amount capitalized exceed the interest actually incurred.

- Interest on expenditures made to acquire land on which a building is to be constructed qualifies for interest capitalization. The capitalization period begins when activities necessary to construct the building commence

**EXAMPLE**

**Interest Capitalization**

Assume the company is constructing an asset which qualifies for interest capitalization. By the beginning of July \$3,000,000 had been spent on the asset, and an additional \$800,000 was spent during July. The following debt was outstanding for the entire month.

- A loan of \$2,000,000, interest of 1% per month, specifically related to the asset.
- A note payable of \$1,500,000, interest of 1.5% per month.
- Bonds payable of \$1,000,000, interest of 1% per month.

The amount of interest to be capitalized is computed below.

**Average accumulated expenditures** (for the month of July) =  $(\$3,000,000 + \$3,800,000) \div 2 = \underline{\$3,400,000}$

<b>Avoidable interest</b>		<b>Actual interest</b>	
$\$2,000,000 \times 1\%$	= \$20,000	$\$2,000,000 \times 1\%$	= \$20,000
$1,400,000 \times 1.3\%^*$	= <u>18,200</u>	$1,500,000 \times 1.5\%$	= 22,500
		$1,000,000 \times 1\%$	= <u>1,000,000</u>
\$3,400,000	<u>\$38,200</u>	\$4,500,000	<u>\$52,500</u>

$\$38,200 < \$52,500$  \ \$38,200 is capitalized

Amount of interest to be capitalized is \$38,200

Asset	38,200
Interest expense	38,200

\* The average rate on other borrowings is  $(\$22,500 + \$10,000) \div (\$1,500,000 + \$1,000,000) = 1.3\%$ . Notice that a specific rate is used to the extent possible and the average rate is used only on any excess. Alternatively, the rate on all debt may be used.

and ends when the building is substantially complete. Interest so capitalized becomes part of the cost of the building. Thus, it is charged to expense as the building is depreciated.

- Frequently, the funds borrowed to finance the construction project are temporarily invested until needed. The interest earned on these funds must be recognized as revenue and may not be offset against the interest expense to be capitalized.
- The diagram below outlines the requirements pertaining to capitalization of interest.

## SUMMARY OF ACCOUNTING FOR INTEREST CAPITALIZATION

## CAPITALIZATION OF INTEREST DURING CONSTRUCTION

**Qualifying Assets:**

Capitalize means to include an expenditure in an asset's cost.

Interest costs, when material, incurred in acquiring the following types of assets, shall be capitalized

1. Assets constructed or produced for a firm's own use
  - a. Including construction by outside contractors requiring progress payments
2. Assets intended for lease or sale that are produced as discrete projects
  - a. For example, ships and real estate developments
3. But **not** on
  - a. Routinely produced inventories (e.g., widgets)
  - b. Assets ready for their intended use when acquired
  - c. Assets not being used nor being readied for use (e.g., idle equipment)
  - d. Land, unless it is being developed (e.g., as a plant site, real estate development, etc.). Then capitalized interest resulting from land expenditure (cash outlay) is added to building.

**When to Capitalize Interest (all three must be met):**

1. Expenditures for asset have been made
2. Activities intended to get asset ready are in progress
3. Interest cost is being incurred

**Applicable Interest (net of discounts, premiums, and issue costs):**

1. Interest obligations having explicit rates
2. Imputed interest on certain payables/receivables
3. Interest related to capital leases

**How Much Interest Cost Is Capitalized?**

$$\left( \frac{\text{Accumulated expenditures beg. of period (C - I - P* bal.)} + \text{Accumulated expenditures end of period (C - I - P bal.)}}{2} \right) \div \text{Portion of year} = \text{Weighted-average accumulated expenditures}$$

Weighted-average accumulated expenditures  $\times$  (Interest rate\*\*) = Amount capitalized (cannot exceed total interest incurred)

\*C-I-P—Construction-in-Progress

\*\* AICPA questions have given the specific borrowing rate on debt incurred to finance a project and indicated that expenditures were incurred evenly throughout the year. ASC Topic 835 (SFAS 34) requires that the firm's weighted-average borrowing rate be used after the amount of a specific borrowing is exhausted. Alternatively, only the firm's weighted-average borrowing rate may be used on all expenditures.

**Qualifications:**

1. Amount of interest to be capitalized cannot exceed total interest costs incurred during the entire reporting period
2. Interest earned on temporarily invested borrowings may not be offset against interest to be capitalized

- a. **Rationale** for interest capitalization
- (1) To reflect asset's acquisition cost
  - (2) To match asset's cost with revenue of periods that benefit from its use

**NOW REVIEW MULTIPLE-CHOICE QUESTIONS 1 THROUGH 5**

**C. Nonmonetary Exchanges**

1. A nonmonetary exchange is a reciprocal transfer wherein the transferor has no substantial continuing involvement in the asset, and the risks and rewards of ownership are transferred.
2. The guidance on nonmonetary exchanges does not apply to (1) business combinations, (2) transfers of nonmonetary assets between companies under common control, (3) acquisition of nonmonetary assets or services for the issuance of capital stock, (4) stock issued or received in stock dividends or stock splits, (5) transfer of assets in exchange for equity interests, (6) a pooling of assets in joint undertaking for gas or oil, (7) exchanging part of an operating interest owned for a part of another operating interest owned by another party, and (8) certain transfers of financial assets.
3. Nonmonetary exchanges are usually recorded using the fair value of the asset exchanged.
  - a. If one of the parties could have elected to receive cash instead of the nonmonetary asset, the amount of cash that could have been received is evidence of the fair value of the assets exchanged.
  - b. If the fair value (FV) of the asset given up cannot be determined, assume it is equal to the fair value of the asset received.
  - c. Three exceptions exist to the fair value treatment:
    - (1) If fair value is not determinable;
    - (2) If it is an exchange transaction to facilitate sales to customers; or
    - (3) The transaction lacks commercial substance.
      - (a) A transaction has **commercial substance** if the configuration of cash flows are significantly different as a result of the exchange. The configuration of cash flows includes the risk, timing, and the amount of future cash flows.
      - (b) Cash flows from tax effects are not considered in determining if the transaction has commercial substance.
  - (4) In these three exceptions, the transaction is measured using the recorded amount (book value) of the asset exchanged.
  - (5) For exception (1) when neither of the fair values is determinable, the exchange is accounted for at book value, and no gain or loss is recognized. For exceptions (2) and (3), the transaction is measured using the recorded amount (book value) of the exchanged asset, and any losses are recognized. When book values are used, a part of the gain may be recognized when boot is received.
4. The exchange of nonmonetary assets (such as inventory, property, and equipment) for other nonmonetary assets requires special consideration of two amounts.
  - a. Gain or loss, if any
  - b. Fair market value of the nonmonetary assets received

**EXAMPLE**

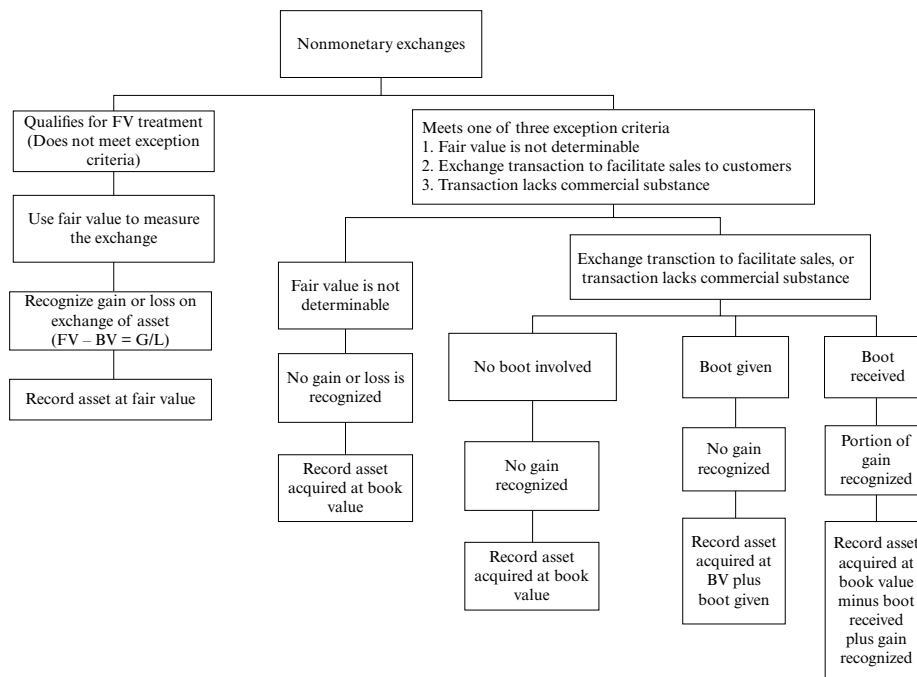

Gain or loss on a nonmonetary exchange is computed as follows:

$$\text{Fair value of the asset given} - \text{Book value of the asset given} = \text{Gain (loss)}$$

- (1) The asset received is generally recorded at the fair value of the asset surrendered (or the FV of the asset received if “more clearly evident”). Some exceptions do exist. Remember, however, that the asset given up will always be removed from the books at book value.
5. The following rules apply in recording nonmonetary exchanges:
- Losses are always recognized
  - Gains are recognized if the exchange is measured at fair value.
  - If any of the three conditions for exception to fair value treatment are met, use book value (recorded amount) of the asset exchanged. If no boot is involved, no gain is recognized. If boot is given, no gain is recognized, and the new asset is recorded at the book value of the exchanged asset plus the boot given. If boot is received, a portion of the gain is recognized.
  - The following chart summarizes the process involved in accounting for nonmonetary exchanges. Refer to this chart as you work through the following examples.

### ACCOUNTING FOR NONMONETARY EXCHANGES

#### Concepts Summary

\* For tax purposes losses are not recognized on exchanges of similar assets; they are adjustments to the asset's basis as are gains.

6. **FV is not determinable.** When fair value of the asset given up or the asset received is not determinable, book value is used to record the exchanged asset.

#### EXAMPLE

A company trades a machine (cost, \$10,000; accumulated depreciation, \$3,000) for land. Neither the FV of the machine or the land is determinable.

Land	7,000	(BV given)
Accumulated depreciation	3,000	
Machine	10,000	

Since FV is unknown, no gain can be computed, and the asset received is recorded at the BV of the asset given up (\$10,000 - \$3,000).

7. **Loss situations.** Normally, an exchanged asset is valued at fair value of the asset exchanged, or the fair value of the asset received, whichever is more clearly evident. When the fair value is less than the book value, a loss occurs. Because losses are recognized immediately, the treatment in a loss situation is the same for all nonmonetary exchanges, regardless of whether it meets the exception criteria.

**EXAMPLE**

**Situation 1. Loss, no boot involved.**

A company trades a machine with a FV of \$5,000 (cost, \$10,000; accumulated depreciation, \$3,000) for land. It is assumed that the transaction has commercial substance and does not meet the exception criteria to fair value measurement.

	<b>FV</b>	<b>BV</b>	<b>Gain (loss)</b>
Machine given	\$5,000	\$7,000	\$(2,000)
Land received			

The loss (FV – BV) is recognized immediately and the land is recorded at the FV of the machine given up.

Land	5,000	(FV given)
Accumulated depreciation	3,000	
Loss	2,000	
Machine		10,000

**NOTE:** This transaction would be treated the same way if the transaction lacked commercial substance.

A company trades a machine (cost, \$10,000; accumulated depreciation, \$3,000) for another machine with a FV of \$6,000. It is assumed that the transaction has commercial substance and does not meet the exception criteria to fair value measurement.

	<b>FV</b>	<b>BV</b>	<b>Gain (loss)</b>
Machine given		\$7,000	\$(1,000)
Machine received	\$6,000		

In this case, the FV of the asset given is unknown. You can substitute the FV of the asset received for FV given when computing gain/loss. The fair value of the asset given is implied in this case.

$$\begin{array}{rclcl}
 \$6,000 & - & \$7,000 & = & \$(1,000) \\
 \text{FV given} & & \text{BV given} & & \text{Loss} \\
 \text{(assumed or implied)} & & & & 
 \end{array}$$

Machine	6,000	(FV received)
Accumulated depreciation	3,000	
Loss	1,000	
Machine		10,000

**NOTE:** If the treatment lacked commercial substance, the entries would be the same because of the loss.

**Situation 2. Loss, boot given.**

A company trades a machine with a FV of \$6,000 (cost, \$10,000; accumulated depreciation, \$3,000) and \$500 cash for land. It is assumed that the transaction has commercial substance and does not meet the exception criteria to fair value measurement.

	<b>Boot</b>	<b>FV</b>	<b>BV</b>	<b>Gain (loss)</b>
Machine given	\$500	\$6,000	\$7,000	\$(1,000)
Land received				

Gain (loss) still equals FV less BV. Boot given is added to the value of the asset given.

Land	6,500	(FV given + Boot given)
Accumulated depreciation	3,000	
Loss	1,000	
Machine		10,000
Cash		500

Assume the FV of the machine was unknown, but the FV of the land received was known to be \$6,000.

	<b>Boot</b>	<b>FV</b>	<b>BV</b>	<b>Gain (loss)</b>
Machine given	\$500		\$7,000	\$(1,500)
Land received		\$6,000		

To compute gain (loss), you can assume FV given is equal to FV received less boot given (\$6,000 – \$500).

\$5,500	–	\$7,000	=	\$(1,500)
FV given		BV given		Loss
(assumed)				
Land		6,000		(FV received)
Accumulated depreciation		3,000		
Loss		1,500		
		Machine		10,000
		Cash		500

**NOTE:** If the transaction lacked commercial substance, the entries would be the same because of the loss.

**Situation 3. Loss, boot received.**

A company trades a machine with a FV of \$6,000 (cost, \$10,000; accumulated depreciation, \$3,000) for land and \$500 cash.

	<b>Boot</b>	<b>FV</b>	<b>BV</b>	<b>Gain (loss)</b>
Machine given		\$6,000	\$7,000	\$(1,000)
Land received	\$500			

Boot received is deducted from the value of the asset given.

Land	5,500	(FV given – Boot received)
Accumulated depreciation	3,000	
Cash	500	
Loss	1,000	
Machine		10,000

Now assume the FV of the machine is unknown but the FV of the land received is known to be \$6,000.

	Boot	FV	BV	Gain (loss)
Machine given			\$7,000	\$(500)
Land received	\$500	\$6,000		

In this case, you can assume FV given is equal to FV received **plus** the boot received (\$6,000 + \$500).

\$6,500	–	\$7,000	=	\$(500)
FV given (assumed)		BV given		Loss
Land		6,000		(FV received)
Accumulated depreciation		3,000		
Cash		500		
Loss		500		
Machine		10,000		

## 8. Gain Situations

### EXAMPLE

#### Situation 1. Gain, fair value measurement.

A company trades a computer with a FV of \$12,000 (cost, \$11,000; accumulated depreciation, \$4,000) for a building. The transaction has commercial substance and does not meet any of the exception criteria; therefore the transaction should be valued at fair value.

	FV	BV	Gain (loss)
Computer given	\$12,000	\$7,000	\$5,000
Building received			

Since the transaction has commercial substance, the earnings process is considered complete and the entire gain is recognized.

Building	12,000		(FV received)
Accumulated depreciation	4,000		
Computer		11,000	
Gain		5,000	

**NOTE:** If boot had been involved, the accounting would be similar to that illustrated in the loss situation.

#### Situation 2. Gain, transaction lacks commercial substance, no boot involved.

A company trades equipment with a FV of \$12,000 (cost, \$11,000; accumulated depreciation, \$4,000) for another piece of equipment. The configuration of cash flows of the asset exchanged does not significantly differ from the cash flows of the new asset.

	FV	BV	Gain (loss)
Equipment given	\$12,000	\$7,000	\$5,000
Equipment received			

Since this transaction lacks commercial substance, the earnings process is **not** considered complete and no gain is recognized. The asset received is debited at the book value (**not** fair value) of the asset given.

Equipment	7,000	(BV given)
Accumulated depreciation	4,000	
Equipment		11,000

The unrecognized gain of \$5,000 will be deferred; it will be recognized as the equipment received is depreciated (lower depreciation results than if FV had been used) and/or sold or disposed of in a subsequent transaction.

**Situation 3. Gain, transaction lacks commercial substance, boot given.**

A company trades a machine (cost, \$10,000; accumulated depreciation, \$2,000) and \$4,000 in cash for another machine with a FV of \$16,000. The configuration of cash flows of the asset exchanged does not significantly differ from the cash flows of the new asset.

	Boot	FV	BV	Gain (loss)
Machine given	\$4,000		\$8,000	\$4,000
Machine received		\$16,000		

As in the loss situation, the FV of the asset given can be assumed equal to the FV received less the boot given (\$16,000 – \$4,000).

\$12,000	–	\$8,000	=	\$4,000
FV given		BV given		Gain
(assumed)				

Boot given is added to the value of the asset given (in this case, book value). Gain is still unrecognized.

Machine	12,000	(BV given + Boot given)
Accumulated depreciation	2,000	
Machine		10,000
Cash		4,000

Below are alternative ways to calculate the asset received.

FV received	\$16,000	BV given	\$8,000
Gain deferred	<u>(4,000)</u>	Cash paid	<u>4,000</u>
	<u>12,000</u>		<u>12,000</u>

**Situation 4. Gain, transaction lacks commercial substance, boot received.**

An exception to nonrecognition of gain on exchange for a transaction lacking commercial substance arises when boot is received in the exchange. This type of earnings process is assumed complete for the portion related to the boot received (i.e., “sale” portion), but is **not** assumed complete for the portion related to the asset received (i.e., “exchange” portion). Therefore, a gain is recognized only for that portion related to the boot. Gain recognized is computed as follows:

$$\left( \frac{\text{Boot received}}{\text{Boot received} + \text{FV if asset received}} \right) \times \text{Total gain} = \text{Gain recognized}$$

If the FV of the asset received is not given, it may be determined by subtracting the boot received from the FV of the asset given up.

A company trades a machine with a FV of \$12,000 (cost, \$9,000; accumulated depreciation, \$2,000) for a different machine and \$2,000 cash.

	Boot received	Machine		Gain (loss)
		FV	BV	
Given		\$12,000	\$7,000	\$5,000
Received	\$2,000	?	?	

Since boot was received, the portion of the gain relating to the boot must be recognized.

$$\left( \frac{\$2,000}{\$2,000 + \$10,000^*} \right) \times (\$5,000) = \$833$$

\* The FV of the asset received (\$10,000) was derived by deducting boot received from the FV of the machine given.

\$12,000		\$2,000		\$10,000
FV given	-	Boot received	=	FV received
				(assumed)

Thus, only \$833 of the gain will be recognized. The machine received would be recorded at its BV given less boot received, plus gain recognized (\$7,000 - \$2,000 + \$833 = \$5,833). Alternatively this could be calculated by taking its FV less the gain deferred [\$10,000 - (\$5,000 gain - \$833 gain recognized)].

Cash	2,000		
Machine (received)	5,833		$\left( \begin{matrix} \text{BV given} - \text{Boot received} \\ + \text{Gain recognized} \end{matrix} \right)$ or $\left( \begin{matrix} \text{FV received} - \\ \text{Gain deferred} \end{matrix} \right)$
Accumulated depreciation	2,000		
Machine (given)		9,000	
Gain		833	

**NOW REVIEW MULTIPLE-CHOICE QUESTIONS 6 THROUGH 19**

**D. Purchase of Groups of Fixed Assets (Basket Purchase)**

1. Cost should be allocated based on relative market value.

$$\text{Cost of all assets acquired} \times \frac{\text{Market value of A}}{\text{Market value of all assets acquired}}$$

**EXAMPLE**

Purchase of Asset 1 with a FMV of \$60,000, Asset 2 with a FMV of \$120,000, and Asset 3 with a FMV of \$20,000 all for \$150,000 cash.

	FMV	Relative FMV	Total cost	Allocated cost
Asset 1	\$60,000	60/200	\$150,000	\$45,000
Asset 2	120,000	120/200	150,000	90,000
Asset 3	<u>20,000</u>	20/200	150,000	15,000
Total FMV	\$200,000			

**Journalized:**

Asset 1	\$45,000	
Asset 2	90,000	
Asset 3	15,000	
Cash		\$150,000

**E. Capital vs. Revenue Expenditures**

1. Capital expenditures and revenue expenditures are charges that are incurred after the acquisition cost has been determined and the related fixed asset is in operation.
  - a. **Capital expenditures** are not normal, recurring expenses; they benefit the operations of more than one period. The cost of major rearrangements of assets to increase efficiency is an example of a capital expenditure.
  - b. **Revenue expenditures** are normal recurring expenditures. However, some expenditures that meet the test for capital expenditures are expensed because they are immaterial (e.g., less than \$50).
2. Expenditures to improve the efficiency or extend the asset life should be capitalized and charged to future periods.
  - a. A subtle distinction is sometimes made between an improvement in efficiency and an extension of the asset life. Some accountants feel improvements in efficiency should be charged to the asset account, and improvements extending the asset life should be charged to the accumulated depreciation account. The rationale is that improvements extending the asset life will need to be depreciated over an extended period of time, requiring revision of depreciation schedules.
3. The chart on the following page summarizes the appropriate treatment of expenditures related to fixed assets.

**NOW REVIEW MULTIPLE-CHOICE QUESTIONS 20 THROUGH 24**

**F. Depreciation**

1. **Depreciation** is the annual charge to income for asset use during the period. Since depreciation is a noncash expense, it does not provide resources for the replacement of assets. It is simply a means of spreading asset costs to periods in which the assets produce revenue.
  - a. Essentially, the “depreciation base” is allocated over the asset’s useful life in a rational and systematic manner. The meaning of the key terms is as follows:

**COSTS SUBSEQUENT TO ACQUISITION OF PROPERTY, PLANT, AND EQUIPMENT**

		Normal accounting treatment			
Type of expenditure	Characteristics	Expense when incurred	Capitalize		Other
			Debit (credit) to asset	Debit (credit) to accum. deprec.	
1. Additions	<ul style="list-style-type: none"> <li>• Extensions, enlargements, or expansions made to an existing asset</li> </ul>		x		
2. Repairs and maintenance					
a. Ordinary	<ul style="list-style-type: none"> <li>• Recurring, relatively small expenditures               <ol style="list-style-type: none"> <li>1. Maintain normal operating condition</li> <li>2. <b>Do not</b> add materially to use value</li> <li>3. <b>Do not</b> extend useful life</li> </ol> </li> </ul>	x			
b. Extraordinary (major)	<ul style="list-style-type: none"> <li>• Not recurring, relatively large expenditures               <ol style="list-style-type: none"> <li>1. Primarily increase the quality and/or output of services</li> <li>2. Primarily extend the useful life</li> </ol> </li> </ul>		x		
3. Replacements and improvements	<ul style="list-style-type: none"> <li>• Major component of asset is removed and replaced with the same type of component with comparable performance capabilities (replacement) or a different type of component having superior performance capabilities (betterment)</li> </ul>				
a. Book value of old component is known	<ul style="list-style-type: none"> <li>• Old component amounts</li> <li>• New component outlay</li> </ul>		(x)	x	<ul style="list-style-type: none"> <li>• Recognize any proceeds and loss (or gain) on old asset</li> </ul>
b. Book value of old component is <b>not</b> known	<ul style="list-style-type: none"> <li>• Primarily increases the use value</li> <li>• Primarily extends the useful life</li> </ul>		x		
4. Reinstallations and rearrangements	<ul style="list-style-type: none"> <li>• Provide greater efficiency in production or reduce production costs               <ol style="list-style-type: none"> <li>1. Material costs, benefits extend into future accounting periods</li> <li>2. No measurable future benefit</li> </ol> </li> </ul>	x	x		

- (1) **Systematic**—Formula or plan
  - (2) **Rational**—Representational faithfulness (fits with reality)
  - (3) **Allocation**—Not a process of valuation
2. The objective is to match asset cost with revenue produced. The depreciation base is cost less salvage value (except for the declining balance method which ignores salvage value). The cost of an asset will include any reasonable cost incurred in bringing an asset to an enterprise and getting it ready for its intended use. The useful life can be limited by
- a. Technological change
  - b. Normal deterioration
  - c. Physical usage
- (1) The first two indicate depreciation is a function of time whereas the third indicates depreciation is a function of the level of activity. Other depreciation methods include inventory, retirement, replacement, group, composite, etc.
3. Depreciation methods based on time are
- a. Straight-line (SL)
  - b. Accelerated
    - (1) Declining balance (DB)
      - (a) Most common is double-declining balance (DDB)
      - (2) Sum-of-the-years' digits (SYD)
4. **Straight-line** and **accelerated** depreciation are illustrated by the following example:

**EXAMPLE**  
 \$10,000 asset, four-year life, \$2,000 salvage value.

Year	Straight line	DDB	SYD
1	\$2,000	\$5,000	\$3,200
2	\$2,000	\$2,500	\$2,400
3	\$2,000	\$500*	\$1,600
4	\$2,000	--	\$ 800

Straight-line →  $\frac{\$10,000 - \$2,000}{4}$

**DDB** Twice the straight-line rate ( $2 \times 25\%$ ) times the net book value at beginning of each year, but not below salvage value (salvage value is not deducted for depreciation base).

**SYD**  $4/10^{**}$ ,  $3/10$ ,  $2/10$ ,  $1/10$  of  $(\$10,000 - \$2,000)$ .

\*  $\$10,000 - (\$5,000 + 2,500) = \$2,500$  Book value at beginning of year three.  $\$2,500 - 2,000$  salvage value = \$500.

\*\*  $\frac{n(n+1)}{2} = \frac{4 \times 5}{2} = 10$

- a. Straight-line and accelerated depreciation methods are illustrated by the following graphs:

- b. Accelerated depreciation is justified by
    - (1) Increased productivity when asset is new
    - (2) Increasing maintenance charges with age
    - (3) Risk of obsolescence
  - c. Accelerated depreciation methods result in a better matching of costs and revenues when one or more of these factors are present.
5. **Physical usage depreciation** is based on activity (e.g., machine hours) or output (e.g., finished widgets).

$$\text{Annual depreciation} = \frac{\text{Current activity or output}}{\text{Total expected activity or output}} \times \text{Depreciation base}$$

**EXAMPLE**

A machine costs \$60,000. The machine’s total output is expected to be 500,000 units. If 100,000 units are produced in the first year, \$12,000 of depreciation would be incurred (100/500 × \$60,000).

**NOTE:** Physical usage depreciation results in a varying charge (i.e., not constant). Also physical usage depreciation is based on asset activity rather than expiration of time.

6. **Inventory depreciation** is a method typically used in situations where there are many low-cost tangible assets, such as hand tools for a manufacturer or utensils for a restaurant.
- a. Using this method, an inventory of the assets is taken at the beginning and the end of the year. Valuation of these assets is based on appraisal value. Depreciation is calculated as follows:
 
$$= \text{Beginning inventory} + \text{Cost of acquisitions} - \text{Ending inventory}$$
  - b. The inventory method is advantageous in situations involving such small assets because it is not practical to maintain separate depreciation schedules for them. On the other hand, this method is often criticized because it is not systematic and rational.
7. **Composite (group) depreciation** averages the service life of a number of property units and depreciates the group as if it were a single unit.
- a. The term “group” is used when the assets are similar; “composite” when they are dissimilar.
  - b. The depreciation rate is the following ratio:

$$\frac{\text{Sum of annual SL depreciation of individual assets}}{\text{Total asset cost}}$$

- c. Thus, composite depreciation is a weighted-average of a group of assets—usually of a similar nature, expected life, etc.

**EXAMPLE**

Three types of assets (A, B, and C) are depreciated under the composite method.

Asset type	Asset cost	Salvage value	Depreciation base	Useful life (yrs.)	SL annual depreciation
A	\$45,000	\$15,000	\$30,000	5	\$6,000
B	90,000	50,000	40,000	4	10,000
C	145,000	25,000	<u>120,000</u>	3	<u>40,000</u>
	\$280,000	\$90,000	\$190,000		\$56,000

$$\text{Depreciation or composite rate} = \frac{\$56,000}{\$280,000} = 20\%$$

$$\text{Composite life} = 3.39 \text{ years } (\$190,000 \div \$56,000)$$

**NOTE:** The composite life is the depreciation base divided by the annual depreciation.

- (1) Depreciation is recorded until the book value of the composite group is depreciated to the salvage value of the then remaining assets. As assets are retired the composite group salvage value is reduced.

**NOTE:** Gains and losses are not recognized on disposal (i.e., gains and losses are netted into accumulated depreciation). This latter practice also affects the length of time required to reduce the book value (cost less accumulated depreciation) to the group salvage value.

The entry to record a retirement is

Cash, other consideration	(amount received)	
Accumulated depreciation	(plug)	
Asset		(original cost)

8. **Changes in depreciation.** A change in depreciation method is a change in accounting estimate effected by a change in accounting principle. Therefore, a change in depreciation method is treated as a change in accounting estimate.
- a. Changes in depreciation estimates also include changes in the expected useful life or salvage value. Changes in accounting estimates are accounted for on a prospective basis in the current and future periods. Make the change prospectively from the beginning of the year in which the change in estimate occurs. The procedure for straight-line depreciation is
- (1) Divide the periods remaining (from the beginning of the year of change) into
  - (2) The remaining depreciation base (i.e., undepreciated cost to date less revised salvage value)
9. **Fractional year depreciation.** Many conventions exist for accounting for depreciation for midyear asset acquisitions. They include
- a. A whole year's depreciation in year of acquisition and none in year of disposal
  - b. One-half year's depreciation in year of acquisition and year of disposal
  - c. Depreciation to nearest whole month in both year of acquisition and year of disposal

**NOTE:** CPA exam questions generally specify the convention to be followed.

**NOW REVIEW MULTIPLE-CHOICE QUESTIONS 25 THROUGH 37**

### G. Disposals and Impairment of Value

1. The entry to record the disposal (sale) of an asset is

Cash	(amount received)	
Accumulated depreciation	(old asset)	
Old asset		(cost)
Gain or loss	(loss)	(gain)

- a. Remember to record depreciation for disposed assets up to the point of disposal.

**EXAMPLE**

Jimco, a manufacturer of sports equipment, purchased a machine for \$6,000 on 1/1/Y1. The machine had an eight-year life, a \$600 salvage value, and was depreciated using the straight-line method. Thus, depreciation was charged at a rate of \$56.25 per month  $[(\$6,000 \text{ cost} - \$600 \text{ salvage}) \div (8 \text{ yrs} \times 12 \text{ mos/yr})]$ . If Jimco sells the asset on 9/1/Y6 for \$3,000, the following entries must be made to record year 6 depreciation and to record the sale:

Depreciation expense	450	
Accumulated depreciation ( $\$56.25 \times 8 \text{ mos}$ )		450
Cash	3,000	
Accumulated depreciation ( $\$56.25 \times 68 \text{ mos}$ )	3,825	
Equipment		6,000
Gain on sale of equip. [ $\$3,000 \text{ cash} - (\$6,000 - \$3,825)\text{CV}$ ]		825

2. In some cases, assets are intended to be **disposed of** in a future reporting period rather than held for use. If management has adopted such a plan for disposal, a loss is recognized if the fair value minus selling costs (NRV) is less than the recorded carrying value.

**EXAMPLE**

Assume that the asset in the above example has not been sold yet. However, management intends to dispose of it in the next year at NRV of \$1,500. The entry to record management's intents would be as follows:

Loss on planned disposition*	675	
Equipment to be disposed of	1,500	
Accumulated depreciation	3,825	
Equipment		6,000
* $1,500 - (6,000 - 3,825)$		

- a. Fixed assets intended for disposal are not subsequently depreciated. The equipment to be disposed of would be classified as other assets on the balance sheet.
- b. **Losses on fixed assets to be disposed of can be recovered** due to changes in the fair value or selling costs associated with the asset. This write-up, however, **cannot** exceed the carrying amount prior to recognition of impairment. If the NRV for this asset increases in the next period, the maximum recovery (gain) that could be recognized is \$675.
3. **Assets that are intended to be held and used** should be tested for impairment. Impairment occurs when the carrying amount of a long-lived asset or asset group exceeds its fair value. However, an impairment loss is recognized only if the carrying amount of the asset is not recoverable. The carrying value is considered not recoverable if it exceeds the sum of the expected value of the undiscounted cash flows.
- a. The loss on impairment recognized is the difference between the asset's fair value and its carrying value. In determining the fair value, the principal or most advantageous market for the asset should be used consistent with the asset's highest and best use. The in-use valuation premise assumes the highest value of the asset is achieved by using it in the business with other assets. An in-exchange premise assumes that the highest value of the asset is the amount received to sell the asset stand-alone.

**EXAMPLE**

Assume that the asset in the previous example is not to be sold. A test for impairment indicates that the net undiscounted cash flows from the machine are \$2,000. Since the carrying value is equal to \$2,175 (\$6,000 – \$3,825), the asset is impaired as of 9/1/Y6. If the machine's fair value at this date is \$1,400, its carrying value is reduced, as shown below.

Loss on impairment [(\$6,000 – \$3,825) CV – \$1,400 FV]	775
Accumulated depreciation	775

It will continue to be depreciated at \$50.00 per month for its remaining useful life (\$1,400 ÷ 28 mos = \$50.00). At 12/31/Y8, when the asset is fully depreciated, Jimco retires it and writes the machine off with the following entry:

Accumulated depreciation	6,000
Equipment	6,000

**NOTE:** The entire cost has been depreciated because upon impairment of the asset it was determined that the equipment did not have a salvage value.

- b. When management has alternative courses of action to recover the carrying amount of the assets or a particular course has multiple outcomes in terms of cash flow, ASC 360-10-35-30 (SFAS 144) indicates that probability-weighted cash flow approach should be considered. **Recoveries of previously recognized impairment losses may not be recognized in subsequent periods.**

**H. Depletion**

1. **Depletion** is “depreciation” of natural resources. The depletion base is the total cost of the property providing the natural resources. This includes all development costs such as exploring, drilling, excavating, and other preparatory costs.
- a. The depletion base is usually allocated by the ratio of extracted units over the total expected recoverable units.

$$\frac{\text{Units extracted}}{\text{Total expected recoverable units}} \times \text{Depletion base}$$

- b. The unit depletion rate is frequently revised due to the uncertainties surrounding the recovery of natural resources. The revised unit rate in any year takes the following form:

$$\frac{\text{Orig. cost} + \text{Addl. cost incurred} - \text{Resid. value} - \text{Depletion taken in prev. yrs.}}{\text{Units withdrawn currently} + \text{Estimated units recoverable at year-end}}$$

**NOTE:** The adjustment is being made prospectively (i.e., the remaining undepleted cost is being expensed over the remaining recoverable units).

- c. Depletion on resources extracted during an accounting period is allocated between inventory and cost of goods sold.

**NOW REVIEW MULTIPLE-CHOICE QUESTIONS 38 THROUGH 57**

**I. Insurance**

1. **Loss account for fixed assets.** When an insured loss occurs, an insurance loss account should be set up and charged for all losses. These losses include decreases in asset value, earned insurance premiums, etc. The account should be credited for any payments from the insurance company. The remainder is closed to revenue and expense summary.
2. **Coinsurance.** This area is tested on the Business Environment and Concepts section of the exam.

**J. Goodwill and Other Intangible Assets**

1. Intangible assets are nonphysical assets. Intangible assets normally include only noncurrent intangibles (e.g., accounts receivable are not considered intangibles). Examples of intangible assets include copyrights, leaseholds, organizational costs, trademarks, franchises, patents, and goodwill. These intangibles may be categorized according to the following characteristics:
  - a. Identifiability. Separately identifiable or lacking specific identification.
  - b. Manner of acquisition. Acquired singly, in groups, or in business combinations; or developed internally.
  - c. Expected period of benefit. Limited by law or contract, related to human or economic factors, or indefinite or indeterminate duration.
  - d. Separability from enterprise. Rights transferable without title, salable, or inseparable from the entire enterprise.
2. **Acquisition of intangibles.** Purchased intangibles should be recorded at cost, which represents the fair value of the intangible at time of acquisition. Internally developed intangibles are written off as research and development expense; an exception is the cost to register a patent.
3. **Acquisition of goodwill and allocation to reporting units.** Goodwill is recorded only when an entire business is purchased. Purchase of goodwill as part of acquiring a business is discussed in the Modules 16 and 18.
  - a. In a business acquisition, the recognized goodwill should be assigned to one or more reporting units. In essence, the goodwill assigned to a reporting unit is the difference between the fair value of the unit and the value of its individual assets and liabilities. A reporting unit can be an operating segment or one level below.

**EXAMPLE**

**Allocation of Goodwill to a Reporting Unit**

Dunn Corporation acquired all of the assets of Yeager Corporation for \$12,000,000 cash. The assets were seen as relating to three different reporting units (operating segments)—Communications, Technology, and Consulting. The fair value of the Communications reporting unit at the date of acquisition was \$4,700,000. Goodwill associated with the unit would be assigned based on a comparison of its total fair value to the value of its assets and liabilities as shown below.

**Communications Reporting Unit (In 000s)**

	Fair value
Cash	\$200
Accounts receivable	900
Net Equipment	2,700
Patents	1,000
Customer contracts	700
Current liabilities	(1,100)
Fair value of net assets	\$4,400

The amount of goodwill assigned to the reporting unit would be \$300,000 (\$4,700,000 – \$4,400,000), the excess of the fair value of the reporting unit over the value of its net assets. Goodwill would be assigned to the other two reporting units in a similar manner.

4. **Amortization of intangibles.** Intangible assets that have a definite useful life are amortized by crediting the intangible account directly (ordinarily, contra accounts are not used).

Amortization expense	xx
Intangible asset	xx

- a. The method of amortization of intangibles should mirror the pattern that the asset is consumed. If the pattern cannot be reliably determined, the straight-line basis should be used.

#### EXAMPLE

##### Determination of Useful Life of an Intangible Asset

Yeager Communications owns several radio stations and has \$5,000,000 recorded as the carrying value of broadcast rights. The rights have a legal life of 7 more years but may be extended upon appropriate application for an indefinite period. Since the company has the right and intent to extend the rights indefinitely, the useful life of the asset should be considered indefinite and the rights should not be amortized.

5. **Impairment of intangible assets.** An intangible asset that is amortized should be tested for impairment.

- a. An intangible asset that is determined to have an indefinite useful life should not be amortized. However, it should be reevaluated every reporting period to determine if facts and circumstances have changed creating a limited life and requiring it to be amortized. Also, such intangible assets should be tested for impairment annually or more frequently if facts and circumstances indicate that impairment may have occurred. In assessing impairment, an entity may choose to qualitatively assess (a likelihood of more than 50%) whether a quantitative impairment assessment is necessary. Events and circumstances to be qualitatively examined include, but are not limited to: cost increases negatively effecting future cash flows; financial performance declines; legal, regulatory, or contractual changes; entity specific events; industry and market deterioration; and other macroeconomic conditions. If it is **not** more likely than not that the events and circumstances lead to impairment, then a quantitative assessment is unnecessary. However, if the qualitative assessment reveals that it is more likely than not that the indefinite-lived intangible asset is impaired, a quantitative assessment (described below) is necessary.

- (1) If the carrying value of the intangible asset exceeds its fair value, an impairment loss should be recorded in the amount of the difference.

#### EXAMPLE

##### Impairment of an Intangible Asset with an Indefinite Life

Wilson Company acquired a trademark for a major consumer product several years ago for \$50,000. At the time it was expected that the asset had an indefinite life. During its annual impairment test of this asset, the company determined that unexpected competition has entered the market that will significantly reduce the future sales of the product. Based on an analysis of cash flows, the trademark is determined to have a fair market value of \$30,000 and is expected to continue to have an indefinite useful life. The \$20,000 (\$50,000 – \$30,000) impairment loss should be recognized as shown below.

Impairment loss	20,000
Trademark	20,000

6. **Impairment of goodwill.** The goodwill assigned to a reporting unit should be examined for impairment on an annual basis and between annual tests in certain circumstances. The annual examination may be performed any time during the company's fiscal year as long as it is done at the same time every year. Different reporting units may be examined at different times during the year. An entity has the option to first qualitatively determine

if it is more likely than not (greater than 50%) that the fair value of a reporting unit is less than its carrying value, including goodwill. Circumstances to be examined include, but are not limited to, examination of: macroeconomic conditions, industry and market considerations, cost factors, overall financial performance, entity-specific events, reporting unit events, and share price decreases. If it is found that it is **not** more likely than not that the fair value of the reporting unit is less than its carrying value, the goodwill impairment tests are deemed unnecessary. Then entity can choose to bypass the qualitative assessment and proceed directly to the first step of the goodwill impairment test. The test of impairment is a two-step process as described below.

- a. Compare the fair value of the reporting unit with its carrying amount.
  - (1) To determine fair value, a valuation premise should be used that is consistent with the asset’s highest and best use. The valuation premise can either be an in-use or an in-exchange premise. An in-use premise is used if the asset is used in a business in combination with other assets, such as a reporting unit.
    - (a) If the carrying amount of the unit is greater than zero and exceeds its fair value, the second step is performed.
    - (b) If the carrying amount of the unit is zero or negative, step 2 of the goodwill impairment test should be performed if it is more likely than not that a goodwill impairment exists.
- b. Compare the implied fair value of the reporting unit goodwill with the carrying amount of that goodwill.
  - (1) The implied fair value of goodwill is determined in the same manner as the amount of goodwill recognized in a business combination. That is, all assets in the segment are valued, and the excess of the fair value of the reporting unit as a whole over the amounts assigned to its assets and liabilities is the implied goodwill.
    - (a) If the implied value of goodwill is less than its carrying amount, goodwill is written down to its implied value and an impairment loss is recognized.

**EXAMPLE**

**Test of Impairment of Goodwill**

Dunn Corporation is performing the test of impairment of the Communications reporting unit at 9/30/Y1. In performing the first step in the test of impairment, the Communications reporting unit is valued through a multiple of earnings approach at \$4,450,000. The carrying amount of the unit at 9/30/Y1 is \$4,650,000, requiring the second step to be performed. The fair value of the assets and liabilities are valued as shown below.

**Communications Reporting Unit  
Estimated Fair Values 9/30/Y1 (In 000s)**

	Fair value
Cash	\$150
Accounts receivable	1,000
Net Equipment	2,600
Patents	950
Customer contracts	800
Current liabilities	<u>(1,100)</u>
Fair value of net assets	\$4,400

The implied value of goodwill is \$50,000 (\$4,450,000 – \$4,400,000) and this is less than the carrying amount of \$300,000. Therefore, an impairment of goodwill should be recognized as shown below.

Impairment loss	250,000	
Goodwill—Communications		250,000

**NOW REVIEW MULTIPLE-CHOICE QUESTIONS 58 THROUGH 68**

**K. Reporting on the Costs of Start-Up Activities**

Start-up costs, including organization costs, are to be expensed as incurred. Start-up costs are defined as one-time activities related to opening a new facility or new class of customer, initiating a new process in an existing facility, or some new operation. In practice, these are referred to as preopening costs, preoperating costs, and organization costs. Routine ongoing efforts to improve existing quality of products, services, or facilities, are not start-up costs.

**L. Research and Development Costs**

1. R&D costs are expensed as incurred except for intangibles or fixed assets purchased from others having alternative future uses. These should be capitalized and amortized over their useful life. Thus, the cost of patents and R&D equipment purchased from third parties may be deferred and amortized over the asset’s useful life. Internally developed R&D may not be deferred.
2. Finally, R&D done under contract for others is not required to be expensed. The costs incurred would be matched with revenue using the completed-contract or percentage-of-completion method.

**M. Computer Software Costs**

Costs  Accounting treatment	Costs of Computer Software Excepted to Be Sold, Leased, or Otherwise Marketed		
	R & D expense	Capitalization of cost	Inventory cost
	↑ Product reaches technological* feasibility	↑ Product has market* feasibility	
What cost to include	All costs until technological feasibility established	All costs incurred once technological feasibility established until product has market feasibility	Costs incurred for duplicating software and physical packaging of product
When to expense costs	In the period occurred	After market feasibility	As the product is sold
How to expense costs	R & D expense	Annual amortization	Cost of goods sold
How to amortize costs	N/A	<ol style="list-style-type: none"> <li>1. Greater of                             <ol style="list-style-type: none"> <li>a. SL amortization, or</li> <li>b. <math>\frac{\text{Current revenue}}{\text{Expected revenue}} \times \text{cost}</math></li> </ol> </li> <li>2. Ceiling for carrying amount = NRV of asset. If carrying amount exceeds NRV, defference is written off</li> </ol>	N/A

\* Software creation process includes a detail program design.

\*\* Product ready for release to customers.

1. **Software developed for sale or lease.** If software is developed for sale or lease, the costs incurred to internally create software should be expensed as research and development until technological feasibility is established. Thereafter, all costs should be capitalized and reported at the lower of unamortized cost or net realizable value. Capitalization should cease when the software is available for general release to customers.
  - a. The annual amortization of capitalized computer software costs will be the greater of the ratio of current revenues to anticipated total revenues or the straight-line amortization which is based on the estimated economic life.
  - b. Once the software is available for general release to customers, the inventory costs should include costs for duplicating software and for physically packaging the product.

- c. The cost of maintenance and customer support should be charged to expense in the period incurred.
2. **Software developed for internal use.** Software must meet two criteria to be accounted for as internally developed software.
- a. First, the software's specifications must be designed or modified to meet the reporting entity's internal needs, including costs to customize purchased software.
  - b. Second, during the period in which the software is being developed, there can be no plan or intent to market the software externally, although development of the software can be jointly funded by several entities that each plan to use the software internally.
    - (1) In order to justify capitalization of related costs, it is necessary for management to conclude that it is probable that the project will be completed and that the software will be used as intended.
      - (a) Absent that level of expectation, costs must be expensed currently as research and development costs are required to be.
      - (b) Entities which historically were engaged in both research and development of software for internal use and for sale to others would have to carefully identify costs with one or the other activity, since the former would (if all conditions are met) be subject to capitalization, while the latter might be expensed as research and development costs until technological feasibility had been demonstrated.
  - b. Under terms of the standard, cost capitalization commences when an entity has completed the conceptual formulation, design, and testing of possible project alternatives, including the process of vendor selection for purchased software, if any. These early-phase costs (referred to as "preliminary project stage") are analogous to research and development costs and must be expensed as incurred. These cannot be later restored to an asset account if the development proves to be successful.
  - c. Costs incurred subsequent to the preliminary stage, and which meet the criteria under GAAP as long-lived assets, can be capitalized and amortized over the asset's expected economic life. Capitalization of costs will begin when both of two conditions are met.
    - (1) First, management having the relevant authority authorizes and commits to funding the project and believes that it is probable that it will be completed and that the resulting software will be used as intended.
    - (2) Second, the conceptual formulation, design, and testing of possible software project alternatives (i.e., the preliminary project stage) have been completed.

#### N. Development Stage Enterprises

1. A **development stage enterprise** is defined as one devoting substantially all of its efforts to establishing a new business and (1) planned principal operations have not commenced, or (2) planned principal operations have commenced, but there has been no significant revenue.

**NOTE:** Generally accepted accounting principles are to be followed in preparing the financial statements of a development stage enterprise. Therefore, no special treatment is allowed concerning capitalization or deferral of costs; only costs that may be deferred for an established enterprise may be capitalized by a development stage enterprise.

- a. The balance sheet should show cumulative losses since inception under stockholders' equity.
- b. The income statement and statement of cash flows should include both current period and cumulative amounts, since inception, of revenues, expenses, losses, and cash flows.
- c. The financial statements must be identified as those of a development stage enterprise.

**NOTE:** The first fiscal year after the development stage, a disclosure is required in the financial statements stating that the entity was previously in the development stage.

**NOW REVIEW MULTIPLE-CHOICE QUESTIONS 69 THROUGH 84**

**O. Research Component—Accounting Standards Codification**

Research on fixed assets is found in several locations in the accounting standards. The most basic accounting rules for fixed assets are in ASC Topic 360, titled *Property, Plant, and Equipment*. Other accounting standards may apply to fixed assets. The following table lists these standards with the corresponding ASC topic numbers and relevant account issues.

Topic number	Topic	Accounting issue(s)
250	<i>Accounting Changes</i>	Changes in Depreciation
280	<i>Segment Reporting</i>	Defining a Reporting Unit
350	<i>Intangibles—Goodwill and Other</i>	Valuation, Impairment
360	<i>Property, Plant, and Equipment</i>	Cost, Measurement, Impairment, Disclosures
410	<i>Asset Retirement Obligations</i>	Capitalizing Costs of Retirement Obligation
720	<i>Other Expenses (Including Start-Up Costs)</i>	Start-Up Activities/Costs
730	<i>Research and Development</i>	Capitalizing R&D
805	<i>Business Combinations</i>	Valuation in Business Combination
820	<i>Fair Value Measurements and Disclosures</i>	Fair Value Measures
835	<i>Interest (Capitalization of Interest)</i>	Capitalization of Interest
845	<i>Nonmonetary Transactions</i>	Exchanges of Nonmonetary Assets
915	<i>Development Stage Enterprises</i>	Accounting for Development Stage Enterprises
958	<i>Not-For-Profit Entities</i>	Donated Assets
985	<i>Software</i>	Capitalizing Software Costs

**P. International Financial Reporting Standards (IFRS)**

1. Some of the most significant differences between US GAAP and IFRS exist in the area of accounting for fixed assets. Items which are classified as noncurrent assets under US GAAP may be classified differently under IFRS. Specifically, noncurrent assets must be identified in categories such as plant, property, and equipment, investment property, intangible assets, and biological assets.
2. Plant, Property, and Equipment
  - a. Plant, property, and equipment are tangible items which are expected to be used during more than one period, and used in the production or supply of goods or services, for rental to others, or for administrative purposes. Plant, property, and equipment are recorded at cost.
    - (1) Cost includes the purchase price net of discounts and rebates, the expenditures to bring the asset to its required location and condition, delivery and handling, site preparation, installation, assembly costs, professional fees, and the estimate of the cost of obligations required for the asset's disposal (decommissioning or site restoration).
    - (2) Similar to US GAAP, costs of self-constructed assets include material, labor, and interest costs. However, unlike US GAAP that calculates interest cost as the weighted-average accumulated expenditures times the borrowing rate, IFRS calculates interest costs as the actual borrowing costs less any associated investment income.
  - b. After an asset is initially recognized at cost, it is subsequently measured using either the cost model or the revaluation model. Long-lived assets are divided into classes, and a decision is made for each class on which valuation method is applied.

**NOTE:** A different valuation model can be used for different classes of assets but not individual assets within a class. Examples of classes of assets include land, equipment, motor vehicles, land and buildings, ships, aircraft, and furniture and fixtures.

- (1) The cost model provides that the asset is carried at cost less an accumulated depreciation and less any accumulated impairment loss.
  - (a) The depreciation method chosen should reflect the pattern of economic benefits expected to be consumed. The straight-line, declining balance, and units of production methods are acceptable depreciation methods. A change in depreciation method is considered a change in accounting estimate and is accounted for on a prospective basis.

- (2) Under the revaluation model, the carrying amount of the asset is the fair value at the date of revaluation less any subsequent accumulated depreciation and subsequent accumulated impairment loss. The revaluation model should be applied to assets whose value can be reliably measured. There is no rule regarding the frequency or date of revaluation; therefore, annual revaluations are not required. However, when revaluation is performed, it must be performed for the entire class of assets.
  - (a) Revaluation to fair value usually involves obtaining appraisals. When a class of assets is revalued, the asset account is written up or down, and the adjustment is recorded to the revaluation surplus account which is reported in other comprehensive income for the period.
  - (b) If the revaluation model is used, accumulated depreciation can be adjusted proportionately, or the accumulated depreciation account can be eliminated and the asset shown net.
  - (c) When an asset is disposed of, a gain or loss is recognized and reported on the income statement. Any balance in the revaluation surplus account is transferred directly to retained earnings (not to profit or loss).

### 3. Investment Property

- a. Investment property is defined as property held to earn rentals, for capital appreciation, or both. To qualify as investment property, it may not be used in the production or supply of goods or services or for administrative purposes, nor can it be held for sale in the ordinary course of business.
  - (1) Investment property includes land or a building and can be held by the owner or by a lessee under a financing lease.
  - (2) Examples of investment property also include land held for long-term appreciation, land held for an undetermined future use, buildings owned by the entity, or a vacant building held to be leased under an operating lease.
- b. Investment property is recognized when it is probable that the future economic benefits of the property will flow to the entity and the cost of the property can be measured reliably. Investment property is measured at cost. After initial recognition, the investment property is measured under the fair value model or the cost model, with certain exceptions.
  - (1) Under the fair value model, investment property is initially measured at fair value. Changes in fair value are recognized in profit or loss in the period of the change. Notice that this is different treatment than for plant, property, and equipment, where the revaluation is recorded in other comprehensive income.
    - (a) If the fair value model is used, no depreciation is recorded.
    - (b) The fair value is the price at which the property could be exchanged between knowledgeable parties in an arm's-length transaction.
  - (2) The cost model requires investment property to be carried on the balance sheet at cost less accumulated depreciation and less accumulated impairment losses. If an entity chooses the cost model, it must still disclose fair values in the notes to the financial statements.
- c. Another difference between IFRS and US GAAP involves investment property leased under operating leases. Under IFRS, an entity has the option to record investment property leased under an operating lease as an asset on the balance sheet if the lessee can reliably measure the fair value of the lease. Once this option is selected for one leased property, other investment property must also be accounted for using the fair value model.
- d. Investment property does not include property used in the business, property being constructed or developed for others, property under construction that will be future investment property, and property held for sale in the normal course of business.

### 4. Intangible Assets

- a. Intangible assets either have no physical substance or have a value that is not represented by its physical substance. Intangible assets are categorized as either identifiable or unidentifiable.
  - (1) An asset is identifiable if meets one of the two criteria: (1) it is based on contractual or legal rights, or (2) it can be separated from the entity and sold, transferred, licensed, rented, or exchanged.
    - (a) Notice this is similar to US GAAP where an identifiable intangible must meet the legal, contractual, or separability criteria.
  - (2) Identifiable intangibles include patents, copyrights, brand names, customer lists, trade names, computer software, formulae, licenses, and franchises.

- b. Accounting for intangibles under IFRS depends upon whether the intangible assets were acquired or internally developed.
- (1) If the intangible assets were acquired, the intangible asset is recorded at cost.
  - (2) If the intangible assets were acquired in a business combination, newly identified intangibles are recognized at fair value separately from goodwill.
  - (3) Internally generated intangibles are initially recognized at the cost of development. However, to be recognized, they must meet the definition of identifiable assets (i.e., they must have future economic benefits and can be measured reliably).
    - (a) Although internally generated goodwill may provide future economic benefits, it cannot be measured reliably. Therefore, internally generated goodwill is not recognized as an asset.
    - (b) Similarly, expenditures on research may not result in probable future economic benefits; therefore, research expenditures are treated as an expense of the period.
    - (c) Development is the application of research findings for the production of new products or technology. Development costs may be recognized as an intangible asset if the following six criteria are met: (1) technological feasibility of completing the asset for use or sale has been achieved; (2) the entity intends to complete and use or sell the asset; (3) the entity has the ability to use or sell the asset; (4) the entity understands how the asset will generate probable future economic benefits; (5) technical, financial, and other resources are available to complete development of the asset; (6) the entity has the ability to reliably measure the expenditures. If all six conditions are not met, development costs should be expensed in the current period. Once development costs are expensed, they cannot be capitalized in the future.
- c. Intangible assets may use either the cost model or the revaluation model.
- (1) Similar to plant, property, and equipment, the cost model requires the asset to be recorded at its cost less any accumulated amortization or accumulated impairment losses.
  - (2) The revaluation model requires that the fair value must be determined in an active market. Therefore, only intangible assets that are traded with active market prices may be valued using the revaluation model. The revaluation model requires gains and losses on revaluation to be recorded in other comprehensive income.
- d. The useful life of an intangible asset is either finite or indefinite. Intangible assets with finite lives are amortized over the useful life; intangible assets with indefinite lives are not amortized, but tested for impairment annually (at the reporting date).

## 5. Impairment of Assets

- a. An entity should determine at each reporting date if there are conditions that would cause an asset to be impaired.
- (1) Asset impairment exists if the carrying value of the asset is greater than its recoverable amount.
    - (a) The recoverable amount is the greater of the net selling price or its value in use.
  - (2) An impairment loss for an asset accounted for at historical cost is recognized as an expense of the current period. The loss may be included with depreciation expense or identified separately on the income statement.
  - (3) If the revaluation model was used, an impairment adjustment may be treated as a reversal of an upward revaluation. Once the entire revaluation account is eliminated, the excess charge is recognized in expense of the period. Hence, the revaluation account cannot have a debit balance.
- b. Intangible assets with finite lives are tested for impairment when the asset's carrying value is more than its recoverable amount. However, if an intangible asset has an indefinite life, a test for impairment must be made annually.
- (1) If an intangible asset's carrying value is more than its recoverable amount, the asset is considered impaired.
    - (a) The recoverable amount is the greater of the net selling price (fair value less costs of disposal) or its value in use.
    - (b) The value in use is determined by estimating the future cash flows expected from the continued use of the asset and its disposal.

- (2) Impairments of intangible assets carried at historical cost are recognized as charges against the current period profit or loss.
  - (3) If the revaluation method was used for long-lived assets, any increase in value was recorded in a revaluation account in other comprehensive income. Therefore, the impairment adjustment is used to reverse any previous revaluation adjustment. Once the revaluation account is reduced to zero, the impairment is then charged to expense of the period.
- c. An important difference between US GAAP and IFRS is that IFRS allows reversals of previously recognized impairments if the historical cost method is used.
- (1) If the cost method is used, a reversal of impairment losses may be recognized in the income statement up to the amount of the impairments previously recognized.
  - (2) However, if the revaluation method is used, the recovery of impairments would be recognized in other comprehensive income.
6. **Biological Assets**
- a. Biological assets (agricultural assets) are living animals or plants and must be disclosed as a separate item on the balance sheet. Biological assets are recognized when a future economic benefit is probable, the entity controls the asset as a result of past events, and the cost or fair value can be measured reliably. Agricultural produce should be measured as fair value less costs to sell at harvest.

**NOW REVIEW MULTIPLE-CHOICE QUESTIONS 85 THROUGH 102**

## KEY TERMS

**Capital expenditures** are not normal, recurring expenses; they benefit the operations of more than one period.

**Capitalize.** To include an expenditure in an asset's cost.

**Commercial substance.** A transaction lacks commercial substance if the configuration of cash flows is significantly different as a result of the exchange.

**Depletion.** "Depreciation" of natural resources.

**Depreciation** is the annual charge to income for asset use during the period.

**Development stage enterprise.** One devoting substantially all of its efforts to establishing a new business and (1) planned principal operations have not commenced, or (2) planned principal operations have commenced, but there has been no significant revenue.

**Fixed assets.** The capitalized amount of expenditures made to acquire tangible property which will be used for a period of more than one year.

**Impairment.** Occurs when the carrying amount of a long-lived asset or asset group exceeds its fair value.

**Intangible assets.** Nonphysical assets.

**Nonmonetary exchange** is a reciprocal transfer wherein the transferor has no substantial continuing involvement in the asset, and the risks and rewards of ownership are transferred.

**Revenue expenditures** are normal recurring expenditures.

**Start-up costs.** One-time activities related to opening a new facility or new class of customer, initiating a new process in an existing facility, or some new operation.

**Tangible property.** Property that physically exists.

## Multiple-Choice Questions (1–102)

### A. Acquisition Cost

1. Merry Co. purchased a machine costing \$125,000 for its manufacturing operations and paid shipping costs of \$20,000. Merry spent an additional \$10,000 testing and preparing the machine for use. What amount should Merry record as the cost of the machine?

- a. \$155,000
- b. \$145,000
- c. \$135,000
- d. \$125,000

2. On December 1, year 4, Boyd Co. purchased a \$400,000 tract of land for a factory site. Boyd razed an old building on the property and sold the materials it salvaged from the demolition. Boyd incurred additional costs and realized salvage proceeds during December year 4 as follows:

Demolition of old building	\$50,000
Legal fees for purchase contract and recording ownership	10,000
Title guarantee insurance	12,000
Proceeds from sale of salvaged materials	8,000

In its December 31, year 4 balance sheet, Boyd should report a balance in the land account of

- a. \$464,000
- b. \$460,000
- c. \$442,000
- d. \$422,000

### B. Capitalization of Interest

3. Cole Co. began constructing a building for its own use in January year 4. During year 4, Cole incurred interest of \$50,000 on specific construction debt, and \$20,000 on other borrowings. Interest computed on the weighted-average amount of accumulated expenditures for the building during year 4 was \$40,000. What amount of interest cost should Cole capitalize?

- a. \$20,000
- b. \$40,000
- c. \$50,000
- d. \$70,000

4. Clay Company started construction of a new office building on January 1, year 4, and moved into the finished building on July 1, year 5. Of the building's \$2,500,000 total cost, \$2,000,000 was incurred in year 4 evenly throughout the year. Clay's incremental borrowing rate was 12% throughout year 4, and the total amount of interest incurred by Clay during year 4 was \$102,000. What amount should Clay report as capitalized interest at December 31, year 4?

- a. \$102,000
- b. \$120,000
- c. \$150,000
- d. \$240,000

5. During year 4, Bay Co. constructed machinery for its own use and for sale to customers. Bank loans financed these assets both during construction and after construction was complete. How much of the interest incurred should be reported as interest expense in the year 4 income statement?

Interest incurred for machinery for own use	Interest incurred for machinery held for sale
a. All interest incurred	All interest incurred
b. All interest incurred	Interest incurred after completion
c. Interest incurred after completion	Interest incurred after completion
d. Interest incurred after completion	All interest incurred

### C. Nonmonetary Exchanges

6. On July 1, year 4, Balt Co. exchanged a truck for twenty-five shares of Ace Corp.'s common stock. On that date, the truck's carrying amount was \$2,500, and its fair value was \$3,000. Also, the book value of Ace's stock was \$60 per share. On December 31, year 4, Ace had 250 shares of common stock outstanding and its book value per share was \$50. What amount should Balt report in its December 31, year 4 balance sheet as investment in Ace?

- a. \$3,000
- b. \$2,500
- c. \$1,500
- d. \$1,250

7. A nonmonetary exchange is recognized at fair value of the assets exchanged unless

- a. Exchange has commercial substance.
- b. Fair value is not determinable.
- c. The assets are similar in nature.
- d. The assets are dissimilar.

8. In a nonmonetary exchange, which of the following situations will require the asset to be recognized at the recorded value of the asset relinquished?

- a. A delivery truck exchanged for a delivery van that can deliver four times the quantity of goods to customers.
- b. The exchanged item is intended to facilitate sales to customers.
- c. The cash flows from the new asset will be significantly different from cash flows of the exchanged asset.
- d. The assets are both productive assets.

9. For purposes of nonmonetary exchanges, the configuration of cash flows includes which of the following?
- The implicit rate, maturity date of loan, and amount of loan.
  - The risk, timing, and amount of cash flows of the assets.
  - The entity-specific value of the asset which is equal to the fair value of the asset exchanged.
  - The estimated present value of the assets exchanged.

10. When determining the commercial substance of the exchange, which of the following items is **not** considered?

- Cash flow of exchanged asset.
- Cash flow of new asset.
- Cash flow from tax effects on the exchange to avoid taxes.
- Cash flow from potential sale of new equipment at a later date.

11. On March 31, year 4, Winn Company traded in an old machine having a carrying amount of \$16,800, and paid a cash difference of \$6,000 for a new machine having a total cash price of \$20,500. The cash flows from the new machine are expected to be significantly different than the cash flows from the old machine. On March 31, year 4, what amount of loss should Winn recognize on this exchange?

- \$0
- \$2,300
- \$3,700
- \$6,000

12. Amble, Inc. exchanged a truck with a carrying amount of \$12,000 and a fair value of \$20,000 for a truck and \$2,500 cash. The cash flows from the new truck are not expected to be significantly different from the cash flows of the old truck. The fair value of the truck received was \$17,500. At what amount should Amble record the truck received in the exchange?

- \$7,000
- \$9,500
- \$10,500
- \$17,500

13. In an exchange of assets that is deemed to lack commercial substance, Transit Co. received equipment with a fair value equal to the carrying amount of equipment given up. Transit also contributed cash. As a result of the exchange, Transit recognized

- A loss equal to the cash given up.
- A loss determined by the proportion of cash paid to the total transaction value.
- A gain determined by the proportion of cash paid to the total transaction value.
- Neither gain **nor** loss.

14. May Co. and Sty Co. exchanged nonmonetary assets. The exchange did not result in the expected cash flows of the assets being significantly different for either May or Sty. May paid cash to Sty in connection with the exchange. To the extent that the amount of cash exceeds a proportionate share of the

carrying amount of the asset surrendered, a realized gain on the exchange should be recognized by

	May	Sty
a.	Yes	Yes
b.	Yes	No
c.	No	Yes
d.	No	No

15. Vik Auto and King Clothier exchanged goods, held for resale, with equal fair values. Each will use the other's goods to promote their own products. The retail price of the car that Vik gave up is less than the retail price of the clothes received. Assuming the transaction has commercial substance, what profit should Vik recognize for the nonmonetary exchange?

- A profit is not recognized.
- A profit equal to the difference between the retail prices of the clothes received and the car.
- A profit equal to the difference between the retail price and the cost of the car.
- A profit equal to the difference between the fair value and the cost of the car.

16. Yola Co. and Zaro Co. are fuel oil distributors. To facilitate the delivery of oil to their customers, Yola and Zaro exchanged ownership of 1,200 barrels of oil without physically moving the oil. Yola paid Zaro \$20,000 to compensate for a difference in the grade of oil. On the date of the exchange, cost and market values of the oil were as follows:

	Yola Co.	Zaro Co.
Cost	\$100,000	\$126,000
Market values	130,000	150,000

In Zaro's income statement, what amount of gain should be reported from the exchange of the oil?

- \$0
- \$3,200
- \$20,000
- \$24,000

17. An entity disposes of a nonmonetary asset in a nonreciprocal transfer. A gain or loss should be recognized on the disposition of the asset when the fair value of the asset transferred is determinable and the nonreciprocal transfer is to

	Another entity	A stockholder of the entity
a.	No	Yes
b.	No	No
c.	Yes	No
d.	Yes	Yes

18. On July 1, year 4, one of Rudd Co.'s delivery vans was destroyed in an accident. On that date, the van's carrying value was \$2,500. On July 15, year 4, Rudd received and recorded a \$700 invoice for a new engine installed in the van in May year 4, and another \$500 invoice for various repairs. In August, Rudd received \$3,500 under its insurance policy on the van, which it plans to use to replace the van. What amount should

Rudd report as gain (loss) on disposal of the van in its year 4 income statement?

- a. \$1,000
- b. \$300
- c. \$0
- d. \$(200)

19. Lano Corp.'s forest land was condemned for use as a national park. Compensation for the condemnation exceeded the forest land's carrying amount. Lano purchased similar, but larger, replacement forest land for an amount greater than the condemnation award. As a result of the condemnation and replacement, what is the net effect on the carrying amount of forest land reported in Lano's balance sheet?

- a. The amount is increased by the excess of the replacement forest land's cost over the condemned forest land's carrying amount.
- b. The amount is increased by the excess of the replacement forest land's cost over the condemnation award.
- c. The amount is increased by the excess of the condemnation award over the condemned forest land's carrying amount.
- d. No effect, because the condemned forest land's carrying amount is used as the replacement forest land's carrying amount.

#### D. Purchase of Groups of Fixed (Basket Purchase)

20. On July 1, year 4, Town Company purchased for \$540,000 a warehouse building and the land on which it is located. The following data were available concerning the property:

	Current appraised value	Seller's original cost
Land	\$200,000	\$140,000
Warehouse building	<u>300,000</u>	<u>280,000</u>
	<u>\$500,000</u>	<u>\$420,000</u>

Town should record the land at

- a. \$140,000
- b. \$180,000
- c. \$200,000
- d. \$216,000

#### E. Capital vs. Revenue Expenditures

21. During year 4, King Company made the following expenditures relating to its plant building:

Continuing and frequent repairs	\$40,000
Repainted the plant building	10,000
Major improvements to the electrical wiring system	32,000
Partial replacement of roof tiles	14,000

How much should be charged to repair and maintenance expense in year 4?

- a. \$96,000
- b. \$82,000
- c. \$64,000
- d. \$54,000

22. On June 18, year 4, Dell Printing Co. incurred the following costs for one of its printing presses:

Purchase of collating and stapling attachment	\$84,000
Installation of attachment	36,000
Replacement parts for overhaul of press	26,000
Labor and overhead in connection with overhaul	14,000

The overhaul resulted in a significant increase in production. Neither the attachment nor the overhaul increased the estimated useful life of the press. What amount of the above costs should be capitalized?

- a. \$0
- b. \$84,000
- c. \$120,000
- d. \$160,000

23. A building suffered uninsured fire damage. The damaged portion of the building was refurbished with higher quality materials. The cost and related accumulated depreciation of the damaged portion are identifiable. To account for these events, the owner should

- a. Reduce accumulated depreciation equal to the cost of refurbishing.
- b. Record a loss in the current period equal to the sum of the cost of refurbishing and the carrying amount of the damaged portion of the building.
- c. Capitalize the cost of refurbishing and record a loss in the current period equal to the carrying amount of the damaged portion of the building.
- d. Capitalize the cost of refurbishing by adding the cost to the carrying amount of the building.

24. Derby Co. incurred costs to modify its building and to rearrange its production line. As a result, an overall reduction in production costs is expected. However, the modifications did not increase the building's market value, and the rearrangement did not extend the production line's life. Should the building modification costs and the production line rearrangement costs be capitalized?

	Building modification costs	Production line rearrangement costs
a.	Yes	No
b.	Yes	Yes
c.	No	No
d.	No	Yes

#### F. Depreciation

25. On January 2, year 4, Lem Corp. bought machinery under a contract that required a down payment of \$10,000, plus twenty-four monthly payments of \$5,000 each, for total

cash payments of \$130,000. The cash equivalent price of the machinery was \$110,000. The machinery has an estimated useful life of ten years and estimated salvage value of \$5,000. Lem uses straight-line depreciation. In its year 4 income statement, what amount should Lem report as depreciation for this machinery?

- a. \$10,500
- b. \$11,000
- c. \$12,500
- d. \$13,000

26. Turtle Co. purchased equipment on January 2, year 2, for \$50,000. The equipment had an estimated five-year service life. Turtle's policy for five-year assets is to use the 200% double-declining depreciation method for the first two years of the asset's life, and then switch to the straight-line depreciation method. In its December 31, year 4 balance sheet, what amount should Turtle report as accumulated depreciation for equipment?

- a. \$30,000
- b. \$38,000
- c. \$39,200
- d. \$42,000

27. Rago Company takes a full year's depreciation expense in the year of an asset's acquisition, and no depreciation expense in the year of disposition. Data relating to one of Rago's depreciable assets at December 31, year 5, are as follows:

Acquisition year	Year 2
Cost	\$110,000
Residual value	20,000
Accumulated depreciation	72,000
Estimated useful life	5 years

Using the same depreciation method as used in year 2, year 3, and year 4, how much depreciation expense should Rago record in year 5 for this asset?

- a. \$12,000
- b. \$18,000
- c. \$22,000
- d. \$24,000

28. On January 2, year 1, Union Co. purchased a machine for \$264,000 and depreciated it by the straight-line method using an estimated useful life of eight years with no salvage value. On January 2, year 4, Union determined that the machine had a useful life of six years from the date of acquisition and will have a salvage value of \$24,000. An accounting change was made in year 4 to reflect the additional data. The accumulated depreciation for this machine should have a balance at December 31, year 4, of

- a. \$176,000
- b. \$160,000
- c. \$154,000
- d. \$146,000

29. Weir Co. uses straight-line depreciation for its property, plant, and equipment, which, stated at cost, consisted of the following:

	12/31/Y4	12/31/Y3
Land	\$25,000	\$25,000
Buildings	195,000	195,000
Machinery and equipment	<u>695,000</u>	<u>650,000</u>
	915,000	870,000
Less accumulated depreciation	<u>400,000</u>	<u>370,000</u>
	<u>\$515,000</u>	<u>\$500,000</u>

Weir's depreciation expense for year 4 and year 3 was \$55,000 and \$50,000, respectively. What amount was debited to accumulated depreciation during year 4 because of property, plant, and equipment retirements?

- a. \$40,000
- b. \$25,000
- c. \$20,000
- d. \$10,000

30. On January 1, year 1, Crater, Inc. purchased equipment having an estimated salvage value equal to 20% of its original cost at the end of a ten-year life. The equipment was sold December 31, year 5, for 50% of its original cost. If the equipment's disposition resulted in a reported loss, which of the following depreciation methods did Crater use?

- a. Double-declining balance.
- b. Sum-of-the-years' digits.
- c. Straight-line.
- d. Composite.

31. A depreciable asset has an estimated 15% salvage value. At the end of its estimated useful life, the accumulated depreciation would equal the original cost of the asset under which of the following depreciation methods?

	Straight-line	Productive output
a.	Yes	No
b.	Yes	Yes
c.	No	Yes
d.	No	No

32. In which of the following situations is the units-of-production method of depreciation most appropriate?

- a. An asset's service potential declines with use.
- b. An asset's service potential declines with the passage of time.
- c. An asset is subject to rapid obsolescence.
- d. An asset incurs increasing repairs and maintenance with use.

33. A machine with a five-year estimated useful life and an estimated 10% salvage value was acquired on January 1, year 1. On December 31, year 4, accumulated depreciation, using the sum-of-the-years' digits method, would be

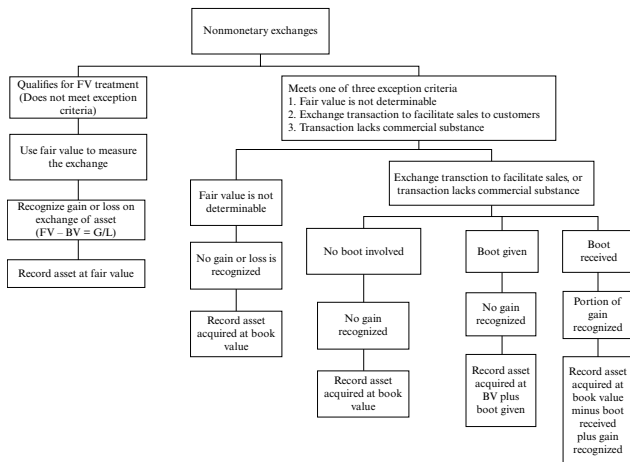

- a. (Original cost less salvage value) multiplied by 1/15.
- b. (Original cost less salvage value) multiplied by 14/15.
- c. Original cost multiplied by 14/15.
- d. Original cost multiplied by 1/15.

34. Spiro Corp. uses the sum-of-the-years' digits method to depreciate equipment purchased in January year 1 for \$20,000.

The estimated salvage value of the equipment is \$2,000 and the estimated useful life is four years. What should Spiro report as the asset's carrying amount as of December 31, year 3?

- a. \$1,800
- b. \$2,000
- c. \$3,800
- d. \$4,500

35. The following graph depicts three depreciation expense patterns over time.

Which depreciation expense pattern corresponds to the sum-of-the-years' digits method and which corresponds to the double-declining balance method?

	Sum-of-the-years' digits	Double-declining balance
a.	III	II
b.	II	I
c.	I	III
d.	II	III

36. Which of the following uses the straight-line depreciation method?

	Group depreciation	Composite depreciation
a.	No	No
b.	Yes	No
c.	Yes	Yes
d.	No	Yes

37. A company using the composite depreciation method for its fleet of trucks, cars, and campers retired one of its trucks and received cash from a salvage company. The net carrying amount of these composite asset accounts would be decreased by the

- a. Cash proceeds received and original cost of the truck.
- b. Cash proceeds received.
- c. Original cost of the truck less the cash proceeds.
- d. Original cost of the truck.

**G. Disposals and Impairment of Value**

38. During year 4, the management of West Inc. decided to dispose of some of its older equipment and machinery. By

year-end, December 31, year 4, these assets had not been sold, although the company was negotiating their sale to another company. On the December 31, year 4 balance sheet of West Inc., this equipment and machinery should be reported at

- a. Fair value.
- b. Carrying amount.
- c. The lower of carrying amount or fair value.
- d. The lower of carrying amount or fair value less cost to sell.

39. At December 31, year 4, Matson Inc. was holding long-lived assets that it intended to sell. The assets do not constitute a separate component of the company. The company appropriately recognized a loss in year 4 related to these assets. On Matson's income statement for the year ended December 31, year 4, this loss should be reported as a(n)

- a. Extraordinary item.
- b. Component of income from continuing operations before income taxes.
- c. Separate component of selling or general and administrative expenses, disclosed net of tax benefit.
- d. Component of the gain (loss) from sale of discontinued operations, disclosed net of income taxes.

40. Taft Inc. recognized a loss in year 3 related to long-lived assets that it intended to sell. These assets were not sold during year 4, and the company estimated, at December 31, year 4, that the loss recognized in year 3 had been more than recovered. On the December 31, year 4 balance sheet, Taft should report these long-lived assets at their

- a. Fair value on December 31, year 3.
- b. Fair value less cost to sell on December 31, year 3.
- c. Fair value on December 31, year 4.
- d. Carrying amount on December 31, year 3.

41. Cranston Inc. reported an impairment loss of \$150,000 on its income statement for the year ended December 31, year 3. This loss was related to long-lived assets which Cranston intended to use in its operations. On the company's December 31, year 3 balance sheet, Cranston reported these long-lived assets at \$920,000 and, as of December 31, year 3, Cranston estimated that these long-lived assets would be used for another five years. On December 31, year 4, Cranston determined that the fair values of its impaired long-lived assets had increased by \$25,000 over their fair values at December 31, year 3. On the company's December 31, year 4 balance sheet, what amount should be reported as the carrying amount for these long-lived assets? Assume straight-line depreciation and no salvage value for the impaired assets.

- a. \$761,000
- b. \$736,000
- c. \$945,000
- d. \$756,000

42. Assets intended to be held and used for productive purposes may suffer from impairment in each of the following circumstances **except**

- a. A change in the way the assets are used or physical change in the assets.

- b. Asset costs incurred exceed the original amounts planned.
- c. Discounted expected future cash flows and interest charges are less than the carrying amount of the assets.
- d. A significant adverse change in legal factors that might affect the assets' fair value.

**43.** Synthia, Inc., a clothing manufacturer, purchased a sewing machine for \$10,000 on July 1, year 2. The machine had a ten-year life, a \$500 salvage value, and was depreciated using the straight-line method. On December 31, year 4, a test for impairment indicates that the undiscounted cash flows from the sewing machine are less than its carrying value. The machine's actual fair value on December 31, year 4 is \$3,000. What is Synthia's loss on impairment on December 31, year 4?

- a. \$6,500
- b. \$4,750
- c. \$4,625
- d. \$4,150

**44.** With regard to impaired assets, the FASB standards provide for

	<b>Recognition of loss upon impairment</b>	<b>Restoration of previously recognized impairment losses</b>
a.	Yes	Yes
b.	Yes	No
c.	No	Yes
d.	No	No

**45.** Scarbrough Company had purchased equipment for \$280,000 on January 1, year 1. The equipment had an eight-year useful life and a salvage value of \$40,000. Scarbrough depreciated the equipment using the straight-line method. In August year 4, Scarbrough questioned the recoverability of the carrying amount of this equipment. At August 31, year 4, the expected net future cash inflows (undiscounted) related to the continued use and eventual disposal of the equipment total \$175,000. The equipment's fair value on August 31, year 4, is \$150,000. After any loss on impairment has been recognized, what is the carrying value of Scarbrough's equipment as of August 31, year 4?

- a. \$175,000
- b. \$170,000
- c. \$150,000
- d. \$130,000

**46.** Linx Corporation acquired equipment on January 1, year 3, for \$100,000. The equipment had a ten-year useful life and no salvage value. On December 31, year 4, the following information was obtained regarding the equipment:

Expected value of undiscounted cash flows	\$72,000
Fair value estimated with in-use valuation premise	\$74,000
Fair value estimated with in-exchange valuation premise	\$70,000

What is the amount of impairment loss that Linx should report in its year 4 income statement?

- a. \$6,000
- b. \$8,000
- c. \$10,000
- d. \$0

**47.** Conner Corporation has equipment with a carrying value of \$160,000 on December 31, year 4, after recording depreciation expense for year 4. The following information was available on December 31, year 4:

Value of similar equipment for sale in market	\$140,000
Present value of estimated future cash flows discounted at 10%	\$130,000
Estimated undiscounted cash flows of equipment	\$135,000

At what amount should the equipment be presented on the December 31, year 4 balance sheet?

- a. \$160,000
- b. \$140,000
- c. \$135,000
- d. \$130,000

**48.** Dahle Corporation has equipment with a carrying value of \$450,000 on December 31, year 4. The following information was available on December 31, year 4:

Expected net cash flows (undiscounted)	\$420,000
Expected net cash flows discounted at 7%	\$400,000
Fair value, using the assets with other assets	\$415,000
Fair value, assuming the assets are sold stand-alone	\$428,000

What is the impairment loss that Dahle must report in its year 4 income statement for this equipment?

- a. \$50,000
- b. \$35,000
- c. \$30,000
- d. \$22,000

**49.** Under the reporting requirements for impaired assets, impairment losses for assets to be held and used shall be reported

- a. As an extraordinary item.
- b. As a component of discontinued operations.
- c. As a component of income from continuing operations.
- d. As a change in accounting estimate.

**50.** During December year 4, Bubba Inc. determined that there had been a significant decrease in the market value of its equipment used in its manufacturing process. At December 31, year 4, Bubba compiled the information below.

Original cost of the equipment	\$500,000
Accumulated depreciation	300,000
Expected net future cash inflows (undiscounted) related to the continued use and eventual disposal of the equipment	175,000
Fair value of the equipment	125,000

What is the amount of impairment loss that should be reported on Bubba's income statement prepared for the year ended December 31, year 4?

- \$75,000
- \$25,000
- \$325,000
- \$375,000

**51.** Marjorie, Inc. acquired a machine for \$320,000 on August 31, year 1. The machine has a five-year life, a \$50,000 salvage value, and was depreciated using the straight-line method. On May 31, year 4, a test for recoverability reveals that the expected net future undiscounted cash inflows related to the continued use and eventual disposal of the machine total \$150,000. The machine's actual fair value on May 31, year 4, is \$135,000, with no salvage value. Assuming a loss on impairment is recognized May 31, year 4, what is Marjorie's depreciation expense for June year 4?

- \$6,352
- \$5,000
- \$4,500
- \$3,148

**52.** Which of the following statements is(are) correct about the carrying amount of a long-lived asset after an impairment loss has been recognized? Assume the long-lived asset is being held for use in the business and that the asset is depreciable.

- The reduced carrying amount of the asset may be increased in subsequent years if the impairment loss has been recovered.
  - The reduced carrying amount of the asset represents the amount that should be depreciated over the asset's remaining useful life.
- I only.
  - II only.
  - Both I and II.
  - Neither I nor II.

**53.** According to ASC Topic 360, if a long-lived asset is determined to be impaired, how is the loss calculated?

- Future discounted cash flows less asset's carrying (book) value.
- Future undiscounted cash flows less asset's carrying (book) value.
- Fair value less asset's carrying (book) value.
- Cash outflows needed to obtain cash inflows.

**54.** In accordance with ASC Topic 360, long-lived assets are required to be reviewed for impairment

- At the balance sheet date, every three years.
- When the asset is fully depreciated.
- When circumstances indicate that the carrying amount of an asset might not be recoverable.
- At the balance sheet date, every year.

**55.** During December year 4, Toni Corp. determined that there had been a significant decrease in the market value of its equipment used in its roofing business. At December 31, year 4, Toni compiled the information below.

Original cost of equipment	\$800,000
Accumulated depreciation	450,000
Expected net future cash inflows (undiscounted) related to the continued use and eventual disposal of the equipment	300,000
Fair value of the equipment	250,000

What is the amount of the impairment loss that should be reported on Toni's income statement prepared for the year ended December 31, year 4?

- \$50,000
- \$100,000
- \$150,000
- \$200,000

**56.** Miller Company acquired a machine for \$420,000 on June 30, year 2. The machine has a seven-year life, no salvage value, and was depreciated using the straight-line method. On August 31, year 4, a test for recoverability reveals that the expected net future undiscounted cash inflows related to the continued use and eventual disposal of the machine total \$275,000. The machine's actual fair value on August 31, year 4, is \$261,000. Assuming a loss on impairment is recognized August 31, year 4, what is Miller's depreciation expense for September year 4?

- \$4,000
- \$4,350
- \$4,500
- \$5,000

## H. Depletion

**57.** In January year 4, Vorst Co. purchased a mineral mine for \$2,640,000 with removable ore estimated at 1,200,000 tons. After it has extracted all the ore, Vorst will be required by law to restore the land to its original condition at an estimated cost of \$220,000. The present value of the estimated restoration costs is \$180,000. Vorst believes it will be able to sell the property afterwards for \$300,000. During year 4, Vorst incurred \$360,000 of development costs preparing the mine for production and removed and sold 60,000 tons of ore. In its year 4 income statement, what amount should Vorst report as depletion?

- \$135,000
- \$144,000
- \$150,000
- \$159,000

## J. Goodwill and Intangible Assets

**58.** On December 31, year 3, Byte Co. had capitalized software costs of \$600,000 with an economic life of four years. Sales for year 4 were 10% of expected total sales of the software. At December 31, year 4, the software had a net realizable value of \$480,000. In its December 31, year 4 balance sheet, what amount should Byte report as net capitalized cost of computer software?

- a. \$432,000
- b. \$450,000
- c. \$480,000
- d. \$540,000

**59.** On January 2, year 4, Judd Co. bought a trademark from Krug Co. for \$500,000. Judd retained an independent consultant, who estimated the trademark's remaining life to be fifty years. Its unamortized cost on Krug's accounting records was \$380,000. In Judd's December 31, year 4 balance sheet, what amount should be reported as accumulated amortization?

- a. \$7,600
- b. \$9,500
- c. \$10,000
- d. \$12,500

**60.** On January 2, year 4, Paye Co. purchased Shef Co. at a cost that resulted in recognition of goodwill of \$200,000. During the first quarter of year 4, Paye spent an additional \$80,000 on expenditures designed to maintain goodwill. In its December 31, year 4 balance sheet, what amount should Paye report as goodwill?

- a. \$180,000
- b. \$200,000
- c. \$252,000
- d. \$280,000

**61.** Northern Airline purchased airline gate rights at Newark International Airport for \$2,000,000 with a legal life of five years. However, Northern has the ability and right to extend the rights every ten years for an indefinite period of time. Over what period of time should Northern amortize the gate rights?

- a. 5 years.
- b. 15 years.
- c. 40 years.
- d. The rights should not be amortized.

**62.** On January 2, year 1, Lava, Inc. purchased a patent for a new consumer product for \$90,000. At the time of purchase, the patent was valid for fifteen years; however, the patent's useful life was estimated to be only ten years due to the competitive nature of the product. On December 31, year 4, the product was permanently withdrawn from sale under governmental order because of a potential health hazard in the product. What amount should Lava charge against income during year 4, assuming amortization is recorded at the end of each year?

- a. \$9,000
- b. \$54,000
- c. \$63,000
- d. \$72,000

**63.** What does ASC Topic 350 require with respect to accounting for goodwill?

- a. Goodwill should be amortized over a five-year period.
- b. Goodwill should be amortized over its expected useful life.
- c. Goodwill should be recorded and never adjusted.
- d. Goodwill should be recorded and periodically evaluated for impairment.

**64.** Which of the following statements concerning patents is correct?

- a. Legal costs incurred to successfully defend an internally developed patent should be capitalized and amortized over the patent's remaining economic life.
- b. Legal fees and other direct costs incurred in registering a patent should be capitalized and amortized on a straight-line basis over a five-year period.
- c. Research and development contract services purchased from others and used to develop a patented manufacturing process should be capitalized and amortized over the patent's economic life.
- d. Research and development costs incurred to develop a patented item should be capitalized and amortized on a straight-line basis over seventeen years.

**65.** Under ASC Topic 350, goodwill should be tested periodically for impairment

- a. For the entity as a whole.
- b. At the subsidiary level.
- c. At the industry segment level.
- d. At the operating segment level or one level below.

**66.** On July 12, year 4, Carver, Inc. acquired Jones Company in a business combination. As a result of the combination, the following amounts of goodwill were recorded for each of the three reporting units of the acquired company.

Retailing	\$30,000
Service	\$20,000
Financing	\$40,000

Near the end of year 4 a new major competitor entered the company's market and Carver was concerned that this might cause a significant decline in the value of goodwill. Accordingly, Carver computed the implied value of the goodwill for the three major reporting units at December 31, year 4, as follows:

Retailing	\$25,000
Service	\$10,000
Financing	\$60,000

Determine the amount of impairment of goodwill that should be recorded by Carver at December 31, year 4.

- a. \$0
- b. \$10,000
- c. \$15,000
- d. \$25,000

**67.** Sloan Corporation is performing its annual test of the impairment of goodwill for its Financing reporting unit. It has determined that the fair value of the unit exceeds its carrying value. Which of the following is correct concerning this test of impairment?

- a. Impairment is not indicated and no additional analysis is necessary.
- b. Goodwill should be written down as impaired.

- c. The assets and liabilities should be valued to determine if there has been an impairment of goodwill.
- d. Goodwill should be retested at the entity level.

**68.** Wilson Corporation is performing the test of impairment of its Technology reporting unit at 9/30/Y4. In the first step of the process, Wilson has valued the unit using a multiple of earnings approach at \$2,000,000. The carrying value of the net assets of the Technology unit is \$2,100,000. What should Wilson do with this information?

- a. Record an impairment loss of \$100,000.
- b. Record no impairment loss.
- c. Value goodwill individually.
- d. Perform step two of the test of impairment.

### **K. Reporting on the Costs of Start-Up Activities**

**69.** Brunson Corp., a major US winery, begins construction of a new facility in Italy. Following are some of the costs incurred in conjunction with the start-up activities of the new facility:

Production equipment	\$815,000
Travel costs of salaried employees	40,000
License fees	14,000
Training of local employees for production and maintenance operations	120,000
Advertising costs	85,200

What portion of the organizational costs will be expensed?

- a. \$975,000
- b. \$160,000
- c. \$0
- d. \$139,200

**70.** On January 1, year 4, Kew Corp. incurred organization costs of \$24,000. What portion of the organization costs will Kew defer to years subsequent to year 4?

- a. \$23,400
- b. \$19,200
- c. \$4,800
- d. \$0

**71.** Which of the following statements is(are) correct regarding the treatment of start-up activities related to the opening of a new facility?

- I. Costs of raising capital should be expensed as incurred.
  - II. Costs of acquiring or constructing long-lived assets and getting them ready for their intended use should be expensed as incurred.
  - III. Cost of research and development should be expensed as incurred.
- a. I only.
  - b. III only.
  - c. Both I and III.
  - d. I, II, and III.

### **L. Research and Development Costs**

**72.** Cody Corp. incurred the following costs during year 4:

Design of tools, jigs, molds, and dies involving new technology	\$125,000
Modification of the formulation of a process	160,000
Troubleshooting in connection with breakdowns during commercial production	100,000
Adaptation of an existing capability to a particular customer's need as part of a continuing commercial activity	110,000

In its year 4 income statement, Cody should report research and development expense of

- a. \$125,000
- b. \$160,000
- c. \$235,000
- d. \$285,000

**73.** In year 4, Ball Labs incurred the following costs:

Direct costs of doing contract research and development work for the government to be reimbursed by governmental unit	\$400,000
---	-----------

Research and development costs not included above were

Depreciation	\$300,000
Salaries	700,000
Indirect costs appropriately allocated	200,000
Materials	180,000

What was Ball's total research and development expense in year 4?

- a. \$1,080,000
- b. \$1,380,000
- c. \$1,580,000
- d. \$1,780,000

**74.** West, Inc. made the following expenditures relating to Product Y:

- Legal costs to file a patent on Product Y—\$10,000. Production of the finished product would not have been undertaken without the patent.
- Special equipment to be used solely for development of Product Y—\$60,000. The equipment has no other use and has an estimated useful life of four years.
- Labor and material costs incurred in producing a prototype model—\$200,000.
- Cost of testing the prototype—\$80,000.

What is the total amount of costs that will be expensed when incurred?

- a. \$280,000
- b. \$295,000
- c. \$340,000
- d. \$350,000

75. Brill Co. made the following expenditures during year 4:

Costs to develop computer software for internal use in Brill's general management information system	\$100,000
Costs of market research activities	75,000

What amount of these expenditures should Brill report in its year 4 income statement as research and development expenses?

- a. \$175,000
- b. \$100,000
- c. \$75,000
- d. \$0

76. On January 1, year 4, Jambon purchased equipment for use in developing a new product. Jambon uses the straight-line depreciation method. The equipment could provide benefits over a ten-year period. However, the new product development is expected to take five years, and the equipment can be used only for this project. Jambon's year 4 expense equals

- a. The total cost of the equipment.
- b. One-fifth of the cost of the equipment.
- c. One-tenth of the cost of the equipment.
- d. Zero.

**M. Computer Software Costs**

Items 77 and 78 are based on the following:

During year 4, Pitt Corp. incurred costs to develop and produce a routine, low-risk computer software product, as follows:

Completion of detailed program design	\$13,000
Costs incurred for coding and testing to establish technological feasibility	10,000
Other coding costs after establishment of technological feasibility	24,000
Other testing costs after establishment of technological feasibility	20,000
Costs of producing product masters for training materials	15,000
Duplication of computer software and training materials from product masters (1,000 units)	25,000
Packaging product (500 units)	9,000

77. In Pitt's December 31, year 4 balance sheet, what amount should be reported in inventory?

- a. \$25,000
- b. \$34,000
- c. \$40,000
- d. \$49,000

78. In Pitt's December 31, year 4 balance sheet, what amount should be capitalized as software cost, subject to amortization?

- a. \$54,000
- b. \$57,000
- c. \$59,000
- d. \$69,000

79. On December 31, year 3, Bit Co. had capitalized costs for a new computer software product with an economic life of five years. Sales for year 4 were 30% of expected total sales of the software. At December 31, year 4, the software had a net realizable value equal to 90% of the capitalized cost. What percentage of the original capitalized cost should be reported as the net amount on Bit's December 31, year 4 balance sheet?

- a. 70%
- b. 72%
- c. 80%
- d. 90%

80. Which of the following statements is incorrect regarding internal-use software?

- a. The application and development costs of internal-use software should be amortized on a straight-line basis unless another systematic and rational basis is more representative of its costs.
- b. Internal-use software is considered to be software that is marketed as a separate product or as part of a product or process.
- c. The costs of testing and installing computer hardware should be capitalized as incurred.
- d. The costs of training and application maintenance should be expensed as incurred.

81. Which of the following statements is(are) correct regarding the proper accounting treatment for internal-use software costs?

- I. Preliminary costs should be capitalized as incurred.
  - II. Application and development costs should be capitalized as incurred.
- a. I only.
  - b. II only.
  - c. Both I and II.
  - d. Neither I nor II.

82. What is the proper accounting treatment for the following stages of internal-use software costs?

	<b>Preliminary stage costs</b>	<b>Post- implementation costs</b>
a.	Capitalized as incurred	Capitalized as incurred
b.	Expensed as incurred	Capitalized as incurred
c.	Capitalized as incurred	Expensed as incurred
d.	Expensed as incurred	Expensed as incurred

**N. Development Stage Enterprises**

83. Financial reporting by a development stage enterprise differs from financial reporting for an established operating enterprise in regard to footnote disclosures

- a. Only.
- b. And expense recognition principles only.

- c. And revenue recognition principles only.
- d. And revenue and expense recognition principles.

**84.** A development stage enterprise

- a. Issues an income statement that shows only cumulative amounts from the enterprise's inception.
- b. Issues an income statement that is the same as an established operating enterprise, but does not show cumulative amounts from the enterprise's inception as additional information.
- c. Issues an income statement that is the same as an established operating enterprise, and shows cumulative amounts from the enterprise's inception as additional information.
- d. Does not issue an income statement.

**P. International Financial Reporting Standards (IFRS)**

**85.** For companies that prepare financial statements in accordance with IFRS, plant, property, and equipment should be valued using which models?

- a. The cost model or the revaluation model.
- b. The cost model or the fair value model.
- c. The cost model or the fair value through profit or loss model.
- d. The revaluation model or the fair value model.

**86.** Which is true about the revaluation model for valuing plant, property, and equipment?

- a. Revaluation of assets must be made on the last day of the fiscal year.
- b. Revaluation of assets must be made on the same date each year.
- c. There is no rule for the frequency or date of revaluation.
- d. Revaluation of assets must be made every two years.

**87.** When the revaluation model is used for reporting plant, property, and equipment, the gain or loss should be included in

- a. Income for the period.
- b. Gain from revaluation on the income statement.
- c. A revaluation surplus account is other comprehensive income.
- d. An extraordinary gain or loss on the income statement.

**88.** Linden Corporation has investment property that is held to earn rental income. Linden prepares its financial statements in accordance with IFRS. Linden uses the fair value model for reporting the investment property. Which of the following is true?

- a. Changes in fair value are reported as profit or loss in the current period.
- b. Changes in fair value are reported as other comprehensive income for the period.
- c. Changes in fair value are reported as an extraordinary gain on the income statement.
- d. Changes in fair value are reported as deferred revenue for the period.

**89.** Under IFRS, what valuation methods are used for intangible assets?

- a. The cost model or the fair value model.
- b. The cost model or the revaluation model.
- c. The cost model or the fair value through profit or loss model.
- d. The revaluation model or the fair value model.

**90.** Pinkerton Corp. uses the cost model for intangible assets. On April 10, year 3, Pinkerton acquired assets for \$100,000. On December 31, year 3, it was determined that the recoverable amount for these intangible assets was \$80,000. On December 31, year 4, it was determined that the intangible assets had a recoverable amount of \$84,000. What is the impairment gain or loss recognized in year 3 and year 4 on the income statement?

	Year 3	Year 4
a.	\$20,000 loss	\$16,000 loss
b.	\$20,000 loss	\$0
c.	\$20,000 loss	\$4,000 gain
d.	\$0	\$0

**91.** Under IFRS when accounting for plant, property, and equipment, a company

- a. Must use the cost model for presenting the assets.
- b. May elect to use the cost model or the revaluation model on any individual asset.
- c. May elect to use the cost model or the revaluation model on any asset class.
- d. Must use the cost model for land.

**92.** Under the IFRS revaluation model for accounting for plant, property, and equipment

- a. Assets must be revaluated quarterly.
- b. Assets must be revaluated annually.
- c. Assets must be revaluated biannually.
- d. There are no rules regarding the frequency of revaluation.

**93.** Wilson Company maintains its records under IFRS. During the current year Wilson sold a piece of equipment used in production. The equipment had been accounted for using the revaluation method and details of the accounts and sale are presented below.

Sales price	\$100,000
Equipment book value (net)	90,000
Revaluation surplus	20,000

Which of the following is correct regarding recording the sale?

- a. The gain that should be recorded in profit and loss is \$30,000.
- b. The gain that should be recorded in other comprehensive income is \$10,000.
- c. The gain that should be recorded in other comprehensive income is \$30,000.
- d. The gain that should be recorded in profit and loss is \$10,000; the \$20,000 revaluation surplus should be transferred to retained earnings.

**94.** Under IFRS, an entity that acquires an intangible asset may use the revaluation model for subsequent measurement only if

- a. The useful life of the intangible asset can be reliably determined.
- b. An active market exists for the intangible asset.
- c. The cost of the intangible asset can be measured reliably.
- d. The intangible asset is a monetary asset.

**95.** Under IFRS, which of the following is a criterion that must be met in order for an item to be recognized as an intangible asset other than goodwill?

- a. The item's fair value can be measured reliably.
- b. The item is part of the entity's activities aimed at gaining new scientific or technical knowledge.
- c. The item is expected to be used in the production or supply of goods or services.
- d. The item is identifiable and lacks physical substance.

**96.** An entity purchases a trademark and incurs the following costs in connection with the trademark:

One-time trademark purchase price	\$100,000
Nonrefundable VAT taxes	5,000
Training sales personnel on the use of the new trademark	7,000
Research expenditures associated with the purchase of the new trademark	24,000
Legal costs incurred to register the trademark	10,500
Salaries of the administrative personnel	12,000

Applying IFRS and assuming that the trademark meets all of the applicable initial asset recognition criteria, the entity should recognize an asset in the amount of

- a. \$100,000
- b. \$115,500
- c. \$146,500
- d. \$158,500

**97.** Under IFRS, when an entity chooses the revaluation model as its accounting policy for measuring property, plant, and equipment, which of the following statements is correct?

- a. When an asset is revalued, the entire class of property, plant, and equipment to which that asset belongs must be revalued.
- b. When an asset is revalued, individual assets within a class of property, plant, and equipment to which that asset belongs can be revalued.
- c. Revaluations of property, plant, and equipment must be made at least every three years.
- d. Increases in an asset's carrying value as a result of the first revaluation must be recognized as a component of profit or loss.

**98.** On January 1, year 1, an entity acquires for \$100,000 a new piece of machinery with an estimated useful life of 10 years. The machine has a drum that must be replaced every five years and costs \$20,000 to replace. Continued operation of the machine requires an inspection every four years after purchase; the inspection cost is \$8,000. The company uses the straight-line method of depreciation. Under IFRS, what is the depreciation expense for year 1?

- a. \$10,000
- b. \$10,800
- c. \$12,000
- d. \$13,200

**99.** Taylor Company uses IFRS for financial reporting purposes. Which of the following is true about accounting for the development costs of the company?

- a. Development costs must be expensed.
- b. Development costs are always deferred and expensed against future revenues.
- c. Development costs may be capitalized as an intangible asset in very restrictive situations.
- d. Development costs are recorded in other comprehensive income.

**100.** Under IFRS, intangible assets with indefinite lives are tested for impairment

- a. Quarterly at the quarterly reporting date.
- b. Annually at the annual reporting date.
- c. Biannually at the reporting date.
- d. There are no guidelines defining when intangible assets are tested for impairment.

**101.** Under IFRS, an intangible asset is considered to be impaired if its carrying value is greater than its recoverable amount. The recoverable amount is

- a. Its historical cost.
- b. Its net selling price.
- c. The greater of its net selling price or its value in use.
- d. Its replacement cost.

**102.** Which of the following is true about biological assets under IFRS?

- a. Biological assets are only found in Biotech companies.
- b. Biological assets are living animals or plants and must be disclosed as a separate item on the balance sheet.
- c. Biological assets must be valued at cost.
- d. Biological assets do not generally have future economic benefits.

### Explanations

1. (a) The cost of machinery includes all expenditures incurred in acquiring the asset and preparing it for use. Cost includes the purchase price, freight and handling charges, insurance on the machine while in transit, cost of special foundations, and costs of assembling, installation, and testing. All of the costs given in this problem are properly recorded as the cost of the machine. Therefore the cost to be recorded is \$155,000 (\$125,000 + \$20,000 + \$10,000).

2. (a) Any cost involved in preparing land for its ultimate use (such as a factory site) is considered part of the cost of the land. Before the land can be used as a building site, it must be purchased (involving costs such as purchase price, legal fees, and title insurance) and the old building must be razed (cost of demolition less proceeds from sale of scrap). The total balance in the land account should be \$464,000.

Purchase price	\$400,000
Legal fees	10,000
Title insurance	12,000
Net cost of demolition (\$50,000 – \$8,000)	<u>42,000</u>
	<u>\$464,000</u>

3. (b) The amount of interest cost which should be capitalized during building construction is the **lower of avoidable interest or actual interest**. Avoidable interest equals the interest computed on the weighted-average amount of accumulated expenditures on the building (\$40,000). Since

actual interest is \$70,000 (\$50,000 + \$20,000), the amount capitalized should be \$40,000.

4. (a) The requirement is to calculate the amount of capitalized interest at 12/31/Y4. The requirements for capitalization of interest are met if: (1) expenditures for the asset have been made, (2) activities that are necessary to get the asset ready for its intended use are in progress, and (3) interest cost is being incurred. The amount to be capitalized is the lower of avoidable interest or actual interest. Avoidable interest is the average accumulated expenditures multiplied by the appropriate interest rate or rates. Since \$2,000,000 was spent on the building evenly throughout the year, the average accumulated expenditures were \$1,000,000 (\$2,000,000 ÷ 2) and the avoidable interest was \$120,000 (\$1,000,000 × 12%). Since actual interest (\$102,000) is less than avoidable interest, the actual interest cost is capitalized.

5. (d) Certain assets for which interest costs incurred in their production should be capitalized rather than expensed. Assets which “qualify” for interest capitalization are those constructed or otherwise produced for an enterprise’s own use and those intended for sale or lease that are constructed or otherwise produced as **discrete projects**. The capitalization period shall end when the asset is substantially complete and ready for its intended use. Based upon these criteria, the interest costs associated with the machinery for Bay’s own use should be capitalized during the construction period and expensed after completion. Additionally, all costs associated with the machinery held for sale should be expensed because the machinery does not meet the “discrete project” criterion.

6. (a) When the investment was acquired, it was recorded at cost—the fair market value of the asset surrendered to acquire it. The July 1 entry was

Inv. in Ace stock	3,000	
Truck	2,500	
Gain on disposal	500	(\$3,000 – \$2,500)

The investment would be reported in the 12/31/Y4 balance sheet at \$3,000. The book value of Ace’s stock does not affect the amount recorded on Balt’s books.

7. (b) A nonmonetary exchange is recognized at fair value unless the fair value is not determinable, the exchange transaction is to facilitate sales to customers, or the exchange transactions lacks commercial substance. Answer (a) is incorrect, because the exchange must **lack** commercial substance. Answers (c) and (d) are incorrect because there is no longer the distinction of similar or dissimilar assets in nonmonetary exchanges.

8. (b) A nonmonetary exchange is recognized at fair value unless the fair value is not determinable, the exchange transaction is to facilitate sales to customers, or the exchange transactions lacks commercial substance. Answers (a) and (c) are incorrect; these transactions have commercial substance because there is a significant change in the entity’s cash flows as a result of the exchange.

9. (b) An entity’s cash flows are expected to change significantly if the configuration of the cash flows of the asset received differs significantly from the configuration of the cash flows of the asset transferred. The configuration includes the risk, timing, and amount of the cash flows.

10. (c) In determining cash flows from a transaction, the effect of taxes is not considered unless it serves a legitimate business purpose other than tax avoidance. In assessing the commercial substance of an exchange, tax cash flows arising solely to avoid taxes are not considered. Other cash flows from the nonmonetary exchange are considered.

11. (b) The cash price of the new machine represents its fair market value (FMV). The FMV of the old machine can be determined by subtracting the cash portion of the purchase price (\$6,000) from the total cost of the new machine: \$20,500 – \$6,000 = \$14,500. Since the book value of the machine (\$16,800) exceeds its FMV on the date of the trade-in (\$14,500), the difference of \$2,300 must be recognized as a loss.

12. (c) Because the cash flows of the exchanged assets will not be significantly different, the transaction lacks commercial substances. Therefore, book value is used to record the transition. When the assets are exchanged, boot is received, and a gain results, the exchange is treated as part sale and part exchange. The earnings process is assumed to be complete for the portion relating to the boot received. The gain recognized is computed as follows:

$$\frac{\text{Boot received}}{\text{Boot received} + \text{FMV of assets received}} \times \text{Total gain} = \text{Gain recognized}$$

$$\text{Total Gain} = (\text{Assets received by Amble} + 2,500) - \text{Book value of asset given up by Amble} = 12,000 = 8,000$$

The gain recognized would be calculated as follows:

$$\frac{2,500}{17,500 + 2,500} \times 8,000 = \$1,000 \text{ gain recognized}$$

The asset acquired is recorded at the **book** value of the asset surrendered plus the gain recognized less boot received (\$12,000 + \$1,000 – \$2,500 = \$10,500). The journal entry is

Truck (new)	10,500	
Cash	2,500	
Truck (old)		12,000
Gain on sale		1,000

13. (a) If a loss is indicated by the terms of the transaction, the entire loss on the exchange should be recognized. In this case, a loss results because Transit received an asset whose fair value equaled the book value of the asset given up and paid cash. Therefore, Transit gave up more than they received, the difference being the loss.

14. (c) Transactions lacking commercial substance are recorded at book value. When the exchange of nonmonetary assets includes an amount of monetary consideration, the receiver of monetary consideration has realized a partial gain on the exchange. To determine the partial gain to be recognized, first compute the total gain which is the difference between the fair market value of the nonmonetary asset given up and its book value. Then multiply the ratio of the **monetary** consideration received to the **total** consideration received (i.e., monetary consideration plus the estimated fair market value of the asset received) times the total gain. The result is the realized gain to be recognized. The entity paying the monetary consideration should **not** recognize any gain until the earnings process is culminated. Note, however, that **all losses** on sales or exchanges are recognized immediately.

15. (d) Nonmonetary exchanges of assets that are deemed to have commercial substance are accounted for on the basis of fair values, and both gains and losses recognized. The gain (or loss) for Vik is calculated as the difference between the fair value and cost of the car. Note that the retail/list price of an asset is not always representative of the fair value of the asset. An asset can often be purchased for less than the retail/list price.

16. (b) This transaction qualifies as an exception to fair value measurement and should be measured at book value. However, when these assets are exchanged, and boot is received and a gain results, the exchange is treated as part sale and part exchange. The earnings process is assumed to be complete for the portion relating to the boot received. The gain recognized is computed as follows:

$$\frac{\text{Boot received}}{\text{Boot received} + \text{FMV of assets received}} \times \text{Total gain} = \text{Gain recognized}$$

$$\text{Total gain} = \underbrace{(130,000 + 20,000)}_{\substack{\text{Assets received by} \\ \text{Zaro}}} - \underbrace{126,000}_{\substack{\text{Book value of} \\ \text{asset given up by} \\ \text{Zaro}}} = 24,000$$

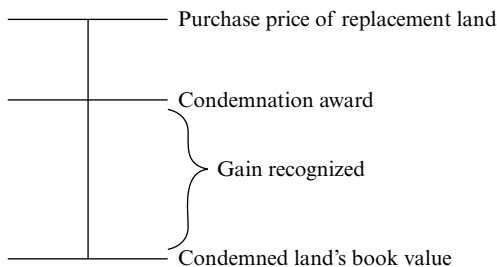

In this case, it would be calculated as follows:

$$\frac{20,000}{(20,000 + 130,000)} \times 24,000 = \$3,200$$

**17. (d)** A transfer of a nonmonetary asset in a nonreciprocal transfer should be recorded at the fair value of the asset transferred, with a gain or loss recognized on the disposition, whether the transfer is made to a stockholder or to another entity.

**18. (b)** A gain (loss) must be recognized when a nonmonetary asset is involuntarily converted into monetary assets even if the company reinvests the monetary assets in replacement nonmonetary assets. The gain or loss is the difference between the insurance proceeds received (\$3,500) and the carrying value of the asset destroyed. The unadjusted carrying value (\$2,500) must be adjusted for the capital expenditure (\$700) which has not yet been recorded. When a major component of an asset like an engine is replaced, the preferred treatment is to take the old component off the books (with a loss recognized) and record the new component. When the book value of the component is unknown (as in this case), the cost of the new component (\$700) is simply debited to the accumulated depreciation account. This increases the van's carrying value to \$3,200 (\$2,500 + \$700), which means the gain is \$300 (\$3,500 - \$3,200). Note that the \$500 invoice should be recorded as repairs expense, and therefore does not affect the van's carrying value.

**19. (a)** Involuntary conversions of nonmonetary assets to monetary assets are monetary transactions for which gain or loss shall be recognized even though an enterprise reinvests or is obligated to reinvest the monetary assets in replacement nonmonetary assets. Accordingly, Lano would record the condemnation and replacement of the forest land as two separate transactions. Lano should recognize a gain on the condemnation and subsequently record the replacement land at the total purchase price. The net effect of these events is to increase the amount of forest land on Lano's balance sheet by the excess of the replacement land's cost over the condemned land's carrying amount, as shown below.

**20. (d)** The requirement is to determine the amount at which land acquired in a group purchase of fixed assets should be recorded. The total cost (\$540,000) of the land and building should be allocated based on their relative fair value (FV). Current appraised value is a better indicator of FV than the seller's original cost. Therefore, the land should be recorded at \$216,000.

$$\frac{\text{FV land}}{\text{Total FV of assets purchased}} \times \text{Purchase price of group assets}$$

$$\frac{200,000}{500,000} \times 540,000 = \$216,000$$

There is no problem in recording the land at more than its appraised value since value is only an estimate of FV.

**21. (c)** The requirement is to calculate the amount to be charged to repair and maintenance expense in year 4. Generally, a cost should be capitalized if it improves the asset and expensed if it merely maintains the asset at its current level. Continuing and frequent repairs (\$40,000) should be expensed. Similarly, the cost of repainting the plant building (\$10,000) and the cost of partially replacing the roof tiles (\$14,000) should be expensed. These are ordinary, regularly occurring expenditures which maintain, rather than improve, the plant building. The work on the electrical wiring system (\$32,000) is capitalized instead of expensed since it is a major improvement. Therefore, the total amount expensed is \$64,000 (\$40,000 + \$10,000 + \$14,000).

**22. (d)** The cost of the attachment (\$84,000) should be capitalized because it is an **addition**. The cost of installing the attachment (\$36,000) is also capitalized because this expenditure was required to get the attachment ready for its intended use. The overhaul costs (\$26,000 + \$14,000 = \$40,000) are also capitalized. Even though the overhaul did not increase useful life, it is a capital expenditure because it increased productivity. The total amount capitalized is \$160,000 (\$84,000 + \$36,000 + \$40,000).

**23. (c)** When an entity suffers a casualty loss to an asset, the accounting loss is recorded at the net carrying value of the damaged asset, if known. In this case, the cost and related accumulated depreciation are identifiable. The entity should therefore recognize a loss in the current period equal to the carrying amount of the damaged portion of the building. The refurbishing of the building, which is an economic event separate from the fire damage, should be treated similarly to the purchase of other assets or betterments. The cost of refurbishing the building should therefore be capitalized and depreciated over the shorter of the refurbishment's useful life or the useful life of the building.

Loss	xxx	(Plug)
Acc. depr.	xxx	
Building		xxx
Building	xxx	
Cash		xxx

Answer (a) is incorrect because in order to reduce the accumulated depreciation account, the useful life of the asset must be extended. In this case, there is no mention of this fact. Answer (d) is incorrect because it fails to recognize the casualty loss and properly remove the cost and accumulated depreciation on the damaged portion of the building from the accounting records.

**NOTE:** If the components of the damaged portion are not identifiable, the following entry would be made:

Loss	xxx	
Cash		xxx

**24. (b)** Generally, a cost should be capitalized if it improves the efficiency of the asset or extends its useful life and expensed if it merely maintains the asset at its current level. Since an overall reduction in production costs is expected, efficiency must have been improved by the steps taken by Derby. In this problem, it appears that both the building modification and the production line rearrangement contributed to the improved efficiency in the production process. Therefore, both costs should be capitalized.

**25. (a)** Machinery is recorded at its historical cost, which is measured by the cash or **cash equivalent price** of obtaining the machine and preparing it for use. The journal entry to record this acquisition would be

Machinery	110,000	(cash equiv.)
Discount on N.P.	20,000	(\$130,000 – \$110,000)
Notes payable	120,000	(24 × \$5,000)
Cash	10,000	

The \$20,000 discount represents future interest expense (the cost associated with paying for the asset over two years instead of immediately) rather than part of the cost of the machine. Straight-line depreciation for year 4 is computed as follows:

$$(\text{Cost} - \text{Salvage value}) \times 1/\text{useful life} = \text{Depr. expense}$$

$$(\$110,000 - \$5,000) \times 1/10 = \underline{\underline{\$10,500}}$$

**26. (b)** The formula for 200% double-declining balance (DDB) depreciation is

$$(\text{Beginning-of-year book value}) \times \text{DDB rate} = \text{Depreciation expense}$$

The DDB rate is two times the straight-line rate (in this case,  $1/5 \times 2 = 2/5$  or 40%). Therefore, depreciation for the first two years is

$$\begin{aligned} \text{Year 2: } \$50,000 \times 40\% &= \$20,000 \\ \text{Year 3: } (\$50,000 - \$20,000) \times 40\% &= \underline{\underline{\$12,000}} \\ &= \underline{\underline{\$32,000}} \end{aligned}$$

In year 4, Turtle switches to the straight-line method. The book value ( $\$50,000 - \$32,000 = \$18,000$ ) would be depreciated

over the remaining three years (five years less two gone by). Therefore, year 4 depreciation is \$6,000 ( $\$18,000 \times 1/3$ ) and 12/31/Y4 accumulated depreciation is \$38,000 ( $\$32,000 + \$6,000$ ).

**27. (a)** The requirement is to calculate the amount of depreciation expense to be recorded in year 5. After three years (year 2-year 4), accumulated depreciation is \$72,000. Therefore, the method that was used was the sum-of-the-years' digits (SYD) method. Using this method, after three years the balance in accumulated depreciation would be 12/15 of the depreciable base ( $5/15 + 4/15 + 3/15$ ). The depreciable base is the cost (\$110,000) less the residual value (\$20,000), or \$90,000. Thus, using the SYD method, accumulated depreciation at 12/31/Y4 would be \$72,000 ( $\$90,000 \times 12/15$ ), which matches the amount given in the problem. Year 5 depreciation expense, using the SYD method is \$12,000 ( $\$90,000 \times 2/15$ ).

**28. (d)** From 1/2/Y1 to 12/31/Y3, depreciation was recorded using an eight-year life. Yearly depreciation was \$33,000 ( $\$264,000 \div 8$ ), and accumulated depreciation at 12/31/Y3 was \$99,000 ( $3 \times \$33,000$ ). In year 4, the estimated useful life was changed to six years total with a salvage value of \$24,000. Therefore, the 12/31/Y3 book value ( $\$264,000 - \$99,000 = \$165,000$ ) is depreciated down to the \$24,000 salvage value over a remaining useful life of three years (6 years total – 3 years already recorded). The year 4 depreciation expense is \$47,000 [ $(\$165,000 - \$24,000) \div 3$ ], increasing accumulated depreciation to \$146,000 ( $\$99,000 + \$47,000$ ).

**29. (b)** The solutions approach is to set up a T-account for **accumulated depreciation** and solve for the unknown.

		Accumulated Depreciation	
Year 4 retirements	?	370,000	12/31/Y3
		55,000	Year 4 depr. expense
		400,000	12/31/Y4

The 12/31/Y3 and 12/31/Y4 balances were given in the schedule. The year 4 depreciation expense would be recorded by debiting the expense account and crediting accumulated depreciation. The accumulated depreciation would be debited for the property, plant, and equipment retirements. To balance the T-account, the debit must be \$25,000. Alternatively, an equation can be used as shown below.

$$\begin{aligned} \$370,000 + \$55,000 - X &= \$400,000 \\ 425,000 - X &= 400,000 \\ X &= 25,000 \\ 370,000 &= 12/31/Y3 \text{ balance} \\ 55,000 &= \text{Year 4 depreciation expense} \\ 400,000 &= 12/31/Y4 \text{ balance} \\ X &= \text{retirements} \end{aligned}$$

**30. (c)** After reviewing the different methods, you might realize that the method with the highest carrying amount would result in a loss as shown below, where C is equal to the asset's original cost.

$$\begin{aligned} \text{Gain/loss} &= \text{Proceeds} - \text{Carrying amount} \\ &= 50\% C - [C - 50\% (C - S)] \\ &= 50\% C - [C - 50\% (C - 20\%C)] \\ &= .5C - [1.00C - .5(1.00C - .2C)] \\ &= .5C - [.6C] \end{aligned}$$

Carrying amount > Proceeds  
 ∴ Loss

Straight-line depreciation would result in the highest carrying value.

31. (d) The formula to compute straight-line depreciation is

$$\frac{\text{Original cost less salvage value}}{\text{Estimated useful life}}$$

The formula to determine depreciation using the productive output method is

$$\frac{\text{Current activity (output)}}{\text{Total expected activity}} \times \frac{\text{Original cost less salvage value}}{\text{salvage value}}$$

Note that both of these methods use cost minus salvage value as the depreciable base of the asset. This means that after all depreciation has been recorded using either method, the net asset will be recorded at salvage value, and accumulated depreciation will equal the original cost minus salvage value.

32. (a) Depreciation is a method of allocating the cost of an asset in a systematic and rational manner. Since the units-of-production method of depreciation is most appropriate when depreciation is a function of activity, answer (a) is correct. Answer (b) is incorrect because this situation warrants the use of a depreciation method based on the passage of time. Answers (c) and (d) are incorrect because both support the use of an accelerated method of depreciation.

33. (b) Under the sum-of-the-years' digits (SYD) method, depreciation expense is computed by applying declining fractions to the depreciable cost of the asset. The denominator is the sum of the years in the life of the asset ( 1 + 2 + 3 + 4 + 5 = 15 in this case). Annual depreciation would be computed as follows:

Year 1	Original cost less salvage value	×	5/15
Year 2	Original cost less salvage value	×	4/15
Year 3	Original cost less salvage value	×	3/15
Year 4	Original cost less salvage value	×	2/15
<hr/>			
Total	Original cost less salvage value	×	14/15

Accumulated depreciation at December 31, year 4, would be (original cost less salvage value) multiplied by 14/15.

34. (c) Sum-of-the-years' digits (SYD) depreciation = (Cost less Salvage value) × Applicable fraction.

$$\text{Where applicable fraction} = \frac{\text{Number of years of estimated life remaining as of the beginning of the year}}{\text{SYD}}$$

and

$$\text{SYD} = \frac{N(n+1)}{2} \quad \text{Where } n = \text{estimated useful life}$$

Calculated as

$$\text{Year 1} = \$18,000^* \times \frac{4}{10} = \$7,200$$

$$\text{Year 2} = \$18,000^* \times \frac{3}{10} = \$5,400$$

$$\text{Year 3} = \$18,000^* \times \frac{2}{10} = \$3,600$$

\*(\$20,000 – \$2,000)

On December 31, year 3, the carrying amount of Spiro's asset equals \$3,800 (the asset's cost of \$20,000 minus accumulated depreciation of \$16,200\*\*).

\*\*(\$7,200 + \$5,400 + \$3,600)

35. (d) Line I represents depreciation expense that stays constant over time (i.e., straight-line). Both sum-of-the-years' digits and double-declining balance are accelerated depreciation methods, and hence the depreciation expense for these two methods does not stay constant over time. Line II represents depreciation expense that decreases at a constant rate (i.e., a linear function) and thus would be the pattern of depreciation for sum-of-the-years' digits. Line III represents depreciation expense that decreases at a decreasing rate (i.e., a nonlinear function) and thus would be the pattern of depreciation for the double-declining balance method.

36. (c) Composite (group) depreciation averages the service life of a number of property units and depreciates the group as if it were a single unit. The term "group" is used when the assets are similar; the term "composite" is used when they are dissimilar. The mechanical application of both of these methods is identical. The depreciation rate is the following ratio:

$$\frac{\text{Sum of annual SL depreciation of individual assets}}{\text{Total asset cost}}$$

Thus, both group and composite depreciation utilize the straight-line depreciation method.

37. (b) The solutions approach is to prepare the journal entry that would be made when an asset is retired under the composite depreciation method.

Cash	(cash proceeds)
Accumulated depreciation	(plug)
Truck	(original cost)

The net decrease in the carrying amount of the assets is the credit to the asset account less the plug to accumulated depreciation. This amount would be equal to the **cash proceeds received**.

38. (d) When management plans to dispose of long-lived assets and limited-lived intangibles, the assets shall be reported at the lower of carrying amount or fair value less cost to sell.

**39. (b)** Losses associated with long-lived assets which are to be disposed of are to be reported as a component of income from continuing operations before income taxes for entities preparing income statements. Losses on long-lived assets to be disposed of are neither unusual nor infrequent occurrences. These losses are not part of selling or general and administrative expenses and they are not disclosed net of tax. Discontinued operations result from disposal of a separate business component.

**40. (d)** In year 3, Taft recognized a loss on the long-lived assets that were to be sold and changed the carrying amount of these assets to fair value less cost to sell. In year 4, the assets have still not been sold. The loss recognized has been more than recovered. Subsequent revisions in estimates of fair value less cost to sell shall be reported as adjustments of the carrying amount of an asset to be disposed of. However, the carrying amount may not be increased above the carrying amount prior to impairment. The same amount recognized as a loss in year 3 would be recognized as a recovery (gain) in the year 4 income statement.

**41. (b)** The reduced carrying amount of Cranston’s assets (\$920,000) should be accounted for as their new cost, and this amount should be depreciated over the remaining useful life of five years. Restoration of previously recognized impairment losses is prohibited. Therefore, Cranston should report  $.80 \times \$920,000$  or \$736,000 as the carrying amount of its impaired long-lived assets on its December 31, year 4 balance sheet.

**42. (c)** The requirement is to determine when an asset is impaired. An asset is impaired when the sum of the expected future cash flows is less than the carrying amount of the asset. The expected future cash flows are **not** discounted and do not consider interest charges. Answer (c) refers to one way to measure a loss once it has been determined that an asset has been impaired.

**43. (c)** The loss on impairment is calculated by subtracting the machine’s actual fair value from its carrying value at the date of impairment.

\$10,000	Initial cost of machine	\$10,000	Cost on 7/1/Y2
			Accumulated
– 500	Salvage value	– 2,375	depreciation
			Carrying value on
\$9,500	Depreciable base	\$7,625	12/31/Y4
			Actual fair value on
÷ 10	Year life	– 3,000	12/31/Y4
\$950	Depreciation per year	\$4,625	Loss on impairment
× 2.5	Years (7/1/Y2–12/31/Y4)		
\$2,375	Accumulated depreciation		

**44. (b)** When an asset has been determined to be impaired, it is written down to fair value and loss on impairment is recognized. Restoration of previously recognized impairment losses is prohibited.

**45. (b)** A long-lived asset is considered impaired if the future cash flows expected to result from the use of the asset and its eventual disposition are less than the carrying amount of the asset. If deemed impaired, the asset’s carrying value is reduced

to fair value and a loss on impairment is recognized for the difference (Carrying value – Fair value). In this case, the asset is **not** impaired, as the net cash inflows of \$175,000 are greater than the 8/31/Y4 carrying amount (book value) of \$170,000. Therefore, the carrying amount of the asset (\$170,000) remains unchanged.

**46. (a)** The requirement is to determine the amount of impairment loss. The impairment loss recognized is the difference between the asset’s fair value and its carrying value. On December 31, year 4, the carrying value of the equipment is \$80,000 after recording depreciation expense for the current year. ( $\$100,000/Y4 \text{ years} = \$10,000 \text{ per year} \times 2 \text{ years} = \$20,000$  accumulated depreciation). The fair value is determined by using the principal or most advantageous market assuming the highest and best use of the asset. Since the in-use valuation premise is \$74,000, the asset is assumed to be in its highest and best use using an in-use valuation premise. Therefore, the impairment loss recognized in year 4 would be the carrying value of \$80,000 less the fair value of \$74,000 = \$6,000.

**47. (b)** The requirement is to determine the amount that should be presented for the equipment. An impairment loss is recognized if the carrying value of the asset exceeds the sum of the undiscounted cash flows. Since the carrying value of \$160,00 exceeds the sum of the estimated undiscounted cash flows of \$135,000, an impairment loss must be measured. The impairment loss is measured by comparing the fair value of the asset to the carrying value. The fair value of the asset is determined by using the lowest level input available. In this situation, a Level 1 input is not available. The value of similar equipment for sale in the market is a Level 2 input because it is a directly or indirectly observable input. The present value of future cash flows is a Level 3 input, and should only be used when Level 1 or Level 2 inputs are not available. Therefore, the asset should be presented at its fair value of \$140,000, which uses a Level 2 input to appropriately measure fair value of the equipment.

**48. (d)** The requirement is to determine the impairment loss on the equipment. An impairment loss is recognized when the carrying value of an asset exceeds the expected undiscounted cash flows of the asset. In this case, the undiscounted expected cash flows are \$420,000 and are less than the carrying value. Therefore, an impairment loss is measured as the difference between the fair value of the asset and its carrying value. The fair value of the asset should be measured based on the lowest level priority input, and assuming the highest and best use of the asset. The highest and best use of the asset occurs when the asset is sold as standalone for \$428,000. Therefore, the impairment loss recognized for year 4 is \$428,000 fair value less \$450,000 carrying value, or \$22,000.

**49. (c)** An impairment loss for assets to be held and used shall be reported as a component of income from continuing operations before income taxes for entities presenting an income statement and in the statement of activities of a not-for-profit organization. Although there is no requirement to report a subtotal such as “income from operations,” entities that present such a subtotal must include the impairment loss in that subtotal.

**50. (a)** The undiscounted expected future cash flows (\$175,000) are less than the carrying amount of the equipment (\$200,000). Therefore, the equipment is deemed impaired. The impairment loss is calculated in the following way:

Carrying amount of the equipment on December 31, year 4	\$200,000
Fair value of the equipment on December 31, year 4	<u>125,000</u>
Impairment loss reported on year 4 income statement	<u>\$75,000</u>

**51. (b)** After an impairment loss is recognized, the reduced carrying amount of the asset shall be accounted for as its new cost. This new cost (the fair value of the asset at the date of impairment, or \$135,000) shall be depreciated over the asset's remaining useful life (twenty-seven months). Therefore, the depreciation expense for June is \$5,000 ( $\$135,000 \div 27 \text{ months} \times 1 \text{ month}$ ).

**52. (b)** Recoveries of impairment losses shall not be recognized.

**53. (c)** The loss due to impairment of long-lived assets is measured by deducting the asset's fair value from the carrying (book) value.

**54. (c)** Long-lived assets and limited-lived intangibles must be reviewed for impairment whenever circumstances and situations change such that there is an indication that the carrying amount might not be recoverable. A specific time frame for review of asset impairment, every year or every three years, is not required.

**55. (b)** The undiscounted expected future cash flows (\$300,000) are less than the carrying amount of the equipment (\$350,000). Thus, the equipment is determined to be impaired. The impairment loss is calculated as follows:

Carrying value—12/31/Y4	\$350,000
Fair value—12/31/Y4	<u>250,000</u>
Impairment loss reported on year 4 income statement	<u>\$100,000</u>

**56. (c)** After an impairment loss is recognized, the reduced carrying amount of the asset shall be accounted for as its new cost. This new cost (the fair value of the asset at the date of impairment, or \$261,000) shall be depreciated over the asset's remaining useful life (58 months). Therefore, the depreciation expense for September is \$4,500 ( $\$261,000 \div 58 \text{ months} \times 1 \text{ month}$ ).

**57. (b)** The depletion charge per unit is the **depletion base** (net cost of the resource) divided by the **estimated units of the resource**. Vorst's depletion base is \$2,880,000, as computed below.

Cost of mine	\$2,640,000
Development cost	360,000

Restoration cost	180,000
Residual value	<u>(300,000)</u>
	<u>\$2,880,000</u>

Note that the present value of the restoration costs are recorded. The depletion charge is \$2.40 per ton ( $\$2,880,000 \div 1,200,000 \text{ tons}$ ). Since 60,000 tons were removed and sold, depletion of \$144,000 ( $60,000 \times \$2.40$ ) is included in Vorst's year 4 income statement. Note that the amount of depletion included in the income statement depends on the tons **sold**. If more tons were removed than sold, part of the depletion would be included in the cost of ending inventory rather than in the income statement.

**58. (b)** The software should be valued at the lower of its unamortized cost or its net realizable value. The software's unamortized cost is \$450,000, which is equal to  $\$600,000 - \$150,000$  ( $\$600,000/4$ ). Answer (c) is incorrect because the software's unamortized cost is less than its net realizable value.

**59. (c)** Judd Company would record the trademark at its cost of \$500,000. The unamortized cost on the seller's books (\$380,000) is irrelevant to the buyer. The trademark has a remaining useful life of fifty years. Therefore, the year 4 amortization expense and 12/31/Y4 accumulated amortization is \$10,000 ( $\$500,000 \div 50 \text{ years}$ ).

**60. (b)** A company should record as an asset the cost of intangible assets such as goodwill **acquired from other entities**. **Costs of developing** intangible assets such as goodwill "which are not specifically identifiable, have indeterminate lives, or are inherent in a continuing business and related to an entity as a whole" should be expensed when incurred. Therefore, only the \$200,000 (and not the additional \$80,000) should be capitalized as goodwill. Goodwill should not be amortized.

**61. (d)** In determining the useful life of an intangible, consideration should be given to the legal, regulatory or contractual life, including rights to extension. Since Northern has the ability and intent to renew the rights indefinitely, the intangible should not be amortized.

**62. (c)** Before year 4, Lava would record total amortization of \$27,000 [ $(\$90,000 \times 1/10) \times 3 \text{ years}$ ], resulting in a 12/31/Y3 carrying amount of \$63,000 ( $\$90,000 - \$27,000$ ). Since the patent became worthless at 12/31/Y4 due to government prohibition of the product, the entire carrying amount (\$63,000) should be charged against income in year 4 as an impairment loss.

**63. (d)** Goodwill should not be amortized. Instead, goodwill remains at the amount established at the time of the business combination unless it is determined to be impaired. Goodwill should be tested for impairment annually, or more often if events and circumstances indicate that goodwill may be impaired.

**64. (a)** Costs incurred in connection with securing a patent, as well as attorney's fees and other unrecovered costs of a successful legal suit to protect the patent, can be capitalized as part of patent costs. Therefore, answer (a) is correct because

legal fees and other costs incurred to successfully defend a patent should be amortized along with the acquisition cost over the remaining economic life of the patent. Answer (b) is incorrect because legal fees and other direct costs incurred in registering a patent should be capitalized and amortized on a straight-line basis over its economic life, not five years. Answers (c) and (d) are incorrect because research and development costs related to the development of the product, process or idea that is subsequently patented must be expensed as incurred, not capitalized and amortized.

**65. (d)** Goodwill is allocated to reporting units which are operating segments of the business or one level below. Goodwill is also tested for impairment at the level of the reporting unit.

**66. (c)** Goodwill impairment is determined at the level of the individual reporting unit. It is the difference between the carrying amount of goodwill and its implied value. The carrying amounts of goodwill of the Retailing and Service reporting units are greater than their implied values. Therefore, an impairment loss should be recognized in the amount of \$15,000 ( $\$30,000 + \$20,000$ ) – ( $\$25,000 + \$10,000$ ).

**67. (a)** There are two steps in the test of impairment of goodwill. The first is to compare the carrying value of the reporting unit to its fair value. If the fair value exceeds the carrying value there is no need to perform the second step of valuing the unit's assets and liabilities. Goodwill is never tested at the entity level.

**68. (d)** Since the fair value of the reporting unit is less than its carrying amount, the second step in the test should be performed. The assets and liabilities of the unit should be valued and compared to value of the total unit. The implied value of goodwill is the difference. The impairment is equal to the difference between the implied value and the carrying amount of the goodwill.

**69. (b)** Start-up activities are defined broadly as those onetime activities related to opening a new facility as well as introducing a new product or service and conducting business in a new territory. Certain costs that may be incurred in conjunction with start-up activities are not subject to these provisions. These costs include the costs of acquiring long-lived assets such as production equipment, costs of advertising, and license fees. Answer (b) which includes the costs of training local employees (\$120,000) and travel costs of salaried employees (\$40,000) is the correct answer.

**70. (d)** Organization costs are those incurred in the formation of a corporation. These costs should be expensed as incurred. The rationale is that uncertainty exists concerning the future benefit of these costs in future years. Thus, they are properly recorded as an expense in year 4.

**71. (b)** The costs of raising capital and the costs of acquiring or constructing long-lived assets and getting them ready for their intended use are not expensed as incurred. Such costs should be accounted for in accordance with other existing authoritative accounting literature. Research and development (R&D) costs are expensed as incurred.

**72. (d)** Among those items listed as being part of R&D costs are design of tools, jigs, molds, and dies involving new technology (\$125,000) and modification of the formulation of a process (\$160,000), for a total R&D expense of \$285,000. Included in the items **not** being part of R&D costs are troubleshooting breakdowns during production (\$100,000), and adaptation of existing capability for a specific customer (\$110,000).

**73. (b)** All R&D costs must be expensed when incurred. However, R&D costs incurred when performing R&D work under contract for other entities are specifically excluded from the reporting requirements. Generally such costs are deferred and matched with revenue under the completed-contract or percentage-of-completion method. The other costs listed would all be expensed in year 4. Therefore, Ball's year 4 research and development expense is \$1,380,000 ( $\$300,000 + \$700,000 + \$200,000 + \$180,000$ ).

**74. (c)** All R&D costs are to be charged to expense when incurred. Specifically R&D costs include designing, constructing, and testing preproduction prototypes, and the cost of R&D equipment (unless it has alternative future uses). Therefore, \$340,000 ( $\$60,000 + \$200,000 + \$80,000$ ) is classified as R&D costs and expensed. The legal costs incurred to obtain a patent (\$10,000) are capitalized in the patents account.

**75. (d)** The FASB excludes from its definitions of research and development expense the acquisition, development, or improvement of a product or process for use in its **selling or administrative activities**. Both costs given in this problem relate to selling or administrative activities, so the expenditures of \$175,000 would not be reported as research and development expense.

**76. (a)** Research and development costs are expensed as incurred except for fixed assets, intangible assets, or materials purchased that have alternative future uses. Jambon purchased equipment to be used for research and development, but the equipment can only be used for that project. Therefore, the cost of the equipment must be expensed in year 4 as it has no alternative future uses.

**77. (b)** Costs incurred in creating a computer software product should be charged to research and development expense when incurred until **technological feasibility** has been established for the product. Technological feasibility is established upon completion of a detailed program design or working model. In this case, \$23,000 would be recorded as expense (\$13,000 for completion of detailed program design and \$10,000 for coding and testing to establish technological feasibility). Costs incurred from the point of technological feasibility until the time when product costs are incurred are capitalized as software costs. In this situation, \$59,000 is capitalized as software cost ( $\$24,000 + \$20,000 + \$15,000$ ). Product costs that can be easily associated with the inventory items are reported as inventory (in this case, \$25,000 for duplication of computer software and training materials and \$9,000 of packaging costs, for a total of \$34,000).

**78. (c)** Costs incurred in creating a computer software product should be charged to research and development

expense when incurred until **technological feasibility** has been established. Technological feasibility is established upon completion of a detailed program design or working model. In this case, \$23,000 would be recorded as expense (\$13,000 for completion of detailed program design and \$10,000 for coding and testing to establish technological feasibility). Costs incurred from the point of technological feasibility until the time when product costs are incurred are capitalized as software costs. In this situation, \$59,000 is capitalized as software cost (\$24,000 + \$20,000 + \$15,000). Product costs that can be easily associated with the inventory items are reported as inventory (in this case, \$25,000 for duplication of computer software and training materials and \$9,000 of packaging costs, for a total of \$34,000).

**79. (a)** The annual amortization of capitalized software costs shall be the greater of

1. The ratio of the software's current sales to its expected total sales, or
2. The straight-line method over the economic life of the product.

In this case, the ratio of current to expected total sales is 30% (given). The annual straight-line rate is 20% per year ( $1 \div$  economic life of five years). The 30% amortization should be recorded in year 4, since it is the higher of the two. The unamortized cost on the 12/31/Y4 balance sheet should, therefore, be 70% ( $100\% - 30\%$  amortization). Note that the unamortized cost of capitalized software products must be compared to the net realizable value of those assets at each balance sheet date. Any excess of the amortized cost over the net realizable value must be written off. In this case, the net realizable value (90%) was **above** the unamortized cost (70%), so no additional write-off was required.

**80. (b)** Internal-use software is software having the following characteristics: (1) The software is acquired, internally developed, or modified solely to meet the entity's internal needs, and (2) during the software's development or modification, no substantive plan exists to market the software externally.

**81. (b)** Application and development costs create probable future benefit. Therefore, they should be capitalized as incurred. However, preliminary costs are similar to research and development costs and are expensed as incurred, not capitalized.

**82. (d)** Preliminary costs are similar to research and development costs; therefore, they are expensed as incurred. Postimplementation costs such as training are not considered software development costs at all and are expensed as incurred.

**83. (a)** A development stage enterprise shall follow the same revenue and expense recognition principles and issue the same basic financial statements as an established operating enterprise, but shall disclose certain additional information. A development stage company shall use the same generally accepted accounting principles that apply to established operating enterprises to govern the recognition of revenue and to determine whether a cost is to be capitalized or expensed as incurred.

**84. (c)** A development stage enterprise shall issue the same basic financial statements as an established operating enterprise, but shall disclose certain additional information. An income statement, in addition to showing amounts of revenues and expenses for each period covered by the income statement, shall include the cumulative amounts from the enterprise's inception.

**85. (a)** The requirement is to identify the models that may be used to value plant, property, and equipment. Answer (a) is correct because IFRS allows the use of the cost model or the revaluation model for reporting plant, property, and equipment.

**86. (c)** The requirement is to identify the true statement about the revaluation model. Answer (c) is correct because IFRS does not provide requirements as to the frequency or date of revaluation of plant, property, and equipment.

**87. (c)** The requirement is to identify where the gain or loss should be presented. Answer (c) is correct because when the revaluation method is used for reporting plant, property, and equipment under IFRS, any gain or loss is recorded in a revaluation surplus account which is classified as other comprehensive income.

**88. (a)** The requirement is to identify the true statement regarding use of the fair value model. Answer (a) is correct because the fair value model requires that investment property be measured at fair value, and any changes in fair value are recognized in profit or loss of the period.

**89. (b)** The requirement is to identify the acceptable valuation methods for intangible assets. Answer (b) is correct because under IFRS, intangible assets can be measured using either the cost model or the revaluation model.

**90. (c)** The requirement is to determine the impairment gain or loss reported in the financial statements. Answer (c) is correct because if the cost model is used to record intangible assets, the impairment loss is recognized as a loss in the current period. If the cost model is used, a reversal of impairment losses may be recognized in the income statement up to the amount of the impairment loss previously recognized. Therefore, an impairment loss of \$20,000 is recognized in year 3, and a gain of \$4,000 is recognized in year 4.

**91. (c)** The requirement is to identify the statement that is true about accounting for plant, property, and equipment under IFRS. Answer (c) is correct because a company may elect to use the cost model or the revaluation model on any asset class.

**92. (d)** The requirement is to identify the correct statement about the revaluation model. Answer (d) is correct because there are no rules under IFRS regarding the frequency of revaluation.

**93. (d)** The requirement is to identify the correct statement about recording the sale. Answer (d) is correct because the gain of \$10,000 ( $\$100,000$  book value  $-$   $\$90,000$  book value) should be recorded in profit and loss for the period; the balance in the revaluation surplus account should be transferred to retained earnings.

**94. (b)** The requirement is to identify the circumstances that allow the entity to use the revaluation model. Answer (b) is

correct because the revaluation method can only be used if there is an active market for the intangible asset.

**95. (d)** The requirement is to identify the criterion that must be met in order for an item to be recognized as an intangible asset other than goodwill. Answer (d) is correct because the asset must be identifiable and lack physical substance.

**96. (b)** The requirement is to determine the amount that should be recognized in the financial statements for the trademark. Answer (b) is correct because the trademark amount should include the purchase price (\$100,000) plus the VAT taxes (\$5,000) plus the legal cost incurred to register the trademark (\$10,500), which is equal to \$115,500. The research expenditures, training costs, and salaries should be expensed.

**97. (a)** The requirement is to identify the correct statement regarding the use of the revaluation model. Answer (a) is correct because when an asset is revalued, the entire class must be revalued. Answer (b) is incorrect because the entire class must be revalued. Answer (c) is incorrect because there are no rules regarding the frequency of revaluation. Answer (d) is incorrect because the revaluation surplus is presented in other comprehensive income, not profit or loss.

**98. (d)** The requirement is to calculate depreciation for the asset. Answer (d) is correct because IFRS requires each major component to be depreciated over its respective useful life. The machinery cost \$72,000 (\$100,000 – \$20,000 – \$8,000) would

be depreciated over 10 years. The drum would be depreciated over 5 years, and the inspection would be depreciated over 4 years. Therefore, depreciation for year 1 would be calculated as \$13,200 [(\$72,000/10) + (\$20,000/5) + (\$8,000/4)].

**99. (c)** The requirement is to identify the correct statement regarding accounting for development costs under IFRS. Answer (c) is correct because development costs can be capitalized only if six criteria are met.

**100. (b)** The requirement is to identify the rule regarding testing intangible assets with indefinite lives for impairment under IFRS. Answer (b) is correct because intangible assets with indefinite lives must be tested for impairment annually at the annual reporting date.

**101. (c)** The requirement is to identify the definition of recoverable amount under IFRS. Answer (c) is correct because recoverable amount is defined as the greater of net selling price or value in use.

**102. (b)** The requirement is to identify the true statement about biological assets under IFRS. Answer (b) is correct because biological assets are living animals or plants and must be disclosed as a separate item on the balance sheet.

## Simulations

### Task-Based Simulation 1

Concepts	Authoritative Literature	Help

Asset Valuation	Authoritative Literature	Help
-----------------	--------------------------	------

#### *Situation*

- Link Co. purchased an office building and the land on which it is located by paying \$800,000 cash and assuming an existing mortgage of \$200,000. The property is assessed at \$960,000 for realty tax purposes, of which 60% is allocated to the building.
- Link leased construction equipment under a seven-year capital lease requiring annual year-end payments of \$100,000. Link's incremental borrowing rate is 9%, while the lessor's implicit rate, which is not known to Link, is 8%. Present value factors for an ordinary annuity for seven periods are 5.21 at 8% and 5.04 at 9%. Fair value of the equipment is \$515,000.
- Link paid \$50,000 and gave a plot of undeveloped land with a carrying amount of \$320,000 and a fair value of \$450,000 to Club Co. in exchange for a plot of undeveloped land with a fair value of \$500,000. The land was carried on Club's books at \$350,000. This transaction is considered to lack commercial substance; the configuration of cash flows from the land acquired is not expected to be significantly different from the configuration of cash flows of the land exchanged.  
Calculate the following amounts to be recorded by Link.

#### Amount

1. Building.
2. Leased equipment.
3. Land received from Club on Link's books.
4. Land received from Link on Club's books.

<b>Capitalized Costs</b>	<b>Authoritative Literature</b>	<b>Help</b>
--------------------------	---------------------------------	-------------

**Situation**

Selected accounts included in the property, plant, and equipment section of Carlton Corporation's balance sheet at December 31, year 3, had the following balances:

Land	\$400,000
Land improvements	130,000
Buildings	2,000,000
Machinery and equipment	800,000

During year 4, the following transactions occurred:

1. A tract of land was acquired for \$200,000 as a potential future building site from Alison Corp.
2. A plant facility consisting of land and building was acquired from Kaufman Company in exchange for 20,000 shares of Carlton's common stock. On the acquisition date, Carlton's stock had a closing market price of \$42 per share on a national stock exchange. The plant facility was carried on Kaufman's books at \$178,000 for land and \$520,000 for the building at the exchange date. Current appraised values for the land and the building, respectively, are \$200,000 and \$800,000. The building has an expected life of forty years with a \$20,000 salvage value.
3. Items of machinery and equipment were purchased from Apex Equipment at a total cost of \$400,000. Additional costs were incurred as follows: freight and unloading, \$13,000; installation, \$26,000. The equipment has a useful life of ten years with no salvage value.
4. Expenditures totaling \$120,000 were made for new parking lots, street, and sidewalks at the corporation's various plant locations. These expenditures had an estimated useful life of fifteen years.
5. Research and development costs were \$110,000 for the year.

Indicate the capitalized cost of each asset acquired during year 4, and the depreciation expense recorded for each of the acquired items in year 4.

### Task-Based Simulation 9

Intangible Assets	Authoritative Literature	Help

#### Situation

During year 4, Broca Co. had the following transactions:

- On January 2, Broca purchased the net assets of Amp Co. for \$360,000. The fair value of Amp’s identifiable net assets was \$172,000. Broca believes that, due to the popularity of Amp’s consumer products, the life of the resulting goodwill is unlimited.
- On February 1, Broca purchased a franchise to operate a ferry service from the state government for \$60,000 and an annual fee of 1% of ferry revenues. The franchise expires after five years. Broca received \$20,000 of ferry revenues in year 4.
- On April 5, Broca was granted a patent that had been applied for by Amp. During year 4, Broca incurred legal costs of \$51,000 to register the patent and an additional \$85,000 to successfully prosecute a patent infringement suit against a competitor. Broca estimates the patent’s economic life to be ten years.

Broca has determined that it is appropriate to amortize these intangibles on the straight-line basis over the maximum period permitted by generally accepted accounting principles, taking a full year's amortization in the year of acquisition.

Complete the following schedule for Broca's intangible assets and the related income statement expenses.

<i>Broca Co.</i>			
<b>SCHEDULE FOR INTANGIBLE ASSETS AND AMORTIZATION EXPENSE</b>			
<i>December 31, Year 4</i>			
Item	Valuation before adjusting entries	Amortization expense for the year	Valuation on 12/31/Y4
Goodwill			
Franchise (net)			
Patent (net)			

Complete the following schedule for Broca's expenses.

<i>Broca Co.</i>	
<b>EXPENSES RESULTING FROM INTANGIBLES</b>	
<i>For the Year Ended December 31, Year 4</i>	
Amortization:	
Franchise	
Patent	
Franchise fee	
Total expenses

## Simulation Solutions

### Task-Based Simulation 1

Concepts	Authoritative Literature	
	Help	

	Capitalize	Expense
1. Freight charges paid for goods held for resale.	<input checked="" type="radio"/>	<input type="radio"/>
2. In-transit insurance on goods held for resale purchased FOB shipping point.	<input checked="" type="radio"/>	<input type="radio"/>
3. Interest on note payable for goods held for resale.	<input type="radio"/>	<input checked="" type="radio"/>
4. Installation of equipment.	<input checked="" type="radio"/>	<input type="radio"/>
5. Testing of newly purchased equipment.	<input checked="" type="radio"/>	<input type="radio"/>
6. Cost of current year service contract on equipment.	<input type="radio"/>	<input checked="" type="radio"/>

### Explanations

**Items 1 through 6** represent questions concerning expenditures for goods held for resale and equipment and whether these expenditures should be capitalized or expensed as a period cost. The general concept that determines whether expenditures should be product costs and, therefore, capitalized or expensed as period costs is whether or not these expenditures “attach” themselves to the assets of inventory or equipment. Costs that “attach” themselves to assets are those that are directly connected with bringing the goods or equipment to the place of business of the buyer and converting such goods to a salable (inventory) or usable (equipment) condition.

1. (C) Freight charges are directly connected with bringing the goods to the place of business of the buyer.
2. (C) Insurance charges are directly connected with bringing the goods to the place of business of the buyer.
3. (E) Only interest costs related to continued assets constructed for internal use or assets produced as discrete products for sale or lease should be capitalized. The informational benefit of capitalization does not justify the cost of the accounting for the interest as a product cost.
4. (C) Direct cost of bringing the equipment to the buyer.
5. (C) Direct cost of converting the equipment to a usable condition.
6. (E) Does not relate to bringing the equipment to the buyer or putting it into a usable condition.

### Task-Based Simulation 2

Asset Valuation	Authoritative Literature	
	Help	

1. (**\$600,000**) Since the land and building were purchased together, the cost of each must be allocated based on the relative market value. The land and building were purchased together for a total cost of \$1,000,000 (\$800,000 cash + \$200,000 mortgage assumption). For property tax purposes, the building is deemed to be 60% of the value of the land and building. Therefore, the cost of the building should be recorded at \$600,000 ( $\$1,000,000 \times 60\%$ ).

2. (**\$504,000**) As the lease is classified as a capital lease, Link must record an asset and liability based on the present value of the minimum lease payments. However, the leased assets cannot be recorded at an amount greater than the fair value. To determine the minimum value of the lease payments, Link should discount the future payments using the **lesser** of the lessee’s (Link’s) incremental borrowing rate (9%) or the lessor’s implicit rate if **known** by the lessee. Therefore, since Link does not

know the lessor's implicit rate, Link's rate of 9% should be used. The recorded value would be  $\$100,000 \times 5.04 = \$504,000$ , which is less than the fair value.

**3. (\$370,000)** In recording a nonmonetary exchange, if the transaction lacks commercial substance, the asset received is recorded at the book value of the asset given up plus any boot given when gains and losses are not recognized. The following fact pattern exists for Link:

	Boot	FV	BV	Gain (Loss)
Land given	50,000	450,000	320,000	130,000
Land received		500,000		

Link will record the land received from Club at the book value of the land given up plus the boot given ( $\$320,000 + 50,000 = \$370,000$ ).

An alternative method to calculate the value to record the land at is to subtract the deferred gain from the fair value of the land received ( $\$500,000 - 130,000 = \$370,000$ ).

**4. (\$315,000)** On Club's books the following situation exists:

	Boot	FV	BV	Gain (Loss)
Land given		500,000	350,000	150,000
Land received	50,000	450,000		

An exception to the nonrecognition of gain on similar assets exists when boot is received. The earnings process is considered complete for the portion related to the boot received, but not complete for the portion related to the asset received. A gain is recognized only for the portion related to the boot. The gain is computed as follows:

$$\frac{\text{Boot received}}{\text{Boot received} + \text{FMV of assets received}} \times \text{Total gain} = \text{Gain recognized}$$

$$\frac{50,000}{50,000 + 450,000} \times 150,000 = \$15,000$$

The land received will be recorded at its fair value less the gain deferred.

$$\$450,000 - (150,000 - 15,000) = \$315,000$$

An alternative method is to record the land received at the book value of the land given less the boot received plus the gain recognized, as follows:

$$\$350,000 - 50,000 + 15,000 = \$315,000$$

### Task-Based Simulation 3

Depreciation Calculations	Authoritative Literature	Help

**1. (\$90,000)** Under the straight-line method of depreciation, the depreciation expense would be calculated as follows:

$$\frac{\text{Cost-salvage value}}{\text{Estimated life}} = \frac{\$864,000 - 144,000}{8} = \$90,000$$

Depreciation expense would be \$90,000 for all eight years, year 3-2016.

2. (**\$162,000**) The double-declining balance method is calculated by taking two times the straight-line rate times the net book value at the beginning of each year, but not below the salvage value. Furthermore the salvage value is not deducted to arrive at the depreciable base. The calculation would be as follows:

	NBV	=	Depreciation expense
Year 3	$\$864,000 \times (1/8 \times 2)$	=	\$216,000
Year 4	$(\$864,000 - 216,000) \times (1/8 \times 2)$	=	\$162,000

3. (**\$140,000**) Under the sum-of-the-years' digits method, the depreciation expense is calculated as follows:

Year 3	$8 \div \frac{8(8+1)}{2} \times (\$864,000) - \$144,000 = \$160,000$
Year 4	$(7 \div 36) \times (\$864,000 - \$144,000) = \$140,000$

4. (**\$120,000**) The units of production method is a type of physical usage depreciation that is based on activity. The formula is as follows:

$$\frac{\text{Current activity/output}}{\text{Total expected activity/output}} \times \text{Depreciable base} = \text{Annual depreciation}$$

Depreciation expense for year 4 is calculated as follows:

$$\frac{300,000 \text{ units}}{1,800,000 \text{ units}} \times (\$864,000 - \$144,000) = \$120,000$$

### Task-Based Simulation 4

Research	Authoritative Literature				Help
	ASC	205	20	45	

### Task-Based Simulation 5

Capitalized Costs	Authoritative Literature		Help

	Capitalized cost	Depreciation/amortization expense for year 4
Land acquired from Alison Corp.	\$200,000	0
Land acquired from Kaufman	168,000	0
Building acquired from Kaufman	672,000	16,300
Machinery and equipment acquired from Apex Equipment	439,000	43,900
Land improvements	120,000	8,000
Research and development	0	0

**Explanations**

- Allocation of the land and building for purchase from Kaufman:  $FMV = 20,000 \text{ shares} \times \$42 \text{ per share} = \$840,000$ .
- Allocate based on relative fair values. Therefore, land is  $\$840,000 \times \$200,000/\$1,000,000 = \$168,000$ ; Building is  $\$840,000 \times \$800,000/\$1,000,000 = \$672,000$ . Land is not depreciated. Building is depreciated  $(\$672,000 - \$20,000)/40 \text{ years} = \$16,300$ .
- Items of machinery and equipment should capitalize all costs to get the asset in its intended and useful place.
- Land improvements are depreciated over fifteen years.  $\$120,000/15 \text{ years} = \$8,000 \text{ per year}$ .
- Research and development costs should be expensed as incurred. They are not capitalized, and they are not depreciated.

| 10. Expenditures to improve the efficiency or extend the useful life of an asset should be capitalized.   | <input checked="" type="radio"/> | <input type="radio"/>            |

### Explanations

- (F) Intangible assets that have indefinite lives are not amortized.
- (T) The recorded values of intangibles are impaired if they are above fair value.
- (F) The impairment test for goodwill can be performed anytime during the year, but it must be performed at the same time every year.
- (F) Interest earned on temporary investments from borrowed funds used to finance construction projects should be recognized as interest revenue and not netted against interest expense during the period.
- (F) A company may not capitalize interest on funds borrowed to finance routinely produced inventory.
- (F) Recognition of gain is required unless the transaction lacks commercial substance.
- (F) Losses on nonmonetary exchanges are recognized.
- (F) In a nonmonetary exchange, if the fair value is unknown and no gain can be computed, the asset is recorded at the book value of the asset given up.
- (T) Capital expenditures are amortized over the useful life of the asset.
- (T) Expenditures to improve capital assets should be capitalized.

### Task-Based Simulation 9

Intangible Assets	Authoritative Literature	Help

*Broca Co.*  
**SCHEDULE FOR INTANGIBLE ASSETS AND AMORTIZATION EXPENSE**  
*December 31, Year 4*

Item	Valuation before adjusting entries	Amortization expense for the year	Valuation on 12/31/Y4
Goodwill	188,000 [1]	-0-	188,000
Franchise (net)	60,000 [2]	12,000	48,000
Patent (net)	136,000 [3]	13,600	122,400

*Broca Co.*  
**EXPENSES RESULTING FROM INTANGIBLES**  
*For the Year Ended December 31, Year 4*

Amortization:	
Franchise	12,000
Patent	<u>13,600</u>
	\$25,600
Franchise fee (\$20,000 × 1%)	<u>200</u>
Total expenses	<u>\$25,800</u>

*Explanations*

**Broca Co.**  
**SUPPORTING CALCULATIONS FOR INTANGIBLES**  
*December 31, Year 4*

Goodwill	\$188,000 [1]
Franchise, net of accumulated amortization of \$12,000	48,000 [2]
Patent, net of accumulated amortization of \$13,600	122,400 [3]

[1]	Cash paid	\$360,000
	Value of net assets	<u>(172,000)</u>
	Goodwill	<u>188,000</u>
[2]	Franchise	<u>\$60,000</u>
	Amortization over 5 years	<u>(12,000)</u>
	Balance	<u>\$48,000</u>
[3]	Legal costs (\$51,000 + \$85,000)	\$136,000
	Amortization over 10 years	<u>(13,600)</u>
	Balance	<u>\$122,400</u>

[1] Goodwill calculation

In a purchase, the net assets acquired are recorded at their FV. The excess of the cost of the investment (\$360,000) over the FV of the net assets acquired (\$172,000) is allocated to goodwill (\$360,000 – \$172,000 = \$188,000). Intangible assets with an indeterminate or unlimited life, such as this goodwill, are not amortized. The goodwill is reported in the 12/31/Y4 balance at its cost.

[2] Franchise fee

The franchise acquired on 2/1/Y4 is recorded at its cost of \$60,000. Since Broca amortizes these intangibles on a straight-line basis, and takes a full year’s amortization in the year of acquisition, year 4 amortization is \$12,000 (\$60,000 × 1/5), and the franchise is reported at cost less accumulated amortization at 12/31/Y4 (\$60,000 – \$12,000 = \$48,000). In addition to the amortization expense, there is also an annual fee that must be expensed, equal to 1% of ferry revenues.

[3] Patents are initially recorded at cost of acquisition, which is purchase price for a purchased patent, or legal and other costs of registration (\$51,000) for an internally generated patent. Legal fees incurred in **successfully** defending the patent (\$85,000) are also capitalized because such fees help establish the legal right of the holder to any future benefits that will be derived from the patent. Therefore, this patent is capitalized at a total amount of \$136,000 (\$51,000 + \$85,000). Since Broca amortizes these intangibles on a straight-line basis and takes a full-year’s

amortization in the year of acquisition, amortization is \$13,600 ( $\$136,000 \times 1/10$ ). The patent is reported at cost less accumulated amortization at 12/31/Y4 ( $\$136,000 - \$13,600 = \$122,400$ ).

### Task-Based Simulation 10

<b>Goodwill Impairment</b>	<b>Authoritative Literature</b>
	<b>Help</b>

1. Implied goodwill \$200,000
  
- Impairment of goodwill \$300,000

#### Explanations

1. Goodwill acquired through a business combination is the only type of goodwill that is recognized. Such goodwill is not amortized but is tested periodically for impairment. Internally generated goodwill is not recorded. Expenditures to develop, maintain, or enhance goodwill are expensed as incurred.

Since the carrying value of the reporting unit (\$1,900,000) exceeds the fair value of the unit (\$1,700,000), the second step in the test of impairment should be performed.

The implied value of goodwill is the difference between the fair value of the unit (\$1,700,000) and the fair value of its assets and liabilities (\$1,500,000). Therefore, the implied value of goodwill is \$200,000. Since the carrying value of goodwill is \$500,000, there is a \$300,000 impairment that must be recognized as shown below.

2. Journal entry required for goodwill impairment

Impairment loss	\$300,000	
Goodwill		\$300,000

*To recognize impairment of goodwill for the Technology reporting unit at 12/31/Y4.*

# Module 12: Monetary Current Assets and Current Liabilities

## Overview

This study module reviews accounting for current assets (except inventory which is presented in Module 10) and short-term investments (which are presented in Module 16). The primary topics covered on the Financial Accounting Reporting Section of the exam include

1. Cash and bank reconciliations.
2. Receivables with respect to initial recording, bad debts, borrowing, factoring, transferring, servicing, and securitizing.

This module also reviews current liabilities. The primary topics tested on the exam include accounting for payroll and contingencies (e.g., warranties, lawsuits.) Additionally, this module covers ratio analysis for solvency (e.g. current ratio) and operational efficiency (e.g. inventory turnover).

<b>A. Cash</b>	<b>329</b>
<b>B. Bank Reconciliations</b>	<b>329</b>
<b>C. Receivables</b>	<b>331</b>
<b>D. Current Liabilities</b>	<b>341</b>
<b>E. Fair Value Option</b>	<b>347</b>
<b>F. Ratios</b>	<b>347</b>
<b>G. Research Component—Accounting Standards Codification</b>	<b>348</b>

<b>Key Terms</b>	<b>350</b>
<i>Multiple-Choice Questions</i>	<b>352</b>
<i>Multiple-Choice Answers and Explanations</i>	<b>368</b>
<i>Simulations</i>	<b>382</b>
<i>Simulation Solutions</i>	<b>388</b>

### A. Cash

The definition of **cash** includes both cash (cash on hand and demand deposits) and cash equivalents (short-term, highly liquid investments).

1. **Cash equivalents** have to be readily convertible into cash and so near maturity that they carry little risk of changing in value due to interest rate changes. Generally this will include only those investments with original maturities of three months or less from the **date of purchase** by the enterprise.
  - a. Common examples of cash equivalents include Treasury bills, commercial paper, and money market funds. Unrestricted cash and cash equivalents available for general use are presented as the first current asset.
2. Cash set aside for special uses is usually disclosed separately. The entry to set up a special fund is

Special cash fund	xx	
Cash		xx

3. Cash restricted as to use (e.g., not transferable out of a foreign country) should be disclosed separately, but not as a current asset if it cannot be used in the next year (this is true of special funds also).
4. Imprest (petty) cash funds are generally included in the total cash figure, but unreimbursed expense vouchers are excluded.

### B. Bank Reconciliations

1. Bank reconciliations are prepared by bank depositors when they receive their monthly bank statements. The reconciliation is made to determine any required adjustments to the cash balance. Two types of reconciling items are possible.
  - a. Reconciling items not requiring adjustment on the books (type A)
    - (1) There are three type A reconciling items. They do not require adjusting journal entries.

- (a) Outstanding checks
  - (b) Deposits in transit
  - (c) Bank errors
- b. Reconciling items requiring adjustment on the books (type B)
- (1) All other reconciling items (type B) require adjusting journal entries. Examples of type B reconciling items include
- (a) Unrecorded returned nonsufficient funds (NSF) checks
  - (b) Unrecorded bank charges
  - (c) Errors in the cash account
  - (d) Unrecorded bank collections of notes receivable
2. Two types of formats are used in bank reconciliations.

Format 1	Format 2
Balance per bank	Balance per bank
<u>+(-) A adjustments</u>	+(-) A adjustments
Correct cash balance	<u>+(-) B adjustments</u>
	Balance per books
Balance per books	<u>+(-) B adjustments</u>
<u>+(-) B adjustments</u>	Correct cash balance
Correct cash balance	

- a. Type A and B adjustments can be either added or subtracted depending upon the type of format and the nature of the item.
- b. Reconciling items must be analyzed to determine whether they are included in (1) the balance per bank, and/or (2) the balance per books.
- (1) If they are included in one, but not the other, an adjustment is required.
- (a) For instance, the \$1,800 deposit in transit in the following example is included in the balance per books but not in the balance per bank. Thus, it must be added to the balance per bank to reconcile to the correct cash balance.
  - (b) Deposits in transit do not require an adjusting journal entry. Analyze all reconciling items in this manner, but remember, only journalize type B reconciling items.

#### SAMPLE BANK RECONCILIATION (FORMAT 1)

Per bank statement	\$ 4,702
Deposits in transit	1,800
Outstanding checks	(1,200)
Bank error	<u>50</u>
Correct cash balance	<u>\$ 5,352</u>
Per books	\$ 5,332
Service charges	(5)
Note collected by bank	150
Customer's NSF check	(170)
Deposit of July 10 recorded as \$749 instead of \$794	<u>45</u>
Correct cash balance	<u>\$ 5,352</u>

**NOTE:** The balance per bank and balance per books each are reconciled directly to the corrected balance.

- c. **Adjusting journal entries.** All of the items in the per books section of a bank reconciliation (type B) require adjusting entries. The entries for the above example appear below.

Miscellaneous expense	5		AR	170	
Cash		5	Cash		170
Cash	150		Cash	45	
Notes receivable		150	AR (or sales)		45

**3. Four-column cash reconciliation**

- a. Unlike the bank reconciliation above, which is as of a specific date, a four-column cash reconciliation, also known as a “proof of cash,” reconciles bank and book cash balances over a specified time period.
- b. A proof of cash consists of four columns: beginning of the period bank reconciliation, receipts, disbursements, and end-of-the-period bank reconciliation. Thus, the proof of cash cross-foots as well as foots.

**SAMPLE PROOF OF CASH (FORMAT 2)**

	<b>Bank reconciliation</b>			<b>Bank reconciliation</b>
	<b>June 30, Year 1</b>	<b>Receipts</b>	<b>Disbursements</b>	<b>July 31, Year 1</b>
Balance per bank statement	\$3,402	\$25,200	\$23,900	\$ 4,702
Deposits in transit				
June 30, year 1	1,610	(1,610)		
July 31, year 1		1,800		1,800
Outstanding checks				
June 30, year 1	(450)		(450)	
July 31, year 1			1,200	(1,200)
Service charges			(5)	5
Note collected by bank		(150)		(150)
Customer’s NSF check			(170)	170
Deposit of July 10 recorded as \$749 instead of \$794		(45)		(45)
Bank error			(50)	50
Balance per books	\$4,562	\$25,195	\$24,425	\$ 5,332

- (1) There are no type B reconciling items in the beginning reconciliation column. This is because the \$4,562 has been adjusted when the June bank statement was reconciled.
  - (2) Figures appearing in the center columns have unlike signs if they are adjacent and like signs if they are not adjacent to amounts in the side columns.
- c. The purpose of the proof of cash is to disclose any cash misstatements, such as unrecorded disbursements and receipts within a month, which would not be detected by a bank reconciliation.

**EXAMPLE**

If the center two columns each required a negative \$1,000 to make the top line reconcile with the bottom line, there may be unrecorded receipts and deposits of \$1,000.

**NOW REVIEW MULTIPLE-CHOICE QUESTIONS 1 THROUGH 6**

**C. Receivables**

Accounts receivable should be disclosed in the balance sheet at net realizable value (gross amount less estimated uncollectibles) by source (e.g., trade, officer, etc.). Officer, employee, and affiliate company receivables should be separately disclosed. Unearned interest and finance charges should be deducted from gross receivables.

**1. Anticipation of Sales Discounts**

- a. Cash discounts are generally recognized as expense when cash payment is received within the discount period. As long as cash discounts to be taken on year-end receivables remain constant from year to year, there

is no problem. If, however, discounts on year-end receivables fluctuate, a year-end allowance can be set up or sales can be recorded net of the discounts.

(1) The entries to record sales at net are shown below in comparison to the sales recorded at **gross**.

	Sales at net			Sales at gross		
a. Sale	AR	(net)		AR	(gross)	
	Sales	(net)		Sales	(gross)	
b. Cash receipt within discount period	Cash	(net)		Sales disc.	(disc.)	
	AR	(net)		Cash	(net)	
				AR	(gross)	
c. Cash receipt after discount period	Cash	(gross)		Cash	(gross)	
	AR	(net)		AR	(gross)	
	Disc. not taken	(disc.)				

(a) The rationale for the net method is that sales are recorded at the cash equivalent amount and receivables nearer realizable value.

**NOTE:** Under both the net and gross methods, sales and accounts receivable are recorded net of trade discounts for the same reason.

(b) If a sales discount allowance method is used, the entry below is made with the gross method entries. The entry should be reversed.

Sales discounts	(expected disc. on year-end AR)	
Allowance for sales disc.		(expected disc. on year-end AR)

(c) Similarly, when using the “**net method**,” an entry should be made to pick up discounts not expected to be taken on year-end receivables. Generally, however, these latter adjustments are not made, because they are assumed to be about the same each period.

## 2. Bad Debts Expense

There are two approaches to bad debts.

- Direct write-off method
- Allowance method

a. Under the **direct write-off method**, bad debts are considered expenses in the period in which they are written off.

**NOTE:** The direct write-off method is not considered acceptable under GAAP, unless the amounts are immaterial.

(1) The direct write-off method is the method required for tax purposes.

Bad debts expense	(uncollectible AR)	
AR		(uncollectible AR)

b. The **allowance method** seeks to estimate the amount of uncollectible receivables, and establishes a contra valuation account (allowance for bad debts) for the amount estimated to be uncollectible.

(1) The adjusting entry to set up the allowance is

Bad debts expense	(estimated)	
Allowance for bad debts		(estimated)

(2) The entry to write off bad debts is

Allowance for bad debts	(uncollectible AR)	
AR		(uncollectible AR)

(a) There are two methods to determine the annual charge to bad debts expense.

1] **Annual sales**

- a] Charging bad debts expense for 1% of annual sales is based on the theory that bad debts are a function of sales; this method emphasizes the income statement.
- b] When bad debts expense is estimated as a function of sales, any balance in the allowance account is ignored in making the adjusting entry. Bad debts expense under this method is simply the total amount computed (i.e., Sales × Percentage).

2] **Year-end AR**

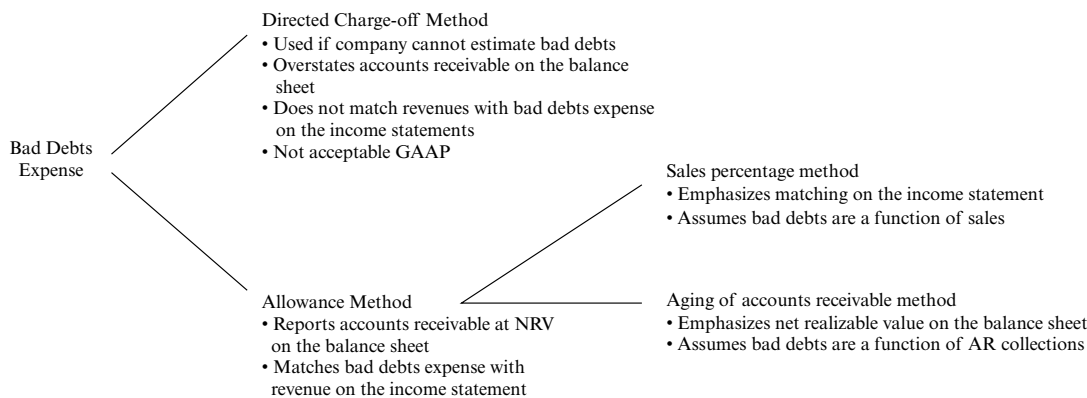

- a] Charging bad debts on year-end AR is based on the theory that bad debts are a function of AR collections during the period; this method emphasizes the balance sheet.
- b] A bad debts percentage can be applied to total AR or subsets of AR. Often an aging schedule is prepared for this purpose. An AR aging schedule classifies AR by their age (e.g., 30, 60, 90, 120, etc., days overdue).
- c] When bad debts expense is estimated using outstanding receivables, the expense is the amount needed to adjust the allowance account to the amount computed (i.e., AR × Percentage[s]). Thus, bad debts expense under this method is the amount computed less any credit balance currently in the allowance account (or plus any debit balance).

(3) **Net accounts receivable** is the balance in accounts receivable less the allowance for bad debts.

**NOTE:** Net receivables **do not change** when a specific account is written off since both accounts receivable and the allowance account are reduced by the same amount.

(4) The policy for charging off uncollectible trade accounts receivable must be disclosed for receivables that have a contractual maturity of one year or less and arise from the sale of goods or services.

**Methods of Recognizing Bad Debts  
Expense Concepts Summary**

**NOW REVIEW MULTIPLE-CHOICE QUESTIONS 7 THROUGH 23**

3. **Transfers and servicing of financial assets (ASC Topic 860).** Transfers of financial assets include the transfer of an entire financial asset, a group of financial assets, or a participating interest in an entire financial asset. Specifically, this topic includes servicing arrangements, recourse arrangements, guarantees, agreements to purchase or redeem transferred financial assets, options written or held, derivative financial instruments that are entered into with contemplation of a transfer, arrangements to provide financial support, pledges of collateral, and transferor's beneficial interests in the transferred financial asset.
- a. The major types of transfers include
- (1) **Securitizations**—Purchasing and selling securities that are collateralized by a pool of assets, such as a group of receivables.
  - (2) **Factoring**—Selling receivables at a discount to obtain immediate cash.
  - (3) **Transfers of receivables with recourse**—Selling receivables at a discount to obtain immediate cash but retaining the risk of loss if the customer does not pay the amount owed.
  - (4) **Repurchase agreements**—An agreement to sell an asset to a lender and later repurchase the asset. These agreements are in effect using the asset as collateral for a loan.
  - (5) **Loan participations**—A situation where a group of financial institutions (called participating interest holders) purchases a share of a financial instruments (e.g., a loan).
  - (6) **Banker's acceptances**—An order from a customer of a bank for the payment of a specified sum of money (like a post-dated check) that may be bought and sold.
- b. The important determination in accounting for transfers of assets is whether the transaction is accounted for as a sale of the asset or a secured loan with the asset as collateral.
- (1) A transfer may be accounted for as a sale only when the transferor surrenders control of the financial asset(s) and all of the following conditions are met:
    - (a) The transferred financial asset(s) are isolated and beyond the reach of the transferor and its creditors, even in bankruptcy or receivership.
    - (b) The transferee can pledge or exchange the asset(s) without unreasonable constraints or conditions.
    - (c) The transferor does not maintain effective control over the transferred financial asset(s) or a third-party beneficial interest in the asset(s).

#### EXAMPLE

The transferor may not have a repurchase or redemption agreement, an agreement to cause the holder to return the asset (other than a cleanup call), or an agreement that requires the transferor to repurchase the financial asset at a favorable price wherein it is probable that the repurchase will occur.

- (2) Transfers of financial assets are disaggregated into separate components of assets and liabilities. Each entity involved in the transaction
    - (a) Recognizes only the assets it controls and liabilities it incurs after the transaction has occurred, and
    - (b) Derecognizes assets for which control has been given up or lost, and liabilities for which extinguishment has occurred.
  - (3) The proceeds received from the sale of financial assets is the cash or other assets obtained, including separately recognized servicing assets, less any liabilities incurred.
    - (a) Any asset obtained that is not an interest in the transferred asset is a part of the proceeds of the sale.
    - (b) Any liability incurred, even if it is related to the transferred assets, is treated as a reduction of the proceeds from the sale.
- c. **Accounting for transfers of participating interests.** In order to be eligible for sale accounting, the entire financial asset cannot be divided into components before the transfer, unless all the components meet the definition of a participating interest.
- (1) A participating interest must have the following four characteristics: (1) the interest is a proportionate ownership interest in an entire financial asset; (2) all cash flows received from the asset are divided proportionately among the participating interest holders based upon their share of ownership; (3) the rights of each participating interest holder have the same priority (i.e., in transfers, bankruptcy,

or receivership); and (4) no party has the right to pledge or exchange the financial asset unless all participating interest holders agree.

- (2) When a transfer of a participating interest(s) qualifies as a sale, the transferor should
  - (a) Allocate the carrying amount of the entire financial asset(s) between the participating interest(s) sold and the participating interest that continues to be held by the transferor. Relative fair values at the date of transfer are used to allocate the carrying amount.
  - (b) Derecognize the participating interest(s) sold.
  - (c) Recognize and measure at fair value servicing assets, servicing liabilities, and any other assets obtained or liabilities incurred in the sale.
  - (d) Recognize any gain or loss on the sale in earnings.
  - (e) Report any participating interest that continues to be held as the difference between the previous carrying amount and the amount derecognized.
- (3) If the transfer of a financial asset does not meet the criteria for a sale, the transferor and transferee account for the transfer as a secured borrowing with the financial asset(s) pledged as collateral.

d. **Factoring of receivables.** This category of financing is the most significant in terms of accounting implications. **Factoring** traditionally involves the outright sale of receivables to a financing institution known as a factor. These arrangements usually involve (1) notification to the customer to forward future payments to the factor and (2) transfer of receivables **without recourse**, which means that the factor assumes the risk of loss from noncollection. Thus, once a factoring arrangement is completed, the entity has no further involvement with the receivables, unless the customer decides to return the merchandise. In its simplistic form, the receivables are sold and the difference between the cash received and the carrying value of the receivables is recognized as a gain or loss.

- (1) Factoring **without** recourse provides two financial benefits to the business: it permits the entity to obtain cash earlier, and the risk of bad debts is transferred to the factor.
  - (a) The factor is compensated for each of the aspects of the transaction.
  - (b) Interest is charged based on the anticipated length of time between the date the factoring is consummated and the expected collection date of the receivables sold, and a fee is charged based upon the anticipated bad debt losses.

**EXAMPLE**

Thirsty Corp., on July 1, year 1, enters into an agreement with Rich Company (the factor) to sell a group of its receivables **without recourse**. A total face value of \$200,000 of accounts receivable are involved. The factor charges 20% interest computed on the weighted-average time to maturity of the receivables of thirty-six days plus a 3% fee.

The entries required by the transferor are as follows:

Cash	190,055	
Interest expense (or prepaid) $(200,000 \times .20 \times 36/365)$	3,945	
Factoring fee $(200,000 \times .03)$	6,000	
Accounts receivable		200,000

The interest expense and factor's fee can be combined into a \$9,945 loss on the sale of receivables.

- (c) Merchandise returns will normally be the responsibility of the transferor, who must then make the appropriate settlement with the factor.
  - 1] To protect against the possibility of merchandise returns which diminish the total amount of the receivables to be collected, a factor will often holdback a portion of the amount of the receivables factored in addition to taking the interest and fee.
  - 2] The transferor will charge any merchandise returns to a "factor's holdback receivable" account that is created when the receivables are factored. At the end of the return privilege period, any remaining holdback will become due and payable to the borrower.

**EXAMPLE**

Accounting by the transferor for the transfer of receivables without recourse

1. Thirsty Corp., on July 1, year 1, enters into an agreement with Rich Company to sell a group of its receivables **without recourse**. A total face value of \$200,000 accounts receivable are involved. Rich (the factor) charges 20% interest computed on the weighted-average time to maturity of the receivables of thirty-six days plus a 3% fee. A 5% holdback is also retained.
2. Thirsty's customers return for credit \$4,800 of merchandise.
3. The customer return privilege period expires and the remaining holdback is paid to the transferor.

The entries required are as follows:

1. Cash	180,055	
Loss on sale of receivables	9,945*	
Factor's holdback receivable (200,000 × .05)	10,000	
Accounts receivable		200,000
* (\$3,945 interest expense + \$6,000 factoring fee)		
2. Sales returns and allowances	4,800	
Factor's holdback receivable		4,800
3. Cash	5,200	
Factor's holdback receivable		5,200

(d) Factoring transfers title to the receivables. Thus, if there is a **without recourse** provision, the removal of these receivables from the borrower's balance sheet is clearly warranted.

(2) Factoring arrangements may also involve factoring **with** recourse.

- (a) In a with-recourse arrangement, if the customer does not pay the factor, the transferor must pay the factor the amount due on the account.
- (b) The rules for transfer of receivables with recourse vary by jurisdiction; therefore, transfers with recourse may or may not qualify for sale treatment.
- (c) If the factoring with recourse arrangement qualifies as a sale, the recourse liability is treated as reduction of the proceeds received in the transfer.

- 1] In computing the gain or loss to be recognized at the date of the transfer of the receivables, the borrower (transferor) must take into account the anticipated chargebacks from the transferee for bad debts expected to be incurred. This action requires an estimate by the transferor, based on past experience.
- 2] Adjustments should also be made at the time of sale for the estimated effects of any accelerated payments by customers (where the receivables are interest-bearing or where cash discounts are available).

**EXAMPLE**

Accounting by the transferor for the transfer of receivables with recourse

1. Thirsty Corp., on July 1, year 1, enters into an agreement with Rich Company to sell a group of its receivables with a face value of \$200,000. Rich Company (the factor) charges 20% interest computed on the weighted-average time to maturity of the receivables of thirty-six days and a 3% fee. A 5% holdback is also retained.
2. Assume Thirsty Corp. surrenders control of the receivables, per ASC Topic 860, Thirsty's future obligation for uncollectible accounts is reasonably estimable, and Rich Co. does not have a unilateral ability to require Thirsty to repurchase the receivables.
3. The factor accepts the receivables **subject to recourse** for nonpayment. The recourse obligation has a fair value of \$10,000.

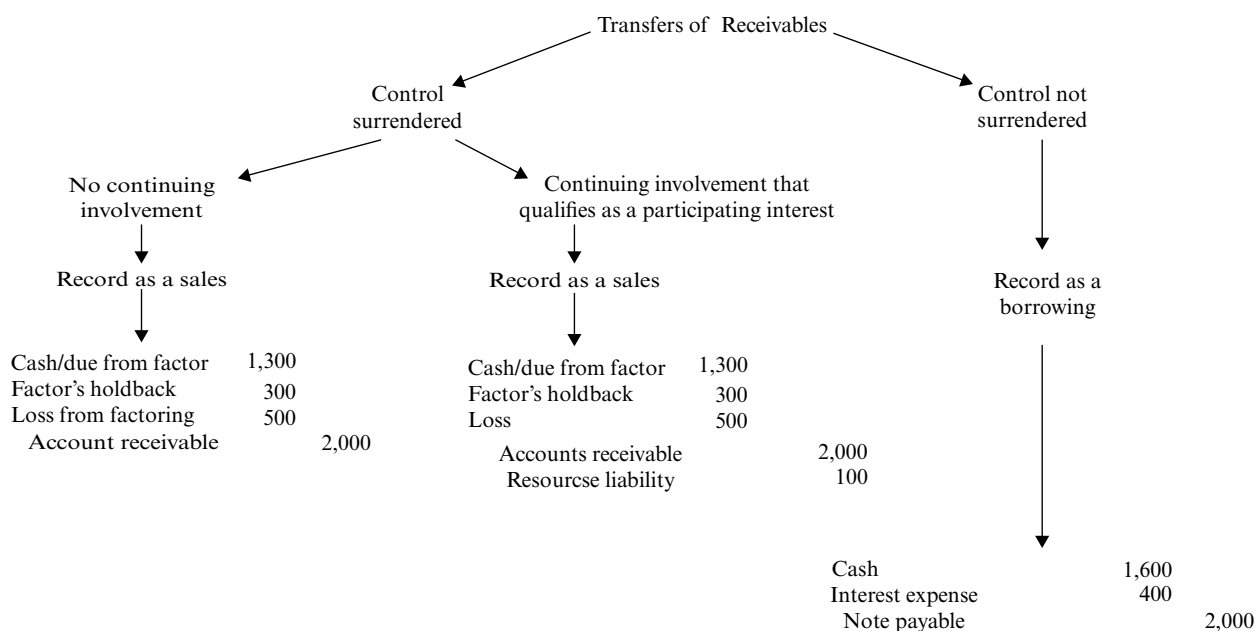

Fair Values	
Cash proceeds	180,055
Factor's holdback receivable	10,000
Recourse obligation	<u>(10,000)</u>
Net proceeds	180,055
Less: Carrying value of receivables	<u>(200,000)</u>
Loss on sale of receivables	(19,945)

The entries required to record the sale are

Cash	180,055	
Factor's holdback receivable (200,000 × .05)	10,000	
Loss on sale of receivables	19,945	
Accounts receivable		200,000
Recourse obligation		10,000

- (d) The accounts receivable are removed from the transferor's books because they have been sold. The loss on sale of receivables is the sum of the interest charged by the factor (\$3,945), the factor's fee (\$6,000), and the fair value of the recourse obligation (\$10,000), which is the estimated amount of uncollectible accounts.
- (e) Because the transaction resulted in a "sale" rather than a borrowing, the "interest" and "fee" elements relate directly to the sale transaction. In a sale, these components are in essence part of a negotiated price for the receivables.
- (f) If, subsequent to the sale of the receivables, the actual experience relative to the recourse terms differs from the provision made at the time of the sale, a change in an accounting estimate results. It is reflected as an additional gain or loss in the subsequent period. These changes are not corrections of errors or retroactive adjustments.
- (g) If the above transfer did not meet the requirements for sale treatment, it would be accounted for as a secured borrowing.

(3) The chart below summarizes the accounting for the transfer of receivables.

**e. Servicing of financial assets.**

- (1) Servicing of financial assets may involve any one or all of the following activities:
  - (a) Collecting payments
  - (b) Paying taxes and insurance

- (c) Monitoring delinquencies
  - (d) Foreclosing
  - (e) Investing
  - (f) Remitting fees
  - (g) Accounting
- (2) Although inherent in transfers of most financial assets, **servicing** is a distinct asset or liability only when separated contractually from the underlying financial asset. The servicing asset usually results either from separate purchase or assumption of the servicing rights, or from securitization with retained servicing. The servicer's obligations are specified in the contract.
- (3) Typically, the servicing contract results in an asset because the benefits are more than adequate compensation for the cost of servicing. The benefits include fees, late charges, float, and other income.
- (4) If the benefits do not provide fair compensation, the servicing contract is a liability. The fair value of a servicing contract is based on its value in the market and is not based on the internal cost structure of the servicer. Thus, the concept of adequate compensation is judged by requirements that would be imposed by a new or outside servicer. In cases where there is not a reliable market for the contract, present value methods may be used to value the servicing contract.
- (5) In summary, the servicer should record the servicing contract based on the following criteria:
- (a) More than adequate—resulting in a recorded asset
  - (b) Adequate compensation—resulting in no asset or liability
  - (c) Less than adequate—resulting in a recorded liability
- (6) Servicing assets or servicing liabilities are to be accounted for separately as follows:
- (a) Assets are reported separately from liabilities. They are not netted.
  - (b) Initially measure servicing assets that are retained by the transferor by allocating the carrying amount based on relative fair values at the date of transfer.
  - (c) Initially measure at fair value all purchased assets, assumed liabilities, and liabilities undertaken in a sale or securitization.
  - (d) Account separately for interest-only strips (future interest income from serviced assets that exceed servicing fees).
  - (e) Measure servicing assets and servicing liabilities using one of two methods: amortization method, or fair value method. An election must be made to use the fair value method for each class of servicing assets and servicing liabilities. Once the election is made to value using the fair value method, the election cannot be reversed.
  - (f) Report servicing assets and servicing liabilities on the balance sheet in one of two ways:
    - 1] Display separate line items for amounts valued at fair value and amounts measured by amortization method, **or**
    - 2] Display aggregate amounts for all servicing assets and servicing liabilities, and disclose parenthetically the amount that is measured at fair value that is included in the aggregate amount.
- (7) The **amortization method** requires servicing assets and servicing liabilities to be initially recorded at fair value. Assets are then amortized in proportion to, and over the period of, receipt of estimated net servicing income or net servicing loss. At the end of each period, the assets are assessed for impairment or increased obligation based on fair value. Over time, the asset is tested for impairment which is recognized in a valuation allowance account. Liabilities are amortized in proportion to, and over the period of, the net servicing loss. In cases where changes have increased the fair value above the book value, an increased liability and a loss should be recognized.
- (8) Under the **fair value method**, servicing assets and servicing liabilities are initially recorded at fair value. The fair value is measured at each reporting date. Changes in fair value are reported in earnings in the period in which the change in fair value occurs.
- (9) Required disclosures for **all** servicing assets and servicing liabilities include management's basis for determining classes, a description of risks, the instruments used to mitigate income statement effect of changes in fair value, the amount of contractually specified servicing fees, late fees, and ancillary fees for each period, and quantitative and qualitative information about assumptions used to estimate fair value.
- (a) For servicing assets and liabilities subsequently measured at fair value, disclosures must also be provided showing the beginning and ending balances, additions, disposals, changes in fair value inputs or assumptions used, and changes in fair value.

- (b) For servicing assets and liabilities that use the amortization method, disclosures must include the beginning and ending balances, additions, disposals, amortization, application of valuation allowance to adjust carrying value, and other changes that affect the balance, as well as a description of the changes. In addition, the fair value at the beginning and end of each period should be disclosed if it is practicable to estimate the value. The activity in the valuation account, including beginning and ending balances, recoveries made, and write-downs charged against the allowance for each period should also be disclosed.
- f. **Securitizations.** As described above, securitization is the transformation of financial assets into securities (asset-backed securities). Various assets including mortgages, credit cards, trade receivables, loans, and leases are grouped and securitized. These groupings of relatively homogeneous assets are then pooled and divided into securities with cash flows that can be quite different from those of the original individual assets. With an established market, most of these securities cost less than the alternative use of the assets as collateral for borrowing. Thus, the benefits of most securitizations include lower financing costs, increased liquidity, and lower credit risk.
- (1) The transferor (also called issuer or sponsor) forms a securitization mechanism to buy the assets and to issue the securities. Sometimes, another transfer is made to a trust and the trust issues the securities. These different structures are generally referred to as one-tier or two-tier respectively. The securitization mechanism then generates beneficial interests in the assets or resulting cash flows which are sold. The form of the securities chosen depends on such things as the nature of the assets, income tax considerations, and returns to be received.

**EXAMPLE****Sale of loans with servicing contract and an interest-strip of 1% (transferor retains 1% of the interest paid)**

(This problem is adapted from ASC 860-10-65-3)

Since the transfer does not qualify as a sale, it is treated as a secured borrowing. The borrower's entry will be

**Facts given:**

Cash proceeds	\$16,000
Loan's book value	15,000
Fair value of servicing asset	1,200
Fair value of interest strip	800

**Net Proceeds**

Cash proceeds	\$16,000
Servicing asset	1,200
Interest strip	800
Net proceeds	18,000
Less: Carrying amount of loans	(15,000)
Gain on sale of loans	3,000

**Journal entry**

Cash	16,000	
Servicing asset	1,200	
Interest strip	800	
Loans		15,000
Gain on sale		3,000

- (2) Various financial components (assets or liabilities) arise from securitizations. Examples include servicing contracts, interest-only strips, retained interests, recourse obligations, options, swaps, and forward contracts. All controlled assets and liabilities must be recognized.
- (3) The transferor generally wants to take the assets off the balance sheet. This result can be accomplished if the transaction results in a sale. The key criterion in this case is to be sure that the assets are beyond control of the transferor even in bankruptcy.
- g. **Secured borrowings.** In a **secured borrowing** arrangement, receivables are pledged as collateral for a loan. The customers whose accounts have been pledged are not aware of this event, and their payments are still remitted to the borrower. The pledged accounts merely serve as security to the lender, giving comfort

**EXAMPLE**

Thirsty Corp., on July 1, year 1, enters into an agreement with Rich Company (the factor) to sell a group of its receivables **with recourse**. A total face value of \$200,000 of accounts receivable are involved. The factor charges 20% interest computed on the weighted-average time to maturity of the receivables of thirty-six days plus a 3% fee. Assume the transfer does not qualify as a sale.

Since the transfer does not qualify as a sale, it is treated as a secured borrowing. The borrower's entry will be

Cash	190,055	
Interest expense (or prepaid)	3,945	
Factoring fee	6,000	
Factor borrowing payable		200,000

that sufficient assets exist which will generate cash flows adequate in amount and timing to repay the debt. However the debt is paid by the borrower whether or not the pledged receivables are collected and whether or not the pattern of such collections matches the payments due on the debt.

- (1) The accounts receivable remain on the borrower's books. Both the accounts receivable and the factor borrowing payable should be cross-referenced in the balance sheet.
- (2) In a secured borrowing, the assets of the borrowing entity continue to be shown as assets in its financial statements but must be identified as having been pledged. This identification can be accomplished either parenthetically or by footnote disclosures. Similarly, the related debt should be identified as having been secured by the receivables or other asset.

**EXAMPLE****Proper disclosure for pledged receivable shown parenthetically on the balance sheet**

Current assets:

Accounts receivable, net of allowance for doubtful accounts of \$600,000 (\$3,500,000 of which has been pledged as collateral for bank loans)	8,450,000
---	-----------

Current liabilities:

Bank loans payable (secured by pledged accounts receivable)	2,700,000
---	-----------

- h. **Accounting for collateral.** The method of accounting for a collateral agreement depends both on control of the assets and on the liabilities incurred under the agreement.
  - (1) Ordinarily, the transferor should carry the collateral as an asset and the transferee should not record the pledged asset.
  - (2) If the transferee, however, has control of the asset, the secured party should record the asset at fair value and also the liability to return it. The transferor should reclassify the asset (probably as a receivable) and report it separately in the balance sheet.
  - (3) If the transferor defaults and is not entitled to the return of the collateral, it should be derecognized. If not already recognized, the transferee should record collateral as an asset at fair value.
4. **Disclosures.** Additional disclosures required for receivables, off-balance-sheet credit exposure, and foreclosed and repossessed assets include the following:
  - a. Accounting policies for loans and trade receivables
  - b. Assets serving as collateral
  - c. Nonaccrual and past due financing receivables
  - d. Accounting policies for off-balance sheet credit exposures
  - e. Foreclosed and repossessed assets
  - f. Allowance for credit losses
  - g. Impaired loans
  - h. Loss contingencies

- i. Risks and uncertainties
- j. Fair value disclosures
- k. Credit quality information
- l. Modifications

**NOW REVIEW MULTIPLE-CHOICE QUESTIONS 24 THROUGH 46**

**D. Current Liabilities**

**Current liabilities** are “obligations whose liquidation is reasonably expected to require the use of existing resources properly classifiable as current assets, or the creation of other current liabilities.”

**1. Examples of current liabilities** (as they fall within the above definition)

- a. Trade accounts and notes payable
- b. Loan obligations—Including current portions of long-term debt. This is not true if the current portion of long-term debt will not require the use of current assets (e.g., be paid from a sinking fund which is not classified as current).
- c. Short-term obligations expected to be refinanced cannot be reclassified as noncurrent liabilities unless there is both an intent and an ability to refinance.
- d. Dividends payable—Cash dividends are a liability when declared. They cannot be rescinded.
- e. Accrued liabilities—Adjusting entries to reflect the use of goods or services before paying for them. Will pay in future periods even though the expense is incurred in this period (e.g., interest, payroll, rent expenses).

Expense account	xx	
Liability (usually current) account		xx

- f. Payroll—There are two entries to record payroll. The first records the employee’s payment and deductions on behalf of the employee. The second is to record the employer’s taxes.

Payroll expense	xx (gross pay)	
Payroll payable, cash		xx (net pay)
Income taxes payable		xx
FICA taxes payable		xx
Union dues payable		xx
Medical insurance payable		xx
Payroll tax expense	xx	
FICA taxes payable		xx
Federal unemployment tax payable		xx
State unemployment tax payable		xx

- g. Property taxes. Generally, there is a monthly accrual for property taxes over the fiscal period of the taxing authority. If taxes are payable at the end of the tax authority’s fiscal period, the monthly accrual would be

Property tax expense	xx	
Property tax payable		xx

- (1) If the taxes were paid at the beginning of the period, the entry to record the prepayment would be followed by monthly entries to expense the prepayment.

Prepaid property taxes	xx	Property tax expense	xx
Cash	xx	Prepaid property taxes	xx

- (2) If taxes are due, but not paid at the beginning of the year, the liability should be recorded and the deferred charge expensed over the fiscal year of the taxing body.

## Module 12: Monetary Current Assets and Current Liabilities

Deferred property taxes	xx	Property tax expense	xx
Property tax payable	xx	Deferred property taxes	xx

### h. Bonus arrangements

Bonus expense	xx
Bonus payable	xx

(1) Set up equations to describe the terms of the bonus agreement. The general forms of the equations follow:

$$\begin{aligned}
 B &= P(NI - B - T) \\
 T &= R(NI - B) \\
 B &= \text{Bonus} \\
 P &= \text{Bonus or profit sharing rate (10\%)} \\
 NI &= \text{Net income (\$150,000)} \\
 T &= \text{Taxes} \\
 R &= \text{Tax rate (40\%)}
 \end{aligned}$$

#### EXAMPLE

**Work through the above equations using the data in parentheses.**

$$\begin{aligned}
 T &= .40(150,000 - B) \\
 T &= 60,000 - .4B \\
 B &= .10(150,000 - B - T) \\
 B &= .10(150,000 - B - 60,000 + .4B) \\
 B &= 15,000 - .1B - 6,000 + .04B \\
 1.06B &= 9,000 \\
 B &= \$8,491
 \end{aligned}$$

Advances from customers—Record as deferred revenue and recognize as revenue when earned

Cash	xx	Deferred revenue	xx
Deferred revenue	xx	Revenue	xx

- j. Fixed obligations resulting from joint and several liability arrangements may be considered current liabilities. The total obligation must be fixed at the reporting date (no measurement uncertainty) but the obligation may change in value, for example, an additional borrowing under a line of credit. The amount to report includes the agreed upon amount between the co-obligators and potential amounts the entity may be required to pay on behalf of the co-obligators.

**NOW REVIEW MULTIPLE-CHOICE QUESTIONS 47 THROUGH 76**

## 2. Contingencies

- a. **Definitions**—An obligation may be either determinable (fixed) or contingent in accordance with the following definitions.
- (1) **Determinable liabilities**—The amount of cash and time of payment are known and reasonably precise. Such liabilities are usually evidenced by written contracts but may also arise from implied agreements or imposed legal statutes. Examples include notes payable and liabilities for various taxes as shown above.

- (2) **Contingent liabilities**—Such obligations **may** exist but are dependent on uncertain future events. A contingency is defined as an existing condition, situation, or set of circumstances involving uncertainty

**NOTE:** To accrue a loss contingency means that the financial effects are reported in the financial statements **before** the contingency is resolved.

as to possible gain or loss to an enterprise that will ultimately be resolved when one or more future events occur or fail to occur.

- b. **Recording and disclosing contingencies**—The accounting problems related to contingencies involve the following issues.
- (1) When is it appropriate to record and report the effects of a contingency in the financial statements? Should the financial impact of the contingency be reported in the period when the contingency is still unresolved or in the period in which the contingency is resolved?
  - (2) For contingencies not recorded and reported on the financial statements before they are resolved, what disclosures, if any, are needed in the footnotes to the financial statements?
- c. A loss contingency should be accrued if it is **probable** that an asset has been impaired or a liability has been incurred at the balance sheet date **and** the amount of the loss is **reasonably estimable**. When loss contingencies are accrued, a debit should be made to an expense or to a loss account and a credit should be made to either a liability or to a contra asset account.
- (1) When making the decision concerning the accrual of a loss contingency, the term **probable** relates to the likelihood of a future event taking place or failing to take place which would resolve the uncertainty. However, the likelihood of a future event taking place or failing to take place may not always be judged to be probable. The likelihood of the future event taking place or failing to take place may instead be judged to be **reasonably possible** or **remote**. In these last two situations, it is **not** appropriate to accrue the loss contingency as of the balance sheet date, although footnote disclosure may be necessary. Footnote disclosure will be discussed later in this section.
  - (2) In addition to being probable, the accrual of a loss contingency also requires that the amount of the loss be **reasonably estimable**. In most situations, a single amount can be estimated, and this represents the loss that is accrued. In other situations, the loss may be estimated in terms of a range, for example, the range of loss may be \$100,000 to \$500,000. In these situations, the amount of loss to accrue is the best estimate within the range. For example, if the best estimate within the range is \$200,000, the loss should be accrued in the amount of \$200,000. However, if no number in the range is a better estimate of the loss than any other number in the range, the lower number in the range is accrued as the loss. Thus, \$100,000 would be accrued if no other number in the range from \$100,000 to \$500,000 were a better estimate of the loss than any other number in the range.

#### EXAMPLE

The accounting problems related to contingencies involve the following issues:

- Collectibility of receivables (Bad debts expense/Allowance for uncollectible accounts),
- Obligations related to product warranties and product defects (Warranty expense/Warranty liability), and
- Premiums offered to customers (Premium expense/Premium liability)

**EXAMPLE****Product warranty loss contingency.**

Facts related to the illustration for ABC Company.

Year	Sales	Actual warranty expenditures	Estimated warranty costs related to dollar sales
Year 1	\$500,000	\$15,000	Year of sale 4%
Year 2	\$700,000	\$47,000	Year after sale 6%

In year 1, ABC should accrue a loss contingency related to product warranties for \$50,000 [ $\$500,000 \times (4\% + 6\%)$ ]. The entry would appear as follows:

Warranty expense	50,000	
Liability for product warranty		50,000

The **actual** warranty expenditures in year 1 would be recorded in the following manner. (Note that the actual expenditures reduce the liability and have no effect on the expense account.)

Liability for product warranty	15,000	
Cash, parts inventory, etc.		15,000

ABC's income statement for year 1 would report an expense for \$50,000 related to its product warranty, and its December 31, year 1 balance sheet would report a current liability for product warranty of \$35,000 ( $\$50,000 - \$15,000$ ). In year 2, ABC should accrue a loss contingency related to product warranties for \$70,000 [ $\$700,000 \times (4\% + 6\%)$ ]. The entry would appear as follows:

Warranty expense	70,000	
Liability for product warranty		70,000

The actual warranty expenditures for year 2 would be recorded in the following manner. (Again, note that the actual expenditures only affect the liability account.)

Liability for product warranty	47,000	
Cash, parts inventory, etc.		47,000

ABC's income statement for year 2 should report an expense related to product warranties of \$70,000, and its December 31, year 2 balance sheet should report a current liability for product warranty of \$58,000 (the 1/1/Y2 balance of \$35,000 + the year 2 expense of \$70,000 less the actual warranty expenditures of \$47,000 in year 2).

**EXAMPLE****Premium (e.g., towels, knives, and other prizes) contingency accrual.**

Companies often have premium liability for outstanding coupons when it is probable that some of the coupons will be redeemed and the amount can be estimated. The expense should be accrued in the period of sale based on the estimated redemption rate.

Premium plan expense	xx	
Premium plan liability		xx

As coupons are actually redeemed by customers, the liability is reduced.

Premium plan liability	xx	
Premiums		xx

**EXAMPLE 1**

**Environmental Liabilities** [e.g., Asset Retirement Obligation (ARO)]

Companies often have environmental liabilities related to nuclear facilities, oil and gas properties, mining facilities, or landfills and these liabilities are often estimable. The cost associated with the ARO is initially measured at fair value and is included in the carrying amount of the associated asset. A related liability is also recorded.

Landfill	xx	
Asset retirement obligation		xx

The cost of the ARO is allocated over the asset's life.

Depreciation expense	xx	
Accumulated depreciation		xx

Interest is accrued (accretion expense).

Interest expense	xx	
Asset retirement obligation		xx

An entry is made to record the retirement of the settlement

Asset retirement obligation	xx	
Loss on settlement of ARO	xx	
Cash		xx

- (a) These contingencies are usually accrued because it is **probable** that some receivables will not be collected, that some of the products sold will be defective and may need warranty work, and that some customers will take advantage of premiums offered by the company.
- (b) In addition, the **amounts** in each case can usually be **estimated** because of past experience with each of these situations.
- (3) Loss contingencies that may be accrued (depending upon whether or not the two conditions of probable and reasonably estimable are satisfied) include the following events.
  - Threat of expropriation of assets
  - Pending or threatened litigation
  - Actual or possible claims and assessments
  - Guarantees of indebtedness of others
    - Obligations of commercial banks under "Standby letters of credit," and
    - Agreements to repurchase receivables (or the related property) that have been sold

**EXAMPLE**

**Litigation**

Assume that XYZ Company is presently involved in litigation involving patent infringement that allegedly occurred during year 1. The financial statements for year 1 are being prepared, and XYZ's legal counsel believes it is probable that XYZ will lose the lawsuit and that the damages will be in the range from \$500,000 to \$800,000 with the most likely amount being \$700,000. Based upon XYZ's legal counsel, it should accrue the loss contingency in the following manner at December 31, year 1.

Loss from litigation	700,000	
Liability from litigation		700,000

The \$700,000 loss from litigation should be reported on XYZ's year 1 income statement, and the liability should be reported on the December 31, year 1 balance sheet.

If XYZ settles the litigation in year 2 by paying damages of \$600,000, the following journal entry should be made.

Liability from litigation	700,000	
Cash		600,000
Recovery of loss from litigation		100,000

The above entry results in a loss recovery for year 2 because the damages were settled for less than their estimated amount. This situation is not unusual because the loss contingency related to the litigation was based upon an estimate. Note that the loss recovery cannot exceed the estimated loss, which in this case was \$700,000. It would be incorrect to revise the year 1 financial statements so that the loss contingency reflected the actual damages of \$600,000. When the financial statements for year 1 were issued, the best estimate of loss was \$700,000. This estimate is not revised subsequent to the issuance of the year 1 financial statements.

Since loss contingencies involving litigation are only accrued if the conditions of probable and reasonably estimable are present, you should be aware of what is reported if either or both of these conditions are not present. For XYZ's case, suppose that its legal counsel believed it was only **reasonably possible** (not probable) as of the balance sheet date, December 31, year 1, that XYZ would lose its lawsuit. In this situation, it would **not** be appropriate for XYZ to accrue a loss at December 31, year 1. However, because XYZ's legal counsel believes it is reasonably possible to lose the lawsuit, XYZ should disclose this litigation in its footnotes for its year 1 financial statements. The range of loss, noted before as being from \$500,000 to \$800,000, would also be disclosed in the footnote. In year 2, when the actual damages of \$600,000 are known, XYZ would record a loss of this amount and report it on its year 2 income statement.

If XYZ's legal counsel believed that it was **remote** as of December 31, year 1, that the lawsuit would be lost, no accrual or disclosure of the litigation would be necessary.

(a) **Litigation**—The one event listed above that appears frequently on the exam involves pending litigation. If the loss from litigation is reasonably estimable, and it is probable as of the balance sheet date that the lawsuit will be lost, the loss should be accrued.

(4) Loss contingencies that are not accrued or even disclosed in the footnotes include the following events.

**NOTE:** The last two criteria are the general criteria for recognizing a loss contingency.

- Risk of loss or damage of enterprise property by fire, explosion, or other hazards
- General or unspecified business risks
- Risk of loss from catastrophes assumed by property and casualty insurance companies including reinsurance companies

(a) Losses that result from the above events are recorded and reported in the period when the event occurs that causes the loss.

#### EXAMPLE

If XYZ's factory is destroyed by fire in year 1, the loss from this event should be recorded and reported in year 1. If the damages from the fire amount to \$1,000,000, and XYZ's insurance company reimburses XYZ \$800,000, XYZ's loss is \$200,000. If XYZ does not insure for fire with an insurance company, XYZ's loss for year 1 would be \$1,000,000.

- d. **Compensated absences**—Knowledge of the conditions that must be present in order to accrue a loss contingency is helpful in the accounting for compensated absences (vacation, sick leave pay, etc.).
- (1) An employer shall accrue a liability for employees' compensation for future absences if all of the following conditions are met:
    - (a) The employer's obligation relating to employees' rights to receive compensation for future absences is attributable to employees' **services already rendered**
    - (b) The obligation relates to rights that **vest or accumulate**
    - (c) Payment of the compensation is **probable**
    - (d) The amount can be reasonably **estimated**

**EXAMPLE**

Assume MNO Company employees earn two weeks of paid vacation for each year of employment. Unused vacation time can be accumulated and carried forward to succeeding years, and will be paid at the salary level in effect when the vacation is taken. As of December 31, year 11 when John Baker's salary was \$600 per week, John Baker had earned eighteen weeks vacation time and had used twelve weeks of accumulated vacation time. At December 31, year 11, MNO should report a liability for John Baker's accumulated vacation time of \$3,600 (six weeks of accumulated vacation time times \$600 per week). The journal entry at December 31, year 11, would appear as follows (assume previous year's entry was reversed).

Salary and wages expense	3,600	
Accrued liability for compensated absences		3,600

- e. **Gain contingencies**—The discussion relating to contingencies has focused on the accounting for loss contingencies. On the other hand, contingencies exist that may also result in possible **gains**.
- (1) Contingencies that might result in gains usually are not reflected in the accounts since to do so might be to recognize revenue prior to its realization. This means that any gains that result from gain contingencies should be recorded and reported in the period during which the contingency is resolved.
    - (a) For example, the plaintiff in a lawsuit should not record or report the expected damages to be received until the lawsuit has been decided.

**E. Fair Value Option**

As discussed in Section D of Module 9, a company can elect the fair value option for reporting financial assets and financial liabilities. The fair value option also applies to firm commitments that would otherwise not be recognized at inception that only involve financial instruments. Nonfinancial insurance contracts and warranties may only be reported at fair value if the obligation can be settled by paying a third party to provide the goods and services.

**NOW REVIEW MULTIPLE-CHOICE QUESTIONS 77 THROUGH 104**

**F. Ratios**

1. **Solvency**—Measures short-term viability
  - a. **Acid-test (quick) ratio**—Measures ability to pay current liabilities from cash and near-cash items

$$\frac{\text{Cash} + \text{Net receivables} + \text{Marketable securities}}{\text{Current liabilities}}$$

- b. **Current ratio**—Measures ability to pay current liabilities from cash, near-cash, and cash flow items

$$\frac{\text{Current assets}}{\text{Current liabilities}}$$

2. **Operational efficiency**—Measures utilization of assets

- a. **Receivable turnover**—Measures how rapidly cash is collected from credit sales

$$\frac{\text{Net credit sales}}{\text{Average net receivables}}$$

- b. **Number of days' sales in average receivables**—Average length of time receivables are outstanding, which reflects credit and collection policies

$$\frac{365}{\text{Receivable turnover}}$$

- c. **Inventory turnover**—Indicates how rapidly inventory is sold

$$\frac{\text{Cost of goods sold}}{\text{Average inventory}}$$

- d. **Number of days' supply in average inventory**—Measures the number of days inventory is held before sale and therefore reflects the efficiency of the entity's inventory policies

$$\frac{365}{\text{Inventory turnover}}$$

**NOW REVIEW MULTIPLE-CHOICE QUESTIONS 105 THROUGH 112**

- e. **Length of operating cycle**—Measures length of time from purchase of inventory to collection of cash

$$\begin{array}{l} \text{Number of days' supply in average} \\ \text{inventory} \end{array} + \begin{array}{l} \text{Number of days' sales in average} \\ \text{receivables} \end{array}$$

### G. Research Component—Accounting Standards Codification

1. Basic concepts regarding balance sheet classification of current assets and current liabilities are found in ASC Section 210-10-45, which is contained under the heading “Presentation” in the Codification. Specific rules for monetary current assets and current liabilities are located throughout the Codification as shown in the following table.

Topic	Title	Accounting issues
305	<i>Cash and cash equivalents</i>	Classification and disclosures
310	<i>Receivables</i>	A/R, bad debts
405	<i>Liabilities</i>	Cross referencing to specific issues

440	<i>Commitments</i>	Unconditional purchase obligations
450	<i>Contingencies</i>	Contingent liabilities
470	<i>Debt</i>	Liability issues
720	<i>Compensation—general</i>	Compensated absences
820	<i>Fair value measurements</i>	Measuring FV
825	<i>Financial instruments</i>	FV option
835	<i>Interest</i>	Interest rates, imputed interest, interest calculations and disclosures
860	<i>Transfers and servicing</i>	Factoring, pledging, assigning A/R

2. Keywords for research are listed below.

Agreement to refinance	Estimated or accrued amounts	Refinance obligation
Appropriated retained earnings	Examples loss contingencies	Remote
Beneficial interests	Extinguished debt	Retained interests
Benefits of servicing	Extinguished liability	Rights that vest
Classification current liabilities	Fair value retained interests	Sale of financial assets
Collateral	Financial assets	Sale of receivables
Collateral pledged	Financial assets exchange	Securitization
Compensation future absences	Financial liability	Securitized financial assets
Contingency	Loss contingency	Servicing fees
Control transferred assets	Operating cycle	SPE
Current assets	Ordinary operations	Transferor surrendered control
Current liabilities	Primary obligor	Transfers financial assets
Debtor security interest	Probable	Undivided interests
Deduction from receivables	Probable future events	Unilateral ability
Derecognize assets	Proceeds	With recourse
Derecognize liability	Reasonably possible	Without recourse
Estimated loss	Recourse	Working capital

## H. International Financial Reporting Standards (IFRS)

- Normally, assets are reported as current and noncurrent, and liabilities are reported as current and noncurrent on the balance sheet. If a liquidity presentation provides more relevant and reliable information, then balance sheet items may be reported based on their liquidity without segregation.
  - In a balance sheet segregated between current and noncurrent items, an asset is classified as current (1) when the entity expects to realize the asset or to consume or sell it within 12 months or the normal operating cycle, or (2) it holds the asset primarily for the purpose of trading. A liability is classified as current when it expects to settle the liability within the normal operating cycle, the liability will be settled within 12 months after the reporting period, or it holds the liability for the purpose of trading.
- IFRS defines the terms financial assets and financial liabilities.
  - A financial asset is any asset that is cash, an equity instrument of another entity, a contractual right to receive cash or another financial asset, a contractual right to exchange a financial instrument, or a contract that will be settled in the reporting entity's own equity instruments.
    - IFRS 9 requires that financial assets be measured at amortized cost or fair value based on the entity's business model for managing the financial asset and the contractual cash flow characteristics of the financial asset.
      - A financial asset should be measured at amortized cost if the business model's objective is to hold the asset in order to collect contractual cash flows, and the terms of the contract indicate specific dates for the payment of principal and interest on the principle amount outstanding.

- (b) An entity may also elect at initial recognition to value a financial asset at fair value through profit or loss (FVTPL).
- b. A financial liability is any liability that is a contractual obligation to deliver cash or another financial asset, a contractual obligation to exchange financial instruments under potentially unfavorable conditions, or a contract that may be settled in the entity's own equity instruments.
- (1) Financial liabilities are measured at either amortized cost using the effective interest method, or an election may be made to value the financial liability at fair value through profit or loss (FVTPL).
3. There are two important areas where IFRS differ from US GAAP.
- a. The first relates to short-term obligations expected to be refinanced. Under US GAAP, short-term obligations expected to be refinanced may be reported in the noncurrent liability section of the balance sheet if the company has the intent and ability to refinance. However, IFRS requires obligations expected to be refinanced to be reported as current liabilities unless there is an agreement to refinance in place prior to the balance sheet date.
- b. The second area in which the terminology and rules are different is "provisions" and "contingencies." Under IFRS, a "provision" is a liability that is uncertain in timing or amount. Provisions are made for items such as taxes payable, compensated absences, bad debts, warranties, and other estimated liabilities. A "contingency," however, depends upon some future uncertainty or event.
- (1) A contingent asset is a possible asset that arises from past events that will be confirmed only by occurrence or nonoccurrence of uncertain future events that are not within the control of the reporting entity. As with US GAAP, a contingent asset is not recognized, but it is disclosed if the economic benefits are probable.
- (2) Under IFRS, a contingent liability does not have the same definition as in the US standards. Recall that under US GAAP, the accounting for a contingency depends on whether the outcome is probable, reasonably possible, or remote, and whether the contingency is measureable. In contrast, under IFRS if the outcome is probable and measureable, it is not considered a contingency. Instead, it is classified as a "provision."
- (3) Under IFRS, the term contingency is used to describe an event which is not recognized because it is not probable that an outflow will be required or the amount cannot be measured reliably.
- (4) If an item qualifies as a contingency, the notes to the financial statements should include an estimate of the financial effect, and indication of the uncertainties, and the possibility of reimbursement. If the possibility of the event occurring is remote, no disclosure is required in the notes to the financial statements.
- (5) It should be noted that the "probable" threshold test for determining whether a provision should be made is "more likely than not" which is defined as a probability over 50%.
- (6) Under IFRS, if no single amount in a range is a better estimate, then the midpoint of the range is used. US GAAP uses the minimum of the range under those same circumstances.

**NOW REVIEW MULTIPLE-CHOICE QUESTIONS 113 THROUGH 117**

## KEY TERMS

**Acid-test (quick) ratio.** Measures ability to pay current liabilities from cash and near-cash items.

**Allowance method.** Seeks to estimate the amount of uncollectible receivables, and establishes a contra valuation account (allowance for bad debts) for the amount estimated to be uncollectible.

**Amortization method.** Requires servicing assets and servicing liabilities to be initially recorded at fair value. Assets are then amortized in proportion to, and over the period of, receipt of estimated net servicing income or net servicing loss.

**Banker's acceptance.** An order from a customer of a bank for the payment of specified sum of money (like a post-dated check) that may be bought and sold.

**Cash.** Includes both cash (cash on hand and demand deposits) and cash equivalents (short-term, highly liquid investments).

**Cash equivalents.** Readily convertible into cash and so near maturity that they carry little risk of changing in value due to interest rate changes.

**Contingent liabilities.** Obligations may exist but are dependent on uncertain future events.

**Current liabilities.** Obligations whose liquidation is reasonably expected to require the use of existing resources properly classifiable as current assets, or the creation of other current liabilities.

**Current ratio.** Measures ability to pay current liabilities from cash, near-cash, and cash flow items.

**Determinable liabilities.** The amount of cash and time of payment are known and reasonably precise.

**Direct write-off method.** Bad debts are considered expenses in the period in which they are written off.

**Factoring.** Selling receivables at a discount to obtain immediate cash. Traditionally involves the outright sale of receivables to a financing institution known as a factor.

**Fair value method.** Servicing assets and servicing liabilities are initially recorded at fair value. The fair value is measured at each reporting date.

**Inventory turnover.** Indicated how rapidly inventory is sold.

**Length of operating cycle.** Measures length of time from purchase of inventory to collection of cash.

**Loan participations.** A situation where a group of financial institutions (called participating interest holders) purchases a share of a financial instrument (e.g., a loan).

**Net realizable value.** Gross amount of receivables less estimated uncollectibles.

**Number of days' sales in average receivables.** Average length of time receivables are outstanding, which reflects credit and collection policies.

**Number of days' supply in average inventory.** Measures the number of days inventory is held before sale and therefore reflects the efficiency of the entity's inventory policies.

**Operation efficiency.** Measures utilization of assets.

**Probable.** The likelihood of a future event taking place or failing to take place which would resolve the uncertainty.

**Receivable turnover.** Measures how rapidly cash is collected from credit sales.

**Repurchase agreements.** An agreement to sell an asset to a lender and later repurchase the asset. These agreements are in effect using the asset as collateral for a loan.

**Secured borrowing.** Receivables are pledged as collateral for a loan.

**Securitizations.** Purchasing and selling securities that are collateralized by a pool of assets, such as a group of receivables.

**Servicing.** A distinct asset or liability only when separated contractually from the underlying.

**Solvency.** Measures short-term viability.

**Transfers of receivables with recourse.** Selling receivables at a discount to obtain immediate cash but retaining the risk of loss if the customer does not pay the amount owed.

**Transfer of receivables without recourse.** The factor assumes the risk of loss from noncollection.

## Multiple-Choice Questions (1–117)

### A. Cash

1. Burr Company had the following account balances at December 31, year 2:

Cash in banks	\$2,250,000
Cash on hand	125,000
Cash legally restricted for additions to plant (expected to be disbursed in year 3)	1,600,000

Cash in banks includes \$600,000 of compensating balances against short-term borrowing arrangements. The compensating balances are not legally restricted as to withdrawal by Burr. In the current assets section of Burr's December 31, year 2 balance sheet, total cash should be reported at

- a. \$1,775,000
- b. \$2,250,000
- c. \$2,375,000
- d. \$3,975,000

2. Ral Corp.'s checkbook balance on December 31, year 2, was \$5,000. In addition, Ral held the following items in its safe on that date:

Check payable to Ral Corp., dated January 2, year 3, in payment of a sale made in December year 2, not included in December 31 checkbook balance	\$2,000
Check payable to Ral Corp., deposited December 15 and included in December 31 checkbook balance, but returned by bank on December 30 stamped "NSF." The check was redeposited on January 2, year 3, and cleared on January 9	500
Check drawn on Ral Corp.'s account, payable to a vendor, dated and recorded in Ral's books on December 31 but not mailed until January 10, year 3	300

The proper amount to be shown as Cash on Ral's balance sheet at December 31, year 2, is

- a. \$4,800
- b. \$5,300
- c. \$6,500
- d. \$6,800

3. Trans Co. had the following balances at December 31, year 2:

Cash in checking account	\$ 35,000
Cash in money market account	75,000
US Treasury bill, purchased 11/1/year 2, maturing 1/31/year 3	350,000
US Treasury bill, purchased 12/1/year 2, maturing 3/31/year 3	400,000

Trans's policy is to treat as cash equivalents all highly liquid investments with a maturity of three months or less when purchased. What amount should Trans report as cash and cash equivalents in its December 31, year 2 balance sheet?

- a. \$110,000
- b. \$385,000
- c. \$460,000
- d. \$860,000

4. On October 31, year 2, Dingo, Inc. had cash accounts at three different banks. One account balance is segregated solely for a November 15, year 2 payment into a bond sinking fund. A second account, used for branch operations, is overdrawn. The third account, used for regular corporate operations, has a positive balance. How should these accounts be reported in Dingo's October 31, year 2 classified balance sheet?

- a. The segregated account should be reported as a noncurrent asset, the regular account should be reported as a current asset, and the overdraft should be reported as a current liability.
- b. The segregated and regular accounts should be reported as current assets, and the overdraft should be reported as a current liability.
- c. The segregated account should be reported as a noncurrent asset, and the regular account should be reported as a current asset net of the overdraft.
- d. The segregated and regular accounts should be reported as current assets net of the overdraft.

### B. Bank Reconciliations

5. In preparing its August 31, year 2 bank reconciliation, Apex Corp. has available the following information:

Balance per bank statement, 8/31/Y2	\$18,050
Deposit in transit, 8/31/Y2	3,250
Return of customer's check for insufficient funds, 8/31/Y2	600
Outstanding checks, 8/31/Y2	2,750
Bank service charges for August	100

At August 31, year 2, Apex's correct cash balance is

- a. \$18,550
- b. \$17,950
- c. \$17,850
- d. \$17,550

6. Poe, Inc. had the following bank reconciliation at March 31, year 2:

Balance per bank statement, 3/31/Y2	\$46,500
Add deposit in transit	<u>10,300</u>
	56,800
Less outstanding checks	<u>12,600</u>
Balance per books, 3/31/Y2	<u>\$44,200</u>

Data per bank for the month of April year 2 follow:

Deposits	\$58,400
Disbursements	49,700

All reconciling items at March 31, year 2, cleared the bank in April. Outstanding checks at April 30, year 2, totaled \$7,000. There were no deposits in transit at April 30, year 2. What is the cash balance per books at April 30, year 2?

- a. \$48,200
- b. \$52,900
- c. \$55,200
- d. \$58,500

**C. Receivables**

7. On the December 31, year 2 balance sheet of Mann Co., the current receivables consisted of the following:

Trade accounts receivable	\$93,000
Allowance for uncollectible accounts	(2,000)
Claim against shipper for goods lost in transit (November year 2)	3,000
Selling price of unsold goods sent by Mann on consignment at 130% of cost ( <b>not</b> included in Mann's ending inventory)	26,000
Security deposit on lease of warehouse used for storing some inventories	<u>30,000</u>
Total	<u>\$150,000</u>

At December 31, year 2, the correct total of Mann's current net receivables was

- a. \$94,000
- b. \$120,000
- c. \$124,000
- d. \$150,000

8. The following information relates to Jay Co.'s accounts receivable for year 2:

	\$
Accounts receivable, 1/1/Y2	650,000
Credit sales for year 2	2,700,000
Sales returns for year 2	75,000
Accounts written off during year 2	40,000
Collections from customers during year 2	2,150,000
Estimated future sales returns at 12/31/Y2	50,000
Estimated uncollectible accounts at 12/31/Y2	110,000

What amount should Jay report for accounts receivable, before allowances for sales returns and uncollectible accounts, at December 31, year 2?

- a. \$1,200,000
- b. \$1,125,000
- c. \$1,085,000
- d. \$ 925,000

9. Frame Co. has an 8% note receivable dated June 30, year 1, in the original amount of \$150,000. Payments of \$50,000 in principal plus accrued interest are due annually on July 1, year 2, year 3, and year 4. In its June 30, year 2 balance sheet, what amount should Frame report as a current asset for interest on the note receivable?

- a. \$0
- b. \$4,000
- c. \$8,000
- d. \$12,000

10. On December 1, year 2, Tigg Mortgage Co. gave Pod Corp. a \$200,000, 12% loan. Pod received proceeds of \$194,000 after the deduction of a \$6,000 nonrefundable loan origination fee. Principal and interest are due in sixty monthly installments of \$4,450, beginning January 1, year 3. The repayments yield an effective interest rate of 12% at a present value of \$200,000 and 13.4% at a present value of \$194,000. Tigg does not elect the fair value option for recording the note to Pod. What amount of accrued interest receivable should Tigg include in its December 31, year 2 balance sheet?

- a. \$4,450
- b. \$2,166
- c. \$2,000
- d. \$0

11. On Merf's April 30, year 2 balance sheet a note receivable was reported as a noncurrent asset and its accrued interest for eight months was reported as a current asset. Which of the following terms would fit Merf's note receivable?

- a. Both principal and interest amounts are payable on August 31, year 2, and August 31, year 3.
- b. Principal and interest are due December 31, year 2.
- c. Both principal and interest amounts are payable on December 31, year 2, and December 31, year 3.
- d. Principal is due August 31, year 3, and interest is due August 31, year 2, and August 31, year 3.

12. On August 15, year 2, Benet Co. sold goods for which it received a note bearing the market rate of interest on that date. The four-month note was dated July 15, year 2. Note principal, together with all interest, is due November 15, year 2. Assume Benet did not elect the fair value option for reporting the note. When the note was recorded on August 15, which of the following accounts increased?

- a. Unearned discount.
- b. Interest receivable.
- c. Prepaid interest.
- d. Interest revenue.

**C.1. Anticipation of Sales Discounts**

13. Delta, Inc. sells to wholesalers on terms of 2/15, net 30. Delta has no cash sales but 50% of Delta's customers take advantage of the discount. Delta uses the gross method of recording sales and trade receivables. An analysis of Delta's trade receivables balances at December 31, year 2, revealed the following:

Age	Amount	Collectible
0 – 15 days	\$100,000	100%
16 – 30 days	60,000	95%
31 – 60 days	5,000	90%
Over 60 days	<u>2,500</u>	\$500
	<u>\$167,500</u>	

In its December 31, year 2 balance sheet, what amount should Delta report for allowance for discounts?

- a. \$1,000
- b. \$1,620
- c. \$1,675
- d. \$2,000

14. Fenn Stores, Inc. had sales of \$1,000,000 during December, year 2. Experience has shown that merchandise equaling 7% of sales will be returned within thirty days and an additional 3% will be returned within ninety days. Returned merchandise is readily resalable. In addition, merchandise equaling 15% of sales will be exchanged for merchandise of equal or greater value. What amount should Fenn report for net sales in its income statement for the month of December year 2?

- a. \$900,000
- b. \$850,000
- c. \$780,000
- d. \$750,000

**C.2. Bad Debts Expense**

15. At January 1, year 2, Jamin Co. had a credit balance of \$260,000 in its allowance for uncollectible accounts. Based on past experience, 2% of Jamin’s credit sales have been uncollectible. During year 2 Jamin wrote off \$325,000 of uncollectible accounts. Credit sales for year 2 were \$9,000,000. In its December 31, year 2 balance sheet, what amount should Jamin report as allowance for uncollectible accounts?

- a. \$115,000
- b. \$180,000
- c. \$245,000
- d. \$440,000

16. The following accounts were abstracted from Roxy Co.’s unadjusted trial balance at December 31, year 2:

	Debit	Credit
Accounts receivable	\$1,000,000	
Allowance for uncollectible accounts		8,000
Net credit sales		\$3,000,000

Roxy estimates that 3% of the gross accounts receivable will become uncollectible. After adjustment at December 31, year 2, the allowance for uncollectible accounts should have a credit balance of

- a. \$90,000
- b. \$82,000

- c. \$38,000
- d. \$30,000

17. In its December 31 balance sheet, Butler Co. reported trade accounts receivable of \$250,000 and related allowance for uncollectible accounts of \$20,000. What is the total amount of risk of accounting loss related to Butler’s trade accounts receivable, and what amount of that risk is off-balance-sheet risk?

	Risk of accounting loss	Off-balance-sheet risk
a.	\$0	\$0
b.	\$230,000	\$0
c.	\$230,000	\$20,000
d.	\$250,000	\$20,000

18. Inge Co. determined that the net value of its accounts receivable at December 31, year 2, based on an aging of the receivables, was \$325,000. Additional information is as follows:

Allowance for uncollectible accounts—1/1/Y2	\$30,000
Uncollectible accounts written off during year 2	18,000
Uncollectible accounts recovered during year 2	2,000
Accounts receivable at 12/31/Y2	350,000

For year 2, what would be Inge’s uncollectible accounts expense?

- a. \$5,000
- b. \$11,000
- c. \$15,000
- d. \$21,000

19. The following information pertains to Tara Co.’s accounts receivable at December 31, year 2:

Days outstanding	Amount	Estimated % uncollectible
0 – 60	\$120,000	1%
61 – 120	90,000	2%
Over 120	<u>100,000</u>	6%
	<u>\$310,000</u>	

During year 2, Tara wrote off \$7,000 in receivables and recovered \$4,000 that had been written off in prior years. Tara’s December 31, year 1 allowance for uncollectible accounts was \$22,000. Under the aging method, what amount of allowance for uncollectible accounts should Tara report at December 31, year 2?

- a. \$9,000
- b. \$10,000
- c. \$13,000
- d. \$19,000

20. A method of estimating uncollectible accounts that emphasizes asset valuation rather than income measurement is the allowance method based on

- a. Aging the receivables.
- b. Direct write-off.
- c. Gross sales.
- d. Credit sales less returns and allowances.

21. Which method of recording uncollectible accounts expense is consistent with accrual accounting?

	Allowance	Direct write-off
a.	Yes	Yes
b.	Yes	No
c.	No	Yes
d.	No	No

22. When the allowance method of recognizing uncollectible accounts is used, the entry to record the write-off of a specific account

- a. Decreases both accounts receivable and the allowance for uncollectible accounts.
- b. Decreases accounts receivable and increases the allowance for uncollectible accounts.
- c. Increases the allowance for uncollectible accounts and decreases net income.
- d. Decreases both accounts receivable and net income.

23. A company uses the allowance method to recognize uncollectible accounts expense. What is the effect at the time of the collection of an account previously written off on each of the following accounts?

	Allowance for uncollectible accounts	Uncollectible accounts expense
a.	No effect	Decrease
b.	Increase	Decrease
c.	Increase	No effect
d.	No effect	No effect

### C.3. Transfers and Servicing of Financial Assets (ASC Topic 860)

24. Which of the following is a method to generate cash from accounts receivables?

	Assignment	Factoring
a.	Yes	No
b.	Yes	Yes
c.	No	Yes
d.	No	No

25. Gar Co. factored its receivables. Control was surrendered in the transaction which was on a without recourse basis with Ross Bank. Gar received cash as a result of this transaction, which is **best** described as a

- a. Loan from Ross collateralized by Gar's accounts receivable.
- b. Loan from Ross to be repaid by the proceeds from Gar's accounts receivable.
- c. Sale of Gar's accounts receivable to Ross, with the risk of uncollectible accounts retained by Gar.
- d. Sale of Gar's accounts receivable to Ross, with the risk of uncollectible accounts transferred to Ross.

Items 26 through 28 are based on the following:

Taylor Corp. factored \$400,000 of accounts receivable to Rich Corp. on July 1, year 2. Control was surrendered by Taylor. Rich accepted the receivables subject to recourse for nonpayment. Rich assessed a fee of 2% and retains a holdback equal to 5% of the accounts receivable. In addition, Rich charged 15% interest computed on a weighted-average time to maturity of the receivables of forty-one days. The fair value of the recourse obligation is \$12,000.

26. Taylor will receive and record cash of

- a. \$385,260
- b. \$357,260
- c. \$365,260
- d. \$377,260

27. Which of the following statements is correct?

- a. Rich should record an asset of \$8,000 for the recourse obligation.
- b. Taylor should record a liability and corresponding loss of \$12,000 related to the recourse obligation.
- c. Taylor should record a liability of \$12,000, but no loss, related to the recourse obligation.
- d. No entry for the recourse obligation should be made by Taylor or Rich until the debtor fails to pay.

28. Assuming all receivables are collected, Taylor's cost of factoring the receivables would be

- a. \$8,000
- b. \$34,740
- c. \$42,740
- d. \$14,740

29. Which of the following is used to account for probable sales discounts, sales returns, and sales allowances?

	Due from factor	Recourse liability
a.	Yes	No
b.	Yes	Yes
c.	No	Yes
d.	No	No

30. Scarbrough Corp. factored \$600,000 of accounts receivable to Duff Corp. on October 1, year 2. Control was surrendered by Scarbrough. Duff accepted the receivables subject to recourse for nonpayment. Duff assessed a fee of 3% and retains a holdback equal to 5% of the accounts receivable. In addition, Duff charged 15% interest computed on a weighted-average time to maturity of the receivables of fifty-four days. The fair value of the recourse obligation is \$9,000. Scarbrough will receive and record cash of

- a. \$529,685
- b. \$538,685
- c. \$547,685
- d. \$556,685

31. Synthia Corp. factored \$750,000 of accounts receivable to Thomas Company on December 3, year 2. Control was surrendered by Synthia. Thomas accepted the receivables subject to recourse for nonpayment. Thomas assessed a fee

of 2% and retains a holdback equal to 4% of the accounts receivable. In addition, Thomas charged 12% interest computed on a weighted-average time to maturity of the receivables of fifty-one days. The fair value of the recourse obligation is \$15,000. Assuming all receivables are collected, Synthia's cost of factoring the receivables would be

- \$12,575
- \$15,000
- \$27,575
- \$42,575

**32.** Bannon Corp. transferred financial assets to Chapman, Inc. The transfer meets the conditions to be accounted for as a sale. As the transferor, Bannon should do each of the following, **except**

- Remove all assets sold from the balance sheet.
- Record all assets received and liabilities incurred as proceeds from the sale.
- Measure the assets received and liabilities incurred at cost.
- Recognize any gain or loss on the sale.

**33.** If financial assets are exchanged for cash or other consideration, but the transfer does not meet the criteria for a sale, the transferor and the transferee should account for the transaction as a

	Secured borrowing	Pledge of collateral
a.	No	Yes
b.	Yes	Yes
c.	Yes	No
d.	No	No

**34.** All but one of the following are required before a transfer of receivables can be recorded as a sale.

- The transferred receivables are beyond the reach of the transferor and its creditors.
- The transferor has not kept effective control over the transferred receivables through a repurchase agreement.
- The transferor maintains continuing involvement.
- The transferee can pledge or sell the transferred receivables.

**35.** Which of the following is **not** an objective for each entity accounting for transfers of financial assets?

- To derecognize assets when control is gained.
- To derecognize liabilities when extinguished.
- To recognize liabilities when incurred.
- To derecognize assets when control is given up.

**36.** Which of the following is false?

- A servicing asset shall be assessed for impairment based on its fair value.
- A servicing liability shall be assessed for increased obligation based on its fair value.

- An obligation to service financial assets may result in the recognition of a servicing asset or servicing liability.
- A servicing asset or liability should be amortized for a period of five years.

**37.** Fusion Corporation uses the amortization method to account for its servicing assets. Which of the following statements is true?

- Increases in fair value are reported in other comprehensive income.
- Increases in fair value are reported in earnings of the period.
- The assets are measured at fair value at the end of each reporting period.
- The assets are measured for impairment at the end of each reporting period.

**38.** According to ASC Topic 860, which of the following statements is true regarding servicing assets and servicing liabilities?

- Either the amortization method or the fair value method can be used.
  - Once the fair value method is elected, the election cannot be reversed.
  - Changes in fair value are reported in other comprehensive income for the period.
- I only.
  - I and II.
  - II only.
  - I and III.

**39.** Binsar Corporation transfers a financial asset but continues to hold an interest in the servicing asset. How should the interest in the servicing asset that continues to be held be measured at the date of the transfer?

- At the present value of future cash flows.
- At fair value.
- At the difference between the previous carrying amount and the amount derecognized.
- At net realizable value.

**40.** Which of the following is true?

- A debtor may not grant a security interest in certain assets to a lender to serve as collateral with recourse.
- A debtor may not grant a security interest in certain assets to a lender to serve as collateral without recourse.
- The arrangement of having collateral transferred to a secured party is known as a pledge.
- Secured parties are never permitted to sell collateral held under a pledge.

**Items 41 through 43** are based on the following:

Company ABC sells loans with a \$2,200 fair value and a carrying amount of \$2,000. ABC Company obtains an option to purchase similar loans and assumes a recourse obligation to repurchase loans. ABC Company also agrees to provide

a floating rate of interest to the transferee company. The fair values are listed.

<b>Fair values</b>	
Cash proceeds	\$2,100
Interest rate swap	140
Call option	80
Recourse obligation	(120)

41. What is the gain (loss) on the sale?
- \$320
  - \$200
  - \$(100)
  - \$120
42. The journal entry to record the transfer for ABC Company includes
- A debit to call option.
  - A credit to interest rate swap.
  - A debit to loans.
  - A credit to cash.
43. Assume for this problem that ABC Company agreed to service the loans without explicitly stating the compensation. The fair value of the service is \$50. What are the net proceeds received and the gain (loss) on the sale?

	<b>Net proceeds received</b>	<b>Gain (loss)</b>
a.	\$2,200	\$200
b.	\$2,250	\$250
c.	\$2,150	\$150
d.	\$2,200	\$(250)

44. In accordance with accounting for transfers and servicing, financial assets subject to prepayment should be measured
- Like investments in debt securities classified as held-to-maturity.
  - At cost.
  - Like investments in debt securities classified as available-for-sale or trading.
  - At fair value.
45. In accordance with accounting for transfers and servicing, all of the following would be disclosed **except**
- Policy for requiring collateral or other security due to repurchase agreements or securities lending transactions.
  - Cash flows between the securitization special-purpose entity (SPE) and the transferor.
  - Accounting policies for measuring interests that continue to be held.
  - Description of assets or liabilities with estimable fair values.
46. Taft Inc. borrowed \$1,000,000 from Wilson Company on July 2, year 8. As part of the loan agreement, Taft granted Wilson a security interest in land that originally cost \$750,000 when it was acquired by Taft in year 1. The land had a fair value of \$900,000 on July 2, year 8. In June year 9, Taft

defaulted on its loan to Wilson, and the land was transferred to Wilson in full settlement of the debt on June 30. The land had a fair value of \$950,000 on June 30, year 9. What amount should Wilson record for land on June 30, year 9?

- \$0
- \$750,000
- \$900,000
- \$950,000

### D.1. Examples of Current Liabilities

47. Lyle, Inc. is preparing its financial statements for the year ended December 31, year 2. Accounts payable amounted to \$360,000 before any necessary year-end adjustment related to the following:

- At December 31, year 2, Lyle has a \$50,000 debit balance in its accounts payable to Ross, a supplier, resulting from a \$50,000 advance payment for goods to be manufactured to Lyle's specifications.
- Checks in the amount of \$100,000 were written to vendors and recorded on December 29, year 2. The checks were mailed on January 5, year 3.

What amount should Lyle report as accounts payable in its December 31, year 2 balance sheet?

- \$510,000
- \$410,000
- \$310,000
- \$210,000

48. Rabb Co. records its purchases at gross amounts but wishes to change to recording purchases net of purchase discounts. Discounts available on purchases recorded from October 1, year 1, to September 30, year 2, totaled \$2,000. Of this amount, \$200 is still available in the accounts payable balance. The balances in Rabb's accounts as of and for the year ended September 30, year 2, before conversion are

Purchases	\$100,000
Purchase discounts taken	800
Accounts payable	30,000

What is Rabb's accounts payable balance as of September 30, year 2, after the conversion?

- \$29,800
- \$29,200
- \$28,800
- \$28,200

49. On March 1, year 1, Fine Co. borrowed \$10,000 and signed a two-year note bearing interest at 12% per annum compounded annually. Interest is payable in full at maturity on February 28, year 3. What amount should Fine report as a liability for accrued interest at December 31, year 2?

- \$0
- \$1,000
- \$1,200
- \$2,320

**50.** On September 1, year 1, Brak Co. borrowed on a \$1,350,000 note payable from Federal Bank. The note bears interest at 12% and is payable in three equal annual principal payments of \$450,000. On this date, the bank's prime rate was 11%. The first annual payment for interest and principal was made on September 1, year 2. At December 31, year 2, what amount should Brak report as accrued interest payable?

- a. \$54,000
- b. \$49,500
- c. \$36,000
- d. \$33,000

**51.** In its year 2 financial statements, Cris Co. reported interest expense of \$85,000 in its income statement and cash paid for interest of \$68,000 in its cash flow statement. There was no prepaid interest or interest capitalization either at the beginning or end of year 2. Accrued interest at December 31, year 1, was \$15,000. What amount should Cris report as accrued interest payable in its December 31, year 2 balance sheet?

- a. \$2,000
- b. \$15,000
- c. \$17,000
- d. \$32,000

**52.** Ames, Inc. has \$500,000 of notes payable due June 15, year 3. Ames signed an agreement on December 1, year 2, to borrow up to \$500,000 to refinance the notes payable on a long-term basis with no payments due until year 4. The financing agreement stipulated that borrowings may not exceed 80% of the value of the collateral Ames was providing. At the date of issuance of the December 31, year 2 financial statements, the value of the collateral was \$600,000 and is not expected to fall below this amount during year 3. In Ames' December 31, year 2 balance sheet, the obligation for these notes payable should be classified as

	Short-term	Long-term
a.	\$500,000	\$0
b.	\$100,000	\$400,000
c.	\$20,000	\$480,000
d.	\$0	\$500,000

**53.** A company issued a short-term note payable with a stated 12% rate of interest to a bank. The bank charged a .5% loan origination fee and remitted the balance to the company. The effective interest rate paid by the company in this transaction would be

- a. Equal to 12.5%.
- b. More than 12.5%.
- c. Less than 12.5%.
- d. Independent of 12.5%.

**54.** Cali, Inc. had a \$4,000,000 note payable due on March 15, year 3. On January 28, year 3, before the issuance of its year 2 financial statements, Cali issued long-term bonds in the amount of \$4,500,000. Proceeds from the bonds were used to repay the note when it came due. How should Cali

classify the note in its December 31, year 2 financial statements?

- a. As a current liability, with separate disclosure of the note refinancing.
- b. As a current liability, with no separate disclosure required.
- c. As a noncurrent liability, with separate disclosure of the note refinancing.
- d. As a noncurrent liability, with no separate disclosure required.

**55.** On December 31, year 2, Largo, Inc. had a \$750,000 note payable outstanding, due July 31, year 3. Largo borrowed the money to finance construction of a new plant. Largo planned to refinance the note by issuing long-term bonds. Because Largo temporarily had excess cash, it prepaid \$250,000 of the note on January 12, year 3. In February year 3, Largo completed a \$1,500,000 bond offering. Largo will use the bond offering proceeds to repay the note payable at its maturity and to pay construction costs during year 3. On March 3, year 3, Largo issued its year 2 financial statements. What amount of the note payable should Largo include in the current liabilities section of its December 31, year 2 balance sheet?

- a. \$750,000
- b. \$500,000
- c. \$250,000
- d. \$0

**56.** Rice Co. salaried employees are paid biweekly. Advances made to employees are paid back by payroll deductions. Information relating to salaries follows:

	12/31/Y1	12/31/Y2
Employee advances	\$24,000	\$ 36,000
Accrued salaries payable	40,000	?
Salaries expense during the year		420,000
Salaries paid during the year (gross)		390,000

In Rice's December 31, year 2 balance sheet, accrued salaries payable was

- a. \$94,000
- b. \$82,000
- c. \$70,000
- d. \$30,000

**57.** Fay Corp. pays its outside salespersons fixed monthly salaries and commissions on net sales. Sales commissions are computed and paid on a monthly basis (in the month following the month of sale), and the fixed salaries are treated as advances against commissions. However, if the fixed salaries for salespersons exceed their sales commissions earned for a month, such excess is not charged back to them. Pertinent data for the month of March year 2 for the three salespersons are as follows:

Salesperson	Fixed salary	Net sales	Commission rate
A	\$10,000	\$ 200,000	4%
B	14,000	400,000	6%
C	<u>18,000</u>	<u>600,000</u>	6%
Totals	<u>\$42,000</u>	<u>\$1,200,000</u>	

What amount should Fay accrue for sales commissions payable at March 31, year 2?

- a. \$70,000
- b. \$68,000
- c. \$28,000
- d. \$26,000

58. Lime Co.'s payroll for the month ended January 31, year 2, is summarized as follows:

Total wages	\$10,000
Federal income tax withheld	1,200

All wages paid were subject to FICA. FICA tax rates were 7% each for employee and employer. Lime remits payroll taxes on the 15th of the following month. In its financial statements for the month ended January 31, year 2, what amounts should Lime report as total payroll tax liability and as payroll tax expense?

	Liability	Expense
a.	\$1,200	\$1,400
b.	\$1,900	\$1,400
c.	\$1,900	\$700
d.	\$2,600	\$700

59. Under state law, Acme may pay 3% of eligible gross wages or it may reimburse the state directly for actual unemployment claims. Acme believes that actual unemployment claims will be 2% of eligible gross wages and has chosen to reimburse the state. Eligible gross wages are defined as the first \$10,000 of gross wages paid to each employee. Acme had five employees, each of whom earned \$20,000 during year 2. In its December 31, year 2 balance sheet, what amount should Acme report as accrued liability for unemployment claims?

- a. \$1,000
- b. \$1,500
- c. \$2,000
- d. \$3,000

60. Pine Corp. is required to contribute, to an employee stock ownership plan (ESOP), 10% of its income after deduction for this contribution but before income tax. Pine's income before charges for the contribution and income tax was \$75,000. The income tax rate is 30%. What amount should be accrued as a contribution to the ESOP?

- a. \$7,500
- b. \$6,818
- c. \$5,250
- d. \$4,773

61. Able Co. provides an incentive compensation plan under which its president receives a bonus equal to 10% of the corporation's income before income tax but after deduction of the bonus. If the tax rate is 40% and net income after bonus and income tax was \$360,000, what was the amount of the bonus?

- a. \$36,000
- b. \$60,000
- c. \$66,000
- d. \$90,000

62. Ivy Co. operates a retail store. All items are sold subject to a 6% state sales tax, which Ivy collects and records as sales revenue. Ivy files quarterly sales tax returns when due, by the twentieth day following the end of the sales quarter. However, in accordance with state requirements, Ivy remits sales tax collected by the twentieth day of the month following any month such collections exceed \$500. Ivy takes these payments as credits on the quarterly sales tax return. The sales taxes paid by Ivy are charged against sales revenue.

Following is a monthly summary appearing in Ivy's first quarter year 2 sales revenue account:

	Debit	Credit
January	\$ --	\$10,600
February	600	7,420
March	--	<u>8,480</u>
	<u>\$600</u>	<u>\$26,500</u>

In its March 31, year 2 balance sheet, what amount should Ivy report as sales taxes payable?

- a. \$600
- b. \$900
- c. \$1,500
- d. \$1,590

63. Hudson Hotel collects 15% in city sales taxes on room rentals, in addition to a \$2 per room, per night, occupancy tax. Sales taxes for each month are due at the end of the following month, and occupancy taxes are due fifteen days after the end of each calendar quarter. On January 3, year 3, Hudson paid its November year 2 sales taxes and its fourth quarter year 2 occupancy taxes. Additional information pertaining to Hudson's operations is

Year 2	Room rentals	Room nights
October	\$100,000	1,100
November	110,000	1,200
December	150,000	1,800

What amounts should Hudson report as sales taxes payable and occupancy taxes payable in its December 31, year 2 balance sheet?

	Sales taxes	Occupancy taxes
a.	\$39,000	\$6,000
b.	\$39,000	\$8,200
c.	\$54,000	\$6,000
d.	\$54,000	\$8,200

**64.** On July 1, year 2, Ran County issued realty tax assessments for its fiscal year ended June 30, year 3. On September 1, year 2, Day Co. purchased a warehouse in Ran County. The purchase price was reduced by a credit for accrued realty taxes. Day did not record the entire year's real estate tax obligation, but instead records tax expenses at the end of each month by adjusting prepaid real estate taxes or real estate taxes payable, as appropriate. On November 1, year 2, Day paid the first of two equal installments of \$12,000 for realty taxes. What amount of this payment should Day re-cord as a debit to real estate taxes payable?

- \$4,000
- \$8,000
- \$10,000
- \$12,000

**65.** Kemp Co. must determine the December 31, year 2 year-end accruals for advertising and rent expenses. A \$500 advertising bill was received January 7, year 3, comprising costs of \$375 for advertisements in December year 2 issues, and \$125 for advertisements in January year 3 issues of the newspaper.

A store lease, effective December 16, year 1, calls for fixed rent of \$1,200 per month, payable one month from the effective date and monthly thereafter. In addition, rent equal to 5% of net sales over \$300,000 per calendar year is payable on January 31 of the following year. Net sales for year 2 were \$550,000.

In its December 31, year 2 balance sheet, Kemp should report accrued liabilities of

- \$12,875
- \$13,000
- \$13,100
- \$13,475

**66.** On May 1, year 2, Marno County issued property tax assessments for the fiscal year ended June 30, year 3. The first of two equal installments was due on November 1, year 2. On September 1, year 2, Dyr Co. purchased a four-year-old factory in Marno subject to an allowance for accrued taxes. Dyr did not record the entire year's property tax obligation, but instead records tax expenses at the end of each month by adjusting prepaid property taxes or property taxes payable, as appropriate. The recording of the November 1, year 2 payment by Dyr should have been allocated between an increase in prepaid property taxes and a decrease in property taxes payable in which of the following percentages?

	Percentage allocated to	
	Increase in pre-paid property taxes	Decrease in property taxes payable
a.	66 2/3%	33 1/3%
b.	0%	100%
c.	50%	50%
d.	33 1/3%	66 2/3%

**67.** Black Co. requires advance payments with special orders for machinery constructed to customer specifications. These advances are nonrefundable. Information for year 2 is as follows:

Customer advances—balance 12/31/Y1	\$118,000
Advances received with orders in year 2	184,000
Advances applied to orders shipped in year 2	164,000
Advances applicable to orders cancelled in year 2	50,000

In Black's December 31, year 2 balance sheet, what amount should be reported as a current liability for advances from customer?

- \$0
- \$88,000
- \$138,000
- \$148,000

**68.** Marr Co. sells its products in reusable containers. The customer is charged a deposit for each container delivered and receives a refund for each container returned within two years after the year of delivery. Marr accounts for the containers not returned within the time limit as being retired by sale at the deposit amount. Information for year 3 is as follows:

Container deposits at December 31, year 2, from deliveries in

Year 1	\$150,000	
Year 2	<u>430,000</u>	\$580,000
Deposits for containers delivered in year 3		780,000

Deposits for containers returned in year 3 from deliveries in

Year 1	\$ 90,000	
Year 2	250,000	
Year 3	<u>286,000</u>	626,000

In Marr's December 31, year 3 balance sheet, the liability for deposits on returnable containers should be

- \$494,000
- \$584,000
- \$674,000
- \$734,000

**69.** Kent Co., a division of National Realty, Inc., maintains escrow accounts and pays real estate taxes for National's mortgage customers. Escrow funds are kept in interest-bearing accounts. Interest, less a 10% service fee, is credited to the mortgagee's account and used to reduce future escrow payments. Additional information follows:

Escrow accounts liability, 1/1/Y2	\$ 700,000
Escrow payments received during year 2	1,580,000
Real estate taxes paid during year 2	1,720,000
Interest on escrow funds during year 2	50,000

What amount should Kent report as escrow accounts liability in its December 31, year 2 balance sheet?

- a. \$510,000
- b. \$515,000
- c. \$605,000
- d. \$610,000

70. Cobb Company sells appliance service contracts agreeing to repair appliances for a two-year period. Cobb's past experience is that, of the total dollars spent for repairs on service contracts, 40% is incurred evenly during the first contract year and 60% evenly during the second contract year. Receipts from service contract sales for the two years ended December 31, year 2, are as follows:

Year 1	\$500,000
Year 2	600,000

Receipts from contracts are credited to unearned service contract revenue. Assume that all contract sales are made evenly during the year. What amount should Cobb report as unearned service contract revenue at December 31, year 2?

- a. \$360,000
- b. \$470,000
- c. \$480,000
- d. \$630,000

71. Toddler Care Co. offers three payment plans on its twelve-month contracts. Information on the three plans and the number of children enrolled in each plan for the September 1, year 2 through August 31, year 3 contract year follows:

Plan	Initial payment per child	Monthly fees per child	Number of children
#1	\$500	\$ --	15
#2	200	30	12
#3	--	50	<u>9</u>
			<u>36</u>

Toddler received \$9,900 of initial payments on September 1, year 2, and \$3,240 of monthly fees during the period September 1 through December 31, year 2. In its December 31, year 2 balance sheet, what amount should Toddler report as deferred revenues?

- a. \$3,300
- b. \$4,380
- c. \$6,600
- d. \$9,900

72. A retail store received cash and issued gift certificates that are redeemable in merchandise. The gift certificates lapse one year after they are issued. How would the deferred revenue account be affected by each of the following transactions?

	Redemption of certificates	Lapse of certificates
a.	Decrease	No effect
b.	Decrease	Decrease
c.	No effect	No effect
d.	No effect	Decrease

73. On March 31, year 2, Dallas Co. received an advance payment of 60% of the sales price for special-order goods to be manufactured and delivered within five months. At the same time, Dallas subcontracted for production of the special-order goods at a price equal to 40% of the main contract price. What liabilities should be reported in Dallas' March 31, year 2 balance sheet?

	Deferred revenues	Payables to subcontractor
a.	None	None
b.	60% of main contract price	40% of main contract price
c.	60% of main contract price	None
d.	None	40% of main contract price

74. In June year 2, Northan Retailers sold refundable merchandise coupons. Northan received \$10 for each coupon redeemable from July 1 to December 31, year 2, for merchandise with a retail price of \$11. At June 30, year 2, how should Northan report these coupon transactions?

- a. Unearned revenues at the merchandise's retail price.
- b. Unearned revenues at the cash received amount.
- c. Revenues at the merchandise's retail price.
- d. Revenues at the cash received amount.

75. Delect Co. provides repair services for the AZ195 TV set. Customers prepay the fee on the standard one-year service contract. The year 1 and year 2 contracts were identical, and the number of contracts outstanding was substantially the same at the end of each year. However, Delect's December 31, year 2 deferred revenues' balance on unperformed service contracts was significantly less than the balance at December 31, year 1. Which of the following situations might account for this reduction in the deferred revenue balance?

- a. Most year 2 contracts were signed later in the calendar year than were the year 1 contracts.
- b. Most year 2 contracts were signed earlier in the calendar year than were the year 1 contracts.
- c. The year 2 contract contribution margin was greater than the year 1 contract contribution margin.
- d. The year 2 contribution margin was less than the year 1 contract contribution margin.

76. Brad Corp. has unconditional purchase obligations associated with product financing arrangements. These obligations are reported as liabilities on Brad's balance sheet, with the related assets also recognized. In the notes to Brad's financial statements, the aggregate amount of payments for these obligations should be disclosed for each of how many years following the date of the latest balance sheet?

- a. 0
- b. 1
- c. 5
- d. 10

## D.2. Contingencies

**77.** On January 17, year 2, an explosion occurred at a Sims Co. plant causing extensive property damage to area buildings. Although no claims had yet been asserted against Sims by March 10, year 2, Sims' management and counsel concluded that it is likely that claims will be asserted and that it is reasonably possible Sims will be responsible for damages. Sims' management believed that \$1,250,000 would be a reasonable estimate of its liability. Sims' \$5,000,000 comprehensive public liability policy has a \$250,000 deductible clause. In Sims' December 31, year 1 financial statements, which were issued on March 25, year 2, how should this item be reported?

- As an accrued liability of \$250,000.
- As a footnote disclosure indicating the possible loss of \$250,000.
- As a footnote disclosure indicating the possible loss of \$1,250,000.
- No footnote disclosure or accrual is necessary.

**78.** Brite Corp. had the following liabilities at December 31, year 2:

Accounts payable	\$55,000
Unsecured notes, 8%, due 7/1/Y3	400,000
Accrued expenses	35,000
Contingent liability	450,000
Deferred income tax liability	25,000
Senior bonds, 7%, due 3/31/Y3	1,000,000

The contingent liability is an accrual for possible losses on a \$1,000,000 lawsuit filed against Brite. Brite's legal counsel expects the suit to be settled in year 4, and has estimated that Brite will be liable for damages in the range of \$450,000 to \$750,000.

The deferred income tax liability is not related to an asset for financial reporting and is expected to reverse in year 4.

What amount should Brite report in its December 31, year 2 balance sheet for current liabilities?

- \$515,000
- \$940,000
- \$1,490,000
- \$1,515,000

**79.** On February 5, year 3, an employee filed a \$2,000,000 lawsuit against Steel Co. for damages suffered when one of Steel's plants exploded on December 29, year 2. Steel's legal counsel expects the company will lose the lawsuit and estimates the loss to be between \$500,000 and \$1,000,000. The employee has offered to settle the lawsuit out of court for \$900,000, but Steel will not agree to the settlement. In its December 31, year 2 balance sheet, what amount should Steel report as liability from lawsuit?

- \$2,000,000
- \$1,000,000
- \$900,000
- \$500,000

**80.** On November 5, year 2, a Dunn Corp. truck was in an accident with an auto driven by Bell. Dunn received notice

on January 12, year 3, of a lawsuit for \$700,000 damages for personal injuries suffered by Bell. Dunn Corp.'s counsel believes it is probable that Bell will be awarded an estimated amount in the range between \$200,000 and \$450,000, and that \$300,000 is a better estimate of potential liability than any other amount. Dunn's accounting year ends on December 31, and the year 2 financial statements were issued on March 2, year 3. What amount of loss should Dunn accrue at December 31, year 2?

- \$0
- \$200,000
- \$300,000
- \$450,000

**81.** During year 2, Haft Co. became involved in a tax dispute with the IRS. At December 31, year 2, Haft's tax advisor believed that an unfavorable outcome was probable. A reasonable estimate of additional taxes was \$200,000 but could be as much as \$300,000. After the year 2 financial statements were issued, Haft received and accepted an IRS settlement offer of \$275,000. What amount of accrued liability should Haft have reported in its December 31, year 2 balance sheet?

- \$200,000
- \$250,000
- \$275,000
- \$300,000

**82.** Management can estimate the amount of loss that will occur if a foreign government expropriates some company assets. If expropriation is reasonably possible, a loss contingency should be

- Disclosed but not accrued as a liability.
- Disclosed and accrued as a liability.
- Accrued as a liability but not disclosed.
- Neither accrued as a liability nor disclosed.

**83.** Invern, Inc. has a self-insurance plan. Each year, retained earnings is appropriated for contingencies in an amount equal to insurance premiums saved less recognized losses from lawsuits and other claims. As a result of a year 2 accident, Invern is a defendant in a lawsuit in which it will probably have to pay damages of \$190,000. What are the effects of this lawsuit's probable outcome on Invern's year 2 financial statements?

- An increase in expenses and no effect on liabilities.
- An increase in both expenses and liabilities.
- No effect on expenses and an increase in liabilities.
- No effect on either expenses or liabilities.

**84.** In year 1, a personal injury lawsuit was brought against Halsey Co. Based on counsel's estimate, Halsey reported a \$50,000 liability in its December 31, year 1 balance sheet. In November year 2, Halsey received a favorable judgment, requiring the plaintiff to reimburse Halsey for expenses of \$30,000. The plaintiff has appealed the decision, and Halsey's counsel is unable to predict the outcome of the appeal. In its December 31, year 2 balance sheet, Halsey should report what amounts of asset and liability related to these legal actions?

	Asset	Liability
a.	\$30,000	\$50,000
b.	\$30,000	\$0
c.	\$0	\$20,000
d.	\$0	\$0

**85.** During January year 2, Haze Corp. won a litigation award for \$15,000 that was tripled to \$45,000 to include punitive damages. The defendant, who is financially stable, has appealed only the \$30,000 punitive damages. Haze was awarded \$50,000 in an unrelated suit it filed, which is being appealed by the defendant. Counsel is unable to estimate the outcome of these appeals. In its year 2 financial statements, Haze should report what amount of pretax gain?

- a. \$15,000
- b. \$45,000
- c. \$50,000
- d. \$95,000

**86.** In May year 1 Caso Co. filed suit against Wayne, Inc. seeking \$1,900,000 damages for patent infringement. A court verdict in November year 5 awarded Caso \$1,500,000 in damages, but Wayne’s appeal is not expected to be decided before year 7. Caso’s counsel believes it is probable that Caso will be successful against Wayne for an estimated amount in the range between \$800,000 and \$1,100,000, with \$1,000,000 considered the most likely amount. What amount should Caso record as income from the lawsuit in the year ended December 31, year 5?

- a. \$0
- b. \$800,000
- c. \$1,000,000
- d. \$1,500,000

**87.** During year 2, Smith Co. filed suit against West, Inc. seeking damages for patent infringement. At December 31, year 2, Smith’s legal counsel believed that it was probable that Smith would be successful against West for an estimated amount in the range of \$75,000 to \$150,000, with all amounts in the range considered equally likely. In March year 3, Smith was awarded \$100,000 and received full payment thereof. In its year 2 financial statements, issued in February year 3, how should this award be reported?

- a. As a receivable and revenue of \$100,000.
- b. As a receivable and deferred revenue of \$100,000.
- c. As a disclosure of a contingent gain of \$100,000.
- d. As a disclosure of a contingent gain of an undetermined amount in the range of \$75,000 to \$150,000.

**88.** In year 2, a contract dispute between Dollis Co. and Brooks Co. was submitted to binding arbitration. In year 2, each party’s attorney indicated privately that the probable award in Dollis’ favor could be reasonably estimated. In year 3, the arbitrator decided in favor of Dollis. When should Dollis and Brooks recognize their respective gain and loss?

	Dollis’ gain	Brooks’ loss
a.	Year 2	Year 2
b.	Year 2	Year 3
c.	Year 3	Year 2
d.	Year 3	Year 3

**89.** Eagle Co. has cosigned the mortgage note on the home of its president, guaranteeing the indebtedness in the event that the president should default. Eagle considers the likelihood of default to be remote. How should the guarantee be treated in Eagle’s financial statements?

- a. Disclosed only.
- b. Accrued only.
- c. Accrued and disclosed.
- d. Neither accrued nor disclosed.

**90.** North Corp. has an employee benefit plan for compensated absences that gives employees 10 paid vacation days and 10 paid sick days. Both vacation and sick days can be carried over indefinitely. Employees can elect to receive payment in lieu of vacation days; however, no payment is given for sick days not taken. At December 31, year 2, North’s unadjusted balance of liability for compensated absences was \$21,000. North estimated that there were 150 vacation days and 75 sick days available at December 31, year 2. North’s employees earn an average of \$100 per day. In its December 31, year 2 balance sheet, what amount of liability for compensated absences is North required to report?

- a. \$36,000
- b. \$22,500
- c. \$21,000
- d. \$15,000

**91.** Ross Co. pays all salaried employees on a Monday for the five-day workweek ended the previous Friday. The last payroll recorded for the year ended December 31, year 2, was for the week ended December 25, year 2. The payroll for the week ended January 1, year 3, included regular weekly salaries of \$80,000 and vacation pay of \$25,000 for vacation time earned in year 2 not taken by December 31, year 2. Ross had accrued a liability of \$20,000 for vacation pay at December 31, year 1. In its December 31, year 2 balance sheet, what amount should Ross report as accrued salary and vacation pay?

- a. \$64,000
- b. \$68,000
- c. \$69,000
- d. \$89,000

**92.** Gavin Co. grants all employees two weeks of paid vacation for each full year of employment. Unused vacation time can be accumulated and carried forward to succeeding years and will be paid at the salaries in effect when vacations are taken or when employment is terminated. There was no employee turnover in year 2. Additional information relating to the year ended December 31, year 2, is as follows:

Liability for accumulated vacations at 12/31/Y1	\$35,000
Pre-year 2 accrued vacations taken from 1/1/Y2 to 9/30/Y2 (the authorized period for vacations)	20,000
Vacations earned for work in year 2 (adjusted to current rates)	30,000

Gavin granted a 10% salary increase to all employees on October 1, year 2, its annual salary increase date. For the year

ended December 31, year 2, Gavin should report vacation pay expense of

- \$45,000
- \$33,500
- \$31,500
- \$30,000

**93.** At December 31, year 2, Taos Co. estimates that its employees have earned vacation pay of \$100,000. Employees will receive their vacation pay in year 3. Should Taos accrue a liability at December 31, year 2, if the rights to this compensation accumulated over time or if the rights are vested?

	Accumulated	Vested
a.	Yes	No
b.	No	No
c.	Yes	Yes
d.	No	Yes

**94.** If the payment of employees' compensation for future absences is probable, the amount can be reasonably estimated, and the obligation relates to rights that accumulate, the compensation should be

- Accrued if attributable to employees' services not already rendered.
- Accrued if attributable to employees' services already rendered.
- Accrued if attributable to employees' services whether already rendered or not.
- Recognized when paid.

**95.** During year 1, Gum Co. introduced a new product carrying a two-year warranty against defects. The estimated warranty costs related to dollar sales are 2% within twelve months following the sale and 4% in the second twelve months following the sale. Sales and actual warranty expenditures for the years ended December 31, year 1 and year 2, are as follows:

	Sales	Actual warranty expenditures
Year 1	\$150,000	\$2,250
Year 2	<u>250,000</u>	<u>7,500</u>
	<u>\$400,000</u>	<u>\$9,750</u>

What amount should Gum report as estimated warranty liability in its December 31, year 2 balance sheet?

- \$2,500
- \$4,250
- \$11,250
- \$14,250

**96.** Vadis Co. sells appliances that include a three-year warranty. Service calls under the warranty are performed by an independent mechanic under a contract with Vadis. Based on experience, warranty costs are estimated at \$30 for each machine sold. When should Vadis recognize these warranty costs?

- Evenly over the life of the warranty.
- When the service calls are performed.
- When payments are made to the mechanic.
- When the machines are sold.

**97.** Lute Corporation sells furnaces that include a three-year warranty. Lute can contract with a third party to provide these warranty services. Lute elects the fair value option for reporting financial liabilities. At what amount should Lute record the warranty liability on the balance sheet?

- The cost of expected warranty services.
- The present value of expected warranty costs.
- The fair value of the contract to settle the warranty services.
- The fair value of the contract to settle less the cost to provide services.

**98.** Case Cereal Co. frequently distributes coupons to promote new products. On October 1, year 2, Case mailed 1,000,000 coupons for \$.45 off each box of cereal purchased. Case expects 120,000 of these coupons to be redeemed before the December 31, year 2, expiration date. It takes thirty days from the redemption date for Case to receive the coupons from the retailers. Case reimburses the retailers an additional \$.05 for each coupon redeemed. As of December 31, year 2, Case had paid retailers \$25,000 related to these coupons and had 50,000 coupons on hand that had not been processed for payment. What amount should Case report as a liability for coupons in its December 31, year 2 balance sheet?

- \$35,000
- \$29,000
- \$25,000
- \$22,500

**99.** Dunn Trading Stamp Co. records stamp service revenue and provides for the cost of redemptions in the year stamps are sold to licensees. Dunn's past experience indicates that only 80% of the stamps sold to licensees will be redeemed. Dunn's liability for stamp redemptions was \$6,000,000 at December 31, year 1. Additional information for year 2 is as follows:

Stamp service revenue from stamps sold to licensees	\$4,000,000
Cost of redemptions (stamps sold prior to 1/1/Y2)	2,750,000

If all the stamps sold in year 2 were presented for redemption in year 3, the redemption cost would be \$2,250,000. What amount should Dunn report as a liability for stamp redemptions at December 31, year 2?

- \$7,250,000
- \$5,500,000
- \$5,050,000
- \$3,250,000

**100.** Chemrite Inc. reported a total asset retirement obligation of \$350,000 in last year's balance sheet. This year, Chemrite

acquired a new chemical manufacturing facility subject to unconditional retirement obligations. Two measures of the obligation are the discounted cash flow estimate of \$82,000 and the undiscounted cash flow estimate of \$105,000.

Accretion expense equaled \$23,000. What amount should Chemrite report for the asset retirement obligation in this year's balance sheet?

- a. \$350,000
- b. \$373,000
- c. \$455,000
- d. \$478,000

**Miscellaneous**

Items 101 and 102 are based on the following:

The following trial balance of Trey Co. at December 31, year 2, has been adjusted except for income tax expense.

	Debit	Credit
Cash	\$ 550,000	
Accounts receivable, net	1,650,000	
Prepaid taxes	300,000	
Accounts payable		\$ 120,000
Common stock		500,000
Additional paid-in capital		680,000
Retained earnings		630,000
Foreign currency translation adjustment	430,000	
Revenues		3,600,000
Expenses	<u>2,600,000</u>	
	<u>\$5,530,000</u>	<u>\$5,530,000</u>

**Additional information**

- During year 2, estimated tax payments of \$300,000 were charged to prepaid taxes. Trey has not yet recorded income tax expense. There were no differences between financial statement and income tax income, and Trey's tax rate is 30%.
- Included in accounts receivable is \$500,000 due from a customer. Special terms granted to this customer require payment in equal semiannual installments of \$125,000 every April 1 and October 1.

**101.** In Trey's December 31, year 2 balance sheet, what amount should be reported as total current assets?

- a. \$1,950,000
- b. \$2,200,000
- c. \$2,250,000
- d. \$2,500,000

**102.** In Trey's December 31, year 2 balance sheet, what amount should be reported as total retained earnings?

- a. \$1,029,000
- b. \$1,200,000
- c. \$1,330,000
- d. \$1,630,000

**103.** The following is Gold Corp.'s June 30, year 2 trial balance:

Cash overdraft		\$ 10,000
Accounts receivable, net	\$ 35,000	
Inventory	58,000	
Prepaid expenses	12,000	
Land held for resale	100,000	
Property, plant, and equipment, net	95,000	
Accounts payable and accrued expenses		32,000
Common stock		25,000
Additional paid-in capital		150,000
Retained earnings		<u>83,000</u>
	<u>\$300,000</u>	<u>\$300,000</u>

**Additional information**

- Checks amounting to \$30,000 were written to vendors and recorded on June 29, year 2, resulting in a cash overdraft of \$10,000. The checks were mailed on July 9, year 2.
- Land held for resale was sold for cash on July 15, year 2.
- Gold issued its financial statements on July 31, year 2.

In its June 30, year 2 balance sheet, what amount should Gold report as current assets?

- a. \$225,000
- b. \$205,000
- c. \$195,000
- d. \$125,000

**104.** Mill Co.'s trial balance included the following account balances at December 31, year 2:

Accounts payable	\$15,000
Bonds payable, due year 3	25,000
Discount on bonds payable, due year 3	3,000
Dividends payable 1/31/Y3	8,000
Notes payable, due year 4	20,000

What amount should be included in the current liability section of Mill's December 31, year 2 balance sheet?

- a. \$45,000
- b. \$51,000
- c. \$65,000
- d. \$78,000

**F. Ratios**

Items 105 and 106 are based on the following:

*Rey, Inc.*  
**SELECTED FINANCIAL DATA**  
*December 31,*

	Year 2	Year 1
Cash	\$ 170,000	\$ 90,000
Accounts receivable (net)	450,000	400,000
Merchandise inventory	540,000	420,000
Short-term marketable securities	80,000	40,000
Land and building (net)	1,000,000	1,000,000
Mortgage payable—current portion	60,000	50,000
Accounts payable and accrued liabilities	240,000	220,000
Short-term notes payable	100,000	140,000

Net credit sales totaled \$3,000,000 and \$2,000,000 for the years ended December 31, year 2 and year 1, respectively.

**105.** At December 31, year 2, Rey's quick (acid-test) ratio was

- 1.50 to 1.
- 1.75 to 1.
- 2.06 to 1.
- 3.10 to 1.

**106.** For year 2, Rey's accounts receivable turnover was

- 1.13
- 1.50
- 6.67
- 7.06

**107.** Which of the following ratios is(are) useful in assessing a company's ability to meet currently maturing or short-term obligations?

	Acid-test ratio	Debt to equity ratio
a.	No	No
b.	No	Yes
c.	Yes	Yes
d.	Yes	No

**108.** North Bank is analyzing Belle Corp.'s financial statements for a possible extension of credit. Belle's quick ratio is significantly better than the industry average. Which of the following factors should North consider as a possible limitation of using this ratio when evaluating Belle's credit-worthiness?

- Fluctuating market prices of short-term investments may adversely affect the ratio.
- Increasing market prices for Belle's inventory may adversely affect the ratio.
- Belle may need to sell its available-for-sale investments to meet its current obligations.
- Belle may need to liquidate its inventory to meet its long-term obligations.

**109.** On December 30, year 2, Vida Co. had cash of \$200,000, a current ratio of 1.5:1 and a quick ratio of .5:1. On December 31, year 2, all cash was used to reduce accounts payable. How did these cash payments affect the ratios?

	Current ratio	Quick ratio
a.	Increased	Decreased
b.	Increased	No effect
c.	Decreased	Increased
d.	Decreased	No effect

**110.** Tod Corp. wrote off \$100,000 of obsolete inventory at December 31, year 2. The effect of this write-off was to decrease

- Both the current and acid-test ratios.
- Only the current ratio.
- Only the acid-test ratio.
- Neither the current nor the acid-test ratios.

**111.** The following computations were made from Clay Co.'s year 2 books:

Number of days' sales in inventory	61
Number of days' sales in accounts receivable	33

What was the number of days in Clay's year 2 operating cycle?

- 33
- 47
- 61
- 94

**112.** On December 31, year 2, Northpark Co. collected a receivable due from a major customer. Which of the following ratios would be increased by this transaction?

- Inventory turnover ratio.
- Receivable turnover ratio.
- Current ratio.
- Quick ratio.

**H. International Financial Reporting Standards (IFRS)**

**113.** On March 22, year 1, Cole Corporation received notification of legal action against the firm. Cole's attorneys determine that it is probable the company will lose the suit, and the loss is estimated at \$2,000,000. Cole's accountants believe this amount is material and should be disclosed. Cole prepares its financial statements in accordance with IFRS. How should the estimated loss be disclosed in Cole's financial statements at December 31, year 1?

- As a loss recorded in other comprehensive income.
- As a contingent liability reported in the balance sheet and a loss on the income statement.
- As a provision for loss reported in the balance sheet and a loss on the income statement.
- In the footnotes to the financial statements as a contingency.

**114.** Roland Corp. signed an agreement with Linx, which requires that if Linx does not meet certain contractual obligations, Linx must forfeit land worth \$40,000 to Roland. Roland's accountants believe that Linx will not meet its contractual obligations, and it is probable Roland will receive the land by the end of year 2. Roland uses IFRS for reporting purposes. How should Roland report the land?

- a. As investment property in the asset section of the balance sheet.
- b. As a contingent asset in the current asset section of the balance sheet.
- c. In a footnote disclosure if the economic benefits are probable.
- d. As a contingent asset and other comprehensive income for the period.

**115.** Under IFRS, if a long-term debt becomes callable due to the violation of a loan covenant

- a. The debt may continue to be classified as long-term if the company believes the covenant can be renegotiated.
- b. The debt must be reclassified as current.
- c. Cash must be reserved to pay the debt.
- d. Retained earnings must be restricted in the amount of the debt.

**116.** Under IFRS, which of the following accounts would not be considered a "provision"?

- a. Warranty liabilities.
- b. Bad debts.
- c. Taxes payable.
- d. Note payable.

**117.** Under IFRS, a contingency is described as

- a. An estimated liability.
- b. An event which is not recognized because it is not probable that an outflow will be required or the amount cannot be reasonably estimated.
- c. The same as it is described by US generally accepted accounting principles.
- d. A potentially large liability.

### Explanations

**1. (c)** Cash on hand (\$125,000) and cash in banks (\$2,250,000) are both reported as cash in the current asset section of the balance sheet because they are both unrestricted and readily available for use. Cash legally restricted for additions to plant (\$1,600,000) is not available to meet current operating needs, and therefore should be excluded from current assets. Instead, it should be shown in the long-term asset section of the balance sheet as an investment.

**2. (a)** To be classified as cash, the item must be readily available for current needs with no legal restrictions limiting its use. A postdated check is not acceptable for deposit and therefore is not considered cash. Thus, the \$2,000 check was correctly excluded from the 12/31 checkbook balance and no adjustment is necessary. An NSF check should not be included in cash until it has been redeposited and has cleared the bank. At 12/31, the NSF check (\$500) had not yet been redeposited, so it was incorrectly included in the 12/31 checkbook balance, and an adjustment must be made. The check which was not mailed until 1/10/Y3 (\$300) should not be subtracted from cash until the company gives up physical control of that amount. Therefore, \$300 must be added back to the checkbook balance. As a result of these adjustments, the correct cash balance is \$4,800 (\$5,000 – \$500 + \$300).

**3. (c)** The definition of cash includes both cash (cash on hand and demand deposits) and cash equivalents (short-term, highly liquid investments). Cash equivalents have to be readily convertible into cash and so near maturity that they carry little

risk of changing in value due to interest rate changes. This will include only those investments with original maturities of three months or less from the date of purchase by the enterprise. Common examples of cash equivalents include treasury bills, commercial paper, and money market funds. Trans should report a total of \$460,000 (\$35,000 + \$75,000 + \$350,000) on its December 31, year 2 balance sheet. The US treasury bill purchased on 12/1/Y2 is not included in the calculation because its original maturity is not within three months or less from the date of purchase.

**4. (a)** Cash which is segregated and deposited into a bond sinking fund is presented in a classified balance sheet as a noncurrent asset because its use is restricted. Bank overdrafts are presented as current liabilities, unless other accounts at the **same bank** contain sufficient cash to offset the overdraft. The operating account that has a positive balance, should be presented as a current asset.

**5. (a)** To determine the correct 8/31/Y2 cash balance, a partial bank reconciliation should be prepared. The balance per bank statement (\$18,050) must be adjusted for any items which the bank has not yet recorded and also for any bank errors (none in this problem).

Balance per bank statement	\$18,050
Deposits in transit	3,250
Outstanding checks	(2,750)
Correct balance	<u>\$18,550</u>

The deposits in transit and outstanding checks represent transactions that the company has recorded, but the bank has not yet recorded. The insufficient funds check (\$600) and bank service charge (\$100) are both items which the bank has recorded but the company has not. They would be adjustments to the **book balance**, not the **bank balance**.

**6. (a)** The balance per books at 3/31/Y2 is \$44,200. The amount would be increased by cash receipts per books and decreased by cash disbursements per books. Cash receipts per the bank in April were \$58,400, but this amount includes the \$10,300 in transit at 3/31. Therefore, cash receipts per books in April are \$48,100 (\$58,400 – \$10,300). Cash disbursements per the bank in April were \$49,700. This amount includes the 3/31 outstanding checks (\$12,600) but does **not** include the 4/30 outstanding checks (\$7,000). Therefore, April cash disbursements per books is \$44,100 (\$49,700 – \$12,600 + \$7,000). The cash balance per books at 4/30/Y2 is \$48,200 (\$44,200 at 3/31/Y2, plus \$48,100 receipts, less \$44,100 disbursements). An alternative solutions approach is to first compute the 4/30/Y2 bank balance (\$46,500 + \$58,400 – \$49,700 = \$55,200), and then adjust for outstanding checks (\$55,200 – \$7,000 = \$48,200).

**7. (a)** The 12/31/Y2 current net receivables would include the trade receivables, net of the allowance account (\$93,000 – \$2,000 = \$91,000). The claim against a shipper for goods lost in transit (\$3,000) is also a valid receivable at year-end. Therefore, the total current net receivables are \$94,000 (\$91,000 + \$3,000). The **unsold** goods on consignment do not represent a receivable until sold. Therefore, the \$26,000 should be removed from receivables and sales and the cost (\$26,000 ÷ 130% = \$20,000) should be removed from cost of goods sold and reported as ending inventory. The security deposit (\$30,000) should be reported as a **long-term** receivable.

**8. (c)** The solutions approach is to set up a T-account for accounts receivable.

		AR	
1/1/Y2	650,000		
Credit sales	2,700,000	75,000	Sales returns
		40,000	Write-offs
		2,150,000	Collections
12/31/Y2	1,085,000		

Credit sales are debited to **AR** and credited to **sales**. Sales returns are debited to **sales returns** and credited to **AR**; write-offs are debited to the **allowance for doubtful accounts** and credited to **AR**; and cash collections are debited to **cash** and credited to **AR**. The estimated future sales returns (\$50,000) and estimated uncollectible accounts (\$110,000) do not affect the accounts receivable account but are instead recorded in separate allowance accounts. Since the requirement is to determine accounts receivable **before** these allowances, the balance of accounts receivable should include only sales returns and write-offs for year 2.

**9. (c)** Accrued interest receivable at 6/30/Y3 is interest revenue which has been earned by 6/30/Y3, but has not yet been received by that date. Interest was last received on 7/1/Y2; the accrued interest receivable includes interest revenue earned from 7/1/Y2 through 6/30/Y3 (a full year). The original balance of the note receivable was \$150,000 but the 7/1/Y2 principal payment of \$50,000 reduced this balance to \$100,000. Therefore, the 6/30/Y3 interest receivable is \$8,000 (\$100,000 × 8%).

**10. (c)** Loan origination fees are recognized over the life of the related loan as an adjustment of yield. These fees are recorded as a discount on the note receivable. Therefore, Tigg’s 12/1/Y2 entry is

Notes receivable	200,000	
Discount on NR		6,000
Cash		194,000

Using the effective interest method, Tigg’s 12/31/Y2 adjusting entry is

Int. receivable	2,000	
Discount on NR		166
Int. revenue		2,166

The interest receivable is

$$\begin{matrix} \text{Face value} & \times & \text{Stated rate} & \times & \text{Time} \\ \$200,000 & \times & 12\% & \times & 1/12 & = & \underline{\underline{\$2,000}} \end{matrix}$$

The interest revenue is

$$\begin{matrix} \text{Carrying} & \times & \text{Effective rate} & \times & \text{Time} \\ \text{amount} & & & & \\ \$194,000 & \times & 13.4\% & \times & 1/12 & = & \underline{\underline{\$2,166}} \end{matrix}$$

**11. (d)** A current asset is an asset that can be reasonably expected to be converted into cash, sold or consumed in operations, within a single operating cycle or within a year if more than one cycle is completed each year. A noncurrent asset is an asset that cannot be expected to be converted to cash, sold or consumed within a single operating cycle or within one year, whichever is longer. Because accrued interest was reported as a current asset on the year 2 balance sheet, it can be assumed interest will be received on August 31, year 2, since current assets are received within one year. Also, because the note receivable was reported as a noncurrent asset it can be assumed that the principal will not be collected within the next twelve months. Principal that is not due until August 31, year 3, coincides with reporting the note as a noncurrent asset.

**12. (b)** Upon receipt of the interest-bearing note for the sale of goods, Benet would record the following entry:

Notes receivable	(face value)
Interest receivable	(interest from 7/15 to 8/15)
Sales	(face + interest)

Note that the interest that accrued on the note from July 15 to August 15 represents part of the sales price of the merchandise (rather than interest income) because Benet did not hold the note during this period. On November 15, Benet will record the following entry:

Cash	(Plug)
Note receivable	(face value)
Interest revenue	(interest from 8/15 to 11/15)
Interest receivable	(interest from 7/15 to 8/15)

**13. (a)** If material, an allowance for discounts must be reported at year-end in order to match the discounts with the related sales and to report receivables at their collectible amount. At 12/31/Y2, \$100,000 of the accounts receivable have the potential to be discounted by 2% because they are less than fifteen days old (terms 2/15, net 30). Since 50% of the customers are expected to take advantage of the 2% discount, the allowance for discounts should be \$1,000 [ $(\$100,000 \times 50\%) \times 2\%$ ]. None of the other categories require a discount allowance because they are older than the maximum age of fifteen days to receive the 2% discount.

**14. (a)** When revenue is recognized from sales and a right of return exists, sales revenue must be reduced to reflect estimated returns. In this case, sales of \$1,000,000 must be reduced by estimated returns of \$100,000 [ $(7\% + 3\%) \times \$1,000,000$ ], resulting in net sales of \$900,000. The estimated exchanges (15%) will not result in a future reduction of sales.

**15. (a)** To compute the 12/31/Y2 allowance for uncollectible accounts, the solutions approach is to set up a T-account for the allowance.

Allowance for U.A.									
Write-offs	<table border="0" style="width: 100%;"> <tr> <td style="border-bottom: 1px solid black; width: 100px;">260,000</td> <td style="width: 100px;">1/1/Y2</td> </tr> <tr> <td>180,000</td> <td>Expense (2% × 9,000,000)</td> </tr> <tr> <td style="border-top: 1px solid black;">325,000</td> <td></td> </tr> <tr> <td>115,000</td> <td>12/31/Y2</td> </tr> </table>	260,000	1/1/Y2	180,000	Expense (2% × 9,000,000)	325,000		115,000	12/31/Y2
260,000	1/1/Y2								
180,000	Expense (2% × 9,000,000)								
325,000									
115,000	12/31/Y2								

The 1/1/Y2 balance is increased by bad debts expense recorded ( $2\% \times$  credit sales of \$9,000,000) and decreased by write-offs of specific uncollectible accounts.

**16. (d)** The balance in the allowance for doubtful accounts should reflect the amount of accounts receivable that are estimated to be uncollectible. Since it is estimated that 3% of the gross accounts receivable will become uncollectible, the allowance account should have a 12/31/Y2 balance of \$30,000 ( $3\% \times \$1,000,000$ ). Note that **bad debt expense** of \$38,000 would be recorded for year 2, as indicated below.

Allowance							
Bal. before adj.	<table border="0" style="width: 100%;"> <tr> <td style="border-bottom: 1px solid black; width: 100px;">8,000</td> <td style="width: 100px;">?</td> </tr> <tr> <td>30,000</td> <td>Bad debt expense (\$38,000)</td> </tr> <tr> <td></td> <td>12/31/Y2 (3% × \$1,000,000)</td> </tr> </table>	8,000	?	30,000	Bad debt expense (\$38,000)		12/31/Y2 (3% × \$1,000,000)
8,000	?						
30,000	Bad debt expense (\$38,000)						
	12/31/Y2 (3% × \$1,000,000)						

**17. (b)** The total amount of risk of accounting loss related to Butler’s trade accounts receivable is \$230,000 (\$250,000 trade accounts receivable – \$20,000 uncollectible amount). The accounting loss cannot exceed the amount of the account receivable recognized as an asset in the balance sheet (\$230,000). Off-balance-sheet risk refers to a potential loss that may exceed the amount recognized as an asset. There is no off-balance-sheet risk in this example.

**18. (b)** The solutions approach is to set up a T-account for the allowance for doubtful accounts.

Allowance											
Year 2 Write-offs	<table border="0" style="width: 100%;"> <tr> <td style="border-bottom: 1px solid black; width: 100px;">30,000</td> <td style="width: 100px;">1/1/Y2</td> </tr> <tr> <td>18,000</td> <td>2,000</td> </tr> <tr> <td style="border-top: 1px solid black;">14,000</td> <td>12/31/Y2 Before adj.</td> </tr> <tr> <td>?</td> <td>Unc. accts. expense</td> </tr> <tr> <td>25,000</td> <td>12/31/Y2</td> </tr> </table>	30,000	1/1/Y2	18,000	2,000	14,000	12/31/Y2 Before adj.	?	Unc. accts. expense	25,000	12/31/Y2
30,000	1/1/Y2										
18,000	2,000										
14,000	12/31/Y2 Before adj.										
?	Unc. accts. expense										
25,000	12/31/Y2										

In year 2, \$18,000 of accounts were written off as uncollectible (debit allowance, credit AR). Also, \$2,000 of AR were recovered (debit AR, credit allowance; then, debit cash, credit AR), leaving a balance in the allowance account of \$14,000 ( $\$30,000 - \$18,000 + \$2,000$ ). The desired 12/31/Y2 balance is \$25,000 ( $\$350,000$  AR less  $\$325,000$  net value per aging schedule). Therefore, to increase the allowance from \$14,000 to \$25,000, uncollectible accounts expense of \$11,000 must be recorded.

**19. (a)** When an aging schedule is used to estimate uncollectibles, the total uncollectibles computed is the amount used for the ending balance in the allowance account. As computed below, the 12/31/Y2 allowance for uncollectible accounts should be \$9,000.

$\$120,000 \times 1\%$	=	\$1,200
$90,000 \times 2\%$	=	1,800
$100,000 \times 6\%$	=	<u>6,000</u>
		<u>\$9,000</u>

The other information given (12/31/Y1 allowance, write-offs, and recoveries) would be used to determine the bad debt expense adjustment, not the allowance balance. In this case, apparently due to a change in estimate, the bad debt expense adjustment would actually be a credit (to offset the necessary debit to the allowance account).

Allowance for U.A.													
Write-offs	<table border="0" style="width: 100%;"> <tr> <td style="border-bottom: 1px solid black; width: 100px;">22,000</td> <td style="width: 100px;">12/31/Y1</td> </tr> <tr> <td>7,000</td> <td>4,000</td> </tr> <tr> <td style="border-top: 1px solid black;">19,000</td> <td>Recoveries</td> </tr> <tr> <td>10,000</td> <td></td> </tr> <tr> <td></td> <td>9,000</td> </tr> <tr> <td></td> <td>12/31/Y2</td> </tr> </table>	22,000	12/31/Y1	7,000	4,000	19,000	Recoveries	10,000			9,000		12/31/Y2
22,000	12/31/Y1												
7,000	4,000												
19,000	Recoveries												
10,000													
	9,000												
	12/31/Y2												

20. (a) The aging of receivables method of estimating uncollectible accounts is based on the theory that bad debts are a function of accounts receivable collections during the period. The aging of receivables method emphasizes reporting accounts receivable at their net realizable value. It is a “balance-sheet” approach, which stresses the collectibility (valuation) of the receivable balance. Once the balance of the allowance account required to reduce net accounts receivable to their realizable value has been computed, bad debts expense is merely the amount needed to adjust the allowance account to the computed balance. Answer (b) is incorrect because under the direct write-off method, bad debts are considered expenses in the period in which they are written off; no consideration is given to the valuation of accounts receivable. Answers (c) and (d) are incorrect because both of these methods are based on the theory that bad debts are a function of sales. Thus, these methods emphasize reporting the bad debts expense amount accurately on the income statement.

21. (b) A primary objective of accrual accounting is to record the cash consequences of events that change an entity’s financial position in the period in which the events occur. This means recognizing revenues when earned rather than when cash is received, and recognizing expenses when incurred rather than when cash is paid. Expenses are incurred when they help the firm earn revenue. Under the allowance method, uncollectible accounts expense is recognized in the same period as the related revenue. The same credit decisions that enabled the entity to earn revenue caused it to incur uncollectible accounts expense. Therefore, under accrual accounting that expense should be recognized in the same period. On the other hand, when the direct write-off method is used, the uncollectible accounts expense is generally recognized after the period in which the revenue is recognized; after the event (credit decision) which changed financial position. Therefore, the direct write-off method is **not** consistent with accrual accounting.

22. (a) When the allowance method for recognizing uncollectible accounts is used, the entry to write off a specific account is

Allowance for unc. accts.	xxx	
Accts. receivable		xxx

Answer (a) is correct because this entry decreases both accounts.

23. (c) When an account receivable that was previously written off is collected, two entries must be made. The first entry reverses the write-off and reestablishes the receivable.

Accounts receivable	xxx	
Allowance for uncollectible accounts		xxx

The second entry records the cash receipt.

Cash	xxx	
Accounts receivable		xxx

The credit to the allowance account in the first entry increases its balance. Uncollectible accounts expense, however, is not affected by this transaction.

24. (b) An **assignment** of accounts receivable is a financing arrangement whereby the owner of the receivables (assignor) obtains a loan from the lender (assignee) by pledging the accounts receivable as collateral. A **factoring** of accounts receivable is basically a sale of, or borrowing on, the receivables. “Factors” are intermediaries that buy receivables from companies (for a fee) and then collect payments directly from the customers. Thus, both of these are methods of generating cash from accounts receivable.

25. (d) When receivables are factored and control is surrendered the transaction is treated as a **sale**. A transfer in which control is surrendered will not be treated as a borrowing. The risk of uncollectible accounts is **not** retained by the seller in a sale without recourse.

26. (c) Taylored will receive the value of the receivables (\$400,000), reduced by \$20,000 for the amount of the holdback ( $\$400,000 \times .05$ ), \$8,000 withheld as fee income ( $\$400,000 \times .02$ ), and \$6,740 withheld as interest expense ( $\$400,000 \times .15 \times 41/365$ ). Answer (c) is therefore correct ( $\$400,000 - \$8,000 - \$6,740 - \$20,000$ ).

27. (b) A sale of receivables with recourse is recorded using a financial components approach because the seller has a continuing involvement. Under this approach the seller would reduce receivables, recognize assets obtained and liabilities incurred, and record gain or loss. The entry would be

Cash	\$365,260	
Factor’s holdback	20,000	
Loss	26,740*	
Accounts receivable		\$400,000
Recourse liability		12,000
* (\$6,740 + \$8,000 + \$12,000)		

28. (d) If all receivables are collected, Taylored would eliminate its recourse liability and the corresponding loss. The costs incurred by Taylored would include a fee of \$8,000 ( $\$400,000 \times .02$ ) and interest expense of \$6,740 ( $\$400,000 \times .15 \times 41/365$ ) for a total of \$14,740.

29. (a) The seller uses a Due from Factor or Factor’s Holdback account to account for probable sales discounts, sales returns, and sales allowances. The Recourse liability account is recorded to indicate probable uncollectible accounts.

30. (b) Scarbrough will receive the value of the receivables (\$600,000), reduced by \$30,000 for the amount of the holdback ( $\$600,000 \times .05$ ), \$18,000 withheld as fee income ( $\$600,000 \times .03$ ), and \$13,315 withheld as interest expense ( $\$600,000 \times .15 \times 54/365$ ). Answer (b) is therefore correct ( $\$538,685 = 600,000 - \$30,000 - \$18,000 - \$13,315$ ).

31. (c) If all receivables are collected, Synthia would eliminate its recourse liability and the corresponding loss. The costs incurred by Synthia would include a fee of \$15,000

(\$750,000 × .02) and interest expense of \$12,575 ( $\$750,000 \times .12 \times 51/365$ ) for a total of \$27,575.

**32. (c)** The transferor, Bannon, should measure the assets received and liabilities incurred at fair value, not at cost. The transferee, Chapman, should record any assets obtained and liabilities incurred at fair value.

**33. (b)** If financial assets are exchanged for cash or other consideration, but the transfer does not meet the criteria to be accounted for as a sale, both the transferor and the transferee should account for the transfer as a secured borrowing and a pledge of collateral.

**34. (c)** A sale occurs if the seller surrenders control of the receivables transferred. Control is deemed to have been surrendered by the seller only if all three conditions listed in (a), (b), and (d) are met. Answer (c) is used to determine whether a recourse liability is recorded as part of the sale, not whether a transaction can be recorded as a sale.

**35. (a)** To derecognize assets when control is gained is not an objective in accounting for transfers of financial assets. When control is gained, the assets should be recognized. Answer (b) is incorrect because an objective is to derecognize liabilities when extinguished. A liability no longer exists, and it should be removed from the balance sheet. Answer (c) is incorrect because recognizing liabilities when incurred is an objective. Answer (d) is incorrect because derecognizing assets when control is given up is an objective in accounting for transfers of financial assets.

**36. (d)** A servicing asset or liability should be amortized in proportion to and over the period of estimated net servicing income or net servicing loss. Answer (a) is incorrect because a servicing asset shall be assessed for impairment based on its fair value. Answer (b) is incorrect because a servicing liability shall be assessed for increased obligation based on its fair value. Answer (c) is incorrect because an obligation to service financial assets may result in the recognition of a servicing asset or a servicing liability.

**37. (d)** The assets must be measured for impairment at the end of each reporting period. Answer (a) is incorrect because increases in fair value are not reported under the amortization method. Answer (a) is also incorrect because when using the fair value method, changes in fair value are reported in earnings, not in other comprehensive income. Answers (b) and (c) are incorrect because these rules refer to the fair value method.

**38. (b)** Answer (b) is correct. Either the amortization method or the fair value method can be used for servicing assets and servicing liabilities. However, if the fair value method is elected, the election cannot be reversed. Changes in fair value are reported in earnings in the period in which the change occurs.

**39. (c)** When a company transfers a financial asset but continues to hold an interest in the servicing asset, the transferor should report the interest that continues to be held as the difference between the previous carrying amount and the

amount derecognized. Answers (a), (b), and (d) are incorrect because they represent incorrect values.

**40. (c)** The arrangement of having collateral transferred to a secured party is known as a pledge. Answer (a) is incorrect because a debtor may grant a security interest in certain assets to a lender to serve as collateral with recourse. Answer (b) is incorrect because a debtor may grant a security interest in certain assets to a lender to serve as collateral without recourse. Answer (d) is incorrect because secured parties are sometimes permitted to sell collateral held under a pledge.

**41. (b)** Net proceeds from the sale are equal to \$2,200.

<b>Net proceeds</b>	
Cash received	\$2,100
Plus: Interest rate swap	140
Call option	80
Less: Recourse obligation	<u>(120)</u>
Net proceeds	<u>\$2,200</u>

The gain is computed as follows:

Net proceeds	\$2,200
Carrying amount of loans sold	<u>2,000</u>
Gain on sale	<u>\$ 200</u>

**42. (a)** The journal entry to record the transfer for ABC Company is as follows:

Cash	2,100
Interest rate swap	140
Call option	80
Loans	2,000
Recourse obligation	120
Gain on sale	200

Answer (b) is incorrect because it should be a debit to interest rate swap, not a credit. Answer (c) is incorrect because loans should be credited. It was on ABC Company's books as an asset and must be taken off. Answer (d) is incorrect because cash is being received, so it must be debited.

**43. (c)** ABC Company must report a servicing obligation of \$50. The calculation of net proceeds is

Cash received	\$2,100
Plus: Interest rate swap	140
Call option	80
Less: Recourse obligation	(120)
Servicing obligation	<u>(50)</u>
Net proceeds	<u>\$2,150</u>

The gain is

Net proceeds	\$2,150
Carrying amount of loans sold	<u>2,000</u>
Gain on sale	<u>\$ 150</u>

**44. (c)** Financial assets subject to prepayment should be measured like investments in debt securities classified as available-for-sale or trading.

45. (d) Answers (a), (b), and (c) are required disclosures. Answer (d) is the correct answer as disclosure is only required of assets and liabilities with nonestimable fair values.

46. (d) If the debtor defaults under the terms of the secured contract and is no longer entitled to redeem the pledged asset, it (Taft) shall derecognize the pledged asset, and the secured party (Wilson) shall recognize the collateral as its asset initially measured at fair value.

47. (a) Before adjustment, the balance in the Accounts Payable account is \$360,000. This amount is net of a \$50,000 debit balance in Lyle’s account payable to Ross resulting from a \$50,000 advance payment for goods to be manufactured to Lyle’s specifications. The \$50,000 should be reclassified as a current asset, **Advance to Suppliers**. The checks recorded on 12/29/Y2 incorrectly reduced the accounts payable balance by \$100,000. The \$100,000 reduction should not have been recorded until the checks were mailed on 1/5/Y3. The 12/31/Y2 accounts payable must be increased by \$100,000. Therefore, the corrected 12/31/Y2 accounts payable is \$510,000.

Unadjusted AP	\$360,000
Reclassification of advance	50,000
Error correction	<u>100,000</u>
	<u>\$510,000</u>

48. (a) When purchases are recorded using the net method, purchases and accounts payable are recorded at an amount net of the cash discounts, and the failure to take advantage of a discount is recorded in a Purchase Discounts Lost account. Therefore, when Rabb changes to the net method, gross accounts payable (\$30,000) must be adjusted down to the net amount. Since \$200 of discounts are still available in the accounts payable balance, the net accounts payable at 9/30/Y2 is \$29,800 (\$30,000 - \$200). The journal entry is

Purchase discounts lost	1,000	
Purchase discounts	800	
Accts. payable	200	
Purchases		2,000

49. (d) Accrued interest payable at 12/31/Y2 is interest expense which has been incurred by 12/31/Y2, but has not yet been paid by that date. The note was issued on 3/1/Y1 and interest is payable in full at maturity on 2/28/Y3. Therefore, there is one year and ten months of unpaid interest at 12/31/Y2 (3/1/Y1 to 12/31/Y2). Interest for the first year is \$1,200 (\$10,000 × 12%). Since interest is compounded annually, the new principal amount for the second year includes the original principal (\$10,000) plus the first year’s interest (\$1,200). Therefore, accrued interest for the ten months ended 12/31/Y2 is \$1,120 (\$11,200 × 12% × 10/12), and total accrued interest at 12/31/Y2 is \$2,320 (\$1,200 + \$1,120).

50. (c) Accrued interest payable at 12/31/Y2 is interest expense which has been incurred by 12/31/Y2, but has not yet been paid by that date. Interest was last paid on 9/1/Y2; the accrued interest payable includes interest expense incurred from 9/1/Y2 through 12/31/Y2 (four months). The original balance of the note payable was \$1,350,000 but the

9/1/Y2 principal payment of \$450,000 reduced this balance to \$900,000. Therefore, the interest payable at 12/31/Y2 is \$36,000 (\$900,000 × 12% × 4/Y3). The prime rate (11%) does not affect the computation because it is not the stated rate on this note.

51. (d) The solutions approach is to analyze the interest payable T-account for year 2, assuming all interest payments flow through interest payable.

		Interest Payable	
		15,000	12/31/Y1
Year 2 Int. paid	68,000	85,000	Year 2 Expense
		?	12/31/Y2

The beginning interest payable balance (\$15,000) is increased by interest expense (debit interest expense, credit interest payable for \$85,000) and decreased by interest paid (debit interest payable, credit cash for \$68,000), resulting in a 12/31/Y2 balance of \$32,000 (\$15,000 + \$85,000 - \$68,000).

52. (c) All of the notes are due 6/15/Y3, and normally the entire amount would be classified as current. However, a short-term obligation can be reclassified as long-term if the enterprise intends to refinance the obligation on a long-term basis **and** the intent is supported by the ability to refinance. Ames demonstrated its ability by entering into a financing agreement before the statements are issued. The amount to be excluded from current liabilities cannot exceed the amount available for refinancing under the agreement. Ames expects to be able to refinance at least \$480,000 (80% × \$600,000) of the notes. Therefore, that amount can be classified as long-term, while the remaining \$20,000 must be classified as short-term.

53. (b) The effective rate of interest paid on a note is computed as follows:

$$\text{Effective interest rate} = \frac{\text{Interest paid}}{\text{Cash received}}$$

In this case, let’s assume the short-term note payable was in the amount of \$100,000. The effective interest rate would be 12.56%.

$$\frac{(100,000 \times .12) + (100,000 \times .005)}{99,500} = 12.56$$

This is because the loan origination fee increases the interest paid on the note and reduces the net cash received from the note.

54. (c) The \$4,000,000 note payable is due March 15, year 3 and normally would be classified as a current liability in the December 31, year 2 financial statements. However, a short-term obligation can be reclassified as long-term if the enterprise intends to refinance the obligation on a long-term basis and the intent is supported by the ability to refinance.

Cali demonstrated its ability to refinance by actually issuing bonds and refinancing the note prior to the issuance of the December 31, year 2 financial statements. Since the proceeds from the bonds exceeded the amount needed to retire the note, the entire \$4,000,000 notes payable would be classified as a noncurrent liability, with separate disclosure of the note refinancing.

**55. (c)** The notes payable (\$750,000) are due 7/31/Y3, and would normally be included in 12/31/Y2 current liabilities. However, a short-term obligation can be reclassified as long-term if the enterprise intends to refinance the obligation on a long-term basis and the intent is supported by the ability to refinance. Largo demonstrated its ability to refinance by actually issuing \$1,500,000 of bonds in February year 3 before the 12/31/Y2 financial statements were issued on 3/3/Y3. The bond proceeds will be used to retire the note at maturity. The amount excluded from current liabilities cannot exceed the amount actually refinanced. Since Largo prepaid \$250,000 of the note on 1/12/Y3 with excess cash, that amount must be included in 12/31/Y2 current liabilities. Only the remaining \$500,000 can be excluded from current liabilities.

**56. (c)** A key to solving this problem is understanding that the employee advances do **not** affect the accrued salaries payable. When advances are made to employees, they are a cash payment separate from the payroll function. The advances made, therefore, are not reflected in salaries expense (\$420,000) or **gross** salaries paid (\$390,000). Therefore, the solutions approach is to analyze the salaries payable T-account for year 2 (disregarding the employee advances).

Salaries Payable			
		40,000	12/31/Y1
Year 2 sal. paid	390,000	420,000	Year 2 sal. expense
		?	12/31/Y2

The beginning salaries payable balance (\$40,000) is increased by salaries expense (\$420,000) and decreased by salaries paid (\$390,000), resulting in a 12/31/Y2 balance of \$70,000.

**57. (c)** No sales commission is due to salesperson A because his commissions earned ( $\$200,000 \times 4\% = \$8,000$ ) are less than his fixed salary (\$10,000). Note that the excess of the fixed salary over commissions earned is not charged back against A. Commissions totaling \$28,000 are due to salespersons B and C as computed below.

	Commissions earned		Fixed salary paid	Commissions payable
B	( $6\% \times \$400,000$ )	-	\$14,000	\$10,000
C	( $6\% \times \$600,000$ )	-	\$18,000	<u>18,000</u>
				<u>\$28,000</u>

**58. (d)** Lime’s payroll tax liability includes amounts withheld from payroll checks [\$1,200 of federal income taxes withheld and \$700 of the **employees’** share of FICA ( $\$10,000 \times 7\%$ )] plus the **employer’s** share of FICA (an additional \$700). Therefore, the total payroll tax liability is \$2,600 ( $\$1,200 + \$700 + \$700$ ). The amount recorded as payroll tax expense consists only of the employer’s share of FICA (\$700), since no unemployment taxes are mentioned in the problem.

**59. (a)** The contingent unemployment claims liability is both probable and reasonably estimable, so it must be accrued at 12/31/Y2. Acme’s reasonable estimate of its probable liability is 2% of eligible gross wages. Eligible gross wages are the first \$10,000 of gross wages paid to each of the five employees ( $5 \times \$10,000 = \$50,000$ ), so the accrued liability should be \$1,000 ( $2\% \times \$50,000$ ). Note that the 3% rate is not used because Acme has chosen the option to reimburse the state directly, and its best estimate of this liability is based on 2%, not 3%.

**60. (b)** To compute the amount of the contribution, the requirements described in the problem must be translated into an equation. The contribution must equal 10% of income **after** deduction of the contribution, but **before** income tax. Therefore, the tax rate (30%) does not enter into the computation. The equation is solved below.

$$\begin{aligned}
 C &= .10 \times (\$75,000 - C) \\
 C &= \$7,500 - .10C \\
 1.1C &= \$7,500 \\
 C &= \$7,500 \div 1.1 \\
 C &= \$6,818
 \end{aligned}$$

The amount to be accrued as an expense and liability is \$6,818.

**61. (b)** If net income **after** bonus and income tax is \$360,000, income before taxes can be computed by dividing **\$360,000 by 1 minus the tax rate.**

$$\text{Income before taxes} = \frac{\$360,000}{1 - .40} = \underline{\underline{\$600,000}}$$

The bonus is equal to 10% of income **before** income tax but **after** the bonus. The \$600,000 computed above **is** income before tax but after all other expenses including the bonus. Therefore, the bonus must be \$60,000 ( $10\% \times \$600,000$ ). Note that this problem is different from other bonus problems because usually the income before taxes and bonus (\$660,000 in this case) is given as the starting point, rather than net income.

**62. (b)** To determine the correct amount for sales revenue, Ivy must divide the total of sales and sales taxes by 100% plus the sales tax percentage (6%) as indicated below.

Month	Total	Percentage		Sales revenue
Jan.	\$10,600	$\div 106\%$	=	\$10,000
Feb.	\$7,420	$\div 106\%$	=	7,000
March	\$8,480	$\div 106\%$	=	<u>8,000</u>
Total				<u>\$25,000</u>

Sales taxes payable would include all sales taxes collected, less any sales taxes already remitted.

January sales taxes (\$10,600 - \$10,000)	\$ 600
*February sales taxes (\$7,420 - \$7,000)	420
March sales taxes (\$8,480 - \$8,000)	<u>480</u>
Total	\$1,500
Less taxes remitted	<u>600</u>
Sales taxes payable	<u>\$ 900</u>

\*Note February sales taxes were not remitted since they did not exceed \$500.

**63. (b)** As of 12/31/Y2 the October sales taxes should have been paid, so there would be no 12/31/Y2 current liability for those taxes. However, at 12/31/Y2 sales taxes payable must be reported for the November room rentals as they were not paid until 1/3/Y3 and the December room rentals [15% × (\$110,000 + \$150,000) = \$39,000]. The fourth quarter occupancy taxes were not paid until 1/3/Y3, so they would also represent a current liability at 12/31/Y2 [(1,100 + 1,200 + 1,800) × \$2 = \$8,200].

**64. (b)** When the warehouse was purchased on 9/1/Y2, it would be recorded at its total cost before any credit for accrued realty taxes. The offsetting credits would be to **cash** for the net amount paid, and to **real estate taxes payable** for two months' taxes (\$12,000 × 2/6 = \$4,000). At the end of September and of October, Day would record property tax expense each month as follows:

Real estate tax expense	2,000	
Real estate taxes payable		2,000

Therefore, at October 31, Day has a balance of \$8,000 in the payable account (\$4,000 + \$2,000 + \$2,000). On 11/1/Y2, Day would record the semiannual payment as follows:

Real estate taxes payable	8,000	
Prepaid real estate taxes	4,000	
Cash		12,000

The prepaid real estate taxes would then be expensed \$2,000 per month at the end of November and December.

**65. (d)** An accrued liability is an expense which has been incurred, but has not been paid. Of the \$500 advertising bill, \$375 had been incurred as an expense as of 12/31/Y2 and should be reported as an accrued liability at that time. For the store lease, the fixed portion (\$1,200 per month) is payable on the 16th of each month for the preceding month. Therefore, on 12/16/Y2, rent was paid for the period 11/16/Y2 to 12/15/Y2. An additional one-half month's rent expense (1/2 × \$1200 = \$600) has been incurred but not paid as of 12/31/Y2. The variable portion of the rent [5% × (\$550,000 - \$300,000), or \$12,500] was incurred during year 2, but will not be paid until 1/31/Y3. It, too, is an accrued liability at 12/31/Y2. Total 12/31/Y2 accrued liabilities are \$13,475.

Advertising	\$ 375
Fixed rent (1/2 × \$1,200)	600
Variable rent [5% × (\$550,000 - \$300,000)]	<u>12,500</u>
Total	<u>\$13,475</u>

**66. (d)** The solutions approach to this problem is to construct a time line documenting the events in the question.

Note that on May 1, year 2, the County has merely determined the amount of property tax owed by each property owner, and no entries would be made by companies subject to property taxes on that date. The fiscal year 3 taxes are for the period from July 1, year 2, to June 30, year 3. On September 1, year 2, the date on which Dyur purchased the building, two months of the fiscal year had passed, and the property tax expense related to those months was borne by the seller. At October 31, year 2, Dyur would have a liability for four months of property taxes (even though only the months of September and October would have been expensed by Dyur). On November 1, year 2, four months of the fiscal year had passed, and Dyur paid taxes for the first six months of the fiscal year. The entry recorded upon the payment would be

Property taxes payable	(four months)
Prepaid property taxes	(two months)
Cash	(six months)

The payment would therefore be allocated as two-sixths (33 1/3%) to an increase in prepaid property taxes and four-sixths (66 2/3%) to a decrease in property taxes payable.

**67. (b)** To determine the 12/31/Y2 balance of the liability for customer advances, the solutions approach is to set up a T-account for the liability.

Customer Advances			
	118,000		12/31/Y1
Year 2 adv. applied	164,000	184,000	Year 2 adv. received
Year 2 cancellations	50,000		
		88,000	12/31/Y2

When advances are received (\$184,000), cash is debited and the liability account is credited. When advances are applied to orders shipped (\$164,000), the liability account is debited and sales is credited. When an order is cancelled (\$50,000), the liability account is debited and a revenue account is credited, since the advance payments are nonrefundable. Thus, the customer advances balance on 12/31/Y2 is \$88,000.

68. (c) The solutions approach is to set up a T-account for the liability.

Liability for Deposits			
		580,000	12/31/Y2 balance
		780,000	Year 3 deliveries
Year 3 returns	626,000		
Year 2 sales	60,000		
<hr/>		674,000	12/31/Y3 balance

When customers pay the deposit for a container, cash is debited and the liability is credited. Therefore, at 12/31/Y2 the liability consists of deposits for containers still held by customers from the last two years (\$580,000). During year 3, the liability was increased for deposits on containers delivered (\$780,000). When containers are returned, the deposits are returned to the customers; in year 3, the liability was debited and cash credited for \$626,000. Also, at 12/31/Y3, some customers still held containers from year 1 (\$150,000 – \$90,000 = \$60,000). The two-year time limit has expired on these, so the company is no longer obligated to return the deposit. The containers are considered sold to the customers, so the liability account is debited and sales credited for \$60,000. This results in a 12/31/Y3 balance of \$674,000.

69. (c) To compute the escrow liability, the solutions approach is to use a T-account.

Escrow Liability			
		700,000	1/1/Y2
Taxes paid	1,720,000	1,580,000	Receipts
		45,000	Net interest
<hr/>		605,000	12/31/Y2

Escrow payments received (\$1,580,000) would increase the liability because these amounts are payable to taxing authorities. Taxes paid (\$1,720,000) decrease the liability. The net interest credited to the escrow accounts [ $\$50,000 - (10\% \times \$50,000) = \$45,000$ ] would increase the liability, resulting in a 12/31/Y2 balance of \$605,000.

70. (d) All contract sales are made **evenly** during the year. Therefore, the year 1 contracts range from one year expired (if sold on 12/31/Y1) to two years expired (if sold on 1/1/Y1), for an average of one and one-half years expired  $[(2+1)/2]$ . Similarly, the year 2 contracts range from zero years expired to one

year expired, for an average of one-half year expired  $[(0+1)/2]$ . The average **unearned** portion of the year 1 contracts is one-half year (two years – one and one-half years), the last half of the second contract year. The amount of unearned revenue related to year 1 contracts is computed as follows:

$$\$500,000 \times 60\% \times 1/2 = \$150,000$$

The average **unearned** portion of the year 2 contracts is one and one-half years (two years – one-half year), the last half of the first contract year and all of the second contract year. The amount of unearned revenue related to the year 2 contracts is computed as follows:

$$\begin{aligned} \text{Year 2: } & \$600,000 \times 40\% \times 1/2 = & \$120,000 \\ & \$600,000 \times 60\% & = & \underline{360,000} \\ & & & \underline{\underline{\$480,000}} \end{aligned}$$

Therefore, the total unearned revenue is \$630,000 (\$150,000 + \$480,000).

71. (c) Revenue is earned by Toddler Care Co. as time goes by and care is provided. Therefore, revenue should be recognized on a straight-line basis regardless of the timing of cash receipts. The monthly fees can simply be recognized on a monthly basis, but the initial payment must be deferred and recognized as revenue on a straight-line basis over the twelve-month period. The 12/31/Y2 deferred revenues are \$6,600, as computed below.

Plan	Initial fees	Year 2 revenue (4/Y3)	12/31/Y2 def. rev. (8/Y3)
1	$15 \times \$500 = \$7,500$	\$2,500	\$5,000
2	$12 \times \$200 = \$2,400$	800	1,600
3	<u>\$ 0</u>	<u>0</u>	<u>0</u>
	<u>\$9,900</u>	<u>\$3,300</u>	<u>\$6,600</u>

Since the total initial payments received are given (\$9,900), a shortcut is to multiply that amount by 8/Y3 ( $\$9,900 \times 8/12 = \$6,600$ ).

72. (b) When a company issues gift certificates for cash, the following journal entry is made:

Cash	(amount of certificate)
Deferred revenue	(amount of certificate)

When the gift certificates are subsequently redeemed, the following journal entry is made:

Deferred revenue	(amount of certificate)
Revenue	(amount of certificate)

However, if the gift certificates are not redeemed and lapse, the following journal entry is made:

Deferred revenue	(amount of certificate)
Gain on lapse of certificates	(amount of certificate)

Please note that although different accounts are credited depending on whether the certificates are redeemed or lapse, the Deferred Revenue account is decreased in both cases.

**73. (c)** Revenues are generally recognized when they are both **realized** or **realizable** and **earned**. Therefore, Dallas Co. should report a liability for deferred revenues equal to the advance payment of 60% of the main contract price. One of three essential characteristics of a liability is that the transaction or other event obligating the entity has already happened. Since the subcontractor had not produced the special-order goods as of March 31, Dallas should not record a liability at that time. Therefore, no payable to the subcontractor would be reported for this activity as of March 31.

**74. (b)** At June 30, year 2, Northan Retailers should report the coupon transactions as unearned revenues because the sale of the coupons is not the culmination of the earnings process (i.e., Northan must allow customers to exchange the coupons for merchandise or refund the cost of the coupons at some later date). The unearned revenues should be recorded at the amount of the cash received by debiting cash and crediting an unearned revenue account. The retail price of the merchandise for which coupons may be redeemed does not impact the monetary amount of Northan's liability to its customers, and each coupon redeemed will ultimately result in the recognition of sales of \$10, the amount of cash previously received.

**75. (b)** The requirement is to determine the situation that might account for the reduction in the deferred revenue balance. When a service contract is purchased by a customer and the fee prepaid, deferred revenue is recognized at the date of payment. Revenue cannot be recorded because revenue has not yet been earned. Revenue is only recorded when services are performed under the contract. The deferred revenue balance is reduced by the **actual** amount of revenue earned when services are performed under the services contract. If more contracts were signed earlier in one year than another year, there is a greater period of time in which to perform actual services. As previously stated, when actual services are performed, the deferred revenue balance is decreased. Therefore, the more actual services that are performed, the greater the reduction in the deferred revenue balance. If more year 2 contracts were signed later in year 2 than year 1, the deferred revenue balance in year 2 would be larger than year 1. There would be less time to perform actual services, therefore less actual revenue would be recognized, creating a larger deferred revenue balance at year-end. There is no contribution margin recognized on service contracts.

**76. (c)** The aggregate amount of payments for unconditional purchase obligations that have been recognized on the purchaser's balance sheet shall be disclosed for each of the **five** years following the date of the latest balance sheet presented.

**77. (b)** A loss contingency should be accrued if it is **probable** that a liability has been incurred at the balance sheet date and the amount of the loss is reasonably estimable. With respect to unfiled claims, the enterprise must consider both the probability that a claim will be filed and the probability of an unfavorable outcome. Although it is probable that claims

will be asserted against Sims, it is only **reasonably possible** that the claims will be successful. Therefore, this contingent liability should not be accrued, but should be disclosed. The potential loss to be disclosed is \$250,000, since the additional amount above the deductible would be covered by the insurance policy, and therefore is not a loss or liability for Sims.

**78. (c)** Current liabilities are obligations whose liquidation is reasonably expected to require the use of current assets or the creation of other current liabilities. This means that generally, current liabilities are the liabilities that are due within one year of the balance sheet date. Clearly, accounts payable (\$55,000) and accrued expenses (\$35,000) are current liabilities. Notes payable (\$400,000) and bonds payable (\$1,000,000) are usually considered to be long-term, but the maturity dates given (7/1/Y3 and 3/1/Y3 respectively) indicate they are current liabilities at 12/31/Y2. The contingent liability (\$450,000) and deferred tax liability (\$25,000) will not be settled until year 4 and therefore should be classified as long-term at 12/31/Y2. Thus, the 12/31/Y2 current liabilities total is \$1,490,000 as follows:

Accounts payable	\$ 55,000
Accrued expenses	35,000
Unsecured notes 8%—due 7/1/Y3	400,000
Senior bonds 7%—due 3/31/Y3	<u>1,000,000</u>
Total current liabilities	<u>\$1,490,000</u>

**79. (d)** The lawsuit damages must be accrued as a loss contingency because an unfavorable outcome is **probable** and the amount of the loss is **reasonably estimable**. When a range of possible loss exists, the best estimate within the range is accrued. When no amount within the range is a better estimate than any other amount, the dollar amount at the low end of the range is **accrued** (in this case, \$500,000) and the dollar amount of the high end of the range is **disclosed**.

**80. (c)** A loss contingency should be accrued if it is **probable** that a liability has been incurred at the balance sheet date and the amount of the loss is **reasonably estimable**. This loss must be accrued because it meets both criteria. Notice that even though the lawsuit was not initiated until 1/12/Y3, the liability was incurred on 11/5/Y2 when the accident occurred. When some amount within an estimated range is a better estimate than any other amount in the range, that amount is accrued. Therefore, a loss of \$300,000 should be accrued. If no amount within the range is a better estimate than any other amount, the amount at the low end of the range is accrued and the amount at the high end is disclosed.

**81. (a)** The additional tax liability must be accrued as a loss contingency because an unfavorable outcome is **probable** and the amount of the loss is **reasonably estimable**. Since \$200,000 is the reasonable estimate, that amount should be accrued by debiting Income Tax Expense and crediting Income Tax Payable. The possibility of the liability being as high as \$300,000 would be disclosed in the notes. The settlement offer of \$275,000 is not accrued at 12/31/Y2 because prior to financial statement issuance, Haft was unaware of the offer, and \$200,000 was the best estimate. In year 3, when the

settlement offer was accepted, Haft would record an additional \$75,000 of expense and liability.

**82. (a)** A loss contingency is accrued if it is **probable** that a liability has been incurred at the balance sheet date and the amount of the loss is reasonably estimable. If no accrual is made for a loss contingency because one or both of the conditions above are not met, disclosure of the contingency shall be made when it is at least **reasonably possible** that a loss was incurred. Therefore, this loss should be disclosed, but not accrued as a liability.

**83. (b)** Invern's appropriation of retained earnings for contingencies is merely a reclassification of retained earnings on the balance sheet which tells the readers of the financial statements that such amounts are generally not available to pay dividends. This appropriation has no effect on the income statement. When a loss contingency is probable (as in this instance) **and** reasonably estimable (\$190,000 in this instance), accrual of the loss is required. Therefore, Invern must accrue both a liability and an expense of \$190,000. Note that Invern will also reclassify \$190,000 of appropriated retained earnings into the "general" retained earnings.

**84. (d)** At 12/31/Y2, Halsey's contingent liability of \$50,000 is no longer probable due to the favorable judgment and the inability to predict the outcome of the appeal. Therefore, no liability should be reported in the balance sheet. **Gain** contingencies are not reflected in the accounts until realized, so the \$30,000 asset is not reported in the 12/31/Y2 balance sheet, either.

**85. (a)** Gain contingencies are not recognized in the income statement until realized. As only \$15,000 of the litigation awards has been resolved as of December 31, year 2, Haze should report only \$15,000 as a gain in its year 2 financial statements.

**86. (a)** Gain contingencies are not reflected in the accounts until realized. Since the case is unresolved at 12/31/Y5, none of this contingent gain should be recorded as income in year 5. Adequate disclosure should be made of the gain contingency, but care should be taken to avoid misleading implications as to the likelihood of realization.

**87. (d)** Gain contingencies are not reflected in the accounts until realized. Since the case was unresolved at 12/31/Y2, none of this contingent gain can be recorded as a receivable and/or revenue in year 2. Since the contingency is probable, it should be disclosed along with the 12/31/Y2 estimate of a range of \$75,000 to \$150,000. A gain contingency would not be accrued as a receivable. The amount disclosed should be the range because all amounts within the range are considered equally likely.

**88. (c)** An estimated loss from a loss contingency shall be accrued by a charge to income if **both** of the following conditions are met:

1. Information available indicates that it is **probable** that an asset has been impaired or a liability has been incurred.
2. The amount of the loss can be **reasonably estimated**.

However, gain contingencies are only recognized when a specific event actually occurs, not prior to the event, because to do so would recognize the gain prior to its realization. Therefore, Brooks should recognize the loss in year 2 due to the fact that the event is probable and can be reasonably estimated. Dollis, on the other hand, cannot recognize the gain until year 3, the year they receive the actual award.

**89. (a)** Eagle Co. has a contingent liability where the possibility of loss is **remote**. Loss contingencies are accrued when they are **probable** and **reasonably estimable**. All others are disclosed unless remote. However, some contingencies, such as guarantees of others' debts, standby letters of credit by banks, and agreements to repurchase receivables, are disclosed even if remote. Eagle's contingent liability is **not** accrued, because it is not probable. It is disclosed for two reasons: it is a guarantee of other's debt, and it is a related-party transaction.

**90. (d)** An accrual of a liability for future vacation pay is required if all the conditions below are met.

1. Obligation arises from employee services already performed.
2. Obligation arises from rights that vest or accumulate.
3. Payment is probable.
4. Amount can be reasonably estimated.

The criteria are met for the vacation pay ( $150 \times \$100 = \$15,000$ ), so North is required to report a \$15,000 liability. The same criteria apply to accrual of a liability for future sick pay, **except** that if sick pay benefits accumulate but do not vest, accrual is **permitted** but not **required** because its payment is contingent upon future employee sickness. Therefore, no liability is **required** for these sick pay benefits ( $75 \times \$100 = \$7,500$ ). Note that the unadjusted balance of the liability account (\$21,000) does not affect the computation of the required 12/31/Y2 liability.

**91. (d)** The week ended 1/1/Y3 included four days in year 2 and one day in year 3. The pay due for this week won't be paid until the following Monday (1/4/Y3). Therefore, Ross has a liability for four days' accrued salaries at 12/31/Y2 ( $4/5 \times \$80,000 = \$64,000$ ). The entire \$25,000 of vacation pay is an accrued liability at 12/31/Y2 because it represents vacation time earned by employees in year 2 but not taken by 12/31/Y2. Therefore, the total accrued salary and vacation pay is \$89,000 ( $\$64,000 + \$25,000$ ).

**92. (c)** An employer is required to accrue a liability for employees' rights to receive compensation for future absences, such as vacations, when certain conditions are met. The Statement does **not**, however, specify how such liabilities are to be measured. Since vacation time is paid by Gavin Co. at the salaries in effect when vacations are taken or when employment is terminated, Gavin adjusts its vacation liability and expense to current salary levels. Gavin's year 2 vacation pay expense consists of vacations earned for work in year 2 (adjusted to current rates) of \$30,000 plus the amount necessary to adjust its pre-year 2 vacation liability for the 10% salary increase. The amount of this adjustment is equal to 10% of the preexisting liability balance at December 31, year 2 [ $(\$35,000 - \$20,000) \times 10\% = \$1,500$ ]. Therefore,

total vacation pay expense for the period is equal to \$31,500 (\$30,000 + \$1,500).

**93. (c)** An employer shall accrue a liability for employees' future absences if **all** of the following conditions are met: (1) the employer's obligation relates to employees' service already rendered, (2) the employees' rights vest **or** accumulate, (3) payment of the compensation is probable, and (4) the amount can be reasonably estimated. All of these conditions are met whether Taos Co.'s employees' rights either accumulate or vest.

**94. (b)** Accrual of a liability for employees' compensation for future absences is required if all of the conditions below are met.

1. Obligation arises from employee services already performed.
2. Obligation arises from rights that vest or accumulate.
3. Payment is probable.
4. Amount can be reasonably estimated.

**95. (d)** The solutions approach is to set up a T-account for warranty liability.

Warranty Liability			
Year 1 payments	2,250	9,000	Year 1 exp. (6% × \$150,000)
Year 2 payments	7,500	15,000	Year 2 exp. (6% × \$250,000)
		14,250	12/31/Y2 liability

Each year warranty expense is estimated at 6% of sales and recorded by debiting the expense account and crediting the liability. As warranty expenditures are made, the liability is debited and cash is credited. Note that the total estimated warranty cost for **both** years (2% + 4% = 6%) is recorded in the year of sale in compliance with the matching principle.

**96. (d)** The warranty expense of \$30 for each machine sold, although it will be incurred over the three-year warranty period, is directly related to the sales revenue as an integral and inseparable part of the sale and recognized at the time of the sale. The warranty costs make their contribution to revenue in the year of sale by making the product more attractive to the customer. Therefore, in accordance with the matching principle, the warranty costs should be expensed when the machines are sold with a corresponding credit to accrued liability. Answers (a) and (b) are incorrect; this is a sales warranty approach in which the warranty is sold separately from the product. The revenue is recognized on the straight-line basis and they are expensed as incurred. Answer (c) is incorrect because this describes a cash basis method.

**97. (c)** Warranty services can be recorded at the fair value only if the contract can be settled by a third party. Therefore, the fair value is considered the settlement amount of the contract.

**98. (a)** Case expects 120,000 coupons to be redeemed at a total cost of \$.50 per coupon (\$.45 + \$.05). Therefore, total expected redemptions are \$60,000 (120,000 × \$.50). By 12/31/Y2, \$25,000 has been paid on coupon redemptions, so a

liability of \$35,000 must be established (\$60,000 - \$25,000). Note that this liability would include both payments due for the 50,000 coupons on hand, and payments due on coupons to be received within the first thirty days after the expiration date.

**99. (c)** Dunn records stamp service revenue and provides for the cost of redemptions in the year stamps are sold. Therefore, Dunn's entries are

<i>To record sales of stamps</i>		
Cash	4,000,000	
Stamp service revenue		4,000,000
<i>To record cost of redemptions</i>		
Liability for stamp reds.	2,750,000	
Inventory		2,750,000
<i>To provide for cost of future redemptions</i>		
Cost of redemptions	1,800,000	
Liability for stamp reds.		1,800,000
	(80% × \$2,250,000)	

The 12/31/Y2 liability balance is \$5,050,000 as shown below.

Liability for Stamp Redemptions			
		6,000,000	12/31/Y1
Redemptions	2,750,000	1,800,000	Provision for reds.
		<u>5,050,000</u>	12/31/Y2

**100. (c)** The asset retirement obligation (ARO) is recorded at its fair value in the period in which it is incurred. Subsequently, it is adjusted for revisions in estimates and the passage of time. The beginning balance in the asset retirement obligation account is \$350,000. The fair value of the additional unconditional retirement obligations incurred during the year was \$82,000 and increases the ARO. The \$23,000 accretion expense is the expense recognized on the ARO due to the passage of time and will increase the ARO. (\$350,000 + \$82,000 + \$23,000 = \$455,000).

**101. (a)** Current assets listed in the trial balance are cash (\$550,000), accounts receivable (\$1,650,000), and prepaid taxes (\$300,000). However, part of the AR must be reclassified, and income tax expense has not yet been recorded. Included in AR is \$500,000 due from a customer, for which \$250,000 is collectible in year 3 (2 × \$125,000) and \$250,000 is collectible in year 4. The portion collectible in year 4 should be reclassified as a noncurrent asset. Revenues (\$3,600,000) less expenses (\$2,600,000) result in pretax income of \$1,000,000. Since the tax rate is 30%, tax expense is \$300,000 (30% × \$1,000,000). Therefore, an adjustment is necessary to debit **income tax expense** and credit **prepaid taxes** for \$300,000. Total current assets, after reclassification and adjustment, are \$1,950,000 [answer (a)] as calculated below.

Cash	\$ 550,000
AR (\$1,650,000 – \$250,000)	1,400,000
Prepaid taxes (\$300,000 – \$300,000)	—
	<u>\$1,950,000</u>

**102. (c)** Before closing entries, retained earnings is \$630,000. Year 2 net income is revenues (\$3,600,000) less expenses (\$2,600,000) and income tax expense [ $30\% \times (\$3,600,000 - \$2,600,000) = \$300,000$ ]. After adjusting for income tax expense, net income is \$700,000 [ $\$3,600,000 - (\$2,600,000 + \$300,000)$ ]. After closing entries, 12/31/Y2 retained earnings is \$1,330,000 ( $\$630,000 + \$700,000$ ). The foreign currency translation adjustment (\$430,000) does not affect retained earnings; it is reported as a separate component of stockholders' equity.

**103. (a)** Current assets are cash and other assets that are expected to be converted into cash, sold, or consumed either in one year, or in the operating cycle, whichever is longer. Generally included in this category are cash, temporary investments, short-term receivables, inventories, and prepaid expenses. In this situation, there are two special items. Cash must be adjusted because checks that were not mailed until July 9 were recorded June 29. To compute the correct June 30 cash balance, this \$30,000 of checks must be added back to the cash balance, turning the \$10,000 overdraft into a \$20,000 positive balance [ $(-\$10,000) + \$30,000 = \$20,000$ ]. Also, land held for resale (\$100,000) must be included in current assets because, like inventory, at June 30 it is expected to be sold for cash within the next year. Therefore, June 30 current assets total \$225,000.

Cash	\$ 20,000
AR, net	35,000
Inventory	58,000
Prepaid expenses	12,000
Land held for resale	<u>100,000</u>
	<u>\$225,000</u>

**104. (a)** Current liabilities are obligations whose liquidation is reasonably expected to require the use of current assets or the creation of other current liabilities. This means that generally, current liabilities are liabilities due within one year of the balance sheet date. Clearly, accounts payable (\$15,000) and dividends payable (\$8,000) are current liabilities. Generally, bonds payable are a long-term liability; however, since these bonds are due in year 3, they must be reported as a current liability at 12/31/Y2 (\$25,000 fair value less \$3,000 discount, or \$22,000). Therefore, total current liabilities are \$45,000 ( $\$15,000 + \$8,000 + \$22,000$ ). The notes payable (\$20,000) are classified as long-term because they are not due until year 4.

**105. (b)** The quick (acid-test) ratio is quick assets (cash, temporary investments in marketable equity securities, and net receivables) divided by current liabilities. The quick ratio measures the ability to pay current liabilities from cash and near-cash items. In this case, quick assets total \$700,000 ( $\$170,000 + \$450,000 + \$80,000$ ) and current liabilities total

\$400,000 ( $\$60,000 + \$240,000 + \$100,000$ ), resulting in a quick ratio of 1.75 to 1 ( $\$700,000 \div \$400,000$ ).

**106. (d)** The formula to compute accounts receivable turnover is

$$\frac{\text{Net credit sales}}{\text{Average accounts receivable}}$$

The average receivable is the sum of the beginning and ending net accounts receivable divided by 2. The year 2 beginning accounts receivable equals the year 1 ending balance in accounts receivable. Average accounts receivable is \$425,000 [ $(\$450,000 + \$400,000) \div 2$ ]. Applying the formula, the year 2 accounts receivable turnover is 7.06 times ( $\$3,000,000 \div \$425,000$ ).

**107. (d)** Ratios that are useful in assessing a company's ability to meet currently maturing or short-term obligations are referred to as solvency ratios. The acid-test ratio is classified as a solvency ratio, and it measures the ability to pay current liabilities from cash and near-cash items. The acid-test ratio is

$$\frac{\text{Cash} + \text{Net receivables} + \text{Marketable securities}}{\text{Current liabilities}}$$

The debt to equity ratio is a leverage ratio that measures the relative amount of leverage or debt a company has. The debt to equity ratio is

$$\frac{\text{Total liabilities}}{\text{Common stockholders' equity}}$$

Therefore, answer (d) is correct because the acid-test ratio is useful in assessing a company's ability to meet currently maturing or short-term obligations while the debt to equity ratio is not.

**108. (a)** The quick (acid-test) ratio measures the ability to pay current liabilities from cash and near-cash items.

$$\text{Quick ratio} = \frac{\text{Cash} + \text{Net receivables} + \text{Marketable securities}}{\text{Current liabilities}}$$

Fluctuating market prices of short-term investments may adversely affect Belle's quick ratio and creditworthiness. Inventory and available-for-sale investment items do not affect the quick ratio.

**109. (a)** The solutions approach is to create a numerical example that conforms to the facts given in the question. Assume the following:

$$\text{Current ratio} = \frac{\$900,000}{\$600,000} = 1.5 \text{ to } 1$$

$$\text{Quick ratio} = \frac{\$300,000}{\$600,000} = .5 \text{ to } 1$$

Payments of accounts payable decrease both cash (a current and quick asset) and accounts payable (a current liability). After payment the following

$$\text{Current ratio} = \frac{900 - 200}{600 - 200} = \frac{700}{400} = 1.75 \text{ to } 1$$

$$\text{Quick ratio} = \frac{300 - 200}{600 - 200} = \frac{100}{400} = .25 \text{ to } 1$$

Subtracting equal amounts from the numerator and the denominator of a ratio **greater than one** will **increase** the ratio. Subtracting equal amounts from the numerator and the denominator of a ratio **less than one** will **decrease** the ratio. Therefore, the current ratio will increase while the quick ratio decreases.

**110. (b)** The formula to compute the current ratio is

$$\text{Current ratio} = \frac{\text{Current assets}}{\text{Current liabilities}}$$

The write-off of inventory would decrease current assets and the current ratio. The formula to compute the acid-test (quick) ratio is

$$\text{Acid-test ratio} = \frac{\text{Cash} + \text{Net receivables} + \text{Marketable securities}}{\text{Current liabilities}}$$

The write-off of inventory has no effect on the acid-test ratio.

**111. (d)** The number of days in the operating cycle measures the length of time from purchase of inventory to collection of cash. The formula is

$$\left( \frac{\text{Number of days' sales in inventories}}{\text{Number of days' sales in accts. receivable}} \right) = \left( \frac{\text{Number of days in operating cycle}}{\text{Number of days in operating cycle}} \right)$$

$$61 \text{ days} + 33 \text{ days} = 94 \text{ days}$$

Note that the number of days' sales in inventories measures the number of days from the purchase of inventory to the sale of inventory, while the number of days' sales in accounts receivable measures the number of days from the sale of inventory to the collection of cash.

**112. (b)** Collection of a receivable results in an increase in cash and a decrease in the accounts receivable balance. The accounts receivable turnover ratio is computed by dividing net credit sales by the average net accounts receivable balance. Collection of a receivable reduces the average net

accounts receivable balance. Thus the receivable turnover ratio increases. Since this transaction does not affect cost of goods sold or inventory, the inventory turnover ratio is unaffected. Neither the current ratio nor the quick ratio is affected by the collection; neither current assets nor quick assets would change as a result of the collection.

**113. (c)** The requirement is to identify how the estimated loss should be disclosed in the financial statements. Answer (c) is correct because IFRS defines a provision as a liability that is uncertain in timing or amount. Provisions are made for estimated liabilities and recorded as a loss in earnings for the period if the outcome is probable and measurable. Answer (a) is incorrect because the loss should be recorded in the current period income statement. Answer (b) is incorrect because under IFRS, a contingency depends on some future uncertainty or event, it is not probable that an outflow will be required to settle, or the amount cannot be measured with reliability. If an item qualifies as a contingency, it is disclosed in the notes to the financial statements. Answer (d) is incorrect because contingencies are disclosed in the footnotes.

**114. (c)** The requirement is to identify how Roland should report the land. Answer (c) is correct because IFRS provides that a contingent asset is a possible asset that arises from past events, and is confirmed only by the occurrence of uncertain future events that are not within the control of the reporting entity. A contingent asset is not recognized, but it is disclosed in the notes to the financial statements if the economic benefits are probable. Answer (a) is incorrect because it does not meet the definition of an asset. Answers (b) and (d) are incorrect because contingent assets are not recognized in the balance sheet.

**115. (b)** The requirement is to identify the response to a violation of a loan covenant on a long-term debt under IFRS. Answer (b) is correct because the debt must be reclassified as current.

**116. (d)** The requirement is to identify the account that would not be considered a "provision." Answer (d) is correct because provisions are accounts that are uncertain as to amount or timing. They involve estimated amounts, such as warranty liabilities, bad debts, and taxes. A note payable is not uncertain as to amount or timing.

**117. (b)** The requirement is to identify the description of a contingency under IFRS. Answer (b) is correct because a contingency is described as an event which is not recognized in the financial statements because it is not probable that an outflow will be required or the amount cannot be reasonably estimated.

Reporting Requirements	Authoritative Literature	
	Help	

Items 1 through 6 are based on the following:

Lorn Company is preparing its financial statements for the year ended December 31, year 2.

Items 1 through 6 represent various commitments and contingencies of Lorn at December 31, year 2, and events subsequent to December 31, year 2, but prior to the issuance of the year 2 financial statements. For each item, select from the following list the reporting requirement. A reporting requirement may be selected once, more than once, or not at all.

**Reporting requirement**

- |                    |                                   |
|--------------------|-----------------------------------|
| D. Disclosure only | B. Both accrual and disclosure    |
| A. Accrual only    | N. Neither accrual nor disclosure |

- |  | (D)                   | (A)                   | (B)                   | (N)                   |
|--|-----------------------|-----------------------|-----------------------|-----------------------|
| 1. On December 1, year 2, Lorn was awarded damages of \$75,000 in a patent infringement suit it brought against a competitor. The defendant did not appeal the verdict, and payment was received in January year 3.  | <input type="radio"/> | <input type="radio"/> | <input type="radio"/> | <input type="radio"/> |
| 2. A former employee of Lorn has brought a wrongful-dismissal suit against Lorn. Lorn’s lawyers believe the suit to be without merit.  | <input type="radio"/> | <input type="radio"/> | <input type="radio"/> | <input type="radio"/> |
| 3. At December 31, year 2, Lorn had outstanding purchase orders in the ordinary course of business for purchase of a raw material to be used in its manufacturing process. The market price is currently higher than the purchase price and is not anticipated to change within the next year. | <input type="radio"/> | <input type="radio"/> | <input type="radio"/> | <input type="radio"/> |
| 4. A government contract completed during year 2 is subject to renegotiation. Although Lorn estimates that it is reasonably possible that a refund of approximately \$200,000 – \$300,000 may be required by the government, it does not wish to publicize this possibility.                   | <input type="radio"/> | <input type="radio"/> | <input type="radio"/> | <input type="radio"/> |
| 5. Lorn has been notified by a governmental agency that it will be held responsible for the cleanup of toxic materials at a site where Lorn formerly conducted operations. Lorn estimates that it is probable that its share of remedial action will be approximately \$500,000.               | <input type="radio"/> | <input type="radio"/> | <input type="radio"/> | <input type="radio"/> |
| 6. On January 5, year 3, Lorn redeemed its outstanding bonds and issued new bonds with a lower rate of interest. The reacquisition price was in excess of the carrying amount of the bonds.  | <input type="radio"/> | <input type="radio"/> | <input type="radio"/> | <input type="radio"/> |

<b>Uncollectible Accounts</b>	<b>Authoritative Literature</b>	<b>Help</b>

**Situation**

Sigma Co. began operations on January 1, year 1. On December 31, year 1, Sigma provided for uncollectible accounts based on 1% of annual credit sales. On January 1, year 2, Sigma changed its method of determining its allowance for uncollectible accounts by applying certain percentages to the accounts receivable aging as follows:

<b>Days past invoice date</b>	<b>Percent deemed to be uncollectible</b>
0–30	1
31–90	5
91–180	20
Over 180	80

In addition, Sigma wrote off all accounts receivable that were over one year old. The following additional information relates to the years ended December 31, year 2, and year 1:

	<b>Year 2</b>	<b>Year 1</b>
Credit sales	\$3,000,000	\$2,800,000
Collections	2,915,000	2,400,000
Accounts written off	27,000	None
Recovery of accounts previously written off	7,000	None
<b>Days past invoice date at 12/31</b>		
0–30	300,000	250,000
31–90	80,000	90,000
91–180	60,000	45,000
Over 180	25,000	15,000

Complete the following schedules showing the calculation of the allowance for uncollectible accounts at December 31, year 2 and the calculation for uncollectible accounts expense for year 2.

*Sigma Company*  
**SCHEDULE OF CALCULATION OF ALLOWANCE FOR UNCOLLECTIBLE ACCOUNTS**  
*December 31, Year 2*

	<b>Amounts of accounts receivable</b>	<b>Percentage of uncollectible accounts</b>	<b>Estimate of uncollectible accounts</b>

| 4. A transfer of receivables with recourse may be accounted for as a sale, provided the transferee can require the transferor to repurchase the receivables.   | <input type="radio"/>            | <input checked="" type="radio"/> |
| 5. In a transfer of receivables with recourse accounted for as a borrowing, the difference between the receivables and the total of the factor’s holdback plus the proceeds is a financing cost that should be amortized to interest expense over the term of the receivables. | <input checked="" type="radio"/> | <input type="radio"/>            |

### *Explanations*

- (F)** “Factor’s holdback” accounts for the proceeds retained by the factor to cover estimated sales discounts, sales returns, and sales allowances. When all amounts have been collected by the factor, the balance in factor’s margin is returned to the seller. Therefore, this account is a receivable reported as a current asset on the balance sheet.
- (T)** A specific assignment of receivables bestows more formal rights upon the assignee (lender) in that the AR do not simply collateralize the loan, but collections on the assigned accounts are actually remitted to the assignor who remits them to the assignee (lender).
- (F)** Once a company sells receivables to a factor it normally has no further involvement with the receivables. The factor usually collects the remittances directly from the **customer**.
- (F)** Transfers of receivables in which the transferee can require the transferor to repurchase the receivables may not be considered a sale.
- (T)** The difference between the amount of receivables sold to a factor in a borrowing transaction and the total of the factor’s holdback plus the proceeds is recorded in a “Discount on Transferred AR” or interest expense account. This account represents interest cost and should be recognized over the term of the receivables. If interest expense is debited, an adjusting entry to defer some of the interest as “Discount” would be required if some of the discount pertains to a later period.

|--|-----------------------|----------------------------------|----------------------------------|----------------------------------|----------------------------------|----------------------------------|
| 1. Lake transfers receivables by surrendering control. Collection is to be made by the purchaser (factor), who assumes risk of loss.                                       | <input type="radio"/> | <input type="radio"/>            | <input type="radio"/>            | <input checked="" type="radio"/> | <input type="radio"/>            | <input type="radio"/>            |
| 2. Lake specifically assigns a portion of its receivables as collateral for a loan. Collections from the assigned receivables will be used to repay the loan and interest. | <input type="radio"/> | <input type="radio"/>            | <input checked="" type="radio"/> | <input type="radio"/>            | <input type="radio"/>            | <input type="radio"/>            |
| 3. Lake pledges its receivables as collateral to secure a loan and the debtor collects the proceeds.   | <input type="radio"/> | <input type="radio"/>            | <input type="radio"/>            | <input type="radio"/>            | <input checked="" type="radio"/> | <input type="radio"/>            |
| 4. Lake sells accounts receivable to a factor in a transaction considered a borrowing.   | <input type="radio"/> | <input checked="" type="radio"/> | <input type="radio"/>            | <input type="radio"/>            | <input type="radio"/>            | <input type="radio"/>            |
| 5. Lake transfers a note receivable by surrendering control over it. The transfer was on a without recourse basis.   | <input type="radio"/> | <input type="radio"/>            | <input type="radio"/>            | <input type="radio"/>            | <input type="radio"/>            | <input checked="" type="radio"/> |
| 6. Lake pledges its accounts receivable as security for a loan.  | <input type="radio"/> | <input type="radio"/>            | <input type="radio"/>            | <input type="radio"/>            | <input checked="" type="radio"/> | <input type="radio"/>            |

### Explanations

- (D)** In this transaction, receivables are factored by surrendering control and without recourse. This constitutes an outright sale of the receivables in that title, risk of loss, and rights to future benefits are all transferred. Therefore, a loss on the transaction is recognized.
- (C)** In a specific assignment of receivables, AR assigned are identified by placing them in an AR assigned account. A finance charge is assessed on assignment transactions that are borrowings.
- (E)** When AR are pledged, the receivables serve as collateral for a loan but the proceeds are not remitted to the lender. In this case, the amount of AR pledged is reported at the balance sheet date either parenthetically or in the notes.
- (B)** In this transaction, considered a borrowing, receivables are considered to be factored with recourse. Thus, the transaction is viewed as a loan collateralized by AR and the amount of the proceeds plus the factor's holdback and interest charged should be reported as a liability.
- (F)** A note discounted on which control is surrendered and the terms include without recourse is considered a sales transaction upon which a loss should be recognized. Notes receivable should be credited.
- (E)** A general assignment of receivables is another term for pledging AR, and thus should be disclosed parenthetically or in the notes to the financial statements (no journal entry).

|---|-----------------------|-----------------------|----------------------------------|----------------------------------|
| 1. On December 1, year 2, Lorn was awarded damages of \$75,000 in a patent infringement suit it brought against a competitor. The defendant did not appeal the verdict, and payment was received in January year 3. | <input type="radio"/> | <input type="radio"/> | <input checked="" type="radio"/> | <input type="radio"/>            |
| 2. A former employee of Lorn has brought a wrongful-dismissal suit against Lorn. Lorn's lawyers believe the suit to be without merit.   | <input type="radio"/> | <input type="radio"/> | <input type="radio"/>            | <input checked="" type="radio"/> |

- |  | (D)                              | (A)                   | (B)                              | (N)                              |
|--|----------------------------------|-----------------------|----------------------------------|----------------------------------|
| 3. At December 31, year 2, Lorn had outstanding purchase orders in the ordinary course of business for purchase of a raw material to be used in its manufacturing process. The market price is currently higher than the purchase price and is not anticipated to change within the next year. | <input type="radio"/>            | <input type="radio"/> | <input type="radio"/>            | <input checked="" type="radio"/> |
| 4. A government contract completed during year 2 is subject to renegotiation. Although Lorn estimates that it is reasonably possible that a refund of approximately \$200,000 – \$300,000 may be required by the government, it does not wish to publicize this possibility.                   | <input checked="" type="radio"/> | <input type="radio"/> | <input type="radio"/>            | <input type="radio"/>            |
| 5. Lorn has been notified by a governmental agency that it will be held responsible for the cleanup of toxic materials at a site where Lorn formerly conducted operations. Lorn estimates that it is probable that its share of remedial action will be approximately \$500,000.               | <input type="radio"/>            | <input type="radio"/> | <input checked="" type="radio"/> | <input type="radio"/>            |
| 6. On January 5, year 3, Lorn redeemed its outstanding bonds and issued new bonds with a lower rate of interest. The reacquisition price was in excess of the carrying amount of the bonds.  | <input checked="" type="radio"/> | <input type="radio"/> | <input type="radio"/>            | <input type="radio"/>            |

**Explanations**

1. (B) Contingencies that might result in gains usually are not reflected in the accounts since to do so might be to recognize revenue prior to its realization. Since this gain contingency was resolved before the issuance of the financial statements, it is handled similar to an ordinary transaction that occurred prior to the year-end and is accrued in the year of its occurrence.

However, disclosure of the contingencies that might result in gains is made in the notes to financial statements.

2. (N) To accrue an estimated loss from a loss contingency it is necessary that it is probable that an asset has been impaired or a liability has been incurred and that the amount of loss can be reasonably estimated. Since Lorn’s lawyers believe the suit to be without merit, neither condition has been met.

Disclosure is also required of some loss contingencies that do not meet the accrual requirements if there is a **reasonable possibility** that a loss may be incurred. Again, this condition has not been met.

3. (N) The conditions described in this question would be considered general or unspecified business risks that do not meet the conditions for accrual or disclosure.

4. (D) The words “reasonably possible” require the disclosure of this item. No accrual need be made since the question does not state it is **probable** that an asset has been impaired or a liability incurred and that the amount of loss can be reasonably estimated.

5. (B) The word “probable” and the inclusion of the estimated amount of \$500,000 mean that this situation meets the criteria of (1) a probable incurrence of a liability and (2) a reasonable estimate of an amount.

6. (D) Disclosure is made for commitments such as an obligation to reduce debts. Since the entire transaction took place in the next accounting period it does not meet the conditions for an accrual in the current period even though it would be disclosed in a footnote.

Uncollectible Accounts	Authoritative Literature	Help

Schedule to calculate allowance for uncollectible accounts

*Sigma Company*  
**SCHEDULE OF CALCULATION OF ALLOWANCE FOR UNCOLLECTIBLE ACCOUNTS**  
*December 31, Year 2*

	Amounts of accounts receivable	Percentage of uncollectible accounts	Estimate of uncollectible accounts
0 to 30 days	\$300,000	× 1%	\$ 3,000
31 to 90 days	80,000	× 5%	4,000
91 to 180 days	60,000	× 20%	12,000
Over 180 days	<u>25,000</u>	× 80%	<u>20,000</u>
Total accounts receivable	<u>\$465,000</u>		
Total allowance for uncollectible accounts			<u>\$39,000</u>

### Explanations

1. This problem consists of two related parts: part a. requires a calculation of the allowance for uncollectible accounts at 12/31/Y2 using an aging approach, and part b. requires a computation of the year 2 provision for uncollectible accounts (uncollectible accounts expense). The solutions approach is to quickly review the basics of accounting for uncollectible accounts, visualize the solution format, and begin. Some candidates may benefit from preparation of T-accounts (see item 4. below).

2. When using the aging approach, the **total** uncollectible accounts (in other words, the required ending balance in the allowance account) is estimated by applying a different percentage to the various age categories. The percentage increases as the age of the receivables increases because the older a receivable is, the less likely is its ultimate collection.

2.1 In this case, Sigma estimates that 1% of its receivables in the zero-thirty days age category will prove to be uncollectible. Therefore, of that \$300,000 of accounts receivable, it is estimated that \$3,000 ( $1\% \times \$300,000$ ) will be uncollectible. Similar computations are performed for the other age categories, resulting in an estimate that \$39,000 of the \$465,000 accounts receivable will prove to be uncollectible. This is the required 12/31/Y2 balance in the allowance account.

3. When using the aging approach, the first step is to compute the required ending balance in the allowance account (as discussed in items 2. and 2.1 above). The second step is to compute the uncollectible accounts expense necessary to bring the **unadjusted** allowance balance up to the **required** allowance balance.

3.1 The only item affecting the allowance account in year 1 was the recording of uncollectible accounts expense of \$28,000 ( $1\% \times \$2,800,000$  credit sales). Therefore, the 1/1/Y2 balance in this account is \$28,000. No adjustment is necessary for the change in the method of estimating this expense (from percent of sales to aging schedule) because any such change is handled prospectively.

**NOTE:** Using the aging percents given also results in a \$28,000 balance at 1/1/Y2. Even if the result was different, though, no adjustment is necessary.

3.2 During year 2, this \$28,000 credit balance was decreased by write-offs of \$27,000 (debit allowance, credit AR) and increased by \$7,000 of recoveries (debit AR, credit allowance; and debit cash, credit AR). Therefore, the 12/31/Y2 balance in the allowance account, before adjustment, is \$8,000 ( $\$28,000 - \$27,000 + \$7,000$ ).

3.3 To increase the allowance account from \$8,000 (see 3.2 above) to \$39,000 (see 2.1 above), a provision for uncollectible accounts (uncollectible accounts expense) of \$31,000 must be recorded for year 2.

4. Some candidates may benefit from the preparation of T-accounts for the allowance account and accounts receivable. These T-accounts are provided below.

*T-accounts for year 1*

	AR		
Sales	2,800,000	2,400,000	Collections
12/31/Y1	400,000		
	Allowance		
		28,000	Provision
		28,000	12/31/Y1

Computation of year 2 provision

Balance December 31, year 1	\$ 28,000
Write-offs during year 2	(27,000)
Recoveries during year 2	7,000
Balance before year 2 provision	8,000
Required allowance at December 31, year 2	<u>39,000</u>
Year 2 Provision	<u>\$ 31,000</u>

# Module 13: Present Value

## Overview

This module begins by reviewing the basic concepts related to time value of money such as present and future value. The module then covers four major topics in which time value of money applications are used extensively:

1. **Bonds** payable and bond investments including initial accounting, sales, conversions, warrants, and extinguishments.
2. **Debt restructure** including settlement, modification of terms, and impairment.
3. **Pensions** including defined contribution plans, defined benefit plans, and other post-employment benefits.
4. **Leases** including operating leases and capital leases for both lessees and lessor.

All of these topics are tested on the Financial Accounting and Reporting section of the exam to varying degrees.

**A. Fundamentals**

The concepts of time value of money are essential for successful completion of the CPA exam. Time value of money concepts are central to capital budgeting, leases, pensions, bonds, and other topics. You must understand the mechanics as well as the concepts. After studying the next few pages, work the multiple-choice questions entitled “Fundamentals.” Note that the following abbreviations are used in the text that follows.

$i$  = interest rate

$n$  = number of periods or rents

On the CPA exam, you do not have to know the complex formulas that are used to compute time value of money factors (TVMF). The factors will be given to you or enough information will be given to you so that you can easily compute them (see section A.8. “TVMF Applications”). Your main focus of attention should be centered on understanding which TVMF should be used in a given situation.

**1. Future Value (FV) of an Amount** (future value of \$1)

- a. The future value of an amount is the amount that will be available at some point in the future if an amount is deposited today and earns compound interest for “ $n$ ” periods.

- (1) The most common application is savings deposits.

**EXAMPLE**

If you deposited \$100 today at 10%, you would have \$110 [ $\$100 + (\$100 \times 10\%)$ ] at the end of the first year, \$121 [ $\$100 + (\$110 \times 10\%)$ ] at the end of the second year, etc. The compounding feature allows you to earn interest on interest. In the second year of the example you earn \$11 interest: \$10 on the original \$100 and \$1 on the first year’s interest of \$10.

**2. Present Value (PV) of a Future Amount** (present value of \$1)

- a. The present value of a future amount is the amount you would pay now for an amount to be received “ $n$ ” periods in the future given an interest rate of “ $i$ .”

- (1) A common application would be the money you would lend today for a noninterest-bearing note receivable in the future.

**EXAMPLE**

If you were lending money at 10%, you would lend \$100 for a \$110 note due in one year or for a \$121 note due in two years.

- b. The present value of \$1 is the inverse of the future value of \$1. Thus, given a future value of \$1 table, you have a present value of \$1 by dividing each value into 1.00.

**EXAMPLE**

Look at the present value of \$1 and future value of \$1 tables on the next page. The future value of \$1 at 10% in five years is 1.611. Thus, the present value of \$1 in five years would be  $1.00 \div 1.611$  which is .621 (check the table). Conversely, the future value of \$1 is found by dividing the present value of \$1 into 1.00, that is,  $1.00 \div .621 = 1.611$ .

**3. Compounding**

- a. When interest is compounded more than once a year, two extra steps are needed.

- (1) First, **multiply** “ $n$ ” by the number of times interest is compounded annually. This will give you the total number of interest periods.

- (2) Second, **divide** “*i*” by the number of times interest is compounded annually. This will give you the appropriate interest rate for each interest period.

**EXAMPLE**

If the 10% was compounded semiannually, the amount of \$100 at the end of one year would be \$110.25  $[(1.05)^2]$  instead of \$110.00. The extra \$.25 is 5% of the \$5.00 interest earned in the first half of the year.

**4. Future Value of an Ordinary Annuity**

- a. The **future value of an ordinary annuity** is the amount available “*n*” periods in the future as a result of the deposit of an amount (*A*) at the end of every period “1” through “*n*.”
- b. Compound interest is earned at the rate of “*i*” on the deposits.
- (1) A common application is a bond sinking fund. A deposit is made at the end of the first period and earns compound interest for  $n-1$  periods (not during the first period, because the deposit is made at the end of the first period). The next to the last payment earns one period’s interest, that is,  $n - (n-1) = 1$ . The last payment earns no interest, because it is deposited at the end of the last (*n*th) period.

**NOTE:** In the FUTURE AMOUNT OF AN ORDINARY ANNUITY TABLE, all of the factors for any “*n*” row are based on one less interest period than the number of payments.

**TIME VALUE OF MONEY FACTOR (TVMF) TABLES****Future Value (Amount) of \$1**

<b>n</b>	<b>6%</b>	<b>8%</b>	<b>10%</b>	<b>12%</b>	<b>15%</b>

5	5.637	5.867	6.105	6.353	6.742

Present Value of an Ordinary Annuity of \$1					
n	6%	8%	10%	12%	15%
1	.943	.926	.909	.893	.870
2	1.833	1.783	1.736	1.690	1.626
3	2.673	2.577	2.487	2.402	2.283
4	3.465	3.312	3.170	3.037	2.855
5	4.212	3.993	3.791	3.605	3.352

**5. Present Value of an Ordinary Annuity**

- a. The present value of an ordinary annuity is the value today, given a discount rate, of a series of future payments.
  - (1) A common application is the capitalization of lease payments by either lessors or lessees. Payments “1” through “n” are assumed to be made at the end of years “1” through “n,” and are discounted back to the present.

**EXAMPLE**

Assume a five-year lease of equipment requiring payments of \$1,000 at the end of each of the five years, which is to be capitalized. If the discount rate is 10%, the present value is \$3,791 (\$1,000 × 3.791).

The behavior of the present value of the lease payment stream over the five-year period is shown below. Note that the liability (principal amount) grows by interest in the amount of 10% during each period and decreases by \$1,000 at the end of each period.

	<u>1</u>	<u>2</u>	<u>3</u>	<u>4</u>	<u>5</u>
\$3,791 + 380 Int. = \$4,171					
- 1,000 Payment					
\$3,171 + 320 Int. = \$3,491					
- 1,000 Payment					
\$2,491 + 250 Int. = \$2,741					
- 1,000 Payment					
\$1,741 + 170 Int. = \$1,911					
- 1,000 Payment					
\$ 911 + 91 Int. = \$1,002 Payment

**6. Distinguishing a Future Value of an Annuity from a Present Value of an Annuity**

- a. Sometimes confusion arises in distinguishing between the future value (amount) of an annuity and the present value of an annuity. These two may be distinguished by determining whether the total dollar amount in the problem comes at the beginning (e.g., cost of equipment acquired for leasing) or at the end (e.g., the amount needed to retire bonds) of the series of payments as illustrated as follows.

**NOTE:** If the total amount comes at the end of the series of payments, it is a **future value** of annuity situation. If the total amount comes at the beginning of the series of payments, it is a **present value** of annuity situation. The total dollar amount may be given in the problem or you may have to compute it; either way, it makes no difference in determining whether a problem involves a present value or future value situation.

**NOTE:** Some students feel the need to “convert” all time value of money problems into either present value or future value problems, depending on which they’re most comfortable with. This process involves more work and more chance for errors, because an additional TVMF equation must be solved in the conversion. This is inefficient, and unnecessary if you are able to correctly identify between the two initially. Become proficient at determining present value and future value situations, so that you may efficiently select the correct TVMF from the corresponding table. Drawing a timeline for the facts in each problem will help you determine if you need to solve for a present value or a future value.

**7. Annuities Due**

- a. In some cases, the payments or annuities may not conform to the assumptions inherent in the annuity tables. For example, the payments might be made at the beginning of each of the five years instead of at the end of each year. This is an annuity due (annuity in advance) in contrast to an ordinary annuity (annuity in arrears). Both annuity due and ordinary annuity payments are represented by the “x’s” in the illustration below.

**EXAMPLE**

If the payments in the 5-period lease example presented previously were made at the beginning of the period, the present value of the first payment which is made today is \$1,000 (i.e., the TVMF is 1.00). The remaining 4 payments comprise an ordinary annuity for 4 periods as you can see on the above diagram. Always use time diagrams to analyze application of annuities.

- b. To convert either a future value of an ordinary annuity or the present value of an ordinary annuity factor to an annuity due factor, multiply the ordinary annuity factor times  $(1 + i)$ .

**EXAMPLE**

For the above lease example, you would find the present value of an ordinary annuity factor for  $n = 5$  which is 3.993. Then multiply 3.993 by 1.08 to arrive at the annuity due factor, 4.312. The present value of the payments would be \$4,312 ( $4.312 \times \$1,000$ ).

**NOTE:** The present value of the annuity due in the above example is \$319 greater than the present value of the ordinary annuity because the payments are moved closer to the present.

**8. TVMF Applications**

- a. The basic formula to use is

$$FV \text{ or } PV = TVMF \times \text{Amount}$$

- b. If an annuity is involved, the amount is the periodic payment or deposit; if not, it is a single sum.

**NOTE:** FV or PV is determined by three variables: time, interest rate, and payment. TVMF represents two variables: time and interest rate. The tables usually have the interest rate on the horizontal axis and time on the vertical axis.

- c. The above formula may also be stated as

$$\text{Amount} = \frac{\text{FV or PV}}{\text{TVMF}}$$

#### EXAMPLE

If we need to accumulate \$12,210 in five years to repay a loan, we could determine the required annual deposit with the above formula. If the savings rate were 10%, we would divide the FV (\$12,210) by the TVMF of the future value of annuity,  $n = 5$ ,  $i = .10$  (6.105) and get \$2,000. Thus, \$2,000 deposited at the end of each of five years earning 10% will result in \$12,210. This formula may also be used to find future values of an amount, present values of amounts, and annuities in the same manner.

Another variation of the formula is

$$\text{TVMF} = \frac{\text{FV or PV}}{\text{Amount}}$$

#### EXAMPLE

We may be offered a choice between paying \$3,312 in cash or \$1,000 a year at the end of each of the next four years. We determine the interest rate by dividing the annual payment into the present value of the annuity to obtain the TVMF (3.312) for  $n = 4$ . We then find the interest rate which has the same or similar TVMF (in this case 8%). Alternatively, using the above formula, we may know the interest rate but not know the number of payments. Given the TVMF, we can determine “n” by looking in the TVMF table under the known interest rate. Remember the TVMF reflects two variables: time and interest rate.

**NOW REVIEW MULTIPLE-CHOICE QUESTIONS 1 THROUGH 5**

### 9. Notes Receivable and Payable

- a. This section assumes that the entity does not elect the fair value option for accounting for receivables or payables (see section A.12 “Fair Value Option”). Short-term notes receivable and notes payable that arise from transactions with customers and suppliers in the normal course of business and are due in one year are classified as current liabilities. These short-term notes are recorded at their maturity value.
- b. Notes receivable and notes payable due in more than one year (long-term notes) should be recorded at their present values. Upon receipt or issuance of a long-term note, record the net value of the note receivable or payable (i.e., note plus or minus premium or discount) at
- (1) Cash received or paid
    - (a) Assumes no other rights or privileges
  - (2) Established exchange price (fair value) or property or services received or provided
    - (a) If not determinable, determine present value with imputed interest rate
- c. Record interest revenue (on notes receivable) or interest expense (on notes payable) as the effective rate of interest times the net receivable or payable during the period.

d. Note exchanged for cash only

- (1) When a note is exchanged for cash and no other rights or privileges are exchanged, the present value of the note is equivalent to the cash exchanged.
  - (a) The cash exchanged, however, may not be equal to the face amount of the note (the amount paid at maturity).
- (2) When the face amount of a note does not equal its present value, the difference is either a discount or a premium.
  - (a) A discount results when the face of the note exceeds its present value, and a premium results when the present value of the note exceeds its face (see section B.1. in this module for a more detailed discussion of discounts and premiums).

e. Note exchanged for cash and unstated rights and privileges

- (1) In the preceding discussion, notes were issued solely for cash, and no other rights or privileges were exchanged. The accounting treatment differs, however, when a note is issued for cash and unstated rights and/or privileges are also exchanged. The cash exchanged for such a note consists of two elements:
  - (a) The present value of the note, and
  - (b) The present value of the unstated right or privilege.
- (2) Proper accounting for this situation requires that one of the two present values above be determined. Once this is done, the remaining present value is simply the difference between the face amount of the note and the present value that was determined.

**EXAMPLE**

On January 1, year 1, Zilch Company borrowed \$200,000 from its major customer, Martha Corporation. The borrowing is evidenced by a note payable due in three years. The note is noninterest-bearing. In consideration for the borrowing, Zilch Company agrees to supply Martha Corporation’s inventory needs for the loan period at favorable prices. This last feature of the transaction is the unstated right or privilege; that is, the ability of Martha to purchase inventory at less than regular prices.

The present value of the note (assuming it is easier to determine) should be based upon the interest rate Zilch would have to pay in a normal borrowing of \$200,000 (i.e., in a transaction that did not include unstated rights or privileges). Assume that Zilch would have to pay interest at 12% in a normal borrowing. The present value of \$200,000 discounted for three years at 12% is \$142,400 ( $\$200,000 \times .712$ ). The difference between the face amount of the note, \$200,000, and its present value of \$142,400 represents the present value of the unstated right or privilege. The amount of this present value is \$57,600

The entries below show how both Zilch and Martha should account for this transaction during year 1.

	<b>Zilch</b>		<b>Martha</b>	
<b>1/1/Y1</b>			<b>1/1/Y1</b>	
Cash	142,400		Note receivable	200,000
Discount on note payable	57,600		Discount on note receivable	57,600
Note payable		200,000	Cash	142,400
Cash	57,600		Advance payments on inventory	57,600
Deferred revenue		57,600	Cash	57,600
<b>12/31/Y1</b>			<b>12/31/Y1</b>	
Interest expense	17,088*		Discount on note receivable	17,088
Discount on note payable			Interest income	17,088
* $\$142,400 \times .12 = \$17,088$		17,088		
Deferred revenue		xx	Inventory (purchases)	xx
Sales		xx	Advance payments on inventory	xx

The amounts represented by “xx” in the entries above depend upon the amount of goods acquired by Martha during year 1. On the December 31, year 1 balance sheets of both Zilch and Martha, the above notes should be disclosed in the noncurrent liability (Zilch) and asset (Martha) sections net of the unamortized discount applicable to each note.

## f. Note exchanged in a noncash transaction

- (1) In addition to notes issued for cash, a note may also be received or issued in a noncash transaction; that is, for goods, property, or services. The problem created in this situation is how to determine the note's present value in the absence of cash.
- (a) One way to solve this problem is to assume that the stated rate or contractual rate stated on the note represents a fair rate of return to the supplier for the use of the related funds. If the interest rate is presumed to be fair, then the face amount of the note is presumed to equal its present value. Interest revenue (expense) is computed by multiplying the interest rate stated on the face of the note by the face of the note. There is no discount or premium to consider because the face of the note is assumed to be equal to its present value.
- (b) The assumption that the interest rate on the face of the note is fair is not always valid. The assumption is not valid if
- 1] The interest rate is not stated (usually, this means the note is noninterest-bearing), or
  - 2] The stated rate is unreasonable (this refers to both unreasonably low and high rates), or
  - 3] The stated face amount of the note is materially different from the current cash sales price for the same or similar items, or from the fair value of the note at the date of the transaction.
- (c) When the interest rate is not fair, the face amount of the note does not equal its present value. In the absence of cash, the present value of a note is determined according to the following priorities:
- 1] First, determine if the goods, property, or services exchanged have a reliable fair value. If they do, the fair value is presumed to be the present value of the note.
  - 2] If a reliable fair value does not exist for the goods, property, or services exchanged, then determine if the note has a fair value. If it does, the note's fair value is equal to the present value of the note.
  - 3] Finally, if fair values do not exist for either the goods, property, or services or for the note, then an interest rate must be **imputed**. This imputed interest rate is then used to determine the present value of the note. The imputed interest rate represents the **debtor's** incremental borrowing rate.

**EXAMPLE****The situation where the interest rate on a note is not fair, yet the fair value of the property exchanged is known.**

Doink Co. sold a building on January 1, year 4, which originally cost \$7,000,000 and which had a book value of \$4,000,000 for a \$14,000,000 (face amount) noninterest-bearing note due in three years. Since zero interest is not considered to be a fair rate of return, the face amount of Doink's note does not equal its present value. In Doink's case, the face of its note is \$14,000,000. The present value of the note is the unknown and must be calculated.

To determine the present value of Doink's \$14,000,000 noninterest-bearing note, you should first see if the building sold had a reliable fair value at the date it was sold. Assume that Doink's building could have been sold on January 1, year 4, for \$10,000,000 in a straight cash transaction. Given the information about the building, its fair value of \$10,000,000 on January 1, year 4, represents the note's present value. Since the face of the note is \$14,000,000 and its present value is \$10,000,000, the \$4,000,000 difference represents the discount. Doink should record this transaction in the following manner:

Note receivable	14,000,000	
Accumulated depreciation	3,000,000	
Building		7,000,000
Gain on sale of building		6,000,000
Discount on note receivable		4,000,000

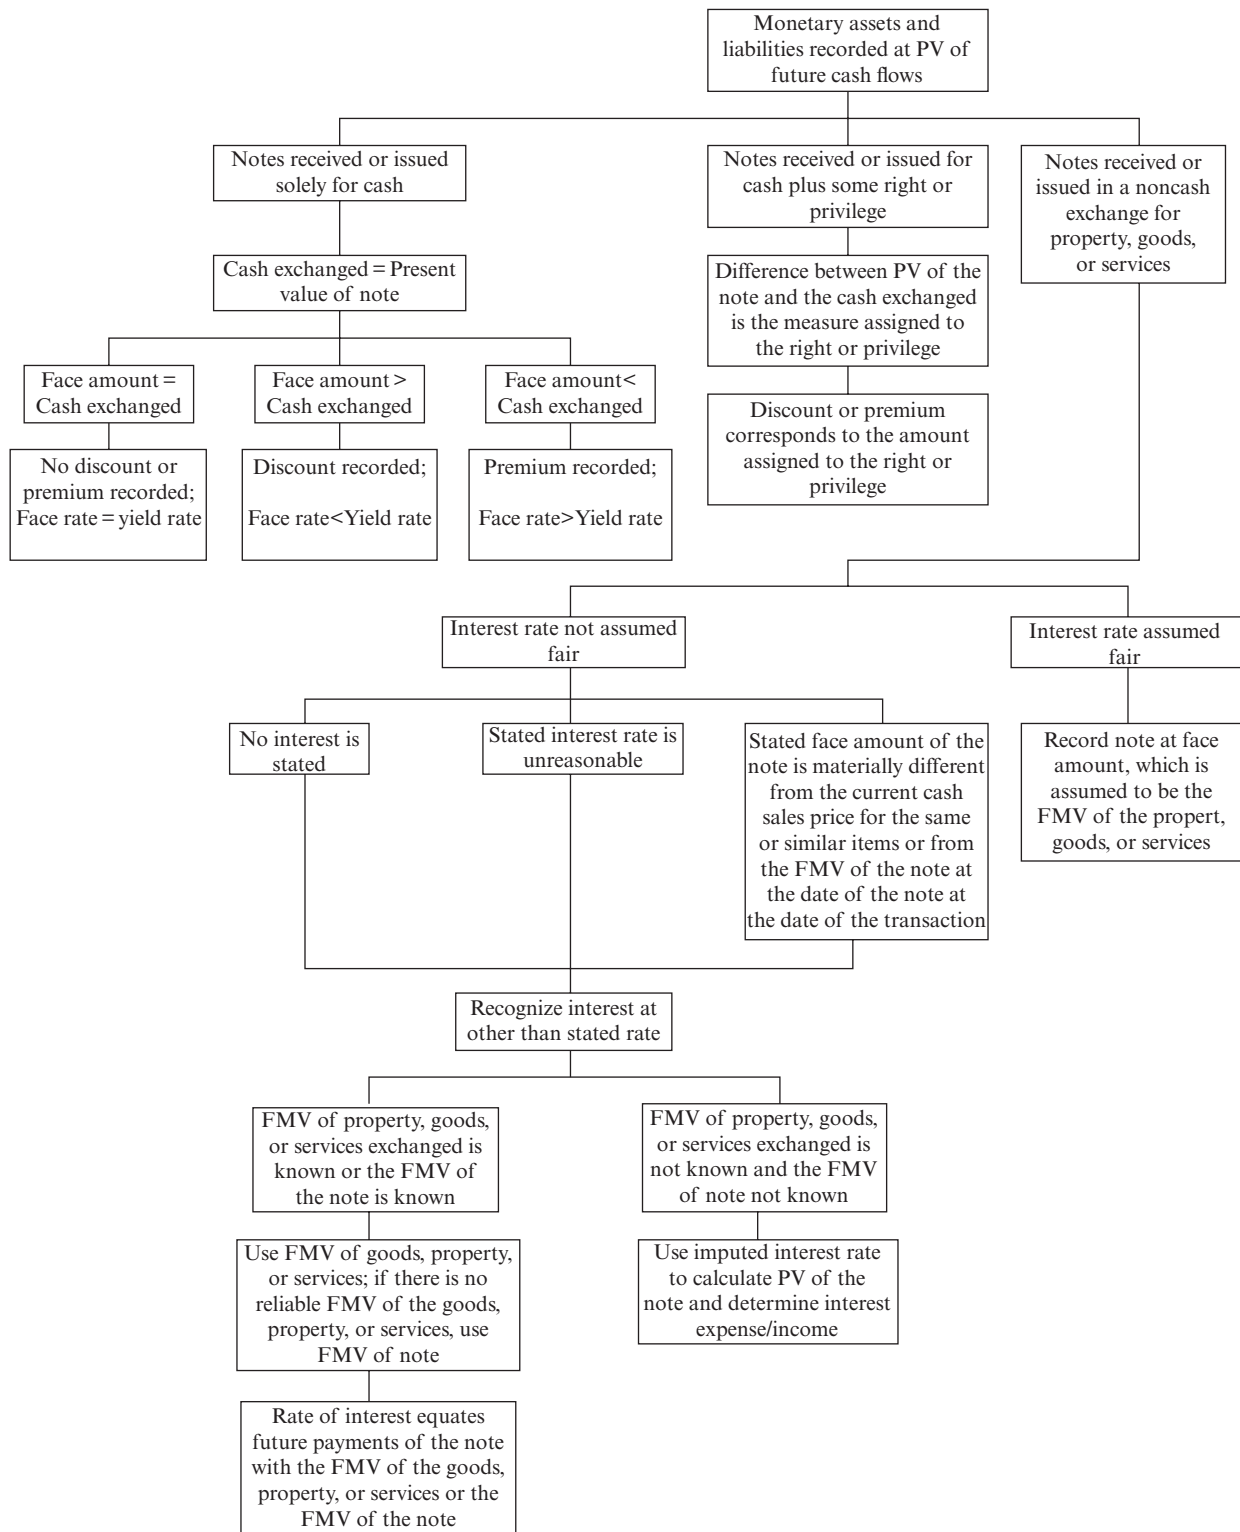

**NOTE:** It is important that you note how the gain is calculated in the entry above. The gain is the difference between the present value of the note (\$10,000,000) and the book value of the property sold (\$4,000,000). The difference between the face amount of the note (\$14,000,000) and its present value (\$10,000,000) represents the discount of \$4,000,000. This discount should be amortized to interest income using the effective interest method. However, before this discount can be amortized, the interest rate must be determined. In situations like this, the interest rate can be determined by reference to present value tables. In Doink's situation, the present value of the note, \$10,000,000, divided by its face amount, \$14,000,000, results in the number .714. This number represents a factor from the present value of \$1 table. Since Doink's note is for 3 periods, the factor .712 in the present value of \$1 table is under the 12% interest rate. Thus, Doink's interest rate is approximately 12%.

If the building sold by Doink did not have a reliable fair value on January 1, year 4, the next step would be to determine if the note had a fair value on that date.

Finally, if the building sold by Doink did not possess a reliable fair value on January 1, year 4, and the note did not have a fair value on that date, the present value of Doink's note would have to be determined by **imputation**. This means that Doink would determine the present value of its note by reference to the incremental borrowing rate of the company which acquired its building.

- (2) The following diagram represents the forementioned relationships and procedures for determining the present value of a note receivable or payable (monetary assets and liabilities) and the amount of a discount/premium.

**ACCOUNTING FOR MONETARY ASSETS AND LIABILITIES WHICH HAVE MATURITIES GREATER THAN ONE YEAR FROM THE BALANCE SHEET DATE**

**NOW REVIEW MULTIPLE-CHOICE QUESTIONS 6 THROUGH 18**

## 10. Loan Origination Costs and Fees

- a. Sometimes the lender incurs various loan origination costs when originating or acquiring a loan. The lender shall defer and recognize these costs over the life of the loan only when the costs relate directly to the loan, and would not have been incurred but for the loan. Otherwise, the costs are considered indirect and are charged to expense as incurred.
- b. Sometimes the lender charges the borrower a nonrefundable loan origination fee. Both lender and borrower shall defer and recognize the nonrefundable fee over the life of the loan. The fee is frequently assessed in the form of points, where a point is 1% of the face amount of the loan.

### EXAMPLE

Assume that Bannon Bank grants a ten-year loan to VerSteiner, Inc. in the amount of \$100,000 with a stated interest rate of 8%. Payments are due monthly, and are computed to be \$1,213. In addition, Bannon Bank incurs \$3,000 of direct loan origination costs (attorney's fees, title insurance, wages of employees' direct work on loan origination), and also charges VerSteiner a 5-point nonrefundable loan origination fee.

Bannon Bank, the lender, has a carrying amount of \$98,000. This reflects the \$100,000 face amount of the loan less the \$5,000 nonrefundable fee, plus the \$3,000 additional investment Bannon Bank incurs to generate the \$145,560 total payments from the borrower, VerSteiner. The effective interest rate is approximately 8.5%.

VerSteiner, the borrower, receives 5% less than the face amount of \$100,000, or \$95,000, but is still required to pay \$1,213 per month under the terms of the loan. VerSteiner's carrying amount is then  $\$100,000 - \$5,000 = \$95,000$ , with an effective interest rate of approximately 9.2%.

**NOTE:** Both the rates can be derived with a financial calculator. It is not likely that you would be asked to compute these on the CPA exam because the computerized exam provides a simple four-function calculator, and the formula to calculate interest is not included in the spreadsheet formulas. What you are expected to know is the concept of effective interest. You also need to know that the loan origination costs are to be added to the principal, by the lender, and any fee charged to the client is deducted from the principal by both parties in calculating the carrying amount.

## 11. Disclosures

- a. The basic loan situation involves a borrower receiving the face amount of a loan from a lender, with no related discount or premium. The liability is the face amount, and the effective interest rate is the stated interest rate on the interest-bearing note.
  - (1) When a note is issued for an amount other than the face of the loan or when a noninterest-bearing note is used, and the fair value option is not elected, a premium or discount must be recorded for the note. The discount amount is additional interest over the life of the note; the premium amount is a reduction in interest expense over the life of the loan. The amount in the discount or premium account is amortized to interest expense over the life of the note using the effective interest rate.
- b. Notes are reported on the financial statement at their net carrying value.
  - (1) Discount on notes payable is a liability valuation account (contra account). It should be reported as a direct reduction from the face amount of the note on the balance sheet.
  - (2) A premium on the note is reported as an addition to the face amount of the note (adjunct account) on the balance sheet.
- c. In the footnotes to the financial statements, a disclosure must be made for the aggregate amounts of maturities and the sinking fund requirements for all long-term borrowings for each of the five years following the balance sheet date.

## 12. Fair Value Option

- a. A company may elect the fair value option for reporting financial assets and financial liabilities. The financial liability is reported at fair value at the end of each reporting period, and the resulting gain or loss is reported in earnings of the period. A company may calculate interest expense in various ways, but must disclose in the notes to the financial statements the method used to determine interest expense.

### 13. Research Component—Accounting Standards Codification

- a. The authoritative literature on payables and receivables is found in several locations in the Codification: Topics 310, 825, and 835. ASC Topic 835 addresses the valuation of the note, determining appropriate interest rates, amortization of discounts and premiums, and financial statement presentation of the discount and premium account.
- b. A list of keywords that may be helpful in your research is shown below.

Determining present value	Indirect costs loan	Note issued
Direct costs loan	Loan origination fees	Note received
Disclosure long-term borrowings	Maturities long-term	Points fees
Effective interest note	Noncash transaction note	Present value note
Exchange price note	Nonrefundable fees loan	

### 14. International Financial Reporting Standards (IFRS)

- a. IAS 23 requires borrowing costs to be capitalized if they meet certain criteria. Borrowing costs must be capitalized if they are related to the acquisition, construction, or production of a qualifying asset.
  - (1) A qualifying asset is one that takes a substantial period of time to get ready for its intended use. Qualifying assets include inventory, plant, property, and equipment, intangible assets, or investment property.
  - (2) Borrowing costs that do not meet the rules for capitalization are expensed in the current period. Note that finance costs (interest expense) must be disclosed separately in the income statement.

**NOW REVIEW MULTIPLE-CHOICE QUESTIONS 19 THROUGH 25**

## KEY TERMS

**Future value.** The amount that will be available at some point in the future if an amount is deposited today and earns compound interest for “n” periods.

**Future value of an ordinary annuity.** The amount available “n” periods in the future as a result of the deposit of an amount (A) at the end of every period “1” through “n.”

**Present value.** The amount you would pay now for an amount to be received “n” periods in the future given an interest rate of “i.”

**Present value of an ordinary annuity.** The value today, given a discount rate, of a series of future payments.

## Multiple-Choice Questions (1–25)

### A. Fundamentals

1. On March 15, year 1, Ashe Corp. adopted a plan to accumulate \$1,000,000 by September 1, year 5. Ashe plans to make four equal annual deposits to a fund that will earn interest at 10% compounded annually. Ashe made the first deposit on September 1, year 1. Future value and future amount factors are as follows:

Future value of \$1 at 10% for 4 periods	1.46
Future amount of ordinary annuity of \$1 at 10% for four periods	4.64
Future amount of annuity in advance of \$1 at 10% for four periods	5.11

Ashe should make four annual deposits (rounded) of

- a. \$250,000
- b. \$215,500
- c. \$195,700
- d. \$146,000

2. On July 1, year 1, James Rago signed an agreement to operate as a franchisee of Fast Foods, Inc. for an initial franchise fee of \$60,000. Of this amount, \$20,000 was paid when the agreement was signed and the balance is payable in four equal annual payments of \$10,000 beginning July 1, year 2. The agreement provides that the down payment is not refundable and no future services are required of the franchisor. Rago's credit rating indicates that he can borrow money at 14% for a loan of this type. Information on present and future value factors is as follows:

Present value of \$1 at 14% for four periods	0.59
Future amount of \$1 at 14% for four periods	1.69
Present value of an ordinary annuity of \$1 at 14% for four periods	2.91

Rago should record the acquisition cost of the franchise on July 1, year 1 at

- a. \$43,600
- b. \$49,100
- c. \$60,000
- d. \$67,600

3. On November 1, year 1, a company purchased a new machine that it does not have to pay for until November 1, year 3. The total payment on November 1, year 3, will include both principal and interest. Assuming interest at a 10% rate, the cost of the machine would be the total payment multiplied by what time value of money concept?

- a. Present value of annuity of \$1.
- b. Present value of \$1.
- c. Future amount of annuity of \$1.
- d. Future amount of \$1.

4. For which of the following transactions would the use of the present value of an annuity due concept be appropriate in calculating the present value of the asset obtained or liability owed at the date of incurrence?

- a. A capital lease is entered into with the initial lease payment due one month subsequent to the signing of the lease agreement.
- b. A capital lease is entered into with the initial lease payment due upon the signing of the lease agreement.
- c. A ten-year 8% bond is issued on January 2 with interest payable semiannually on July 1 and January 1 yielding 7%.
- d. A ten-year 8% bond is issued on January 2 with interest payable semiannually on July 1 and January 1 yielding 9%.

5. Jole Co. lent \$10,000 to a major supplier in exchange for a noninterest-bearing note due in three years and a contract to purchase a fixed amount of merchandise from the supplier at a 10% discount from prevailing market prices over the next three years. The market rate for a note of this type is 10%. On issuing the note, Jole should record

	Discount on note receivable	Deferred charge
a.	Yes	Yes
b.	Yes	No
c.	No	Yes
d.	No	No

### A.9. Notes Receivable and Payable

6. On December 30, year 1, Chang Co. sold a machine to Door Co. in exchange for a noninterest-bearing note requiring ten annual payments of \$10,000. Door made the first payment on December 30, year 1. The market interest rate for similar notes at date of issuance was 8%. Information on present value factors is as follows:

	Present value of \$1 at 8%	Present value of ordinary annuity of \$1 at 8%
9	0.50	6.25
10	0.46	6.71

In its December 31, year 1 balance sheet, what amount should Chang report as note receivable?

- a. \$45,000
- b. \$46,000
- c. \$62,500
- d. \$67,100

Items 7 and 8 are based on the following:

On January 2, year 1, Emme Co. sold equipment with a carrying amount of \$480,000 in exchange for a \$600,000 noninterest-bearing note due January 2, year 4. There was no established exchange price for the equipment. The prevailing rate of interest for a note of this type at January 2, year 1, was 10%. The present value of \$1 at 10% for three periods is 0.75.

7. In Emme's year 1 income statement, what amount should be reported as interest income?

- \$9,000
- \$45,000
- \$50,000
- \$60,000

8. In Emme's year 1 income statement, what amount should be reported as gain (loss) on sale of machinery?

- \$(30,000) loss.
- \$30,000 gain.
- \$120,000 gain.
- \$270,000 gain.

9. On December 31, year 1, Jet Co. received two \$10,000 notes receivable from customers in exchange for services rendered. On both notes, interest is calculated on the outstanding balance at the interest rate of 3% compounded annually and payable at maturity. The note from Hart Corp., made under customary trade terms, is due in nine months and the note from Maxx, Inc. is due in five years. The market interest rate for similar notes on December 31, year 1, was 8%. The compound interest factors are as follows:

Future value of \$1 due in nine months at 3%	1.0225
Future value of \$1 due in five years at 3%	1.1593
Present value of \$1 due in nine months at 8%	.944
Present value of \$1 due in five years at 8%	.680

Jet does not elect the fair value option for reporting its financial assets. At what amounts should these two notes receivable be reported in Jet's December 31, year 1 balance sheet?

	Hart	Maxx
a.	\$9,440	\$6,800
b.	\$9,652	\$7,820
c.	\$10,000	\$6,800
d.	\$10,000	\$7,883

10. Leaf Co. purchased from Oak Co. a \$20,000, 8%, five-year note that required five equal annual year-end payments of \$5,009. The note was discounted to yield a 9% rate to Leaf. At the date of purchase, Leaf recorded the note at its present value of \$19,485. Leaf does not elect the fair value option for reporting its financial liabilities. What should be the total interest revenue earned by Leaf over the life of this note?

- \$5,045
- \$5,560
- \$8,000
- \$9,000

Items 11 and 12 are based on the following:

House Publishers offered a contest in which the winner would receive \$1,000,000, payable over twenty years. On December 31, year 1, House announced the winner of the contest and signed a note payable to the winner for \$1,000,000, payable in \$50,000 installments every January 2. Also on December 31, year 1, House purchased an annuity for \$418,250 to provide the \$950,000 prize monies remaining after the first \$50,000 installment, which was paid on January 2, year 2.

11. In its December 31, year 1 balance sheet, what amount should House report as note payable—contest winner, net of current portion?

- \$368,250
- \$418,250
- \$900,000
- \$950,000

12. In its year 1 income statement, what should House report as contest prize expense?

- \$0
- \$418,250
- \$468,250
- \$1,000,000

13. On December 31, year 1, Roth Co. issued a \$10,000 face value note payable to Wake Co. in exchange for services rendered to Roth. The note, made at usual trade terms, is due in nine months and bears interest, payable at maturity, at the annual rate of 3%. The market interest rate is 8%. The compound interest factor of \$1 due in nine months at 8% is .944. At what amount should the note payable be reported in Roth's December 31, year 1 balance sheet?

- \$10,300
- \$10,000
- \$9,652
- \$9,440

14. On January 1, year 1, Parke Company borrowed \$360,000 from a major customer evidenced by a noninterest-bearing note due in three years. Parke agreed to supply the customer's inventory needs for the loan period at lower than fair value. At the 12% imputed interest rate for this type of loan, the present value of the note is \$255,000 at January 1, year 1. What amount of interest expense should be included in Parke's year 1 income statement?

- \$43,200
- \$35,000
- \$30,600
- \$0

15. Pie Co. uses the installment sales method to recognize revenue. Customers pay the installment notes in twenty-four equal monthly amounts, which include 12% interest. What is an installment note's receivable balance six months after the sale?

- 75% of the original sales price.
- Less than 75% of the original sales price.
- The present value of the remaining monthly payments discounted at 12%.
- Less than the present value of the remaining monthly payments discounted at 12%.

16. On July 1, year 1, a company obtained a two-year 8% note receivable for services rendered. At that time the market rate of interest was 10%. The face amount of the note and the entire amount of the interest are due on June 30, year 3. Interest receivable at December 31, year 1, was

- 5% of the face value of the note.
- 4% of the face value of the note.

- c. 5% of the July 1, year 1, present value of the amount due June 30, year 3.
- d. 4% of the July 1, year 1, present value of the amount due June 30, year 3.

17. Which of the following is reported as interest expense?
- a. Pension cost interest.
  - b. Postretirement health-care benefits interest.
  - c. Imputed interest on noninterest-bearing note.
  - d. Interest incurred to finance construction of machinery for own use.

18. Norton Corp. does not elect the fair value option for recording its financial liabilities. The discount resulting from the determination of a note payable's present value should be reported on its balance sheet as a(n)

- a. Addition to the face amount of the note.
- b. Deferred charge separate from the note.
- c. Deferred credit separate from the note.
- d. Direct reduction from the face amount of the note.

**A.10. Loan Origination Costs and Fees**

19. In calculating the carrying amount of a loan, the lender adds to the principal

	Direct loan origination costs incurred by the lender	Loan origination fees charged to the borrower
a.	Yes	Yes
b.	Yes	No
c.	No	Yes
d.	No	No

20. Duff, Inc. borrowed from Martin Bank under a ten-year loan in the amount of \$150,000 with a stated interest rate of 6%. Payments are due monthly, and are computed to be \$1,665. Martin Bank incurs \$4,000 of direct loan origination costs and \$2,000 of indirect loan origination costs. In addition, Martin Bank charges Duff, Inc. a four-point nonrefundable loan origination fee.

Martin Bank, the lender, has a carrying amount of

- a. \$144,000
- b. \$148,000
- c. \$150,000
- d. \$152,000

21. Martin Bank grants a ten-year loan to Duff, Inc. in the amount of \$150,000 with a stated interest rate of 6%. Payments are due monthly, and are computed to be \$1,665. Martin Bank incurs \$4,000 of direct loan origination costs and \$2,000 of indirect loan origination costs. In addition, Martin Bank charges Duff, Inc. a four-point nonrefundable loan origination fee.

Duff, the borrower, has a carrying amount of

- a. \$144,000
- b. \$148,000
- c. \$150,000
- d. \$152,000

22. On December 1, year 1, Money Co. gave Home Co. a \$200,000, 11% loan. Money paid proceeds of \$194,000 after

the deduction of a \$6,000 nonrefundable loan origination fee. Principal and interest are due in sixty monthly installments of \$4,310, beginning January 1, year 2. The repayments yield an effective interest rate of 11% at a present value of \$200,000 and 12.4% at a present value of \$194,000. What amount of income from this loan should Money report in its year 1 income statement?

- a. \$0
- b. \$1,833
- c. \$2,005
- d. \$7,833

23. On July 1, year 2, Marseto Corporation borrows \$100,000 on a 10%, five-year interest-bearing note. At December 31, year 2, the fair value of the note is determined to be \$97,500. Marseto elects the fair value option for reporting its financial liabilities. On its December 31, year 2 financial statements, what amounts should be presented for this note?

	Interest Expense	Note Payable	Gain (Loss)
a.	\$10,000	\$100,000	\$0
b.	\$10,000	\$97,500	\$2,500
c.	\$5,000	\$97,500	\$2,500
d.	\$0	\$97,500	\$(7,500)

24. On January 1, year 2, Connor Corporation signed a \$100,000 noninterest-bearing note due in three years at a discount rate of 10%. Connor elects to use the fair value option for reporting its financial liabilities. On December 31, year 2, Connor's credit rating and risk factors indicated that the rate of interest applicable to its borrowings was 9%. The present value factors at 10% and 9% are presented below.

PV factor 10%, 3 periods	.751
PV factor 10%, 2 periods	.826
PV factor 10%, 1 period	.909
PV factor 9%, 3 periods	.772
PV factor 9%, 2 periods	.842
PV factor 9%, 1 period	.917

At what amount should Connor present the note on the December 31, year 2 balance sheet?

- a. \$75,100
- b. \$77,200
- c. \$82,610
- d. \$84,200

25. On January 1, year 2, London Corporation borrowed \$500,000 on a 8%, noninterest-bearing note due in four years. The present value of the note on January 1, year 2, was \$367,500. London Corporation elects the fair value method for reporting its financial liabilities. On December 31, year 2, it is determined the fair value of the note is \$408,150. At what amount should the discount on notes payable be presented on the balance sheet on December 31, year 2?

- a. \$132,500
- b. \$103,100
- c. \$91,850
- d. \$0

## Multiple-Choice Answers and Explanations

### Answers

1. c	7. b	13. b	19. b	25. d
2. b	8. a	14. c	20. b	
3. b	9. d	15. c	21. a

6. c	12. c	18. d	24. d	2nd: ___/25 = ___%

### Explanations

1. (c) The desired fund balance on September 1, year 5, (\$1,000,000) is a **future amount**. The series of four equal annual deposits is an **annuity in advance**, as illustrated in the diagram below.

This is an annuity in advance, rather than an ordinary annuity, because the last deposit (9/1/Y4) is made one year prior to the date the future amount is needed. Therefore, these are beginning-of-year payments. The deposit amount is computed by dividing the future amount by the factor for the future amount of an annuity in advance.

$$\$1,000,000 \div 5.11 = \$195,700$$

2. (b) The requirement is to determine the acquisition cost of a franchise. The cost of this franchise is the down payment of \$20,000 plus the present value of the four equal annual payments of \$10,000. The annual payments represent an annuity, so the \$10,000 annual payment is multiplied by the present value factor of 2.91. Therefore, the franchise cost is \$49,100 (\$20,000 + \$29,100). The journal entry is

Franchise	49,100	
Discount on notes payable	10,900	
Notes payable	40,000	
Cash	20,000	

3. (b) The requirement is to determine what time value of money concept would be used to determine the cost of a machine when a payment (principal plus interest) is to be made in two years. Answer (b) is correct because the cost of the machine is to be recorded immediately; therefore, the cost of the present value of a lump-sum payment would be used. Answer (c) is incorrect because a future amount would be used in computing the payment and not the cost of the machine. Also, a lump-sum payment is involved and not an annuity. Answer (d) is incorrect because a future amount would be used in computing the payment and not the cost. Answer (a) is incorrect because a lump-sum payment is involved, not an annuity.

4. (b) The requirement is the situation which illustrates an annuity due. An annuity due (annuity in advance) is a series of payments where the first payment is made at the beginning

of the first period, in contrast to an ordinary annuity (annuity in arrears), in which the first payment is made at the end of the first period. Answer (b) is correct because the initial lease payment is due immediately (at the beginning of the first period). Answers (a), (c), and (d) all illustrate situations in which the first lease or interest payment occurs at the end of the first period. Note that in answers (c) and (d), the stated rate and yield rate of the bonds differ; while this would affect the present value of the bonds, it has no effect on the classification as an annuity due or an ordinary annuity.

5. (a) In recording the transaction recognition should be given to both the imputed interest rate and the deferred charge related to the merchandise discount. Answer (b) is incorrect because the deferred charge should also be recognized. Answer (c) is incorrect because a discount on the noninterest-bearing note should also be recognized. Answer (d) is incorrect because both the discount and the deferred charge should be recognized.

6. (c) If the FMV of the machine and the FMV of the note are not known, the transaction should be recorded at the PV of the note by imputing interest at the prevailing rate (8%) for similar notes. This series of ten payments is an **annuity in advance**, because the first payment is due immediately on 12/30/Y1. However, the problem requires the amount to be reported for the note receivable on **12/31/Y1**, after the first payment is received. The remaining nine payments are an ordinary annuity, as illustrated in the diagram below.

PV = ?

	R1	R2	R8	R9
12/30/Y1	12/30/Y2	12/30/Y3	12/30/Y9	12/30/Y10

In a PV computation, one must look at the first rent to see if it is an ordinary annuity or annuity in advance. If the first rent occurs one period after the computation date, it is an ordinary annuity. Therefore, the PV to be reported for the note receivable at 12/31/Y1 is \$62,500 (10,000 × 6.25).

7. (b) The \$600,000 noninterest-bearing note should be recorded at its present value of \$450,000 (\$600,000 × .75). The journal entry is

Loss on sale of equip.	30,000			
Note receivable	600,000	}		
Discount on NR		150,000	450,000	
Equipment (net)		48,000		

At 12/31/Y1, interest income would be recognized using the effective interest method. Using this method, interest is computed by multiplying the book value of the note (\$600,000 – \$150,000 = \$450,000) by the effective interest rate (\$450,000 × 10% = \$45,000).

8. (a) The \$600,000 noninterest-bearing note should be recorded at its present value of \$450,000 (\$600,000 × .75). The journal entry is

Loss on sale of equip.	30,000		
Note receivable	600,000		
Discount on NR		150,000	} 450,000
Equipment (net)		48,000	

The loss is recognized because the fair value of the note received (\$450,000) is \$30,000 less than the carrying amount of the equipment sold (\$480,000).

9. (d) Receivables bearing an unreasonably low stated interest rate should be recorded at their present value. However, this rule does **not** apply to receivables arising through the normal course of business that mature in less than one year. Therefore, the Hart receivable would be recorded at face value (\$10,000), since it matures in nine months. The Maxx receivable would be recorded at its present value, since it matures in five years. The Maxx receivable will result in a lump-sum collection of \$11,593 (\$10,000 × 1.1593), so its present value is \$7,883 (\$11,593 × .680).

10. (b) The total interest revenue earned over the life of the note equals the excess of the cash received over the cash paid to acquire the note. The cash received over the five years is \$25,045 (5 receipts of \$5,009 each). The cash paid to acquire the \$20,000 note was \$19,485. Therefore, the total interest revenue is \$5,560 (\$25,045 – \$19,485).

11. (b) The \$1,000,000 note is payable \$50,000 in year 1 (current portion) and \$950,000 after year 1 (long-term portion). This noninterest-bearing long-term note should be recorded at its present value, which can be measured as the amount required to purchase an annuity sufficient to provide the funds to satisfy the obligation. Therefore, the note payable, net of current portion, should be reported at \$418,250.

12. (c) The contest prize expense must be recognized at the present value of the obligation incurred as a result of the contest. The obligation consists of \$50,000 payable in two days, and \$950,000 payable over the next nineteen years. The \$950,000 long-term portion has a present value of \$418,250, as evidenced by the cost of an annuity contract sufficient to satisfy it. Therefore, the total PV of the obligation is \$468,250 (\$50,000 + \$418,250). The journal entry to record the expense is

Contest prize expense	468,250	
Discount on NP	531,750	
Notes payable		1,000,000

13. (b) All receivables and payables are subject to present value measurement techniques and interest imputation, if necessary, with certain exceptions. One exception is normal course of business receivables and payables maturing in less than one year. Therefore this note payable, due in nine months at usual trade terms, would be reported at face value (\$10,000) rather than at present value (\$10,225 × .944 = \$9,652).

14. (c) The requirement is to determine the amount of interest expense to be recognized in year 1 from a noninterest-bearing note. Parke Company is able to borrow on a noninterest basis because they agree to sell their product at less than the fair value. In this type of situation, the note payable is recorded at present value, and the difference between the present value and the cash received is recorded as **unearned sales revenue** (to be recognized when the product is sold at less than fair value). The initial journal entry is

Cash	360,000		
Discount on NP	105,000		
Note payable		360,000	} 255,000
Unearned sale revenue		105,000	

When interest expense is recognized at the end of year 1, the effective interest method must be used. Using this method, interest expense is computed by multiplying the book value of the liability (\$360,000 – \$105,000 = \$255,000) by the effective interest rate (12%), resulting in interest expense of \$30,600.

15. (c) The entry made to record an installment sale (ignoring the cost of sale and inventory) is as follows:

Note receivable	(Sale price)
Installment sales	(PV of note @ 12%)
Discount on notes receivable	(Plug)

Although the customer would have paid 25% (six out of twenty-four months) of the total payments due under the terms of the installment sale, the **net** carrying value of the note (equal to the principal balance of the note less the unamortized discount) is equal to the present value of the remaining monthly payments discounted at 12%. Under the effective interest method, the carrying value of the note will at all times be equal to the present value of the remaining installment payments, regardless of whether the note is recorded gross or net in Pie Co.'s accounts.

16. (b) When a note is issued with a stated rate (8% in this case) below the market rate (10% in this case), the note will be issued at a discount. The entry for the recipient of the note on July 1 would be as follows:

Notes receivable	xxx	
Disc. on notes rec.		xxx
Service revenue		xxx

On December 31, the company must accrue interest on the note. The following entry would be made:

Interest receivable	(6 months at stated rate)
Disc. on notes rec.	(6 months amortization)
Interest revenue	(6 months interest at market rate)

Note that interest receivable is debited for an amount based upon the **stated** (face) rate of the note. This is because the stated rate will determine the amount of cash interest that will be received upon maturity of the note. Since the bond was held for six months (7/1/Y1 to 12/31/Y1) as of 12/31/Y1, the amount of the receivable would be determined as follows:

$$\begin{aligned}
 \text{Interest receivable} &= \text{Face value of note} \times \text{Stated rate} \times \text{Period held} \\
 &= \text{Face value} \times 8\% \times (6/12 \text{ months}) \\
 &= 4\% \times \text{Face value}
 \end{aligned}$$

**17. (c)** When a noninterest-bearing note is issued, interest must be imputed on the note and amortized to interest expense over the life of the note using the effective interest rate.

Answers (a) and (b) are incorrect because interest on pension cost and postretirement health-care benefits is included as a component of future benefit obligation. Answer (d) is incorrect because interest incurred to finance construction of machinery for a company's own use may be capitalized and amortized.

**18. (d)** **Discount on notes payable** is a liability valuation account. It should be reported as a direct reduction from the face amount of the note (contra account). A **premium on notes payable** would be reported as an addition to the face amount of the note. A discount is not recorded as a separate asset because it does not provide any future economic benefit. It is not a deferred credit separate from the note because it is a debit, not a credit, and because it is inseparable from the note. Thus, a discount on notes payable should be reported on the balance sheet as a direct reduction from the face amount of the note.

**19. (b)** In calculating the carrying amount of a loan, loan origination costs are added to the principal by the lender. Any fee charged to the borrower is **deducted** from the principal by both parties (the lender and the borrower) in calculating the carrying amount.

**20. (b)** The lender's carrying amount of the loan is calculated by adding the direct loan origination costs to the principal and deducting the loan origination fee charged to the borrower. Indirect loan origination costs are charged to expense as incurred, and are not considered when calculating the carrying amount of the loan. Therefore, Martin Bank has a carrying amount of \$148,000 [\$150,000 principal plus \$4,000 direct loan origination costs minus \$6,000 ( $\$150,000 \times 0.04$ ) nonrefundable loan origination fee]. The \$2,000 indirect loan origination costs are expensed in the period incurred.

**21. (a)** Duff, Inc., the borrower, receives 4% less than the face amount of \$150,000. Duff's carrying amount is, therefore,  $\$150,000 - \$6,000$ , or \$144,000. Loan origination fees charged to the borrower are deducted from the principal in calculating the carrying amount.

**NOTE:** Loan origination fees are frequently assessed in the form of points, where a point is 1% of the face amount of the loan.

**22. (c)** Money Co. made a cash outflow of \$194,000 for the \$200,000 loan Money gave to Home Co. The book value of the loan is \$194,000 on Money's books. Money will receive an effective interest rate of 12.4% on its cash outflow. Income from the loan would be calculated by multiplying the book value, times the effective interest rate, and the number of months of the year (in this case just one—December).  $\$194,000 \times .124 \times 1/12 = \$2,004.67$ . The stated rate is 11% and is not used in the calculation. Money Co. will receive equal monthly installments over the sixty-month life of the loan. Money Co. will effectively earn 12.4% on its initial cash outflow of \$194,000, because Home Co. will repay principal for the total loan amount of \$200,000.

**23. (c)** The requirement is to determine the amounts presented in the financial statements. If the fair value option is elected for reporting financial liabilities, the liability would be reported on the balance sheet at its fair value of \$97,500, with a resulting gain of \$2,500 ( $\$100,000 - \$97,500$ ) on the income statement. The interest expense for the period would be calculated as  $\$100,000 \times 10\% \times 6/12 = \$5,000$ . Answers (a) and (b) are incorrect because interest is calculated for the amount of time the loan is outstanding. In this case, the loan was outstanding for six months. Answer (d) is incorrect because if interest expense were netted against the gain of \$2,500 the total expense or loss would be \$2,500 for the period ( $\$5,000$  interest expense less \$2,500 gain on note payable).

**24. (d)** The requirement is to determine the amount at which the note should be presented on the balance sheet. On January 1, year 2, the note payable would be recorded at its present value of \$75,100 (PV factor of 10% for 3 periods  $.751 \times \$100,000 = \$75,100$ ). At December 31, year 2, the note would be revalued to fair value using the appropriate interest rate of 9%. At December 31, year 2, the note is valued at the PV factor of 9% for 2 periods. Therefore, the note would be valued at \$84,200 ( $.842 \times \$100,000$ ).

**25. (d)** The requirement is to determine the amount to be presented on the balance sheet. When the fair value option is elected, any effects of discounts or premiums are removed from the financial statements, and the accounting rules for reporting discounts and premiums no longer apply.

Assume that you are the accountant for Kern Corporation and are working on various debt accounting issues. Use the following responses to define the terms in the table that follows.

**Responses to be selected**

- A. Effective interest rate  $\times$  Net receivable or payable balance at the beginning of the period
- B. Periodic interest is computed on principal balance and interest earned to date
- C. Represents the debtor's incremental borrowing rate
- D. Series of payments/receipts which occur at beginning of the period
- E. The difference between the present value of the note and the cash exchanged when the market rate of interest  $<$  rate on note
- F. Periodic interest is computed based on the principal balance only
- G. Maturity value of note and interest payments discounted to the present value
- H. This will result when face rate of the note  $<$  yield rate
- I. The amount which will be available in the future as a result of consecutive payments/receipts at the end of each period—  
compounded at a specified interest rate
- J. Series of payments/receipts which are made at the end of the period
- K. No premium or discount exists

### Task-Based Simulation 2

Balance Sheet Disclosures	Authoritative Literature	Help
---------------------------	--------------------------	------

#### *Situation*

Kern, Inc. had the following long-term receivable account balances at December 31, year 3:

Note receivable from the sale of an idle building	\$750,000
Note receivable from an officer	200,000

Transactions during year 4 and other information relating to Kern’s long-term receivables follow:

- The \$750,000 note receivable is dated May 1, year 3, bears interest at 9%, and represents the balance of the consideration Kern received from the sale of its idle building to Able Co. Principal payments of \$250,000 plus interest are due annually beginning May 1, year 4. Able made its first principal and interest payment on May 1, year 4. Collection of the remaining note installments is reasonably assured.
- The \$200,000 note receivable is dated December 31, year 1, bears interest at 8%, and is due on December 31, year 6. The note is due from Frank Black, president of Kern, Inc., and is collateralized by 5,000 shares of Kern’s common stock. Interest is payable annually on December 31, and all interest payments were made through December 31, year 4. The quoted market price of Kern’s common stock was \$45 per share on December 31, year 4.
- On April 1, year 4, Kern sold a patent to Frey Corp. in exchange for a \$100,000 noninterest-bearing note due on April 1, year 6. There was no established exchange price for the patent, and the note had no ready market. The prevailing interest rate for this type of note was 10% at April 1, year 4. The present value of \$1 for two periods at 10% is 0.826. The patent had a carrying amount of \$40,000 at January 1, year 4, and the amortization for the year ended December 31, year 4, would have been \$8,000. Kern is reasonably assured of collecting the note receivable from Frey.
- On July 1, year 4, Kern sold a parcel of land to Barr Co. for \$400,000 under an installment sale contract. Barr made a \$120,000 cash down payment on July 1, year 4, and signed a four-year 10% note for the \$280,000 balance. The equal annual payments of principal and interest on the note will be \$88,332, payable on July 1 of each year from year 5 through year 8. The fair value of the land at the date of sale was \$400,000. The cost of the land to Kern was \$300,000. Collection of the remaining note installments is reasonably assured.

Complete the following section of the long-term receivables on the balance sheet.

<i>Kern, Inc.</i>		
<b>LONG-TERM RECEIVABLES SECTION</b>		
<b>OF BALANCE SHEET</b>		
<i>December 31, Year 4</i>		
9% note receivable from sale of idle building, due in annual installments of \$250,000 to May 1, year 6, less current installment		
8% note receivable from officer, due December 31, year 6 collateralized by 5,000 shares of Kern, Inc. common stock with a fair value of \$225,000		
Noninterest-bearing note from sale of patent, net of 10% imputed interest due April 1, year 6		
Installment contract receivable, due in annual installments of \$88,332 to July 1, year 8, less current installment		
<b>Total long-term receivables</b>

### Task-Based Simulation 4

<b>Amortization Table</b>		
	<b>Authoritative Literature</b>	<b>Help</b>

**Situation**

Assume that you are the CPA for Dawson Corporation. On January 1, year 1, Catrina Corporation sold to Dawson Corporation equipment that originally cost \$320,000, with accumulated depreciation of \$75,000 for a noninterest-bearing note with a face value of \$300,000 due January 1, year 5. The fair value of the equipment is not readily determinable but the market rate for a note of this type is 6%. Dawson depreciates equipment over a five-year life with no residual value. The present value of the note is \$239,630.

Prepare an amortization table and calculate the interest income and carrying value of the note for Catrina for year 1 and year 2. Indicate whether the note has a premium or discount by completing the correct columns in the schedule. (For a more realistic exam experience, complete the problem using a spreadsheet program, such as Excel.)

Year	Interest income	Premium on note	Discount on note	Carrying value

### *Explanations*

1. **(D)** An annuity due (annuity in advance) represents a series of payments made or received at the beginning of the period.
2. **(C)** An imputed interest rate is used when the rate on a note is not fair and the fair value of the items being exchanged is not readily determinable. An imputed interest rate represents the rate at which the debtor could obtain financing from a different source; this is known as the debtor's incremental borrowing rate.
3. **(G)** The fair value of a note is equal to the maturity value and the interest payments discounted to the present value. The present value represents the amount you would pay now for an amount to be received in the future. Thus, answer G is the correct response, as the present value equals the current fair value of the principal and interest amounts.
4. **(H)** When a note is exchanged for cash and no other rights or privileges exist, the present value of the note will equal the cash received if the stated rate on the note equals the market yield rate. However, if the stated rate is less than the market rate, then the note will be issued at a discount to compensate.
5. **(E)** A premium on a note occurs when the interest rate on a note is greater than the market yield rate. The market bids up the price of the bond above par until the effective interest rate on the note equals the market yield rate.
6. **(F)** The simple interest method computes interest based upon the amount of principal only. Interest is computed as  $\text{Principal} \times \text{Interest} \times \text{Time}$ . The compound interest method computes interest on principal and any interest earned and not withdrawn.
7. **(A)** The interest revenue or expense on a note is computed by taking the effective interest rate times the net receivable or payable balance.
8. **(I)** An annuity is a periodic payment or receipt made in consecutive intervals over time compounded at a stated interest rate. The future value of an annuity represents the total of the periodic payments and accumulated interest at some point in the future.
9. **(K)** When a note is exchanged for cash and no other rights or privileges exist, the present value of the note will be equal to the cash exchanged if the stated rate of interest equals the market yield rate. No premium or discount exists if the stated rate on the note equals the market yield rate.

## B. Bonds

### 1. Bonds Payable and Bond Investments

- a. Investment in bonds and bonds payable are discussed together to contrast their treatment.<sup>1</sup> Bonds generally provide for periodic fixed interest payments at a contract rate of interest. At issuance, or thereafter, the market rate of interest for the particular type of bond may be above, the same, or below the contract rate.
- (1) If the market rate exceeds the contract rate, the book value will be less than the maturity value. The difference (discount) will make up for the contract rate being below the market rate.
  - (2) Conversely, when the contract rate exceeds the market rate, the bond will sell for more than maturity value to bring the effective rate to the market rate. This difference (premium) will make up for the contract rate being above the market rate.
  - (3) When the contract rate equals the market rate, the bond will sell for the maturity value.
- b. The market value of a bond is equal to the maturity value and interest payments discounted to the present.

**NOTE:** You may have to refer to the discussion of time value of money concepts in the previous section before working with the subsequent material. Finally, when solving bond problems, candidates must be careful when determining the number of months to use in the calculation of interest and discount/premium amortization. For example, candidates frequently look at a bond issue with an interest date of September 1 and count three months to December 31. This error is easy to make because candidates focus only on the fact that September is the ninth month instead of also noting whether the date is at the beginning or end of the month. Candidates should also be aware that bond issues that mature on a single date are called term bonds, and bond issues that mature in installments are called serial bonds.

### 2. Accounting for Bonds

- a. A company may elect the fair value option for reporting financial assets and financial liabilities. If the fair value option is elected for a bond, the measurement of the financial liability should include adjustments for nonperformance risk, credit risk, or instrument-specific credit risk.
- (1) The election to value a financial liability at fair value should be made on the date the entity initially recognizes the item.
  - (2) Although the fair value option may be made on an instrument-by-instrument basis, it must be applied to the entire instrument.
- b. If the fair value option is elected for a financial liability, the bond is not reported with a discount or premium. In addition, if the fair value option is elected for a bond, the effective interest method is not required for measuring interest expense.
- (1) Interest expense may be calculated using various methods, but the company must disclose in the notes to the financial statements the manner in which interest expense was measured.
  - (2) Any gain or loss in revaluing the bond to fair value should be included on the income statement for the current period.
  - (3) Two methods are allowed for disclosing financial liabilities on the balance sheet.
    - (a) The first method is to disclose the total fair value and non-fair value amounts in the aggregate, with a parenthetical disclosure of the amounts measured at fair value.
    - (b) The second method of disclosure is to present two separate line items to display the fair value and non-fair value carrying amounts separately.
  - (4) In addition, the standards require footnote disclosure of the difference between the aggregate fair value and the aggregate unpaid principal balance.
  - (5) If the fair value of a liability is significantly affected by instrument-specific credit risk, disclosures must also indicate the estimated amount of gains and losses from fair value changes that are attributable to changes in the credit risk.

<sup>1</sup>Coverage in this module focuses on a bond's book or carrying value. Issues concerning FV, holding gains and losses, and financial statement presentation of bond investments are covered with other marketable debt securities in Module 16, Investments.

- c. If an entity does not elect the fair value option, the bond is recorded at its issue price, and the effective interest method is used to amortize any premium or discount on the bond. The remainder of this module will focus on the pricing of the bond using the effective interest method of amortizing a bond.

**EXAMPLE****Bond Valuation Example**

\$10,000 in bonds, interest at 6% contract rate, paid semiannually, maturing in six years, and market rate of 5%.

- Find present value of maturity value. Use present value of \$1 factor. Discount \$10,000 back 12 periods at 2 1/2% interest (Factor = .7436). (Semiannual compounding is going to be required to discount the semiannual payments so it is also assumed here.)

$$\$10,000 \times .7436 = \$7,436$$

- Find the present value of the annuity of twelve \$300 interest payments. Use present value of an ordinary annuity of \$1 factor for twelve periods at 2 1/2% interest (Factor = 10.26).

$$\$300 \times 10.26 = \$3,078$$

- Today's value is \$10,514 (7,436 + 3,078)

The \$514 premium is to be recognized over the life of the bond issue. It is a reduction of interest expense on the books of the issuer and a reduction of interest revenue on the books of the investor. Amortization is to be on the present value basis.

- d. The following summarizes when bonds are issued/acquired at a premium or discount:

**Issue/Acquisition Price of Bonds—Present Value of Interest Annuity Plus the Present Value of the Maturity Amount Using the Yield or Market Rate**

Face amount	Premium	Discount
Yield rate = Face rate	Yield rate < Face rate	Yield rate > Face rate

**3. Journal Entries****EXAMPLE****Bond Journal Entries**

The issuer's books will be illustrated at gross (including a premium or discount account) and the investor's books will be illustrated at net (no discount or premium account).

The investor may record the bonds either net or gross, but the issuer records at gross.

In the past, CPA examination problems and solutions have followed the net method on the books of the investor.

		Issuer		Investor	
a.	Issue and Acquisition	Cash	10,514	Bond invest.	10,514
		Bonds pay.	10,000	Cash	10,514
		Bonds prem.	514		
b.	First int. payment	Interest exp.	300	Cash	300
		Cash	300	Interest rev.	300
c.	Premium—Amortization	Bond prem.	37.15*	Interest rev.	37.15
		Interest exp.	37.15	Bond invest.	37.15*

\* Interest receipt (payment) minus effective interest = 300 – 262.85 = 37.15

Effective interest = net book value times effective rate = 10,514 × .025 = 262.85

- a. Entry a. assumes that the bonds are issued on the interest payment date. If bonds are purchased between interest payment dates, the purchaser will also include accrued interest through the purchase date in the total cash paid for the bonds.

- b. The payment of this accrued interest on the purchase date will serve to reduce the subsequent receipt of interest income (which covers a time period longer than the time the purchaser held the bond). Subsequent interest payments are recorded the same as entry b. shown above. The amount of subsequent amortization (entry c. above) changes. Interest to be recorded under the interest method is always computed by

$$\text{Effective interest rate} \times \text{Net book value}$$

- c. This formula is true of all applications of the interest method. The effective rate of interest times net book value is the actual interest revenue or expense for the period. The difference between the actual interest and the amount received or paid is the amortization. The amortization table below shows the effective interest amounts and premium amortizations for the first 4 periods.

**EXAMPLE**

Effective Interest Table and Journal Entries

Period	3% cash interest	2 1/2% effective interest	Decrease in book value	Book value of bonds
0				\$10,514.00
1	\$300 <sup>(a)</sup>	\$262.85 <sup>(b)</sup>	\$37.15 <sup>(c)</sup>	10,476.85 <sup>(d)</sup>
2	300	261.92	38.08	10,438.77
3	300	260.97	39.03	10,399.74
4	300	259.99	40.01	10,359.73

(a)  $3\% \times \$10,000$

(c)  $\$300 - \$262.85$

(b)  $2\ 1/2\% \times \$10,514.00$

(d)  $\$10,514.00 - \$37.15$

Since the interest is paid semiannually, interest (including premium amortization) is recorded every six months. The journal entries for periods 2, 3, and 4 are

	Issuer		Investor	
Period 2	Interest expense	261.92	Cash	300.00
	Bond premium	38.08	Interest rev.	261.92
	Cash	300.00	Bond invest.	38.08
Period 3	Interest expense	260.97	Cash	300.00
	Bond premium	39.03	Interest rev.	260.97
	Cash	300.00	Bond invest.	39.03
Period 4	Interest expense	259.99	Cash	300.00
	Bond premium	40.01	Interest rev.	259.99
	Cash	300.00	Bond invest.	40.01

**NOTE:** The interest (revenue and expense) decreases over time. This is because the net book value (which is also the present value) is decreasing from the maturity value plus premium to the maturity value. Thus, the effective rate is being multiplied by a smaller amount each six months.

**NOTE:** The change in interest each period is the prior period's premium amortization times the effective rate.

**EXAMPLE**

**Change in Interest**

The interest in period 3 is \$.95 less than in period 2, and \$38.08 of premium was amortized in period 2. The effective rate of 2½% (every six months) times \$38.08 is \$.95. Thus, if the interest changes due to the changing level of net book value, the change in interest will be equal to the change in the net book value times the effective rate of interest.

- d. Another complication may arise if the year-end does not coincide with the interest dates. In such a case, an adjusting entry must be made. The proportional share of interest payable or receivable should be recognized along with the amortization of discount or premium. The amortization of discount or premium should be straight-line within the amortization period.

**EXAMPLE**

Assume that in the above example, both issuer and investor have reporting periods ending three months after the issuance of the bonds.

	<b>Issuer</b>			<b>Investor</b>	
Entries on the closing date	Interest expense	150		Interest receivable	150
	Interest payable		150	Interest revenue	150
	Bond premium	18.57		Interest revenue	18.57
	Interest expense		18.57	Bond investment	18.57

Reverse at beginning of new period and make regular entry at next interest payment date.

- e. If bonds are sold (bought) between interest dates, premium/discount amortization must be computed for the period between sale (purchase) date and last (next) interest date. This is accomplished by straight-lining the six-month amount which was calculated using the effective interest method.

**EXAMPLE****Sale of bonds between interest dates**

The investor sold \$5,000 of bonds in the above example, two months after issuance, for \$5,250 plus interest.

1. The bond premium which must be amortized to the point of sale (\$5,000 for two months) is  $1/2 \times 1/3 \times \$37.15$  or \$6.19.

Interest revenue	6.19	
Investment		6.19

2. The sale is recorded. The investment account was \$5,257 before amortization of \$6.19. The cash received would be \$5,250 plus \$50 interest ( $1/2 \times 1/3 \times \$300$ ). The loss is a forced figure.

Cash	5,300.00	
Loss	.81	
Interest revenue		50.00
Investment		5,250.81 [ $(\$10,514.00/2) - \$6.19$ ]

3. Check the interest revenue recorded (\$50.00 – \$6.19) to the interest earned:  $\$5,257 \times 2 \frac{1}{2}\% \times 1/3$  (which equals \$43.81).

- f. Bonds issue costs are treated as deferred charges and amortized on a straight-line basis over the life of the bond.

#### 4. Comparison of Effective Interest and Straight-Line Amortization Methods

Method of Amortization	Interest Revenue/Expense	Interest Rate**
Effective interest method	Changes each period*	Constant each period
Straight-line method	Constant each period	Changes each period

\* Carrying amount of the bond investment or bonds payable at the beginning of the interest period multiplied times the yield rate

\*\* Interest revenue/expense for a period divided by the carrying amount of the bond investment or bond liability at the beginning of the interest period

- a. The following table summarizes the various behavior patterns related to the use of the effective interest method:

Description	Amortization of	
	Discount	Premium
Interest revenue/expense	↑ Increases each period	↓ Decreases each period
Amount of amortization	↑ Increases each period	↑ Increases each period
Carrying amount of bonds payable/ investment in bonds	↑ Increases each period	↓ Decreases each period

**NOW REVIEW MULTIPLE-CHOICE QUESTIONS 1 THROUGH 30**

**5. Convertible Bonds**

a. Bonds are frequently issued with the right to convert the bonds into common stock. When issued, no value is apportioned to the conversion feature. Two approaches are possible to account for bond conversions:

(1) Valuing the transaction at cost (book value of the bonds)

- (a) Conversion under the cost method would result in debits to bonds payable and bond premium (or a credit to bond discount) equal to the book value of the bonds, and credits to common stock and paid-in excess of par equal to the book value.
- (b) In practice, conversions are usually recorded at book value.

**NOTE:** Under the cost conversion method no gain (loss) is recorded, as no gain (loss) should result from an equity transaction.

(2) Valuing at market (of the stocks or bonds), whichever is more reliable.

(a) At market, assuming market value exceeds book value, the entries would be

Issuer		Investor	
Loss on redemption	(plug)	Stock invest	(mkt)
Bonds payable	(book value)	Invest in bonds	(carrying value)
Bond premium	(book value)	Gain on conversion	(plug)
Common stock	(par)		
Paid-in excess of par	(mkt-par)		

- (b) On the issuer’s books, the debit (credit) to the loss (gain) account (ordinary) would be for the difference between the market value of the stock (bonds) and the book value of the bonds.
- (c) The conversion is treated as the culmination of an earnings process; thus the loss (gain) should be recognized.
- (d) The bonds and the related accounts must be written off, and paid-in excess of par is credited for the excess of the market value of the stock (bonds) over the stock’s par value.
- (e) On the investor’s books, the gain (loss) would also be the difference between the market value the stock (bonds) and the book value of the bonds.

**NOTE:** In both cases that the accrued interest and discount or premium amortization must be recorded prior to the conversion

b. To induce conversion, firms sometimes change the original conversion privilege or give additional considerations to the bondholders.

- (1) The fair value of these “sweeteners” should be recognized as an expense (ordinary in nature) upon conversion, determined as the excess of the FV of all securities and consideration transferred over the FV of the securities issuable per the original conversion terms.

**NOW REVIEW MULTIPLE-CHOICE QUESTIONS 31 THROUGH 34**

## 6. Debt Issued with Detachable Purchase Warrants

- a. The proceeds of debt issued with detachable stock purchase warrants are allocated between the debt and stock warrants based on relative market values.

### EXAMPLE

Units of one bond and one warrant (to buy 10 shares of stock at \$50/share) are issued for \$1,030. Thereafter, warrants trade at \$40 and the bonds at \$960. The relative market value of the warrants is 4% (40/1,000) and the relative market value of the bonds is 96% (960/1,000). Thus, \$41.20 ( $.04 \times \$1,030$ ) of the issue price is assigned to the warrants.

Cash	1,030.00	
Bond discount	11.20	
Bonds payable		1,000.00
Paid-in capital—stock warrants		41.20
If one warrant was subsequently exercised		
Cash	500.00	
Paid-in capital—stock warrants	41.20	
Common stock		(par of 10 shs)
Paid-in excess		(plug)

Alternatively, the example above could have indicated the market value of the stock (e.g., \$54) rather than the market values of the bonds and warrants. In such a case, one would value the warrants based on the difference between option price and market price, for example,  $[\$54 (\text{market}) - \$50 (\text{option})] \times 10 \text{ shares} = \$40$  value for the warrants.

**NOTE:** The effect of requiring allocation of the cash received to the stock warrants. The final effect is to increase interest costs on the bond issue by reducing the premium or increasing the discount.

**NOTE:** The allocation to equity shown above is only applicable where the purchase warrants are **detachable**. In contrast, no allocation is made to equity if the bonds are issued with **nondetachable** stock purchase warrants. Detachable warrants are often traded separately from the debt and therefore have a readily determinable market value of their own. The inseparability of nondetachable warrants prevents the determination of a separate market value; therefore, no allocation to equity is permitted.

**NOW REVIEW MULTIPLE-CHOICE QUESTIONS 35 THROUGH 39**

## 7. Extinguishment of Debt

- a. Debt is considered extinguished whenever the debtor pays the creditor and is relieved of all obligations relating to the debt.
- (1) Typical examples of this are the calling of a bond by the debtor, requiring the bondholder to sell the bond to the issuing corporation at a certain date and stated price, and the open market repurchase of a debt issue.
  - (2) Refunding of debt (replacement of debt with other debt) is also considered an extinguishment.
  - (3) However, troubled debt restructures (situations where creditors agree to grant relief to debtors) and debt conversions initiated by the debt holders are not.
  - (4) Additionally, when the debtor is legally released from being the primary obligor of the debt either judicially or by the creditor, and it is probable the debtor will make no further payments on it, the debt is considered extinguished.
- b. All gains (losses) resulting from the extinguishment of debt should be recognized in the period of extinguishment.

- (1) The gain (loss) is the difference between the bond's reacquisition price and its net book value (face value plus [minus] any unamortized premium [discount] and issue costs).
- (a) The rule is not affected by the reissuance of debt before or after the refunding.
- (b) Furthermore, this rule applies to convertible bonds when reacquired with cash. The gain or loss is considered an ordinary gain or loss, and is a separate item in net income before extraordinary items.
- c. Because most companies use debt refinancing as a normal risk management tool, early extinguishment of debt is no longer considered an extraordinary item. If, however, the company can meet the criteria for extraordinary (infrequent in occurrence and unusual in nature), the early extinguishment of debt may be considered for extraordinary treatment.

Loss or gain	xx	xx
Bonds payable	xx	
Bond premium	xx

#### 8. Research Component—Accounting Standards Codification

The Codification lists *Liabilities* as Topic 405. This topic lists the various issues related to liabilities and provides for cross-references for topics related to debt. Topic 470, entitled *Debt*, contains subtopics that outline the rules for debt with conversion and other options, product financing, modifications and extinguishments, and troubled debt restructuring by debtors. ASC Topic 835 outlines the rules relating to interest on debt.

**NOW REVIEW MULTIPLE-CHOICE QUESTIONS 40 THROUGH 42**

#### 9. International Financial Reporting Standards (IFRS)

- a. Similar to US accounting standards, IAS 39 provides that financial liabilities are initially measured at fair value, and subsequently measured at amortized cost using the effective interest method.
- (1) An option can be made to value financial liabilities at fair value.
- b. Financial instruments with characteristics of both debt and equity are referred to as “compound instruments.”
- (1) Accounting for compounds instruments is another area where IFRS differs from US GAAP. Convertible bonds, bonds with detachable warrants, and other compound instruments must be separated into their components of debt and equity.
- (a) The liability component is initially recorded at fair value, and the residual value is assigned to the equity component.
- (b) Each component is presented in the appropriate section of the balance sheet. IFRS refers to the fair value option as “Fair Value through Profit or Loss” (FVTPL).
- (c) If the fair value option is elected for a financial liability, then the liability is revalued at the end of the reporting period and the resulting gain or loss is recognized in profit or loss for the period.

**NOW REVIEW MULTIPLE-CHOICE QUESTIONS 43 THROUGH 45**

## KEY TERMS

**Discount.** The difference between the net proceeds, after expense, received upon issuance of debt and the amount repayable at its maturity.

**Premium.** The excess of the net proceeds, after expense, received upon issuance of debt over the amount repayable at its maturity.

**Serial bonds.** Bond issues that mature in installments.

**Term bonds.** Bond issues that mature on a single date.

**Warrant.** A security that gives the holder the right to purchase shares of common stock in accordance with the terms of the instrument, usually upon payment of a specified amount.

## Multiple-Choice Questions (1–45)

### B.1.–4. Bonds

1. Hancock Co.'s December 31, year 1 balance sheet contained the following items in the long-term liabilities section:

<b>Unsecured</b>	
9.375% registered bonds (\$25,000 maturing annually beginning in year 5)	\$275,000
11.5% convertible bonds, callable beginning in year 9, due year 21	125,000
<b>Secured</b>	
9.875% guaranty security bonds, due year 21	\$275,000
10.0% commodity backed bonds (\$50,000 maturing annually beginning in year 6)	200,000

What are the total amounts of serial bonds and debenture bonds?

	<b>Serial bonds</b>	<b>Debenture bonds</b>
a.	\$475,000	\$400,000
b.	\$475,000	\$125,000
c.	\$450,000	\$400,000
d.	\$200,000	\$650,000

2. Blue Corp.'s December 31, year 1 balance sheet contained the following items in the long-term liabilities section:

9 3/4% registered debentures, callable in year 12, due in year 17	\$700,000
9 1/2% collateral trust bonds, convertible into common stock beginning in year 10 due in year 20	600,000
10% subordinated debentures (\$30,000 maturing annually beginning in year 7)	300,000

What is the total amount of Blue's term bonds?

- a. \$600,000
- b. \$700,000
- c. \$1,000,000
- d. \$1,300,000

3. Bonds payable issued with scheduled maturities at various dates are called

	<b>Serial bonds</b>	<b>Term bonds</b>
a.	No	Yes
b.	No	No
c.	Yes	No
d.	Yes	Yes

4. The following information pertains to Camp Corp.'s issuance of bonds on July 1, year 1:

Face amount	\$800,000	
Term	Ten years	
Stated interest rate	6%	
Interest payment dates	Annually on July 1	
Yield	9%	
	<b>At 6%</b>	<b>At 9%</b>
Present value of one for ten periods	0.558	0.422
Future value of one for ten periods	1.791	2.367
Present value of ordinary annuity of one for ten periods	7.360	6.418

What should be the issue price for each \$1,000 bond?

- a. \$1,000
- b. \$864
- c. \$807
- d. \$700

5. Perk, Inc. issued \$500,000, 10% bonds to yield 8%. Bond issuance costs were \$10,000. How should Perk calculate the net proceeds to be received from the issuance?

- a. Discount the bonds at the stated rate of interest.
- b. Discount the bonds at the market rate of interest.
- c. Discount the bonds at the stated rate of interest and deduct bond issuance costs.
- d. Discount the bonds at the market rate of interest and deduct bond issuance costs.

6. The market price of a bond issued at a discount is the present value of its principal amount at the market (effective) rate of interest

- a. Less the present value of all future interest payments at the market (effective) rate of interest.
- b. Less the present value of all future interest payments at the rate of interest stated on the bond.
- c. Plus the present value of all future interest payments at the market (effective) rate of interest.
- d. Plus the present value of all future interest payments at the rate of interest stated on the bond.

7. On July 1, year 1, Eagle Corp. issued 600 of its 10%, \$1,000 bonds at 99 plus accrued interest. The bonds are dated April 1, year 1, and mature on April 1, year 11. Interest is payable semiannually on April 1 and October 1. What amount did Eagle receive from the bond issuance?

- a. \$579,000
- b. \$594,000
- c. \$600,000
- d. \$609,000

8. During year 1, Lake Co. issued 3,000 of its 9%, \$1,000 face value bonds at 101 1/2. In connection with the sale of these bonds, Lake paid the following expenses:

Promotion costs	\$20,000
Engraving and printing	25,000
Underwriters' commissions	200,000

What amount should Lake record as bond issue costs to be amortized over the term of the bonds?

- a. \$0
- b. \$220,000
- c. \$225,000
- d. \$245,000

9. Dixon Co. incurred costs of \$3,300 when it issued, on August 31, year 1, five-year debenture bonds dated April 1, year 1. What amount of bond issue expense should Dixon report in its income statement for the year ended December 31, year 1?

- a. \$220
- b. \$240
- c. \$495
- d. \$3,300

10. On November 1, year 1, Mason Corp. issued \$800,000 of its ten-year, 8% term bonds dated October 1, year 1. The bonds were sold to yield 10%, with total proceeds of \$700,000 plus accrued interest. Interest is paid every April 1 and October 1. Mason does not elect the fair value option for reporting financial liabilities. What amount should Mason report for interest payable in its December 31, year 1 balance sheet?

- a. \$17,500
- b. \$16,000
- c. \$11,667
- d. \$10,667

11. Which one of the following is a true statement for a firm electing the fair value option for valuing its bonds payable?

- a. The effective interest method of amortization must be used to calculate interest expense.
- b. Discount or premium is disclosed in the notes to the financial statements.
- c. The fair value of the bond and the principal obligation value must be disclosed.
- d. If the fair value option is elected, it must be applied to all bonds.

12. On January 1, year 2, Southern Corporation received \$107,720 for a \$100,000 face amount, 12% bond, a price that yields 10%. The bonds pay interest semiannually. Southern elects the fair value option for valuing its financial liabilities. On December 31, year 2, the fair value of the bond is determined to be \$106,460. Southern recognized interest expense of \$12,000 in its year 2 income statement. What was the gain or loss recognized on the year 2 income statement to report this bond at fair value?

- a. \$1,260 gain
- b. \$6,460 gain
- c. \$12,000 loss
- d. \$13,260 loss

13. On July 1, year 1, Day Co. received \$103,288 for \$100,000 face amount, 12% bonds, a price that yields 10%. Assuming management does not elect the fair value option, interest expense for the six months ended December 31, year 1, should be

- a. \$6,197
- b. \$6,000
- c. \$5,164
- d. \$5,000

14. On January 2, year 1, West Co. issued 9% bonds in the amount of \$500,000, which mature on January 2, year 11. The bonds were issued for \$469,500 to yield 10%. Interest is payable annually on December 31. West uses the interest method of amortizing bond discount and does not elect the fair value option for reporting financial liabilities. In its June 30, year 1 balance sheet, what amount should West report as bonds payable?

- a. \$469,500
- b. \$470,475
- c. \$471,025
- d. \$500,000

15. Webb Co. has outstanding a 7%, ten-year \$100,000 face-value bond. The bond was originally sold to yield 6% annual interest. Webb uses the effective interest rate method to amortize bond premium, and does not elect the fair value option for reporting financial liabilities. On June 30, year 1, the carrying amount of the outstanding bond was \$105,000. What amount of unamortized premium on bond should Webb report in its June 30, year 2 balance sheet?

- a. \$1,050
- b. \$3,950
- c. \$4,300
- d. \$4,500

16. For the issuer of a ten-year term bond, the amount of amortization using the interest method would increase each year if the bond was sold at a

	Discount	Premium
a.	No	No
b.	Yes	Yes
c.	No	Yes
d.	Yes	No

17. On January 2, year 1, Nast Co. issued 8% bonds with a face amount of \$1,000,000 that mature on January 2, year 7. The bonds were issued to yield 12%, resulting in a discount of \$150,000. Nast incorrectly used the straight-line method instead of the effective interest method to amortize the discount. Nast does not elect the fair value option for reporting financial liabilities. How is the carrying amount of the bonds affected by the error?

	At December 31, Year 1	At January 2, Year 7
a.	Overstated	Understated
b.	Overstated	No effect
c.	Understated	Overstated
d.	Understated	No effect

18. The following information relates to noncurrent investments that Fall Corp. placed in trust as required by the underwriter of its bonds:

Bond sinking fund balance, 12/31/Y1	\$450,000
Year 1 additional investment	90,000
Dividends on investments	15,000
Interest revenue	30,000
Administration costs	5,000
Carrying amount of bonds payable	1,025,000

What amount should Fall report in its December 31, year 2 balance sheet related to its noncurrent investment for bond sinking fund requirements?

- a. \$585,000
- b. \$580,000
- c. \$575,000
- d. \$540,000

19. Witt Corp. has outstanding at December 31, year 1, two long-term borrowings with annual sinking fund requirements and maturities as follows:

	Sinking fund requirements	Maturities
Year 2	\$1,000,000	\$–
Year 3	1,500,000	2,000,000
Year 4	1,500,000	2,000,000
Year 5	2,000,000	2,500,000
Year 6	<u>2,000,000</u>	<u>3,000,000</u>
	<u>\$8,000,000</u>	<u>\$9,500,000</u>

In the notes to its December 31, year 1 balance sheet, how should Witt report the above data?

- No disclosure is required.
- Only sinking fund payments totaling \$8,000,000 for the next five years detailed by year need to be disclosed.
- Only maturities totaling \$9,500,000 for the next five years detailed by year need to be disclosed.
- The combined aggregate of \$17,500,000 of maturities and sinking fund requirements detailed by year should be disclosed.

20. On March 1, year 1, a company established a sinking fund in connection with an issue of bonds due in year 12. At December 31, year 3, the independent trustee held cash in the sinking fund account representing the annual deposits to the fund and the interest earned on those deposits. How should the sinking fund be reported in the company's balance sheet at December 31, year 3?

- The cash in the sinking fund should appear as a current asset.
- Only the accumulated deposits should appear as a noncurrent asset.
- The entire balance in the sinking fund account should appear as a current asset.
- The entire balance in the sinking fund account should appear as a noncurrent asset.

21. An issuer of bonds uses a sinking fund for the retirement of the bonds. Cash was transferred to the sinking fund and subsequently used to purchase investments. The sinking fund

- Increases by revenue earned on the investments.
- Is **not** affected by revenue earned on the investments.
- Decreases when the investments are purchased.

- I only.
- I and III.
- II and III.
- III only.

22. On July 2, year 1, Wynn, Inc., purchased as a short-term investment a \$1,000,000 face value Kean Co. 8% bond for \$910,000 plus accrued interest to yield 10%. The bonds mature on January 1, year 8, pay interest annually on January 1, and are classified as trading securities. On December 31, year 1, the bonds had a market value of \$945,000. On February 13, year 2, Wynn sold the bonds for \$920,000. In its December 31,

year 1 balance sheet, what amount should Wynn report for short-term investments in trading debt securities?

- \$910,000
- \$920,000
- \$945,000
- \$950,000

23. On July 1, year 1, East Co. purchased as a long-term investment \$500,000 face amount, 8% bonds of Rand Corp. for \$461,500 to yield 10% per year. The bonds pay interest semiannually on January 1 and July 1. East does not elect the fair value option for reporting these securities. In its December 31, year 1 balance sheet, East should report interest receivable of

- \$18,460
- \$20,000
- \$23,075
- \$25,000

24. On October 1, year 1, Park Co. purchased 200 of the \$1,000 face value, 10% bonds of Ott, Inc., for \$220,000, including accrued interest of \$5,000. The bonds, which mature on January 1, year 8, pay interest semiannually on January 1 and July 1. Park used the straight-line method of amortization and appropriately classified the bonds as held-to-maturity. On Park's December 31, year 2 balance sheet, the bonds should be reported at

- \$215,000
- \$214,400
- \$214,200
- \$212,000

25. On July 1, year 1, York Co. purchased as a held-to-maturity investment \$1,000,000 of Park, Inc.'s 8% bonds for \$946,000, including accrued interest of \$40,000. The bonds were purchased to yield 10% interest. The bonds mature on January 1, year 8, and pay interest annually on January 1. York uses the effective interest method of amortization. In its December 31, year 1 balance sheet, what amount should York report as investment in bonds?

- \$911,300
- \$916,600
- \$953,300
- \$960,600

26. In year 1, Lee Co. acquired, at a premium, Enfield, Inc. ten-year bonds as a long-term investment. At December 31, year 2, Enfield's bonds were quoted at a small discount. Which of the following situations is the **most** likely cause of the decline in the bonds' market value?

- Enfield issued a stock dividend.
- Enfield is expected to call the bonds at a premium, which is less than Lee's carrying amount.
- Interest rates have declined since Lee purchased the bonds.
- Interest rates have increased since Lee purchased the bonds.

27. An investor purchased a bond as a held-to-maturity investment on January 2. Assume the fair value option is not elected for these securities. The investor's carrying value at the end of the first year would be highest if the bond was purchased at a
- Discount and amortized by the straight-line method.
  - Discount and amortized by the effective interest method.
  - Premium and amortized by the straight-line method.
  - Premium and amortized by the effective interest method.

28. An investor purchased a bond as a long-term investment on January 1. Annual interest was received on December 31. The investor's interest income for the year would be highest if the bond was purchased at
- Par.
  - Face value.
  - A discount.
  - A premium.

29. On March 1, year 1, Clark Co. issued bonds at a discount. Clark incorrectly used the straight-line method instead of the effective interest method to amortize the discount. Clark does not elect the fair value option to report these securities. How were the following amounts, as of December 31, year 1, affected by the error?

	Bond carrying amount	Retained earnings
a.	Overstated	Overstated
b.	Understated	Understated
c.	Overstated	Understated
d.	Understated	Overstated

30. Jent Corp. purchased bonds at a discount of \$10,000. Subsequently, Jent sold these bonds at a premium of \$14,000. During the period that Jent held this investment, amortization of the discount amounted to \$2,000. Jent did not elect the fair value option to report these bonds. What amount should Jent report as gain on the sale of bonds?
- \$12,000
  - \$22,000
  - \$24,000
  - \$26,000

### B.5. Convertible Bonds

31. On July 1, year 1, after recording interest and amortization, York Co. converted \$1,000,000 of its 12% convertible bonds into 50,000 shares of \$1 par value common stock. On the conversion date the carrying amount of the bonds was \$1,300,000, the market value of the bonds was \$1,400,000, and York's common stock was publicly trading at \$30 per share. Using the book value method, what amount of additional paid-in capital should York record as a result of the conversion?
- \$950,000
  - \$1,250,000
  - \$1,350,000
  - \$1,500,000

32. On March 31, year 1, Ashley, Inc.'s bondholders exchanged their convertible bonds for common stock. The carrying amount of these bonds on Ashley's books was less

than the market value but greater than the par value of the common stock issued. If Ashley used the book value method of accounting for the conversion, which of the following statements correctly states an effect of this conversion?

- Stockholders' equity is increased.
- Additional paid-in capital is decreased.
- Retained earnings is increased.
- An extraordinary loss is recognized.

Items 33 and 34 are based on the following:

On January 2, year 1, Chard Co. issued ten-year convertible bonds at 105. During year 4, these bonds were converted into common stock having an aggregate par value equal to the total face amount of the bonds. At conversion, the market price of Chard's common stock was 50% above its par value.

33. On January 2, year 1, cash proceeds from the issuance of the convertible bonds should be reported as
- Contributed capital for the entire proceeds.
  - Contributed capital for the portion of the proceeds attributable to the conversion feature and as a liability for the balance.
  - A liability for the face amount of the bonds and contributed capital for the premium over the face amount.
  - A liability for the entire proceeds.

34. Depending on whether the book value method or the market value method was used, Chard would recognize gains or losses on conversion when using the

	Book value method	Market value method
a.	Either gain or loss	Gain
b.	Either gain or loss	Loss
c.	Neither gain nor loss	Loss
d.	Neither gain nor loss	Gain

### B.6. Debt Issued with Detachable Purchase Warrants

35. On December 30, year 1, Fort, Inc. issued 1,000 of its 8%, ten-year, \$1,000 face value bonds with detachable stock warrants at par. Each bond carried a detachable warrant for one share of Fort's common stock at a specified option price of \$25 per share. Immediately after issuance, the market value of the bonds without the warrants was \$1,080,000 and the market value of the warrants was \$120,000. In its December 31, year 1 balance sheet, what amount should Fort report as bonds payable?

- \$1,000,000
- \$975,000
- \$900,000
- \$880,000

36. On December 31, year 1, Moss Co. issued \$1,000,000 of 11% bonds at 109. Each \$1,000 bond was issued with fifty detachable stock warrants, each of which entitled the bondholder to purchase one share of \$5 par common stock for \$25. Immediately after issuance, the market value of each

warrant was \$4. On December 31, year 1, what amount should Moss record as discount or premium on issuance of bonds?

- \$40,000 premium.
- \$90,000 premium.
- \$110,000 discount.
- \$200,000 discount.

**37.** On March 1, year 1, Evan Corp. issued \$500,000 of 10% nonconvertible bonds at 103, due on February 28, year 11. Each \$1,000 bond was issued with thirty detachable stock warrants, each of which entitled the holder to purchase, for \$50, one share of Evan's \$25 par common stock. On March 1, year 1, the market price of each warrant was \$4. By what amount should the bond issue proceeds increase stockholders' equity?

- \$0
- \$15,000
- \$45,000
- \$60,000

**38.** Main Co. issued bonds with detachable common stock warrants. Only the warrants had a known market value. The sum of the fair value of the warrants and the face amount of the bonds exceeds the cash proceeds. This excess is reported as

- Discount on bonds payable.
- Premium on bonds payable.
- Common stock subscribed.
- Contributed capital in excess of par—stock warrants.

**39.** When bonds are issued with stock purchase warrants, a portion of the proceeds should be allocated to paid-in capital for bonds issued with

	<b>Detachable stock purchase warrants</b>	<b>Nondetachable stock purchase warrants</b>
a.	No	Yes
b.	No	No
c.	Yes	No
d.	Yes	Yes

### ***B.7. Extinguishment of Debt***

**40.** On June 30, year 1, King Co. had outstanding 9%, \$5,000,000 face value bonds maturing on June 30, year 6. Interest was payable semiannually every June 30 and December 31. King did not elect the fair value option for reporting its financial liabilities. On June 30, year 1, after amortization was recorded for the period, the unamortized bond premium and bond issue costs were \$30,000 and \$50,000, respectively. On that date, King acquired all its outstanding bonds on the open market at 98 and retired them. At June 30, year 1, what amount should King recognize as gain before income taxes on redemption of bonds?

- \$20,000
- \$80,000
- \$120,000
- \$180,000

**41.** On January 1, year 1, Fox Corp. issued 1,000 of its 10%, \$1,000 bonds for \$1,040,000. These bonds were to mature on January 1, year 11 but were callable at 101 any time after December 31, year 4. Interest was payable semiannually on

July 1 and January 1. Fox did not elect the fair value option for reporting its financial liabilities. On July 1, year 6, Fox called all of the bonds and retired them. Bond premium was amortized on a straight-line basis. Before income taxes, Fox's gain or loss in year 6 on this early extinguishment of debt was

- \$30,000 gain.
- \$12,000 gain.
- \$10,000 loss.
- \$8,000 gain.

**42.** On January 1, year 13, Hart, Inc. redeemed its fifteen-year bonds of \$500,000 par value for 102. They were originally issued on January 1, year 1, at 98 with a maturity date of January 1, year 16. The bond issue costs relating to this transaction were \$20,000. Hart did not elect the fair value option for reporting its financial liabilities. Hart amortizes discounts, premiums, and bond issue costs using the straight-line method. What amount of loss should Hart recognize on the redemption of these bonds?

- \$16,000
- \$12,000
- \$10,000
- \$0

### ***B.9. International Financial Reporting Standards (IFRS)***

**43.** On February 1, year 1, Blake Corporation issued bonds with a fair value of \$1,000,000. Blake prepares its financial statements in accordance with IFRS. What methods may Blake use to report the bonds on its December 31, year 1 statement of financial position?

- Amortized cost.
- Fair value method.
- Fair value through profit or loss.

- I only
- II only.
- I and III only.
- III only.

**44.** Under IFRS, issued convertible bonds are

- Separated into debt and equity components with the liability component recorded at fair value and the residual assigned to the equity component.
- Always recorded using the fair value option.
- Recorded at face value for the liability along with the associated premium or discount.
- Recorded at face value without consideration of a premium or discount.

**45.** Grim Corporation reports under IFRS. Grim issued 2,000 \$1,000 convertible bonds at par, with an annual interest rate of 6% when the market was 8%. The bonds are due in 5 years and each \$1,000 bond is convertible into 3 shares of common stock. At what amount would Grim record the liability component of the bond?

- \$479,125
- \$1,840,285
- \$2,000,000
- \$2,006,000

Explanations

1. (a) **Serial** bonds are bond issues that mature in installments (usually on the same date each year over a period of years). In this case, serial bonds total \$475,000 (\$275,000 + \$200,000). **Debenture** bonds are bonds that are **not** secured by specifically designated collateral, but rather by the general assets of the corporation. The unsecured bonds total \$400,000 (\$275,000 + \$125,000).

2. (d) **Term bonds** are bond issues that mature on a single date, as opposed to **serial bonds**, which mature in installments. In this case, the 9 3/4% bonds and the 9 1/2% bonds are term bonds (\$700,000 + \$600,000 = \$1,300,000), while the 10% bonds are serial bonds (\$300,000).

3. (c) Serial bonds are bond issues that mature in installments (i.e., on the same date each year over a period of years). Term bonds, on the other hand, are bond issues that mature on a single date.

4. (c) The issue price of each bond is equal to the present value (PV) of the maturity value plus the PV of the interest annuity. The PV must be computed using the yield rate (9%). The computation is

Amount		PV factor	=	PV
\$1,000	×	.422	=	\$422
60	×	6.418	=	<u>385</u>
				<u>\$807</u>

The annuity interest amount above (\$60) is the principal (\$1,000) times the stated cash rate (6%).

5. (d) The question asks for net proceeds to be received from the issuance. The market value of a bond is equal to the maturity value and the interest payments discounted at the market rate of interest. The net proceeds will be the market value of the bond less the bond issuance costs.

6. (c) The market price of a bond issued at any amount (par, premium, or discount) is equal to the present value of all of its future cash flows, discounted at the current market (effective) interest rate. The market price of a bond issued at a discount is equal to the present value of both its principal and periodic

future cash interest payments at the stated (cash) rate of interest, discounted at the current market (effective) rate.

7. (d) To determine the net cash received from the bond issuance, the solutions approach is to prepare the journal entry for the issuance

Cash	?	
Discount on BP	6,000	
Bonds payable		600,000
Interest expense		15,000

The bonds were issued at 99 (\$600,000 × 99% = \$594,000), so the discount is \$6,000 (\$600,000 – \$594,000). The accrued interest covers the three months from 4/1 to 7/1 (\$600,000 × 10% × 3/12 = \$15,000). The cash received includes the \$594,000 for the bonds and the \$15,000 for the accrued interest, for a total of \$609,000.

8. (d) Engraving and printing costs, legal and accounting fees, commissions, promotion costs, and other similar costs should be recorded as bond issue costs and amortized over the term of the bonds. All the costs given are bond issue costs, so the amount reported as bond issue costs is \$245,000 (\$20,000 + \$25,000 + \$200,000).

9. (b) Bond issue costs are treated as deferred charges and amortized on a straight-line basis over the life of the bond. These five-year bonds were issued five months late (4/1/Y1 to 8/31/Y1), so they will be outstanding only fifty-five months (60 – 5). During year 1, the bonds were outstanding for four months (8/31/Y1 to 12/31/Y1). Therefore, the bond issue costs must be amortized for four months out of fifty-five months total, resulting in bond issue expense of \$240 (\$3,300 × 4/55).

10. (b) Interest payable reported in the 12/31/Y1 balance sheet would consist of interest due from the bond date (10/1/Y1) to the year-end (12/31/Y1); in other words, three months' interest. The formula for interest payable is

Face value	×	Stated rate	×	Time period	=	Interest payable
\$800,000	×	8%	×	3/12	=	\$16,000

This amount would result from two entries.

**Issuance**

Cash	705,333	
Discount on BP	100,000	
Bonds payable		800,000
Int. payable		5,333
		(800,000 × 8% × 1/12)

**Adjusting entry**

Interest expense	11,667	(700,000 × 10% × 2/12)
Int. payable		10,667
		(800,000 × 8% × 2/12)
Discount on BP		1,000

**11. (c)** Answer (a) is incorrect because various methods may be used to measure interest expense. Answer (b) is incorrect because when the fair value option is elected, the effects of discount or premiums are removed from the balance sheet. Answer (d) is incorrect because the fair value option may be applied on an instrument-by-instrument basis.

**12. (a)** Interest expense can be measured using various methods. In this situation, Southern recognized interest expense by debiting interest expense for \$12,000 and crediting cash for \$12,000, which represents the coupon interest paid on the bond. Therefore, interest expense was recognized on the income statement as a separate line item. The change in fair value from January 1, year 2, to December 31, year 2, would, therefore, be recognized as a gain or loss to revalue the bond's carrying value to fair value. The change in value is calculated as beginning of year carrying value of \$107,720 less end of year carrying value of 106,460, or \$1,260. Since the value of the liability decreased, this indicates a gain of \$1,260 that would be recognized on the year 2 income statement.

**13. (c)** A bond premium must be amortized using the interest method or the straight-line method if the results are not materially different. To use the straight-line method, the amount of time the bonds will be outstanding must be known. Since this time period is not given, the interest method must be used. Under the interest method, interest expense is computed as follows:

BV of bonds	×	Yield rate	×	Time period	=	Interest expense
\$103,288	×	10%	×	6/12	=	\$5,164

The interest payable at 12/31/Y1 is \$6,000 (\$100,000 × 12% × 6/12), so the 12/31/Y1 journal entry is

Interest expense	5,164	
Premium on BP	836	
Interest payable		6,000

**14. (b)** Under the effective interest method, interest expense is computed as follows:

BV of bonds	×	Yield rate	×	Time period	=	Interest expense
\$469,500	×	10%	×	6/12	=	\$23,475

The cash interest payable is computed below.

FV of bonds	×	Stated rate	×	Time period	=	Interest payable
\$500,000	×	9%	×	6/12	=	\$22,500

The bond discount amortization is the difference between these two amounts computed above (\$23,475 – \$22,500 = \$975). This amortization would increase the carrying amount of the bonds to \$470,475 (\$469,500 original carrying amount + \$975 amortization).

**15. (c)** Under the effective interest method, interest expense is computed as follows:

BV of bonds	×	Yield rate	×	Time period	=	Interest payable
\$105,000	×	6%	×	12/12	=	\$6,300

The cash interest payable is computed as follows:

FV of bonds	×	Stated rate	×	Time period	=	Cash interest
\$100,000	×	7%	×	12/12	=	\$7,000

The bond premium amortization is the difference between these two amounts (\$7,000 – \$6,300 = \$700). Therefore, the unamortized premium at 6/30/Y2 is \$4,300 (\$5,000 – \$700).

**16. (b)** The requirement is to determine whether the amount of amortization increases each year using the interest method when a bond is sold either at a discount or premium or both. Using the interest method, interest expense for the period is based on the carrying value of the bond multiplied by the effective rate of interest. Cash interest paid for the period equals the face value of the bond multiplied by the stated rate of interest. The difference between these two resulting figures is the amortization of the discount or premium each period. The solutions approach is to prepare a table for a bond issued at a discount and at a premium and examine the direction of the successive amortization amounts. Consider \$100,000 of 8% bonds issued on January 1, year 1, due on January 1, year 6, with interest payable each July 1 and January 1. Investors wish to obtain a yield of 10% on the issue. The amortization for the first two periods is as follows:

Dates	Credit cash	Debit interest expense	Credit bond discount	Carrying value of bonds
1/1/Y1				\$92,278
7/1/Y1	\$4,000	\$4,614	\$614	92,892
1/1/Y2	4,000	4,645	645	93,537

Assume the same facts, except the investors wish to obtain a yield of only 6% on the issue.

Dates	Credit cash	Debit interest expense	Debit bond premium	Carrying value of bonds
1/1/Y1				\$108,530
7/1/Y1	\$4,000	\$3,256	\$744	107,786
1/1/Y2	4,000	3,234	766	107,020

The above tables show that when bonds are sold at either a discount or a premium, the amount of amortization using the interest method will increase each year.

**17. (b)** Using the effective interest method, interest expense is computed as the **carrying amount** of the bonds multiplied by the **effective rate** of interest. Cash interest paid equals the **face value** of the bonds multiplied by the **stated rate** of interest. The difference between interest expense and cash interest

paid is discount amortization. When bonds are issued at a discount, the carrying amount increases each year, so interest expense increases each year, which causes a larger difference between interest expense and interest paid. Therefore, under the effective interest method, the discount amortization amount increases yearly. Under the straight-line method, discount amortization is constant each period. After one year, the incorrect use of the straight-line method would overstate the carrying amount of the bonds since more discount would have been amortized than under the effective interest method. By the time the bonds mature at 1/2/Y7, the entire discount would have been amortized under both methods, so the carrying amount would be the same for both methods.

**18. (b)** The 12/31/Y1 bond sinking fund balance (\$450,000) was increased by the additional investment (\$90,000), dividends (\$15,000), and interest (\$30,000). It was decreased by administration costs (\$5,000), resulting in a 12/31/Y2 balance of \$580,000 (\$450,000 + \$90,000 + \$15,000 + \$30,000 – \$5,000).

**19. (d)** Disclosure is required at the balance sheet date of future payments for sinking fund requirements and maturity amounts of long-term debt during each of the next five years. Therefore, the combined aggregate of \$17,500,000 of maturities and sinking fund requirements detailed by year should be disclosed.

**20. (d)** Companies sometimes place assets in segregated funds for special needs. These funds may become unavailable for normal operations due to debt covenants or other contractual requirements. Funds segregated for long-term needs, such as the bond sinking fund established in this problem, are reported as investments in the noncurrent section of the balance sheet. When interest is earned on investments held in a bond sinking fund, the following journal entry would be made:

Bond sinking fund cash	(revenue earned)
Bond sinking fund revenue	(revenue earned)

The debit to the bond sinking fund increases the balance of the fund. The amount credited to bond sinking fund revenue is reported in the “Other Income (Expense)” section of the income statement.

**21. (a)** Businesses occasionally accumulate a fund of cash and/or investments for a specific purpose, such as the retirement of bonds in this problem. These funds are referred to as “sinking funds.” The sinking fund is increased when periodic additions are made to the fund and when revenue is earned on the investments held in the fund. When cash is used to purchase investments, the components of the fund change (i.e., cash is invested and replaced by bonds or other securities), but the total fund balance is not affected.

**22. (c)** Debt and equity securities that are classified as **trading securities** are reported at fair market value, with unrealized gains and losses included in earnings. Therefore, at 12/31/Y1 Wynn would recognize an unrealized holding gain of \$35,000 (\$945,000 – \$910,000) on the income statement, and report the securities at their fair market value of \$945,000. Securities classified as trading securities are reported at fair market value on the balance sheet.

**23. (b)** Interest **receivable** on an investment in bonds is computed using the basic interest formula

$$\begin{array}{rcccccc} \text{Face} & \times & \text{Stated rate} & \times & \text{Time} & = & \text{Interest} \\ \text{value} & & & & \text{period} & & \text{receivable} \\ \$500,000 & \times & 8\% & \times & 6/12 & = & \$20,000 \end{array}$$

Note that interest **revenue** is \$23,075 (\$461,500 × 10% × 6/12) using the interest method.

**24. (d)** The bonds should be recorded at an original cost of \$215,000 (\$220,000 less accrued interest of \$5,000). The premium of \$15,000 is amortized using the straight-line method over the period from the 10/1/Y1 date of purchase to the 1/1/Y8 maturity date (seventy-five months). By 12/31/Y2, amortization has been recorded for fifteen months (10/1/Y1 to 12/31/Y2), so total amortization is \$3,000 (\$15,000 × 15/75). Therefore, the bonds should be reported on the 12/31/Y2 balance sheet at \$212,000 (\$215,000 – \$3,000).

**25. (a)** When using the interest method of amortization, interest revenue is computed as follows:

$$\begin{array}{rcccccc} \text{BV of} & \times & \text{Yield} & \times & \text{Time} & = & \text{Interest} \\ \text{bonds} & & \text{rate} & & \text{period} & & \text{expense} \\ \$906,000 & \times & 10\% & \times & 6/12 & = & \$45,300 \end{array}$$

The initial BV is the total amount paid less the accrued interest (\$946,000 – \$40,000 = \$906,000). The amount of interest receivable for the six months is computed below.

$$\begin{array}{rcccccc} \text{FV of} & \times & \text{Stated} & \times & \text{Time} & = & \text{Interest} \\ \text{bonds} & & \text{rate} & & \text{period} & & \text{receivable} \\ \$1,000,000 & \times & 8\% & \times & 6/12 & = & \$40,000 \end{array}$$

The discount amortized at 12/31/Y1 is the difference in these two amounts (\$45,300 – \$40,000 = \$5,300). This increases the book value of the investment to \$911,300 (\$906,000 + \$5,300).

**26. (d)** The requirement is to determine the **most** likely cause of the decline in the bonds’ market value. When the bonds were acquired at a premium, they sold above their face value. This meant that the stated rate of the bonds was greater than the market rate of interest on an alternative investment of equal risk. Thus, the investors paid more than the face value to acquire the bonds. However, when bonds are quoted at a discount, the stated rate of the bonds is less than the market rate. Therefore, the market rate of interest has increased since Lee purchased the bonds.

**27. (d)** At any point in time, an investor’s carrying value of a bond held as a long-term investment is equal to the par value of the bond, plus the amount of the unamortized premium, or less the amount of the unamortized discount. A bond purchased at a premium, thus, has a higher carrying value at any point in time than if it had been purchased at a discount. This is logical since its initial cost is also higher when purchased at a premium.

Having determined that the bond purchased at a premium will result in the highest carrying value, we must now determine which amortization method will result in the higher carrying value at the end of the first year. Under the straight-line method, the periodic amortization is constant;

it is computed by dividing the total premium by the number of periods involved. Under the effective interest method, the periodic amortization changes over the term of the bond. A review of amortization tables for bonds issued at a premium will demonstrate that the periodic amortization of the premium is lowest in the first period, but increases over subsequent periods. Therefore, the straight-line method would result in higher amortization of the premium at the end of the first year than under the effective interest method. The higher amortization would result in a smaller unamortized premium and lower, overall carrying value at the end of the first year under the straight-line method than under the effective interest method.

**28. (c)** The requirement is to determine the purchase price of a bond which will yield the highest interest income for the investor. If the bond's market rate of interest on the date of acquisition is different than the stated rate, the bonds will sell at a premium or discount. If the market rate of interest is higher than the bond's stated rate, the purchase price will be lower than the face value (i.e., discounted). The discount will be recognized over the life of the investment as an addition to interest income. Annual interest income will equal the cash interest received plus the discount amortization for the year. If the bonds are purchased at par (face value), the interest income will equal the cash interest received. The interest income for a bond purchased at a premium would equal the cash interest received less the premium amortization for the year.

**29. (c)** When a company uses the effective interest method to amortize a discount on bonds payable, interest expense (which is based on the carrying value of the bonds) is lower in earlier years when compared to interest expense under the straight-line method. Therefore, the straight-line method results in higher interest expense, lower net income, and **understated** retained earnings. Since more interest expense is recorded under the straight-line method, amortization of the discount on bonds payable will be greater under the straight-line method when compared to the effective-interest method. Therefore, the carrying amount of the bonds under the straight-line method is **overstated**.

**30. (b)** The gain on sale of the bond investment is the excess of the selling price over the carrying amount. The selling price was \$14,000 **above** face value. The bonds were purchased at a discount of \$10,000, but after amortization of \$2,000 the carrying amount at the time of sale was \$8,000 **below** face value. Therefore, the selling price exceeded the carrying amount by \$22,000 (\$14,000 premium + \$8,000 remaining discount).

**31. (b)** Using the book value method, the common stock is recorded at the carrying amount of the converted bonds, less any conversion expenses. Since there are no conversion expenses in this case, the common stock is recorded at the \$1,300,000 carrying amount of the converted bonds. The par value of the stock issued is \$50,000 ( $50,000 \times \$1$ ), so additional paid-in capital (APIC) of \$1,250,000 ( $\$1,300,000 - \$50,000$ ) is recorded. The entry is

Bonds payable	1,000,000	
Premium on B.P.	300,000	
Common stock		50,000
APIC		1,250,000

Note that when the book value method is used, the fair value is not considered, and no gain or loss is recognized.

**32. (a)** Under the book value method, the common stock will be recorded at the book value of the bonds at the date of conversion. Thus, no gain or loss is recognized on the conversion. The conversion entry credits common stock and APIC, which increases stockholders' equity. The amount of additional paid-in capital is the difference between the book value of the bonds and the par value of the stock. The effect of the conversion would be to increase the APIC. The conversion has no effect on retained earnings. No gain or loss is recognized.

**33. (d)** Convertible debt securities which may be converted into common stock at the option of the holder, and whose issue price is not significantly greater than face value, should be reported as debt upon issuance for the entire proceeds of the bonds. This reasoning is based on the inseparability of the debt and the conversion option, and the mutually exclusive options of the holder (i.e., holding either bonds or stock). Contributed capital would be recorded only upon conversion of the bonds to common stock.

**34. (c)** When the **book value method** of accounting for the conversion of bonds into common stock is used, the common stock will be recorded at the book value of the bonds at the date of conversion. Thus, no gain or loss is recognized on the conversion. When the **market value method** of accounting for the conversion is used, the following journal entry would be made on the books of the issuer (assuming market value > book value):

Loss on redemption	(plug)	
Bonds payable	(book value)	
Common stock		(par)
APIC-common stock		(mkt.-par)

The debit to the loss account would be for the difference between the market value of the stock and the book value of the bonds. The market value method assumes a culmination of the earnings process, and a gain or loss on the conversion may be recognized. In this case, the market value of the stock exceeds the book value of the bonds, and a loss is recognized.

**35. (c)** The proceeds of bonds issued with **detachable** warrants are allocated between the bonds and the warrants based upon their relative fair value at the time of issuance. In this case, the portion allocated to the bonds is \$900,000, calculated as follows:

$$\frac{\$1,080,000}{\$1,080,000 + \$120,000} = 90\%; 90\% \times \$1,000,000 = \$900,000$$

Therefore, the bonds payable are reported at \$900,000 (face value \$1,000,000 less discount \$100,000).

**36. (c)** The proceeds from the issuance of debt with **detachable** stock warrants should be allocated between the debt and equity elements. 1,000 bonds ( $\$1,000,000 \div \$1,000$ ) were issued with fifty detachable stock warrants each, for a total of 50,000 warrants. Paid-in capital from stock warrants is \$200,000 ( $50,000 \times \$4$ ). Since the bonds and warrants were issued for \$1,090,000 ( $\$1,000,000 \times 109\%$ ), the portion of the proceeds allocated to the bonds is \$890,000 ( $\$1,090,000 - \$200,000$ ) and the discount is \$110,000 ( $\$1,000,000 - \$890,000$ ). Note that if a fair value is given for the **bonds without warrants**, ASC Subtopic 470-20 states that the proceeds should be allocated between the bonds and warrants based on their relative fair value at the time of issuance.

**37. (d)** The proceeds from the issuance of debt with **detachable** stock warrants should be allocated between the debt and equity elements. 500 bonds ( $\$500,000 \div \$1,000$ ) were issued with thirty detachable stock warrants each, for a total of 15,000 warrants. Paid-in capital from stock warrants is \$60,000 ( $15,000 \times \$4$ ). Note that if a fair value was given for the **bonds without warrants**, ASC Subtopic 470-20 states that the proceeds should be allocated between the bonds and warrants based on their relative fair value at the time of issuance.

**38. (a)** The solutions approach is to set up the original journal entry on the books of the issuer. The entry would be made as follows:

Cash	(proceeds)	
Discount on bonds payable	(plug)	
Bonds payable		(face)
APIC—Stock warrants		(fair value)

Since the APIC—Stock warrants account is already stated at market value, any remaining difference must be allocated to the **bonds**. Bonds payable would be credited only at their face (par) value. Therefore, Discount on bonds payable is debited for the excess of the fair value of the warrants and the face amount of the bonds over cash proceeds.

**39. (c)** Bonds issued with stock purchase warrants are, in substance, composed of two elements: a debt element, and a stockholders' equity element. Proceeds from bonds issued with **detachable** stock purchase warrants should be allocated between the bonds and the warrants on the basis of their relative fair market values. Detachable warrants trade separately from the debt; thus, a market value is available. The amount allocated to the warrants should be accounted for as paid-in capital. Bonds issued with **nondetachable** stock purchase warrants must be surrendered in order to exercise the warrants. Since this inseparability prevents the determination of individual market values, no allocation is permitted.

**40. (b)** A gain or loss on redemption of bonds is the difference between the **cash paid** ( $\$5,000,000 \times 98\% = \$4,900,000$ ) and the **net book value of the bonds**. To compute the net book value, premium or discount and bond issue costs must be considered. Book value is \$4,980,000 ( $\$5,000,000$  face value, less \$50,000 bond issue costs, plus \$30,000 premium). Therefore the gain or redemption is \$80,000 ( $\$4,980,000$  book value less  $\$4,900,000$  cash paid).

**41. (d)** The gain on early extinguishment of debt is the excess of the book value of the bonds at the time of retirement over the cash paid ( $\$1,000,000 \times 101\% = \$1,010,000$ ). On 1/1/Y1, the original balance in the premium account was \$40,000 ( $\$1,040,000 - \$1,000,000$ ). At 7/1/Y1, the premium had been amortized for five and one-half years, or eleven six-month periods (1/1/Y1 to 7/1/Y6). Since the bond term was ten years, or twenty six-month periods, the total premium amortized was \$22,000 ( $\$40,000 \times 11/20$ ). Therefore, the unamortized premium was \$18,000 ( $\$40,000 - \$22,000$ ) and the book value of the bonds was \$1,018,000 ( $\$1,000,000 + \$18,000$ ). A shortcut approach is to take the 1/1/Y1 book value ( $\$1,040,000$ ) and subtract the amortization ( $\$22,000$ ) to determine the 7/1/Y6 book value of \$1,018,000. The gain is \$8,000 ( $\$1,018,000$  book value less  $\$1,010,000$  cash paid).

**42. (a)** The total bond discount and bond issue costs were \$30,000 at the time of issuance [ $(.02 \times \$500,000) + \$20,000$ ]. By 1/1/Y13, twelve years have passed since the bonds were issued on 1/1/Y1. Since the bonds have a fifteen-year life, 12/15 of the discount and issue costs have been amortized, leaving 3/15 unamortized ( $3/15 \times \$30,000 = \$6,000$ ). When bonds are retired, the bonds and unamortized premium or discount, and/or issue costs must be removed from the books. In this situation, the difference between the net book value of the bonds ( $\$500,000 - \$6,000 = \$494,000$ ) and the cash paid ( $\$500,000 \times 1.02 = \$510,000$ ) is recognized as a loss ( $\$510,000 - \$494,000 = \$16,000$ ).

**43. (c)** The requirement is to identify the method(s) that may be used to report the bonds. Answer (c) is correct because IFRS provides that financial liabilities may be reported at amortized cost or at the fair value through profit or loss (FVTPL). If FVTPL is elected, the resulting gain or loss is recognized in profit or loss for the period.

**44. (a)** Answer (a) is correct because under IFRS, an issued convertible bond is separated into debt and equity components with the liability component recorded at fair value and the residual assigned to the equity component.

**45. (b)** Under IFRS, Grim should bifurcate the convertible bond into its debt and equity components. Answer (b) is correct. To do this, discount the bond at market interest rates as in US GAAP. The liability component is the discounted amount and the equity component is the residual of the cash received less the discounted amount. Calculations are as follows:

Face amount of the bonds:	=	\$2,000,000
$2,000 \times \$1,000$		
Present value of \$1 for the principal	=	\$1,361,160
( $\$2,000,000 \times 0.68058$ )		
Present value of an ordinary annuity for	=	\$479,125
the interest ( $\$120,000 \times 3.99271$ )		
Value of the liability	=	\$1,840,285
Value of the equity ( $\$2,000,000 -$	=	\$159,715
\$1,840,285)		

Journal entry at issuance:

Cash	2,000,000	
Bonds payable		1,840,285
Equity—conversion option		159,715

## Simulations

<b>Concepts</b>	<b>Authoritative Literature</b>	<b>Help</b>
-----------------	---------------------------------	-------------

Parker Co. \$50 par value common stock has always traded above par. During year 1, Parker had several transactions that affected the following balance sheet accounts:

- I. Bond discount
- II. Bond premium
- III. Bond payable
- IV. Common stock
- V. Additional paid-in capital
- VI. Retained earnings

For each of the following items, determine whether the transaction Increased, Decreased, or had No effect for each of the items in the chart.

	Bond discount	Bond premium	Bonds payable	Common stock	Additional paid-in capital	Retained earnings
1. Parker issued bonds payable with a nominal interest rate that was less than the market rate of interest.						
2. Parker issued convertible bonds, which are common stock equivalents, for an amount in excess of the bonds' face amount.						
3. Parker issued common stock when the convertible bonds described in item 2. were submitted for conversion. Each \$1,000 bond was converted into twenty common shares. The book value method was used for the early conversion.						
4. Parker issued bonds with nondetachable warrants for an amount equal to the face amount of the bonds. The stock warrants do not have a determinable value.						
5. Parker issued bonds, with detachable stock warrants, for an amount equal to the face amount of the bonds. The stock warrants have a determinable value.						
6. Parker redeemed a bond issued at 8% at a discount for an amount that was 102% of face value.						
7. Parker issued bonds payable with a nominal rate of interest that is higher than the market rate.						
8. Parker called a bond that was issued at 105 at a time when the market value of the bond was less than its carrying value.						

### Task-Based Simulation 2

<b>Bond Valuation and Amortization</b>		
	<b>Authoritative Literature</b>	<b>Help</b>

#### Situation

On January 2, year 1, Parker Co. issued 6% bonds with a face value of \$400,000 when the market interest rate was 8%. The bonds are due in ten years, and interest is payable every June 30 and December 31. Parker does not elect the fair value option for reporting its financial liabilities.

Use the following present value and present value annuity tables to calculate the selling price of the bond on January 2, year 1. Round your final answer to the nearest dollar.

Periods	Present Value Ordinary Annuity of \$1					
	3%	4%	6%	8%	12%	16%
5 periods	4.5797	4.4518	4.2124	3.9927	3.6048	3.2743
10 periods	8.5302	8.1109	7.3601	6.7101	5.6502	4.8337
20 periods	14.8775	13.5903	11.4699	9.8181	7.4694	5.9288

Periods	Present Value of \$1					
	3%	4%	6%	8%	12%	16%
5 periods	.8626	.8219	.7473	.6806	.5674	.4761
10 periods	.7441	.6756	.5584	.4632	.3220	.2267
20 periods	.5537	.4564	.3118	.2145	.1037	.0514

Calculate the price of the bond, and prepare the amortization schedule for the bond through December 31, year 1. Round all numbers to the nearest dollar.

Date	Interest paid	Interest expense	Amortization of discount	Discount on bond payable	Carrying value of bond payable
1/2/Y1					
6/30/Y1					
12/31/Y1

| 7. A bond premium represents a reduction of interest expense on the books of the issuer.                  | <input type="radio"/> | <input type="radio"/> |
| 8. When the contract or coupon rate is greater than the effective rate, the bonds will sell at a premium. | <input type="radio"/> | <input type="radio"/> |

### Task-Based Simulation 6

Journal Entries	Authoritative Literature	Help

#### Situation

On January 1, year 5, Castle issued \$400,000 of 6% bonds. The bonds were issued at 98 and pay interest semiannually on July 1 and December 31 each year.

On September 1, year 5, Castle issued for \$530,000 cash, 500 7% five-year nonconvertible bonds dated September 1, year 5. Each \$1,000 bond had a detachable stock purchase warrant to purchase 20 shares of \$3 par value stock for \$10 per share. Immediately after issuance, the warrants had a market value of \$45,000, and the bonds were selling at 102 without the warrant.

On January 1, year 1, Castle issued 100 ten-year convertible bonds. Each \$1,000 bond is convertible into 20 shares of Castle's \$10 par value common stock. The bonds were issued at 105 when the common stock traded for \$40 per share. The bonds pay interest annually. The conversion features of the bond are not beneficial. On October 1, year 5, half of the bonds were tendered for conversion when the common stock was trading at \$62 per share. Castle uses the book value method to account for the conversion. At the time of conversion, the bonds had a carrying value of \$104,300. Castle does not elect the fair value option for reporting these financial liabilities.

Prepare the journal entries for the bond transactions during year 5.

1. January 1, year 5 Issue bonds

2. September 1, year 5 Issue bonds with detachable warrants

3. October 1, year 5 Conversion of bonds

	Bond discount	Bond premium	Bonds payable	Common stock	Additional paid-in capital	Retained earnings
1. Parker issued bonds payable with a nominal interest rate that was less than the market rate of interest.	Increase	No effect	Increase	No effect	No effect	No effect
2. Parker issued convertible bonds, which are common stock equivalents, for an amount in excess of the bonds' face amount.	No effect	Increase	Increase	No effect	No effect	No effect
3. Parker issued common stock when the convertible bonds described in item 2. were submitted for conversion. Each \$1,000 bond was converted into twenty common shares. The book value method was used for the early conversion.	No effect	Decrease	Decrease	Increase	Increase	No effect
4. Parker issued bonds, with nondetachable warrants for an amount equal to the face amount of the bonds. The stock warrants do not have a determinable value.	No effect	No effect	Increase	No effect	No effect	No effect
5. Parker issued bonds, with detachable stock warrants, for an amount equal to the face amount of the bonds. The stock warrants have a determinable value.	Increase	No effect	Increase	No effect	Increase	No effect
6. Parker redeemed a bond issued at 8% at a discount for an amount that was 102% of face value.	Decrease	No effect	Decrease	No effect	No effect	Decrease
7. Parker issued bonds payable with a nominal rate of interest that is higher than the market rate.	No effect	Increase	Increase	No effect	No effect	No effect
8. Parker called a bond that was issued at 105 at a time when the market value of the bond was less than its carrying value.	No effect	Decrease	Decrease	No effect	No effect	Increase

### *Explanations*

1. Since the nominal rate of interest was less than the market rate of interest, the bonds sold at a discount. In other words, the investors paid less than the face value to acquire the bonds. The journal entry to record the transaction is

Cash	xx		
Discount on bonds payable	xx		
Bonds payable		xx	

Therefore, the issuance of the bonds would increase both bonds payable and discount on bonds payable.

2. Convertible debt securities which may be converted into common stock at the option of the holder, and whose issue price is not significantly greater than face value, should be reported as debt upon issuance for the entire proceeds of the bonds. This

reasoning is based on the inseparability of the debt and the conversion option, and the mutually exclusive options of the holder (i.e., holding either bonds or stock). The journal entry to record the transaction is

Cash	xx	
Premium on bonds payable		xx
Bonds payable		xx

Therefore, the issuance of the convertible bonds would increase both bonds payable and premium on bonds payable.

3. When the book value method of accounting for the conversion of bonds into common stock is used, the common stock will be recorded at the book value of the bonds at the date of conversion. Thus, no gain or loss is recognized on the conversion. The journal entry to record the transaction is

Bonds payable	xx	
Premium on bonds payable	xx	
Common stock		xx
Additional paid-in capital		xx

Therefore, the conversion of the bonds would decrease bonds payable and premium on bonds payable while increasing common stock and additional paid-in capital.

4. Nondetachable warrants are not valued separately from the bond. Therefore, the entry to record the bond is

Cash	xx	
Bonds payable		xx

5. The proceeds of bonds issued with detachable warrants are allocated between the bonds and the warrants based upon their relative fair market values at the time of issuance. In this case, the bonds, with detachable stock warrants, were issued for an amount equal to the face amount of the bonds. Since part of the proceeds is allocated to the stock warrants, the bonds were issued at a discount. The journal entry to record the transaction is

Cash		xx
Discount on bonds payable		xx
Bonds payable		xx
Additional paid-in capital—Stock warrants		xx

Therefore, the issuance of the bonds, with detachable stock warrants, would increase bonds payable, discount on bonds payable, and additional paid-in capital.

6. The bond was sold at a discount. Therefore, when the bond is redeemed, the bonds payable and the discount account must be removed from the records. The net carrying amount is less than the reacquisition price. Therefore, there is a loss on the extinguishment of debt. It will be an ordinary loss on the income statement. The journal entry for the transaction is

Bonds payable	xx	
Loss on bond	xx	
Discount on bond		xx
Cash		xx

7. Since the nominal rate of interest is greater than the market rate, the bonds sold at a premium. In other words, the investors paid more than face value for the bond. The journal entry to record the transaction is

Cash	xx	
Bonds payable		xx
Premium on bond		xx

8. The net carrying value is greater than the market value of the bond (reacquisition price). Therefore, there is a gain on the redemption of the bond. The journal entry for this transaction is

Premium on bonds payable	xx	
Bonds payable	xx	
Cash		xx
Gain on extinguishment of debt		xx

### Task-Based Simulation 2

<b>Bond Valuation and Amortization</b>	<b>Authoritative Literature</b>	<b>Help</b>

PVA of \$12,000 at 4% for 20 periods	+	PV of \$400,000 at 4% after 20 periods
(13.5903 × 12,000)	+	(.4564 × \$400,000)
163,083.60	+	183,560
Price of the bond	=	345,643.60
		Rounds to 345,644

Date	Interest paid	Interest expense	Amortization of discount	Discount on bond payable	Carrying value of bond payable
1/2Y1	0	0	0	54,356	345,644
6/30/Y1	12,000	13,826	1,826	52,530	347,470
12/31/Y1	12,000	13,899	1,899	50,631	349,369

- The discount on bonds is (face – carrying value). The carrying value is \$345,644, the issue price. Therefore, the discount account is \$54,356 (\$400,000 – \$345,644).
- The carrying amount at date of issue is the issue price, \$345,644.
- The cash interest payment is \$12,000 and is given in the problem. This represents a semiannual interest rate of 3% (\$400,000 × 3% = \$12,000).
- The interest expense is \$13,826 (\$345,644 × 4%) and is given in the problem.
- Amortization of discount is interest expense minus cash interest payment (\$13,826 – \$12,000) = \$1,826.
- The discount is amortized by \$1,826. The discount account approaches zero as the bond approaches maturity date. Therefore, the discount on 6/30/Y1 is \$52,530 (\$54,356 – \$1,826).
- The new carrying amount on 6/30/Y1 is \$347,470 (\$345,644 + \$1,826).
- The cash interest payment is the same as the previous period. It is always coupon interest rate times the face of the bond (3% × \$400,000) = \$12,000.
- Interest expense is the carrying value times the effective rate. \$13,899 = (\$347,470 × 4%).
- Amortization is the difference between the cash payment and the interest expense. \$1,899 (\$13,899 – \$12,000).
- Discount on bonds is \$50,631 (\$52,530 – \$1,899).
- Carrying amount is \$349,369 (\$347,470 + \$1,899).

### Task-Based Simulation 3

| 8. When the contract or coupon rate is greater than the effective rate, the bonds will sell at a premium. | <input checked="" type="radio"/> | <input type="radio"/>            |

### Explanations

- (T) Bond issue costs are amortized over the bond life.
- (F) Early extinguishment of debt does not receive routine treatment as an extraordinary item. It must meet the test for an extraordinary item (infrequent and unusual) in order to receive extraordinary treatment.
- (F) Losses shall be recognized in the period of extinguishment.
- (F) The effective amortization method should be used.
- (F) Bonds that mature on a single date are called term bonds.
- (F) The effective interest is calculated by the carrying value times the effective rate.
- (T) As the premium is amortized, interest expense is decreased.
- (T) When a bond pays a higher rate than the market, it will sell for a premium.

## Task-Based Simulation 6

Journal Entries		
	Authoritative Literature	Help

### 1. January 1, year 5 Issue bonds

Cash	392,000	
Discount on bonds	8,000	
Bonds payable		400,000

### 2. September 1, year 5 Issue bonds with detachable warrants

Cash	530,000	
Discount on bonds	12,973	
Bonds payable		500,000
Additional paid-in capital—warrants		42,973

### 3. October 1, year 5 Conversion of bonds

Bonds payable	50,000	
Premium on bonds payable	2,150	
Common stock		10,000
Additional paid-in capital		42,150

## Explanations

1. Cash received from the sale of the bonds is equal to \$392,000 ( $98\% \times \$400,000$ ). Bonds payable is recorded at \$400,000 (face value), and the difference is recorded as discount, \$8,000 ( $\$400,000 - \$392,000$ ).

2. The sales price of the bonds and the warrants was \$530,000. The sales price is allocated to the two instruments based on relative fair value. After issuance, the bonds sold for \$510,000 ( $102\% \times \$500,000$ ) and the warrants sold for \$45,000 for a total value of \$555,000. The price allocated to the warrants is \$42,973 [ $\$530,000 \times (\$45,000/\$555,000)$ ], and the price allocated to the bonds is \$487,027 [ $\$530,000 \times (\$510,000/\$555,000)$ ].

3. At the time of conversion, the bonds had a carrying value of \$104,300 ( $\$100,000$  face value +  $\$4,300$  unamortized premium). In recording the conversion, bonds payable would be reduced by the face value of the bonds converted, \$50,000 ( $50\% \times \$100,000$ ), and premium on bonds payable would be reduced by \$2,150 ( $50\% \times \$4,300$ ). The common stock account would be increased for the par value of the stock issued, \$10,000 ( $1,000$  shares  $\times$   $\$10$ ). The difference between the carrying value of the bonds issued and the par value of the stock would be recorded as additional paid-in capital, \$42,150 ( $\$52,150 - \$10,000$ ).

## Task-Based Simulation 7

Research		
	Authoritative Literature	Help

ASC	470	20	25	2
-----	-----	----	----	---

### C. Debt Restructure

1. Creditors may grant relief to debtors. Two types of restructure are described. The first is a settlement of the debt at less than the carrying amount and the second is a continuation of the debt with a modification of terms.
  - a. ASC 310 addresses the accounting by creditors for impairment of certain loans. Impaired loans include all loans that are restructured in a troubled debt restructuring involving a modification of terms. Two requirements must be met for a creditor to classify a restructuring as a troubled debt restructuring

- (1) The restructuring constitutes a concession
  - (2) The debtor is experiencing financial difficulties
- b. An election can also be made to value certain financial assets or financial liabilities at fair value. Included in the list of eligible items is modification of debt. If the fair value option is elected, the debt is revalued at fair value and any resulting gain or loss is recognized in earnings for the period. If the fair value option is not elected, then the rules of ASC Topic 470 (SFAS 15) apply for the debtor, and the rules of ASC Topic 310 (SFAS 114) apply to the creditor. The remainder of this chapter will focus on the rules when the fair value option is **not** elected and when the restructuring qualifies as a troubled debt restructuring.

**2. Settlement of Debt**

- a. **Debtors.** If the debt is settled by the exchange of assets, a gain is recognized for the difference between the carrying amount of the debt and the consideration given to extinguish the debt. Such gains are no longer extraordinary.
- (1) If a noncash asset is given, a separate gain or loss is recorded to revalue the noncash asset to fair value (FV) as the basis of the noncash asset given. Thus, a two-step process is used: (1) revalue the noncash asset to FV and (2) determine the restructuring gain. If stock is issued to settle the liability, record the stock at FV.
- b. **Creditors**
- (1) Assets received in full settlement are recorded at FV
    - (a) The excess of receivable over asset FV is an ordinary loss
    - (b) Subsequently account for the assets as if purchased for cash

<b>EXAMPLE</b>						
<b>Settlement of Debt.</b> Debtor company transfers land in full settlement of its loan payable.						
		Loan payable (5 years remaining)			\$90,000	
		Accrued interest payable on loan			10,000	
		Land:				
		Book value			70,000	
		Fair value			80,000	
<b>Debtor</b>					<b>Creditor</b>	
1. Land	10,000			1. Land	80,000	
Gain on transfer of assets		10,000			Loss on settlement	20,000
2. Loan payable	90,000			Loan receivable	90,000	
Interest payable	10,000			Interest receivable	10,000*	
Land		80,000				
Gain on settlement of debt		20,000				
* If the creditor was a bank or other finance company, this amount would be included as part of Loan receivable.						

**3. Modification of Terms**

- a. **Debtors.** If the debt is continued with a modification of terms, it is necessary to compare the total future cash flows of the restructured debt (both principal and stated interest) with the prerestructured carrying value.
- (1) If the total amount of future cash flows is greater than the carrying value, no adjustment is made to the carrying value of the debt; however, a new effective interest rate must be computed.
    - (a) This rate makes the present value of the total future cash flows equal to the present carrying value of debt (principal and accrued interest).

- (2) If the total future cash flows of the restructured debt are less than the present carrying value, the current debt should be reduced to the amount of the future cash flows and a gain should be recognized.
  - (a) No interest expense would be recognized in subsequent periods because the loan was written down below its carrying value.
  - (b) All payments including those designated as interest would be applied to the principal amount.
- (3) If the restructuring consists of part settlement and part modification of payments, first account for the part settlement per the above, and then account for the modification of payments per the above.

**b. Creditors**

- (1) Under ASC 310 (SFAS 114), a creditor measures impairment based on the present value of expected future cash flows discounted at the loan's effective interest rate.
  - (a) The effective interest rate for a loan restructured in a troubled debt restructuring is based on the original contractual rate, not the rate specified in the restructuring agreement.
  - (b) As a practical expedient, a creditor may measure impairment based on a loan's observable market price, or the fair value of the collateral if the loan is collateral dependent.
    - 1] A loan is collateral dependent if the repayment of the loan is expected to be provided solely by the underlying collateral.
- (2) If the measure of the impaired loan is less than the recorded investment in the loan (including accrued interest, net deferred loan fees or costs, and unamortized premium or discount), a creditor shall recognize an impairment by creating a valuation allowance with a corresponding charge to bad debt expense or by adjusting an existing valuation allowance for the impaired loan with a corresponding charge or credit to bad debt expense.
- (3) The present value of an impaired loan's expected future cash flows will change from one reporting period to the next because of the passage of time and also may change because of revised estimates in the amount or timing of those cash flows. No guidance is provided on how the creditor should recognize the change in the present value.
- (4) The following example of the treatment of modification of terms for creditors demonstrates the accounting for the **debtor** under ASC Topic 470 (SFAS 15) and for the **creditor** under ASC Topic 310 (SFAS 114).

**EXAMPLE**

**Modification of Terms—Gain/Loss Recognized**—Using the previous example with a loan payable of \$90,000 and accrued interest payable on the loan of \$10,000, assume the interest rate on above loan is 5% and the following modification of terms is made:

1. Interest rate is reduced to 4%.
2. The accrued interest is forgiven.
3. The principal at date of restructure is reduced to \$80,000.

**Debtor**

Future cash flows (after restructuring):	
Principal	\$80,000
Interest (5 years × \$80,000 × 4%; \$3,200 per year)	+ <u>16,000</u>
<b>Total</b> cash to be repaid	<b>\$96,000</b>
Amount prior to restructure	
(\$90,000 principal + \$10,000 accrued interest)	- <u>100,000</u>
Gain to be recognized	<u>\$ 4,000</u>

Analysis of Debtor's Loan Payable Account

		90,000	Loan payable before modification of terms						
Gain	4,000	10,000	Additional amount payable from accrued interest						
4% modified interest payments in years 1-5	<table border="0"> <tr><td rowspan="5" style="font-size: 3em; vertical-align: middle;">{</td><td>3,200*</td></tr> <tr><td>3,200</td></tr> <tr><td>3,200</td></tr> <tr><td>3,200</td></tr> <tr><td>3,200</td></tr> </table>	{	3,200*	3,200	3,200	3,200	3,200	96,000	Balance after restructure
{	3,200*								
	3,200								
	3,200								
	3,200								
	3,200								

\* Note that the \$3,200 is recorded as a reduction of principal, not as an interest expense.

**Creditor**

Present value of future cash flows (after restructuring) discounted at the original effective interest rate of 5% for the 5 years remaining:

Principal (\$80,000 × .78353)**	\$ 62,682
Interest (\$80,000 × 4% × 4.32948)***	13,854
Present value of future cash flows	<u>\$ 76,536</u>
Recorded investment in loan by creditor	\$ 100,000
Present value of future cash flows after restructuring	<u>76,536</u>
Impairment loan loss to be recognized by creditor	<u>\$ 23,464</u>

\*\* PV of 1 for 5 periods at 5%.

\*\*\* PV of ordinary annuity for 5 periods at 5%.

**Debtor (ASC Topic 470 [SFAS 15])**

**Beginning of Year 1**

Interest payable	10,000	
Loan payable	4,000	
Loan payable	10,000	
Gain on restructure of debt	4,000	

(The accrued interest is added to the loan payable to arrive at the prerestructure carrying value. The gain reduces the loan payable to the total future cash flows of the restructured debt.)

**End of Year 1**

Loan payable	3,200	
Cash	3,200	

**End of Year 2**

Loan payable	3,200	
Cash	3,200	

**End of Year 3**

Loan payable	3,200	
Cash	3,200	

**End of Year 4**

**Creditor (ASC Topic 310 [SFAS 114])**

**Beginning of Year 1**

Bad debt expense	23,464	
Loan receivable		10,000
Accrued interest receivable		10,000
Valuation allowance for impaired loans		3,464

(This entry reduces the principal to \$80,000 forgives the accrued interest, and recognizes a loss on impairment.)

**End of Year 1**

Cash	3,200	
Valuation allowance for impaired loans	627	
Interest revenue/bad debts expense		3,827*
* [(\$80,000 - \$3,464)] × 5% = \$3,827		

**End of Year 2**

Cash	3,200	
Valuation allowance for impaired loans	658	
Interest revenue/bad debts expense		3,858*
* [\$80,000 - (\$3,464 - \$627)] × 5% = \$3,858		

**End of Year 3**

Cash	3,200	
Valuation allowance for impaired loans	691	
Interest revenue/bad debts expense		3,891*
* [\$80,000 - (\$3,464 - \$627 - \$658)] × 5% = \$3,891		

**End of Year 4**

## Module 13: Present Value

Loan payable	3,200	Cash	3,200	
Cash		3,200	Valuation allowance for impaired loans	726
			Interest revenue/bad debts expense	3,926*
			* $[\$80,000 - (\$3,464 - \$627 - \$658 - \$691)] \times 5\% = \$3,926$	
<b>End of Year 5</b>		<b>End of Year 5</b>		
Loan payable	3,200	Cash	3,200	
Cash		3,200	Valuation allowance for impaired loans	762
			Interest revenue/bad debts expense	3,962*
			* $[\$80,000 - (\$3,464 - \$627 - \$658 - \$691 - \$726)] \times 5\% = \$3,962$	
Loan payable	80,000	Cash	80,000	
Cash		80,000	Loan receivable	80,000

**NOTE:** This example does not include any future changes in the amount and timing of future cash flows, due to the complexity of the accounting.

**EXAMPLE****Modification of Terms—No Gain Recognized by Debtor**

Assume the \$90,000 principal is reduced to \$85,000. The interest rate of 5% is reduced to 4%.

Future cash flows (after restructuring):

Principal	\$85,000
Interest (5 years $\times$ \$85,000 $\times$ 4%)	<u>17,000</u>
<b>Total cash to be repaid</b>	<b>\$102,000</b>

Amount prior to restructure:

(\$90,000 principal + \$10,000 accrued interest)	<u>- 100,000</u>
Interest expense/revenue to be recognized over 5 years	<u>\$ 2,000</u>

**NOTE:** A new effective interest rate must be computed so that the PV of future payments = \$100,000. A trial and error approach would be used. For the exam, you need to be prepared to describe this process and the related entries, but you will not have to make such a computation.

End of Year 1–5

Debtor		
Loan payable	xxxx	
Interest expense	xxx	
Cash		3,400

End of Year 5

Loan payable	85,000	
Cash		85,000

**NOTE:** x's equal different amounts each year based on effective interest rate computed.

**By Creditor**—The creditor would account for the modification in the same way as in the previous example that shows the ASC Topic 310 (SFAS 114) approach. That is, the original effective rate would be used to measure the loss.

- c. To summarize the two basic situations
  - (1) **Settlement of debt:** The debtor transfers assets or grants an equity interest to the creditor in full satisfaction of the claim. Both debtor and creditor account for the fair values of assets transferred and equity interest granted. A gain or loss is recognized on the asset transferred. The debtor recognizes a gain and the creditor recognizes a loss for the difference between the recorded value of the debt and the fair values accounted for.
  - (2) **Restructuring of the debt:** Under ASC Topic 470 (SFAS 15), the terms of the debt are modified in order to reduce or defer cash payments that the debtor is obligated to make to the creditor, but the debt itself is continued. The debtor accounts for the modification of terms as a reduction in interest expense from the date of restructuring until maturity. Gains and losses will generally not be recognized unless the total future cash payments specified by the new terms are less than the recorded amount of the debt. Then the debtor would recognize a gain for the difference. Under ASC Topic 310 (SFAS 114), the creditor accounts for a restructuring using the original effective rate to measure losses.
- d. Refer to the outlines of ASC Topic 470 (SFAS 15) and ASC Topic 310 (SFAS 114) for the disclosure requirements.

**3. Impairment**

- a. **Debtors.** The debtor still has a legal obligation to repay the debt, so no entry is made for impairment on the debtor’s accounting records.
- b. **Creditors.** If the creditor determines that, based on current information and events, it is probable that they will be unable to collect all amounts due on an outstanding note receivable, then the note is considered to be impaired. The criteria for determining uncollectibility of a note should be based on the creditor’s normal review procedures.
  - (1) When a note receivable is considered to be impaired, a loss should be recorded at the time the impairment is discovered. The loss will be based upon the difference between the current carrying value of the note and the present value of the expected future cash flows from the impaired note, discounted at the loan’s contractual rate.

**EXAMPLE**

On January 1, year 1, Spot Corporation issued a \$100,000, three-year noninterest-bearing note to yield 10%, to Grover Corporation. The amortization schedule using the effective interest method for the note is calculated as follows:

Date	10% interest	Carrying value	
1/1/Y1	–	\$ 75,132	(present value of 100,000 at 10% for 3 periods, 100,000 × .75132)
12/31/Y1	7,513	82,645	(75,132 + 7,513)
12/31/Y2	8,265	90,910	(82,645 + 8,265)
12/31/Y3	9,090	100,000	(90,910 + 9,090)

On December 31, year 1, Spot Co. management determines that it is probable that Grover Co. will be unable to repay the entire note. It appears as though only \$75,000 will be repaid. Using the effective interest method, the impairment is calculated as follows:

Carrying value at 12/31/Y1	\$82,645
Present value of future receipts (\$75,000, 10%, 2 periods = \$75,000 × .82645)	61,984
Impairment at 12/31/Y1	<u>\$20,661</u>

The loss due to the impairment of the Grover Co. note will be recorded on Spot Corporation’s (the creditor’s) books as follows:

Bad debt expense	20,661	
Allowance for doubtful accounts		20,661

The debtor, Grover Co., should not record anything, as it still has a legal obligation to repay the entire \$100,000. The future interest revenue recorded by Spot Co. will be based upon the new carrying value of \$61,984. If there is a significant change in the expected future cash flows, then the impairment should be recalculated and the allowance adjusted accordingly.

#### 4. Research Component—Accounting Standards Codification

- a. The Accounting Standards Codification addresses debt restructure in ASC Subtopics 470-50, 470-60, and 310-40.
- b. When researching impaired loans, it is important that you first distinguish whether you are taking the perspective of the debtor or the creditor. Using the word debtor or creditor in your search string may help to find the appropriate sites more quickly.
- c. ASC Topic 825 applies only if the entity elects the fair value option for accounting for a debt modification.
- d. Keywords for researching in this area are shown below.

Carrying amount payable	Impairment loan	Restructuring
Fair value collateral	Measure impaired loan	Restructuring payables
Future cash flows impairment	Modification terms	Troubled debt restructurings
Impaired loan	Original contract rate	

#### 5. International Financial Reporting Standards (IFRS)

IFRS 9 provides that a modification of debt, or an exchange of an original liability with a new financial liability with substantially different terms, are accounted for as an extinguishment of the original liability and the recognition of a new financial liability.

**NOW REVIEW MULTIPLE-CHOICE QUESTIONS 1 THROUGH 8**

### KEY TERMS

**Debt.** A receivable or payable (collectively referred to as debt) represents a contractual right to receive money or a contractual obligation to pay money on demand or on fixed or determinable dates that is already included as an asset or liability in the creditor's or debtor's balance sheet at the time of the restructuring.

**Effective interest rate.** The rate of return implicit in the loan, that is, the contractual interest rate adjusted for any net deferred loan fees or costs, premium, or discount existing at the origination or acquisition of the loan.

**Fair value.** The price that would be received to sell an asset or paid to transfer a liability in an orderly transaction between market participants at the measurement date.

**Probable.** The future event or events are likely to occur.

**Recorded investment.** The amount of the investment in a loan, which is not net of a valuation allowance, but which does reflect any direct write-down of the investment.

**Troubled debt restructuring.** A restructuring of a debt constitutes a troubled debt restructuring if the creditor for economic or legal reasons related to the debtor's financial difficulties grants a concession to the debtor that it would not otherwise consider.

## Multiple-Choice Questions (1–8)

### C. Debt Restructure

1. For a troubled debt restructuring involving only a modification of terms, which of the following items specified by the new terms would be compared to the carrying amount of the debt to determine if the debtor should report a gain on restructuring?

- The total future cash payments.
- The present value of the debt at the original interest rate.
- The present value of the debt at the modified interest rate.
- The amount of future cash payments designated as principal repayments.

Items 2 and 3 are based on the following:

The following information pertains to the transfer of real estate pursuant to a troubled debt restructuring by Knob Co. to Mene Corp. in full liquidation of Knob's liability to Mene:

Carrying amount of liability liquidated	\$150,000
Carrying amount of real estate transferred	100,000
Fair value of real estate transferred	90,000

2. What amount should Knob report as a gain (loss) on restructuring of payables?

- \$(10,000)
- \$0
- \$50,000
- \$60,000

3. What amount should Knob report as a gain (loss) on transfer of real estate?

- \$(10,000)
- \$0
- \$50,000
- \$60,000

4. On October 15, year 3, Kam Corp. informed Finn Co. that Kam would be unable to repay its \$100,000 note due on October 31 to Finn. Finn agreed to accept title to Kam's computer equipment in full settlement of the note. The equipment's carrying value was \$80,000 and its fair value was \$75,000. Kam's tax rate is 30%. What amounts should Kam report as the gain (loss) on the transfer of assets, and the gain on restructuring of debt?

	Transfer gain (loss)	Restructuring gain
a.	\$(5,000)	\$25,000
b.	\$0	\$30,000
c.	\$0	\$20,000
d.	\$20,000	\$0

5. Colt, Inc. is indebted to Kent under an \$800,000, 10%, four-year note dated December 31, year 1. Annual interest of \$80,000 was paid on December 31, year 2 and year 3. During year 4, Colt experienced financial difficulties and is likely to

default unless concessions are made. On December 31, year 4, Kent agreed to restructure the debt as follows:

- Interest of \$80,000 for year 4, due December 31, year 4, was made payable December 31, year 5.
- Interest for year 5 was waived.
- The principal amount was reduced to \$700,000.

Assume Colt does not elect the fair value option for reporting the debt modification. How much should Colt report as a gain in its income statement for the year ended December 31, year 4?

- \$0
- \$100,000
- \$60,000
- \$120,000

6. Grey Company holds an overdue note receivable of \$800,000 plus recorded accrued interest of \$64,000. The effective interest rate is 8%. As the result of a court-imposed settlement on December 31, year 3, Grey agreed to the following restructuring arrangement:

- Reduced the principal obligation to \$600,000.
- Forgave the \$64,000 accrued interest.
- Extended the maturity date to December 31, year 5.
- Annual interest of \$40,000 is to be paid to Grey on December 31, year 4 and year 5.

The present value of the interest and principal payments to be received by Grey Company discounted for two years at 8% is \$585,734. Grey does not elect the fair value option for reporting the debt modification. On December 31, year 3, Grey would recognize a valuation allowance for impaired loans of

- \$14,266
- \$184,000
- \$278,266
- \$0

7. On December 31, year 1, Marsh Company entered into a debt restructuring agreement with Saxe Company, which was experiencing financial difficulties. Marsh restructured a \$100,000 note receivable as follows:

- Reduced the principal obligation to \$70,000.
- Forgave \$12,000 of accrued interest.
- Extended the maturity date from December 31, year 1 to December 31, year 3.
- Reduced the interest rate from 12% to 8%. Interest is payable annually on December 31, year 2 and year 3.

Present value factors:

Single sum, two years @ 8%	.85734
Single sum, two years @ 12%	.79719
Ordinary annuity, two years @ 8%	1.78326
Ordinary annuity, two years @ 12%	1.69006

In accordance with the agreement, Saxe made payments to Marsh on December 31, year 2 and year 3. Marsh does not

elect the fair value option for reporting the modification of debt. How much interest income should Marsh report for the year ended December 31, year 3?

- a. \$0
- b. \$5,600
- c. \$8,100
- d. \$11,200

8. Casey Corp. entered into a troubled debt restructuring agreement with First State Bank. First State agreed to accept

land with a carrying amount of \$85,000 and a fair value of \$120,000 in exchange for a note with a carrying amount of \$185,000. What amount should Casey report as a gain from extinguishment of debt in its income statement?

- a. \$0
- b. \$35,000
- c. \$65,000
- d. \$100,000

**Multiple-Choice Answers and Explanations**

**Answers**

1. a	___	3. a	___	5. b	___	7. c	___	1st: ___/8 = ___%
2. d	___	4. a	___	6. a	___	8. c	___	2nd: ___/8 = ___%

**Explanations**

1. (a) In a restructuring involving only a change in terms, the total future cash payments should be compared to the carrying amount to determine if a gain should be recognized. Answers (b) and (c) are incorrect because the undiscounted future cash flows are compared to the carrying amount. Answer (d) is incorrect because the total amount of future cash flows are compared to the carrying amount.

2. (d) In this restructure, the debt is retired by the transfer of real estate to the creditor. A gain or loss is recognized on the transfer of real estate, and a gain or loss is recognized on the restructuring. The loss on the transfer of assets is the excess of the real estate's carrying amount over its FV (\$100,000 – \$90,000 = \$10,000). The restructuring gain is the excess of the carrying amount of the liability over the FV of the real estate transferred. The restructuring gain is \$60,000 (\$150,000 – \$90,000). The journal entry is

Liability	150,000		
Loss on transfer	10,000		
Real estate		100,000	
Gain on restructuring		60,000	

3. (a) In this restructure, the debt is retired by the transfer of real estate to the creditor. A gain or loss is recognized on the transfer of real estate, and a gain or loss is recognized on the restructuring. The loss on the transfer of assets is the excess of the real estate's carrying amount over its FV (\$100,000 – \$90,000 = \$10,000). The restructuring gain is the excess of the carrying amount of the liability over the FV of the real estate transferred, net of the related tax effect. The restructuring gain is \$60,000 (\$150,000 – \$90,000). The journal entry is

Liability	150,000		
Loss on transfer	10,000		
Real estate		100,000	
Gain on restructuring		60,000	

4. (a) In this restructure, the debt is retired by the transfer of equipment to the creditor. A gain or loss is recognized on the transfer of the equipment, and a gain or loss is recognized on the retirement of the debt. The loss on the transfer of equipment is the excess of the equipment's carrying amount over its fair value (\$80,000 – \$75,000 = \$5,000). The gain on retirement of debt is the excess of the carrying amount of the debt over the fair value of the equipment transferred (\$100,000 – \$75,000 = \$25,000).

5. (b) The requirement is to determine the amount of gain to be recognized from a troubled debt restructure. If the debt is continued with a modification of terms, a gain is recognized by the debtor if the future cash payments on the debt are less than the carrying value of the debt. For troubled debt restructures, carrying value is defined as the principal amount (\$800,000) plus accrued interest (\$80,000), or \$880,000. The future payments total \$780,000 (\$700,000 reduced principal and \$80,000 interest). The \$100,000 difference (\$880,000 – \$780,000) is recognized as a restructuring gain.

6. (a) If the present value of future cash flows is less than the carrying amount of the loan (Principal + Accrued interest) then bad debt expense should be recorded for the total impairment, the accrued interest account should be written off, and the principal balance in the loan receivable account should be reduced to reflect any amounts forgiven. Any remaining balance should be recorded in an allowance account, as follows:

Present value of interest and principal payments to be received by Grey Company (as stated in the problem)	585,734
Recorded investment by Grey Company (\$800,000 principal + \$64,000 interest)	864,000
Less present value of future cash flows	(585,734)
	<u>278,266</u>
Bad debt expense	278,266
Loan receivable	200,000
Accrued interest receivable	64,000
Valuation allowance for impaired loans	14,266

Thus, the valuation allowance Grey must recognize is \$14,266.

7. (c) The requirement is to determine the amount of interest revenue to be recorded by Marsh, after a modification of terms type of troubled debt restructure on December 31, year 1.

When a modification of terms results in the present value of future cash flows being less than the carrying amount, then the interest revenue is calculated by using the effective interest method. In this problem the expected future cash flows is determined by discounting the principal and interest at the original effective rate of 12%.

70,000	×	.79719	=	55,803
5,600	×	1.69005	=	<u>9,464</u>
Present value of future cash flows				<u><u>65,267</u></u>

The interest revenue to be recognized can then be determined using the effective interest method.

PV at 12/31/Y1		\$65,267
Interest income at 12/31/Y1 ( $\$65,267 \times 12\%$ )	\$7,832	
Interest receivable at 12/31/Y2 ( $70,000 \times 8\%$ )	<u>5,600</u>	
Increase in carrying value of loan		<u>2,232</u>
PV at 12/31/Y2		<u>67,499</u>
Interest revenue at 12/31/Y3 ( $67,499 \times 12\%$ )	<u>\$8,100</u>	

8. (c) If a debt is settled by the exchange of assets, a restructuring gain is recognized for the difference between the carrying amount of the debt and the fair value of the consideration given to extinguish the debt. If a noncash asset is given, a separate gain or loss is recorded to revalue the nonasset to fair market value as the basis of the noncash asset given. Therefore, a gain of \$35,000 ( $\$120,000 - \$85,000$ ) will be recorded to revalue the land to fair market value, and a gain of \$65,000 ( $\$185,000 - \$120,000$ ) will be recorded for the extinguishment of the debt in Casey's income statement.

#### *Situation*

Jayson Company has an overdue note receivable from Simpson Corporation for \$300,000. The note was dated January 1, year 1. It has an annual interest rate of 9%, and interest is paid December 31 of each year. Simpson paid the interest on the note on December 31, year 1, but Simpson did not pay the interest due in December of year 2. The current effective rate of interest is 6%. On January 1, year 3, Jayson agrees to the following restructuring arrangement:

- Reduce the principal to \$250,000.
- Forgive the accrued interest.
- Reduce the interest rate to 6%.
- Extend the maturity date of the note to December 31, year 5.

Assume that Jayson does not elect to use the fair value option for reporting the debt modification. Calculate the present value of the future cash flows of the restructured note.

Calculate the net carrying amount of the prerestructured loan. (For a more realistic exam experience complete this requirement using a spreadsheet program such as Excel.)

Prepare the journal entries needed by Jayson for the restructuring of the loan and the interest payment received on December 31, year 3.

January 1, year 3

December 31, year 3

-----------------	---------------------------------	-------------

Assume that you are assigned to the audit of Naples Corporation. Naples has just restructured a large note payable with FDE Bank that qualifies as a troubled debt restructuring. As a result of the modification of the terms, the carrying amount of the note payable on Naples' books is more than the future payments that will be made. Which section of the Professional Standards provides guidance on how Naples should account for the restructuring?

Enter your response in the answer fields below.

**D. Pensions**

Accounting for pensions involves the use of special terminology. Mastery of this terminology is essential both to an understanding of problem requirements and to the ability to respond correctly to theory questions. In this section the key points covered are as follows:

1. The differences between a defined contribution pension plan and a defined benefit pension plan and the resulting accounting and reporting differences between these two types of plans.
2. The bookkeeping entries made to record an employer's pension expense and the funding of pension cost.
3. The benefits-years-of-service approach.
4. The calculation and reporting of the net pension asset/liability for employers who sponsor defined benefit pension plans.
5. The five elements which, if they all exist, an employer sponsoring a defined benefit pension plan must evaluate for inclusion in its pension expense each year. These factors are
  - a. Service cost
  - b. Interest cost
  - c. Actual return on plan assets
  - d. Amortization of unrecognized prior service cost
  - e. Gain or loss.
6. The required disclosures in the financial statements of employers who sponsor pension plans.

**1. Employer Sponsor's vs. Plan's Accounting and Reporting**

- a. In order to understand the accounting and reporting requirements for pension plans, you must keep in mind that there are two accounting entities involved: the employer sponsor of the plan, and the pension plan which is usually under the control of a pension trustee.
  - (1) The employer sponsor reports Pension Cost (Pension Expense) in its income statement. In its balance sheet it usually reports a net Pension Asset/Liability representing the difference between the Projected Benefit Obligation and the Plan Assets; both of the latter accounts, are under the control of the pension trustee. As discussed later, another entry may be required to accumulated other comprehensive income to report the funding status of the plan.
- b. A separate accounting entity, the pension plan, maintains the following accounts: Projected Benefit Obligation, Accumulated Benefit Obligation (for reporting purposes only), Vested Benefits (for reporting purposes only), and Plan Assets. The pension plan pays benefits to the retired employees.
- c. The diagram below shows the relationship of the entities involved in a pension plan, the accounts usually used by each, and the flow of cash.

- (1) The employer sponsor must maintain, accounts for Unrecognized Prior Service Cost and Unrecognized Gains and Losses within Other Comprehensive Income (OCI).

**NOTE:** The projected benefit obligations of the pension plan, the interest on these obligations, the pension plan assets available to meet these obligations, and returns (income) on these plan assets are all economic variables which impact the employer sponsor's yearly calculations of pension expense and its year-end pension asset/liability. (Key concepts are **boldfaced** to call attention to those terms and phrases that must be clearly understood.)

- (2) Plan information must be made available to the participants and beneficiaries. Furthermore, after filing under ERISA (the Employee Retirement Income Security Act of 1974), the DOL (Department of Labor) must make the annual report available to the public. Certain funding information must be filed with the PBGC (Pension Benefit Guarantee Corporation).

2. An Overview of Employer’s Accounting for Pension Plans

a. Under a **defined contribution plan** the employer agrees to make a defined contribution to a pension plan as determined by the provisions of the plan. Consequently, plan participants will receive at retirement whatever benefits (i.e., payments) the contributions can provide.

- (1) Accounting for a defined contribution plan is relatively straightforward. Each year the employer records an expense and a related liability for the agreed-upon contribution.
- (2) Payments are charged against the liability with an offsetting reduction in cash.
- (3) Additional disclosure requirements include a description of the plan including employee groups covered, the basis for determining contributions, and the nature and effects of events affecting comparability.

b. Under a **defined benefit plan** the employer agrees to provide a benefit at retirement that is defined or fixed by a formula. Because the benefits are defined, the employer accepts the risk associated with changes in the variables that determine the amounts needed to meet the obligation to plan participants. These amounts require the use of estimates that may become very complex. However, these estimates are made by actuaries hired by the management of the employer sponsor. They are not made by the sponsoring company’s accountants. The remainder of our pension coverage is devoted to a discussion of the issues that arise under this type of plan.

- (1) The **accrual accounting objective** for pension costs recognizes the compensation cost of an employee’s pension benefits including prior service costs over that employee’s service period. Under accrual accounting, pension expense should not be determined on the basis of the employer’s cash payout (funding) practices.
- (2) The **funding of the pension obligation** refers to the amount that the employer contributes to an independent trustee for the pension plan (plans where the fund is under the control of the employer are considered unfunded). Many factors including tax considerations, working capital management, and contractual agreements influence funding decisions.

(a) Thus, the amount selected for funding should not govern the determination of the amount to be reported as pension expense under accrual accounting; these events should be distinguished. Although both events can be recorded with one entry, we use two entries in this section to better illustrate this distinction.

Pension expense	xxxx	
Pension asset/liability		xxxx

1] This adjusting entry is to record the accrued expense. The use of the Pension asset/liability account simplifies the accounting. If the account has a net debit balance, it is an asset. If the account has a net credit balance, it is a liability.

Pension asset/liability	xxxx	
Cash		xxxx

2] This entry is to record the funding of the pension obligation at the time cash is transferred to the plan’s trustee.

(b) The determination of the amounts to be used in the above entries requires the professional expertise of actuaries who assess the benefits to be provided under the pension formula and the characteristics of the employees covered under the plan (e.g., average age). With these factors as given, the actuaries must estimate the values of the variables that will influence the actual amounts to be paid at retirement by making actuarial assumptions about factors such as longevity, early retirements, turnover rate, and the rates of return to be earned on invested funds.

- (3) The actuarial present value of the obligation determined under the benefits-years-of-service method is referred to as the **projected benefit obligation**. The **accumulated benefit obligation** is the amount computed using the current salary amounts instead of the estimated future salary amounts. Therefore, if the defined benefit formula is not dependent on the amount of a future salary (say a retiree receives a fixed amount for each month worked), there would be no difference between the two approaches. If the defined benefit formula is pay-related and salaries are assumed to increase over time, the projected benefit obligation will be a greater amount than the accumulated benefit obligation.
- (4) The Codification requires reporting the funded status of a pension plan. Overfunded and underfunded plans must be reported on the balance sheet as either assets or liabilities.

### 3. Funded Status of Pension Plan

- a. The funded status of the plan must be reported in the balance sheet. The funded status is the difference between the projected benefit obligation and the fair value of the plan assets at the measurement date.
  - (1) If the plan is overfunded, a noncurrent asset is recorded on the balance sheet.
  - (2) If the plan is underfunded, either a current liability, a noncurrent liability, or both are reported on the balance sheet.
  - (3) Any additional asset or liability not already recognized as pension expense is recognized in other comprehensive income (net of tax).
  - (4) If a plan is amended and either increases or decreases the projected benefit obligation, this amount should be recognized as either a prior service cost or credit. Prior service costs or credits should be amortized over the future periods of service of the employees expected to receive benefits.
- b. For an employer with multiple plans, all overfunded plans are aggregated and disclosed as a noncurrent asset. All underfunded plans are aggregated and disclosed as a current liability, noncurrent liability, or both. **In other words, the funding status of plans may NOT be netted (overfunded plans may not be netted with underfunded plans).** The measurement date for plans is the fiscal year-end (i.e., balance sheet date) of the entity.

### 4. Determination of Pension Expense

- a. The general term **Pension Cost** is preferred over pension expense because pension cost is included in overhead in the determination of product costs and therefore may be part of inventory in the balance sheet.
  - (1) When permissible the term “Pension Expense” is used instead because it is simpler and clearer.
  - (2) The disclosure of the elements included in pension expense is one of the most significant disclosures required. A comprehensive illustration is presented in Section 7 below.
    - (a) This illustration integrates the concepts and calculations that have been introduced in the preceding discussions.
- b. Pension Expense is a net amount calculated by adding together five factors. These factors are (1) service cost, (2) interest on the projected benefit obligation, (3) return on plan assets, (4) amortization of unrecognized prior service cost or credit, and (5) the effect of gains and losses. Each of these components is discussed below.
  - (1) **Service cost—Increases pension expense**
    - (a) **Service cost** is defined as the actuarial present value of benefits attributed by the pension benefit formula to employee service during the current period.
    - (b) ASC Topic 715 (SFAS 87) requires that future salary levels be taken into consideration in this calculation (i.e., the benefits-years-of-service approach).
  - (2) **Interest on projected benefit obligation—Increases pension expense**
    - (a) The **interest on the projected benefit obligation** is defined as the increase in the amount of the projected benefit obligation due to the passage of time. Since the pension plan’s obligation at the beginning of the year is stated in terms of present value, a provision for interest is required. By the end of the period, the plan’s obligation will increase by the amount of interest that would accrue based on the discount (settlement) rate selected.
      - 1] The discount rate selected should be determined by reference to market conditions using such rates as the return on high quality investments or the implicit rate of return in retirement annuities as a basis for comparison.
      - 2] Also, the rate selected must be **explicit** and an unreasonable rate cannot be justified by an argument that the unreasonable rate is **implicitly** valid because of other offsetting actuarial assumptions. The selected discount rate is referred to as the **settlement rate** because it is the rate at which the plan’s obligation could be settled.

**EXAMPLE**

Compute the “interest” component of net pension expense for year 2, if the projected benefit obligation was \$4,800,000 on January 1, year 2, and the settlement rate is 9%. Answer: Net pension expense for year 2 is increased by \$432,000 ( $9\% \times \$4,800,000$ ) to provide for interest on the projected benefit obligation.

**(3) Actual return on plan assets—Decreases or possibly increases pension expense**

- (a) The **actual return on plan assets** is defined as the difference in the fair value of plan assets at the beginning and the end of the period adjusted for contributions made to the plan and benefit payments made by the plan during the period. The formula for determining the actual return is as follows:

$$\text{Actual return} = (\text{End. Bal. of plan assets at fair value} - \text{Beg. bal. of plan assets at fair value}) + \text{Benefits} - \text{Contributions}$$

- (b) The **fair value or market value** of plan assets is defined as the price expected in a sales transaction between a willing buyer and seller.
- 1] **Plan assets** typically include marketable securities and other investments such as real estate that are held in trust for the plan participants.
  - 2] Assets that are under the control of the employer are not considered to be plan assets.
  - 3] In calculating the return on plan assets, considerable leeway has been allowed in measuring the fair value of plan assets.

**EXAMPLE**

Compute the “actual return on plan assets” component of net pension expense, if the fair value of plan assets was \$3,100,000 at the beginning of the year and \$3,820,000 at year-end. The employer sponsor contributed \$450,000 to the plan and the plan paid benefits of \$200,000 during the year. Answer: Net pension expense is decreased by \$470,000 [ $(\$3,820,000 - \$3,100,000) + \$200,000 - \$450,000$ ] due to the actual return earned on the fair value of plan assets.

- (c) Although the **actual** return on plan assets is measured and disclosed as one of the components of net pension expense, net pension expense will include only an amount equal to the **expected** return on plan assets.

- 1] This methodology is followed because the difference between the actual return on plan assets and the expected return on plan assets is a canceling adjustment that is included in the gain or loss calculation to be discussed below.

**(4) Prior service cost or credit—Increases or possibly decreases pension expense**

- (a) Prior service costs are retroactive adjustments that are granted to recognize services rendered in previous periods.
- 1] These costs are caused by either an amendment to an existing plan or the initiation of a new plan where a **retroactive allowance** is made for past services rendered.
  - 2] If, as a result of an amendment to an existing plan, the benefits are increased, then the amount of the plan’s projected benefit obligation will increase.
    - a] The amount of the prior service costs is measured by the increase in the projected benefit obligation caused by the amendment or the initiation of the plan.
- (b) While the prior service costs are related to the past, it is assumed that the initiation or amendment of the plan was made with the intent of benefiting the employer’s future operations rather than its past operations. Because of this assumption, prior service costs should be amortized over the present and future periods affected. The unamortized portion is located in OCI. Two methods

approved for use in determining the assignment of prior service costs are (1) the expected future years of service method, and (2) the straight-line basis over the average remaining service period of active employees method.

- 1] Under the **expected future years of service** method, the total number of employee service years is calculated by grouping employees according to the time remaining to their retirement, based on actuarial assumptions, and multiplying the number in each group by the number of periods remaining to retirement.

**EXAMPLE**

Eight employees expected to work ten years until retirement would contribute eighty expected future years of service to the total.

- a] To calculate the amortization of prior service costs for a given year, the number of employee service years applicable to that period is used as the numerator of the fraction and the denominator is the total employee service years based on all the identified groups. This method produces a declining pattern similar to the amortization applicable to premiums or discounts on serial bonds and the sum-of-the-years' digits method of depreciation.
- 2] The **straight-line basis over the average remaining service period** of active employees is a simpler method. The projected average remaining service period for the affected participants is estimated by the use of a weighted-average method.

**EXAMPLE**

Ten employees with ten years remaining to retirement, and fifteen employees with twenty years remaining to retirement would have a weighted-average service life of sixteen years computed as follows:  $(10 \times 10 + 15 \times 20)/25$ . In this example, the prior service costs would be amortized and included in pension expense over sixteen years.

- a] Although the costs are gradually recognized in Pension Expense over the sixteen years, the costs are fully recognized on the balance sheet in OCI immediately resulting in an adjustment to the Pension Asset/Liability account.

**EXAMPLE**

Compute the "amortization of prior service cost" component of net pension expense for the first three years after an amendment, based on the following facts. The prior service cost associated with the amendment is determined by the actuaries to be \$650,000 (the difference between the projected benefit obligation before and after the amendment). The employer has 200 employees at the time of the amendment. It is expected that workers will retire or terminate at the rate of 4% per year, and the employer will use the "expected future years of service" method of amortization.

**Answer:** Since the workers will leave at the rate of 8 per year ( $4\% \times 200$  employees), the denominator of the amortization fraction is computed by summing  $200 + 192 + 184 + \dots + 8$ . This series can be written as  $8(25 + 24 + 23 + \dots + 1)$  or  $8n(n+1)/2 = 8(25)(26)/2 = 2,600$ . The calculations for the first three years and the unamortized balance at year-end are presented in the table below.

Year	Amortization fraction	Annual amortization	Unamortized balances
0			\$650,000
1	200/2,600	\$50,000	600,000
2	192/2,600	48,000	552,000
3	184/2,600	46,000	506,000

(5) **Gain or loss—Increases or decreases pension expense**

- (a) Net gain or loss is defined as the change in the amount of the projected benefit obligation as well as the change in the value of plan assets (realized and unrealized), resulting from experience being different from that assumed, or from a change in an actuarial assumption. For this calculation, plan assets are valued at the market-related value, discussed under (3) above.
- (b) The gain or loss component included in net pension expense consists of two items:
- 1] The current period difference between the actual and expected return on plan assets.
    - a]  $(\text{Expected rate of return on plan assets}) \times (\text{Market-related value of plan assets at the beginning of the period})$
  - 2] Amortization of the unrecognized net gain or loss from **previous** periods.
    - a] The current period difference is reported as a component of the current period net pension expense and the unrecognized net gain or loss is located in OCI until it is subject to amortization.
    - b] In the unusual case when a gain or loss arises from an event such as the discontinuation of a business component, the gain or loss should be recognized immediately and associated with the event that was the cause (e.g., discontinued operations) rather than the pension plan.
- (c) When the amortization of the cumulative unrecognized net gain or loss from previous periods is required, the procedure is comparable to the amortization of prior service cost and, in general, it requires the use of a systematic method applied on a consistent basis that is dependent on the average remaining service period for active employees.
- 1] Unlike past service cost, however, the amount to be amortized is not necessarily the calculated amount of the cumulative unrecognized net gain or loss.
  - 2] Instead, the minimum amount subject to amortization is determined by the use of a method sometimes referred to as the “**corridor**” approach and is determined by computing, at the beginning of the fiscal year, the excess of the cumulative unrecognized gain or loss over 10% of the greater of the projected benefit obligation or the market-related asset value.
    - a] If the cumulative unrecognized gain or loss is equal to or less than the 10% calculated value, no amount need be amortized.

**EXAMPLE**

Compute the “gain or loss” component of net pension expense and the other elements of pension expense based on the following facts:

At the beginning of the year the cumulative unrecognized net loss was \$500,000, the fair value and market-related value of plan assets was \$3,100,000, and the projected benefit obligation was \$4,800,000. The expected return on assets for the year was 9% and the settlement rate was 11%. The fair value of plan assets at the end of the year was \$3,400,000. There were no contributions to the plan during the year. The plan made no benefit payments during the year. Service costs for the year were \$400,000. At the beginning of the year the average remaining service period of active employees was ten years. There are no other factors to be considered in computing pension expense for the year.

**Answer:** The elements of net pension expense are calculated as follows:

Service cost	\$ 400,000	
Interest (.11 × \$4,800,000)	528,000	
Actual return on plan assets	(300,000)	(1)
Amortization of unrecognized net loss	2,000	(2)
Asset gain deferred	<u>21,000</u>	(3)
Net pension expense	<u>\$ 651,000</u>	

**NOTE:** The above components of pension expense are required to be disclosed in the employer sponsor's financial statements. This would be done in the footnotes to those statements.

- (1) \$3,400,000 less \$3,100,000 less contributions to the plan of \$0 plus benefit payments of the plan of \$0.
- (2) Amortization of unrecognized net loss is calculated as follows:
 

"Corridor" 10% × \$4,800,000	\$480,000
Cumulative unrecognized net loss at the beginning of the year	<u>500,000</u>
Excess to be amortized	<u>\$ 20,000</u>

 Amortization of unrecognized loss is: \$20,000/10 years = \$2,000.
- (3) The asset gain deferred of \$21,000 is calculated as follows: Actual return on plan assets of \$300,000 less expected return on plan assets of \$279,000. The expected return on plan assets is determined by multiplying the expected return on plan assets of 9% times the market-related value of plan assets at the beginning of the year of \$3,100,000. Note that in the above computation of pension expense actual return on assets of \$300,000 is deducted. However, the expected return on plan assets of \$279,000 (\$300,000 – \$21,000) is the amount that is actually included in pension expense for the year.

## 5. Reconciling the Projected Benefit Obligation

- a. The projected benefit obligation (PBO) is the actuarial present value of all benefits attributed to employee service rendered prior to that date. The PBO is measured by using actuarial assumptions and estimates regarding discount rates, retirement dates, and life expectancies. Any changes in these actuarial assumptions may increase or decrease the PBO.
  - (1) Changes to the PBO due to changes in actuarial assumptions are referred to as actuarial gains or losses in calculating the PBO.
  - (2) The PBO is also affected by any changes or amendments to the plan made during the current period.
  - (3) The total change to the PBO caused by a plan amendment is referred to as the prior service cost or credit.

**NOTE:** The entire amount of the prior service cost or credit will affect the PBO in the year of the change. However, only the amortized amount of the prior service cost or credit is included in pension cost (expense) for the period.

- b. The following formula is used to reconcile the projected benefit obligation:

### Change in projected benefit obligation:

Beginning of year PBO	
+ Service cost	
+ Interest cost	
± Prior service cost or credit (from changes to plan in current year)	
± Actuarial gain or loss (from changes in actuarial or underlying assumptions)	
– <u>Benefits paid</u>	
End of year PBO	

## 6. Disclosures for Pensions

- a. The required disclosures for pensions and other postretirement benefits are as follows:
  - (1) A reconciliation schedule of the benefit obligation showing the components separately
  - (2) A reconciliation schedule of the fair value of plan assets with the components shown separately
  - (3) The funded status of the plans, and the amounts recognized in the balance sheet showing separately the noncurrent assets, current liabilities, and noncurrent liabilities recognized
  - (4) Information about plan assets including equity securities and debt securities, a narrative description of investment policies and strategies, a narrative description of the basis used to determine overall expected rate-of-return on assets, disclosure of classes of plan assets, and information about assets if information is expected to be useful

- (5) For defined benefit pension plans, the accumulated benefit obligation
  - (6) The benefits expected to be paid in each of the next five fiscal years and in the aggregate for the five fiscal years thereafter
  - (7) The employer's best estimate of contributions expected to be paid to the plan during the rest of the fiscal year
  - (8) The net periodic benefit cost recognized with the components shown separately
  - (9) The net gain or loss and net prior service cost or credit recognized in other comprehensive income (OCI) for the period, and any reclassification adjustments of OCI (amortization of items) that are recognized in pension cost
  - (10) The amounts in accumulated OCI that have not yet been recognized as pension costs, showing separately the net gain or loss, the net prior service cost or credit, and net transition asset or obligation
  - (11) On a weighted-average basis, the rates used for the assumed discount rate, rate of compensation increase, and expected long-term rate of return on plan assets, and the assumptions used to determine benefit obligations and net benefit cost
  - (12) The assumed health care cost trend rate, a description of the pattern of change
  - (13) The effect a 1-percentage-point increase or decrease would have on the aggregated service and interest cost components and the accumulated postretirement benefit obligation for health-care benefits
  - (14) The amounts and types of securities of the employer and related parties included in plan assets, the approximate amount of future annual benefits of plan participants covered by insurance contracts issued by employer or related parties, and any significant transactions between the employer or related parties and the plan during the year
  - (15) Any alternative method used to amortize prior service amounts or unrecognized net gains and losses
  - (16) Any substantive commitments, such as past practice or history of regular benefit increases used to account for benefit obligation
  - (17) The cost of providing special or contractual termination benefits recognized during the period and a description of the nature of the event
  - (18) An explanation of any significant changes in the plan assets or the benefit obligation
  - (19) The amounts in accumulated OCI expected to be recognized as components of pension cost over the fiscal year-end that follows the most recent balance sheet presented, showing separately net gain or loss, net prior service cost or credit, and net transition asset or obligation
  - (20) The amount and timing of any plan assets expected to be returned to the employer during the next 12-month period (or operating cycle, if longer) after the most recent balance sheet
- b. The required disclosures for multiemployer plans are as follows:
- (1) The significant multiemployer plans in which an employer participates.
  - (2) The level of an employer's participation (the contribution to the plan and whether that contribution represents more than 5% of the total contributions).
  - (3) The financial health of the plan such as funded status, improvement plans, and surcharges.
  - (4) The nature of the employer commitments to the plans such as collective bargaining agreements and minimum contribution requirements.
  - (5) For plans in which users are unable to obtain additional information from outside sources:
    - (a) A description of the nature of the plan benefits.
    - (b) A qualitative description of the employer responsibility for plan obligations.
    - (c) Other quantitative information available such as total plan assets, actuarial present value of accumulated vested benefits, and total contributions received by the plan.

## 7. Comprehensive Illustration

### EXAMPLE

Schaefer Company has sponsored a noncontributory (i.e., employees make no contributions) defined benefit plan for its 100 employees for several years. Within this group of 100 employees, it is expected that workers will retire or terminate at the rate of 5 per year for the next twenty years starting January 1, year 5. Prior to year 5, cumulative pension expense recognized in compliance with ASC Topic 715 exceeded cumulative contributions by \$150,000, resulting in a \$150,000 balance sheet liability. As of January 1, year 5, the company has agreed to an amendment to its plan that includes a retroactive provision to recognize prior service. To illustrate how the

provisions of ASC Topic 715 should be applied, assumptions about the facts relevant to the pension plan for year 4 and year 5 are presented in the tables that follow:

	1/1/Y4	1/1/Y5	12/31/Y5
Plan assets (at fair value = market-related value)	\$ 400,000	\$ 455,000	\$ 760,500
Accumulated benefit obligation (ABO; 60% vested)	460,000	640,000*	710,000*
Projected benefit obligation	550,000	821,500*	1,033,650*
Unrecognized cumulative gain (loss)—due to unexpected decrease in asset value	—	(106,000)	?
Prior service cost amendment	—	105,000	?
Pension asset/(liability)	(150,000)	?	?

\*Includes effects of amendment

	12/31/Y4	12/31/Y5
Service cost	\$ 117,000	\$ 130,000
Employer's funding contribution	125,000	260,000
Plan assets (at fair value = market-related value)	455,000	760,500
Accumulated benefit obligation (60% vested)	620,000	710,000
Benefits paid by the plan	—	—
Unrecognized cumulative gain (loss)—due to unexpected decrease in asset value	(106,000)	(103,729)
Rate of return on assets	9%	10%
Settlement rate	9%	10%

#### Schedule of Changes in Plan Assets

	Year 4	Year 5
Plan assets at 12/31	\$455,000	\$ 760,500
Plan assets at 1/1	<u>400,000</u>	<u>455,000</u>
Increase in plan assets	55,000	305,500
Add: Benefits paid	—	—
Less: Funding contributions for the year	(125,000)	(260,000)
Actual return or (loss) on plan assets	(70,000)	45,500
Expected return on plan assets		
Year 4: 9% × \$400,000	36,000	
Year 5: 10% × \$455,000		<u>45,500</u>
Unrecognized gain (loss)	<u>\$(106,000)</u>	<u>\$ —</u>

#### Required:

- Prepare a supporting schedule to determine the amounts to be reported as pension expense for year 4 and year 5. The company has decided to use the "expected future years of service" method to amortize the effects of the amendment made in year 5.
- Prepare the journal entries required for year 4 and year 5 with respect to the pension plan including any entry necessary to comply with the minimum liability requirement.
- Prepare pension worksheets for year 4 and year 5.

**NOTE:** These worksheets summarize Schaefer's general journal entries and changes in its pension-related accounts. These worksheets also summarize the changes in the pension plan's accounts, unrecognized prior service cost, and unrecognized gain or loss. Study these worksheets as they are an excellent tool for pulling together the elements of this comprehensive illustration.

- Indicate the pension-related amounts that should appear in the company's financial statements prepared at the end of year 4 and year 5.
- Prepare disclosures of the funded status of the plan to the liability shown in the company's balance sheet at 1/1/Y4, 12/31/Y4, and 12/31/Y5.

**EXAMPLE****Solution Part A****REQUIRED FOOTNOTE DISCLOSURE****Pension Expense**

	12/31/Y4	12/31/Y5
<b>Components of net periodic benefit cost</b>		
1. Service cost	\$117,000	\$130,000
2. Interest cost on projected benefit obligation	49,500	82,150
3. Actual loss or (actual return) on plan assets	70,000	(45,500)
4. Amortization of prior service cost	–	10,000
5. Deferral of “gain” or (loss)	(106,000)	–
6. Loss amortization	–	2,271
7. Recognized actuarial loss	–	–
Net periodic benefit cost	<u>\$130,500</u>	<u>\$178,921</u>

**Calculations**

- Service cost** is given.
- Interest:**  $9\% \times \$550,000$  (year 4), and  $10\% \times \$821,500$  (year 5). The settlement rate times PBO.
- Actual return:** (\$70,000) for year 4 and \$45,500 (same as expected) for year 5. Note that in year 4, the \$70,000 actual loss on plan assets less the \$106,000 unrecognized loss equals the expected return (\$36,000).
- Prior service cost amortization:** Compute the denominator of the fraction for amortization by calculating the sum of the estimated remaining service years by adding  $100 + 95 + 90 + \dots + 10 + 5$ . This series can be written as  $5(20 + 19 + 18 + \dots + 2 + 1)$  or  $5n(n+1)/2$ , where  $n = 100/5 = 20$ , or  $5(20)(21)/2 = 1,050$ . For year 5 the amount is  $(100/1,050) \times \$105,000 = \$10,000$ .
- Loss:** The \$106,000 unrecognized loss that arose in year 4 is not amortized until year 5, because no unrecognized net gain or loss existed at the beginning of the year. The amortization of the unrecognized net gain or loss should be included as a component of pension expense only if the unrecognized net gain or loss existed as of the beginning of the year and the unrecognized gain or loss exceeded the corridor. At 1/1/year 5 10% of the greater of the projected benefit obligation (\$821,500) or the market-related asset value (\$455,000) is equal to \$82,150. The minimum loss to be amortized is  $\$106,000 - \$82,150$  or \$23,850. The average employee service remaining as of 1/1/year 5 assuming a constant work force of 100 and an attrition rate of 5 workers per year is  $(100 + 95 + 90 + \dots + 10 + 5)/100$  or  $1,050/100 = 10.5$  years. The amount of the loss recognized in year 5 is  $\$23,850/10.5 = \$2,271$ . Since actual and expected returns are equal in year 5, no further adjustment is required.

**EXAMPLE****Solution Part B**

The journal entries will include three entries: (1) record pension expense for the period; (2) report the cash paid to fund the plan; and (3) report any pension asset or liability caused by overfunding or underfunding the plan. Below are the journal entries required for Schaefer for the first two entries. Below are the journal entries required for Schaefer. A compound entry is provided with the worksheet.

**Journal Entries**

	Year 4		Year 5	
Pension expense	130,500		178,921	
Pension asset/liability		130,500		178,921
<i>To record pension expense</i>				
Pension asset/liability	125,000		260,000	
Cash		125,000		260,000
<i>To record funding</i>				

The journal entry to record other comprehensive income for the unexpected gain/loss and prior service cost, shown net of tax, are as follows:

Assuming a 40% tax rate, the entries for year 4 and year 5 would be

Year 4 entries		
Other comprehensive income G/L	106,000	
Pension asset/liability		106,000
Deferred tax asset	42,400	
Other comprehensive income—deferred tax asset		42,400
Year 5 entries		
Other comprehensive income PSC	105,000	
Other comprehensive income PSC		10,000
Other comprehensive income G/L		2,271
Pension asset/liability		92,729
Deferred tax asset	37,092	
Other comprehensive income—deferred tax asset		37,092

Therefore, in year 4, OCI would decrease by \$63,600 net of tax, and in year 5, OCI would decrease \$55,637 net of tax.

The total change in the pension asset/liability account resulting from the above journal entries tries to the change in the required pension asset/liability account as calculated by the change in the funded status of the plan. For example, for year 4, the entries to the pension asset/liability account include: \$130,500 (CR) + 125,000 (DR) + 106,000 (CR) = \$111,500. The funded status (as shown on the next page, at the beginning of the year is \$150,000 (CR). The funded status at the end of the year is \$261,500 (CR). The change in funded status is \$261,600 – 150,000 = \$111,500.

The balance sheet reflects the funded status of the plan. The status is determined by comparing the projected benefit obligation to the fair value of the plan assets. The end-of-year projected benefit obligation is calculated as shown below.

	Year 4	Year 5
Projected benefit obligation at beginning of year	\$550,000	\$ 821,500
Service cost	117,000	130,000
Interest cost*	49,500	82,150
Benefits paid	<u>0</u>	<u>0</u>
Projected benefit obligation at end of year	<u>\$716,500</u>	<u>\$1,033,650</u>

\* The interest cost is determined by multiplying the Settlement rate times the beginning projected benefit obligation.

(\$49,500 = \$550,000 × 9%) (\$82,150 = \$821,500 × 10%)

Then the funded status of the plan for the two years may be calculated as follows:

	12/31/Y4	12/31/Y5
Projected benefit obligation	\$ 716,500	\$1,033,650
Fair value of plan assets	<u>455,000</u>	<u>760,500</u>
Funded status of plan	<u>\$(261,500)</u>	<u>\$(273,150)</u>

Because the plan is underfunded at the end of both years, a liability must be included on the balance sheet equal to the underfunded amount. However, the entity will often already have an accrued/prepaid pension account. To determine the liability adjustment needed, the balance in the accrued/prepaid pension cost must be considered.

The balances at 12/31/Y4 and 12/31/Y5 are calculated below.

	Year 4	Year 5
Pension asset/liability at beginning of year	\$(150,000)	\$(261,500)
Funding contributions	125,000	260,000
Pension cost (expense)	<u>(130,500)</u>	<u>(178,921)</u>
Other comprehensive income—G/L	<u>(106,000)</u>	<u>2,271</u>
Other comprehensive income—PSC (net)		(95,000)
Pension asset/liability at end of year	<u>\$(261,500)</u>	<u>\$(273,150)</u>

Finally, the adjustment to establish to recognize the funding status of the plan for each year is calculated as follows:

	12/31/Y4	12/31/Y5
Liability required	\$ 261,500	\$ 273,150
Pension asset/liability at beginning of year	(150,000)	(261,500)
Adjustment to liability*	<u>\$ 111,500</u>	<u>\$ (11,650)</u>

\* The adjustment must tie to the journal entries provided on previous page.

Similarly, if the pension plan were overfunded, Schaefer would record an adjusting entry to record a noncurrent asset for the amount of the plan that is overfunded.

**Often, a compound journal entry will be used to reflect the changes in the pension asset/liability account. The compound journal entry can be derived from the previous information or the worksheet on the following page.**

	Year 4	Year 5
Pension cost (expense)	130,500	178,921
Other comprehensive income G/L	106,000	-
Other comprehensive income PSC	-	105,000
Cash	125,000	260,000
Other comprehensive income G/L	-	2,271
Other comprehensive income PSC	-	10,000
Pension asset/liability	111,500	11,650

**NOW REVIEW MULTIPLE-CHOICE QUESTIONS 1 THROUGH 35**

**8. Postretirement Benefits other than Pensions (OPEB)**

- a. ASC Subtopic 715-60 (refer to outline) establishes the standard for employers’ accounting for other (than pension) postretirement benefits (OPEB). This standard requires a single method for measuring and recognizing an employer’s accumulated postretirement benefit obligation (APBO). It applies to all forms of postretirement benefits, although the most material benefit is usually postretirement health care. To the extent that the promised benefits are similar, the accounting provisions are similar. Only when there is a compelling reason is the accounting different. Companies must disclose the status of overfunded and underfunded postretirement plans on their balance sheets.
- b. There are, however, some fundamental differences between defined benefit pension plans and postretirement benefits other than pensions. The following list presents these differences.

	<b>Differences between Pensions and Postretirement Health Care Benefits*</b>	
Item	Pensions	Health care benefits
Funding	Generally funded.	Generally <i>NOT</i> funded.
Benefit	Well-defined and level dollar amount.	Generally uncapped and great variability.
Beneficiary	Retiree (maybe some benefit to surviving spouse).	Retiree, spouse, and other dependents.
Benefit payable	Monthly.	As needed and used.
Predictability	Variables are reasonably predictable.	Utilization difficult to predict. Level of cost varies geographically and fluctuates over time.

\*D. Gerald Searfoss and Naomi Erickson, “The Big Unfunded Liability: Postretirement Health Care Benefits,” *Journal of Accountancy*, November 1988, pp. 28–39.

- c. OPEB requires accrual accounting and adopts the three primary characteristics of pension accounting: (1) delayed recognition (changes are not recognized immediately, but are subsequently recognized in a gradual and systematic way), (2) reporting net cost (aggregates of various items are reported as one net amount), and (3) offsetting assets and liabilities (assets and liabilities are sometimes shown net).
- d. The Codification distinguishes between the **substantive** plan and **written** plan. Although generally the same, the substantive plan (the one understood as evidenced by past practice or by communication of intended changes) is the basis for the accounting if it differs from the written plan.
- e. OPEBs are considered to be deferred compensation earned in an exchange transaction during the time periods that the employee provides services. The expected cost generally should be attributed in equal amounts (unless the plan attributes a disproportionate share of benefits to early years) over the periods from the employee’s hiring date (unless credit for the service is only granted from a later date) to the date that the employee attains full eligibility for all benefits expected to be received. This accrual should be followed even if the employee provides service beyond the date of full eligibility.
  - (1) The transition obligation is the unrecognized and unfunded APBO (accumulated postretirement benefit obligation) for all of the participants in the plan. This obligation can either (1) be recognized immediately as the effect of an accounting change, subject to certain limitations, or (2) be recognized on a delayed basis over future service periods with disclosure of the unrecognized amount. The delayed recognition has to result in, at least, as rapid a recognition as would have been recognized on a pay-as-you-go basis.

**EXAMPLE**

A sample illustration of the basic accounting for OPEB follows: Firsttime Accrual Co. plans to adopt accrual accounting for OPEB as of January 1, year 31. All employees were hired at age 30 and are fully eligible for benefits at age 60. There are no plan assets. This first calculation determines the unrecognized transition obligation (UTO).

*Firsttime Accrual Co.*  
*December 31, Year 30*

Employee	Age	Years of service	Total years when fully eligible	Expected retirement age	Remaining service to retirement	EPBO	APBO
A	35	5	30	60	25	\$ 14,000	\$ 2,333
B	40	10	30	60	20	22,000	7,333
C	45	15	30	60	15	30,000	15,000
D	50	20	30	60	10	38,000	25,333
E	55	25	30	65	10	46,000	38,333
F	60	30	30	65	5	54,000	54,000
G	65	RET	—		—	46,000	46,000
H	70	RET	—		—	38,000	38,000
					<u>85</u>	<u>\$288,000</u>	<u>\$226,332</u>

**Calculations**

- EPBO (expected postretirement benefit obligation) is usually determined by an actuary, although it can be calculated if complete data is available.
- APBO is calculated using the EPBO. Specifically, it is  $EPBO \times (\text{Years of service} / \text{total years when fully eligible})$
- The unrecognized transition obligation (UTO) is the APBO at 12/31/Y30 since there are no plan assets to be deducted. The \$226,332 can be amortized over the average remaining service to retirement of 14.17 (85/6) years or an optional period of twenty years, if longer. Firsttime Accrual selected the twenty-year period of amortization.
- Note that Employee F has attained full eligibility for benefits and yet plans to continue working.
- Note that the above year 30 table is used in the calculation of the year 31 components of OPEB cost that follows.

After the establishment of UTO, the next step is to determine the benefit cost for the year ended December 31, year 31. The discount rate is assumed to be 10%.

*Firsttime Accrual Co.*  
**OPEB COST**  
*December 31, Year 31*

1. Service Cost	\$ 5,000
2. Interest Cost	22,633
3. Actual Return on Plan Assets	—
4. Gain or Loss	—
5. Amortization of Unrecognized Prior Service Cost	—
6. Amortization of UTO	<u>11,317</u>
Total OPEB Cost	<u>\$38,950</u>

**Calculations**

- Service cost calculation uses only employees not yet fully eligible for benefits.

Employee	1/1/Y31 EPBO	Total years when fully eligible	Service cost
A	\$14,000	30	\$ 467
B	22,000	30	733
C	30,000	30	1,000
D	38,000	30	1,267
E	46,000	30	1,533
Total service cost			<u>\$5,000</u>

2. Interest cost is the 1/1/Y31 APBO of  $\$226,332 \times 10\% = \$22,633$ .
3. There are no plan assets so there is no return.
4. There is no gain (loss) since there are no changes yet.
5. There is no unrecognized prior service cost initially.
6. Amortization of UTO is the 1/1/Y31 UTO of  $\$226,332/20$  year optional election =  $\$11,317$ .

Assume that Firsttime Accrual makes a year-end cash benefit payment of \$20,000. Firsttime Accrual's year-end entry to record other postretirement benefit cost for year 31 would be as follows:

Postretirement benefit cost	38,950	
Cash		20,000
Accrued postretirement benefit cost		18,950

f. Required disclosures for a postretirement benefit plan are stated in ASC Subtopic 715-60. The requirements are the same as the requirements for pensions, which have already been covered in this module.

**9. Nonretirement Postemployment Benefits**

a. Benefits made available to former/inactive employees after employment but before retirement. Examples include continuation of health care and life insurance coverage, severance pay, and disability-related benefits. Criteria for accrual of these benefits are the same as for compensated absences.

- (1) Obligation relates to **services already provided** by the employee,
- (2) Rights to compensation **vest or accumulate**,
- (3) Payment of obligation is **probable**, and
- (4) Amount to be paid is **reasonably estimable**.

**NOTE:** The last two are the general criteria for recognizing a loss contingency per ASC Topic 450. If is not possible to reliably estimate benefits, disclosure of that fact is required in the footnotes to the financial statements.

**10. Deferred Compensation**

Deferred compensation is the payment at a future date for work done in an earlier period(s). Account for these contracts individually on an accrual basis that reflects the terms of the agreement. Accrue amounts to be paid in future over the employment period from date agreement is signed to full eligibility date. The rationale for this treatment is matching.

**NOW REVIEW MULTIPLE-CHOICE QUESTIONS 36 THROUGH 41**

**11. Research Component—Accounting Standards Codification**

In the Codification, the accounting rules for pensions are found in Expenses under Compensation, which is labeled 71X. Topic 71X includes Topics 710, 712, 715, and 718. Topic 710 is *Compensation—General*. Topic 712 is *Compensation—Nonretirement Postemployment Benefits*. Topic 715 is *Compensation—Retirement Benefits*. Topic 715 is organized by subtopics as shown in the following table:

Subtopic	Title
715-10	<i>Overall</i>
715-20	<i>Defined Benefit Plans—General</i>
715-30	<i>Defined Benefit Plans—Pensions</i>
715-60	<i>Defined Benefit Plans—Other Postretirement Plans</i>
715-70	<i>Defined Contribution Plans</i>
715-80	<i>Multiemployer Plans</i>

**12. International Financial Reporting Standards (IFRS)**

The area of employee benefits, and more specifically pensions, is where there are many similarities between US GAAP and IFRS.

- a. In a defined contribution pension plan, the accounting is similar to US GAAP. The employer recognizes an expense for the period equal to the required contribution. If payment is made to the plan, then cash is credited. If the contribution is not made by the end of the accounting period, then the entity would recognize a liability for the accrued contributions.
- b. With respect to defined benefit plans, some vocabulary is different.
- (1) In US GAAP, the benefits-years-of-service method is used to calculate the projected benefit obligation (PBO). Under IFRS, the Projected Unit Credit Method is used to calculate the present value of the defined benefit obligation (PV-DBO). The concept is the same, but the terms are different.
  - (2) In addition, rather than the term “accumulated benefit obligation,” IFRS uses the term “accrued benefit obligation.”
  - (3) In a defined benefit pension plan, the calculation of pension cost for the period is also similar to US GAAP. Under IFRS, net periodic pension cost is comprised of six components:
    - (a) Current service cost,
    - (b) Interest cost for the current period on the accrued benefit obligation,
    - (c) Expected return on plan assets,
    - (d) Actuarial gains and losses,
    - (e) Past service costs, and
    - (f) Effects of curtailments and settlements.
  - (4) Under US GAAP, the discount rate used is the “settlement rate” (the rate at which the plan’s obligations could be settled). With IFRS the discount rate is determined by the market yields at the end of the reporting period for high-quality corporate bonds having a similar term or maturity.
  - (5) Under US GAAP, prior service cost is initially deferred in other comprehensive income and recognized in net income using the expected future years of service method or average remaining service period of active employees method. Under IFRS, prior service cost for vested and nonvested employees is recognized in net income immediately.
  - (6) Another difference in accounting for pensions is that under IFRS, for periods beginning on or after January 1, 2013, an entity must immediately recognize all actuarial gains and losses in other comprehensive income. US GAAP uses the corridor approach.
  - (7) Finally, IFRS has specific rules for netting the balances of pension plan assets and pension liabilities. Netting of plan assets and liability balances is only permissible when there is a legally enforceable right to use the assets of one plan to settle the obligations of another plan.
- c. **Termination benefits.** When an entity provides voluntary termination benefits, a liability and expense are reported when the entity is demonstrably committed to a detailed formal plan that it cannot withdraw. The plan should include information such as location, function, number of employees, benefits provided, and when the plan will be implemented.

**NOW REVIEW MULTIPLE-CHOICE QUESTIONS 42 THROUGH 43**

## KEY TERMS

**Accumulated benefit obligation.** The actuarial present value of benefits (whether vested or nonvested) attributed to employee service rendered before a specified date and based on employee service and compensation before that date.

**Actual return on plan assets.** The difference between the fair value of plan assets at the end of the period and the fair value at the beginning of the period, adjusted for contribution and payments of benefits during the period.

**Benefit-years-of-service approach.** An equal portion of the total estimated benefit is attributed to each year of service. The actuarial present value of the benefits is derived after the benefits are attributed to the periods.

**Benefits.** Payments to which participants may be entitled under pension plan, including pension benefits, death benefits, and benefits due on termination of employment.

**Contributory plan.** A pension plan under which employees contribute part of the cost.

**Cost approach.** Assigns net pension costs to periods as level amounts or constant percentages of compensation.

**Defined benefit pension plan.** A pension plan that defines an amount of pension benefit to be provided, usually as a function of one or more factors such as age, years of service, or compensation.

**Defined contribution plan.** A plan that provides an individual account for each participant and provides benefits that are based on amounts contributed.

**Expected return on plan assets.** An amount calculated as a basis for determining the extent of delayed recognition of the effects of changes in the fair value of assets. The expected return on plan assets is determined based on the expected long-term rate of return on plan assets and the market-related value of plan assets.

**Gain or loss.** A change in the value of either the projected benefit obligation or the plan assets resulting from experience different from that assumed or from a change in an actuarial assumption. Gains and losses that are not recognized in net periodic pension cost when they arise are recognized in other comprehensive income.

**Interest cost.** The amount recognized in a period determined as the increase in the projected benefit obligation due to the passage of time.

**Market-related value of plan assets.** A balance used to calculate the expected return on plan assets. The market-related value of plan assets is either fair value or a calculated value that recognizes changes in fair value in a systematic and rational manner over not more than five years.

**Multiple-employer plan.** A pension plan maintained by more than one employer but not treated as a multiemployer plan.

**Net periodic pension cost.** The amount recognized in an employer's financial statements as the cost of a pension plan for a period. Components of net periodic pension cost are service cost, interest cost, actual return on plan assets, gain or loss, amortization of prior service cost or credit, and amortization of the transition asset or obligation.

**Pension benefits.** Periodic (usually monthly) payments made pursuant to the terms of the pension plan to a person who has retired from employment or to that person's beneficiary.

**Plan amendment.** A change in the terms of an existing plan or the initiation of a new plan. A plan amendment may increase benefits, including those attributed to years of service already rendered.

**Plan assets.** Assets—usually stocks, bonds, and other investments—that have been segregated and restricted, usually in a trust, to provide for pension benefits. The amount of plan assets includes amounts contributed by the employer, and by employees for a contributory plan, and amounts earned from investing the contributions, less benefits paid.

**Prior service cost.** The cost of retroactive benefits granted in a plan amendment. Retroactive benefits are benefits granted in a plan amendment (or initiation) that are attributed by the pension benefit formula to employee services rendered in periods before the amendment.

**Projected benefit obligation.** The actuarial present value as of a date for all benefits attributed by the pension benefit formula to employee service rendered before that date.

**Service cost.** A component of net periodic pension cost recognized in a period determined as the actuarial present value of benefits attributed by the pension benefit formula to services rendered by employees during that period.

**Single-employer plan.** A pension plan that is maintained by one employer. The term also may be used to describe a plan that is maintained by related parties such as a parent and its subsidiaries.

**Unfunded projected benefit obligation.** The excess of the projected benefit obligation over plan assets.

**Vested benefit obligation.** The actuarial present value of vested benefits.

## Multiple-Choice Questions (1–43)

### D.1.–6. Pensions

1. The following information pertains to Lee Corp.'s defined benefit pension plan for year 2:

Service cost	\$160,000
Actual and expected gain on plan assets	35,000
Unexpected loss on plan assets related to a year 1 disposal of a subsidiary	40,000
Amortization of unrecognized prior service cost	5,000
Annual interest on pension obligation	50,000

What amount should Lee report as pension cost in its year 2 income statement?

- a. \$250,000
- b. \$220,000
- c. \$210,000
- d. \$180,000

2. Jordon Corporation obtains the following information from its actuary. All amounts given are as of 1/1/Y2 (beginning of the year).

	1/1/Y2
Projected benefit obligation	\$1,530,000
Market-related asset value	1,650,000
Unrecognized net loss	235,000
Average remaining service period	5.5 years

What amount of unrecognized net loss should be recognized as part of pension cost in year 2?

- a. \$70,000
- b. \$42,727
- c. \$14,909
- d. \$12,727

3. Which of the following disclosures is **not** required of companies with a defined benefit pension plan?

- a. A description of the plan.
- b. The amount of pension expense by component.
- c. The weighted-average discount rate.
- d. The estimates of future contributions for the next five years.

4. Bulls Corporation amends its pension plan on 1/1/Y2. The following information is available:

	1/1/Y2 amendment	1/1/Y2 after amendment
Accumulated benefit obligation	\$950,000	\$1,425,000
Projected benefit obligation	1,300,000	1,900,000

The total amount of unrecognized prior service cost to be amortized over future periods as a result of this amendment is

- a. \$950,000
- b. \$600,000
- c. \$475,000
- d. \$125,000

5. On January 2, year 2, Loch Co. established a noncontributory defined benefit plan covering all employees and contributed \$1,000,000 to the plan. At December 31, year 2, Loch determined that the year 2 service and interest costs on the plan were \$620,000. The expected and the actual rate of return on plan assets for year 2 was 10%. There are no other components of Loch's pension expense. What amount should Loch report in its December 31, year 2 balance sheet as prepaid pension cost?

- a. \$280,000
- b. \$380,000
- c. \$480,000
- d. \$620,000

6. Webb Co., a publicly traded company, implemented a defined benefit pension plan for its employees on January 1, year 1. During year 1 and year 2, Webb's contributions fully funded the plan. The following data are provided for year 4 and year 3:

	Year 4 Estimated	Year 3 Actual
Projected benefit obligation, December 31	\$750,000	\$700,000
Accumulated benefit obligation, December 31	520,000	500,000
Plan assets at fair value, December 31	675,000	600,000
Projected benefit obligation in excess of plan assets	75,000	100,000
Pension expense	90,000	75,000
Employer's contribution	90,000	50,000

What amount should Webb report as a pension liability in its December 31, year 4 balance sheet?

- a. \$50,000
- b. \$60,000
- c. \$75,000
- d. \$100,000

7. Visor Co. maintains a defined benefit pension plan for its employees. The service cost component of Visor's net periodic pension cost is measured using the

- a. Unfunded accumulated benefit obligation.
- b. Unfunded vested benefit obligation.
- c. Projected benefit obligation.
- d. Expected return on plan assets.

8. Which of the following components should be included in the calculation of net pension cost recognized for a period by an employer sponsoring a defined benefit pension plan?

	Actual return on plan assets, if any	Amortization of unrecognized prior service cost, if any
--	---	---

- |    |     |     |
|----|-----|-----|
| a. | No  | Yes |
| b. | No  | No  |
| c. | Yes | No  |
| d. | Yes | Yes |

9. Interest cost included in the net pension cost recognized by an employer sponsoring a defined benefit pension plan represents the

- a. Amortization of the discount on unrecognized prior service costs.
- b. Increase in the fair value of plan assets due to the passage of time.
- c. Increase in the projected benefit obligation due to the passage of time.
- d. Shortage between the expected and actual returns on plan assets.

10. On July 31, year 2, Tern Co. amended its single employee defined benefit pension plan by granting increased benefits for services provided prior to year 2. This prior service cost will be reflected in the financial statement(s) for

- a. Years before year 2 only.
- b. Year 2 only.
- c. Year 2, and years before and following year 2.
- d. Year 2, and following years only.

11. Effective January 1, year 2, Flood Co. established a defined benefit pension plan with no retroactive benefits. The first of the required equal annual contributions was paid on December 31, year 2. A 10% discount rate was used to calculate service cost and a 10% rate of return was assumed for plan assets. All information on covered employees for year 2 and year 3 is the same. How should the service cost for year 3 compare with year 2, and should the year 2 balance sheet report a pension asset or a pension liability?

	<b>Service cost for year 3 compared to year 2</b>	<b>Pension cost reported on the year 2 balance sheet</b>
a.	Equal to	Pension liability
b.	Equal to	Pension asset
c.	Greater than	Pension liability
d.	Greater than	Pension asset

12. A company that maintains a defined benefit pension plan for its employees reports an unfunded pension liability. This cost represents the amount that the

- a. Cumulative net periodic cost accrued exceeds contributions to the plan.
- b. Cumulative net periodic cost exceeds the vested benefit obligation.
- c. Vested benefit obligation exceeds plan assets.
- d. Vested benefit obligation exceeds contributions to the plan.

13. The following information pertains to Seda Co.'s pension plan:

Actuarial estimate of projected benefit obligation at 1/1/Y2	\$72,000
Assumed discount rate	10%
Service costs for year 2	18,000
Pension benefits paid during year 2	15,000

If **no** change in actuarial estimates occurred during year 2, Seda's projected benefit obligation at December 31, year 2 was

- a. \$64,200
- b. \$75,000
- c. \$79,200
- d. \$82,200

14. Which of the following terms includes assumptions concerning projected changes in future compensation when the pension benefit formula is based on future compensation levels (e.g., pay-related and final pay plans)?

	<b>Service cost component</b>	<b>Projected benefit obligation</b>	<b>Accumulated benefit obligation</b>
a.	Yes	Yes	Yes
b.	Yes	Yes	No
c.	No	Yes	No
d.	Yes	No	Yes

15. For a defined benefit pension plan, the discount rate used to calculate the projected benefit obligation is determined by the

	<b>Expected return on plan assets</b>	<b>Actual return on plan assets</b>
a.	Yes	Yes
b.	No	No
c.	Yes	No
d.	No	Yes

16. At December 31, year 2, the following information was provided by the Kerr Corp. pension plan administrator:

Fair value of plan assets	\$3,450,000
Accumulated benefit obligation	4,300,000
Projected benefit obligation	5,700,000

Assume Kerr is a publicly traded company. What is the amount of the pension liability that should be shown on Kerr's December 31, year 2 balance sheet?

- a. \$5,700,000
- b. \$2,250,000
- c. \$1,400,000
- d. \$850,000

17. Nome Co. sponsors a defined benefit plan covering all employees. Benefits are based on years of service and compensation levels at the time of retirement. Nome determined that, as of September 30, year 2, its accumulated benefit obligation was \$380,000, and its plan assets had a \$290,000 fair value. The projected benefit obligation on September 30, year 2, was \$400,000. In its September 30, year 2 balance sheet, what amount should Nome report as pension liability?

- a. \$110,000
- b. \$90,000
- c. \$380,000
- d. \$400,000

18. Payne, Inc., a nonpublicly traded company, implemented a defined benefit pension plan for its employees on January 2, year 2. The following data are provided for year 2, as of December 31, year 2:

Projected benefit obligation	\$103,000
Plan assets at fair value	78,000
Net periodic pension cost	90,000
Employer's contribution	70,000

What amount should Payne record as pension liability at December 31, year 2?

- \$0
- \$25,000
- \$20,000
- \$45,000

**Items 19 and 20** are based on the following:

The following data pertains to Hall Co.'s defined-benefit pension plan at December 31, year 2:

Unfunded projected benefit obligation	\$25,000
Unrecognized prior service cost	12,000
Net periodic pension cost	8,000

Hall made no contributions to the pension plan during year 2.

**19.** At December 31, year 2, what amount should Hall record as pension liability on the balance sheet?

- \$5,000
- \$13,000
- \$17,000
- \$25,000

**20.** In its December 31, year 2 statement of stockholders' equity, what amount should Hall report as accumulated other comprehensive income for pension liabilities before tax effects?

- \$5,000
- \$13,000
- \$17,000
- \$25,000

**21.** An employer sponsoring a defined benefit pension plan must report a liability on the balance sheet equal to

- The current year pension cost that was not funded.
- The difference between the fair value of plan assets less the accumulated benefit obligation.
- The difference between the accumulated benefit obligation and the projected benefit obligation.
- The difference between the fair value of plan assets less the projected benefit obligation.

**22.** Claire, a publicly traded company, has the following defined benefit pension plans with the following information as of December 31, year 2:

	Plan A	Plan B	Plan C
Projected benefit obligation	100,000	150,000	180,000
Accumulated benefit obligation	80,000	140,000	150,000
Fair value of plan assets	110,000	125,000	160,000

Assume Claire will make no payments within the next 24 months to any pension plan. How should Claire report the pension plans on the December 31, year 2 balance sheet?

- A noncurrent liability of \$35,000.
- A noncurrent asset of \$10,000 and a noncurrent liability of \$45,000.
- A noncurrent liability of \$25,000.
- A noncurrent asset of \$30,000 and a noncurrent liability of \$25,000.

**23.** Dawson Corporation, a publicly traded company, implemented a defined benefit pension plan for its employees on January 2, year 1. The following data are provided for year 3 and as of December 31, year 3:

Projected benefit obligation	\$350,000
Accumulated benefit obligation	320,000
Plan assets at fair value	362,000
Pension cost for year 3	100,000
Employer's contribution for year 3	95,000

What amount should Dawson report for the pension plan on its December 31, year 3 balance sheet?

- A current liability of \$5,000.
- No asset or liability.
- A noncurrent asset of \$12,000.
- A noncurrent asset of \$42,000.

**24.** Rose Corporation, a publicly traded company, implemented a defined benefit pension plan for its employees on January 2, year 1. The following data are provided for year 2 and as of December 31, year 2:

Projected benefit obligation	\$400,000
Accumulated benefit obligation	360,000
Plan assets at fair value	362,000
Pension cost for year 2	150,000
Pension contribution for year 2	150,000

Assume that as of January 1, year 2, Rose's pension plan was fully funded, and there were no recorded pension assets or liabilities on the balance sheet. Ignoring tax effects, which of the following entries would be needed to properly record the funding status of Rose's pension plan at December 31, year 2?

- A debit to noncurrent pension asset of \$2,000.
- A debit to prepaid pension for \$150,000.
- A credit to noncurrent pension liability for \$40,000.
- A debit to other comprehensive income for \$38,000.

**25.** Tulip Corporation, a publicly traded company, implemented a defined benefit pension plan for its employees on January 2, year 1. The following data are provided for year 3 and as of December 31, year 3:

Projected benefit obligation	\$700,000
Accumulated benefit obligation	550,000
Plan assets at fair value	520,000
Pension cost for year 3	180,000
Pension contribution for year 3	150,000

Assume that as of January 1, year 3, Tulip's pension plan was fully funded, and there were no recorded pension assets or liabilities on the balance sheet. Assuming a tax rate of 40%,

what is the net effect of the required adjustment on accumulated other comprehensive income on December 31, year 3?

- a. \$90,000 decrease.
- b. \$108,000 decrease.
- c. \$36,000 decrease.
- d. \$0

26. On September 1, year 2, Howe Corp. offered special termination benefits to employees who had reached the early retirement age specified in the company's pension plan. The termination benefits consisted of lump-sum and periodic future payments. Additionally, the employees accepting the company offer receive the usual early retirement pension benefits. The offer expired on November 30, year 2. Actual or reasonably estimated amounts at December 31, year 2, relating to the employees accepting the offer are as follows:

- Lump-sum payments totaling \$475,000 were made on January 1, year 3.
- Periodic payments of \$60,000 annually for three years will begin January 1, year 4. The present value at December 31, year 2, of these payments was \$155,000.
- Reduction of accrued pension costs at December 31, year 2, for the terminating employees was \$45,000.

In its December 31, year 2 balance sheet, Howe should report a total liability for special termination benefits of

- a. \$475,000
- b. \$585,000
- c. \$630,000
- d. \$655,000

27. The Codification requires a reconciliation of the beginning and ending balances of the benefit obligation for both defined benefit pension plans and defined postretirement plans. Which of the following items would appear in the schedule related to defined benefit pension plans?

	Service cost	Benefits paid
a.	Yes	No
b.	Yes	Yes
c.	No	Yes
d.	No	No

28. A company with a defined benefit pension plan must disclose in the notes to its financial statements

- a. A reconciliation of the vested and nonvested benefit obligation of its pension plan with the accumulated benefit obligation.
- b. A reconciliation of the accrued or prepaid pension cost reported in its balance sheet with the pension expense reported in its income statement.
- c. A reconciliation of the accumulated benefit obligation of its pension plan with its projected benefit obligation.
- d. The funded status of its pension plan and the amounts recognized in the balance sheet showing separately the noncurrent assets, current liabilities, and noncurrent liabilities reported.

29. Which of the following items would appear in the reconciliation schedule related to defined benefit pension plans?

	Benefit payments	Actual return on plan assets
a.	No	Yes
b.	No	No
c.	Yes	No
d.	Yes	Yes

30. Which of the following defined benefit pension plan disclosures should be made in a company's financial statements?

- I. The amount of net periodic pension cost for the period.
- II. The fair value of plan assets.
  - a. Both I and II.
  - b. I only.
  - c. II only.
  - d. Neither I nor II.

31. Which of the following is **not** a required disclosure for defined benefit pension plans?

- a. An explanation of a significant change in plan assets if not apparent from other disclosures.
- b. The amount of any unamortized prior service cost or credit not recognized in the statement of financial position (balance sheet).
- c. The effect of a two-percentage-point increase in the assumed health care cost trend rate(s).
- d. Reconciliation of beginning and ending balance of the projected benefit obligation.

32. Which of the following rates must be disclosed for defined benefit pension plans?

- I. Assumed discount rate.
- II. Expected long-term rate of return on all of the employer's assets.
- III. Rate of compensation increase.
  - a. I and III.
  - b. II and III.
  - c. I, II, and III.
  - d. III only.

33. Jan Corp. amended its defined benefit pension plan, granting a total credit of \$100,000 to four employees for services rendered prior to the plan's adoption. The employees, A, B, C, and D, are expected to retire from the company as follows:

- A will retire after three years.
- B and C will retire after five years.
- D will retire after seven years.

What is the amount of prior service cost amortization in the first year?

- a. \$0
- b. \$5,000
- c. \$20,000
- d. \$25,000

34. The effects of a one-percentage-point increase or decrease in the trend rates for health care costs must be disclosed for which of the following relating to defined benefit postretirement plans?

- I. The aggregate of the service and interest cost components.
- II. The accumulated postretirement benefit obligation.
  - a. Both I and II.
  - b. I only.
  - c. II only.
  - d. Neither I nor II.

35. A company with a defined benefit pension plan must disclose in the notes to its financial statements all of the following **except**

- a. The funded status of its pension plan with the amounts recognized in the balance sheet showing separately the noncurrent assets, current liabilities, and noncurrent liabilities recognized.
- b. Rates for assumed discount rate, rate of compensation increase, and expected long-term rate of return on plan assets.
- c. A reconciliation of the accrued or prepaid pension cost reported in its balance sheet with the pension expense reported in its income statement.
- d. The recognized amount of the net periodic benefit cost with the components shown separately.

#### D.8. Postretirement Benefits other than Pensions (OPEB)

36. The following information pertains to Foster Co.'s defined benefit postretirement plan for the year 2.

Service cost	\$120,000
Benefit payment	55,000
Interest on the accumulated postretirement benefit obligation	20,000
Unrecognized transition obligation (to be amortized over twenty years)	200,000

Foster Co.'s year 2 net periodic postretirement benefit cost was

- a. \$205,000
- b. \$150,000
- c. \$95,000
- d. \$285,000

37. Kemp Company provides a defined benefit postretirement plan for its employees. Kemp adopted the plan on January 1, year 1. Data relating to the pension plan for year 2 are as follows:

Service cost for year 2	28,000
Interest on the accumulated postretirement benefit obligation	5,000
Amortization of the unrecognized transition obligation	8,000

At the end of year 2, Kemp makes a benefit payment of \$10,000 to employees. In its December 31, year 2 balance sheet, Kemp should record accrued postretirement benefit cost of

- a. \$35,000
- b. \$31,000
- c. \$51,000
- d. \$15,000

38. Bounty Co. provides postretirement health care benefits to employees who have completed at least ten years service and are aged fifty-five years or older when retiring. Employees retiring from Bounty have a median age of sixty-two, and no one has worked beyond age sixty-five. Fletcher is hired at forty-eight years old. The attribution period for accruing Bounty's expected postretirement health care benefit obligation to Fletcher is during the period when Fletcher is aged

- a. 48 to 65.
- b. 48 to 58.
- c. 55 to 65.
- d. 55 to 62.

39. An employer's obligation for postretirement health benefits that are expected to be provided to or for an employee must be fully accrued by the date the

- a. Employee is fully eligible for benefits.
- b. Employee retires.
- c. Benefits are utilized.
- d. Benefits are paid.

40. Which of the following are correct regarding a transition obligation resulting from the adoption of a defined benefit postretirement plan?

- I. A transition obligation may be recognized immediately.
- II. The transition obligation represents the difference between the accumulated postretirement benefit obligation and the fair value of plan assets at the beginning of the year the plan is adopted.
- III. A transition obligation may be amortized on a straight-line basis over a maximum period of twenty years.

- a. I and II.
- b. II only.
- c. I, II, and III.
- d. II and III.

41. Which of the following information should be disclosed by a company providing health care benefits to its retirees?

- I. The assumed health care cost trend rate used to measure the expected cost of benefits covered by the plan.
- II. The accumulated postretirement benefit obligation.
  - a. Both I and II.
  - b. I only.
  - c. II only.
  - d. Neither I nor II.

***D.12. International Financial Reporting Standards (IFRS)***

- 42.** Which of the following methods is used in IFRS to account for defined benefit pension plans?
- a. Projected-unit-credit method.
  - b. Benefit-years-of-service method.
  - c. Accumulated benefits method.
  - d. Vested years of service method.
- 43.** Utter Corporation uses IFRS for financial reporting purposes and has several pension plans covering various

classes of employees. When may the company net assets and liabilities of the various plans?

- a. Assets and liabilities may always be netted.
- b. Assets and liabilities may be netted when there is a legally enforceable right to use the assets of one plan to settle the obligations of another plan.
- c. When the estimated cash inflows and outflows are similar in pattern.
- d. When the assets and liabilities are both financial.

### Explanations

1. (d) The six elements which an employer sponsoring a defined benefit pension plan must include in its net pension cost are service cost, interest cost, actual return on plan assets, amortization of unrecognized prior service cost, deferral of unexpired gain or loss, and amortization of the unrecognized net obligation or unrecognized net asset existing at the date of initial application. Lee Corp's pension expense is calculated as follows:

Service cost	\$160,000
Gain (actual and expected) on plan assets	(35,000)
Amortization	5,000
Interest	<u>50,000</u>
	<u>180,000</u>

Gains and losses that arise from a single occurrence which is not directly related to the operation of the plan should be reported as part of that occurrence and not as part of the plan's activity. Therefore, the \$40,000 unexpected loss on plan assets related to a year 2 disposal of a subsidiary should be reported as part of the "loss on disposal" and not as part of the year 2 pension cost.

2. (d) The requirement is to determine the amount of unrecognized net loss to be recognized as a part of pension expense in year 2. The **corridor approach** is to be used to determine gain or loss amortization. Under this approach, only the unrecognized net gain or loss in excess of 10% of the **greater** of the projected benefit obligation (PBO) or the market-related asset value (M-RAV) is amortized. In this case, the M-RAV (\$1,650,000) is larger than the PBO (\$1,530,000). The corridor is \$165,000 ( $10\% \times \$1,650,000$ ). The unrecognized net loss (\$235,000) exceeds the corridor by \$70,000 ( $\$235,000 - \$165,000$ ). This excess is amortized over the average remaining service period of active employees expected to participate in the plan ( $\$70,000 \div 5.5 = \$12,727$ ).

3. (d) Estimates of future contributions to a defined benefit pension plan are required to be disclosed only for the next fiscal year. Answer (a) is incorrect because a description of the plan is a required disclosure. Answer (b) is incorrect because

the amount of pension expense by component is a required disclosure. Answer (c) is incorrect because the weighted-average discount rate is a required disclosure.

4. (b) The requirement is to calculate the total amount of unrecognized prior service cost to be amortized over future periods as a result of a pension plan amendment. Prior service cost is the present value of retroactive benefits given to employees for years of service provided before the date of an amendment to the plan. The cost of these retroactive benefits is measured by the increase in the projected benefit obligation at the date of amendment ( $\$1,900,000 - \$1,300,000 = \$600,000$ ). This amount will be recognized as expense (amortized) during the service periods of those employees who are expected to receive benefits under the plan.

5. (c) Prepaid pension cost is the cumulative excess of the amount funded over the amount recorded as pension expense. In year 2, pension expense is \$520,000.

Service cost and interest on PBO	\$620,000
Actual return on plan assets ( $\$1,000,000 \times 10\%$ )	(100,000)
Pension expense	<u>\$520,000</u>

Since year 2 funding was \$1,000,000, 12/31/Y2 prepaid pension cost is \$480,000 ( $\$1,000,000 - \$520,000$ ).

6. (c) As of December 31, year 3, there was a pension liability only for the current year's portion of the pension cost that was not funded. The PBO is compared with the fair value of plan assets, and a liability must be recorded in the balance sheet for the underfunded plan. Therefore, the difference between the PBO and the fair value of the plan assets as of December 31, year 4 ( $\$750,000$  minus  $\$675,000$ ) of \$75,000 must be reported as a liability on the balance sheet.

7. (c) The requirement is to determine how the service cost component of the net periodic pension cost is measured in a defined benefit pension plan. The service cost component recognized shall be determined as "the actuarial present value of benefits attributed by the pension benefit formula to employee service during the period" that is known as the **projected benefit obligation**.

8. (d) Among the components which should be included in the net pension cost recognized for a period by an employer sponsoring a defined benefit pension plan are **both** actual return on plan assets, if any, and amortization of unrecognized prior service cost, if any.

9. (c) Net pension cost (expense) is comprised of six elements. One of these elements is interest on the projected benefit obligation, which is defined as the increase in the amount of the projected benefit obligation due to the passage of time. Candidates must be careful so as not to confuse “interest cost” with the “actual return” component of net pension cost which is the earnings on the plan assets. If the latter component is positive, it reduces the net pension cost for the period.

10. (d) Plan amendments are granted with the expectation that the employer will realize economic benefits in future periods. Therefore, the prior service cost will be reflected in the financial statements for year 2 and future years only.

11. (d) This question addresses the behavior of the components of pension expense over a period of time. Service cost is the actuarial present value of benefits attributed by the pension benefit formula to services rendered by employees during that period. This problem states that “all information on covered employees for year 2 and year 3 is the same,” which indicates that there has been no change in Flood’s work force during this two-year period. The only difference in the service cost for these two years would, therefore, be attributable to differences in the discounting of the benefits. Each year a group of employees works, the group becomes one year closer to retirement age and to collecting their retirement benefits. The present value of the benefits earned by employees each year grows as their retirement date grows nearer, because the benefits are discounted over a shorter period of time. If, for instance, the “average” retirement date for Flood’s employees is January 1, year 12, the present value of the benefits for year 3’s service will be greater than the present value of year 2 service, because it is discounted eleven years for year 2 versus ten years for year 3. (This is because every additional year of discounting reduces the present value of the benefits.) Therefore, the service cost for year 3 will be greater than for year 2. The problem also states that Flood intends to fund the plan in equal annual installments, and that the discount rate which was used to calculate the service cost is equal to the assumed rate of return on plan assets. Under these circumstances, to fully fund the pension obligation in equal payments, Flood will contribute an amount which exceeds the pension cost in the first years of the plan and which is less than the pension cost in later years. A pension asset is the cumulative employer contributions in excess of the pension liability cost. Since year 2’s funding would exceed its pension cost, Flood would report a pension asset on its year 2 balance sheet. The journal entry to record the funding would be

Pension expense	xxx	
Pension asset/liability	xxx	
Cash		xxx

12. (a) The requirement is to determine what the “unfunded accrued pension cost” represents. The unfunded accrued

pension cost is a liability recognized when the net periodic pension cost exceeds the amount the employer has contributed to the plan.

13. (d) The projected benefit obligation is the actuarial present value of the pension obligation at the end of the period. Since there were no changes in actuarial estimates during the year, the end of period projected benefit obligation is computed as follows:

Projected benefit obligation, 1/1/Y2	\$72,000
Service cost	18,000
Interest on projected benefit obligation (10% × \$72,000)	7,200
Benefit payments	(15,000)
Pension benefit obligation, 12/31/Y2	<u>\$82,200</u>

Service cost and interest on the projected benefit obligation increase the projected benefit obligation; benefit payments decrease the projected benefit obligation.

14. (b) The requirement is to determine which of the listed pension terms includes assumptions concerning projected changes in future compensation levels if the pension benefit formula is based on future compensation levels. The service cost component and the projected benefit obligation reflect projected future compensation levels while the accumulated benefit obligation is measured based on employees’ history of service and compensation without an estimate of projected future compensation levels.

15. (b) The assumed discount rate should reflect the rates at which pension benefits could be effectively settled. This rate is sometimes referred to as the “settlement rate.” To determine the settlement rate, it is appropriate to look at rates implicit in current prices of annuity contracts that could be used to settle the obligation under the defined benefit plan. The expected return on plan assets is **not** used to calculate the projected benefit obligation. The actual return on plan assets is also **not** used to calculate the projected benefit obligation.

16. (b) The funding status of the plan is recognized as an asset or liability on the balance sheet. The difference between Kerr’s fair value of plan assets and the projected benefit obligation (\$3,450,000 – \$5,700,000 = \$2,250,000) is the amount of the plan that is underfunded and must be reported as a liability on Kerr’s December 31, year 2 balance sheet.

17. (a) The recognition of a **pension liability** is required if the projected benefit obligation (PBO) exceeds the FV of the plan assets. In this case, the excess of the PBO over the FV of plan assets is \$110,000 (\$400,000 – \$290,000).

18. (b) The reporting of a **pension liability** is required if the projected benefit obligation (PBO) exceeds the FV of the plan assets. In this case, the excess of the PBO over the FV of plan assets is \$25,000 (\$103,000 – \$78,000).

19. (d) A **pension liability** must be reported for the excess of the projected benefit obligation (PBO) over the fair value of the plan assets. The unfunded projected benefit obligation is this excess. Therefore, the required liability amount is \$25,000.

**20. (c)** At December 31, year 2, Hall will record a pension expense of \$8,000 and a pension liability of \$8,000 for the current year's pension journal entry. The overfunded or underfunded status of the plan must be recognized on the balance sheet. Therefore, the unfunded PBO of \$25,000 must be recognized as a liability. An entry must be made to record the adjustment to pension liability for \$17,000 (25,000 – 8,000 liability already recorded). Ignoring the tax effect, the journal entry will include a debit to OCI for \$17,000 and a credit to pension liability for \$17,000.

**21. (d)** An employer must recognize the overfunded or underfunded status of the pension plan. A liability is reported when the fair value of the plan assets is less than the projected benefit obligation.

**22. (b)** The funded status of the plan is recognized on the balance sheet. The fair value of plan assets is compared with the projected benefit obligation. Overfunded plans are aggregated and recognized as noncurrent assets on the balance sheet. Underfunded plans are aggregated and recognized as current, noncurrent liabilities, or both. Claire must aggregate Plans B and C, because they are both underfunded. Plan B is underfunded by \$25,000 (\$125,000 – \$150,000), and Plan C is underfunded by \$20,000 (\$160,000 – \$180,000). Because Claire expects to make no payments within the next 12 months, the aggregated underfunded plans are recorded as noncurrent liabilities on the balance sheet. The overfunded amount (Plan A: \$110,000 – 100,000) of \$10,000 is recognized as a noncurrent asset on the balance sheet. Answer (a) is incorrect because all plans cannot be aggregated. Answers (c) and (d) are incorrect because according to ASC Topic 715, the accumulated benefit obligation is no longer used to measure the funding status of the plan.

**23. (c)** The funding status of the pension plan is recorded on the balance sheet. The funding status is determined by comparing the fair value of plan assets to the projected benefit obligation. Dawson's plan assets are \$12,000 higher than the projected benefit obligation (\$362,000 – 350,000). Therefore, Dawson would be required to report a noncurrent asset of \$12,000 on their balance sheet at December 31, year 3. Answer (a) is incorrect because the current liability of \$5,000 is part of the journal entry required to record pension cost for the period, and does not reflect the overall funding status of the plan. Answer (b) is incorrect because overfunded or underfunded plans must be recognized on the balance sheet. Answer (d) is incorrect because according to ASC Topic 715, the accumulated benefit obligation is not used to measure the funding status of the plan.

**24. (d)** The funding status of the pension plan is recorded on the balance sheet. The funding status is determined by comparing the fair value of plan assets to the projected benefit obligation. Because Rose's pension plan was completely funded as of December 31, year 1, no pension assets or liabilities existed on its balance sheet. The journal entry for year 2 would include a debit to pension cost and a credit to cash for the year 2 pension contribution, which was fully

funded for the current year. However, in comparing the PBO and the fair value of plan assets at the end of the year, Rose's pension plan is underfunded by \$38,000 (\$362,000 – 400,000). Ignoring income tax effects, the entry to record the underfunded plan is to debit other comprehensive income for \$38,000 and credit pension liability for \$38,000.

**25. (a)** The funded status of the plan is recognized in the balance sheet. The funding status is determined by comparing the fair value of plan assets to the projected benefit obligation. The pension plan for Rose is underfunded by a total of \$180,000 (\$520,000 – 700,000). As of December 31, year 3, Rose has recognized a pension liability of \$30,000, which is the difference between pension cost for the period and the pension contribution for the period. This \$30,000 liability has been recognized as an expense and reduces net income for the period. Because Rose must recognize a \$180,000 liability in the balance sheet, an entry must be recorded for the \$150,000 needed to increase the pension liability account to the underfunded amount of \$180,000. Therefore, the entry to recognize the underfunded portion of the plan would be

OCI ( $\$150,000 \times 60\%$ )	90,000 (net of tax)
Deferred tax asset	60,000
Pension liability	150,000

Answer (b) is incorrect because it is necessary to adjust for any existing pension or liability that may exist at year-end. Answers (c) and (d) are incorrect because the accumulated benefit obligation is not used to determine the funded status of the plan.

**26. (c)** When special termination benefits are offered to employees, a loss and liability must be recognized when the employee accepts the offer and the amount can be reasonably estimated. The amount to be recognized shall include any lump-sum payments (\$475,000) and the present value of any expected future payments (\$155,000). Therefore, the total liability for special termination benefits is \$630,000 (\$475,000 + \$155,000). Note that the reduction of accrued pension costs (\$45,000) would reduce the amount of the loss, but would **not** affect the liability. Instead it would be recorded as a reduction of accrued pension costs. The journal entry would be

Loss from termination benefits	585,000
Accrued pension costs	45,000
Liability from termination benefits	630,000

**27. (b)** The reconciliation schedule for the benefit obligation related to defined benefit pension plans would disclose both the amounts for service cost and benefits paid. Other items that would be disclosed in this reconciliation schedule include (1) interest cost, (2) contributions by plan participants, (3) actuarial gains and losses, (4) plan amendments, (5) divestitures, curtailments, and settlements, and (6) special termination benefits.

**28. (d)** The funded status of the pension plans and the amounts are recognized in the balance sheet showing separately the assets, current liabilities, and noncurrent liabilities.

**29. (d)** The reconciliation schedule for the plan assets related to defined benefit pension plans would disclose both the benefit payments and the actual return on plan assets. Other items that would be disclosed in this reconciliation schedule include (1) contributions by the employer, (2) contributions by plan participants, and (3) settlements and divestitures.

**30. (a)** An employer sponsoring a defined benefit pension plan must disclose a great deal of information related to the plan. These disclosures include the amount of net periodic pension cost for the period and the fair value of plan assets.

**31. (c)** The effect of a one-percentage-point increase in the assumed health care cost trend rate(s) is required, not a two-percentage-point increase. An explanation of a significant change in plan assets, if not apparent from other disclosures, is required according to ASC Topic 715. The amount of any unamortized prior service cost or credit not recognized in the statement of financial position (balance sheet) is a required disclosure. Another required disclosure per ASC Topic 715 is a reconciliation of beginning and ending balances of the projected benefit obligation.

**32. (a)** The assumed discount rate and the rate of compensation increase are both required disclosures. The expected long-term rate of return on all of the employer's assets is not required. The expected long-term rate of return on plan assets is required, however.

**33. (c)** There are two methods approved for use in determining the assignment of prior service cost: the expected years of service method, and the straight-line basis over the average remaining service period of active employees method. Under the expected future years of service method, the total number of employee service years is calculated by grouping employees according to the time remaining to their retirement and multiplying the number in each group by the number of periods remaining to retirement. [(1 person × 3) + (2 people × 5) + (1 person × 7) = 20]. To calculate the amortization of prior service costs for a given year, the number of employee service years applicable to that period is used as the numerator of the fraction, and the denominator is the total employee service years based on all the identified groups. (4/20 × \$100,000 = \$20,000) For the straight-line basis over the average remaining service period method, the total number of service years (calculated above) is divided by the number of employees to find the weighted-average service life of each employee. (20/4 = 5 yrs.) The \$100,000 of prior service cost will be amortized over the five years, or at \$20,000 (\$100,000 ÷ 5 = \$20,000) a year.

**34. (a)** A disclosure is made of the effects of a one-percentage-point increase or decrease of the trend rates for health care costs on: the aggregate of the service and interest cost components and the accumulated postretirement obligation.

**35. (c)** A reconciliation of the accrued or prepaid pension cost reported in its balance sheet with the pension expense reported in its income statement is not required. Answer (a) is incorrect because the funded status of the pension plan must be reported in the balance sheet as noncurrent assets, current liabilities, and noncurrent liabilities. Answer (b) is

also incorrect because rates for assumed discount rate, rate of compensation increase, and expected long-term rate of return on plan assets are also required. Another required disclosure is the recognized amount of the net periodic benefit cost with the components shown separately.

**36. (b)** Net periodic postretirement benefit cost is a net amount calculated by adding or subtracting six components. Three components present in this problem are combined as follows:

Service cost	\$120,000
Interest on the accumulated postretirement benefit obligation	20,000
Amortization of transition obligation (\$200,000 ÷ 20 years)	<u>10,000</u>
Postretirement benefit cost	\$150,000

Service cost and interest on the accumulated postretirement benefit obligation always increase postretirement benefit cost. Foster Co. has elected to amortize the unrecognized transition obligation over a twenty-year period. Amortization of the \$200,000 obligation on the straight-line basis increases postretirement benefit cost by \$10,000 per year. The benefit payment represents a cash payment made for benefits by the employer; however, this is not a component of net periodic postretirement benefit cost.

**37. (b)** To determine the accrued postretirement benefit cost, the net periodic postretirement benefit cost must first be calculated as follows:

Service cost	\$28,000
Interest on the accumulated postretirement benefit obligation	5,000
Amortization of the unrecognized transition obligation	<u>8,000</u>
Net periodic postretirement benefit cost	<u>\$41,000</u>

An adjusting entry is required at year-end to record net periodic postretirement benefit cost and the cash benefit payments made to employees. An accrued postretirement benefit cost will be recorded if the net postretirement benefit cost exceeds the cash payments to employees. The journal entry would be

Postretirement benefit cost	41,000
Cash	10,000
Accrued postretirement benefit cost	31,000

The balance in the accrued postretirement benefit cost account would be \$31,000.

**38. (b)** The requirement is to determine the attribution period for accruing the expected postretirement health care benefit obligation. The beginning of the attribution period is generally the date of hire, and the end shall be the date of full eligibility. Fletcher's age at the date of hire is forty-eight and the period of eligibility is ten years. Thus, the attribution period is forty-eight to fifty-eight.

**39. (a)** An employer's obligation for postretirement benefits expected to be provided to an employee must be fully accrued by the full eligibility date of the employee, even if the employee is to render additional service beyond that date.

**40. (c)** A transition obligation is measured as the difference between the accumulated postretirement benefit obligation and the fair value of plan assets at the beginning of the fiscal year for which ASC Topic 715 is adopted. A transition obligation may be recognized immediately in net income of the period of the change, or recognized on a delayed basis as a component of net periodic postretirement benefit cost. If delayed recognition is elected, the transition obligation should be amortized on a straight-line basis over the average remaining service period of plan participants. If the average remaining service period is less than twenty years, the employer may elect to use a twenty-year amortization period.

**41. (a)** The employer must disclose the amount of the accumulated postretirement benefit obligation. The employer must also disclose the assumed health care cost trend rate used to measure the expected cost of benefits covered by the plan.

**42. (a)** The requirement is to identify the method that is used for defined benefit pension plans. Answer (a) is correct because IFRS requires the use of the projected-unit-credit method to calculate the present value of the defined benefit obligation (PV-DBO). Answer (b) is incorrect because the benefit-years-of-service method is used in US GAAP. Answers (c) and (d) are incorrect because these are not methods for reporting pension benefits.

**43. (b)** The requirements is to identify when pension assets and liabilities may be netted under IFRS. Answer (b) is correct because assets and liabilities may be netted only when there is a legally enforceable right to use the assets of one plan to settle the obligations of another plan.

Pension Calculations	Authoritative Literature	Help

#### *Situation*

The following information pertains to Winger Co.'s defined benefit pension plan. The common stock of Winger is publicly traded.

Discount rate	6%
<b>At January 1, year 2:</b>	
Projected benefit obligation	\$600,000
Fair value of pension plan assets	420,000
Accumulated benefit obligation	380,000
Unrecognized prior service cost	240,000
<b>At December 31, year 2:</b>	
Projected benefit obligation	?

Fair value of pension plan assets 470,200

Service cost for year 2 was \$80,000. The actual and expected return on assets was 6%. A contribution for pension of \$40,000 was made during the year, and \$15,000 of benefits were paid. Winger had no pension asset/liability at December 31, year 1. Winger amortizes the unrecognized service costs at \$20,000 per year. Assume no pension benefits are expected to be paid in the next 12 months.

**Part I.**

Calculate the following amounts for Winger's pension cost for year 2.

1. \_\_\_\_\_ Interest cost
2. \_\_\_\_\_ Actual return on plan assets
3. \_\_\_\_\_ Amortization of prior service costs or credits
4. \_\_\_\_\_ Gain or (Loss)
5. \_\_\_\_\_ Pension cost for year 2
6. \_\_\_\_\_ Projected benefit obligation at December 31, year 2

**Part II.**

For the following items determine whether the component Increases, Decreases, or has No effect on pension cost/expense.

	Increase	Decrease	No effect
1. Service cost	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>
2. Interest cost	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>

8. The actual return on plan assets is defined as the difference in the fair value of plan assets at the beginning and the end of the year.	<input type="radio"/>	<input checked="" type="radio"/>

### Explanations

- (F)** A defined contribution plan is a plan where the employer defines the contribution. No benefit is promised. The benefit is provided by a trust that is funded by the defined contribution of the employer.
- (T)** The projected benefit obligation is calculated using the benefits years of service method.
- (F)** The funded status of the pension plan is calculated by subtracting the projected benefit obligation and the fair value of plan assets at year-end.
- (F)** A company may not net the overfunded and underfunded plans. Overfunded plans must be shown as noncurrent assets on the balance sheet. Underfunded plans should be shown as current liabilities, noncurrent liabilities, or both.
- (F)** Prior service costs are caused by amendments to the plan or initiation of a new plan with a retroactive allowance.
- (F)** In a defined benefit plan, the interest cost represents the increase in the projected benefit obligation due to the passage of time.
- (F)** Companies must disclose the effect that a one percentage point increase would have on the aggregate service and interest costs of the accumulated postretirement benefit obligation on health-care benefits.
- (F)** The actual return on plan assets is defined as the difference in the fair value adjusted for contributions made to the plan and benefits paid.

Pension Calculations	Authoritative Literature	Help

### Part I.

1. \$ 36,000 Interest cost (PBO at BOY  $\$600,000 \times 6\% = \$36,000$ )
2. \$ 25,200 Actual return on plan assets (FV of plan assets BOY  $\$420,000 \times 6\% = \$25,200$ )
3. \$ 20,000 Amortization of prior service costs or credits ( $\$240,000/12$  years = \$20,000 per year)
4. \$ 0 Gain or (Loss) (Actual returns = expected returns)
5. \$ 110,800 Pension cost for year 2 ( $\$80,000$  service cost +  $\$36,000$  interest cost –  $\$25,200$  ROA +  $\$20,000$  amortization of prior service cost =  $\$110,800$ )
6. \$ 701,000 Projected benefit obligation at December 31, year 2 (PBO at BOY  $\$600,000$  + Service Costs  $\$80,000$  + Interest Cost  $\$36,000$  – Benefits Paid  $\$15,000 = \$701,000$  PBO at EOY)

### Part II.

	Increase	Decrease	No effect
1. Service cost	<input checked="" type="radio"/>	<input type="radio"/>	<input type="radio"/>
2. Interest cost	<input checked="" type="radio"/>	<input type="radio"/>	<input type="radio"/>
3. Actual return on plan assets	<input type="radio"/>	<input checked="" type="radio"/>	<input type="radio"/>
4. Amortization of prior service costs or credits	<input checked="" type="radio"/>	<input type="radio"/>	<input type="radio"/>
5. Gain or loss in year 2	<input type="radio"/>	<input type="radio"/>	<input checked="" type="radio"/>

### Explanations

1. (I) Service cost increases pension cost for the period.
2. (I) Interest cost increases pension cost for the period.
3. (D) Actual return on assets decreases pension costs for the period.
4. (I) Amortization of prior service cost increases pension cost for the period.
5. (N) Winger had no gain or loss because actual and expected return on assets were the same for year 2.

## Task-Based Simulation 3

Research	Authoritative Literature	Help

ASC	715	30	35	11
-----	-----	----	----	----

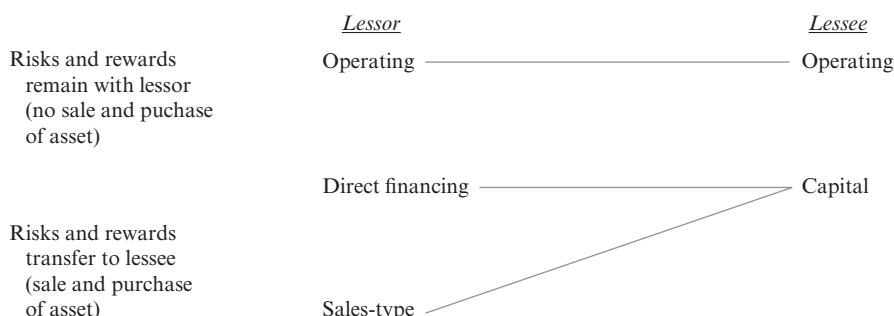

**E. Leases**

A lease is a contract between two parties—a lessor and a lessee. A lease contract gives a lessee rights to use the lessor’s property for a specified period of time in return for periodic cash payments (rent) to the lessor.

1. A major goal in accounting for leases is to recognize the economic substance of the lease agreement over its mere legal form. For example, many lease agreements are similar to the purchase of an asset financed by the issuance of debt. The economic substance of a lease agreement generally takes one of two forms:
  - a. Periodic payments of rent by the lessee for the **use** of the lessor’s property
  - b. Periodic payments similar to an installment purchase by the lessee for the rights to **acquire** the lessor’s property in the future (i.e., acquisition of property by financing)
    - (1) In a., the risks and rewards of owning the asset remain with the lessor. Accordingly, the asset is **not** treated as sold by the lessor to the lessee, and remains on the lessor’s books. This form of leasing arrangement is called an **operating lease**.
    - (2) By contrast, in b., a lease agreement may transfer many of the risks and rewards of ownership to the lessee. This form of lease is treated as a sale by the lessor and as a purchase by the lessee. This concept is clearly stated as follows:

The objective of the **lease** classification criteria in the Subtopic derives from the concept that a lease that transfers **substantially all** of the benefits and risks incident to the ownership of property should be accounted for as the acquisition of an asset and the incurrence of an obligation by the lessee and as a **sale or financing** by the lessor. All other leases should be accounted for as **operating leases** (ASC 840).

- c. When the risks and rewards of ownership are deemed to have been passed from the lessor to the lessee, the lessor will account for the lease as either a **direct financing** or as a **sales-type lease**, and the lessee will account for the lease as a **capital lease**.
  - (1) To determine whether the risks and rewards of ownership have been transferred to the lessee, **at least one** of the following four criteria must be met:
    - (a) The lease transfers title to the lessee.
    - (b) The lease contains a bargain purchase option.
    - (c) The lease term is 75% or more of useful life and the lease is not first executed within the last 25% of the original useful life.
    - (d) The present value of minimum lease payments is 90% or more of the net of the fair value of the asset reduced by the investment tax credit (when in effect) retained by the lessor and the lease is not executed in the last 25% of the original useful life.
  - (2) These four criteria apply to both the lessor and to the lessee. The lessor, however, must meet two additional criteria:
    - (a) Collectibility of minimum lease payments is predictable, and
    - (b) There are no important uncertainties concerning costs yet to be incurred by the lessor under the lease.
    - (c) Both of the above must be satisfied by the lessor in order for the lessor to treat the lease in substance as a capital lease.
- d. The classification of leases can be summarized as follows:

## 2. Study Program for Leases

- Begin by reviewing the terms peculiar to leases that appear at the beginning of the outline of ASC Topic 840 (SFAS 13) in the pronouncement outlines in Appendix A.
- Review the material in this module so that you will be familiar with the major concepts and applications in the leasing area.
- After you have developed a solid base of understanding, you should review the outline of SFAS 13 (ASC Topic 840).
- The discussion of accounting for leases is structured to follow the lease classification matrix listed above.

### (1) Operating Lease—Lessor/Lessee

An operating lease is any lease not meeting the criteria for a direct financing or sales-type lease in the case of a lessor, or for a capital lease in the case of a lessee. Under an operating lease, leased assets continue to be carried on the lessor's balance sheet and are depreciated in the normal manner. These assets, however, are not shown on the lessee's balance sheet since the lessee cannot expect to derive any future economic benefit from the assets beyond the lease term. Several issues are frequently encountered when dealing with operating leases. These issues are discussed in the remainder of this section.

#### (a) Free rent/uneven payments

Some lease agreements might call for uneven payments or scheduled rent increases over the lease term. Other agreements might include, as an incentive to the lessee, several months of "free rent" during which the lessee may use the asset without owing rent to the lessor. In these cases, rental revenue (expense) is still recognized by the lessor (lessee) on a straight-line basis and is prorated over the full term of the lease during which the lessee has possession of the asset. This is due to the matching principle; if physical usage is relatively the same over the lease term, then an equal amount of benefit is being obtained by both parties to the lease.

**NOTE:** Another method to allocate rental revenue (expense) may be used if it better represents the actual physical use of the leased asset.

- 1] When the pattern of actual cash received (paid) as rent is other than straight-line, it will be necessary for both parties to record accruals, or deferrals, depending upon the payment schedule.

		Accruals	(or)	Deferrals
Lessor	—	Rent receivable		Unearned rent
Lessee	—	Rent payable		Prepaid rent

### EXAMPLE

#### Lease Information

- A ten-year lease is initiated on 1/1/Y1
- Payments are \$100,000 per year payable January 1 (except for the first year)
- Payment for the first year is \$50,000, due on 7/1/Y1

Recognition of revenue/expense:

$$\text{Actual cash received/paid} = (9 \text{ years} \times \$100,000) + \$50,000 = \underline{\$950,000} \text{ total}$$

$$\text{Revenue and expense per year} = \$950,000 \div 10 \text{ years} = \underline{\$95,000} \text{ per year}$$

Journal entries for the lessor				Journal entries for the lessee			
<b>Year 1</b>				<b>Year 1</b>			
Cash	50,000			Rent expense	50,000		
Rent revenue		50,000		Cash		50,000	
Rent receivable	45,000			Rent expense	45,000		
Rent revenue		45,000		Rent payable		45,000	
<b>Years 2–10</b>				<b>Years 2–10</b>			
Cash	100,000			Rent expense	95,000		
Rent revenue		95,000		Rent payable	5,000 (b)		
Rent receivable		5,000 (a)		Cash		100,000	

	Rent Receivable		(a)		Rent Payable		
yr. 1	45,000	5,000	yr. 2	yr. 2	5,000	45,000	yr. 1
		•				•	
		•				•	
		•	yr. 10	yr. 10		•	

(b) **Initial direct costs**

The lessor may incur costs in setting up the lease agreement. Such costs might include finder’s fees, appraisal fees, document processing fees, negotiation fees, and any costs in closing the transaction. These costs, called initial direct costs, are carried as an asset on the lessor’s balance sheet. Initial direct costs are amortized on a straight-line basis to expense over the lease term by the lessor, and are shown net of accumulated amortization on the lessor’s balance sheet.

(c) **Lease bonus (fee)**

At the inception of the lease, the lessee may pay a nonrefundable lease bonus (fee) to the lessor in order to obtain more favorable leasing terms (e.g., a lease term of three years instead of five years). The lease bonus (fee) would be treated as unearned rent by the lessor and would be amortized to rental revenue on a straight-line basis over the lease term. The lessee would treat the lease bonus (fee) as prepaid rent and would recognize it as rental expense over the lease term on a straight-line basis.

(d) **Security deposits**

Some lease agreements may require that the lessee pay the lessor a security deposit at the inception of the lease. Security deposits may be either refundable or nonrefundable. A **refundable** security deposit is treated as a liability by the lessor and as a receivable by the lessee until the deposit is returned to the lessee. A **nonrefundable** security deposit is recorded as unearned revenue by the lessor and as prepaid rent by the lessee until the deposit is considered earned by the lessor (usually at the end of the lease term).

(e) **Leasehold improvements**

Frequently, the lessee will make improvements to leased property by constructing new buildings or improving existing structures. The lessee has the right to use these leasehold improvements over the term of the lease; however, these improvements will revert to the lessor at the expiration of the lease.

- 1] Leasehold improvements are capitalized to “Leasehold Improvements” (a property, plant and equipment account) by the lessee and are amortized over the **shorter** of (1) the remaining lease term, **or** (2) the useful life of the improvement.
- 2] Improvements made in lieu of rent should be expensed in the period incurred.
- 3] If the lease contains an option to renew and the likelihood of renewal is uncertain, the leasehold improvement should be written off over the life of the initial lease term or useful life of the improvement, whichever is shorter.

**NOTE:** Moveable equipment or office furniture that is not attached to the leased property is **not** considered a leasehold improvement.

- 4] The summary below lists the elements commonly encountered in operating leases.

<b>Operating Lease FS Elements</b>		
	Lessor	Lessee
<i>Balance sheet:</i>	<ul style="list-style-type: none"> <li>• Leased asset (net of accumulated depreciation)</li> <li>• Rent receivable</li> <li>• Initial direct costs (net of accumulated amortization)</li> <li>• Unearned rent (including lease bonus/fee and nonrefundable security deposit)</li> <li>• Deposit liability</li> </ul>	<ul style="list-style-type: none"> <li>• Prepaid rent (including lease bonus/fee and nonrefundable security deposit)</li> <li>• Leasehold improvements (net of accumulated amortization)</li> <li>• Deposit receivable</li> </ul>
<i>Income statement:</i>	<ul style="list-style-type: none"> <li>• Rent revenue (including amortization of lease bonus/fee and nonrefundable security deposit)</li> <li>• Depreciation expense</li> <li>• Amortization of initial direct costs</li> <li>• Other maintenance expenses</li> </ul>	<ul style="list-style-type: none"> <li>• Rent expense (including amortization of lease bonus/fee and nonrefundable security deposit)</li> <li>• Amortization of leasehold improvements</li> </ul>

**NOTE:** Knowledge of these elements is helpful in answering questions that require a determination of lessor’s net income or lessee’s total expense in connection with an operating lease.

**(f) Modifications and terminations to capital leases**

A company may modify a capital lease in such a way that it changes the lease to an operating lease.

- 1] If a capital lease is modified as such, it is treated as a sales-leaseback transaction.
- 2] If a company terminates a capital lease, the accounting for the termination depends on whether the lease was a capital lease for real estate or for an asset other than real estate.
  - a] If the capital lease was for real estate, then the criteria for recognition of gains must be met in order for the company to recognize a gain on termination of the lease. However, any loss on the transaction is recognized immediately.
  - b] If the lease was for assets other than real estate, then the asset and obligation of the lease are removed from the accounts and a gain or loss is recognized for the difference.
    - i] If the original lessee remains secondarily liable, the guarantee obligation is recognized.

**(g) Termination costs**

If a lessee terminates an operating lease before the end of its term, the lessee must recognize any termination costs. Termination costs may include a lump-sum payment or payments that continue during the remaining lease term. Such costs are measured and recognized at fair value on the date the agreement is terminated, the entity no longer receives rights to the assets, or the company ceases to use the assets (cease-use date).

- 1] If the company remains liable for payments after the cease-use date, the fair value of the termination costs is based on the remaining lease rentals reduced by the estimated sublease rentals that could be obtained for the property, even if the entity does not intend to sublease.
- 2] Termination costs of an operating lease are included in calculating income from continuing operations.
- 3] If the termination of an operating lease is associated with the exit or disposal of a discontinued operation, these costs are included in the results of discontinued operations.

**NOW REVIEW MULTIPLE-CHOICE QUESTIONS 1 THROUGH 18**

**(2) Direct Financing Lease—Lessor**

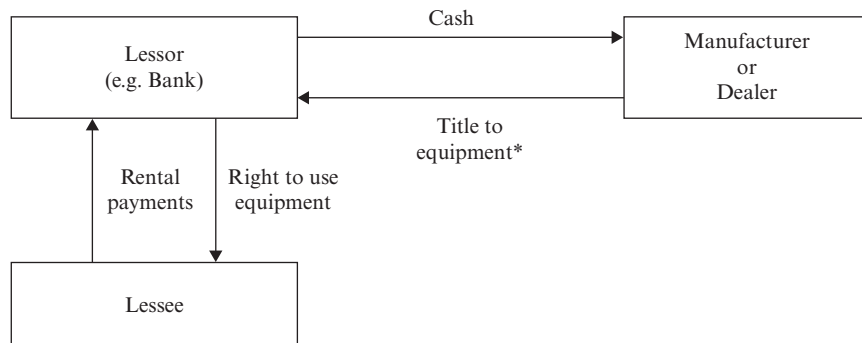

**NOTE:** Although most discussions begin with the lessee’s accounting for a capital lease, we have chosen to present the lessor’s accounting first because the lessor is the party that determines the fixed cash schedule of lease payments that are to be made by the lessee.

- (a) A direct financing lease arises when a consumer needs equipment but does not want to purchase the equipment outright, and/or is unable to obtain conventional financing. In this situation, the consumer will turn to a leasing company (e.g., a bank) which will purchase the desired asset from a manufacturer (or dealer) and lease it to the consumer. Direct financing leases apply to leasing companies, as opposed to manufacturers or dealers, because leasing companies purchase the assets solely for leasing, not for resale. Leasing companies are usually involved in financing activities (e.g., banking and insurance), not in the sale of property of the type being leased. The following situation shows when a direct financing lease would arise:

**EXAMPLE**

ABC Company needs new equipment to expand its manufacturing operations but does not have enough capital to purchase the equipment at present. ABC Company employs Universal Leasing Company to purchase the equipment. ABC will lease the asset from Universal. Universal records a direct financing lease.

- (b) The relationships in a direct financing lease arrangement are illustrated below.

\*Title would stay with the lessor unless criterion (1) or (2) previously presented is met, in which case title would pass to the lessee.

- (c) As mentioned, a lease is considered to be a direct financing lease by the lessor if at least one of the four criteria applicable to both lessors and lessees is met, and both of the additional criteria applicable to lessors are met.

- (d) Direct financing leases result in only interest revenue for the lessor. In essence, no product has been sold by the lessor, so no gain/loss, sales, or cost of sales is recognized from the lease transaction. Thus the FV (selling price) of the leased asset equals its cost to the lessor.

- 1] The lessor's entry to record the acquisition of title to the asset to be leased is as follows:

Asset to be leased	(cost of asset = FV)	
Cash		(cash paid)

- 2] At the inception of the lease, the lessor makes the following entry:

Lease receivable	xx	
Asset to be leased		xx
Unearned interest revenue		xx

- 3] In effect, the asset is removed from the lessor's books; it will be transferred to the lessee's books if one of the four criteria applicable to lessees is met. It is possible that the lessee's analysis might result in an operating lease.

- (e) In order to calculate the amounts in the entry above, you must first become familiar with several important terms.

- 1] **Minimum lease payments (MLP)**

MLP are the payments that the lessor/lessee is or can be required to make in connection with the leased property.

- a] Rent payments (excluding executory costs and contingent rentals)
- b] Bargain purchase option (if any)
- c] Guaranteed residual value (if any)
- d] Penalty for failure to renew (if any)
- e] Executory costs (e.g., property taxes, insurance, etc.) and contingent rentals are treated as revenues in the period earned.

- 2] **Bargain purchase option (BPO)**

This option allows the lessee to purchase leased property for an amount substantially lower than the expected FMV at the exercise date of the option.

- 3] **Residual value**

Residual value can be unguaranteed or guaranteed. Some lease contracts require lessees to guarantee residual value to lessors. The lessee can either buy the leased asset at the end of the lease term for the guaranteed residual value or allow the lessor to sell the leased asset (with the lessee paying any deficiency or receiving any excess over the guaranteed residual value).

- a] **Guaranteed residual value (GRV)** is considered part of the "minimum lease payment" and is reflected in the lessor's lease receivable account and the lessee's lease payable account. At the end of the lease term, the receivable and payable on the respective lessor's and lessee's books should be equal to the guaranteed residual value. Both lessor and lessee consider the guaranteed residual value a final lease payment. The lessee should amortize (depreciate) the asset down to the guaranteed residual value.
- b] **Unguaranteed residual value** is the estimated residual value of the leased asset at the end of the lease (if a guaranteed residual value exists, the unguaranteed residual value is the excess of estimated value over the guaranteed residual value). The present value of the unguaranteed residual value should be included in the lessor's net investment in the lease unless the lease transfers title to the leased asset or there is a bargain purchase option.
  - i] At the end of the lease, the lessor's receivable account should be equal to the unguaranteed residual value. The lessor must review the estimated residual value annually and recognize any decreases as a loss. No upward adjustments of the residual value are permitted.

(f) Now you are ready to calculate the amounts for the lessor's entry using the following formulas:

**EXAMPLE**

**Lease receivable\*** = Total + URV (if any)  
 (= gross investment) MLP\*\*

**Asset to be leased** = PV of gross investment  
 (= net investment)  
 (= FV or cost of asset)

**Unearned interest revenue** = Gross investment - FV (or cost) of asset

\*The title **Gross investment** is used when there is an unguaranteed residual value because the lower probability of collection of the residual value makes the use of the term **Receivable** undesirable.

\*\*Include guaranteed residual value.

Alternative methods of recording the lease transaction are shown below.

Lease receivable (gross)	xx		-or-	Lease receivable (net)	xx
Asset to be leased		xx		Asset to be leased	xx
Unearned interest revenue		xx			

**NOTE:** We will follow the gross method in our examples for the lessor because it is consistent with the questions on the CPA exam.

(g) Below are additional guidelines when accounting for the lessor.

- 1] The lease receivable should be separated into current and noncurrent components on the lessor's balance sheet.
- 2] Unearned interest revenue must be amortized to produce a constant periodic rate of return on the net investment using the interest method.
- 3] No residual value is assumed to accrue to the value of the lessor if the lease transfers ownership or contains a BPO.
- 4] At the termination of the lease, the balance in the receivable should equal the guaranteed or unguaranteed residual value, assuming title is not transferred and there is no bargain purchase option.

**EXAMPLE 2**

**Lease Information**

- 1) A three-year lease is initiated on 1/1/Y1 for equipment costing \$131,858 with an expected useful life of five years. The FV of the equipment on 1/1/Y1 is \$131,858.
- 2) Three annual payments are due to the lessor beginning 12/31/Y1. The property reverts back to the lessor upon termination of the lease.
- 3) The guaranteed residual value at the end of year 3 is \$10,000.
- 4) The lessor is to receive a 10% return (implicit rate).
- 5) Collectivity of minimum lease payments is predictable, and there are no important uncertainties concerning costs yet to be incurred by the lessor under the lease.
- 6) The cost (FV) of the asset incurred by the lessor to acquire the asset for leasing is to be recovered through two components: annual rent payments and guaranteed residual value using a discount (implicit) rate of 10%.
- 7) The annual rent payment to the lessor is computed as follows:
  - a) Find PV of guaranteed residual value
 

\$10,000	×	.7513	=	\$7,513
GRV				
  - b) Find PV of annual rent payments
 

\$131,858	-	\$7,513	=	\$124,345
FV of asset				

c) Find annual rent payment

$$\begin{array}{rcl} \$124,345 & \div & PVA_{n=3; i=10\%} \\ \$124,345 & \div & 2.4869 = \$50,000 \end{array}$$

### Lease Classification

This lease is a direct financing lease because criterion 4 (the 90% test) is satisfied.

$$\$124,345 + \$7,513 \geq (.9)(\$131,858)$$

(Since the residual value is guaranteed, the PV of the MLP is 100% of the FV.) The two additional criteria for the lessor are satisfied, and FV equals cost. If the residual value had been unguaranteed, the 90% test would still have been met because  $\$124,345 \geq (.9)(\$131,858)$ .

### Accounting for Lease

1) The lease should be recorded at the beginning of year 1 by the lessor.

2) The lease receivable is calculated as follows:

$$\begin{array}{rcl} (\text{Annual rent payment} \times \text{Lease term}) & + & \text{GRV} \\ \$50,000 \times 3 \text{ yrs.} & + & \$10,000 = \$160,000 \end{array}$$

3) Unearned interest revenue is calculated as follows:

$$\begin{array}{rcl} \text{Lease receivable} & - & \text{FV of asset} \\ \$160,000 & - & \$131,858 = \$28,142 \end{array}$$

4) Unearned interest is amortized during the lease term using the following amortization schedule:

#### AMORTIZATION SCHEDULE

Carrying value at beg. of yr. 1 (= PV of gross investment)		\$131,858
Interest revenue (10%)	\$ 13,186	
Rent payment	(50,000)	(36,814)
Carrying value at beg. of yr. 2		95,044
Interest revenue	9,504	
Rent payment	(50,000)	(40,496)
Carrying value at beg. of yr. 3		54,548
Interest revenue	5,452	
Rent payment	(50,000)	(44,548)
Carrying value at end of yr. 3 (= residual value)		10,000

Lease receivable on balance sheet:

End of Year 1	- current portion	= \$40,496	principal reduction in year 2
	noncurrent portion	= \$54,548	principal reductions after year 2
End of Year 2	- current portion	= \$54,548	principal reduction in the following year (includes residual value)

**NOTE:** As the lease expires, interest revenue decreases and the reduction of principal increases.

5) The journal entries for the lessor are shown below.

#### JOURNAL ENTRIES FOR THE LESSOR

##### Initial entries (Beg. of Yr. 1)

Equipment for leasing	131,858	Cash	50,000
Cash		Lease receivable	50,000
Lease receivable	160,000	Unearned interest	9,504
Equipment for leasing	131,858	Interest revenue	9,504
Unearned interest	28,142		
Cash	50,000	Cash	50,000
Lease receivable	50,000	Lease receivable	50,000
Unearned interest	13,186	Unearned interest	5,452
Interest revenue	13,186	Interest revenue	5,452

6) Assume that when the asset is returned at the end of year 3 the asset has a FV of only \$4,000. The lessee will need to make a payment of \$6,000 (\$10,000 - \$4,000) because the residual value was guaranteed. The lessor would make the following entry:

Cash	6,000
Residual value of equipment	4,000
Lease receivable	10,000

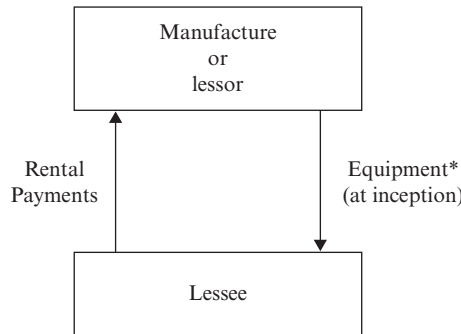

**NOW REVIEW MULTIPLE-CHOICE QUESTIONS 19 THROUGH 20**

**(3) Sales-Type Lease—Lessor**

A sales-type lease arises when a manufacturer or dealer leases an asset which otherwise might be sold outright for a profit. These manufacturers (dealers) use leasing as a way to market their own products (e.g., a car dealership). The leasing, or financing arrangement, is a means for the manufacturer to sell its products and realize a profit from sales. (By contrast, direct financing leases serve purely as financing arrangements.) The following situation shows when a sales-type lease would arise:

ABC Company needs equipment to expand its manufacturing operations. ABC Company enters into a lease agreement with XYZ Manufacturing, Inc. for the equipment. XYZ Manufacturing Inc. records a sales-type lease.

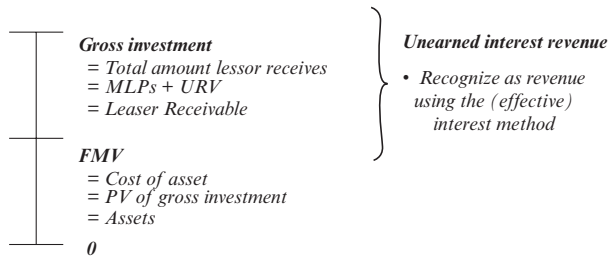

(a) The relationships in a sales-type lease arrangement are illustrated below.

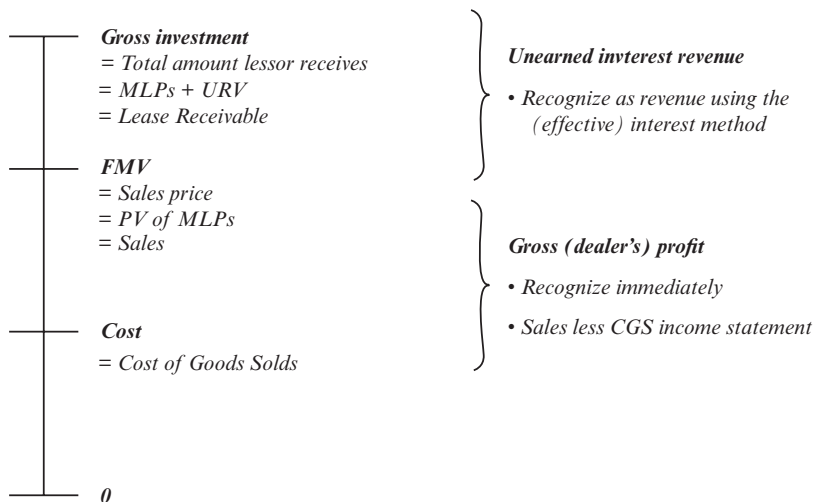

\*Title stays with lessor and property will be returned to lessor at the end of the lease term unless criterion (1) or (2) previously presented is met.

(b) Sales-type leases, unlike direct financing leases, result in both (1) gross profit (loss) in the period of sales, **and** (2) interest revenue to be earned over the lease term using the effective interest method. The diagram below compares and contrasts direct financing leases with sales-type leases.

**Direct Financing Lease (Lessor)**

**Sales-Type Lease (Lessor)**

- (c) A lease is considered to be a sales-type lease from the viewpoint of the lessor if the criteria mentioned earlier for direct financing leases are satisfied. However, in the case of a sales-type lease, the FV of the asset, which is the sales price in the ordinary course of the lessor's business is **greater than** the cost or carrying value of the leased asset. Because of this difference, a sales-type lease is more complex than a direct financing lease. The journal entries to record a sales-type lease are

Lease receivable (Gross)	xx	
Sales		xx
Unearned interest		xx
CGS	xx	
Inventory		xx

Note the similarity of these entries to those made for a sale on account. The differences are "lease receivable" instead of "accounts receivable" and the "unearned interest" for the excess of the receivables over the sales price (present value of future payments).

- (d) Additional guidelines unique to sales-type leases are
- 1] The lessor bases the lease payment schedule on the amount the lessee would have paid to purchase the asset outright (i.e., the sales price). Therefore, sales are equal to the present value of the minimum lease payments.
  - 2] The cost of goods sold to be charged against income is equal to the historic cost or carrying value of the leased asset (most likely inventory) **less** the present value of any unguaranteed residual value.
  - 3] The difference between the selling price and cost of goods sold is the gross profit (loss) recognized by the lessor at the inception of the lease.
  - 4] When accounting for sales-type leases, guaranteed residual value is considered part of sales revenue because the lessor knows the entire asset has been sold. Unguaranteed residual value, however, is excluded from both sales and cost of sales at its present value because there is less certainty that unguaranteed residual value will be realized.

### EXAMPLE 3

#### *Lease Information*

Assume same information as in previous example except

- 1) The cost of the equipment is \$100,000 (either manufactured cost or purchase price paid by dealer).
- 2) The normal selling price of the equipment is \$131,858 which is greater than the \$100,000 cost.
- 3) The residual value is **unguaranteed**.
- 4) The lease payments are \$50,000, the same as computed in the previous example, because the lessor treats an **unguaranteed** residual value in the same way as a guaranteed residual value. However, as mentioned below, the present value of the unguaranteed residual value is not included in the 90% test.

#### *Lease Classification*

This is a sales-type lease since the 90% test is satisfied; 90% of the \$131,858 FV = \$118,672, which is less than \$124,345, the present value of the minimum lease payments (see Numerical Example 2); the present value of the residual value is excluded because it is unguaranteed. Additionally, the cost of the asset is less than its fair value (also the present value of the minimum lease payments plus the unguaranteed residual value). Assume the two additional criteria for the lessor have been satisfied.

#### *Accounting for Lease*

- 1) The gross investment is: \$160,000 [3 payments of \$50,000 (same as Numerical Example 2) plus a \$10,000 unguaranteed residual value]

The PV of gross investment is: \$131,858 [(\$50,000 × 2.4869) + (\$10,000 × .7513)]

The unearned interest revenue is: \$28,142 (\$160,000 – \$131,858)

Sales are: \$124,345 [\$131,858 – (\$10,000 × .7513)\*]

CGS is: \$92,487 [\$100,000 – (\$10,000 × .7513)\*]

\*There is no effect on gross profit of not including the present value of the unguaranteed residual value in either sales or cost of goods sold. In both cases, the gross profit is \$31,858. If the residual value were guaranteed, this adjustment would not be made.

2) The entry to record the lease is

Lease receivable**	160,000	
Cost of goods sold	92,487	
Sales		124,345
Inventory***		100,000
Unearned interest		28,142

\*\*On the balance sheet this amount is termed gross investment since it includes an unguaranteed residual value.

\*\*\*Either acquisition cost to dealer or manufacturer's cost of production.

Interest revenue will be recognized at 10% of the outstanding net investment (lease receivable less unearned interest) each period (i.e., interest revenue in year 1 is  $\$131,858 \times 10\% = \$13,186$ ).

At the end of year 1, the following entry(ies) would be made:

Cash	50,000	
Lease receivable		50,000
Unearned interest revenue	13,186	
Interest revenue		13,186

At termination, the lease receivable will have a balance of \$10,000 which is the unguaranteed residual value. Note that the same amortization schedule that appears in Numerical Example 2 above is applicable to this one. The fact that the residual value is unguaranteed in this example does not affect the amortization schedule because the lessor is projecting that it will get back an asset worth \$10,000. If the asset is returned to the lessor and its fair market value is only \$4,000, the following entry is made on the lessor's books:

Loss	6,000	
Residual value of equipment	4,000	
Lease receivable		10,000

(e) Now that we have completed our discussion of lessor's direct financing and sales-type leases, it should be helpful to review the financial statement elements for the lessor, and to preview elements that appear on the lessee's financial statements. These elements are shown below.

	<b>Lessor</b>	
<i>Balance sheet:</i>	Direct financing lease	Sales-type lease
	Lease receivable (current and noncurrent)	Lease receivable (current and noncurrent)
	Initial direct costs (added to net investment causing a new implicit rate of interest)	

	<b>Lessor</b>	
<i>Income statement:</i>	Unearned interest revenue	Unearned interest revenue
	Interest revenue	Interest revenue
	Amortization of initial direct costs	Initial direct costs (expensed immediately)
		Dealer's profit

	<b>Lessee</b>	
	<b>Capital lease</b>	
<i>Balance sheet:</i>	Leased asset (net of accumulated depreciation)	Lease obligation (current and noncurrent)
<i>Income Statement:</i>	Depreciation expense	
	Interest expense	
	Other maintenance expense	

**NOW REVIEW MULTIPLE-CHOICE QUESTIONS 21 THROUGH 24**

(4) **Capital Leases—Lessee**

When a lessor records a direct financing or sales-type lease, the lessee, in turn, must record a capital lease. Capital leases reflect the transfer of risks and benefits associated with the asset to the lessee.

(a) A lease is considered to be a capital lease to the lessee if any one of the four criteria is satisfied.

- 1] Transfer of title
- 2] Bargain purchase
- 3] 75% of useful life
- 4] 90% of net FV

a] Lease agreements not meeting at least one of the criteria for capital leases are treated as operating leases on the lessee's books. If the lease is classified as a capital lease, the lessee must record an asset and a liability based on the present value of the minimum lease payments as follows:

Leased asset	(PV of MLP)	
Lease obligation		(PV of MLP)

b] The above entry reflects recording the transaction "net" (i.e., at present value). If the lease was recorded gross, the lease obligation would be credited for the total amount of the MLP and there would be a debit to "Discount on lease obligation."

Leased asset	(PV of MLP)	
Discount on lease obligation	(plug)	
Lease obligation		(gross MLP)

- (b) The gross method is similar to the accounting for deferred payment contracts.
- (c) To determine the present value of the MLP, the lessee discounts the future payments using the lesser of
- 1] The lessee's incremental borrowing rate, **or**
  - 2] The lessor's implicit rate if known by the lessee

**NOTE:** Using a lower interest rate increases the present value.

- (d) Leased assets, however, should **not** be recorded at an amount greater than the FV of the asset. If the FV is less than the PV of the MLP, the lease should be recorded at the FV and a new implicit interest rate calculated to reflect a constant periodic rate applied to the remaining balance of the obligation.
- (e) During the term of the lease, the lessee must use the (effective) interest method to allocate cash paid between interest expense and reduction of the lease obligation. This method is the same as the one used by the lessor as previously described.
- (f) Lessees must amortize leased assets recorded on the books under a capital lease. The amortization (depreciation) method used should be consistent with the lessee's normal depreciation policy. The term over which the asset is amortized may differ depending upon which criteria qualified the lease as a capital lease.
- 1] If the lease transfers ownership or contains a BPO (criteria 1 or 2), the asset will be amortized over its estimated useful life (since the asset actually becomes the property of the lessee at the end of the lease term and will be used for the remainder of its useful life).
  - 2] If the 75% of useful life or the 90% test (criteria 3 or 4) is met, the leased asset is amortized over the lease term only (since the property will revert to the lessor at the end of the lease term and will be used for the remainder of its useful life).
- (g) The lease term does not extend beyond the date of a bargain purchase option. Lease terms, however, may include the following:
- 1] Bargain renewal periods
  - 2] Periods when the lessor has the option to renew or extend
  - 3] Periods during which the lessee guarantees the debt of the lessor
  - 4] Periods in which a material penalty exists for failure to renew
- (h) When the lease terminates, the balance in the obligation account should equal the bargain purchase option price or the expected residual value (guaranteed residual value, or salvage value if lower).
- 1] Leased assets and obligations should be disclosed as such in the balance sheet. The lease obligation should be separated into both current and noncurrent components.

**EXAMPLE 4**

**Lease Information**

- 1) A three-year lease is initiated on 1/1/Y1 for equipment with an expected useful life of five years. The equipment reverts back to the lessor upon expiration of the lease agreement.
- 2) Three payments are due to the lessor in the amount of \$50,000 per year **beginning 12/31/Y1**. An additional sum of \$1,000 is to be paid annually by the lessee for insurance.
- 3) Lessee guarantees a \$10,000 residual value on 12/31/Y3 to the lessor.
- 4) The leased asset is expected to have only a \$7,000 salvage value on 12/31/Y3 despite the \$10,000 residual value guarantee; therefore, the asset should be depreciated down to the \$7,000 expected residual value.
- 5) The lessee's incremental borrowing rate is 10% (same as lessor's implicit rate).
- 6) The present value of the lease obligation is

PV of guaranteed residual value	=	\$10,000	×	.7513	=	\$ 7,513
PV of annual payments	=	\$50,000	×	2.4869	=	<u>124,345</u>
						<u>\$131,858</u>

Since the lessee's incremental borrowing rate is 10% and the residual value is guaranteed, the present value of \$131,858 is the same amount used by the lessor in the direct financing lease example (Numerical Example 2) to determine the payments to be made by the lessee. If an incremental borrowing rate different than the lessor's is used and/or the lease contains an unguaranteed residual value, the present value computed by the lessee will differ from the lessor's present value (FV). These differences account for the fact that many leases are not capitalized by lessees because they don't meet the 90% test.

**Lease Classification**

The 90% test is met because the present value of the minimum lease payments (\$131,858) is 100% of the FV of the leased asset.

**Accounting for Lease**

- 1) Note that executory costs (e.g., insurance, property taxes, etc.) are not included in the present value calculations
- 2) The entry to recognize the lease is

1/1/Y1	Leased equipment	131,858	
	Lease obligation		131,858

- 3) The entries to record the payments and depreciation are

	12/31/Y1	12/31/Y2	12/31/Y3		
Insurance expense	1,000	1,000	1,000		
Lease obligation*	36,814	40,496	44,548		
Interest expense*	13,186	9,504	5,452		
Cash		51,000	51,000	51,000	51,000
Depreciation expense**	41,619	41,619	41,620		
Accumulated depreciation	41,619	41,619	41,619		41,620***

\* Refer to the amortization table in the direct financing lease discussion (Numeric Example 2). Note that classification of the lease obligation into current and noncurrent on the lessee's books would parallel classification of the lease receivable on the lessor's books.

**NOTE:** Classification of the lease obligation into current and noncurrent on the lessee's books would parallel classification of the lease receivable on the lessor's books.

\*\*  $[(\$131,858 - 7,000) \div 3 \text{ years}]$

\*\*\* Rounding error of \$1

- 4) The 12/31/Y3 entry to record the guaranteed residual value payment (assuming salvage value = estimated residual value = \$7,000) and to clear the lease related accounts from the lessee's books is

Lease obligation	10,000	
Accumulated depreciation	124,858	
Cash		3,000
Leased equipment		131,858

If the actual residual value were only \$5,000, the credit to "cash" would be \$5,000 and a \$2,000 loss would be recognized by the lessee.

- (i) Remember that leased assets are amortized over the lease term unless title transfers or a bargain purchase option exists—then over the useful life of the leased asset. At the end of the lease, the balance of the lease obligation should equal the guaranteed residual value or the bargain purchase option price. To illustrate, consider the following example.

**EXAMPLE 5****Lease Information**

- 1) A three-year lease is initiated on 1/1/Y1 for equipment with an expected useful life of five years.
- 2) Three annual \$50,000 payments are due the lessor **beginning 1/1/Y1**.
- 3) The lessee can exercise a bargain purchase option on 12/31/Y3 for \$10,000. The expected residual value at 12/31/Y5 is \$1,000.
- 4) The lessee's incremental borrowing rate is 10% (lessor's implicit rate is unknown).

**Lease Classification**

Although the lease term is for only 60% of the asset's useful life, the lessee would account for this as a capital lease because it contains a bargain purchase option. Also, the PV of the minimum lease payments is greater than 90% of the FV of the leased asset.

**Accounting for Lease**

- 1) The present value of the lease obligation is

$$\begin{array}{rcl}
 \text{PV of bargain purchase option} & = & \$10,000 \times .7513 = \$ 7,513 \\
 \text{PV of annual payments} & = & \$50,000 \times 2.7355 = \underline{136,775} \\
 & & \$144,288
 \end{array}$$

- 2) The following amortization table summarizes the liability amortization:

**AMORTIZATION TABLE**

Carrying value at beg. of yr. 1		\$144,288
Lease payment	\$(50,000)	<u>(50,000)</u>
Carrying value at beg. of yr. 1 after first payment		94,288
Interest expense	9,429	
Lease payment	<u>(50,000)</u>	<u>(40,571)</u>
Carrying value at beg. of year 2 after second payment		53,717
Interest expense	5,372	
Lease payment	<u>(50,000)</u>	<u>(44,628)</u>
Carrying value at beg. of yr. 3 after third payment		9,089
Interest expense	911*	<u>911</u>
Bargain purchase option		10,000
Option payment	(10,000)	<u>(10,000)</u>
		-

\*Rounding error of \$2

**NOTE:** This table reflects the fact that the lease is an annuity due with cash payments on 1/1 and interest expense accruals on 12/31; thus, the first payment does not include any interest expense.

- 3) The entry to record the lease is

1/1/Y1	Leased equipment	144,288	
	Lease obligation		144,288

4) The entries to record the payments, interest expense, depreciation (amortization) expense, and the exercise of the bargain purchase are

		Year 1	Year 2	Year 3
1/1	Lease obligation	50,000	40,571	44,628
	Accrued interest payable or interest expense*		9,429	5,372
	Cash		50,000	50,000
12/31	Interest expense	9,429	5,372	911
	Accrued int. payable		9,429	5,372
	Lease obligation			911
12/31	Depreciation expense**	28,658	28,658	28,658
	Accumulated depreciation		28,658	28,658
12/31	Lease obligation			10,000
	Cash			10,000

\* If 12/31 accruals are reversed  
 \*\* (143,288 ÷ 5 years)

3. Other Considerations

To supplement the review of lease accounting presented above, the following topics have been selected for further discussion:

- a. Initial direct costs
- b. Sale-leaseback
- c. Disclosure requirements

a. Initial direct costs

- (1) Initial direct costs are the lessor’s costs directly associated with negotiation and consummation of leases. These costs include commissions, legal fees, credit investigations, document preparation, etc. In operating leases, initial direct costs are capitalized and subsequently amortized to expense in proportion to the recognition of rental revenue (which is usually straight-line).
- (2) Initial direct costs of direct financing and sales-type leases are accounted for differently
  - (a) In sales-type leases, charge initial direct costs to operations in the year the sale is recorded;
  - (b) In direct financing leases add the initial direct costs to the net investment in the lease.
  - (c) Compute a new effective interest rate that equates the minimum lease payments and any unguaranteed residual value with the combined outlay for the leased asset and initial direct costs. Finally, the unearned lease (interest) revenue and the initial direct costs are to be amortized to income over the lease term so that a constant periodic rate is earned on the net investment.

b. Sale-leaseback

- (1) Sale-leaseback describes a transaction where the owner of property (seller-lessee) sells the property, and then immediately leases all or part of it back from the new owner (buyer-lessor). The important consideration in this type of transaction is the recognition of two separate and distinct economic transactions. It is important, however, to note that there is not a physical transfer of property. First, there is a sale of property, and second, there is a lease agreement for the same property in which the seller is the lessee and the buyer is the lessor. This is illustrated below.

**NOTE:** Sale-leaseback transactions only affect accounting for the seller-lessee. Buyer-lessor accounting is unaffected.

- (2) The accounting treatment from the seller-lessee's point of view will depend upon the degree of rights to use the property retained by the seller-lessee. The degree of rights may be categorized in one of three ways:
- Substantially all
  - Minor
  - More than minor but less than substantially all
- (3) A seller-lessee retains **substantially all** the rights to use the property if the PV of the rental payments is 90% or more of the fair value of the asset sold. This test is based on the criteria used earlier to classify leases. Since the seller-lessee retains use of the asset, this type of sale-leaseback is considered, in substance, a form of financing to the seller-lessee rather than a sale. In this case, any gain on the sale is deferred by the seller-lessee.

Cash	(selling price)	
Asset		(carrying value)
Deferred gain		(excess)

- (a) The asset would be reported on the seller-lessee's balance sheet as follows:

Leased asset	xx
Less: Deferred gain	(xx)
	xx

- (b) The net value of the leased asset is the same amount the asset would be if it had not been sold.  
 (c) If the lease is classified as a capital lease, the deferred gain is amortized over the life of the asset at the same rate as the asset is being depreciated. As deferred gain is amortized, it is charged to depreciation expense.

Deferred gain	xx	
Depreciation expense		xx

- (d) Alternatively, the gain may be recognized as income over the term of the lease.  
 (e) Although most leases in the "substantially all" category are capital leases, a sale-leaseback occurring in the last 25% of an asset's economic life would be classified as an operating lease.  
 (f) If the lease is classified as an operating lease, any deferred gain is amortized over the lease term in proportion to the related gross rental charges to expense over the lease term. Amortization in this case is charged to rent expense by the seller-lessee.

Deferred gain	xx	
Rent expense		xx

- (4) The seller-lessee retains only a **minor** portion of rights to use the property when the PV of the rental payments is 10% or less of the fair value of the asset sold. Since the seller-lessee has given up the right to use the asset, the leaseback is considered in substance a sale. Any gain on the sale is recognized in full since the earnings process is considered complete.

Cash	(selling price)	
Asset		(carrying value)
Gain		(excess)

- (a) When only a minor portion of use is retained, the seller-lessee accounts for the lease as an operating lease.  
 (5) The seller-lessee retains **more than a minor portion but less than substantially all** the rights to use the property when the PV of the rental payments is more than 10% but less than 90% of the fair value of the asset sold. In this situation, gain is recognized only to the extent that it exceeds the PV of the rental payments.

Cash	(selling price)	
Asset		(carrying value)
Deferred gain		(PV of rental payments)
Gain		(excess)

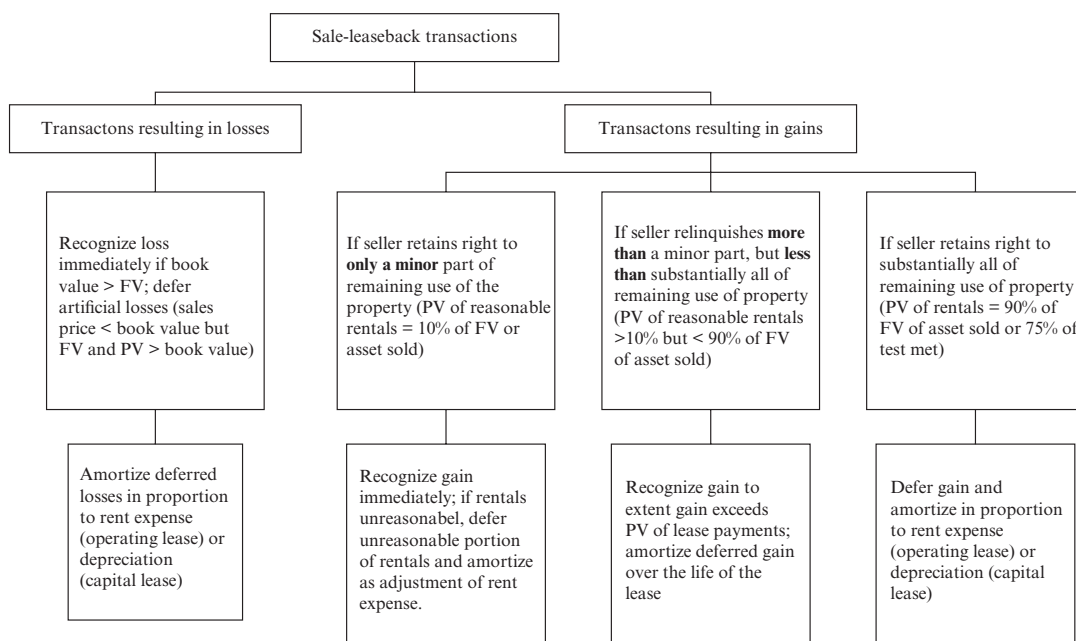

- (6) Recognized gain for capital and operating leases is derived as follows:

- If the leaseback is classified as an operating lease, recognized gain is the portion of gain that exceeds the PV of the MLP over the lease term. The seller-lessee should use its incremental borrowing rate to compute the PV of the MLP. If the implicit rate of interest in the lease is known and lower, it should be used instead.
- If the leaseback is classified as a capital lease, recognized gain is the amount of gain that exceeds the recorded amount of the leased asset.

- (7) In all cases, the seller-lessee should immediately recognize a loss when the fair value of the property at the time of the leaseback is less than its undepreciated cost (book value). In the example below, the sales price is less than the book value of the property. However, there is no economic loss because the FV which equals the PV is greater than the book value.

Sales price	Book value	FV and PV
\$85,000	\$90,000	\$100,000
_____ (\$5,000)		
Artificial Loss		

- (a) The artificial loss must be deferred and amortized as an addition to depreciation.
- (8) In the following chart, when the leased asset is land only, any amortization should be on a straight-line basis over the lease term, regardless of whether the lease is classified as a capital or operating lease.
- (a) The buyer-lessor should account for the transaction as a purchase and a direct financing lease if the agreement meets the criteria of **either** a direct financing lease or a sales-type lease. Otherwise, the agreement should be accounted for as a purchase and an operating lease.
- (b) To illustrate a sale-leaseback transaction, consider the example below.

**EXAMPLE 6**

**Lease Information**

- 1) Lessee Corporation sells equipment that has a book value of \$80,000 and a fair value of \$100,000 to Lessor Corporation, and then immediately leases it back.
- 2) The sale date is January 1, year 1, and the equipment has a fair value of \$100,000 on that date and an estimated useful life of fifteen years.
- 3) The lease term is fifteen years, noncancelable, and requires equal rental payments of \$13,109 at the beginning of each year.
- 4) Lessee Corp. has the option to renew the lease annually at the same rental payments upon expiration of the original lease.
- 5) Lessee Corp. has the obligation to pay all executory costs.
- 6) The annual rental payments provide the lessor with a 12% return on investment.
- 7) The incremental borrowing rate of Lessee Corp. is 12%.
- 8) Lessee Corp. depreciates similar equipment on a straight-line basis.

Lessee Corp. should classify the agreement as a capital lease since the lease term exceeds 75% of the estimated economic life of the equipment, and because the present value of the lease payments is greater than 90% of the fair value of the equipment. Assuming that collectibility of the lease payments is reasonably predictable and that no important uncertainties exist concerning the amount of unreimbursable costs yet to be incurred by the lessor, Lessor Corp. should classify the transaction as a direct financing lease because the present value of the minimum lease payments is equal to the fair market value of \$100,000.

#### *Accounting for Lease*

Lessee Corp. and Lessor Corp. would normally make the following journal entries during the first year:

#### Upon Sale of Equipment on January 1, year 1

<b>Lessee Corp.</b>		<b>Lessor Corp.</b>		
Cash	100,000	Equipment	100,000	
Equipment	80,000	Cash		100,000
Unearned profit on sale-leaseback	20,000	Lease receivable	196,635*	100,000
Leased equipment	100,000	Equipment		
Lease obligations	100,000	Unearned interest		96,635
				* (\$13,109 × 15)

#### To Record First Payment on January 1, year 1

<b>Lessee Corp.</b>		<b>Lessor Corp.</b>		
Lease obligations	13,109	Cash	13,109	
Cash	13,109	Lease receivable		13,109

#### To Record Incurrence and Payment of Executory Costs

<b>Lessee Corp.</b>		<b>Lessor Corp.</b>	
Insurance, taxes, etc.	xxx		(No entry)
Cash (accounts payable)	xxx		

#### To Record Depreciation Expense on the Equipment, December 31, year 1

<b>Lessee Corp.</b>		<b>Lessor Corp.</b>	
Depreciation expense		6,667	(No entry)
Accum. depr.—capital leases (\$100,000 ÷ 15)		6,667	

#### To Amortize Profit on Sale-Leaseback by Lessee Corp., December 31, year 1

<b>Lessee Corp.</b>		<b>Lessor Corp.</b>	
Unearned profit on sale-leaseback	1,333		(No entry)
Depr. Expense (\$20,000 ÷ 15)		1,333	

#### To Record Interest for December 31, year 1

<b>Lessee Corp.</b>		<b>Lessor Corp.</b>		
Interest expense	10,427	Unearned interest revenue	10,427	
Accrued interest payable	10,427	Interest revenue		10,427
(Carrying value \$86,891 × .12 = \$10,427)				

#### c. Disclosure requirements

The disclosures required of the lessor and lessee are very comprehensive and detailed. In essence, all terms of the leasing arrangement are required (i.e., contingent rentals, subleases, residual values, unearned interest revenue, etc.). There are, however, some generic disclosure requirements. First, a **general description** of the leasing arrangement is required. Second, the minimum future payments to be received (paid) by the lessor (lessee) for each of the **five succeeding fiscal years** should also be disclosed.

SUMMARY OF KEY PROBLEM SOLUTION POINTS

(1) Lessor—direct financing and sales-type leases

- (a) Periodic lease payments (PLP) = 
$$\frac{\text{FV of leased property} - \text{PV of RV}^*/\text{BPO}}{\text{PV of an annuity factor}^{**} \text{ using the lessor's implicit rate}}$$
- \* Guaranteed/unguaranteed  
 \*\* Annuity due or ordinary
- (b) Lease payments receivable/Gross investments = (Periodic lease payments × Number of rents) + Residual value/BPO
- (c) Unearned interest revenue = Gross investment – PV of PLP, PV of G/U RV, PV of BPO
- (d) Net investment = Gross investment – Unearned interest revenue
- (e) Gross profit (only for sales-type leases) = Selling price\* – Cost of leased asset sold  
 \* (FV/PV of PLP + G/URV + BPO)
- (f) Interest revenue = Carrying value of lease receivable\* × Implicit % × Time  
 \* (Gross investment – Unearned interest revenue)

Periodic Journal Entries

Unearned interest revenue	xxx	
Interest revenue		xxx
Cash	xxx	
Lease payments receivable		xxx

(2) Lessee—capital lease

- (a) Determine capital lease liability = (Periodic lease payment [PLP] × Present value factor \* ) + (G/URV or BPO × PV of 1.00 factor)  
 \* Annuity due or ordinary annuity
- Use lessee's incremental borrowing %, unless lessor's implicit % is lower and lessee knows it
  - PLP is exclusive of executory costs
- (b) Leased asset = Capital lease liability at inception of lease as computed above—PV × MLP [Exception: where FV of leased asset < PV of MLP (PLP + GRV or BPO), then leased asset and capital lease liability are recorded at the FV of leased asset.]
- (c) Depreciation (amortization) of leased asset • Over useful life, regardless of lease term, if either criterion (1) or (2) is met: title transfer or bargain purchase option.  
 • Over lease term if criterion (3) or (4) is met: ≥ 75% test or ≥ 90% test
- (d) Lease liability = (1) Carrying value at inception of lease \$xxx  
 (2) Less first payment (usually the first payment is all principal because the lease liability is the PV of an annuity due) (xx)  
 (3) Carrying value (CV) \$xxx
- (e) CV × % = Interest expense (4) Less principal part of second payment [PLP – (CV × interest %)] (xxx)  
 (5) Carrying value \$xxx  
 etc.

**NOW REVIEW MULTIPLE-CHOICE QUESTIONS 25 THROUGH 56**

4. Research Component—Accounting Standards Codification

- a. The accounting rules for leases are found in the area of the Codification labeled “Broad Transactions” under Topic 840 Broad Transactions—Leases is divided into the following subtopics:

**Broad Transactions**

840-10	Overall
840-20	Operating Leases
840-30	Capital Leases
840-40	Sales-Leaseback Transactions

- b. Care should be taken when researching this area of the standards, as the rules for lessee and lessor are intertwined throughout each section of the Codification. Candidates should take special care to read the titles of each subtopic and section to ensure the question is answered appropriately for either the lessee or lessor. Typical research questions may include determining whether a lease is an operating lease or a capital lease or determining which items to include in calculating the minimum lease payments.
- c. Keywords are shown below.

Bargain purchase option	Lease modification	Sales-type lease
Capital lease	Leasehold improvement	Substantial rights
Costs to terminate	Minimum lease payments	Termination costs
Direct financing lease	Modified lease	Termination of agreement
Guaranteed residual	New agreement operating lease	Transfer title
Initial direct costs	Operating lease	Unguaranteed residual
Lease bonus	Sale-leaseback	

#### 5. International Financial Reporting Standards (IFRS)

- a. Leasing is a topic where the IASB rules focus on substance over form. Unlike US GAAP, which uses certain thresholds to determine whether a lease should be classified as a capital lease, IAS 17 classifies leases based on whether substantially all the risks or benefits of ownership have been transferred. Leasing is also a topic where subtle terminology differences exist, for example, capital lease (US GAAP) versus finance lease (IFRS).
- b. **Criteria for treatment of leases.** Under US GAAP, a lessee classifies a lease as either an operating lease or a capital lease. For the lessor, the lease is classified as an operating lease, a direct-financing lease, or a sales-type lease. However, under IAS 17 the lease is classified as either an operating lease or a finance lease for the lessee and the lessor. Of course, with a finance lease, the lessor is usually financing the item, or, if the lessor is a manufacturer or dealer, the lessor is selling the item through the leasing process.
- c. Lease payments under an operating lease are recognized as expense on a straight-line basis over the lease term. The lessee must disclose in the footnotes the total future minimum payments for the next 12 months, payments due in Years 2–5, and payments due after five years, as well as a general description of the lease terms and restrictions imposed by the lease.
- d. IFRS provides that a lease is a finance lease if substantially all of the risks or benefits of ownership have been transferred to the lessee. If any one of the four criteria is met, the lease is considered a finance lease.
- (1) The lease transfers ownership to the lessee by the end of the lease term or the lease contains a bargain purchase option, and it is reasonably certain that the option will be exercised.
  - (2) The lease term is for the major part of the economic life of the asset (title may or may not pass to the lessee).
  - (3) The present value of the minimum lease payments at the inception of the lease is at least equal to substantially all of the fair value of the leased asset.
  - (4) The leased assets are of a specialized nature such that only the lessee can use them without modifications.
    - (a) Although these four criteria are similar to the rules under US GAAP, notice that these rules do not carry specific thresholds such as 75% of the economic life or 90% of the fair value of the leased asset. Therefore, the proper classification is determined based on judgments about the substance of the transaction.
    - (b) In addition, the following three other circumstances may indicate that the lease should be treated as a finance lease:
      - 1] If the lessee can cancel the lease, and the lessor's losses are borne by the lessee.
      - 2] Gains or losses resulting from the fluctuations in fair value will accrue to the lessee.
      - 3] The lessee has the ability to continue the lease for a supplemental term at a rent substantially lower than market value.
- e. Under IFRS, a lease is classified as either an operating or a finance lease at the inception of the lease. The inception of the lease is the earlier of the date of the lease agreement or the date of commitment to the lease agreement. The commencement date of the lease term is the date on which the lessee is entitled to use the

leased asset. Although the lease must be classified as either an operating or a finance lease on the date of inception, the lease is not recognized in the financial statements until the commencement date when the lessee is entitled to use the asset.

- f. Another significant difference in classifying leases arises when land and buildings are leased together. Because land has an indefinite life, if title does not pass by the end of the lease term, the substantial risks and rewards of ownership do not transfer. Thus, in such cases the land lease cannot be classified as a finance lease. Under IFRS, the land and building would be treated as separate components; the land lease would be classified as an operating lease, and the building lease would be classified as a finance lease (assuming substantially all risks and rewards of ownership transferred). The minimum lease payments would be allocated between the land and the buildings elements in proportion to the relative fair values of the leasehold interests of each element. If both elements of the lease are expected to pass to the lessee at the end of the lease term, then the entire lease is classified as a finance lease.
- (1) **Accounting by lessees.** Under IFRS, the finance lease is recorded as an asset and as a liability by the lessee at the fair value of the leased property at the inception of the lease or the present value of the minimum lease payments. For the lessee, the minimum lease payments include the payments over the lease term that are required to be made, the bargain purchase option, and amounts guaranteed by the lessee. For the lessor, the minimum lease payments also include any residual value guaranteed by a third party not related to the lessor.
- (a) The interest rate used to calculate the present value of the minimum lease payments is the implicit rate. However, if the implicit rate cannot be determined, then the lessee's incremental borrowing rate is used. Any indirect costs incurred by the lessee in connection with negotiating and arranging the lease are added to the cost of the asset.
  - (b) Each period the minimum lease payments are apportioned between the finance charge and the reduction of the principal outstanding. Any contingent rents are charged to expense as they are incurred. In addition, depreciation expense should be recognized for the leased asset. If ownership transfers at the end of the lease term, then the asset is depreciated over its useful life. If ownership does not transfer, then the finance lease is depreciated over the shorter of the lease term or the asset's useful life.
  - (c) Disclosures required for leases include the net carrying amount at the end of the reporting period, the future minimum lease payments at the end of the reporting period, and the present value of the lease payments due within one year, due after one year and less than five years, and after five years. Disclosures should also indicate the contingent rents recognized as expense during the period, a description of the lease, and its terms and restrictions.
- (2) **Accounting by lessors.** In a finance lease, the asset is removed from the lessor's balance sheet, and the net investment in the lease is recorded as an asset. The net investment in the lease is calculated as gross lease receivables less the unearned finance income (interest income).
- (a) Similar to US GAAP, a manufacturer or dealer will recognize the sale, cost of goods sold, lease receivable, and unearned finance income.
  - (b) **Sales and leaseback.** A sale and leaseback transaction may be classified as either an operating lease or a finance lease. The same criteria (risk and benefits of ownership, substance over form) determine whether the sale and leaseback is an operating or a finance lease. If it is classified as a finance lease, the gain is deferred and amortized over the lease term. If it is classified as an operating lease, the profit or loss is recognized immediately. If it is an operating lease and the fair value at the time of the sale and leaseback transaction is less than the carrying amount of the asset, then a loss is recognized immediately.

**NOW REVIEW MULTIPLE-CHOICE QUESTIONS 57 THROUGH 60**

**KEY TERMS**

**Bargain purchase option (BPO).** Allows the lessee to purchase leased property for an amount substantially lower than the expected FMV at the exercise date of the option.

**Capital lease.** A lease that transfers substantially all of the benefits and risks incident to the ownership of property.

**Guaranteed residual value (GRV).** A guaranteed residual value of the leased asset at the end of the lease.

**Initial direct costs.** Costs in setting up the lease agreement.

**Lease.** A contract between two parties—a lessor and a lessee that gives a lessee rights to use the lessor's property for a specified period of time in return for periodic cash payments (rent) to the lessor.

**Minimum lease payments (MLP).** The payments that the lessor/lessee is or can be required to make in connection with the leased property.

**Operating lease.** The risks and rewards of owning the asset remain with the lessor.

**Unguaranteed residual value.** The estimated residual value of the leased asset at the end of the lease.

## Multiple-Choice Questions (1–60)

### E.2.d.(1) Operating Lease—Lessor/Lessee

1. Rapp Co. leased a new machine to Lake Co. on January 1, year 1. The lease is an operating lease and expires on January 1, year 6. The annual rental is \$90,000. Additionally, on January 1, year 1, Lake paid \$50,000 to Rapp as a lease bonus and \$25,000 as a security deposit to be refunded upon expiration of the lease. In Rapp's year 1 income statement, the amount of rental revenue should be

- a. \$140,000
- b. \$125,000
- c. \$100,000
- d. \$90,000

2. Wall Co. leased office premises to Fox, Inc. for a five-year term beginning January 2, year 1. Under the terms of the operating lease, rent for the first year is \$8,000 and rent for years two through five is \$12,500 per annum. However, as an inducement to enter the lease, Wall granted Fox the first six months of the lease rent-free. In its December 31, year 1 income statement, what amount should Wall report as rental income?

- a. \$12,000
- b. \$11,600
- c. \$10,800
- d. \$8,000

3. On January 1, year 1, Wren Co. leased a building to Brill under an operating lease for ten years at \$50,000 per year, payable the first day of each lease year. Wren paid \$15,000 to a real estate broker as a finder's fee. The building is depreciated \$12,000 per year. For year 1, Wren incurred insurance and property tax expense totaling \$9,000. Wren's net rental income for year 1 should be

- a. \$27,500
- b. \$29,000
- c. \$35,000
- d. \$36,500

4. On July 1, year 1, Gee, Inc. leased a delivery truck from Marr Corp. under a three-year operating lease. Total rent for the term of the lease will be \$36,000, payable as follows:

- 12 months at \$500 = \$6,000
- 12 months at \$750 = 9,000
- 12 months at \$1,750 = 21,000

All payments were made when due. In Marr's June 30, year 3 balance sheet, the accrued rent receivable should be reported as

- a. \$0
- b. \$9,000
- c. \$12,000
- d. \$21,000

5. On January 1, year 1, Glen Co. leased a building to Dix Corp. under an operating lease for a ten-year term at an annual rental of \$50,000. At inception of the lease, Glen received \$200,000 covering the first two years' rent of \$100,000 and a security deposit of \$100,000. This deposit will not be

returned to Dix upon expiration of the lease but will be applied to payment of rent for the last two years of the lease. What portion of the \$200,000 should be shown as a current and long-term liability, respectively, in Glen's December 31, year 1 balance sheet?

	Current liability	Long-term liability
a.	\$0	\$200,000
b.	\$50,000	\$100,000
c.	\$100,000	\$100,000
d.	\$100,000	\$50,000

6. As an inducement to enter a lease, Graf Co., a lessor, granted Zep, Inc., a lessee, twelve months of free rent under a five-year operating lease. The lease was effective on January 1, year 1, and provides for monthly rental payments to begin January 1, year 2. Zep made the first rental payment on December 30, year 1. In its year 1 income statement, Graf should report rental revenue in an amount equal to

- a. Zero.
- b. Cash received during year 1.
- c. One-fourth of the total cash to be received over the life of the lease.
- d. One-fifth of the total cash to be received over the life of the lease.

7. Quo Co. rented a building to Hava Fast Food. Each month Quo receives a fixed rental amount plus a variable rental amount based on Hava's sales for that month. As sales increase so does the variable rental amount, but at a reduced rate. Which of the following curves reflects the monthly rentals under the agreement?

- a. I
- b. II
- c. III
- d. IV

8. As an inducement to enter a lease, Arts, Inc., a lessor, grants Hompson Corp., a lessee, nine months of free rent under a five-year operating lease. The lease is effective on July 1, year 1 and provides for monthly rental of \$1,000 to begin April 1, year 2. In Hompson's income statement for the year ended June 30, year 2, rent expense should be reported as

- a. \$10,200
- b. \$9,000
- c. \$3,000
- d. \$2,550

9. On January 1, year 1, Park Co. signed a ten-year operating lease for office space at \$96,000 per year. The lease included a provision for additional rent of 5% of annual company

sales in excess of \$500,000. Park's sales for the year ended December 31, year 1, were \$600,000. Upon execution of the lease, Park paid \$24,000 as a bonus for the lease. Park's rent expense for the year ended December 31, year 1, is

- \$98,400
- \$101,000
- \$103,400
- \$125,000

10. On July 1, year 1, South Co. entered into a ten-year operating lease for a warehouse facility. The annual minimum lease payments are \$100,000. In addition to the base rent, South pays a monthly allocation of the building's operating expenses, which amounted to \$20,000 for the year ended June 30, year 2. In the notes to South's June 30, year 2 financial statements, what amounts of subsequent years' lease payments should be disclosed?

- \$100,000 per annum for each of the next five years and \$500,000 in the aggregate.
- \$120,000 per annum for each of the next five years and \$600,000 in the aggregate.
- \$100,000 per annum for each of the next five years and \$900,000 in the aggregate.
- \$120,000 per annum for each of the next five years and \$1,080,000 in the aggregate.

11. On January 1, year 1, Mollat Co. signed a seven-year lease for equipment having a ten-year economic life. The present value of the monthly lease payments equaled 80% of the equipment's fair value. The lease agreement provides for neither a transfer of title to Mollat nor a bargain purchase option. In its year 1 income statement Mollat should report

- Rent expense equal to the year 1 lease payments.
- Rent expense equal to the year 1 lease payments less interest expense.
- Lease amortization equal to one-tenth of the equipment's fair value.
- Lease amortization equal to one-seventh of 80% of the equipment's fair value.

12. A twenty-year property lease, classified as an operating lease, provides for a 10% increase in annual payments every five years. In the sixth year compared to the fifth year, the lease will cause the following expenses to increase

	Rent	Interest
a.	No	Yes
b.	Yes	No
c.	Yes	Yes
d.	No	No

### E.2.d.(1)(e) Leasehold Improvements

13. On December 1, year 1, Clark Co. leased office space for five years at a monthly rental of \$60,000. On the same date, Clark paid the lessor the following amounts:

First month's rent	\$60,000
Last month's rent	60,000
Security deposit (refundable at lease expiration)	80,000
Installation of new walls and offices	360,000

What should be Clark's year 1 expense relating to utilization of the office space?

- \$60,000
- \$66,000
- \$120,000
- \$140,000

14. Star Co. leases a building for its product showroom. The ten-year nonrenewable lease will expire on December 31, year 11. In January year 6, Star redecorated its showroom and made leasehold improvements of \$48,000. The estimated useful life of the improvements is eight years. Star uses the straight-line method of amortization. What amount of leasehold improvements, net of amortization, should Star report in its June 30, year 6 balance sheet?

- \$45,600
- \$45,000
- \$44,000
- \$43,200

15. On January 2, year 1, Ral Co. leased land and building from an unrelated lessor for a ten-year term. The lease has a renewal option for an additional ten years, but Ral has not reached a decision with regard to the renewal option. In early January of year 1, Ral completed the following improvements to the property:

Description	Estimated life	Cost
Sales office	10 years	\$47,000
Warehouse	25 years	75,000
Parking lot	15 years	18,000

Amortization of leasehold improvements for year 1 should be

- \$7,000
- \$8,900
- \$12,200
- \$14,000

16. On January 1, year 1, Nobb Corp. signed a twelve-year lease for warehouse space. Nobb has an option to renew the lease for an additional eight-year period on or before January 1, year 5. During January year 3, Nobb made substantial improvements to the warehouse. The cost of these improvements was \$540,000, with an estimated useful life of fifteen years. At December 31, year 3, Nobb intended to exercise the renewal option. Nobb has taken a full year's amortization on this leasehold. In Nobb's December 31, year 3 balance sheet, the carrying amount of this leasehold improvement should be

- \$486,000
- \$504,000
- \$510,000
- \$513,000

17. During January year 1, Vail Co. made long-term improvements to a recently leased building. The lease agreement provides for neither a transfer of title to Vail nor a bargain purchase option. The present value of the minimum lease payments equals 85% of the building's market value, and the lease term equals 70% of the building's economic life.

Should assets be recognized for the building and the leasehold improvements?

	Building	Leasehold improvements
a.	Yes	Yes
b.	No	Yes
c.	Yes	No
d.	No	No

18. A lessee incurred costs to construct office space in a leased warehouse. The estimated useful life of the office is ten years. The remaining term of the nonrenewable lease is fifteen years. The costs should be

- Capitalized as leasehold improvements and depreciated over fifteen years.
- Capitalized as leasehold improvements and depreciated over ten years.
- Capitalized as leasehold improvements and expensed in the year in which the lease expires.
- Expensed as incurred.

**E.2.d.(2) Direct Financing Lease—Lessor**

19. Glade Co. leases computer equipment to customers under direct-financing leases. The equipment has no residual value at the end of the lease and the leases do not contain bargain purchase options. Glade wishes to earn 8% interest on a five-year lease of equipment with a fair value of \$323,400. The present value of an annuity due of \$1 at 8% for five years is 4.312. What is the total amount of interest revenue that Glade will earn over the life of the lease?

- \$51,600
- \$75,000
- \$129,360
- \$139,450

20. On January 1, year 1, JCK Co. signed a contract for an eight-year lease of its equipment with a ten-year life. The present value of the sixteen equal semiannual payments in advance equaled 85% of the equipment's fair value. The contract had no provision for JCK, the lessor, to give up legal ownership of the equipment. Should JCK recognize rent or interest revenue in year 2, and should the revenue recognized in year 2 be the same or smaller than the revenue recognized in year 1?

	Year 2 revenues recognized	Year 2 amount recognized compared to year 1
a.	Rent	The same
b.	Rent	Smaller
c.	Interest	The same
d.	Interest	Smaller

**E.1.d.(3) Sales-Type Lease—Lessor**

21. Peg Co. leased equipment from Howe Corp. on July 1, year 1 for an eight-year period expiring June 30, year 9. Equal payments under the lease are \$600,000 and are due on July 1 of each year. The first payment was made on July 1, year 1. The rate of interest contemplated by Peg and Howe is 10%. The cash selling price of the equipment is \$3,520,000, and

the cost of the equipment on Howe's accounting records is \$2,800,000. The lease is appropriately recorded as a sales-type lease. What is the amount of profit on the sale and interest revenue that Howe should record for the year ended December 31, year 1?

	Profit on sale	Interest revenue
a.	\$720,000	\$176,000
b.	\$720,000	\$146,000
c.	\$45,000	\$176,000
d.	\$45,000	\$146,000

22. Howe Co. leased equipment to Kew Corp. on January 2, year 1, for an eight-year period expiring December 31, year 8. Equal payments under the lease are \$600,000 and are due on January 2 of each year. The first payment was made on January 2, year 1. The list selling price of the equipment is \$3,520,000 and its carrying cost on Howe's books is \$2,800,000. The lease is appropriately accounted for as a sales-type lease. The present value of the lease payments is \$3,300,000. What amount of profit on the sale should Howe report for the year ended December 31, year 1?

- \$720,000
- \$500,000
- \$90,000
- \$0

23. The excess of the fair value of leased property at the inception of the lease over its cost or carrying amount should be classified by the lessor as

- Unearned income from a sales-type lease.
- Unearned income from a direct-financing lease.
- Manufacturer's or dealer's profit from a sales-type lease.
- Manufacturer's or dealer's profit from a direct-financing lease.

24. In a lease that is recorded as a sales-type lease by the lessor, interest revenue

- Should be recognized in full as revenue at the lease's inception.
- Should be recognized over the period of the lease using the straight-line method.
- Should be recognized over the period of the lease using the interest method.
- Does not arise.

**E.2.d.(4) Capital Leases—Lessee**

25. Lease M does not contain a bargain purchase option, but the lease term is equal to 90% of the estimated economic life of the leased property. Lease P does not transfer ownership of the property to the lessee at the end of the lease term, but the lease term is equal to 75% of the estimated economic life of the leased property. How should the lessee classify these leases?

	Lease M	Lease P
a.	Capital lease	Operating lease
b.	Capital lease	Capital lease
c.	Operating lease	Capital lease
d.	Operating lease	Operating lease

**26.** On December 31, year 1, Day Co. leased a new machine from Parr with the following pertinent information:

Lease term	6 years
Annual rental payable at beginning of each year	\$50,000
Useful life of machine	8 years
Day's incremental borrowing rate	15%
Implicit interest rate in lease (known by Day)	12%
Present value of annuity of 1 in advance for 6 periods at	
12%	4.61
15%	4.35

The lease is not renewable, and the machine reverts to Parr at the termination of the lease. The cost of the machine on Parr's accounting records is \$375,500. At the beginning of the lease term, Day should record a lease liability of

- a. \$375,500
- b. \$230,500
- c. \$217,500
- d. \$0

**27.** On January 1, year 1, Day Corp. entered into a ten-year lease agreement with Ward, Inc. for industrial equipment. Annual lease payments of \$10,000 are payable at the end of each year. Day knows that the lessor expects a 10% return on the lease. Day has a 12% incremental borrowing rate. The equipment is expected to have an estimated useful life of ten years. In addition, a third party has guaranteed to pay Ward a residual value of \$5,000 at the end of the lease.

The present value of an ordinary annuity of \$1 at

12% for ten years is	5.6502
10% for ten years is	6.1446

The present value of \$1 at

12% for ten years is	.3220
10% for ten years is	.3855

In Day's October 31, year 1 balance sheet, the principal amount of the lease obligation was

- a. \$63,374
- b. \$61,446
- c. \$58,112
- d. \$56,502

**28.** Robbins, Inc. leased a machine from Ready Leasing Co. The lease qualifies as a capital lease and requires ten annual payments of \$10,000 beginning immediately. The lease specifies an interest rate of 12% and a purchase option of \$10,000 at the end of the tenth year, even though the machine's estimated value on that date is \$20,000. Robbins' incremental borrowing rate is 14%.

The present value of an annuity due of one at

12% for ten years is	6.328
14% for ten years is	5.946

The present value of one at

12% for ten years is	.322
14% for ten years is	.270

What amount should Robbins record as lease liability at the beginning of the lease term?

- a. \$62,160
- b. \$64,860
- c. \$66,500
- d. \$69,720

**29.** Neal Corp. entered into a nine-year capital lease on a warehouse on December 31, year 1. Lease payments of \$52,000, which includes real estate taxes of \$2,000, are due annually, beginning on December 31, year 2, and every December 31 thereafter. Neal does not know the interest rate implicit in the lease; Neal's incremental borrowing rate is 9%. The rounded present value of an ordinary annuity for nine years at 9% is 5.6. What amount should Neal report as capitalized lease liability at December 31, year 1?

- a. \$280,000
- b. \$291,200
- c. \$450,000
- d. \$468,000

**30.** East Company leased a new machine from North Company on May 1, year 1, under a lease with the following information:

Lease term	10 years
Annual rental payable at beginning of each lease year	\$40,000
Useful life of machine	12 years
Implicit interest rate	14%
Present value of an annuity of one in advance for ten periods at 14%	5.95
Present value of one for ten periods at 14%	0.27

East has the option to purchase the machine on May 1, year 11 by paying \$50,000, which approximates the expected fair value of the machine on the option exercise date. On May 1, year 1, East should record a capitalized lease asset of

- a. \$251,500
- b. \$238,000
- c. \$224,500
- d. \$198,000

**31.** On January 1, year 1, Babson, Inc. leased two automobiles for executive use. The lease requires Babson to make five annual payments of \$13,000 beginning January 1, year 1. At the end of the lease term, December 31, year 5, Babson guarantees the residual value of the automobiles will total \$10,000. The lease qualifies as a capital lease. The interest rate implicit in the lease is 9%. Present value factors for the 9% rate implicit in the lease are as follows:

For an annuity due with five payments	4.240
For an ordinary annuity with five payments	3.890
Present value of \$1 for five periods	0.650

Babson's recorded capital lease liability immediately after the first required payment should be

- a. \$48,620
- b. \$44,070
- c. \$35,620
- d. \$31,070

**32.** On December 30, year 1, Rafferty Corp. leased equipment under a capital lease. Annual lease payments of \$20,000 are due December 31 for ten years. The equipment's useful life is ten years, and the interest rate implicit in the lease is 10%. The capital lease obligation was recorded on December 30, year 1, at \$135,000, and the first lease payment was made on that date. What amount should Rafferty include in current liabilities for this capital lease in its December 31, year 1 balance sheet?

- \$6,500
- \$8,500
- \$11,500
- \$20,000

**33.** Oak Co. leased equipment for its entire nine-year useful life, agreeing to pay \$50,000 at the start of the lease term on December 31, year 1, and \$50,000 annually on each December 31 for the next eight years. The present value on December 31, year 1, of the nine lease payments over the lease term, using the rate implicit in the lease which Oak knows to be 10%, was \$316,500. The December 31, year 1 present value of the lease payments using Oak's incremental borrowing rate of 12% was \$298,500. Oak made a timely second lease payment. What amount should Oak report as capital lease liability in its December 31, year 2 balance sheet?

- \$350,000
- \$243,150
- \$228,320
- \$0

**34.** On December 31, year 1, Roe Co. leased a machine from Colt for a five-year period. Equal annual payments under the lease are \$105,000 (including \$5,000 annual executory costs) and are due on December 31 of each year. The first payment was made on December 31, year 1, and the second payment was made on December 31, year 2. The five lease payments are discounted at 10% over the lease term. The present value of minimum lease payments at the inception of the lease and before the first annual payment was \$417,000. The lease is appropriately accounted for as a capital lease by Roe. In its December 31, year 2 balance sheet, Roe should report a lease liability of

- \$317,000
- \$315,000
- \$285,300
- \$248,700

**35.** In the long-term liabilities section of its balance sheet at December 31, year 1, Mene Co. reported a capital lease obligation of \$75,000, net of current portion of \$1,364. Payments of \$9,000 were made on both January 2, year 2, and January 2, year 3. Mene's incremental borrowing rate on the date of the lease was 11% and the lessor's implicit rate, which was known to Mene, was 10%. In its December 31, year 2 balance sheet, what amount should Mene report as capital lease obligation, net of current portion?

- \$66,000
- \$73,500
- \$73,636
- \$74,250

**36.** For a capital lease, the amount recorded initially by the lessee as a liability should normally

- Exceed the total of the minimum lease payments.
- Exceed the present value of the minimum lease payments at the beginning of the lease.
- Equal the total of the minimum lease payments.
- Equal the present value of the minimum lease payments at the beginning of the lease.

**37.** At the inception of a capital lease, the guaranteed residual value should be

- Included as part of minimum lease payments at present value.
- Included as part of minimum lease payments at future value.
- Included as part of minimum lease payments only to the extent that guaranteed residual value is expected to exceed estimated residual value.
- Excluded from minimum lease payments.

**38.** A six-year capital lease entered into on December 31, year 1, specified equal minimum annual lease payments due on December 31 of each year. The first minimum annual lease payment, paid on December 31, year 1, consists of which of the following?

	Interest expense	Lease liability
a.	Yes	Yes
b.	Yes	No
c.	No	Yes
d.	No	No

**39.** A six-year capital lease expiring on December 31 specifies equal minimum annual lease payments. Part of this payment represents interest and part represents a reduction in the net lease liability. The portion of the minimum lease payment in the fifth year applicable to the reduction of the net lease liability should be

- Less than in the fourth year.
- More than in the fourth year.
- The same as in the sixth year.
- More than in the sixth year.

**40.** A lessee had a ten-year capital lease requiring equal annual payments. The reduction of the lease liability in year two should equal

- The current liability shown for the lease at the end of year one.
- The current liability shown for the lease at the end of year two.
- The reduction of the lease obligation in year one.
- One-tenth of the original lease liability.

**41.** On January 2, year 1, Cole Co. signed an eight-year noncancelable lease for a new machine, requiring \$15,000 annual payments at the beginning of each year. The machine has a useful life of twelve years, with no salvage value. Title passes to Cole at the lease expiration date. Cole uses straight-line depreciation for all of its plant assets. Aggregate lease payments have a present value on January 2, year 1, of

\$108,000 based on an appropriate rate of interest. For year 1, Cole should record depreciation (amortization) expense for the leased machine at

- \$0
- \$9,000
- \$13,500
- \$15,000

42. On January 2, year 1, Nori Mining Co. (lessee) entered into a five-year lease for drilling equipment. Nori accounted for the acquisition as a capital lease for \$240,000, which includes a \$10,000 bargain purchase option. At the end of the lease, Nori expects to exercise the bargain purchase option. Nori estimates that the equipment's fair value will be \$20,000 at the end of its eight-year life. Nori regularly uses straight-line depreciation on similar equipment. For the year ended December 31, year 1, what amount should Nori recognize as depreciation expense on the leased asset?

- \$48,000
- \$46,000
- \$30,000
- \$27,500

43. The lessee should amortize the capitalizable cost of the leased asset in a manner consistent with the lessee's normal depreciation policy for owned assets for leases that

	Contain a bargain purchase option	Transfer ownership of the property to the lessee by the end of the lease term
a.	No	No
b.	No	Yes
c.	Yes	Yes
d.	Yes	No

44. On January 1, year 1, Harrow Co. as lessee signed a five-year noncancelable equipment lease with annual payments of \$100,000 beginning December 31, year 1. Harrow treated this transaction as a capital lease. The five lease payments have a present value of \$379,000 at January 1, year 1, based on interest of 10%. What amount should Harrow report as interest expense for the year ended December 31, year 1?

- \$37,900
- \$27,900
- \$24,200
- \$0

45. On January 1, year 1, West Co. entered into a ten-year lease for a manufacturing plant. The annual minimum lease payments are \$100,000. In the notes to the December 31, year 2 financial statements, what amounts of subsequent years' lease payments should be disclosed?

	Amount for appropriate required period	Aggregate amount for the lease term
a.	\$100,000	\$0
b.	\$300,000	\$500,000
c.	\$500,000	\$800,000
d.	\$500,000	\$0

46. Cott, Inc. prepared an interest amortization table for a five-year lease payable with a bargain purchase option of \$2,000, exercisable at the end of the lease. At the end of the five years, the balance in the leases payable column of the spreadsheet was zero. Cott has asked Grant, CPA, to review the spreadsheet to determine the error. Only one error was made on the spreadsheet. Which of the following statements represents the **best** explanation for this error?

- The beginning present value of the lease did **not** include the present value of the bargain purchase option.
- Cott subtracted the annual interest amount from the lease payable balance instead of adding it.
- The present value of the bargain purchase option was subtracted from the present value of the annual payments.
- Cott discounted the annual payments as an ordinary annuity, when the payments actually occurred at the beginning of each period.

### E.3.b. Sale-Leaseback

47. On December 31, year 1, Lane, Inc. sold equipment to Noll, and simultaneously leased it back for twelve years. Pertinent information at this date is as follows:

Sales price	\$480,000
Carrying amount	360,000
Estimated remaining economic life	15 years

At December 31, year 1, how much should Lane report as deferred gain from the sale of the equipment?

- \$0
- \$110,000
- \$112,000
- \$120,000

48. The following information pertains to a sale and leaseback of equipment by Mega Co. on December 31, year 1:

Sales price	\$400,000
Carrying amount	\$300,000
Monthly lease payment	\$3,250
Present value of lease payments	\$36,900
Estimated remaining life	25 years
Lease term	1 year
Implicit rate	12%

What amount of deferred gain on the sale should Mega report at December 31, year 1?

- \$0
- \$36,900
- \$63,100
- \$100,000

49. On December 31, year 1, Parke Corp. sold Edlow Corp. an airplane with an estimated remaining useful life of ten

years. At the same time, Parke leased back the airplane for three years. Additional information is as follows:

Sales price	\$600,000
Carrying amount of airplane at date of sale	\$100,000
Monthly rental under lease	\$6,330
Interest rate implicit in the lease as computed by Edlow and known by Parke (this rate is lower than the lessee's incremental borrowing rate)	12%
Present value of operating lease rentals (\$6,330 for 36 months @ 12%)	\$190,581

The leaseback is considered an operating lease. In Parke's December 31, year 1 balance sheet, what amount should be included as deferred revenue on this transaction?

- a. \$0
- b. \$190,581
- c. \$309,419
- d. \$500,000

50. On June 30, year 1, Lang Co. sold equipment with an estimated useful life of eleven years and immediately leased it back for ten years. The equipment's carrying amount was \$450,000; the sale price was \$430,000; and the present value of the lease payments, which is equal to the fair value of the equipment, was \$465,000. In its June 30, year 1 balance sheet, what amount should Lang report as deferred loss?

- a. \$35,000
- b. \$20,000
- c. \$15,000
- d. \$0

51. On January 1, year 1, Hooks Oil Co. sold equipment with a carrying amount of \$100,000, and a remaining useful life of ten years, to Maco Drilling for \$150,000. Hooks immediately leased the equipment back under a ten-year capital lease with a present value of \$150,000 and will depreciate the equipment using the straight-line method. Hooks made the first annual lease payment of \$24,412 in December year 1. In Hooks' December 31, year 1 balance sheet, the unearned gain on equipment sale should be

- a. \$50,000
- b. \$45,000
- c. \$25,588
- d. \$0

52. In a sale-leaseback transaction, the seller-lessee has retained the property. The gain on the sale should be recognized at the time of the sale-leaseback when the lease is classified as a(n)

	Capital lease	Operating lease
a.	Yes	Yes
b.	No	No
c.	No	Yes
d.	Yes	No

53. Able sold its headquarters building at a gain, and simultaneously leased back the building. The lease was reported as a capital lease. At the time of sale, the gain should be reported as

- a. Operating income.
- b. An extraordinary item, net of income tax.
- c. A separate component of stockholders' equity.
- d. An asset valuation allowance.

54. On January 1, year 1, Goliath entered into a five-year operating lease for equipment. In January year 3, Goliath decided that it no longer needs the equipment and terminates the contract by paying a penalty of \$3,000. How should Goliath account for the lease termination costs?

- a. Recognize \$3,000 termination cost in year 3 as a loss from continuing operations.
- b. Recognize \$1,000 termination cost each year for the remaining three years of the lease term.
- c. Recognize the \$3,000 termination cost as an extraordinary item in year 3.
- d. Recognize the \$3,000 termination cost as a discontinued operation in year 3.

55. In January year 1, Hopper Corp. signed a capital lease for equipment with a term of twenty years. In year 3, Hopper negotiated a modification to a capital lease that resulted in the lease being reclassified as an operating lease. Hopper calculated the company had a gain of \$8,000 on the lease modification. Hopper retains all rights to use the property during the remainder of the lease term. How should Hopper account for the lease modification?

- a. Recognize an \$8,000 gain from lease modification during year 3.
- b. Defer the gain and recognize it over the life of the operating lease.
- c. Recognize the \$8,000 gain as an extraordinary item in year 3.
- d. Recognize the \$8,000 gain as a discontinued operation in year 3.

56. On January 1, year 1, Belkor entered into a 10-year capital lease for equipment. On December 1, year 4, Belkor terminates the capital lease and incurs a \$20,000 loss. How should Belkor recognize the lease termination on their financial statements?

- a. Recognize a \$20,000 loss in year 4 as a discontinued operation.
- b. Recognize a \$20,000 loss in year 4 as an extraordinary item.
- c. Recognize a \$20,000 loss from continuing operations in year 4.
- d. Defer recognition of the loss and recognize pro rata over the life of the lease term.

### E.5. International Financial Reporting Standards (IFRS)

57. Morgan Corp. signs a lease to rent equipment for ten years. The lease payments of \$10,000 per year are due on January 2 each year. At the end of the lease term, Morgan may purchase the equipment for \$50. The equipment is estimated to have a useful life of 12 years. Morgan prepares its financial statements in accordance with IFRS. Morgan should classify this lease as a(n)

- a. Operating lease.
- b. Capital lease.
- c. Finance lease.
- d. Sales-type lease.

**58.** Santiago Corp. signs an agreement to lease land and a building for 20 years. At the end of the lease, the property will not transfer to Santiago. The life of the building is estimated to be 20 years. Santiago prepares its financial statements in accordance with IFRS. How should Santiago account for the lease?

- a. The lease is recorded as a finance lease.
- b. The lease is recorded as an operating lease.
- c. The land is recorded as an operating lease, and the building is recorded as a finance lease.
- d. The land is recorded as a finance lease, and the building is recorded as an operating lease.

**59.** Which of the following is **not** true regarding lease accounting under IFRS?

- a. Lease payments under operating leases are recognized on a straight-line basis over the life of the lease.
- b. Leases are classified as either operating or finance leases by both the lessee and the lessor.
- c. For a finance lease, the asset is removed from the lessor's balance sheet.
- d. IFRS uses the same thresholds as US GAAP to determine if a lease is an operating lease or a finance lease.

**60.** Under IFRS what is the interest rate used by lessees to capitalize a finance lease when the implicit rate cannot be determined?

- a. The prime rate.
- b. The lessor's published rate.
- c. The lessee's average borrowing rate.
- d. The lessee's incremental borrowing rate.

## Explanations

1. (c) In an operating lease, the lessor should recognize rental revenue on a straight-line basis. This means that the lease bonus (\$50,000) should be recorded as unearned revenue on 1/1/Y1, and recognized as rental revenue over the five-year lease term. Therefore, year 1 rental revenue should be \$100,000 [ $\$90,000 + (\$50,000 \div 5)$ ]. The security deposit (\$25,000) does not affect rental revenue. Since it is to be refunded to the lessee upon expiration of the lease, it is recorded as a deposit, a long-term liability when received.

2. (c) Rental revenue on operating leases should be recognized on a straight-line basis unless another method more reasonably reflects the pattern of use given by the lessor. When the pattern of cash flows under the lease agreement is other than straight-line, this will result in the recording of rent receivable or unearned rent. Wall's total rent revenue [ $(1/2 \times \$8,000) + (4 \times \$12,500) = \$54,000$ ] should be recognized on a straight-line basis over the five-year lease term ( $\$54,000 \times 1/5 = \$10,800$ ). Since cash collected in year 1 is only \$4,000 (one-half of \$8,000, since the first six months are rent-free), Wall would accrue rent receivable and rental revenue of \$6,800 ( $\$10,800 - \$4,000$ ) at year-end to bring the rental revenue up to \$10,800.

3. (a) Net rental income on an operating lease is equal to rental revenue less related expenses, as computed below.

Rental revenue	\$50,000
Depreciation expense	(12,000)
Executory costs	(9,000)
Finder's fee ( $\$15,000 \div 10$ )	(1,500)
Net rental income	<u>\$27,500</u>

The finder's fee (\$15,000) is capitalized as a deferred charge at the inception of the lease and amortized over ten years to match the expense to the revenues it enabled the lessor to earn.

4. (b) For an operating lease, rental revenue should be recognized on a straight-line basis unless another method more reasonably reflects the pattern of use given by the lessor.

When the pattern of cash flows under the lease agreement is other than straight-line, this will result in the recording of rent receivable or unearned rent. Gee's total rent revenue (\$36,000) should be recognized on a straight-line basis over the thirty-six-month lease, resulting in monthly entries debiting **rent receivable** and crediting **rent revenue** for \$1,000. Cash collections will result in entries debiting **cash** and crediting **rent receivable** for \$500 per month for the first twelve months and \$750 per month for the second twelve months. Therefore, rent receivable at 6/30/Y3 is \$9,000, as indicated by the T-account below.

Rent Receivable	
Accruals ( $24 \times \$1,000$ )	24,000
	6,000 Collections ( $12 \times \$500$ )
	9,000 Collections ( $12 \times \$750$ )
6/30/Y3 Balance	9,000

An alternative way to analyze this problem if Gee records the entry as the customer pays at the beginning of the month. During year 1, the entry each month will be

Cash	500
Rent receivable	500
Rent revenue	1,000

During year 2, the entry each month will be

Cash	750
Rent receivable	250
Rent revenue	1,000

The Rent receivable account will accrue as follows:

Rent Receivable	
Accruals year 1	6,000
	(500 $\times$ 12 mo.)
Accruals year 2	3,000
	(250 $\times$ 12 mo.)
6/30/Y3 balance	9,000

5. (b) At 1/1/Y1, Glen would record as a current liability unearned rent of \$50,000, and as a long-term liability unearned rent of \$150,000. During year 1, the current portion of unearned rent was earned and would be recognized as revenue.

At 12/31/Y1, the portion of the long-term liability representing the second year's rent (\$50,000) would be reclassified as current, leaving as a long-term liability the \$100,000 representing the last two years' rent.

**6. (d)** Rental revenue on operating leases should be recognized on a straight-line basis unless another method more reasonably reflects the pattern of use given by the lessor. When the pattern of cash flows under the lease agreement is other than straight-line, this will result in the recording of rent receivable or unearned rent. Therefore, even though Graf received only one monthly payment in year 1 (1/48 of the total rent to be received over the life of the lease), they would accrue as rent receivable and rent revenue an amount sufficient to increase the rent revenue account to a balance equal to one-fifth of the total cash to be received over the five-year life of the lease.

**7. (a)** The graph presented in the problem can be interpreted as follows:

Line AB is considered to be fixed rental costs per month. Therefore, answers (c) and (d) are incorrect because lines III and IV do not include the fixed portion of the rental payment, in its graphical representation. The problem states that as the variable rental amount increases, it does so at a decreasing rate. Answer (b) is incorrect because line II is increasing, but at an increasing rate, not a decreasing rate, as line I represents. Therefore, answer (a) is the correct answer because line I is increasing, at a decreasing rate.

**8. (a)** Rent on operating leases should be expensed on a straight-line basis unless another method is better suited to the particular benefits and costs associated with the lease. In this lease, the lessee must pay rent of \$1,000 monthly for five years excluding the first nine months, or fifty-one months (60 – 9). Therefore, total rent expense for the five years is \$51,000 (51 × \$1,000). Recognizing rent expense on a straight-line basis, rent expense for the first year is \$10,200 (\$51,000 ÷ 5 years).

**9. (c)** In an operating lease, the lessee should recognize rent expense on a straight-line basis unless another method is better suited to the particular lease. Therefore, the lease bonus should be recognized as rent expense on a straight-line basis over the ten-year lease term (\$24,000 ÷ 10 = \$2,400). However, the contingent rentals, which are based on company sales, shall be expensed in the period to which they relate. Therefore, in year 1, contingent rentals of \$5,000 [5% × (\$600,000 – \$500,000)] should be included in rent expense. Total rent expense is \$103,400, as computed below.

Base rental	\$ 96,000
Lease bonus (\$24,000 ÷ 10)	2,400
Cont. rental [5% × (\$600,000 – \$500,000)]	5,000
	<u>\$103,400</u>

**10. (c)** For operating leases having noncancelable remaining lease terms of more than one year, the lessee must disclose future minimum lease payments in the aggregate and for each of the five succeeding fiscal years. Since the annual **minimum** lease payments are \$100,000, South must disclose subsequent years' lease payments of \$100,000 per annum for each of the next five years and \$900,000 (nine remaining payments × \$100,000) in the aggregate.

**11. (a)** To qualify for treatment as a capital lease, a lease must meet one or more of the following criteria:

1. Transfers ownership to lessee.
2. Contains bargain purchase option.
3. Lease term is  $\geq 75\%$  of the economic life of the leased asset.
4. Present value of minimum lease payments is  $\geq 90\%$  of the FV of the leased asset.

Since the lease signed by Mollat Company does not meet any of these criteria, it must be classified as an operating lease. For operating leases, the lessee's lease payments are recorded as debits to rent expense. Mollat would report rent expense equal to the year 1 lease payments in its year 1 income statement.

**12. (d)** When a leasing agreement is accounted for as an operating lease, the lessor and the lessee recognize rental revenue and rental expense respectively on a straight-line basis unless another systematic and rational basis more clearly reflects the time pattern in which use benefit is given (received) by the respective parties. The straight-lining of uneven lease payments includes scheduled rent increases. Even though the amount of the annual lease payment increases in year six, rental expense would not change. Interest is not an element of revenue (expense) in operating leases.

**13. (b)** The first month's rent (\$60,000) should be expensed in year 1. The prepayment of the last month's rent (also \$60,000) should be deferred and recognized as an expense in November year 6. The security deposit (\$80,000) should be recorded as a long-term receivable, since Clark can expect to receive the deposit back at lease end. The installation of new walls and offices (\$360,000) is recorded as a leasehold improvement at 12/1/Y1. At 12/31/Y1, amortization must be recorded for one month (\$360,000 × 1/60 = \$6,000). Therefore, year 1 expense is \$66,000 (\$60,000 + \$6,000). The journal entries are

Rent expense	60,000	
Prepaid rent	60,000	
Sec. deposit receivable	80,000	
Leasehold improvements	360,000	
Cash		560,000
Amortization expense	6,000	
Leasehold improvements		6,000

**14. (c)** Leasehold improvements are capitalized and amortized over the shorter of the remaining life of the lease (six years from 1/1/Y6 to 12/31/Y11) or the useful life of the improvements (eight years). Therefore, the \$48,000 cost is amortized over six years, resulting in annual amortization of \$8,000 (\$48,000 ÷ 6). For the period 1/1/Y6 to 6/30/Y6, amortization is \$4,000 (\$8,000 × 6/12), so the 6/30/Y6 net amount for leasehold improvements is \$44,000 (\$48,000 – \$4,000).

**15. (d)** Leasehold improvements are properly capitalized and amortized over the shorter of the remaining life of the lease or the useful life of the improvement. If the lease contains an option to renew and the likelihood of renewal is uncertain (as it is in this case), then the remaining life of the lease is based on the initial lease term. In this case, the remaining life of the lease is therefore ten years. Since the estimated lives of all improvements in this case are greater than or equal to ten years, the appropriate amortization period is ten years. The year 1 amortization is thus computed as the total cost of \$140,000 (\$47,000 + \$75,000 + \$18,000 = \$140,000), divided by ten years, or \$14,000. There is no salvage value for leasehold improvements, because the assets revert to the lessor at the end of the lease term. Note that if the renewal of the lease for an additional ten years were considered a certainty, the amortization periods would be as follows: ten years for the sales office (estimated life); twenty years for the warehouse (lease term); and fifteen years for the parking lot (estimated life).

**16. (b)** The cost of the leasehold improvements (\$540,000) should be amortized over the remaining life of the lease, or over the useful life of the improvements, whichever is **shorter**. The remaining life of the lease should include periods covered by a renewal option **if** it is probable that the option will be exercised. In this case, the remaining life of the lease is eighteen years (12 years of original lease + 8 years in option period – 2 years gone by), and the useful life of the improvements is fifteen years. Therefore, amortization is based on a fifteen-year life ( $\$540,000 \div 15 = \$36,000$ ). The 12/31/Y1 carrying amount is \$504,000 ( $\$540,000 - \$36,000$ ).

**17. (b)** A lease should be classified as a capital lease by the lessee if the lease terms meet any one of the following four criteria: (1) the lease transfers ownership of the property to the lessee by the end of the lease term, (2) the lease contains a bargain purchase option, (3) the lease term is greater than or equal to 75% of the economic life of the leased property, or (4) the present value of the minimum lease payments is greater than or equal to 90% of the fair market value of the leased property. In this question, the terms of Vail's lease do not meet any of the four criteria for treatment as a capital lease, so the lease should be accounted for as an operating lease. Vail should therefore **not** recognize the building as an asset. In an operating lease, the lessee should capitalize the cost of the leasehold improvements, recognizing them as assets, and amortize their cost over the shorter of their useful lives or the term of the lease.

**18. (b)** Leasehold improvements are properly capitalized and amortized over the remaining life of the lease, or the useful life of the improvements, whichever is shorter. Since the useful life of the office is only ten years and the remaining term of the lease is fifteen years, the cost should be depreciated over the ten-year period.

**19. (a)** The annual lease payment is \$75,000 ( $\$323,400 \div 4.312$ ). After five years, total lease payments will be \$375,000 ( $5 \times \$75,000$ ). The total interest revenue over the life of the lease is the excess of total lease payments over the fair value of the leased asset ( $\$375,000 - \$323,400 = \$51,600$ ).

**20. (d)** This lease qualifies as a direct financing lease; therefore interest revenue will be recognized rather than rent revenue. Had the lease qualified as an operating lease, rent revenue would have been recognized. The lessor's criteria for direct financing classification is as follows:

- (1) The lease transfers ownership to the lessee, at the end of the lease
- (2) The lease contains a bargain purchase option
- (3) The lease term is  $\geq 75\%$  of an asset's economic life
- (4) The present value of the minimum lease payments is  $\geq 90\%$  of the fair market value of the leased asset.

Note that the question is silent concerning the two additional criteria that apply to lessors: (1) collectibility of minimum lease payments is predictable, and (2) no important uncertainties exist concerning costs yet to be incurred by the lessee. Recall that if one of the four criteria are met, the lease is treated as a capital lease. In this case, since the lease term is for 80% of the asset's economic life, test (3) is met, and the lease is properly treated as a capital lease. In addition, the amount of interest revenue will be smaller in year 2 than the revenue in year 1. This result occurs because the present value of the minimum lease payments or carrying value of the obligation decreases each year as lease payments are received. As this occurs, the amount of interest revenue on the outstanding amount of the investment will decrease as well. Over the course of time, the investment reduction portion of each level payment increases and the amount of interest declines.

**21. (b)** This is a sales-type lease, so at the inception of the lease, the lessor would recognize sales of \$3,520,000 and cost of goods sold of \$2,800,000, resulting in a **profit on sale of \$720,000**. In addition, interest revenue is recognized for the period July 1, year 1, to December 31, year 1. The initial net lease payments receivable on 7/1/Y1 is \$3,520,000. The first rental payment received on 7/1/Y1 consists entirely of principal, reducing the net receivable to \$2,920,000 ( $\$3,520,000 - \$600,000$ ). Therefore, year 1 **interest revenue for the six months from 7/1/Y1 to 12/31/Y1 is \$146,000** ( $\$2,920,000 \times 10\% \times 6/12$ ).

**22. (b)** This is a sales-type lease, so at the inception of the lease, the lessor would recognize sales of \$3,300,000 (the PV of the lease payments), and cost of goods sold of \$2,800,000, resulting in profit on the sale of \$500,000 ( $\$3,300,000 - \$2,800,000$ ). Note that the list selling price of an asset (\$3,520,000 in this case) is not always representative of its FV. An asset can often be purchased for less than its list price.

**23. (c)** The excess of the fair value of leased property at the inception of the lease over the lessor's cost is defined as the manufacturer's or dealer's profit. Answer (a) is incorrect because the unearned income from a sales-type lease is defined as the difference between the gross investment in the lease and the sum of the present values of the components of the gross investment. Answer (b) is incorrect because the unearned income from a direct-financing lease is defined as the excess of the gross investment over the cost (also the PV of lease payments) of the leased property. Answer (d) is incorrect because a sales-type lease involves a manufacturer's or dealer's profit while a direct financing lease does not.

**24. (c)** Revenue is to be recognized for a sales-type lease over the lease term so as to produce a **constant rate** of return on the net investment in the lease. This requires the use of the **interest method**. Interest revenue **does** arise in a sales-type lease. Answer (a) is incorrect because the interest is to be earned over the life of the lease, not in full at the lease's inception.

**25. (b)** If **any** of the criteria for classification as a capital lease are met, the lease is classified as such. One of the capital lease criterion is that the lease term is equal to 75% or more of the estimated economic life of the leased property. Thus, both leases M and P should be classified as capital leases.

**26. (b)** This is a capital lease for the lessee because the lease term is 75% of the useful life of the machine [6 years = (75% × 8 years)]. For a capital lease, the lessee records as a **leased asset** and a **lease obligation** the lower of the PV of the minimum lease payments or the FV of the leased asset (not given in this problem). The PV of the minimum lease payments is computed using the lower of the lessee's incremental borrowing rate (15%) or the implicit rate used by the lessor if known by the lessee (12%). Since the implicit rate is lower, and known by the lessee, it is used to compute the PV ( $\$50,000 \times 4.61 = \$230,500$ ). The cost of the asset on the lessor's books ( $\$375,500$ ) is irrelevant.

**27. (b)** This is a capital lease since the lease term (ten years) is the same as the useful life of the leased asset. In a capital lease, the lessee records an asset and a liability based on the PV of the minimum lease payments. The minimum lease payments includes rentals and a guaranteed residual value, **if guaranteed by the lessee**. In this case the minimum lease payments include only the rentals, since the residual value is guaranteed by a third party. The minimum lease payments are discounted using the **lower** of the lessee's incremental borrowing rate or the implicit rate used by the lessor, if known. In this case, the lessee knows the implicit rate is 10%, which is lower than the incremental borrowing rate of 12%. Thus, the present value or principal amount of the lease obligation is  $\$61,446$  ( $\$10,000 \times 6.1446$ ) through the first year. Although accrued interest would be recognized at 10/31/Y1, the principal amount does not change until 1/1/Y2.

**28. (c)** The lessee records a capital lease at the present value of the minimum lease payments. The minimum lease payments includes rental payments and bargain purchase options (among other items). The  $\$10,000$  purchase option is a **bargain** purchase option because it allows the lessor to purchase the leased asset at an amount **less** than its expected fair value. The lessee computes the present value using its incremental borrowing rate (14%), unless the lessor's implicit rate (12%) is lower and is known by the lessee. This question indicates that the implicit rate is stated in the lease; therefore it would be known to the lessee. At the beginning of the lease term, Robbins should record a leased asset and lease liability at  $\$66,500$ .

PV of rentals	$(\$10,000 \times 6.328) =$	$\$63,280$
PV of BPO	$(\$10,000 \times .322) =$	$3,220$
PV at 12%		<u><math>\\$66,500</math></u>

**29. (a)** The annual executory costs (real estate taxes of  $\$2,000$ ) are **not** an expense or liability until incurred; therefore

they are excluded from the minimum lease payments and are **not** reflected in the initial lease liability. The 12/31/Y1 capital lease liability is recorded at the PV of the minimum lease payments [ $5.6 \times (\$52,000 - \$2,000) = \$280,000$ ].

**30. (b)** The requirement is to determine the amount to be recorded as a capitalized leased asset. This is a capital lease for the lessee because the lease term exceeds 75% of the economic life of the leased asset ( $10/12 > 75\%$ ). In a capital lease, the lessee records as an asset and liability the present value (PV) of the minimum lease payments (unless the PV exceeds the asset's FV, in which case the FV is recorded). The minimum lease payments include rentals, and a lessee-guaranteed residual value or a bargain purchase option. Only rentals apply in this case. Note that the  $\$50,000$  purchase option is not a **bargain** purchase option that the lessee would be compelled to exercise. A bargain purchase option is an option to purchase the leased asset at an amount **less** than its expected fair value. Therefore, the present value of the minimum lease payments is  $\$238,000$  ( $\$40,000 \times 5.95$ ).

**31. (a)** The initial lease liability at 1/1/Y1, before the 1/1/Y1 payment, is the present value of the five rental payments (an **annuity due** since the first payment is made on 1/1/Y1) plus the present value of the guaranteed residual value. The computation is below.

PV of rentals ( $\$13,000 \times 4.240$ )	$\$55,120$
PV of residual ( $\$10,000 \times 0.650$ )	<u><math>6,500</math></u>
Initial liability	<u><math>\\$61,620</math></u>

The 1/1/Y1 payment consists entirely of principal, bringing the 1/1/Y1 liability down to  $\$48,620$  ( $\$61,620 - \$13,000$ ).

**32. (b)** The initial lease obligation at 12/30/Y1 was  $\$135,000$ . The first lease payment was made the same day, and therefore consisted entirely of principal reduction. After the payment, the lease obligation was  $\$115,000$  ( $\$135,000 - \$20,000$ ). This balance will be reported as current (for the portion to be paid in year 2) and long-term (for the portion to be paid beyond year 2). The next lease payment of  $\$20,000$  will be paid 12/31/Y2, and will consist of both interest ( $\$115,000 \times 10\% = \$11,500$ ) and principal reduction ( $\$20,000 - \$11,500 = \$8,500$ ). Thus, the portion of the  $\$115,000$  lease obligation to be paid in the next year (and therefore reported as a current liability) is  $\$8,500$ . Note that the interest to be paid next year ( $\$11,500$ ) is not a liability at 12/31/Y1 because it has not yet been incurred.

**33. (b)** This is a capital lease for the lessee because the lease term (nine years) exceeds 75% of the useful life of the machine (also nine years). For a capital lease, the lessee records as a **leased asset** and a **lease obligation** at the lower of the PV of the minimum lease payments or the FV of the leased asset (not given in this problem). The PV of the minimum lease payments is computed using the lower of the lessee's incremental borrowing rate (12%) or the implicit rate used by the lessor if known by the lessee (10%). Since the implicit rate is lower, and known by the lessee, it is used to compute the PV ( $\$316,500$ ). The initial lease payment ( $\$50,000$ ) is entirely principal because it was made at the inception of the lease. Therefore, after the 12/31/Y1 payment, the lease liability is  $\$266,500$  ( $\$316,500 - \$50,000$ ). The 12/31/Y2

payment consists of interest incurred during year 2 ( $\$266,500 \times 10\% = \$26,650$ ) and principal reduction ( $\$50,000 - \$26,650 = \$23,350$ ). Therefore, the 12/31/Y2 capital lease liability is  $\$243,150$  ( $\$266,500 - \$23,350$ ).

**34. (d)** The initial lease liability at 12/31/Y1 is  $\$417,000$  (the PV of the minimum lease payments). The annual executory costs ( $\$5,000$ ) are **not** an expense or liability until incurred; therefore, they are excluded from the minimum lease payments and are **not** reflected in the initial lease liability. The 12/31/Y1 payment of  $\$105,000$  includes  $\$5,000$  of executory costs; the remainder ( $\$100,000$ ) is entirely principal since the payment was made at the inception of the lease. Therefore, after the 12/31/Y1 payment, the lease liability is  $\$317,000$  ( $\$417,000 - \$100,000$ ). The 12/31/Y2 payment consists of executory costs ( $\$5,000$ ), interest incurred during year 2 ( $\$317,000 \times 10\% = \$31,700$ ), and reduction of principal ( $\$105,000 - \$5,000 - \$31,700 = \$68,300$ ). Therefore, the 12/31/Y2 balance sheet should include a lease liability of  $\$248,700$  ( $\$317,000 - \$68,300$ ).

**35. (b)** On 1/2/Y2, Mene made a lease payment of  $\$9,000$ , which included payment of the current portion of the lease obligation ( $\$1,364$ ) and interest ( $\$9,000 - \$1,364 = \$7,636$ ). After this payment, the total lease obligation was  $\$75,000$ . The 1/2/Y3 payment would include interest of  $\$7,500$  ( $\$75,000 \times 10\%$ ), and principal of  $\$1,500$  ( $\$9,000 - \$7,500$ ). This  $\$1,500$  amount would represent the current portion of the lease obligation at 12/31/Y2, so the long-term lease obligation net of the current portion at 12/31/Y2 is  $\$73,500$  ( $\$75,000 - \$1,500$ ).

**36. (d)** If a lease is classified as a capital lease, the lessee must record an asset and a liability, each for an amount equal to the present value of the minimum lease payments at the beginning of the lease.

**37. (a)** At the inception of a capital lease, the lessee must record an asset and a liability based on the PV of the minimum lease payments. The minimum lease payments are the payments that lessee is required to make in connection with the leased property, including rent payments, bargain purchase option, and guaranteed residual value. Minimum lease payments (MLP) are recorded at present value. The whole guaranteed residual value is included in MLP.

**38. (c)** In a capital lease where the first annual lease payment is made immediately upon signing the lease (annuity due), the first payment consists solely of lease liability reduction, since no time has transpired during which interest expense could be incurred. Subsequent payments include both interest expense and reduction of the liability.

**39. (b)** Each minimum lease payment shall be allocated between a reduction of the obligation and interest expense so as to produce a constant periodic rate of interest on the remaining balance of the obligation. Since the interest will be computed based upon a **declining** obligation balance, the interest component of each payment will also be declining. The result will be a relatively larger portion of the minimum lease payment allocated to the reduction of the lease obligation in the latter portion of the lease term.

**40. (a)** When a leasing agreement is accounted for as capital lease, the lessee recognizes a liability on its books equal to the present value of the minimum lease payments. The liability

should be divided between current and noncurrent based upon when each lease payment is due. At the end of year one, the current lease liability should equal the principal portion of the lease payment due in year two. Therefore, when the lease payment is made in year two, the reduction of the lease liability will equal the current liability shown at the end of year one.

**41. (b)** This is a capital lease since title passes to Cole, the lessee, at the end of the lease. At the inception of the lease on 1/2/Y1, the lessee records the PV of the lease payments ( $\$108,000$ ) as an asset and a liability. The asset is depreciated on a straight-line basis over its useful life of twelve years, resulting in a yearly depreciation charge of  $\$9,000$  ( $\$108,000 \div 12$ ). The asset is depreciated over its useful life rather than over the lease term (eight years) because title transfers to the lessee, allowing the lessee to use the asset for twelve years.

**42. (d)** A leased asset acquired in a capital lease should be depreciated over the period of time the lessee expects to use the asset (either the lease term or the useful life, depending on the situation). In this case, Nori expects to use the leased asset for its entire eight-year useful life, due to the expected exercise of the bargain purchase option at the end of the five-year lease term. Therefore, Nori's year 1 depreciation expense is  $\$27,500$

$$\frac{(\$240,000 \text{ cost}) - (\$20,000 \text{ salvage})}{8 \text{ years}} = \$27,500$$

**43. (c)** The requirement is to determine whether a lessee should amortize the capitalizable cost of a leased asset in a manner consistent with the lessee's normal depreciation policy for owned assets for leases that contained a bargain purchase option and/or transferred ownership at the end of the lease term. Transfer of ownership of the property to the lessee by the end of the lease term and a lease that contains a bargain purchase option are properly classified as capital leases. If the lease meets either of the above criteria, the asset shall be amortized in a manner consistent with the lessee's normal depreciation policy for owned assets.

**44. (a)** At the inception of the lease on 1/1/Y1, the capitalized liability is  $\$379,000$  (the present value of the lease payments). Since the first payment is not due until the **end** of the first year, year 1 interest expense is based on the full initial liability ( $\$379,000 \times 10\% = \$37,900$ ).

**45. (c)** The future minimum lease payments (MLP) for each of the next five years and the aggregate amount of MLP for the lease term must be disclosed. At 12/31/Y2, eight annual payments of  $\$100,000$  each have not yet been paid. Therefore, future MLP are  $\$800,000$  ( $8 \times \$100,000$ ). The amount for the appropriate required period (five years) is  $\$500,000$  ( $\$100,000$  per year for 5 years).

**46. (a)** At the end of the lease, the balance in the lease payable column should equal the bargain purchase option price. Failure to include the present value of the bargain purchase option price in the beginning present value of the lease would result in an ending balance in the lease payable column of zero. Both answers (b) and (c) would have resulted in an ending balance of less than zero, while answer (d) would have resulted in an ending balance greater than zero.

**47. (d)** Sale-leaseback arrangements are treated as though two transactions were a single financing transaction, if the lease qualifies as a capital lease. Any gain or loss on the sale is deferred and amortized over the lease term (if possession reverts to the lessor) or the economic life (if ownership transfers to the lessee). In this case, the lease qualifies as a capital lease because the lease term (twelve years) is 80% of the remaining economic life of the leased property (fifteen years). Therefore, at 12/31/Y1, all of gain ( $\$480,000 - \$360,000 = \$120,000$ ) would be deferred and amortized over twelve years. Since the sale took place on 12/31/Y1, there is no amortization for year 1.

**48. (a)** A sale-leaseback is generally treated as a single financing transaction in which any profit on the sale is deferred and amortized by the seller. However, there is an exception to this general rule when either **only a minor part** of the remaining use of the leased asset is retained (case one) or when **more than a minor part but less than substantially all** of the remaining use of the leased asset is retained (case two). Case one occurs when the PV of the lease payments is 10% or less of the FV of the sale-leaseback property. Case two occurs when the leaseback is more than minor but does **not** meet the criteria of a capital lease. This problem is an example of case one, because the PV of the lease payments ( $\$36,900$ ) is less than 10% of the FV of the asset ( $10\% \times \$400,000 = \$40,000$ ). Under these circumstances, the full gain ( $\$400,000 - \$300,000 = \$100,000$ ) is recognized, and **none is deferred**.

**49. (b)** A sale-leaseback is generally treated as a single financing transaction in which any profit on the sale is deferred and amortized by the seller. However, there is an exception to this general rule when either **only a minor part** of the remaining use of the leased asset is retained (case one) or when **more than a minor part but less than substantially all** of the remaining use of the leased asset is retained (case two). Case one occurs when the PV of the lease payments is 10% or less of the FV of the sale-leaseback property. Case two occurs when the leaseback is more than minor but does **not** meet the criteria of a capital lease. This is an example of case two because while the PV of the lease payments ( $\$190,581$ ) is more than 10% of the FV of the asset ( $\$600,000$ ), the lease falls into the operating lease category. Under these circumstances, the gain on sale ( $\$600,000 - \$100,000 = \$500,000$ ) is recognized to the extent that it exceeds the PV of the lease payments ( $\$190,581$ ). The gain reported would be  $\$309,419$  ( $\$500,000 - \$190,581$ ). The portion of the gain represented by the  $\$190,581$  PV of the lease payments is deferred and amortized on a straight-line basis over the life of the lease.

**50. (b)** On a sale-leaseback, generally **losses** are recognized immediately. However, there can be two types of losses in sale-leasebacks. The type that is **recognized immediately** is a **real economic loss**, where the carrying amount of the asset is higher than its FV. The type that is **deferred** is an **artificial loss** where the sale price ( $\$430,000$ ) is below the carrying amount ( $\$450,000$ ), but the FV ( $\$465,000$ ) is above the carrying amount ( $\$450,000$ ). The loss in this problem ( $\$450,000 - \$430,000 = \$20,000$ ) is an artificial loss that must be deferred.

**51. (b)** Sale-leaseback transactions are treated as though two transactions were a single financing transaction, if the lease qualifies as a capital lease. Any gain on the sale is deferred and amortized over the lease term (if possession reverts to the lessor) or the economic life (if ownership transfers to the lessee); both are ten years in this case. Since this is a capital lease, the entire gain ( $\$150,000 - \$100,000 = \$50,000$ ) is deferred at 1/1/Y1. At 12/31/Y1, an adjusting entry must be prepared to amortize 1/10 of the unearned gain ( $1/10 \times \$50,000 = \$5,000$ ), because the lease covers ten years. Therefore, the unearned gain at 12/31/Y1 is  $\$45,000$  ( $\$50,000 - \$5,000$ ).

**52. (b)** Any profit related to a sale-leaseback transaction in which the seller-lessee retains the property leased (i.e., the seller-lessee retains substantially all of the benefits and risks of the ownership of the property sold), shall be deferred and amortized in proportion to the amortization of the leased asset, if a capital lease. If it is an operating lease, the profit will be deferred in proportion to the related gross rental charged to expense over the lease term. It is important to note that **losses**, however, are recognized immediately for either a capital or operating lease. Since the gain on the sale should be deferred in either case, no gain is recognized at the time of the sale.

**NOTE:** An example of an operating lease in which substantially all of the remaining use of the leased asset is retained by the lessee occurs when the lease term begins within the last 25% of the asset's original useful life.

**53. (d)** In a sale-leaseback transaction, if the leaseback is recorded as a capital lease and the lessee has retained **substantially all** of the rights to use the property, then any gain on the sale must be deferred and amortized over the life of the property in proportion to the amortization of the leased asset. This deferred gain acts as an asset valuation allowance resulting in the net amount shown for the leased asset being equal to the same carrying value as if the sale and leaseback transaction had not occurred.

**54. (a)** A termination of an operating lease requires that the fair value of the termination costs be recognized as an expense or loss in calculating income from continuing operations in the year the lease was terminated.

**55. (b)** A modification to a capital lease that changes the classification of the lease to an operating lease requires the transaction be accounted for as a sales-leaseback transaction. Since Hopper retains substantially all rights to use the property (and the property is not within the last 25% of its useful life), the gain will be deferred and recognized over the remaining lease term.

**56. (c)** A loss on a capital lease termination is recognized immediately as a loss from continuing operations.

**57. (c)** The requirement is to identify how the lease should be classified. Answer (c) is correct because IFRS requires a lease to be classified as a finance lease if substantially all the risks or benefits of ownership have been transferred to the lessee. Because the lease contains a bargain purchase option, it meets

the criteria for a finance lease. Answer (a) is incorrect because the lease does not qualify as an operating lease since the risks and benefits of ownership have been transferred. Answer (b) is incorrect because US GAAP uses the term “capital lease,” whereas IFRS uses the term “finance lease.” Answer (d) is incorrect because IFRS does not use the term “sales-type lease.”

**58. (c)** The requirement is to identify how Santiago should account for the lease. Answer (c) is correct because IFRS provides that because land has an indefinite life, if title is not expected to pass by the end of the lease term, then the substantial risks and rewards of ownership do not transfer.

Thus, the lease should be separated into two components. The land should be recorded as an operating lease and the building should be recorded as a finance lease.

**59. (d)** The requirement is to identify the incorrect statement regarding lease accounting under IFRS. Answer (d) is correct because IFRS does not use the same thresholds as US GAAP. IFRS standards require more judgment.

**60. (d)** The requirement is to identify the rate used to capitalize a finance lease when the implicit rate cannot be determined. Answer (d) is correct because the lessee’s incremental borrowing rate is used.

## Simulations

### Task-Based Simulation 1

Journal Entries	Authoritative Literature	
	Help	

#### Situation

On January 2, year 1, Nesbitt Co. leased equipment from Grant, Inc. Lease payments are \$100,000, payable annually every December 31 for twenty years. Title to the equipment passes to Nesbitt at the end of the lease term. The lease is noncancelable.

- The equipment has a \$750,000 carrying amount on Grant's books. Its estimated economic life was twenty-five years on January 2, year 1.
- The rate implicit in the lease, which is known to Nesbitt, is 10%. Nesbitt's incremental borrowing rate is 12%.
- Nesbitt uses the straight-line method of depreciation.

The rounded present value factors of an ordinary annuity for twenty years are as follows:

12%	7.5
10%	8.5

Prepare the necessary journal entries, without explanations, to be recorded by Nesbitt for

1. Entering into the lease on January 2, year 1.
2. Making the lease payment on December 31, year 1.
3. Expenses related to the lease for the year ended December 31, year 1.

Concepts	Authoritative Literature	
	Help	

The terms listed below refer to lessee and lessor accounting for operating, capital, direct financing, and sales-type leases. For each term, select the **best** phrase or description from the answers listed A–Q below. An answer may be used once, more than once, or not at all.

#### Answer list

- A. The substance of this transaction is that it consists of two separate and distinct transactions.
- B. Rental payments are recognized on a straight-line basis, even though the lease calls for payments that increase over the term of the lease.
- C. Depreciation expense related to the leased asset is reported on the lessee's income statement over the lease term.
- D. Sales revenue (the present value of the minimum lease payments) less the carrying amount of the leased asset is reported on the lessor's income statement at the inception of the lease.
- E. The rate used by the lessee to determine the present value of the minimum lease payments if the lessee's incremental borrowing rate is less than the lessor's implicit rate.
- F. Initial direct costs should be treated as an asset and amortized over the life of the lease on a straight-line basis.
- G. The difference between the fair value of the asset leased and the total payments to be received over the lease term.
- H. Included in the lessor's gross investment, whether guaranteed or unguaranteed.
- I. Interest revenue is the only item reported on the income statement over the lease term.
- J. The excess of the sales price over the carrying amount of the leased equipment is considered profit and is included in income over the duration of the lease term.
- K. Should be recorded as both an asset and a liability by the lessee when the lease contains a bargain purchase option.
- L. Produces a constant periodic rate of return on the net investment.
- M. The principal portion of the lease liability which must be paid within the next operating cycle.
- N. Produces a desired rate of return which causes the aggregate present value of the minimum lease payments to be equal to the fair value of the leased property.

- O. Lessee’s right to purchase leased property for an amount substantially lower than the expected FV at exercise date.
- P. Costs, such as appraisal fees, incurred by the lessor in setting up the lease agreement.
- Q. A lease agreement which requires the annual payments to be made at the beginning of each period.

Amortization Schedule	Authoritative Literature	Help

#### Situation

On December 30, year 1, Kelty Corporation signed an agreement to lease equipment for ten years. The lease payments of \$70,000 are due each year on December 30. Kelty paid its first lease payment immediately after the lease was signed. The interest rate was 6%. The fair market value of the leased equipment on December 30, year 1, was \$600,000. At the end of the lease term, Kelty may exercise a bargain purchase option to purchase the equipment for \$10,000. The asset has a useful life of twelve years. Kelty uses the net method for recording lease obligations. The present value of the minimum lease payments is \$551,702.

Prepare an amortization table for the lease through December 30, year 4.

Year ending	Interest expense	Lease payment	Amounts applied to carrying value	Carrying value of lease
At signing of note	Not applicable	Not applicable	Not applicable	
December 30, year 1				
December 30, year 2				
December 30, year 3				
December 30, year 4

### Task-Based Simulation 3

Classification	Authoritative Literature	Help

- Ward rents equipment for three years for \$20,000 per year. The equipment is valued at \$200,000. At the end of the rental term the equipment must be returned to the dealer.

Operating lease. Does not meet any of the four criteria.
- Ward rents equipment for five years for \$80,000 per year. At the end of the rental term Ward can purchase the equipment for \$500. At the date the contract was signed the equipment had a value of \$300,000. At the end of five years, it is expected the equipment will have a value of \$42,000.

Capital lease. The lease has a bargain purchase option.
- Ward received six months of free rent on an office building it was leasing for two years. Rent is normally \$1,500 per month.

Operating lease. The building is only leased for two years, and it is doubtful that it is greater than 75% of the building's economic life.
- Ward rents equipment for eight years. The present value of the lease payments are \$80,000. The market value of the equipment is \$90,000 and the useful life of the equipment is ten years.

Capital lease. The present value of the lease payments is not greater than 90% of the fair market value of the leased asset; however, the rental term is 80%, which is greater than 75% of the economic life of the asset.
- Ward rents equipment for ten years. At the end of the lease Ward receives title to the equipment.

Capital lease. Transfer of title.
- Ward rents equipment for seven years. The life of the equipment is ten years. The fair value of the equipment is \$100,000. The present value of the minimum lease payments is \$85,000.

Operating lease. The lease is not greater than 75% of the economic life of the asset, and the present value of the minimum lease payments is not greater than 90% of the fair market value of the asset.

### Task-Based Simulation 5

Amortization Schedule	Authoritative Literature	Help

Prepare an amortization table for the lease through December 30, year 4.

Year ending	Interest expense	Lease payment	Amounts applied to carrying value	Carrying value of lease
At signing of note	Not applicable	Not applicable	Not applicable	\$551,702
December 30, year 1	\$0	\$70,000	\$70,000	481,702
December 30, year 2	28,902	70,000	41,098	440,604
December 30, year 3	26,436	70,000	43,564	397,040
December 30, year 4	23,822	70,000	46,178	350,863

### Task-Based Simulation 6

Financial Statement Disclosures	Authoritative Literature	Help

Interest expense for year 2	28,902
Interest expense for year 3	26,436
Carrying value of lease on 12/31/Y3	397,040
Depreciation expense for year 2	45,975

### Explanations

Interest expense recognized in year 2  
\$28,902 ( $6\% \times \$481,702$ )

Interest expense recognized in year 3  
\$26,436 ( $6\% \times \$440,604$ )

Carrying value of the lease on December 31, year 3  
\$397,040 (See table in solution to Simulation 5)

Depreciation expense for year 2  
 $\$551,702 / 12 \text{ years} = \$45,975$

The leased asset is depreciated over the asset's life because there is a bargain purchase option.

2. Initial direct costs are expensed by the lessor when the lease is signed.	<input type="radio"/>	<input checked="" type="radio"/>
3. A refundable security deposit is treated as an asset by the lessor.	<input type="radio"/>	<input checked="" type="radio"/>
4. Leasehold improvements should be amortized over the longer of the remaining lease term or the useful life of the asset.	<input type="radio"/>	<input checked="" type="radio"/>
5. The minimum lease payment includes any penalty for failure to renew.	<input checked="" type="radio"/>	<input type="radio"/>
6. The unguaranteed residual value is considered part of the minimum lease payment for the lessee's liability.	<input type="radio"/>	<input checked="" type="radio"/>
7. If a seller-lessee retains substantially all rights to use the property in a sales-leaseback transaction, the gain on sale is deferred by the seller-lessee.	<input checked="" type="radio"/>	<input type="radio"/>
8. If a capital lease is modified in such a way that it qualifies as an operating lease, it should be treated as a sales-leaseback transaction.	<input checked="" type="radio"/>	<input type="radio"/>

#### Explanations

- (F)** Free or uneven lease payments received by the lessor should be recognized as revenue on a straight-line basis and prorated over the life of the lease.
- (F)** Initial direct costs should be capitalized and amortized straight-line over the life of the lease.
- (F)** A refundable security deposit is a liability to the lessor and a receivable to the lessee.
- (F)** Leasehold improvements should be amortized over the shorter of the remaining lease term or the useful life of the asset.
- (T)** The minimum lease payment includes any penalty.
- (F)** The unguaranteed residual is considered part of the lessor's net investment in lease unless there is a transfer of title or a bargain purchase option. The unguaranteed residual is not part of the minimum lease payment for the lessee; it is ignored.
- (T)** Gain is deferred in these situations.
- (T)** Sales-leaseback treatment is appropriate.

# Module 14: Deferred Taxes

## Overview

Income for financial reporting purposes (book income) and income for tax purposes (taxable income) usually differ. Differences are due to the fact that for financial reporting, firms are required to follow GAAP. However, for tax purposes, firms must follow the Internal Revenue Code. The differences can either (1) permanently differ, in which case there is no deferral, or (2) reverse over time (e.g., straight line depreciation is used for book purposes and MACRS is used for tax purposes) which leads to a temporary difference or deferred tax.

ASC Topic 740, *Income Taxes* (SFAS 109), requires an asset and liability (balance sheet) approach to recognizing and measuring deferred taxes. This means that Income Tax Expense reporting in a firm's GAAP financial statements is a function of the current taxes owed to the Internal Revenue Service (Income Tax Payable) and the deferred taxes. To understand the basic concepts of deferred taxes, study this module and the outlines of SFAS 109 and APB 23 (ASC Topic 740) in Appendix A.

## A. Overview of Deferred Tax Theory

1. There are numerous differences between the recognition and measurement of pretax financial (book) income and asset/liability valuation under GAAP and the recognition and measurement of taxable income and asset/liability valuation under the Internal Revenue Code. Because of these differences between the two bodies of promulgated rules, pretax financial (book) income usually differs from taxable income. The amount of Income Tax Expense and the amount of Income Taxes Payable are, therefore, often different amounts.
2. Financial income tax expense (the **current and deferred** tax consequences of **all** events that have been recognized in the financial statements) is charged to Income Tax Expense.
  - a. Income Tax Expense equals the taxes actually owed (a current tax liability) for the current period plus or minus the change during the current period in amounts payable in the future and in future tax benefits.
    - (1) By using this procedure, any possible income statement or balance sheet distortion that may result from differences in the timing of revenue recognition or expense deductibility and asset or liability valuation between GAAP and the Internal Revenue Code is avoided.
    - (2) The Income Tax Expense reported in the entity's income statement reflects the amount of taxes related to transactions recognized in the financial statements prepared under GAAP for the specific period.
    - (3) The deferred tax asset or liability (the difference between Income Tax Expense and Income Tax Payable) reported in the entity's balance sheet clearly reflects the amount of taxes that the entity has prepaid (an asset) or will have to pay in the future (a liability) because of temporary differences that result from differences in timing of revenue recognition or expense deductibility between GAAP and the Internal Revenue Code.

## B. Permanent and Temporary Differences Defined

Differences between pretax financial (book) income and taxable income can be divided into two types: temporary differences or permanent differences. The Codification does **not** use the term permanent differences. However, to ease our explanation and your comprehension, the term “permanent difference” will be used in this module, as it is in several intermediate accounting textbooks.

### 1. Temporary Differences

A temporary difference is “a difference between the tax basis of an asset or liability and its reported amount in the financial statements that will result in taxable or deductible amounts in future years when the reported amount of the asset or liability is recovered or settled, respectively.”

- a. This definition of a temporary difference is based on the assumption that assets and liabilities reported on an entity’s balance sheet will eventually be recovered or settled at their net reported (book) value.
  - (1) This recovery or settling process will create income statement items (revenues/gains or expenses/losses) as the life of the asset or liability progresses.
  - (2) If the reported financial (book) value of the balance sheet item differs from its tax basis, the correct period for recognition of the related income statement item will differ between the entity’s financial statements and the entity’s tax return. Thus, from an income statement perspective, a temporary difference occurs when a revenue or expense item: (1) is included in both financial accounting income and taxable income, **and**, (2) is recognized in one period for financial accounting purposes and in another period for income tax purposes because of differences between the promulgated rules of GAAP and the Internal Revenue Code.
    - (a) If such a temporary difference exists, an amount will be recorded and reported as either a deferred tax liability or a deferred tax asset depending upon the relationship between the reported net financial (book) value and the tax basis of the related asset or liability.
    - (b) When the temporary difference reverses, the recorded deferred tax amount is removed from the balance sheet; the amount removed results in an increase or decrease in income tax expense. Some examples of temporary differences are presented below.
      - [1] **Estimated warranty liability: Expense recognized in the financial statements when the liability** is incurred. Deduction recognized for tax purposes when the work is actually performed.
      - [2] **Unearned rent (royalty) revenue:** Recognized in the financial statements as a liability when the rent (royalty) is received and as revenue when earned. Recognized as revenue for tax purposes when the cash is received. (Note that the Internal Revenue Code refers to revenue received in advance as “prepaid income,” not “unearned revenue.”)
      - [3] **Plant assets and accumulated depreciation:** Changes in these assets and the related contra asset are recognized in the financial statements according to depreciation methods acceptable to GAAP. Changes in these assets and the related contra asset are usually recognized for tax purposes according to accelerated methods acceptable to the IRS such as ACRS and MACRS. Note that recovery of these assets occurs as the asset is used in the entity’s operations to generate revenue. In essence, a portion of the investment in the asset is being recovered as the product or service is sold.
      - [4] **Donated asset:** According to GAAP, initial valuation in the financial statements of a donated asset is based upon fair market value, and revenue is recognized for the same amount. Depreciation on the asset is computed according to the entity’s normal policies. Upon sale of the asset, a gain is recognized for the difference between cash received and net book value. According to the Internal Revenue Code, a donated asset has the same basis for the donee as it did in the donor’s hands. Thus, no tax deductions for depreciation are allowed for the asset if the tax basis is zero. When the asset is sold, the entire amount received is a taxable gain.
      - [5] **Involuntary conversion of assets:** According to GAAP, a gain (loss) must be recognized when a nonmonetary asset is involuntarily converted into a monetary asset, even though the entity reinvests the monetary assets in replacement nonmonetary assets. The replacement asset is valued at its cost or fair value on date of acquisition. According to the Internal Revenue Code, no gain is recognized on an involuntary conversion if the amount reinvested in replacement property equals or exceeds the amount realized from the converted property. The tax basis of the replacement asset is valued at its cost less the deferred gain.
      - [6] **Goodwill:** Under GAAP, goodwill is not amortized. The Internal Revenue Code however, mandates an amortization period of fifteen years.

2. **Permanent Differences**

A permanent difference occurs when a revenue or expense item is only included in pretax financial (book) income or in taxable income but will never be included in both. For example, interest income on municipal bonds is included in pretax financial (book) income but is never included in taxable income because it is tax exempt by law.

- a. No deferred taxes need to be recognized because no future tax consequences are created.
- b. The tax exempt income (or deduction not allowed for taxes) is simply subtracted from (or added to) book income in the book to tax reconciliation. Thus, a permanent difference affects only the current reconciliation of book income to taxable income, and has no effect on the computation of deferred taxes. Some common permanent differences are
  - (1) **State and municipal bond interest income:** included in book income but not included in taxable income.
  - (2) **Life insurance premium expense when the corporation is the beneficiary:** deducted for book income but not for taxable income; proceeds received on such policies result in a book gain but are not taxable.
  - (3) **Federal income tax expense:** deducted for book income but not for taxable income.
  - (4) **Payment of penalty or fine:** deducted for book income but not for taxable income.
  - (5) **Dividend received deduction (DRD):** deducted for taxable income but not for book income.
- c. The example below shows how permanent and temporary differences are used in calculating taxable income, given a corporation’s pretax financial (book) income.

**EXAMPLE 1**

A corporation has pretax financial accounting (book) income of \$146,000 in year 3. Additional information is as follows:

- 1. Municipal bond interest income is \$35,000.
- 2. Life insurance premium expense, where the corporation is the beneficiary, per books is \$4,000.
- 3. Accelerated depreciation is used for tax purposes, while straight-line is used for books. Tax depreciation is \$10,000; book depreciation is \$5,000.
- 4. Estimated warranty expense of \$500 is accrued for book purposes.

Taxable income can be determined as follows:

Financial (book) income before income taxes	\$146,000
Permanent differences	
Life insurance premium	4,000
Municipal bond interest	(35,000)
Temporary differences	
Amount added to tax accum. depr. and deducted on the tax return >	(5,000)
Amount added to book accum. deprec. and deprec. exp.	
Amount recognized for book estimated warranty liability and warranty exp. not recognized on the tax return	500
Taxable income	\$110,500

The above schedule is known as the reconciliation of book income to taxable income. It is similar to the Schedule M-1 of the US Corporate Income Tax Return (Form 1120) except it starts with pretax financial accounting income instead of net income as Schedule M-1 does.

**NOTE:** The permanent differences only impact the current year (year 3 in this case) whereas the temporary differences will have future tax consequences.

**NOW REVIEW MULTIPLE-CHOICE QUESTIONS 1 THROUGH 5**

### C. Deferred Tax Assets and Liabilities

A **deferred tax asset** is the deferred tax consequences attributable to deductible temporary differences and carryforwards. The deferred tax asset must be reduced by a valuation account if a portion or all of the deferred tax asset will not be realized in the future. A **deferred tax liability** is defined as an amount that is recognized for the deferred tax consequence of temporary differences that will result in taxable amounts in future years. Discounting of these deferred tax assets and liabilities is not permitted.

#### 1. Identification and Measurement of Deferred Tax Items

**NOTE:** The candidate's ability to work an income tax accounting problem depends upon his/her ability to correctly identify permanent and temporary differences. In order to recognize the tax consequences of a temporary difference, it must be the result of event(s) that have already been recognized in the entity's financial statements for the current or previous years. With regard to a fixed asset, this means that the fixed asset has been acquired before the end of the year for which income taxes are being determined. Thus, planned asset acquisitions for future years cannot result in temporary differences and thereby affect the determination of deferred income taxes.

- a. A **temporary difference** between pretax financial (book) income and taxable income occurs when the tax basis of an asset (or liability) differs from its reported financial statement amount. As shown in Example 1, a temporary difference resulting from timing of GAAP recognition vs. timing of recognition for tax purposes can create the need for additions to or subtractions from book income in order to arrive at taxable income.
- (1) These **additions (taxable amounts) or subtractions (deductible amounts)** can occur in the year an event takes place and a deferred asset or liability is incurred as well to account for future years when the asset is recovered or the liability is settled.
  - (2) The table below presents the various possible relationships between financial statement (book) and tax recognition of revenue and expense and assets and liabilities as well as the nature of the resulting future tax consequences.

Acctg. Income > or < taxable income*	B/S relationships	Temp. differ.**		Type of BS tax deferral	Current deferred tax expense effect	Future deferred tax expense effect
		Cur.	Fut.			
<b>Assets</b>						
>	(1) on books > tax return	D	T	Liability	(+)	(-)
<	(2) on books < tax return	T	D	Asset	(-)	(+)
<b>Liabilities</b>						
<	(3) on books > tax return	T	D	Asset	(-)	(+)
	(4) on books < tax return	D	T	Liability	(+)	(-)

\*Relationship in the year the temporary difference originates.

\*\*Deductible (D) /Taxable (T).

- (a) For example, a type 1 temporary difference (such as the difference between the financial statement amount and the zero tax basis of an asset obtained by a donation) creates a deferred tax liability.
  - [1] If the donated asset is sold for more than its tax basis, recognition of the difference between the asset's financial statement amount and its tax return basis results in a gain for taxable income and either a smaller gain or a loss for book income depending on the amount of book depreciation taken on the asset since it was received by the enterprise. The amount of cash that will be needed to pay the taxes due will be increased because the entire amount of cash received for the donated asset will be reported as gain (taxable amount) on the tax return.
  - [2] A liability is defined in SFAC 6 as "probable future sacrifices of economic benefits arising from present obligations of a particular entity to transfer assets...as a result of past transactions or events." The increase in cash paid out for taxes (a sacrifice of economic benefits) will result when the donated asset (from a past transaction or event) is disposed of; therefore, the future tax impact of the current period difference between financial statement value and tax basis represents a deferred liability. When the liability is recognized, deferred income tax expense is also recognized.
- (b) In contrast, a contingent liability recognized in the current period financial statements represents a type 3 temporary difference because a contingent liability has a zero basis for tax accounting. The

amount of expense stemming from this contingent liability must be added back to financial (book) income to arrive at taxable income. Therefore, a deferred tax asset is created.

- 1] When the probable and measurable future event does actually occur, the contingent liability will then represent a loss (deductible amount) on the tax return. Because the tax loss recognized will reduce taxable income and income taxes payable, the amount of cash that will be needed to pay the taxes due will be decreased.
- 2] Remember, an asset is defined in SFAC 6 as a “probable future economic benefit obtained or controlled by a particular entity as a result of past transactions or events.” The reduction of current tax expense and the resulting future decrease in cash paid out for taxes (an economic benefit) will result from the contingent liability (a past transaction or event). Therefore, the future tax impact of the current period difference between the financial statement value and tax basis represents a deferred tax asset in the year the contingency is recognized.

**NOTE:** The deferred tax expense recorded in this situation is a credit because it represents a current period benefit.

## 2. Scheduling and Recording Deferred Tax Amounts

- a. An entity’s total income statement provision for income taxes is the sum of that entity’s current and deferred tax amounts.
  - (1) The **current tax expense or benefit** is defined by ASC Topic 740 (SFAS 109) as “the amount of income taxes paid or payable (or refundable) for a year as determined by applying the provisions of the tax law to the taxable income or excess of deductions over revenues for that year.”
  - (2) The **deferred tax expense or benefit** is defined as “the change during the year in an enterprise’s deferred tax liabilities or assets.”
  - (3) Current and deferred tax amounts are computed independently.
- b. The deferred tax amount (the future tax consequences of temporary differences) should be recorded in the current financial statements at the amounts that will be paid or recovered based upon tax laws and rates that are already in place and due to be in effect at the date of payment or recovery.
  - (1) These are known as **enacted** tax laws and **enacted** tax rates. An entity must, therefore, determine when the identified and measured temporary differences will become taxable or deductible.
  - (2) Future **taxable amounts** cause taxable income to be greater than financial (book) income in future periods. They are a result of existing temporary differences and are reported as deferred tax liabilities in the current year.
  - (3) Future **deductible amounts** cause taxable income to be less than financial (book) income in future periods. They are a result of existing temporary differences and are reported as a deferred tax asset in the current year.
  - (4) For illustrative purposes, the following examples show the scheduling of future temporary differences.

**NOTE:** In practice and on the CPA exam, extensive scheduling is generally not necessary unless (1) there is a change in future enacted tax rates or (2) the problem requires the use of a valuation allowance account.

- c. Deferred tax liabilities and assets are determined separately for each tax-paying component (an individual entity or group of entities that is consolidated for tax purposes) in each tax jurisdiction. That determination includes the following procedures:
  - (1) Identify the types and amounts of existing temporary differences.
  - (2) Identify the nature and amount of each type of operating loss and tax credit carryforward and the remaining length of the carryforward period.
  - (3) Measure the total deferred tax liability for taxable temporary differences using the applicable tax rate.
  - (4) Measure the total deferred tax asset for deductible temporary differences and operating loss carryforwards using the applicable tax rate.
  - (5) Measure deferred tax assets for each type of tax credit carryforward.

- (6) Reduce deferred tax assets by a valuation allowance if, based on the weight of available evidence, it is *more likely than not* (a likelihood of more than 50%) that some portion or all of the deferred tax assets will not be realized. The valuation allowance should be sufficient to reduce the deferred tax asset to the amount that is more likely than not to be realized.
- (7) Deferred tax assets and liabilities are **not** discounted to reflect their present value.

**EXAMPLE 2**

This example shows the **deferred tax accounting in year 3, year 4, and year 5** for the temporary differences included in Example 1 earlier in this module. Additional details are

- On 1/1/Y1 the enterprise acquired a depreciable asset for \$30,000 that had an estimated life of six years and is depreciated on a straight-line basis for book purposes. For tax purposes, the asset is depreciated using the straight-line election under MACRS and qualifies as a three-year asset.
- The enterprise deducted warranty expense of \$500 for book purposes in year 3 that is expected to be deductible for tax purposes in year 4.
- Taxable income was \$110,500 in year 3, \$112,000 in year 4, and \$113,500 in year 5.
- The applicable tax rate is 40% for all years affected.

The deferred component of income tax expense for year 3 is computed as follows. First, a schedule of the **temporary depreciation differences** for all affected years is prepared:

	Year 1	Year 2	Year 3	Year 4	Year 5	Year 6
Book depreciation	\$ 5,000	\$ 5,000	\$ 5,000	\$5,000	\$5,000	\$5,000
Tax depreciation	<u>5,000*</u>	<u>10,000</u>	<u>10,000</u>	<u>5,000*</u>	—	—
Temporary difference:						
No difference	<u>\$ 0</u>			<u>\$ 0</u>		
Book deprec. < Tax deprec.		<u>\$(5,000)</u>	<u>\$(5,000)</u>			
Book deprec. > Tax deprec.					<u>\$5,000</u>	<u>\$5,000</u>

\* Due to MACRS half-year convention

Then, a schedule of **future taxable (deductible) amounts** is prepared.

	Year 4 Taxable (deductible)	Year 5 Taxable (deductible)	Year 6 Taxable (deductible)	Tax rate	Deferred tax liability (asset)
Scheduled taxable (deductible) amounts:					
Depreciation differences: taxable amounts		\$5,000	\$5,000	40%	\$4,000 Noncurrent
Warranty differences: deductible amounts	\$(500)			40%	\$(200) Current

The above schedule shows that the future tax benefit (deductible amount) in year 4 of the \$500 temporary difference resulting from the Warranty Expense Liability must be recognized automatically as a deferred tax asset in year 3. The deferred tax asset of \$200 ( $\$500 \times 40\%$ ) should be reported as a current asset at 12/31/Y3 because the classification of the temporary difference is based on the related asset or liability, in this case a warranty liability that is expected to be satisfied in the next year. The amount of future taxes payable (deferred tax liability) associated with the total temporary difference of \$10,000 resulting from excess depreciation [ $\$5,000$  (year 3) +  $\$5,000$  (year 4)] is \$4,000 [ $(\$5,000 + 5,000) \times 40\%$ ]. The \$4,000 amount is reported as a noncurrent deferred tax liability at 12/31/Y3, because classification as current or noncurrent is based on the classification of the related asset or liability, in this case a depreciable asset that is noncurrent.

Once the deferred tax asset and deferred tax liability have been measured at year-end, a journal entry is necessary to adjust the deferred tax account balances to the current year-end amount. As stated earlier, income tax expense for the year will consist of the taxes currently payable (based on taxable income) plus or minus any change in the deferred tax accounts.

**Equation for Determining Income Tax Expense**

$$\begin{array}{rcl} \text{Income tax} & & \text{Income tax} \\ \text{expense for financial} & = & \text{payable from} \\ \text{reporting} & & \text{the tax return} \end{array} \quad \pm \quad \begin{array}{l} \text{Change in} \\ \text{deferred} \\ \text{taxes (net)*} \end{array}$$

\* Ending balance of deferred tax liability/asset (net) less beginning balance of deferred tax liability/asset (net)

**Notes:**

1. Income Tax Expense is the sum of the two numbers on the right side of the equation. Each of these two numbers is determined directly using independent calculations. It is not possible to derive Income Tax Expense from pretax financial accounting income adjusted for permanent differences, unless the tax rate is constant for all years affected.
2. The ± refers to whether the change is a credit or additional liability (+) or a debit or additional asset (-).
3. Income Tax Payable is the amount of taxes calculated on the corporate tax return. It is the amount legally owed the government (after credits).
4. One deferred tax (net) balance sheet account may be used in practice. If separate asset and liability accounts are used, the changes in each account would all be netted to determine the deferred tax component of income tax expense.

**EXAMPLE**

To illustrate, we will use the deferred tax liability computed in Example 2 above and the taxable income derived in Example 1. Note that at the end of year 3, but prior to adjustment, the deferred tax asset account had a zero balance and the deferred tax liability account had a balance of \$2,000 ( $\$5,000 \times 40\%$ ) that was recognized as a result of the accumulated depreciation temporary difference that originated in year 1. (Refer to the schedule following the additional information given in Example 2 showing depreciation and the pattern of temporary differences and to the T-account under (c) below.) To focus on the two components of income tax expense, two entries rather than the typical combined entry will be used.

Income tax expense—current	44,200	
Income tax payable (a)		44,200

(a)  $\$110,500$  taxable income (from Example 1)  $\times 40\% = \$44,200$

Income tax expense—deferred (d)	1,800	
Deferred tax asset—current (b)		200
Deferred tax liability—noncurrent (c)		2,000

(b)  $\$500 \times 40\% = \$200$  needed Ending balance;  $\$200$  Ending balance –  $\$0$  Beginning balance =  $\$200$  increase needed in the account

Deferred Tax Asset	
Beg. bal.	0
Increase (b)	200
End. bal.	200

(c)  $\$10,000 \times 40\% = \$4,000$  needed Ending balance;  $\$4,000$  Ending balance –  $\$2,000$  Beginning balance =  $\$2,000$  increase needed in the account

Deferred Tax Liability	
	2,000 Beg. bal.
	2,000 Increase (c)
	4,000 End. bal.

(d)  $\$2,000$  increase in noncurrent deferred tax liability account –  $\$200$  increase in current deferred tax asset account =  $\$1,800$

The bottom of the income statement for year 3 would appear as follows:

Income before income tax		\$146,000
Income tax expense		
Current	\$44,200	
Deferred	1,800	46,000
Net income		\$100,000

To determine the deferred component of income tax expense for year 3, a schedule of future taxable (deductible) amounts is prepared.

	<b>Year 4 Taxable (deductible)</b>	<b>Year 5 Taxable (deductible)</b>	<b>Year 6 Taxable (deductible)</b>	<b>Tax rate</b>	<b>Deferred tax liability (asset)</b>
Scheduled taxable (deductible) amounts:					
Depreciation differences: taxable amounts	-0-	\$5,000	\$5,000	40%	\$4,000 Noncurrent

The temporary depreciation difference of \$10,000 results in future taxes payable (a deferred tax liability) of \$4,000  $[(\$5,000 + 5,000) \times 40\%]$ . Note that the amount of the deferred tax liability in this example does not change from year 3 to year 4. The \$4,000 amount would be reported as a noncurrent deferred tax liability at 12/31/11, based upon the noncurrent classification of the related depreciable asset. The \$500 warranty expense deducted in year 3 for book purposes is deducted in year 4 for tax purposes. Therefore, the deferred tax asset related to warranty expense is realized in year 4 and the temporary difference related to warranty expense no longer exists.

Once the deferred tax amounts have been measured at year-end, a journal entry is required to adjust the deferred tax account balances to the current year-end amount. Income tax expense for the year consists of the taxes currently payable plus or minus any change in the deferred tax accounts. The following journal entries are needed to record income tax expense for year 4:

Income tax expense—current	44,800	
Income tax payable (a)		44,800

(a)  $\$112,000$  taxable income  $\times$  40% = \$44,800

Income tax expense deferred (c)	200	
Deferred tax asset current (b)		200

(b) The credit to the deferred tax asset is the adjustment necessary to reduce the existing balance to the desired ending balance.

	<b>Deferred Tax Asset</b>		
Beg. bal.	200		
		200	Decrease (b)
End. bal.	0		

(c) Income tax expense—deferred results from the decrease in the deferred tax asset. There is no adjustment to the deferred tax liability account.

	<b>Deferred Tax Liability</b>		
	4,000		Beg. bal.
		0	
	4,000		End. bal.

To determine the deferred component of income tax expense for year 5 the following journal entries are required:

Income tax expense—current	45,400	
Income tax payable (a)		45,400

(a)  $\$113,500$  taxable income  $\times$  40% = \$45,400

Deferred tax liability—noncurrent (b)	2,000	
Income tax expense—deferred (c)		2,000

(b) The debit to the deferred tax liability is the adjustment necessary to reduce the existing balance to the desired ending balance.

	<b>Deferred Tax Liability</b>		
	4,000		Beg. bal.
2,000			Decrease (b)
	2,000		End. bal.

- (c) Income tax expense—deferred results from the decrease in the deferred tax liability. The deferred tax asset account was closed in year 4 because all temporary differences have reversed.

The income tax liability per the tax return in year 5 is higher than total tax expense reported on the income statement since depreciation is not deducted for tax purposes anymore. In effect, the income tax liability in year 5 includes a portion of the tax deferred from year 3- year 5 that was recorded as a liability; therefore, the deferred tax liability is reduced in year 5. There is a corresponding decrease in income tax expense—deferred that will reconcile the income tax liability per the tax return to income tax expense on the books.

Income tax expense—current	45,400
Income tax expense—deferred	<u>(2,000)</u>
Income tax expense per income statement	<u>43,400</u>

d. **Changing tax rates.** The previous examples assumed a constant enacted tax rate of 40%.

- (1) Under the **liability method**, future taxable or deductible amounts (deferred tax assets or liabilities) must be measured using enacted tax rates expected to be in effect in the periods such amounts will impact taxable income.
- (2) However, when tax rates change, adjustments to reflect such changes are automatically included in the journal entry amount to increase or decrease the deferred tax accounts to the balances needed to properly reflect balance sheet amounts and to recognize the deferred component of income tax expense.
  - (a) The rate change effect would be included because the amount of the journal entry is determined by comparing the needed balance in deferred taxes at the end of the period which would be based on the newly enacted rates with the balance at the beginning of the period and taking the difference.

**EXAMPLE 3**

Assume that in June year 5 a new income tax law is passed which lowers the corporate tax rate to 35% effective January 1, year 6. The entry debiting income tax expense—current and crediting income tax payable for year 5 is identical to that above.

However, the debit to the deferred tax liability account is the adjustment necessary to reduce the existing balance to the desired ending **balance under the new tax rate**.

Deferred tax liability—noncurrent	2,250
Income tax expense—deferred	2,250

**Deferred Tax Liability**

	4,000	Beg. bal.
2,250		Decrease
	1,750	End. bal.

The \$1,750 is the necessary balance for the year 6 reversal of the remaining \$5,000 at 35%.

**EXAMPLE 4**

Dart Corporation has the following temporary differences from its first year of operations:

1. Long-term contracts:		<b>Treatment in the book to tax reconciliation</b>
Year 1 (Current year):	Book contract income >	
Year 2:	tax contract income	\$300 subtraction
	Book contract income <	
	tax contract income	\$300 addition

<b>2. Accumulated depreciation:</b>		
Year 1 (Current year):	Book deprec. < tax deprec.	\$1,000 subtraction
Year 2:	Book deprec. < tax deprec.	\$500 subtraction
Year 3:	Book deprec. > tax deprec.	\$600 addition
Year 4:	Book deprec. > tax deprec.	\$400 addition
Year 7:		\$500 addition
<b>3. Estimated expense liability:</b>		
Year 1 (Current year):	Book est. exp./loss > tax deduction	\$200 addition
Year 7:	Book exp./loss < tax deduction	\$200 subtraction
		Treatment in the book to tax reconciliation
<b>4. Rent revenue:</b>		
Year 1 (Current year):	Book rev. < tax rev.	\$500 addition
Year 4:	Book rev. > tax rev.	\$200 subtraction
Year 7:	Book rev. > tax rev.	\$300 subtraction
<b>5. Tax rates:</b>		
Current year:	40%	
Years 2–4:	35%	
Years 5–7:	30%	

The schedule below combines (1) the pretax accounting income to taxable income reconciliation and (2) the future taxable (deductible) amounts schedule. Remember that **taxable amounts** are added to financial (book) income in the book to tax reconciliation schedule in the future years in which they increase taxable income. **Deductible amounts** are subtracted from financial (book) income in the book to tax reconciliation schedule in the future years in which they decrease taxable income. Taxable income and deferred tax liability (asset) balances for year 1 (the current year) would be determined as follows:

	Current year	Future years				Deferred tax liability
	Year 1	Year 2 taxable (deductible)	Year 3 taxable (deductible)	Year 4 taxable (deductible)	Year 7 taxable (deductible)	(asset)
Tax rate	40%	35%	35%	35%	30%	
Pretax accounting income	\$ 1,600					
Temporary differences:						
LT contracts	(300)	300				\$ 105 Current
Accumulated deprec.	(1,000)	(500)*	600	400	500	\$ 325 Noncurrent
Estimated expense liability	200				(200)	\$ (60) Noncurrent
Rent revenue	<u>500</u>			(200)	(300)	\$(160) Noncurrent
Taxable income	<u>\$ 1,000</u>					
Income tax payable (\$1,000 × 40%)	<u>\$ 400</u>					

\* Note that in year 2 there is excess tax depreciation as there was in year 1.

Income tax expense would be computed as follows:

$$\text{Income tax expense} = \text{Income taxes} \pm \text{Change in deferred taxes (net)}$$

Under ASC Topic 740, deferred tax assets and liabilities are classified as current or long-term based on the related asset or liability, rather than on the expected timing of the future deductible or taxable amounts. However, if a deferred tax asset or liability is not related to an asset or liability for financial reporting purposes, it is classified based upon its expected reversal date. Presented below is a solution for Example 4.

Temporary difference	Deferred tax asset or liability	Related account	Classification*
LT contracts	$\$300 \times 35\% = \$105$ liability	Const-in-Progress	Current
Depreciation	$[(500) + 600 + 400] \times 35\% + \$500 \times 30\% = \$325$ liability	Accumulated depr.	Noncurrent
Est. expense	$\$200 \times 30\% = \$60$ asset	Estimated liability	Noncurrent
Rent revenue	$\$200 \times 35\% + \$300 \times 30\% = \$160$ asset	Unearned rent	Noncurrent

\* Balance sheet disclosure is explained for this example in Section F.3.

The journal entries required are as follows:

Income tax expense current	400	
Income tax payable		400 (a)

(a)  $\$1,000 \text{ taxable income} \times 40\% = \$400$

Income tax expense deferred (e)	210	
Deferred tax asset noncurrent (b)	220	
Deferred tax liability current (c)		105
Deferred tax liability noncurrent (d)		325

(b)  $\$200 \times 30\% + \$200 \times 35\% + \$300 \times 30\% = \$220$  needed Ending balance;  $\$220 \text{ Ending balance} - \$0 \text{ Beginning balance} = \$220$  increase needed in the account.

**Deferred Tax Asset—Noncurrent**

-0-	Beg. bal.
220	Increase (b)
220	End. bal.

(c)  $\$300 \times 35\% = \$105$  Ending balance;  $\$105 \text{ Ending balance} - \$0 \text{ Beginning balance} = \$105$  increase needed in the account

**Deferred Tax Liability—Current**

Beg. bal.	-0-
Increase (c)	105
End. bal.	105

(d)  $\$1,000 \times 35\% + (\$500) \times 35\% + \$500 \times 30\% = \$325$  Ending balance;  $\$325 \text{ Ending balance} - \$0 \text{ Beginning balance} = \$325$  increase needed in the account.

**Deferred Tax Liability—Noncurrent**

Beg. bal.	-0-
Increase (c)	325
End. bal.	325

(e)  $\$105 \text{ increase in current deferred tax liability amount} + \$325 \text{ increase in noncurrent deferred tax liability account} - \$220 \text{ increase in noncurrent deferred tax asset account} = \$210$ .

**NOTE:** Since this is the firm’s first year of operations, there are no beginning balances in the deferred tax accounts. If there were any permanent differences, such differences would affect only the current year as they did in Example 1. In addition, the need for a valuation allowance to reduce the deferred tax asset to its net realizable value would need to be considered.

- e. **Deferred tax asset valuation allowance.** A deferred tax asset is reduced by a valuation allowance if, based on the weight of available evidence, it is more likely than not (a likelihood of more than 50%) that some portion or all of the deferred tax asset will not be realized.
- (1) All available evidence, both positive and negative, should be considered to determine whether a valuation allowance is needed. The need for a valuation allowance ultimately depends on the existence of sufficient taxable income (necessary to receive the benefit of a future deductible amount) within the carryback/carryforward period, as described in Section E of this module. If any one of the following sources is sufficient to support a conclusion that a valuation allowance is not necessary, other sources need not be considered.
    - (a) Future reversals of existing taxable temporary differences
    - (b) Future taxable income exclusive of reversing temporary differences and carryforwards
    - (c) Taxable income in prior carryback year(s) if carryback is permitted under the tax law
  - (2) Possible sources of taxable income

- (d) Tax-planning strategies that would, if necessary, be implemented to
- 1] Accelerate taxable amounts to utilize expiring carryforwards
  - 2] Change the character of taxable or deductible amounts from ordinary income or loss to capital gain or loss
  - 3] Switch from tax-exempt to taxable investments.
- (3) Examples of evidence to be considered when evaluating the need for a valuation allowance are summarized as follows:
- (a) Negative evidence—Indicates need for a valuation allowance
- 1] Cumulative losses in recent years
  - 2] A history of operating loss or tax credit carryforwards expiring unused
  - 3] Losses expected in early future years (by a presently profitable entity)
  - 4] Unsettled circumstances that, if unfavorably resolved, would adversely affect future operations and profit levels on a continuing basis in future years
  - 5] A carryback/carryforward period that is so brief that it would limit realization of tax benefits if (1) a significant deductible temporary difference is expected to reverse in a single year or (2) the enterprise operates in a traditionally cyclical business.
- (b) Positive evidence—Can offset the impact of negative evidence
- 1] Existing contracts or firm sales backlog that will produce more than enough taxable income to realize the deferred tax asset based on existing sales prices and cost structures
  - 2] An excess of appreciated asset value over the tax basis of the entity's net assets in an amount sufficient to realize the deferred tax asset
  - 3] A strong earnings history exclusive of the loss that created the future deductible amount (tax loss carryforward or deductible temporary difference) coupled with evidence indicating that the loss (for example, an unusual, infrequent, or extraordinary item) is an aberration rather than a continuing condition.

**EXAMPLE****Valuation allowance**

Assume Jeremiah Corporation has determined it has a noncurrent deferred tax asset of \$800,000. Note that in the current and prior periods when this asset was recognized, income tax expense was reduced. Based on the weight of available evidence, Jeremiah feels it is more likely than not that \$300,000 of this deferred tax asset will not be realized. Jeremiah would prepare the following journal entry:

Income tax expense	300,000	
Allowance to reduce deferred tax asset to expected realizable value		300,000

The balance sheet presentation is

Other Assets (Noncurrent)	
Deferred tax asset	\$ 800,000
Less Allowance to reduce deferred tax asset to expected realizable value	<u>(300,000)</u>
	<u>\$ 500,000</u>

At each year-end, the balance on the allowance account is adjusted upward or downward based on the evidence available at that time, resulting in an increase or decrease of income tax expense. For example, if \$600,000 was deemed to be the net realizable value at the end of the next year, the following entry would be made:

Allowance to reduce deferred tax asset to expected realizable value	100,000	
Deferred income tax expense		100,000

**D. Deferred Tax Related to Business Investments**

One additional issue concerns temporary differences from income on long-term investments that are accounted for using the equity method. For these investments a corporation may assume that the temporary difference (the undistributed income since date of acquisition) will ultimately become taxable in the form of a dividend or in the form of a capital gain. Obviously, the tax expense and deferred tax liability recorded when the difference originates will be a function of whichever of these assumptions is made.

**EXAMPLE**

Assume Parent Company owns 70% of the outstanding common stock of Subsidiary Company and 30% of the outstanding common stock of Investee Company. Additional data for Subsidiary and Investee Companies for the year year 1 are as follows:

	Investee Co	Subsidiary Co
Net income	\$50,000	\$100,000
Dividends paid	20,000	60,000

**Income Tax Effects from Investee Co.**

The pretax accounting income of Parent Company will include equity in Investee income equal to \$15,000 ( $\$50,000 \times 30\%$ ). Parent's taxable income, however, will include dividend income of \$6,000 ( $\$20,000 \times 30\%$ ), and a dividends received deduction of 80% of the \$6,000, or \$4,800, will also be allowed for the dividends received. This 80% dividends received deduction is a permanent difference between pretax accounting and taxable income and is allowed for dividends received from domestic corporations in which the ownership percentage is less than 80% and equal to or greater than 20%. The originating temporary difference results from Parent's equity ( $\$9,000 = \$30,000 \times 30\%$ ) in Investee's undistributed income of \$30,000 ( $\$50,000 - \$20,000$ ). The amount by which the deferred tax liability account would increase in year 1 depends upon the expectations of Parent Co. as to the manner in which the \$9,000 of undistributed income will be received. If the expectation of receipt is via dividends, then the temporary difference is 20% of \$9,000 because 80% of the expected dividend will be excluded from taxable income when received. This temporary difference in year 1 of \$1,800, multiplied by the tax rate, will give the amount of the increase in the deferred tax liability. If the expectation of receipt, however, is through future sale of the investment, then the temporary difference is \$9,000, and the change in the deferred tax liability is the capital gains rate (currently the same as ordinary rate) times the \$9,000.

The entries below illustrate these alternatives. A tax rate of 34% is used for both ordinary income and capital gains. Note that the amounts in the entries below relate only to Investee Company's incremental impact upon Parent Company's tax accounts.

	Expectations for undistributed income	
	Dividends	Capital gains
Income tax expense	1,020	3,468
Deferred taxes (net)	612 <sup>b</sup>	3,060 <sup>c</sup>
Income taxes payable	408 <sup>a</sup>	408 <sup>a</sup>
<i><sup>a</sup>Computation of income taxes payable</i>		
<i>Dividend income—30% (\$20,000)</i>		\$ 6,000
<i>Less: 80% dividends received deduction</i>		<u>(4,800)</u>
<i>Amount included in Parent's taxable income</i>		<u>\$ 1,200</u>
<i>Tax liability—34% (\$1,200)</i>		<u>\$ 408</u>
<i><sup>b</sup>Computation of deferred tax liability (dividend assumption)</i>		
<i>Temporary difference—Parent's share of undistributed income—30% (\$30,000)</i>		\$ 9,000
<i>Less: 80% dividends received deduction</i>		<u>\$(7,200)</u>
<i>Originating temporary difference</i>		<u>\$ 1,800</u>
<i>Deferred tax liability—34% (\$1,800)</i>		<u>\$ 612</u>
<i><sup>c</sup>Computation of deferred tax liability (capital gain assumption)</i>		
<i>Temporary difference—Parent's share of undistributed income—30% (\$30,000)</i>		\$ 9,000
<i>Deferred tax liability—34% (\$9,000)</i>		<u>\$ 3,060</u>

**Income Tax Effects from Subsidiary Co.**

The pretax accounting income of Parent will also include equity in Subsidiary income of \$70,000 (70% of \$100,000). Note also that this \$70,000 will be included in pretax consolidated income if Parent and Subsidiary consolidate. For tax purposes, Parent and Subsidiary cannot file a consolidated tax return because the minimum level of control (80%) is not present. Consequently, the taxable income of Parent will include dividend income of \$42,000 (70% of \$60,000) and there will be an 80% dividends received deduction of \$33,600. The temporary difference results from Parent's equity ( $\$28,000 = \$40,000 \times 70\%$ ) in Subsidiary's undistributed earnings of \$40,000 ( $\$100,000 - \$60,000$ ). Remember that the undistributed income of Subsidiary has been recognized for book purposes, but only distributed income (dividends) has been included in taxable income. The amount of the deferred tax liability in year 1 depends upon the expectations of Parent Company as to the manner in which this \$28,000 of undistributed income will be received in the future. The same expectations can exist as previously discussed for Parent's equity in Investee's undistributed earnings (i.e., through future dividend distributions or capital gains). Determination of the amounts and the accounts affected for these two assumptions would be similar. The following diagram illustrates the accounting and income tax treatment of the undistributed investee/subsidiary earnings by corporate investors under different levels of ownership.

### SUMMARY OF TEMPORARY DIFFERENCES OF INVESTEES AND SUBSIDIARIES

#### Level of Ownership Interest

#### Recognition of Temporary Differences

\* Both pretax financial accounting and taxable income would include only dividends declared by the investee. If evidence indicates that significant influence exists at an ownership level less than 20%, a temporary difference would be recognized.

### NOW REVIEW MULTIPLE-CHOICE QUESTIONS 6 THROUGH 29

#### E. Loss Carryforwards and Carrybacks

- Operating losses of a particular period can be carried back to the two immediate past periods' income resulting in a refund. Losses still remaining after carrybacks may also be carried forward for twenty years to offset income if income arises in any of those twenty years. Companies may at the time of the loss elect to use only the carryforward provision.
  - Loss carrybacks** occur when losses in the current period are carried back to periods in which there was income. Loss carrybacks result in tax refunds in the loss period and thus should be recognized in the year of the loss. The entry to record the benefit is
 

Tax refund receivable	(based on tax credit due to loss)	
Tax loss benefit (income tax expense)		(same)

    - The tax loss benefit account would be closed to revenue and expense summary in the year of the loss.
  - Tax loss carryforwards** are recognized in the year the loss occurs. Under ASC Topic 740 (SFAS 109), the benefit of a loss carryforward is **always** recognized as a deferred tax asset which may be reduced by a valuation allowance if necessary.

**EXAMPLE**

Assume Caleb Corporation has a loss carryforward of \$300,000 which could result in future tax savings of \$120,000 (40% × \$300,000). Caleb feels that based on the weight of available evidence it is more likely than not that \$50,000 of these savings will not be realized. Caleb's entries to record the benefit and the valuation allowance are

Deferred tax asset	120,000	
Tax loss benefit (income tax expense)		120,000
Tax loss benefit (income tax expense)	50,000	
Allowance to reduce deferred tax asset to expected realizable value		50,000

- c. **Income statement presentation.** The income statement for the year in which both a loss carryback and carryforward are realized would appear as follows:

Loss before income taxes		\$ (xx)
Less:		
Benefit from operating loss carryback	xx	
Benefit from operating loss carryforward	-	<u>xx</u>
Net loss		\$ ( <u>xx</u> )

**NOW REVIEW MULTIPLE-CHOICE QUESTIONS 30 THROUGH 33**

## F. Financial Statement Presentation of Income Tax

### 1. Income Statement

- a. **Continuing operations.** For each year presented, the significant components of income tax expense arising from continuing operations shall be disclosed on the face of the income statement or in the notes. These components would include
- (1) Current tax expense or benefit
  - (2) Deferred tax expense or benefit (exclusive of the effects of other components listed below).
  - (3) The benefits of operating loss carryforwards
  - (4) Adjustments of a deferred tax liability or asset for enacted changes in tax laws or rates or a change in the tax status of the enterprise
  - (5) Adjustments of the beginning-of-the-year balance of a valuation allowance because of a change in circumstances that causes a change in judgment about the realizability of the related deferred tax asset in future years.
- b. **Other components of net income.** Income tax expense must be allocated within an accounting period between continuing operations and other components of net income (i.e., discontinued operations, extraordinary items, etc.).
- (1) The amount of income tax expense allocated to continuing operations is equal to the tax on pretax income or loss from continuing operations.
    - (a) However, if net income includes "special items" such as discontinued operations, extraordinary items, and accounting changes, the amount of income tax expense allocated to continuing operations must consider these items.
  - (2) The amount allocated to an item other than continuing operations (e.g., discontinued operations, extraordinary items, and accounting changes) is equal to the incremental effect on income taxes resulting from that item.

**EXAMPLE**

Benjamin Corporation's ordinary loss from continuing operations is \$1,000. Benjamin also has an extraordinary gain of \$1,800 that is a capital gain for tax purposes. The tax rate is 40% on ordinary income and 30% on capital gains. Income taxes currently payable are \$240  $[(\$1,800 - \$1,000) \times 30\%]$ . Since the effect of the \$1,000 loss was to offset a capital gain, the benefit allocated to continuing operations is \$300  $(30\% \times \$1,000)$  rather than \$400  $(40\% \times \$1,000)$ . The incremental tax expense allocated to the extraordinary gain is \$540 (difference between the \$300 tax benefit and the \$240 total tax expense).

**EXAMPLE**

Alco Co. has income from continuing operations of \$2,000,000, an extraordinary gain of \$450,000, and no permanent or temporary differences. The current tax rate is 34%. Total income tax expense is \$833,000  $(\$2,450,000 \times 34\%)$ . This amount will first be allocated to income from continuing operations, and the remainder (incremental tax consequences attributable to the remaining components of net income) will be allocated to the extraordinary gain.

Total income tax expense	\$ 833,000
Tax consequences associated with income from continuing operations $(\$2,000,000 \times 34\%)$	<u>680,000</u>
Remainder to extraordinary gain	<u>\$ 153,000</u>

The bottom of the income statement would appear as follows:

Income from continuing operations	\$2,000,000
Income tax expense	<u>680,000</u>
Income before extraordinary item	\$1,320,000
Extraordinary gain (net of \$153,000 tax)	<u>297,000</u>
Net income	<u>\$1,617,000</u>

- c. **Other comprehensive income.** Components of other comprehensive income may be displayed net of related deferred tax effects or before related deferred tax effects with one amount shown for the aggregate income tax effect (with detail shown in notes). Refer to Module 9 for more information regarding comprehensive income.
2. **Retained Earnings**

Any income tax effects associated with adjustments of the opening balance of retained earnings for a **special type** change in accounting principle or correction of an error are to be charged or credited directly to retained earnings. The income tax effects of other stockholders' equity items (e.g., cumulative translation adjustment) are charged or credited to stockholders' equity.
  3. **Balance Sheet**
    - a. The classification of deferred tax liabilities and assets is a two-stage process.
      - (1) First, all deferred tax liabilities and assets are classified as current or noncurrent.
        - (a) Deferred tax liabilities and assets are classified as current or long-term based on the related asset or liability.
          - 1] A deferred tax liability or asset is related to an asset or liability if reduction of the asset or liability will cause the temporary difference to reverse.
        - (b) If the deferred tax liability or asset is not related to any asset or liability for financial reporting purposes (such as a deferred tax asset caused by a loss carryforward), it is classified based on the timing of its expected reversal or utilization date.
      - (2) Once classification has been determined, all current amounts are netted to get a net current asset or liability and the noncurrent amounts are likewise netted to obtain a net noncurrent amount.
      - (3) This process is illustrated in Example 4 that appeared earlier in this module. In Example 4, the only current deferred tax asset/liability is the \$105 current liability. Thus the net current amount is a \$105 liability. The other amounts are netted to find the net noncurrent amount. In this case the net noncurrent amount is a \$105 liability  $(\$325 - \$220)$ .

- b. If an allowance account has been recognized for a deferred tax asset, it would be deducted from the related deferred tax asset before the netting process described above is done. If the allowance account balance relates to a deferred tax asset that is classified partially as current and partially as noncurrent, the allowance balance should be allocated between them in the ratio of each asset balance to the total asset balance.

**NOTE:** If a tax refund receivable results from a loss carryback in the current period, this element would not be included in the netting process; only deferred tax assets and liabilities are netted.

**NOTE:** An unrecognized tax benefit should be presented as a reduction of the deferred tax asset for a net operating loss carryforward (or similar tax loss) or tax credit carryforward. If these items do not already exist, the unrecognized tax benefit should be presented as a liability (not deferred tax liability unless it is the result of a taxable temporary difference) and not be combined with deferred tax assets.

**NOW REVIEW MULTIPLE-CHOICE QUESTIONS 34 THROUGH 41**

### G. Treatment of Selected Temporary Differences

The table on the next page summarizes the treatment of selected temporary differences from the period of origination to the period of reversal.

### H. Research Component—Accounting Standards Codification

ASC Topic 740 addresses most research questions on deferred taxes. An important concept is that SFAS 109 uses the asset/liability method in recognizing deferred taxes. The most likely research questions are defining temporary differences, identifying the tax rates used to calculate deferred taxes, classifying items as current or noncurrent, and the use of valuation accounts. ASC Topic 740 defines temporary differences and lists examples. An important point is that the statement does not define the term “permanent differences,” nor does it use this term in the standard.

Keywords for researching the most important issues in deferred taxes are shown below.

Carrybacks	Deferred tax consequences	Income taxes currently payable
Carryforwards	Deferred tax expense	Negative evidence
Change tax rates	Deferred tax liability	Positive evidence
Current tax expense	Enacted tax rates	Taxable income
Deductible temporary differences	Future deductible amount(s)	Taxable temporary differences
Deferred tax asset	Future taxable amount(s)	Valuation allowance tax
Deferred tax benefit	Income tax expense	

### I. International Financial Reporting Standards (IFRS)

1. IFRS requires the use of the “liability method” to account for income taxes. Similar to US GAAP, its primary purpose is to focus on the statement of financial position and report deferred tax assets and deferred tax liabilities.
  - a. IAS 12 prohibits deferred tax assets or deferred tax liabilities from being classified as current. Therefore, deferred taxes are classified as noncurrent items in the statement of financial position.
2. Current tax is the amount of income taxes payable or recoverable on the taxable profit or loss for the period.
3. Deferred tax assets and liabilities arise due to temporary differences.
  - a. Temporary differences are either taxable temporary differences or deductible temporary differences.
    - (1) A taxable temporary difference will result in an increase in taxable amounts in a future period.
    - (2) A deductible temporary difference will result in amounts that can be deducted in future periods.
  - b. A deferred tax asset arises when there is a deductible temporary difference. A deferred tax asset also arises when an entity has unused tax losses that can be deducted in the future or tax credits which can be used in the future.
  - c. An entity can recognize a deferred tax asset if it is probable (more likely than not) that the tax benefit can be used.
4. Deferred tax assets and liabilities are measured using the enacted rate or substantially enacted rate (unlike US GAAP which requires the use of the enacted tax rate).

**TREATMENT OF SELECTED TEMPORARY DIFFERENCES**

	Book value		Tax basis		Previous and current reconciliations of book income to tax income	Future years(s) reconciliation of book income totax income	Deferred consequence
a. <b>Estimated liability under warranties</b>	56,000	Less	—	=	56,000 addition(s)	56,000 subtraction(s)	Asset
b. <b>Unearned rent (royalty) revenue received (liability)</b>	40,000	Less	—	=	40,000 addition(s)	40,000 subtraction(s)	Asset
c. <b>Long-term contracts:</b>							
Construction in process (asset)	1,125,000	Less	1,000,000	=	125,000 subtraction	125,000 addition	Liability
d. <b>Plant assets and accumulated depreciation:</b>							
Equipment (asset)	50,000		50,000				
Accumulated depreciation (contra asset)	10,000	Less	18,500	=	8,500 subtraction(s)	8,500 addition(s)	Liability
End of period basis	<u>40,000</u>		<u>31,500</u>				
e. <b>Donated assets:</b>							
<b>Year of acquisition:</b>							
Machinery (asset)	90,000	Less	—	=	Not included because donat. recorded in S/E	See deprec. below	Liability
<b>Depreciation:</b>							
Machinery (asset)	90,000		—				
Accumulated depreciation (contra asset)	18,000	Less	—	=	18,000 addition(s)	18,000 addition(s)	Reduction of liability
End of period basis	<u>72,000</u>		<u>—</u>				
<b>Sale of asset:</b>							
Cash received	80,000		80,000				
Basis of asset	72,000	Less	—	=		72,000 addition	Reduction of liability
Gain (revenue)	<u>8,000</u>		<u>80,000</u>				
f. <b>Replacement asset for involuntarily converted asset:</b>							
<b>Year of acquisition:</b>							
Building (asset)	280,000		280,000				
Deferred gain from involuntary conversion			(110,000)				
Initial basis of asset	280,000	Less	170,000	=	110,000 subtraction		Liability
<b>Depreciation:</b>							
Building (asset)	280,000		170,000				
Accumulated depreciation (contra asset)	(14,000)	Less	(28,900)	=	14,900 subtraction		Liability
End of period basis	<u>266,000</u>		<u>141,100</u>				
<b>Sale of replacement asset:</b>							
Cash received	270,000		270,000				
Basis of asset	(266,000)	Less	(141,100)	=		124,900 addition	Reduction of liability
Gain (revenue)	<u>4,000</u>		<u>128,900</u>				

\* The \$110,000 gain was recognized in the financial statements in the period the involuntary conversion occurred.

5. The liability method requires an entity to identify all temporary differences. The differences are then classified as those giving rise to deferred tax liabilities, and those giving rise to deferred tax assets.
  - a. This distinction is important because all deferred tax liabilities are reported, whereas deferred tax assets can only be recognized if it is probable (more likely than not) that the asset will be realized.
  - b. Similar to US GAAP, tax expense is the sum of current tax expense and the deferred tax expense.
6. One of the significant differences in accounting for income taxes between US GAAP and IFRS is the classification of deferred taxes on the balance sheet.
  - a. Recall that for US GAAP, the netting procedures involve netting current deferred tax assets (DTA) with current deferred tax liabilities (DTL) to present one amount, and netting noncurrent DTA with noncurrent DTL to present another amount.
  - b. Under IFRS, deferred tax assets and liabilities may not be classified as current.
  - c. The netting rules are also different.
    - (1) Netting of the components of deferred taxes is only permissible in certain situations.
      - (a) The rules for presentation and disclosure require that a current tax payable and a current tax recoverable (receivable) can be offset only if it relates to the same taxing authority.
      - (b) Likewise, the netting of deferred tax assets and deferred tax liabilities must relate to the same taxing authority. Therefore, in order to net these amounts, the entity must have a legal right to offset the amounts, and the amounts must relate to the same taxing authority.

**NOW REVIEW MULTIPLE-CHOICE QUESTIONS 42 THROUGH 44**

## KEY TERMS

**Asset.** A “probable future economic benefit obtained or controlled by a particular entity as a result of past transactions or events” (SFAC 6).

**Current tax expense or benefit.** “The amount of income taxes paid or payable (or refundable) for a year as determined by applying the provisions of the tax law to the taxable income or excess of deductions over revenues for that year” (ASC Topic 740).

**Deferred tax asset.** The deferred tax consequences attributable to deductible temporary differences and carryforwards.

**Deferred tax expense or benefit.** “The change during the year in an enterprise’s deferred tax liabilities or assets” (ASC Topic 740).

**Deferred tax liability.** An amount that is recognized for the deferred tax consequence of temporary differences that will result in taxable amounts in future years.

**Liability.** A “probable future sacrifices of economic benefits arising from present obligations” (SFAC 6).

**Loss carrybacks.** Occur when losses in the current period are carried back to periods in which there was income.

**Tax loss carryforwards.** Occurs when losses in the current period are carried forward to future years.

**Temporary difference.** “A difference between the tax basis of an asset or liability and its reported amount in the financial statements that will result in taxable or deductible amounts in future years when the reported amount of the asset or liability is recovered or settled, respectively.”

## Multiple-Choice Questions (1–44)

### A. Overview of Deferred Tax Theory

1. Justification for the method of determining periodic deferred tax expense is based on the concept of
- Matching of periodic expense to periodic revenue.
  - Objectivity in the calculation of periodic expense.
  - Recognition of assets and liabilities.
  - Consistency of tax expense measurements with actual tax planning strategies.

### B. Permanent and Temporary Differences Defined

2. Among the items reported on Cord, Inc.'s income statement for the year ended December 31, year 1, were the following:

Payment of penalty	\$ 5,000
Insurance premium on life of an officer with Cord as owner and beneficiary	10,000

Temporary differences amount to

- \$0
  - \$5,000
  - \$10,000
  - \$15,000
3. Caleb Corporation has three financial statement elements for which the December 31, year 1 book value is different than the December 31, year 1 tax basis.

	Book value	Tax basis	Difference
Equipment	\$200,000	\$120,000	\$80,000
Prepaid officers insurance policy	75,000	0	75,000
Warranty liability	50,000	0	50,000

As a result of these differences, future taxable amounts are

- \$50,000
  - \$80,000
  - \$155,000
  - \$205,000
4. Temporary differences arise when revenues are taxable

	After they are recognized in financial income	Before they are recognized in financial income
a.	Yes	Yes
b.	Yes	No
c.	No	No
d.	No	Yes

5. Which of the following differences would result in future taxable amounts?

- Expenses or losses that are deductible after they are recognized in financial income.
- Revenues or gains that are taxable before they are recognized in financial income.

- Expenses or losses that are deductible before they are recognized in financial income.
- Revenues or gains that are recognized in financial income but are never included in taxable income.

### C. Deferred Tax Assets and Liabilities

6. Dunn Co.'s year 1 income statement reported \$90,000 income before provision for income taxes. To compute the provision for federal income taxes, the following year 1 data are provided:

Rent received in advance	\$16,000
Income from exempt municipal bonds	20,000
Depreciation deducted for income tax purposes in excess of depreciation reported for financial statements purposes	10,000
Enacted corporate income tax rate	30%

If the alternative minimum tax provisions are ignored, what amount of current federal income tax liability should be reported in Dunn's December 31, year 1 balance sheet?

- \$18,000
  - \$22,800
  - \$25,800
  - \$28,800
7. Pine Corp.'s books showed pretax income of \$800,000 for the year ended December 31, year 1. In the computation of federal income taxes, the following data were considered:

Gain on an involuntary conversion (Pine has elected to replace the property within the statutory period using total proceeds.)	\$350,000 50,000
Depreciation deducted for the tax purposes in excess of depreciation deducted for book purposes	
Federal estimated tax payments, year 1	70,000
Enacted federal tax rates, year 1	30%

What amount should Pine report as its current federal income tax liability on its December 31, year 1 balance sheet?

- \$50,000
  - \$65,000
  - \$120,000
  - \$135,000
8. For the year ended December 31, year 1, Tyre Co. reported pretax financial statement income of \$750,000. Its taxable income was \$650,000. The difference is due to accelerated depreciation for income tax purposes. Tyre's effective income tax rate is 30%, and Tyre made estimated tax payments during year 1 of \$90,000. What amount should Tyre report as current income tax expense for year 1?

- \$105,000
- \$135,000
- \$195,000
- \$225,000

9. Tower Corp. began operations on January 1, year 1. For financial reporting, Tower recognizes revenues from all sales under the accrual method. However, in its income tax returns, Tower reports qualifying sales under the installment method. Tower's gross profit on these installment sales under each method was as follows:

Year	Accrual method	Installment method
Year 1	\$1,600,000	\$ 600,000
Year 2	2,600,000	1,400,000

The income tax rate is 30% for year 1 and future years. There are no other temporary or permanent differences. In its December 31, year 2 balance sheet, what amount should Tower report as a liability for deferred income taxes?

- a. \$840,000
- b. \$660,000
- c. \$600,000
- d. \$360,000

10. On June 30, year 1, Ank Corp. prepaid a \$19,000 premium on an annual insurance policy. The premium payment was a tax deductible expense in Ank's year 1 cash basis tax return. The accrual basis income statement will report a \$9,500 insurance expense in year 1 and year 2.

Ank's income tax rate is 30% in year 1 and 25% thereafter. In Ank's December 31, year 1 balance sheet, what amount related to the insurance should be reported as a deferred income tax liability?

- a. \$5,700
- b. \$4,750
- c. \$2,850
- d. \$2,375

11. Mill, which began operations on January 1, year 1, recognizes income from long-term construction contracts under the percentage-of-completion method in its financial statements and under the completed-contract method for income tax reporting. Income under each method follows:

Year	Completed-contract	Percentage-of-completion
Year 1	\$—	\$300,000
Year 2	400,000	600,000
Year 3	700,000	850,000

The income tax rate was 30% for year 1 through year 3. For years after year 3, the enacted tax rate is 25%. There are no other temporary differences. Mill should report in its December 31, year 3 balance sheet a deferred income tax liability of

- a. \$87,500
- b. \$105,000
- c. \$162,500
- d. \$195,000

Items 12 and 13 are based on the following:

Zeff Co. prepared the following reconciliation of its pretax financial statement income to taxable income for the year ended December 31, year 1, its first year of operations:

Pretax financial income	\$160,000
Nontaxable interest received on municipal securities	(5,000)

Long-term loss accrual in excess of deductible amount	10,000
Depreciation in excess of financial statement amount	<u>(25,000)</u>
Taxable income	<u>\$140,000</u>

Zeff's tax rate for year 1 is 40%.

12. In its year 1 income statement, what amount should Zeff report as income tax expense—current portion?

- a. \$52,000
- b. \$56,000
- c. \$62,000
- d. \$64,000

13. In its December 31, year 1 balance sheet, what should Zeff report as deferred income tax liability?

- a. \$2,000
- b. \$4,000
- c. \$6,000
- d. \$8,000

14. West Corp. leased a building and received the \$36,000 annual rental payment on June 15, year 1. The beginning of the lease was July 1, year 1. Rental income is taxable when received. West's tax rates are 30% for year 1 and 40% thereafter. West had no other permanent or temporary differences. West determined that no valuation allowance was needed. What amount of deferred tax asset should West report in its December 31, year 1 balance sheet?

- a. \$5,400
- b. \$7,200
- c. \$10,800
- d. \$14,400

15. Black Co., organized on January 2, year 1, had pretax accounting income of \$500,000 and taxable income of \$800,000 for the year ended December 31, year 1. The only temporary difference is accrued product warranty costs that are expected to be paid as follows:

Year 2	\$100,000
Year 3	50,000
Year 4	50,000
Year 5	100,000

Black has never had any net operating losses (book or tax) and does not expect any in the future. There were no temporary differences in prior years. The enacted income tax rates are 35% for year 1, 30% for year 2 through year 4, and 25% for year 5. In Black's December 31, year 1 balance sheet, the deferred income tax asset should be

- a. \$60,000
- b. \$70,000
- c. \$85,000
- d. \$105,000

16. A temporary difference that would result in a deferred tax liability is

- a. Interest revenue on municipal bonds.
- b. Accrual of warranty expense.
- c. Excess of tax depreciation over financial accounting depreciation.
- d. Subscriptions received in advance.

17. Orleans Co., a cash-basis taxpayer, prepares accrual basis financial statements. In its year 2 balance sheet, Orleans' deferred income tax liabilities increased compared to year 1. Which of the following changes would cause this increase in deferred income tax liabilities?

- I. An increase in prepaid insurance.
  - II. An increase in rent receivable.
  - III. An increase in warranty obligations.
- a. I only.
  - b. I and II.
  - c. II and III.
  - d. III only.

18. At the end of year one, Cody Co. reported a profit on a partially completed construction contract by applying the percentage-of-completion method. By the end of year two, the total estimated profit on the contract at completion in year three had been drastically reduced from the amount estimated at the end of year one. Consequently, in year two, a loss equal to one-half of the year one profit was recognized. Cody used the completed-contract method for income tax purposes and had no other contracts. The year two balance sheet should include a deferred tax

	Asset	Liability
a.	Yes	Yes
b.	No	Yes
c.	Yes	No
d.	No	No

19. A deferred tax liability is computed using
- a. The current tax laws, regardless of expected or enacted future tax laws.
  - b. Expected future tax laws, regardless of whether those expected laws have been enacted.
  - c. Current tax laws, unless enacted future tax laws are different.
  - d. Either current or expected future tax laws, regardless of whether those expected laws have been enacted.

20. For the year ended December 31, year 1, Grim Co.'s pretax financial statement income was \$200,000 and its taxable income was \$150,000. The difference is due to the following:

Interest on municipal bonds	\$70,000
Premium expense on keyman life insurance	(20,000)
Total	<u>\$50,000</u>

Grim's enacted income tax rate is 30%. In its year 1 income statement, what amount should Grim report as current provision for income tax expense?

- a. \$45,000
- b. \$51,000
- c. \$60,000
- d. \$66,000

Items 21 and 22 are based on the following:

Venus Corp.'s worksheet for calculating current and deferred income taxes for year 1 follows:

	Year 1	Year 2	Year 3
Pretax income	\$1,400		
Temporary differences:			
Depreciation	(800)	\$(1,200)	\$2,000
Warranty costs	400	(100)	(300)
Taxable income	<u>\$1,000</u>		
Enacted rate	30%	30%	25%
Deferred tax accounts			
	<b>Asset</b>		<b>Liability</b>
Current	\$ (30) <sup>a</sup>		
Noncurrent (before netting)	\$ (75) <sup>b</sup>		\$ 140 <sup>c</sup>

<sup>a</sup> [(\$100) × 30%]  
<sup>b</sup> [(\$300) × 25%]  
<sup>c</sup> [(\$1,200) × 30%] + [\$2,000 × 25%]

Venus had no prior deferred tax balances. In its year 1 income statement, what amount should Venus report as

21. Current income tax expense?

- a. \$420
- b. \$350
- c. \$300
- d. \$0

22. Deferred income tax expense?

- a. \$350
- b. \$300
- c. \$120
- d. \$35

23. Shear, Inc. began operations in year 1. Included in Shear's year 1 financial statements were bad debt expenses of \$1,400 and profit from an installment sale of \$2,600. For tax purposes, the bad debts will be deducted and the profit from the installment sale will be recognized in year 2. The enacted tax rates are 30% in year 1 and 25% in year 2. In its year 1 income statement, what amount should Shear report as deferred income tax expense?

- a. \$300
- b. \$360
- c. \$650
- d. \$780

24. Quinn Co. reported a net deferred tax asset of \$9,000 in its December 31, year 1 balance sheet. For year 2, Quinn reported pretax financial statement income of \$300,000. Temporary differences of \$100,000 resulted in taxable income of \$200,000 for year 2. At December 31, year 2, Quinn had cumulative taxable differences of \$70,000. Quinn's effective income tax rate is 30%. In its December 31, year 2, income statement, what should Quinn report as deferred income tax expense?

- a. \$12,000
- b. \$21,000
- c. \$30,000
- d. \$60,000

25. Rein Inc. reported deferred tax assets and deferred tax liabilities at the end of year 1 and at the end of year 2. For the year ended 12/31/Y2, Rein should report deferred income tax expense or benefit equal to the

- a. Decrease in the deferred tax assets.
- b. Increase in the deferred tax liabilities.

- c. Amount of the current tax liability plus the sum of the net changes in deferred tax assets and deferred tax liabilities.
- d. Sum of the net changes in deferred tax assets and deferred tax liabilities.

**26.** On its December 31, year 2 balance sheet, Shin Co. had income taxes payable of \$13,000 and a current deferred tax asset of \$20,000 before determining the need for a valuation account. Shin had reported a current deferred tax asset of \$15,000 at December 31, year 1. No estimated tax payments were made during year 2. At December 31, year 2, Shin determined that it was more likely than not that 10% of the deferred tax asset would not be realized. In its year 2 income statement, what amount should Shin report as total income tax expense?

- a. \$8,000
- b. \$8,500
- c. \$10,000
- d. \$13,000

**27.** Under current generally accepted accounting principles, which approach is used to determine income tax expense?

- a. Asset and liability approach.
- b. A “with and without” approach.
- c. Net of tax approach.
- d. Periodic expense approach.

#### ***D. Deferred Tax Related to Business Investments***

**28.** Bart, Inc., a newly organized corporation, uses the equity method of accounting for its 30% investment in Rex Co.’s common stock. During year 1, Rex paid dividends of \$300,000 and reported earnings of \$900,000. In addition

- The dividends received from Rex are eligible for the 80% dividends received deductions.
- All the undistributed earnings of Rex will be distributed in future years.
- There are no other temporary differences.
- Bart’s year 1 income tax rate is 30%.
- The enacted income tax rate after year 1 is 25%.

In Bart’s December 31, year 1 balance sheet, the deferred income tax liability should be

- a. \$10,800
- b. \$9,000
- c. \$5,400
- d. \$4,500

**29.** Leer Corp.’s pretax income in year 1 was \$100,000. The temporary differences between amounts reported in the financial statements and the tax return are as follows:

- Depreciation in the financial statements was \$8,000 more than tax depreciation.
- The equity method of accounting resulted in financial statement income of \$35,000. A \$25,000 dividend was received during the year, which is eligible for the 80% dividends received deduction.

Leer’s effective income tax rate was 30% in year 1. In its year 1 income statement, Leer should report a current provision for income taxes of

- a. \$26,400
- b. \$23,400
- c. \$21,900
- d. \$18,600

#### ***E. Loss Carryforwards and Carrybacks***

**30.** Dix, Inc., a calendar-year corporation, reported the following operating income (loss) before income tax for its first three years of operations:

Year 1	\$100,000
Year 2	(200,000)
Year 3	400,000

There are no permanent or temporary differences between operating income (loss) for financial and income tax reporting purposes. When filing its year 2 tax return, Dix did not elect to forego the carryback of its loss for year 2. Assume a 40% tax rate for all years. What amount should Dix report as its income tax liability at December 31, year 3?

- a. \$160,000
- b. \$120,000
- c. \$80,000
- d. \$60,000

**31.** Town, a calendar-year corporation incorporated in January year 1, experienced a \$600,000 net operating loss (NOL) in year 3 due to a prolonged strike. Town never had a strike in the past that significantly affected its income and does not expect such a strike in the future. Additionally, there is no other negative evidence concerning future operating income. For years 1–2, Town reported a taxable income in each year, and a total of \$450,000 for the two years. Assume that: (1) there is no difference between pretax accounting income and taxable income for all years, (2) the income tax rate is 40% for all years, (3) the NOL will be carried back to the profit years 1–2 to the extent of \$450,000, and \$150,000 will be carried forward to future periods. In its year 3 income statement, what amount should Town report as the reduction of loss due to NOL carryback and carryforward?

- a. \$240,000
- b. \$180,000
- c. \$270,000
- d. \$360,000

**32.** Bishop Corporation began operations in year 1 and had operating losses of \$200,000 in year 1 and \$150,000 in year 2. For the year ended December 31, year 3, Bishop had pretax book income of \$300,000. For the three-year period year 1 to year 3, assume an income tax rate of 40% and no permanent or temporary differences between book and taxable income. Because Bishop began operations in year 1, the entire amount of deferred tax assets recognized in year 1 and year 2 were offset with amounts added to the allowance account. In Bishop’s year 3 income

statement, how much should be reported as current income tax expense?

- \$0
- \$40,000
- \$60,000
- \$120,000

33. Mobe Co. reported the following operating income (loss) for its first three years of operations:

Year 1	\$ 300,000
Year 2	(700,000)
Year 3	1,200,000

For each year, there were no deferred income taxes, and Mobe's effective income tax rate was 30%. In its year 2 income tax return, Mobe elected to carry back the maximum amount of loss possible. Additionally, there was more negative evidence than positive evidence concerning profitability for Mobe in year 3. In its year 3 income statement, what amount should Mobe report as total income tax expense?

- \$120,000
- \$150,000
- \$240,000
- \$360,000

### F. Financial Statement Presentation of Income Tax

34. In year 1, Rand, Inc. reported for financial statement purposes the following items, which were **not** included in taxable income:

Installment gain to be collected equally in year 2 through year 4	\$1,500,000
Estimated future warranty costs to be paid equally in year 2 through year 4	2,100,000

There were no temporary differences in prior years. Rand's enacted tax rates are 30% for year 1 and 25% for year 2 through year 4.

In Rand's December 31, year 1 balance sheet, what amounts of the deferred tax asset should be classified as current and noncurrent?

	Current	Noncurrent
a.	\$60,000	\$100,000
b.	\$60,000	\$120,000
c.	\$50,000	\$100,000
d.	\$50,000	\$120,000

35. Thorn Co. applies ASC Topic 740, *Income Taxes*. At the end of year 1, the tax effects of temporary differences were as follows:

	Deferred tax assets (liabilities)	Related asset classification
Accelerated tax depreciation	\$(75,000)	Noncurrent asset
Additional costs in inventory for tax purposes	<u>25,000</u>	Current asset
	<u>\$(50,000)</u>	

A valuation allowance was not considered necessary. Thorn anticipates that \$10,000 of the deferred tax liability will reverse in year 2. In Thorn's December 31, year 1 balance sheet, what amount should Thorn report as noncurrent deferred tax liability?

- \$40,000
- \$50,000
- \$65,000
- \$75,000

36. Because Jab Co. uses different methods to depreciate equipment for financial statement and income tax purposes, Jab has temporary differences that will reverse during the next year and add to taxable income. Deferred income taxes that are based on these temporary differences should be classified in Jab's balance sheet as a

- Contra account to current assets.
- Contra account to noncurrent assets.
- Current liability.
- Noncurrent liability.

37. At the most recent year-end, a company had a deferred income tax liability arising from accelerated depreciation that exceeded a deferred income tax asset relating to rent received in advance which is expected to reverse in the next year. Which of the following should be reported in the company's most recent year-end balance sheet?

- The excess of the deferred income tax liability over the deferred income tax asset as a noncurrent liability.
- The excess of the deferred income tax liability over the deferred income tax asset as a current liability.
- The deferred income tax liability as a noncurrent liability.
- The deferred income tax liability as a current liability.

38. On December 31, year 5, Oak Co. recognized a receivable for taxes paid in prior years and refundable through the carryback of all of its year 5 operating loss. Also, Oak had a year 5 deferred tax liability derived from the temporary difference between tax and financial statement depreciation, which reverses over the period year 6–year 10. The amount of this tax liability is less than the amount of the tax asset. Which of the following year 5 balance sheet sections should report tax-related items?

- Current assets.
  - Current liabilities.
  - Noncurrent liabilities.
- I only.
  - I and III.
  - I, II, and III.
  - II and III.

39. The amount of income tax applicable to transactions that are **not** reported in the continuing operations section of the income statement is computed

- By multiplying the item by the effective income tax rate.
- As the difference between the tax computed based on taxable income without including the item and the tax computed based on taxable income including the item.

- c. As the difference between the tax computed on the item based on the amount used for financial reporting and the amount used in computing taxable income.
- d. By multiplying the item by the difference between the effective income tax rate and the statutory income tax rate.

40. No net deferred tax asset (i.e., deferred tax asset net of related valuation allowance) was recognized in the year 1 financial statements by the Chaise Company when a loss from discontinued operations was carried forward for tax purposes because it was more likely than not that none of this deferred tax asset would be realized. Chaise had no temporary differences. The tax benefit of the loss carried forward reduced current taxes payable on year 2 continuing operations. The year 2 income statement would include the tax benefit from the loss brought forward in

- a. Income from continuing operations.
- b. Gain or loss from discontinued operations.
- c. Extraordinary gains.
- d. Cumulative effect of accounting changes.

41. Which of the following statements is correct regarding the provision for income taxes in the financial statements of a sole proprietorship?

- a. The provision for income taxes should be based on business income using individual tax rates.
- b. The provision for income taxes should be based on business income using corporate tax rates.
- c. The provision for income taxes should be based on the proprietor's total taxable income, allocated to the proprietorship at the percentage that business income bears to the proprietor's total income.
- d. No provision for income taxes is required.

**I. International Financial Reporting Standards (IFRS)**

42. Klaus corporation prepares its financial statements in accordance with IFRS. Klaus locates its business in two jurisdictions, France and Germany. Assume that in each country Klaus has the legal right to offset the taxes receivable and payable. Klaus prepares its taxes based on taxing authority

and has the following information related to its deferred tax assets and liabilities.

Classification	Amount	Taxing jurisdiction
Deferred tax asset	\$4,000	France
Deferred tax liability	\$2,500	Germany
Deferred tax liability	\$3,000	France

How should Klaus present its deferred taxes on its December 31, year 1 statement of financial position?

	Deferred tax asset	Deferred tax liability
a.	\$4,000	\$5,500
b.	\$1,000	\$2,500
c.	\$0	\$1,500
d.	\$1,500	\$3,000

43. Which of the following is true regarding reporting deferred taxes in financial statements prepared in accordance with IFRS?

- a. Deferred tax assets and liabilities are classified as current and noncurrent based on their expiration dates.
- b. Deferred tax assets and liabilities may only be classified as noncurrent.
- c. Deferred tax assets are always netted with deferred tax liabilities to arrive at one amount presented on the balance sheet.
- d. Deferred taxes of one jurisdiction are offset against another jurisdiction in the netting process.

44. Toller Corp. reports in accordance with IFRS. The controller of the company is attempting to prepare the presentation of deferred taxes on Toller's financial statements. Which of the following is correct about the presentation of deferred tax assets and liabilities under IFRS?

- a. Current deferred tax assets are netted against current deferred tax liabilities.
- b. All noncurrent deferred tax assets are netted against noncurrent deferred tax liabilities.
- c. Deferred tax assets are never netted against deferred tax liabilities.
- d. Deferred tax assets are netted against deferred tax liabilities if they relate to the same taxing authority.

### Explanations

1. (c) The objective of accounting for income taxes is to recognize the amount of current and deferred taxes payable or refundable at the date of the financial statements. The standard further states that this objective is implemented through recognition of deferred tax liabilities or assets. Deferred tax expense results from changes in deferred tax assets and liabilities.

2. (a) **Temporary** differences are differences between taxable income and accounting income which originate in one period and reverse in one or more subsequent periods. The payment of a penalty (\$5,000) and insurance premiums where the corporation is the beneficiary (\$10,000) are **not** temporary differences because they never reverse. These are examples of **permanent** differences, which are items that either enter into accounting income but never into taxable income (such as these two items), or enter into taxable income but never into accounting income.

3. (b) The officer insurance policy difference (\$75,000) is a permanent difference which does not result in future taxable or deductible amounts. The warranty difference (\$50,000) is a temporary difference, but it results in future **deductible** amounts in future years when tax warranty expense exceeds book warranty expense. However, the equipment difference (\$80,000) is a temporary difference that results in future taxable amounts in future years when tax depreciation is less than book depreciation.

4. (a) Examples of temporary differences are revenues which are taxable both before and after they are recognized in financial income. Note that emphasis is placed on the difference between book and tax, not the chronological order of the reporting.

5. (c) Expenses or losses that are deductible before they are recognized in financial income would result in future taxable amounts. For example, the cost of an asset may have been deducted for tax purposes faster than it was depreciated for financial reporting. In future years, tax depreciation will be less than financial accounting depreciation, meaning future taxable income will exceed future financial accounting income. Answers (a) and (b) are temporary differences that

would result in future deductible amounts. Answer (d) is a permanent difference that does not result in either future taxable or future deductible amounts.

6. (b) To determine the current federal tax liability, **book** income (\$90,000) must be adjusted for any temporary or permanent differences to determine **taxable** income.

Book income	\$ 90,000
Rent received in advance	16,000
Municipal interest	(20,000)
Excess tax depreciation	<u>(10,000)</u>
Taxable income	<u>\$ 76,000</u>

Rent received in advance (temporary difference) is added to book income because rent is taxable when received, but is not recognized as book revenue until earned. Municipal interest (permanent difference) is subtracted from book income because it is excluded from taxable income. The excess tax depreciation (temporary difference) is subtracted because this excess amount is an additional tax deduction beyond accounting depreciation. The current tax liability is computed by multiplying taxable income by the tax rate ( $\$76,000 \times 30\% = \$22,800$ ).

7. (a) The **current** federal income tax liability is based on **taxable** income, which is computed in the “book to tax reconciliation” below.

Accounting income	\$ 800,000
Nontaxable gain	(350,000)
Excess tax depreciation	<u>(50,000)</u>
Taxable income	<u>\$ 400,000</u>

The gain on involuntary conversion was included in accounting income but is deferred for tax purposes. Depreciation deducted for tax purposes in excess of book depreciation also causes taxable income to be less than accounting income. Taxes payable before considering estimated tax payments is \$120,000 ( $\$400,000 \times 30\%$ ). Since tax payments of \$70,000 have already been made, the 12/31/Y1 current federal income tax liability is \$50,000 ( $\$120,000 - \$70,000$ ).

**8. (c)** Income tax expense must be reported in two components: the amount currently payable (current portion) and the tax effects of temporary differences (deferred portion). The current portion is computed by multiplying taxable income by the current enacted tax rate ( $\$650,000 \times 30\% = \$195,000$ ). The deferred portion is  $\$30,000$  ( $\$100,000$  temporary difference  $\times 30\%$ ). The estimated tax payments ( $\$90,000$ ) do not affect the amount of tax expense, although the payments would decrease taxes payable.

**9. (b)** Over the two years, accounting income on the accrual basis is  $\$4,200,000$  ( $\$1,600,000 + \$2,600,000$ ) and taxable income using the installment method is  $\$2,000,000$  ( $\$600,000 + \$1,400,000$ ). This results in future taxable amounts at 12/31/Y2 of  $\$2,200,000$  ( $\$4,200,000 - \$2,000,000$ ). Therefore, at 12/31/Y2, Tower should report a deferred tax liability of  $\$660,000$  ( $\$2,200,000 \times 30\%$ ).

**10. (d)** For accounting purposes, prepaid insurance is  $\$9,500$  at 12/31/Y1. For tax purposes, there was no prepaid insurance at 12/31/Y1, since the entire amount was deducted on the year 1 tax return. Therefore, the temporary difference is  $\$9,500$ . This temporary difference will result in a future taxable amount in year 2, when the tax rate is 25%. Therefore, at 12/31/Y1, a deferred tax liability of  $\$2,375$  ( $25\% \times \$9,500$ ) must be reported.

**11. (c)** Mill's total accounting income using percentage-of-completion ( $\$300,000 + \$600,000 + \$850,000 = \$1,750,000$ ) will eventually be subject to federal income taxes. However, by 12/31/Y3, only  $\$1,100,000$  of income ( $\$400,000 + \$700,000$ ) has been reported as taxable income using the completed-contract method. The amount of accounting income which has not yet been taxed ( $\$1,750,000 - \$1,100,000 = \$650,000$  temporary difference) will be taxed eventually when the related contracts are completed. The resulting future taxable amounts will all be taxed after year 3 when the enacted tax rate is 25%. Therefore, the 12/31/Y3 deferred tax liability is  $\$162,500$  ( $\$650,000 \times 25\%$ ). To record the liability, the following entries would be made each year:

**Year 1**

Income tax expense—deferred	90,000	
Deferred tax liability		90,000

**Year 2**

Income tax expense—deferred	60,000	
Deferred tax liability		60,000

**Year 3**

Income tax expense—deferred	12,500	
Deferred tax liability		12,500

The total in the deferred tax liability account on 12/31/Y3 should be  $\$162,500$ . Therefore, the entry in year 3 is the amount needed to correctly state the deferred tax liability account. Since  $\$150,000$  was already accrued in the deferred tax liability account in year 1 and year 2, the entry for year 3 is  $\$162,500 - \$150,000$ , or  $\$12,500$ .

**12. (b)** Income tax expense must be reported in two components: the amount currently payable (current portion) and the tax effects of temporary differences (deferred portion).

The amount currently payable, or current income tax expense, is computed by multiplying taxable income by the current enacted tax rate ( $\$140,000 \times 40\% = \$56,000$ ).

**13. (c)** The deferred tax liability reported at 12/31/Y1 results from future taxable (and possibly deductible) amounts which exist as a result of past transactions, multiplied by the appropriate tax rate. The nontaxable interest received on municipal securities ( $\$5,000$ ) is a **permanent** difference that does **not** result in future taxable or deductible amounts. The Codification requires the netting of current deferred tax assets and liabilities, and noncurrent deferred tax assets and liabilities. The future deductible amount ( $\$10,000$ ) resulting from a loss accrual results in a **long-term** deferred tax asset of  $\$4,000$  ( $\$10,000 \times 40\%$ ) because it is related to a **long-term** loss accrual. The future taxable amount ( $\$25,000$ ) caused by depreciation results in a **long-term** deferred tax liability of  $\$10,000$  ( $\$25,000 \times 40\%$ ) because it is related to a **long-term** asset (property, plant, and equipment). Since these are both long-term, they are netted and a long-term deferred tax liability of  $\$6,000$  is reported in the balance sheet ( $\$10,000$  liability less  $\$4,000$  asset).

**14. (b)** At 12/31/Y1, unearned rent for financial accounting purposes is  $\$18,000$  ( $\$36,000 \times 6/12$ ). The amount of rent revenue recognized on the income statement is six of twelve months ( $36,000 \times 6/12 = 18,000$ ). Rental income on the tax return is  $\$36,000$  because rental income is taxed when received. Therefore, the timing difference is  $\$18,000$  ( $\$36,000 - \$18,000 = \$18,000$ ) giving rise to a deferred tax asset on the balance sheet of  $\$18,000 \times 40\% = \$7,200$ . The deferred tax asset to be recorded is measured using the future enacted tax rate of 40%.

**15. (c)** A deferred tax asset is recognized for all deductible temporary differences. The computation of the deferred tax asset for Black Co. arising from the accrued product warranty costs of  $\$300,000$  is shown below.

	<u>Year 2</u>	<u>Year 3</u>	<u>Year 4</u>	<u>Year 5</u>	<u>Total</u>
Future deductible amounts	\$100,000	\$50,000	\$50,000	\$100,000	<u>\$300,000</u>
Tax rate	<u>30%</u>	<u>30%</u>	<u>30%</u>	<u>25%</u>	
Deferred tax asset	\$ 30,000	\$15,000	\$15,000	\$ 25,000	<u>\$ 85,000</u>

Thus, the total deferred tax asset at the end of year 1 is  $\$85,000$ .

**16. (c)** An excess of tax depreciation over financial accounting depreciation results in future taxable amounts and, therefore, a deferred tax liability. Answer (a) is an example of a permanent difference that does not result in future taxable or deductible amounts. Answers (b) and (d) are examples of temporary differences that result in future deductible amounts and a possible deferred tax asset.

**17. (b)** The increase in prepaid insurance in year 2 creates a deductible amount for income tax reporting purposes for the insurance paid; however, for financial reporting purposes the expense is not recognized until years subsequent to year 2. As a result, net taxable income for future years is increased, thus, the deferred income tax liability increases. The increase in rent

receivable in year 2 also increases the deferred tax liability. For income tax purposes, rents are not included in income until received (i.e., years subsequent to year 2). However, the amount of the receivable is earned and recognized in the income statement in year 2. The increase in warranty obligations results in warranty expense for year 2 and will provide future deductible amounts, because under the IRC, a deduction for warranty cost is not permitted until such cost is incurred. Future deductible amounts lead to deferred tax assets.

**18. (b)** A deferred tax liability is recognized for temporary differences that will result in **net** taxable amounts (taxable income exceeds book income) in future years. Although Cody Co. has recognized a loss (per books) in year two of the construction contract, the contract is still profitable over the three years. Therefore, in year three when the contract is completed, Cody will recognize the total profit on its tax return, and only a portion of the profit will be recorded in its income statement. Thus, the contract will result in a taxable amount in year three and a deferred tax liability exists. Note that this liability was recorded at the end of year 1 and reduced by one-half at the end of year two due to the change in estimated profit. Answers (a) and (c) are incorrect because no deferred tax asset is created. Answer (d) is incorrect because Cody will include a deferred tax liability on its balance sheet.

**19. (c)** A deferred tax liability is recognized for the amount of taxes payable in **future** years as a result of the deferred tax consequences (as measured by the provisions of **enacted** tax laws) of events recognized in the financial statements in the current or preceding years.

**20. (a)** Income tax provision (expense) must be reported in two components: the amount currently payable (current portion) and the tax effects of temporary differences (deferred portion). The current portion is computed by multiplying taxable income by the current enacted tax rate ( $\$150,000 \times 30\% = \$45,000$ ). Note that in this case, the deferred portion is \$0, because both differences are permanent differences, which do not result in a deferred tax liability. Therefore, the current provision for income taxes should be reported at \$45,000. It is important to note that if temporary differences did exist the tax effects would have been included in the tax expense for the current period.

**21. (c)** Income tax expense must be reported in two components: the amount currently payable (current portion) and the tax effects of temporary differences (deferred portion). The amount currently payable, or current income tax expense, is computed by multiplying taxable income by the current enacted tax rate ( $\$1,000 \times 30\% = \$300$ ).

**22. (d)** Income tax expense must be reported on the IS in two components: the amount currently payable (current portion) and the tax effects of temporary differences (deferred portion). Note that scheduling is required in this question because the tax rates are not the same in all future years. The worksheet indicates two temporary differences: depreciation and warranty costs. The scheduling contained in the worksheet shows that these two temporary differences will result in a deferred tax asset of \$105 ( $\$30 + \$75$ ) and deferred tax liability of \$140. The liability has the effect of increasing year 1 tax expense

while the asset has the effect of decreasing year 1 tax expense. The net effect is deferred income tax expense of \$35 for year 1 [ $\$140 - (\$30 + \$75)$ ].

**Not required:**

The balance sheet presentation would show a current deferred tax asset of \$30 and a noncurrent deferred tax liability of \$65 ( $\$140 - \$75$ ).

**23. (a)** The deferred portion of income tax expense can be computed by determining the tax effect of the two temporary differences. The installment sale profit results in a future taxable amount in year 2 of \$2,600, and the bad debt expense results in a future deductible amount of \$1,400. The deferred tax consequences of these temporary differences will be measured by Shear in year 1 using the enacted tax rate expected to apply to taxable income in the year the deferred amounts are expected to be settled. The following journal entry is necessary to record the deferred tax liability related to the installment sale:

Deferred tax expense	650	
Deferred tax liability		650
	$[\$2,600 \times .25]$	

To record the deferred tax asset related to the bad debt expense, the following journal entry is required:

Deferred tax asset	350	
Deferred tax expense		350
	$[\$1,400 \times .25]$	

The amount of deferred tax expense to be reported by Shear in its year 1 income statement is \$300 ( $\$650 - \$350$ ). Note that one journal entry could have been used. Using two entries more clearly shows the opposite effect of an asset versus a liability on deferred tax expense.

**24. (c)** Income tax expense must be reported in two components: the amount currently payable (current portion) and the tax effects of temporary differences (deferred portion). The current portion is computed by multiplying taxable income by the current enacted tax rate ( $\$200,000 \times 30\% = \$60,000$ ). The deferred portion is \$30,000 ( $\$100,000$  temporary difference  $\times 30\%$ ). An alternative computation for the deferred portion is shown below.

DT asset at 12/31/Y2	\$	0	
DT asset at 12/31/Y1		<u>9,000</u>	
Decrease in DT asset			\$ 9,000
DT liability at 12/31/Y2		\$21,000	
$(\$70,000 \times 30\%)$			
DT liability at 12/31/Y1		<u>0</u>	
Increase in DT liability			<u>21,000</u>
Deferred portion of tax expense			<u>\$30,000</u>

**25. (d)** The deferred income tax expense or benefit is the net change during the year in an enterprise's deferred tax liabilities or assets. The deferred income tax expense or benefit must consider the net effect of changes (both increases and decreases) in both deferred tax assets and deferred tax liabilities. The decrease in deferred tax assets alone or the increase in deferred tax liabilities alone will not be equal to

the deferred income tax expense. The amount of income tax liability (current portion which comes off the tax return) plus the sum of the net changes in deferred tax assets and deferred tax liabilities is the total amount of income tax expense or benefit for the year. The question asks only for the deferred portion.

**26. (c)** From 12/31/Y1 to 12/31/Y2, the deferred tax asset increased by \$5,000 (from \$15,000 to \$20,000). Income taxes payable at 12/31/Y2 are \$13,000. Based on this information, the following journal entries can be recreated.

Income tax expense—current	13,000	
Income tax payable		13,000
Deferred tax asset	5,000	
Income tax expense—deferred		5,000

An additional entry would be prepared by Shin to record an allowance to reduce the deferred tax asset to its realizable value ( $10\% \times \$20,000 = \$2,000$ ).

Income tax expense—deferred	2,000	
Allowance to reduce deferred tax asset to realizable value		2,000

Based on these three entries, total year 2 income tax expense is \$10,000 ( $\$13,000 - \$5,000 + \$2,000$ ).

**27. (a)** Income tax expense is the sum of income taxes currently payable or refundable and the deferred tax expense or benefit which is the change during the year in an enterprise's deferred tax liabilities and assets. This method is more commonly called the asset and liability approach.

**28. (b)** The deferred income tax liability is the result of the undistributed earnings of an equity investee, which are expected to be distributed as dividends in future periods. For accounting purposes, investment revenue is \$270,000 ( $\$900,000 \times 30\%$ ). For tax purposes, dividend revenue is \$90,000 ( $\$300,000 \times 30\%$ ), which will be partially offset by the 80% dividends received deduction. Because of this 80% deduction, the difference ( $\$270,000 - \$90,000 = \$180,000$ ) is partially a permanent difference ( $80\% \times \$180,000 = \$144,000$ ) which will never be subject to taxes) and partially a temporary difference ( $20\% \times \$180,000 = \$36,000$  which will be taxable in future years). This future taxable amount of \$36,000 will become taxable after 2010, when the expected tax rate is 25%. Therefore, the deferred tax liability is \$9,000 ( $25\% \times \$36,000$ ). The entry to record the liability is as follows:

Income tax expense—deferred	9,000	
Deferred tax liability		9,000

**29. (b)** The **current** provision for income taxes is computed by multiplying taxable income on the Form 1120 by the current tax rate. Since taxable income is not given, pretax book income must be adjusted to compute taxable income.

Pretax book income	\$100,000
Excess book depreciation	8,000
Excess book investment revenue	<u>(30,000)</u>
[ $\$35,000 - (20\% \times \$25,000)$ ]	
Taxable income	<u>\$ 78,000</u>

Excess book depreciation is added because it causes book income to be lower than taxable income. For book purposes, investment revenue of \$35,000 was recognized using the equity method; for tax purposes, net dividend revenue of \$5,000 was recognized [ $\$25,000 - (80\% \times \$25,000)$ ]. The excess book revenue ( $\$35,000 - \$5,000 = \$30,000$ ) is deducted to compute taxable income. Therefore, the **current** provision for income taxes is \$23,400 ( $\$78,000 \times 30\%$ ).

**30. (b)** Dix did **not** elect to forego the loss carryback, so \$100,000 of the \$200,000 loss will be carried back to offset year 1 income, resulting in a tax refund of \$40,000 ( $40\% \times \$100,000$ ). The remaining \$100,000 of the year 2 loss will be carried forward to offset part of year 3 income. Thus, the income tax **liability** at 12/31/Y3 will be \$120,000 [ $40\% \times (\$400,000 - \$100,000)$ ].

**31. (a)** The requirement is to determine the amount to be reported in year 3 as the reduction of loss due to NOL carryback and carryforward (i.e., benefit [negative tax expense] on the face of the IS). A deferred tax liability or asset is recognized for all temporary differences, operating losses, and tax credit carryforwards.

**Income Tax Return Analysis**

	<b>Year 1-Year 2</b>	<b>Year 3</b>
Inc (loss)	450,000	\$(600,000)
Carryback	<u>(450,000)</u>	450,000
Unused NOL		<u>\$ 150,000</u>

Town can thus recognize tax benefits from both the NOL carryback and carryforward. Town may carryback \$450,000 of the NOL which will provide a tax benefit of \$180,000 ( $\$450,000 \times .40$ ). The journal entry to recognize the loss carryback would be as follows:

Tax refund receivable	180,000	
Benefit due to loss carryback		180,000

The additional \$150,000 NOL can be carried forward to future periods to provide a benefit of \$60,000 ( $\$150,000 \times .40$ ). The following journal entry reflects the loss carryforward:

Deferred tax asset	60,000	
Benefit due to loss carryforward		60,000

Therefore, the reduction of the loss due to NOL carryback and carryforward is \$240,000. Note that an allowance for nonrealization of the deferred tax asset is not necessary because the information given about the strike indicates that it is not more likely than not that part of the deferred tax asset may not be recognized.

The carryback and carryforward would be shown in the income statement as follows:

Loss before income taxes		\$(600,000)
Less:		
Benefit from operating loss carryback	\$180,000	
Benefit from operating loss carryforward	<u>60,000</u>	<u>240,000</u>
Net loss		<u>\$(360,000)</u>

**32. (a)** The requirement is to determine the amount of year 3 current income tax expense (or income taxes payable from

tax return) to be reported in the income statement. For tax purposes, loss carryforwards should not be recognized until they are actually realized.

#### Income Tax Return Analysis

	Year 1	Year 2	Year 3
Income or loss	\$(200,000)	\$(150,000)	\$300,000
Carryforward	<u>200,000</u>	<u>100,000</u>	<u>(300,000)</u>
Unused	<u>0</u>	<u>\$ 50,000</u>	<u>0</u>
Carryforward			

Bishop would recognize, in the income statement, income tax expense of \$0 as the loss carryforward fully offsets the year 1 income.

#### Not required:

The deferred tax component for year 3 would be as follows:

Balance in the deferred tax asset and allowance accounts at 1/1/Y3

	Deferred Tax Asset	Allow for Reduction, etc.	
12/31/Y1	80,000		12/31/Y1
12/31/Y2	60,000		12/31/Y2
12/31/Y2 balance	140,000		12/31/Y2 balance
		80,000	
		60,000	
		140,000	

The deferred tax entry for year 3 would be

Allow for reduction, etc.	140,000	
Deferred tax asset		120,000
Income tax expense—deferred		20,000

The bottom of the income statement would be

Income before taxes	\$300,000	
Income tax expense or benefit		
Current		0
Deferred <b>benefit</b>		<u>20,000</u>
Net income	<u>\$320,000</u>	

**33. (c)** A deferred tax liability or asset is recognized for all temporary differences and operating loss carryforwards. In year 2, Mobe would prepare the following entries:

Tax refund receivable (\$300,000 × 30%)	90,000	
Deferred tax asset (\$400,000 × 30%)	120,000	
Tax loss benefit (income tax expense)		210,000
Tax loss benefit (income tax expense)	120,000	
Allowance to reduce deferred tax asset to realizable value		120,000

The tax refund receivable results from carrying \$300,000 of the year 2 loss **back** to offset year 1 taxable income. The deferred tax asset results from the potential **carryforward** of the remaining \$400,000 loss (\$700,000 – \$300,000). However, the inconsistent performance of the company (profitable operations in the first year, loss in the second year) coupled

with the lack of positive evidence concerning future operations indicate that at the end of year 2 it is more likely than not that none of the deferred tax asset will be realized. Therefore, Mobe must establish a valuation allowance to reduce this asset to its expected realizable value. In year 3, the entries are

Income tax expense (\$1,200,000 × 30%)	360,000	
Deferred tax asset		120,000
Income taxes payable [(\$1,200,000 – \$400,000) × 30%]		240,000
Allowance to reduce deferred tax asset to realizable value	120,000	
Benefit due to loss carryforward (income tax expense)		120,000

**Income taxes payable** is year 3 income of \$1,200,000 less the \$400,000 loss carryforward, times 30%. Total income tax expense for year 3 is \$240,000 (\$360,000 – \$120,000). Note that if the facts had indicated positive evidence following year 2 for year 3 operations, the allowance account would not have been recognized and year 3 expense would have been \$360,000.

**34. (c)** The warranty temporary difference results in future deductible amounts of \$700,000 per year in year 2 through year 4 (\$2,100,000 ÷ 3). The installment temporary difference results in future taxable amounts of \$500,000 per year in year 2 through year 4 (\$1,500,000 ÷ 3). The portions of the resulting deferred tax asset and deferred tax liability that will be netted to find the amount of the current asset/current liability to be presented on the BS are shown below.

Deferred tax asset: \$700,000 × 25% =	\$(175,000)
Deferred tax liability: \$500,000 × 25% =	<u>125,000</u>
Current deferred tax asset (CDTA) shown on BS	<u>\$ (50,000)</u>

The noncurrent deferred tax asset is \$100,000 [\$2,100,000 – \$1,500,000] – \$50,000 CDTA.

**35. (d)** Deferred tax liabilities and assets are classified as current or noncurrent based on the classification of the related asset or liability for financial reporting. The deferred tax liability resulting from accelerated tax depreciation should be considered noncurrent because the related asset is classified as noncurrent. The deferred tax asset resulting from additional costs in inventory for tax purposes is classified as current because the related asset is classified as current. Therefore, Thorn would report a **noncurrent deferred tax liability of \$75,000**.

**36. (d)** Deferred tax liabilities and assets are classified as current or noncurrent based on the related asset or liability. A deferred tax liability or asset is considered to be related to an asset or liability if reduction of the asset or liability will cause the temporary difference to reverse. If the deferred tax liability or asset is **not** related to any asset or liability, then it is classified based on the timing of its expected reversal or utilization date. This deferred tax liability is related to equipment, which is noncurrent, so the deferred tax liability

should also be classified as a noncurrent liability. Deferred taxes are always classified as assets or liabilities, rather than as contra accounts.

**37. (c)** Deferred tax assets and liabilities are classified as current or noncurrent based on the classification of the related asset or liability for financial reporting. Therefore, a deferred tax liability relating to depreciation of a fixed asset would be noncurrent in nature. The deferred tax asset relating to rent received in advance that is expected to reverse in the following year would be classified as current. No netting of net current amounts and net noncurrent amounts can occur.

**38. (b)** A **deferred** tax liability or asset should be classified in two categories (the current amount and the noncurrent amount) on the balance sheet based on the classification of the related asset or liability for financial reporting. The receivable for taxes paid in prior years and refundable through the carryback of the year 5 operating loss is **not** considered a **deferred** tax asset. A current asset should be reported on the balance sheet for the amount of the refund due to Oak Co. Note that if there was a current deferred tax liability it would not be netted with the refund receivable. However, a current deferred tax asset would be so netted. A noncurrent deferred tax liability should be reported on the balance sheet for temporary differences related to depreciation of fixed assets.

**39. (b)** Income tax expense must be associated with (i.e., allocated among) income from continuing operations, discontinued operations, extraordinary items, cumulative effect of an accounting change, and prior period adjustments. The tax effect to be associated with any of the special items (other than income from continuing operations) is computed by determining the income tax on overall taxable income and comparing it with the income tax on continuing operations. If more than one special item exists, the difference between tax on ordinary operations and tax on overall taxable income must be allocated proportionately among the special items.

**40. (a)** The tax benefit of an operating loss carryforward or carryback shall be reported in the same manner as the **source of income (loss) in the current year**. Thus, in year 1, the tax benefit shall be reported under income from continuing operations.

**41. (d)** Sole proprietorships do not pay any income taxes as the tax items related to a sole proprietorship flow through to the owner's tax return. Because the sole proprietorship is not a taxable entity, no provision for income taxes would be included in the financial statements of the sole proprietorship. Although answer (a) illustrates the correct formula for calculating the taxes payable related to a sole proprietorship's operations, it is an incorrect response because the tax provision would not be shown on the sole proprietorship's financial statements since it flows through to the owner and is a liability of the owner. The income tax expense would be calculated using the owner's tax rates, as it is the owner's personal liability, not the entity's. The proprietorship would have **no** provision for income taxes on its books. The entire income tax liability is the personal responsibility of the owner.

**42. (b)** The requirement is to determine how deferred taxes should be presented. Answer (b) is correct because IFRS provides that the netting of deferred tax assets and liabilities may only occur if the accounts relate to the same taxing authority and the entity has a legal right to offset the taxes. Therefore, the deferred tax asset of \$4,000 and the deferred tax liability of \$3,000 related to France may be offset, which results in a \$1,000 deferred tax asset. The deferred tax liability of \$2,500 related to Germany may not be netted and is shown as a deferred tax liability of \$2,500 on the balance sheet.

**43. (b)** The requirement is to identify the true statement about accounting for deferred taxes. Answer (b) is correct because IFRS does not permit deferred tax assets or liabilities to be classified as current. Therefore, deferred tax assets and liabilities are reported in the noncurrent section of the statement of financial position. Answer (a) is incorrect because deferred taxes may not be classified as current. Answers (c) and (d) are incorrect because deferred tax assets and liabilities may only be netted if there is a legal right to offset the amounts and they relate to the same taxing authority.

**44. (d)** The requirement is to identify the correct statement about the presentation of deferred tax assets and liabilities under IFRS. Answer (d) is correct because deferred tax assets are netted against deferred tax liabilities if they relate to the same taxing authority.

## Task-Based Simulation 1

Tax Calculations	Authoritative Literature	Help
------------------	--------------------------	------

The following partially completed worksheet contain Lane Co.'s reconciliation between financial statement income and taxable income for the three years ended April 30, year 3, and additional information.

*Lane Co.*  
**INCOME TAX WORKSHEET**  
*For the Three Years Ended April 30, Year 3*

	April 30, Year 1	April 30, Year 2	April 30, Year 3
Pretax financial income	\$900,000	\$1,000,000	\$1,200,000
Permanent differences	100,000	100,000	100,000
Temporary differences	<u>200,000</u>	<u>100,000</u>	<u>150,000</u>
Taxable income	<u>\$600,000</u>	<u>\$800,000</u>	<u>\$ 950,000</u>
Cumulative temporary differences (future taxable amounts)	\$200,000	\$ (2)	\$ 450,000
Tax rate	20%	25%	30%
Deferred tax liability	\$ 40,000	\$ 75,000	\$ (4)
Deferred tax expense	—	\$ (3)	—
Current tax expense	\$ (1)	—	—

The tax rate changes were enacted at the beginning of each tax year and were not known to Lane at the end of the prior year.

**Items 1 through 4** represent amounts omitted from the worksheet. For each item, determine the amount omitted from the worksheet. Select the amount from the following list. An answer may be used once, more than once, or not at all.

- Amount**
- |              |              |
|--------------|--------------|

### Task-Based Simulation 6

Deferred Tax Schedule	Authoritative Literature	Help

Jasco Corporation is in its first year of operations. The company has pretax income of \$400,000. The company has the following items recorded in its records. No estimated tax payments were made during year 1.

Premiums on life insurance of key officer	\$10,000
Depreciation on tax return in excess of book depreciation	12,000
Interest on municipal bonds	5,300
Warranty expense	4,000
Actual warranty repairs	3,250
Bad debt expense	1,400
Beginning balance in allowance for uncollectible accounts	0
End balance for allowance for uncollectible accounts	800
Rent received in advance from clients that will be recognized evenly over the next three years	24,000
Tax rate for year 1 and future years	40%

Prepare the following schedule for the deferred tax amounts for the year. Choose items from the following list:

Items	
Premium on life insurance	Warranties
Depreciation	Bad debts
Interest on municipal bonds	Rent received

Item	Difference between taxable amount and income statement amount	Classification: Deferred tax asset Deferred tax liability	Current or noncurrent	Deferred tax amount

Complete the following table to calculate taxable income. If no adjustment is needed for a particular item enter 0 as your calculation.

Pretax financial income	
Premiums on life insurance of key officer	
Interest on municipal bonds	
Depreciation for tax in excess of book depreciation	
Adjustment for warranties	
Adjustment for bad debts	
Adjustment for rent received in advance	
Taxable income

### Explanations

- (G) Current tax expense for FY 1 is equal to taxable income (Form 1120) of \$600,000 times 20% or \$120,000.
- (M) The \$100,000 temporary difference for FY 2 is deducted from pretax financial income to arrive at taxable income. Therefore, cumulative temporary differences or future taxable amounts are increased. Thus, \$300,000 (\$200,000 + \$100,000) will be added to pretax financial income in future reversal years.
- (B) Deferred tax expense is equal to the increased rate on future taxable amounts outstanding at the beginning of FY 2 plus the amount related to the \$100,000 of temporary differences that originated in FY 2. Thus, deferred tax expense is equal to \$35,000 [ $\$200,000 \times (.25 - .20) + \$100,000 \times .25$ ]. The entry is

Deferred tax expense	35,000
Deferred tax liability	35,000

- (H) In FY 3 cumulative temporary differences (future taxable amounts) increased by \$150,000. The deferred tax liability account for three years is shown below.

Deferred Tax Liability	
40,000	<b>Year 1</b> (200,000 × .20)
10,000	<b>Year 2</b> [200,000 × (.25 – .20)]
25,000	(100,000 × .25)
15,000	<b>Year 3</b> [300,000 × (.30 – .25)]
45,000	(150,000 × .30)
	Bal. 135,000

The \$135,000 is equal to the cumulative temporary differences of \$450,000 × .30.

**Task-Based Simulation 2**

<b>Tax Differences</b>		
	<b>Authoritative Literature</b>	<b>Help</b>

	A	B	C
1. For plant assets, the depreciation expense deducted for tax purposes is in excess of the depreciation expense used for financial reporting purposes.	<input type="radio"/>	<input checked="" type="radio"/>	<input type="radio"/>
2. A landlord collects some rents in advance. Rents received are taxable in the period in which they are received.	<input checked="" type="radio"/>	<input type="radio"/>	<input type="radio"/>
3. Interest is received on an investment in tax-exempt municipal obligations.	<input type="radio"/>	<input type="radio"/>	<input checked="" type="radio"/>
4. Costs of guarantees and warranties are estimated and accrued for financial reporting purposes.	<input checked="" type="radio"/>	<input type="radio"/>	<input type="radio"/>
5. Life insurance proceeds are collected on the death of a key officer.	<input type="radio"/>	<input type="radio"/>	<input checked="" type="radio"/>
6. Bad debts are estimated and expensed on the income statement. No bad debts were charged to the allowance account and written off during the year.	<input checked="" type="radio"/>	<input type="radio"/>	<input type="radio"/>
7. Goodwill is deducted on the tax return.	<input type="radio"/>	<input checked="" type="radio"/>	<input type="radio"/>

***Explanations***

1. (B) In cases in which tax depreciation is greater than accounting (book) depreciation, taxable income will be less than accounting income and a deferred tax liability results. The reason is that in future years tax depreciation will be less than book depreciation and taxable income will be greater than book income. This will result in future cash flows for the income tax liability shown on the firm's Form 1120 exceeding those that would occur based on pretax accounting income. Thus a deferred tax liability will result. The entry is

Deferred income tax expense	xx
Deferred tax liability	xx

In the reversal year, the entry would be

Deferred tax liability	xx
Deferred tax expense	xx

2. (A) Taxable income will exceed pretax accounting (book) income in the year in which the rents are received. In effect, income taxes on the portion of the rent that is unearned for financial reporting under GAAP must be prepaid under the Internal Revenue Code. Thus, a deferred tax asset would result because in future years when the rent received in advance is earned, no taxes will be payable on the amount earned, because the taxes were paid in the year rent was received. The entry is

Deferred tax asset	xx
Deferred tax expense	xx

3. (C) Interest earned on a tax-exempt municipal obligation is a permanent difference. The interest is deducted in the year received from pretax accounting income to arrive at taxable income. However, it will never be reported as income on the firm's Form 1120. Therefore, such a difference does not result in deferred income taxes.

4. (A) Costs of guarantees and warranties are not deductible under the Internal Revenue Code until incurred. Under ASC Topic 450, however they are estimated and recorded as an expense (loss) and a liability in the period of sale. In effect, income taxes are prepaid because in later years a benefit is received when these costs are incurred and deducted on the tax return. The entry in the origination year is

Deferred tax asset	xx	
Deferred tax expense		xx

The entry when the warranty costs are deducted is

Deferred tax expense	xx	
Deferred tax asset		xx

5. (C) life insurance proceeds are not taxable under the Internal Revenue Code. This gives rise to a permanent difference.

6. (A) The Internal Revenue Code requires the direct write-off method for bad debts. Therefore, bad debts cannot be deducted until the debt becomes uncollectible and is written off. Since no deduction is allowed in the current year, this leads to a future deductible amount and is a deferred tax asset.

7. (B) Goodwill is amortized for tax purposes and tested for impairment for GAAP purposes. Therefore, it results in a temporary difference.

### Task-Based Simulation 3

Deferred Tax Classification	Authoritative Literature	Help

	Deferred tax asset	Deferred tax liability	Current	Noncurrent
1. Tax depreciation in excess of book depreciation	<input type="radio"/>	<input checked="" type="radio"/>	<input type="radio"/>	<input checked="" type="radio"/>
2. Bad debts expense in excess of actual write-offs	<input checked="" type="radio"/>	<input type="radio"/>	<input checked="" type="radio"/>	<input type="radio"/>
3. Rent collected in advance for next 12 months	<input checked="" type="radio"/>	<input type="radio"/>	<input checked="" type="radio"/>	<input type="radio"/>

### Task-Based Simulation 4

Rent received in advance from clients	<input checked="" type="radio"/>	<input type="radio"/>

### Task-Based Simulation 6

Deferred Tax Schedule	Authoritative Literature	Help

Item	Difference between taxable amount and income statement amount	Classification: Deferred tax asset Deferred tax liability	Current or noncurrent	Deferred tax amount
Depreciation	12,000	Deferred tax liability	Noncurrent	4,800
Warranties	750	Deferred tax asset	Current	300
Bad debts	800	Deferred tax asset	Current	320
Rent received	8,000	Deferred tax asset	Current	3,200
Rent received	16,000	Deferred tax asset	Noncurrent	6,400

### Explanations

The adjustment to warranties is the difference between warranty expense deducted on the income statement and the actual warranty work performed during the period (\$4,000 – \$3,250 = \$750). The adjustment to bad debt is the difference between bad debt expense subtracted on the balance sheet, and the actual bad debts written off during the period (\$1,400 – \$600 = \$800). Note that rent received is taxable in the period received, and for deferred tax purposes, it must be fragmented into two components, current and noncurrent.

Pretax financial income	\$400,000
Premiums on life insurance of key officer	10,000
Interest on municipal bonds	(5,300)
Depreciation for tax in excess of book depreciation	(12,000)
Adjustment for warranties	750
Adjustment for bad debts	800
Adjustment for rent received in advance	24,000
Taxable income	\$418,250

# Module 15: Stockholders' Equity

## Overview

**Stockholders' equity** is the residual of assets minus liabilities (i.e., net assets). Due to the number of fraudulent manipulations involving stocks, many states have legislated accounting for stockholders' equity transactions, and they are controlled to some degree (e.g., conditions under which dividends may be paid).

This module covers accounts located within stockholders' equity (e.g., common stock) and events affecting stockholders' equity (e.g., bankruptcy).

Common stockholders' equity consists of two major categories: contributed capital and retained earnings. Retained earnings are either appropriated or unappropriated. Paid-in capital consists of paid-in excess and legal capital. Legal capital is the par or stated value of stock.

When significant changes occur in stockholders' equity accounts, enterprises are required to disclose them. Most companies satisfy this requirement by issuing a statement of changes in stockholders' equity (illustrated below). These statements show changes in the number of shares (not included due to space limits) as well as dollars between balance sheet dates. The statement of changes in stockholders' equity may also be used to report comprehensive income.

### A. Common Stock

- The entry to record the issuance of common stock is

Cash	(amount received)	
Common stock		(par or stated value)
Paid-in capital in excess of par		(forced)

- If stock is sold for less than par, a discount account is debited.
- Very little stock is issued at a discount because of the resulting potential liability to the original purchaser for the difference between the issue price (when less than par) and par which in many states is legal capital. This liability has been avoided by the use of stated value and no par stock, but is mainly avoided by establishing par values below market.

- Control accounts are occasionally used to control unissued stock.

- At authorization

Unissued common stock	(total par or stated value)
Common stock authorized	(same)

- At issuance

Cash	(cash received)	
Unissued common stock		(par or stated value)
Paid-in capital in excess of par		(forced)

- (1) The credit balance in the authorized account is the total available for issuance. The debit balance in the unissued account is the amount not issued. Thus, authorized (cr) – unissued (dr) = issued (cr). The unissued account is an offset account to the authorized account.

- No-par stock is occasionally issued (i.e., no par or stated value exists). All of the proceeds from issuance of no-par stock are credited to “common stock.”
- Costs of registering and issuing common stock are generally netted against the proceeds (i.e., reduce “paid-in capital in excess of par”). An alternative method is to consider stock issue costs an organizational cost.

Legal expenses	(FMV)	
Assets	(FMV)	
Common stock		(par)
Paid-in capital in excess of par		(forced)

### B. Preferred Stock

As implied, preferred stock has preferential rights: most commonly the right to receive dividends prior to common stockholders. Generally the dividend payout is specified (e.g., 7% of par). Additional possible features are

- Participating**—share with common stockholders in dividend distributions after both preferred and common stockholders receive a specified level of dividend payment

- a. Participation with common stockholders in dividends is usually specified in terms of a percentage of legal capital. For example, 7% preferred receive 7% of their par value in dividends before common stockholders receive dividends. Fully participating preferred would receive the same percentage dividend as common stockholders if the common stockholders received over a 7% (of par value) dividend.
- 2. **Cumulative**—dividends not paid in any year (dividends in arrears) must be made up before distributions can be made to common stockholders
  - a. However, dividends in arrears are not a liability until declared. They should be disclosed parenthetically or in the footnotes.
- 3. **Convertible**—preferred stockholders have an option of exchanging their stock for common stock at a specified ratio
  - a. Conversion is usually accounted for at book value

Preferred stock	(par converted)
Preferred paid-in accounts	(related balances)
Common stock	(par)
Paid-in capital in excess of par	(forced)

- b. If market value is used, common stock and paid-in excess are credited for the market value, usually resulting in a large debit to retained earnings. (Plug figure in the journal entry.)
- 4. **Callable**—the corporation has the option to repurchase the preferred stock at a specified price
  - a. If called, no gain or loss is recognized on the income statement. Gains are taken to a paid-in capital account; losses are charged to retained earnings.

Preferred stock	(par)
Preferred paid-in accounts	(related balances)
Retained earnings	(if dr. needed)
Cash	(amount paid)
Paid-in capital from preferred retirement	(if cr. needed)

- 5. Any of the above features present in a preferred stock issuance should be disclosed parenthetically in the balance sheet next to the account title.
- 6. Any financial instrument that imposes an obligation on the issuer to transfer assets or issue equity shares is classified as a liability.
  - a. Therefore, mandatorily **redeemable preferred stock** must be classified as liabilities on the balance sheet.
  - b. The SEC requires that preferred securities redeemable for cash or other assets should be classified outside of permanent equity (as temporary equity) if the preferred stock is redeemable at a fixed or determinable price on a fixed or determinable date; at the option of the holder, or upon the occurrence of an event not within the control of the issuer.

**C. Stock Subscriptions**

Stock (common/preferred) can be subscribed by investors. A receivable is established and “stock subscribed” credited. When the total subscription price is received, the stock (common/preferred) is issued.

1. At subscription

Cash	(any cash received)
Subscription receivable	(balance)
Common stock subscribed	(par)
Paid-in capital in excess of par	(subscription price > par)

2. Cash receipt and issuance

Cash	(balance)
Subscriptions receivable	(balance)
Common stock subscribed	(par)
Common stock*	(par)

\* Unissued common stock, if unissued and authorized accounts are being used.

3. Upon default of subscription agreements, depending on the agreement, the amount paid to date may be
  - a. Returned to subscriber
  - b. Kept by company
  - c. Held to cover any losses on resale and balance returned
4. If returned

Common stock subscribed	(par)
Paid-in capital in excess of par	(subscription price > par)
Cash	(any cash received)
Subscriptions receivable	(balance)

- a. If kept by the company, no cash would be paid and “paid-in from subscription default” credited instead of cash.
- b. If held to cover any losses on resale, a “refundable subscription deposit” liability would be credited instead of cash. If the stock were resold at less than the original subscription price, the difference would be debited to “refundable subscription deposit.”

Cash	(payment)
Refundable subscription deposit	(forced)
Stock	(par)
Paid-in capital in excess of par	(amount from original sale)

- (1) The balance in the refundable subscription account would be paid (possibly in an equivalent number of shares) to the original subscriber.

**NOW REVIEW MULTIPLE-CHOICE QUESTIONS 1 THROUGH 11**

#### D. Treasury Stock Transactions

A firm's own stock repurchased on the open market is known as treasury stock. Treasury stock is **not** an asset, as a firm may not own shares of itself. Instead it is treated as a reduction of stockholders' equity. Furthermore, a firm may only recognize a gain or loss on assets, not on transactions with its own stockholders. Therefore the terms “above cost” and “below cost” will be used instead of gain or loss. There are two methods of accounting for treasury stock: cost and par value.

##### 1. Cost Method

- a. Under the **cost method**, treasury stock is debited for the cost of treasury stock.
- b. Any difference between the cost of the treasury stock and the resale price is recognized at the point of resale. However, such amounts are not included in the determination of periodic income.
  - (1) Resale amounts **above cost** are credited to “paid-in capital from treasury stock transactions.”
  - (2) Resale amounts **below cost** should be charged first to “paid-in capital from treasury stock (TS) transactions” or “paid-in capital from stock retirement” to the extent that either of these exists for that class of stock. The remainder of any amount from sales below cost is to be charged to retained earnings.
  - (3) In essence a one-transaction viewpoint is used, as the firm is treated as a middle “person” for the transfer of stock between two shareholders.

##### 2. Par Value Method

Under the **par value** method, all capital balances associated with the treasury shares are removed upon acquisition.

- a. Any excess of treasury stock cost over par value is accounted for by charging “paid-in capital from common stock” for the amount in excess of par received when the shares were originally issued.
- b. Any excess of the cost of acquiring the treasury stock over the original issue cost is charged to retained earnings.

- c. If treasury stock is acquired at a cost equal to or less than the original issue cost, “paid-in capital from common stock” is charged (debited) for the original amount in excess of par and “paid-in capital from treasury stock” is credited for the difference between the original issue price and the cost to acquire the treasury stock.
- d. When the treasury stock is resold, it is treated as a typical issuance, with the excess of selling price over par credited to “paid-in capital from common stock.”

**NOTE:** The par value method takes on a two-transaction viewpoint. The purchase is treated as a “retirement” of the shares, while the subsequent sale of the shares is treated as a “new” issue.

**EXAMPLE**

100 shares (\$50 par) are originally sold at \$60, reacquired at \$70, and subsequently resold at \$75.

<b>Cost method</b>		<b>Par value method</b>	
Treasury stock	7,000	Treasury stock	5,000
Cash	7,000	Paid-in capital—common stock	1,000
		Retained earnings	1,000
		Cash	7,000
Cash	7,500	Cash	7,500
Treasury stock	7,000	Treasury stock	5,000
Paid-in capital—treasury stock	500	Paid-in capital—common stock	2,500

If the shares had been resold at \$65:

<b>Cost method</b>		<b>Par value method</b>	
Cash	6,500	Cash	6,500
Retained earnings*	500	Treasury stock	5,000
Treasury stock	7,000	Paid-in capital—common stock	1,500

\* “Paid-in capital—treasury stock” or “paid-in capital—retired stock” of that issue would be debited first to the extent it exists.

**NOTE:** Total stockholders' equity is not affected by the method selected; only the allocation among the equity accounts is different.

**E. Retirement of Stock**

Formal retirement or constructive retirement (purchase with no intent of reissue) of stock is handled very similarly to treasury stock.

1. When formally retired

Common stock	xx
Paid-in capital in excess of par*	xx
Retained earnings*	xx
Treasury stock*	xx

\* Assuming a loss on the retirement of treasury stock

- a. “Paid-in capital from treasury stock transactions” may be debited to the extent it exists
- b. A pro rata portion of all paid-in capital existing for that issue (e.g., if 2% of an issue is retired, up to 2% of all existing paid-in capital for that issue may be debited)
  - (1) Alternatively, the entire or any portion of the loss may be debited to retained earnings. Any gains are credited to a “paid-in capital from retirement” account.

**NOW REVIEW MULTIPLE-CHOICE QUESTIONS 12 THROUGH 22**
**F. Dividends**

1. At the date of declaration, an entry is made to record the dividend liability.

Retained earnings (dividends)	xx	
Dividends payable		xx

2. No entry is made at the date of record. Those owning stock at the date of record will be paid the previously declared dividends.

- a. The stockholder records consist of

- (1) General ledger account
- (2) Subsidiary ledger
  - (a) Contains names and addresses of stockholders
- (3) Stock certificate book

- b. Outside services: (usually banks)

- (1) Transfer agent issues new certificates, canceling old, and maintains stockholder ledger
- (2) Registrar validates new certificates and controls against overissuance
- (3) Functions are now becoming combined

3. At the payment date, the liability is paid.

Dividends payable	xx	
Cash		xx

4. **Property dividends** are dividends payable in an asset other than cash, but the entries are similar to those of cash dividends.

- a. They are recorded at fair value (FV) of the asset transferred with a gain (loss) recognized on the difference between the asset's book value (BV) and FV at disposition.

5. **Liquidating dividends** (dividends based on other than earnings) are a return of capital to stockholders and should be so disclosed.

- a. Paid-in capital is usually debited rather than retained earnings. Common stock cannot be debited because it is the legal capital which can only be eliminated upon corporate dissolution.

6. **Scrip dividends** are issuance of promises to pay dividends in the future (and may bear interest) instead of cash.

Retained earnings	xx	
Scrip dividends payable		xx

Scrip dividends are a liability which is extinguished by payment.

Scrip dividends payable	xx	
Interest expense (maybe)	xx	
Cash		xx

7. Unlike cash and property dividends, stock dividends are not a liability when declared. They can be rescinded, as nothing is actually being distributed to stockholders except more stock certificates. Current assets are not used to "pay" the dividend.

- a. After stock dividends, shareholders continue to own the same proportion of the corporation.  
 b. At declaration

Retained earnings	(FV of shares)	
Stock dividend distributable		(par)
Paid-in capital in excess of par		(plug)

c. At issuance

Stock dividend distributable                      xx  
     Common stock    xx

d. Charge retained earnings for FV of stock dividend if less than 20%-25% increase in stock outstanding; charge RE for **par value** of stock dividend if greater than 20-25% increase in stock outstanding.

(1) Not required if closely held company

**NOW REVIEW MULTIPLE-CHOICE QUESTIONS 23 THROUGH 35**

**G. Stock Splits**

Stock splits change the number of shares outstanding and the par value per share.

1. Par value is reduced in proportion to the increase in the number of shares.
2. The total par value outstanding does not change and no charge is made to retained earnings.
3. If legal requirements preclude changing the par or stated value, charge retained earnings only for the par or stated value issued.

**STOCK DIVIDENDS AND SPLITS: SUMMARY OF EFFECTS**

	Total S.E.	Par value per share	Total par outstanding	RE	Legal capital	Additional paid-in capital	No. of shares outstanding
Stock dividend < 20–25% of shares outstanding	N/C	N/C	+	Decrease by market value of shares issued	+	+	+
Stock split effected in form of dividend > 20–25% of shares outstanding	N/C	N/C	+	Decrease by par value of shares issued	+	N/C	+
Stock split	N/C	Decrease proportionately	N/C	N/C	N/C	N/C	+

N/C = No Change

+ = Increase

Prepared by Professor John R. Simon, Northern Illinois University

**H. Appropriations of Retained Earnings (Reserves)**

An entry to appropriate retained earnings restricts the amount of retained earnings that is available for dividends.

RE (or Unappropriated RE)                                      xx  
     Reserve for RE (or Appropriated RE)                                      xx

**NOTE:** The restriction of retained earnings does not necessarily provide cash for any intended purpose. The purpose is to show that **assets** in the amount of the appropriation are not available for dividends. When a reserve is no longer needed it must be returned directly to unappropriated retained earnings by reversing the entry that created it.

**NOW REVIEW MULTIPLE-CHOICE QUESTIONS 36 THROUGH 41**

### I. Share-Based Payments

Share-based payments are transactions wherein an entity acquires goods or services by issuing shares (stock), share options, or other equity instruments. It also includes transactions with an employee or supplier wherein the entity incurs a liability that is based on the price of the entity's shares or that will be settled using equity shares.

1. There are two important distinctions for applying the rules for share-based payments:
  - a. Is the share-based payment to employees or nonemployees?
  - b. Is the share-based payment considered equity or a liability?
2. **Share-based payments to nonemployees.** Share-based payments to nonemployees for goods and services are measured at the fair value of the equity instruments or the fair value of the goods and services, whichever is more reliable.
3. **Share-based payments to employees.** Share-based payments to employees are measured based on the fair-value-based method. The cost of the services is measured at the grant-date fair value of the equity instruments issued, or the fair value of the liability incurred. Employee service cost is based on fair value net of any amount the employee pays or is obligated to pay for the instrument.
  - a. The fair value of an equity share option is measured based on the observable market price of an option with the same or similar terms and conditions, or estimated using an option-pricing model.
    - (1) If it is not possible to estimate fair value at the grant date, the compensation cost is measured using the intrinsic value at the end of each reporting period, and final compensation cost is measured at the settlement date.
      - (a) The intrinsic value is the difference between the market value of the stock and the price the employee must pay.
  - b. Compensation cost for share-based employee compensation classified as equity is amortized on a straight-line basis over the requisite service period.
    - (1) The **requisite service period** is the period in which the employee is required to provide services, which is usually the vesting period.
    - (2) The **service inception date** is the beginning of the requisite service period.
    - (3) Firms must estimate the number of forfeitures that will occur.
      - (a) No compensation cost is recognized if an employee forfeits shares because a service or performance condition is not met.
      - (b) However, if an employee renders the requisite service and the share option expires or is unexercised, previously recognized compensation cost is not reversed.
  - c. Share-based payments may also be classified as liabilities.
    - (1) Puttable shares are considered liabilities if the repurchase feature allows the employee to avoid bearing the risks and rewards for a reasonable period (six months or more).
    - (2) The measurement date for liability instruments is the settlement date; therefore, share-based payments are remeasured at the end of each reporting period.
    - (3) Compensation cost is the change in fair value of the instrument from one period to the next.

Share-Based Payments		
	Classified as Equity	Classified as Liability
When to measure	Grant-date fair value of equity instrument	Each reporting period Final measurement on settlement date
How to measure	Observable market price of option with same or similar terms OR Estimate using option pricing model OR Intrinsic value at end of each reporting period if no market price or estimate can be determined (net of amounts that employee must pay)	Fair value of liability incurred
How to allocate compensation expense	Straight-line over requisite service period	Straight-line over requisite service period

- d. If an option-pricing model (such as Black-Scholes model) is used, the option-pricing model should consider the following variables:
- (1) Current price of the underlying stock
  - (2) Exercise price of the option
  - (3) Expected life of the option
  - (4) Expected volatility of the underlying stock
  - (5) Expected dividends on the stock
  - (6) Risk-free interest rate during the expected option term
- (a) The resulting fair value shall be applied to the number of options expected to vest (based on the grant date estimate) or the total number of options issued.

**J. Accounting Entries for the Share-Based Payments to Employees**

**1. Share-based payments classified as equity**

**EXAMPLE**

To illustrate the recognition and measurement of stock compensation expense, suppose ABC Corporation (a public company) establishes an employee stock option plan on January 1, year 1. The plan allows its employees to acquire 10,000 shares of its \$1 par value common stock at \$52 per share, when the market price is also \$52. The options may not be exercised until five years from the grant date. The grant-date fair value of an option with similar terms and conditions is \$8.62.

**Accounting for Stock-Based Compensation  
Calculation of Compensation Cost**

Fair Value of Option at grant-date	\$ 8.62
<u>× Number of options</u>	<u>10,000</u>
Deferred comp. expense	<u>\$86,200</u>

The journal entry to recognize the deferred compensation expense in Year 1 is shown below.

Deferred comp. expense	86,200	
Stock options outstanding		86,200

During each of the next five years which is the requisite service period, compensation expense is recognizes as follows:

Compensation expense	17,240	
Deferred comp. expense		17,240

When the option is exercised, cash is received and stock is issued as reflected in the following entry (assume exercise after the five-year period):

Cash	52,000	(option price)	
Stock options outstanding		86,200	
Common stock		10,000	(par)
Additional paid-in capital		128,200	(plug)

- a. If modifications are made to a shared-based payment plan, the incremental compensation cost is measured by comparing the fair value of the modified plan with the fair value of the plan immediately before the modification.
  - b. Deferred compensation is presented in the balance sheet by subtracting the balance in the deferred compensation expense account from stock options outstanding in the paid-in capital section of owners' equity to indicate the net contributed services on any date.
- 2. Share-based payments classified as liabilities**
- a. When a share-based payment is treated as a liability, it is measured at the fair value of the liability incurred. The measurement date is the date of settlement. Therefore, the liability is remeasured at the end of each reporting period until the date of settlement.
    - (1) Compensation cost for each period is based on the change in fair value of the instrument for each reporting period.
    - (2) If the requisite service period has not been completed, the compensation cost recognized is equal to the percentage of the requisite service that has been rendered as of that date.

- b. An example of share-based payment classified as a liability is a stock appreciation right. **Stock appreciation rights (SAR)** allow employees to receive stock or cash equal in amount to the difference between the market value and some predetermined amount per share for a certain number of shares. SARs allow employees to receive the amount of share appreciation without having to make a cash outlay as is common in stock option plans.
- c. For financial reporting purposes, compensation expense is the excess of market value over a predetermined amount.
- (1) Compensation expense is recorded in each period prior to exercise based on the excess of market value at the end of each period over a predetermined amount.
  - (2) Compensation expense is adjusted up or down as the market value of the stock changes before the measurement date (which is the exercise date). Therefore, compensation expense could be credited (reduced) if the stock's market value drops from one period to the next.

**EXAMPLE**

Assume a company grants 100 SAR, payable in cash, to an employee on 1/1/Y1. The predetermined amount for the SAR plan is \$50 per right, and the market value of the stock is \$55 on 12/31/Y1, \$53 on 12/31/Y2, and \$61 on 12/31/Y3. Compensation expense recorded in each year would be

Total expense – Exp. previously accrued = Current expense

Year 1	100 (\$55 – \$50)	=	\$ 500 – \$ 0	=	\$ <u>500</u>
Year 2	100 (\$53 – \$50)	=	\$ 300 – \$500	=	\$ <u>(200)</u>
Year 3	100 (\$61 – \$50)	=	\$1,100 – \$300	=	\$ <u>800</u>

The total expense recognized over the three-year period is \$1,100 [100(\$61 – \$50)]. Journal entries would be

Year 1 and Year 3		Year 2	
Compensation expense	\$500/\$800	Liability under SAR plan	\$200
Liability under SAR plan	\$500/\$800	Compensation expense	\$200

[If the SAR were to be redeemed in common stock, Stock Rights Outstanding (a paid-in capital account) would replace the liability account in the above entries.]

The above example assumes no service or vesting period, which is the period of time until the SAR become exercisable. If the above plan had a two-year service period, 50% of the total expense would be recognized at the end of the first year, and 100% at the end of the second year and thereafter until exercised. The compensation would be accrued as follows:

Year 1	\$ (500) (50%)	=	\$ 250 – \$ 0	=	\$250
Year 2	\$ (300) (100%)	=	\$ 300 – \$250	=	\$ 50
Year 3	\$(1,100) (100%)	=	\$1,100 – \$300	=	\$800

**3. Disclosures**

- a. Excess tax benefits are recognized as additional paid-in capital.
- b. Cash retained as a result of excess tax benefits are presented in the statement of cash flows as a cash inflow from financing activities (not as a reduction of taxes paid).
- c. Diluted earnings per share is based on the actual number of options or shares granted and not yet forfeited, unless the shares are antidilutive.
  - (1) If equity share options are outstanding for only a part of a period, the shares are weighted to reflect the portion of time outstanding.
- d. Disclosures for share-based payments should include the following:
  - (1) The nature and terms of arrangements during the period and potential effects on shareholders
  - (2) The effect of compensation cost from share-based arrangements on the income statement
  - (3) The method of estimating the fair value of goods or services received, or fair value of the equity instruments granted during the period
  - (4) The cash flow effects from share-based payments

**NOW REVIEW MULTIPLE-CHOICE QUESTIONS 42 THROUGH 54**
**K. Basic Earnings Per Share**

**NOTE:** CPA candidates must be able to compute both basic and diluted earnings per share (EPS). In addition to the computations, candidates should also understand the presentation and disclosure requirements.

1. Only public entities (those who trade their stock on the major stock exchanges and over the counter) are required to present earnings per share.
  - a. Nonpublic companies often choose to present such information, but they are not required to do so.
  - b. Before continuing, it is recommended that candidates read the outline of SFAS 128, *Earnings Per Share* (ASC Topic 260), in the back of the FAR section.
2. The objective of EPS is to measure the performance of an entity over the reporting period. Required presentation calls for a **basic** EPS in all situations and a **diluted** EPS in those situations where an entity's capital structure includes potential dilutive securities. Basic and dilutive (when applicable) earnings per share amounts must be presented on the face of the income statement for two elements.
  - a. Income from continuing operations **and**
  - b. Net income
3. In those situations where an entity also reports discontinued operations, and/or extraordinary items, the entity **may report** EPS on the face of the income statement or disclose such information in the footnotes to the financial statements.

**NOTE:** The only required EPS presentations are for income from continuing operations and net income. All other presentations of EPS are optional.

4. Public corporations begin by computing **basic** earnings per share. In this calculation, only those shares of common stock **outstanding** are included. Any **potential** issuance of securities is **ignored**. The computational formula is as follows:

$$\text{Basic EPS} = \frac{\text{Net income available to common stockholders}}{\text{Weighted-average number of common shares } \mathbf{outstanding}}$$

- a. The **numerator** (net income available to common stockholders) for EPS on **net income** is computed by taking the **net income** and **subtracting**
  - (1) The dividends **declared** in the period on the **noncumulative preferred stock** (whether paid or not) **and**
  - (2) The dividends **accumulated** for the current period only on the **cumulative preferred stock** (whether or not declared).

**NOTE:** Dividends in arrears are excluded from this calculation.

- b. The **numerator** (net income available to common stockholders) for EPS on **net income from continuing operations** is computed by taking the **net income** and subtracting any net income or adding any net loss from the following:
  - (1) Discontinued operations
  - (2) Extraordinary items
  - (3) The net income from continuing operations is then adjusted by subtracting the preferred stock dividends as described in points number 1. and 2. above.
- c. The following example will illustrate the application of this formula:

Numerator information		Denominator information	
a. Net income	\$100,000	a. Common shares outstanding 1/1/Y1	100,000
b. Extraordinary loss (net of tax)	30,000	b. Shares issued for cash 4/1	20,000
c. 6% preferred stock, \$100 par, 1,000 shares issued and outstanding (\$100,000 × .06)	6,000	c. Shares issued in 10% stock dividend declared in July	12,000
		d. Shares of treasury stock purchased 10/1	10,000
Earnings per common share:			
On income from continuing operations	=	$\frac{\$130,000 - 6,000}{\text{Common shares outstanding}}$	
Our net income	=	$\frac{\$100,000 - 6,000}{\text{Common shares outstanding}}$	

d. When calculating the amount of the numerator, the claims of senior securities (i.e., preferred stock) should be deducted to arrive at the earnings attributable to common shareholders.

(1) In the example, the preferred stock is cumulative. Thus, regardless of whether or not the board of directors declares a preferred dividend, holders of the preferred stock have a claim of \$6,000 (1,000 shares × \$6 per share) against year 1 earnings. Therefore, \$6,000 is deducted from the numerator to arrive at the net income attributable to common shareholders. Note that this \$6,000 would have been **deducted for noncumulative preferred only if a dividend of this amount had been declared**. Cumulative preferred stock dividends for the current period are always deducted whether or not declared.

e. The numerator of the EPS calculation covers a particular time period such as a month, a quarter, or a year. It is, therefore, consistent to calculate the average number of common shares which were outstanding during this same time period. The calculation below in Table I illustrates the determination of weighted-average common shares outstanding.

**NOTE:** For stock dividends the number of shares is adjusted retroactively for the shares which were outstanding prior to the stock dividend.

- (1) Since the stock dividend was issued **after** the issuance of additional shares for cash on 4/1, the shareholders of those additional shares and the shareholders of the shares outstanding at the beginning of the year will receive the stock dividend.
- (2) However, if the stock dividend had been issued **before** the issuance of additional shares of stock for cash on 4/1, only the shareholders who own the shares outstanding at the beginning of the period would have received the stock dividend.
- (3) Stock splits are handled in an identical fashion.

TABLE I

Dates	Number common shares outstanding	Months outstanding	Fraction of year	Shares × Fraction of year
1/1 to 4/1	100,000 + 10% (100,000) = 110,000	3	¼	27,500
4/1 to 10/1	110,000 + 20,000 + 10% (20,000) = 132,000	6	½	66,000
10/1 to 12/31	132,000 – 10,000 = 122,000	3	¼	<u>30,500</u>
	Weighted-average of common shares outstanding			<u>124,000</u>

- (a) There is an exception to the general rule that stock dividends and stock splits are treated as if outstanding the entire year. If a stock dividend provides that the shareholders may receive either cash or stock, the dividend is treated as a share issuance, and weighted for the time period outstanding.
- (4) In the weighted-average computation, if common shares are issued in a business combination during the year, the common shares are weighted from the date of issuance.
- (5) Other complications in the weighted-average calculation are posed by actual conversions of debt and preferred stock to common during the year and by exercise of warrants and options. These situations are introduced in the example presented with diluted earnings per share in the next section.
- f. To complete the basic EPS example, the weighted-average number of common shares determined in Table I is divided into the income elements previously computed to arrive at the following:

Earnings per common share

$$\text{On income from continuing operations } \frac{\$130,000 - 6,000}{124,000 \text{ common shares}} = \$1,000$$

$$\text{On net income } \frac{\$100,000 - 6,000}{124,000 \text{ common shares}} = \$ .76$$

- (1) The above EPS numbers should be presented on the face of the income statement. Reporting a \$.24 loss per share due to the extraordinary item is optional.

**NOW REVIEW MULTIPLE-CHOICE QUESTIONS 55 THROUGH 61**

### L. Diluted Earnings Per Share

1. **Diluted EPS** measures the performance of the entity over the reporting period (same as basic EPS) while also taking into account the effect of all dilutive potential common shares that were outstanding during the period.

#### EXAMPLE

For both examples, assume net income is \$50,000, and the weighted-average of common shares outstanding is 10,000.

In the first example, assume the following additional information with respect to the capital structure:

1. 4% nonconvertible, cumulative preferred stock, par \$100, 1,000 shares issued and outstanding the entire year
2. Options and warrants to purchase 1,000 shares of common stock at \$8 per share. The average market price of common stock during the year was \$10 and the closing market price was \$12 per share. The options and warrants were outstanding all year.

**Diluted EPS** must be computed because of the presence of the options and warrants. The preferred stock is not convertible; therefore, it is not a potentially dilutive security.

The first step in the solution of this problem is the determination of the basic EPS. This calculation appears as follows:

$$\frac{\text{Net income} - \text{Preferred dividends}}{\text{Weighted-average of common shares}} = \frac{\$50,000 - 4,000}{10,000 \text{ shares}} = \$4.60$$

**NOTE:** Preferred dividends are deducted to arrive at net income applicable to common stock. When preferred stock is cumulative, this deduction is made whether or not dividends have been declared.

The calculation of diluted EPS is based upon outstanding common stock and all dilutive common shares that were outstanding during the period. In the example, the options and warrants are the only potentially dilutive security. Options and warrants are considered to be common stock equivalents at all times. Consequently, the only question that must be resolved is whether or not the options and warrants are dilutive.

This question is resolved by comparing the average market price per common share of \$10 with the exercise price of \$8. If the average market price is > the exercise price, the effect of assuming the exercise of options and warrants is dilutive. However, if the average market price is ≤ the exercise price, the effect of assuming the exercise of options and warrants would be antidilutive (i.e., EPS would stay the same or increase). In the example, the options and warrants are dilutive (\$10 > \$8).

The method used to determine the dilutive effects of options and warrants is called the **treasury stock method**.

This method assumes:

Dilutive effect = Number of shares issued to exercising stockholders – Shares acquired from selling stockholders

In the example above, all of the options and warrants are assumed to be exercised at the beginning of the year (the options and warrants were outstanding the entire year) and the cash received is used to reacquire shares (treasury stock) at the average market price. The computation below illustrates the “treasury stock” method.

Proceeds from assumed exercise of options and warrants (1,000 shares × \$8)	<u>\$8,000</u>
Number of shares issued	<u>1,000</u>
Number of shares reacquired (\$8,000 ÷ \$10)	<u>800</u>
Number of shares assumed issued and not reacquired	<u>200</u>

\* An alternative approach that can be used to calculate this number for diluted EPS is demonstrated below.

$$\frac{\text{Average market price} - \text{Exercise price}}{\text{Average market price}} \times \text{Number of shares under options/warrants} = \text{Shares not reacquired}$$

$$\frac{\$10 - 8}{\$10} \times 1,000 \text{ shares} = 200 \text{ shares}$$

Diluted EPS can now be calculated, as follows, including the effects of applying the “treasury stock” method.

$$\frac{\text{Net income} - \text{Preferred dividends}}{\text{Weighted-average of common shares outstanding} + \text{Number of shares not acquired with proceeds from options and warrants}} = \frac{\$50,000 - 4,000}{10,000 + 200 \text{ shares}} = \$4.51$$

**NOTE:** The incremental effects of the treasury stock method; there was no effect on the numerator of the EPS calculation while there were 200 shares added to the denominator. Note also that the options and warrants are dilutive. EPS is reduced from \$4.60 to \$4.51.

- a. One difference between the computation of diluted and basic EPS is that the denominator of the diluted EPS computation is increased to include the number of additional common shares that would have been outstanding if the dilutive potential common shares had been issued.
  - b. In addition, the numerator is adjusted to add back any convertible preferred dividends, the after-tax amount of interest recognized in the period associated with any convertible debt, and any other changes in income (loss) that would result from the assumed conversion of the potential common shares.
  - c. Diluted EPS should be based on the security holder's most advantageous conversion rate or exercise price.
  - d. Similar to basic EPS, all antidilutive securities are disregarded.
2. The following two independent examples will illustrate the procedures necessary to calculate basic and diluted EPS.
    - a. Table II summarizes the calculations made for the first example involving diluted EPS.

TABLE II

Items	Basic EPS		Diluted EPS	
	Numerator	Denominator	Numerator	Denominator
Net income	\$50,000		\$50,000	
Preferred div.	(4,000)		(4,000)	
Common shares outstanding		10,000 shs.		10,000 shs.
Options and warrants				200
Totals	\$46,000	÷ 10,000 shs.	\$46,000	÷ 10,200 shs.
EPS		\$4.60		\$4.51

**EXAMPLE**

Assume net income is \$50,000, and the weighted-average of common shares outstanding is 10,000.

Assume the following additional information:

1. 8% convertible debt, 200 bonds each convertible into 40 common shares. The bonds were outstanding the entire year. The average AA corporate bond yield was 10% at the date the bonds were issued. The income tax rate is 40%. The bonds were issued at par (\$1,000 per bond). No bonds were converted during the year.
2. 4% convertible, cumulative preferred stock, par \$100, 1,000 shares issued and outstanding. Each preferred share is convertible into 2 common shares. The preferred stock was outstanding the entire year, and the average AA corporate bond yield at the date the preferred stock was issued was 10%. The preferred stock was issued at par. No preferred stock was converted during the year.

The capital structure is **complex** in this example because of the presence of the two convertible securities. The first step in the solution of this example is the calculation of basic EPS based upon weighted-average of common shares outstanding. This basic EPS is the same as it was for the first example (i.e., \$4.60). The next step is the computation of diluted EPS. The diluted EPS computation will include the convertible preferred stock if it is dilutive.

To determine the dilutive effect of the preferred stock, an assumption (called the **if-converted method**) is made that all of the preferred stock is converted at the earliest date that it could have occurred during the year. In this example, the date would be January 1. The effects of this assumption are twofold. One, if the preferred stock is converted, there will be no preferred dividend of \$4,000 for the year; and, two, there will be an additional 2,000 shares of common stock outstanding during the year (the conversion rate is 2 common for 1 preferred). EPS is computed, as follows, reflecting these two assumptions.

$$\frac{\text{Net income} - \text{Preferred dividends}}{\text{Weighted-average of common shares outstanding} + \text{Shares issued upon conversion of preferred stock}} = \frac{\$50,000 - 4,000}{10,000 + 200 \text{ shares}} = \$4.17$$

The convertible preferred stock is **dilutive** because it reduced EPS from \$4.60 to \$4.17.

In the example, the convertible bonds are assumed to have been converted at the beginning of the year. The effects of this assumption are twofold. One, if the bonds are converted, there will be no interest expense of \$16,000 (8% × \$200,000 face value); and, two, there will be an additional 8,000 shares (200 bonds × 40 shares) of common stock outstanding during the year. One note of caution, however, must be mentioned; namely, the effect of not having \$16,000 of interest expense will increase income, but it will also increase tax expense. Consequently, the net effect of not having interest expense is \$9,600 [\$16,000 – (40% × \$16,000)]. Diluted EPS is computed, as follows, reflecting the dilutive preferred stock and the effects noted above for the convertible bonds:

$$\frac{\text{Net income} + \text{Interest expense (net of tax)}}{\text{Weighted-average of common shares outstanding} + \text{Shares issued upon conversion of preferred and conversion of bonds}} = \frac{\$50,000 + 9,600}{10,000 + 2,000 + 8,000 \text{ shares}} = \$2.98$$

The convertible debt is **dilutive**. Both the convertible bonds and preferred stock reduced EPS from \$4.60 to \$2.98. Table III summarizes the computations made for the second example.

The income statement **disclosures** for EPS, as a result of the second example, would be as follows:

Earnings per common share (see Note X)	\$4.60
Earnings per common share assuming dilution	2.98

Note X would state the assumptions made in determining both basic and diluted EPS numbers.

b. Table III summarizes the computations made for the second example.

TABLE III

Items	Basic EPS		Diluted EPS	
	Numerator	Denominator	Numerator	Denominator
Net income	\$50,000		\$50,000	
Preferred div.	(4,000)			
Common shares outstanding		10,000 shs.		10,000 shs.
Conversion of preferred				2,000
Conversion of bonds			9,600	8,000
Totals	\$46,000	÷ 10,000 shs.	\$59,600	÷ 20,000 shs.
EPS		\$4.60		\$2.98

#### EXAMPLE 1

Suppose the convertible bonds in the second example were issued during the current year on July 1. If all other facts remain unchanged, diluted EPS would be computed as follows:

$$\frac{\text{Net income} + \text{Interest expense (net of tax)}}{\text{Weighted-average of common shares outstanding} + \text{Shares issued upon conversion of preferred and conversion of bonds}} = \frac{\$50,000 + \frac{1}{2}(9,600)}{10,000 + 2,000 + \frac{1}{2}(8,000)} = \$3.43$$

The convertible debt is dilutive whether or not it is outstanding the entire year or for part of a year.

- In the two examples, all of the potentially dilutive securities were outstanding the entire year and no conversions or exercises were made during the year. If a potentially dilutive security was not outstanding the entire year, then the numerator and denominator effects would have to be "time-weighted."
- If actual conversions or exercises take place during a period, the common shares issued will be outstanding from their date of issuance and, therefore, will be in the weighted-average of common shares outstanding. These shares are then weighted from their respective times of issuance.
- It should also be noted that when convertible debt is issued for a premium or discount, the interest expense net of taxes must be computed after giving effect to premium/discount amortization.

**EXAMPLE**

For example, assume that all the bonds in the second example are converted on July 1 into 8,000 common shares. Several important effects should be noted, as follows:

1. The weighted-average of common shares outstanding will be increased by  $(8,000)(.5)$  or 4,000. Income will increase by \$4,800 net of tax because the bonds are no longer outstanding.
  2. The "if converted" method is applied to the period January 1 to July 1 because it was during this period that the bonds were potentially dilutive. The interest expense, net of tax, of \$4,800 is added to the income, and 4,000 shares (.5 of 8,000) are added to the denominator.
  3. Interestingly, the net effect of items 1 and 2 is the same for the period whether these dilutive bonds were outstanding the entire period or converted during the period.
- f. The benchmark used to determine if including individual securities decreases income is income from continuing operations unless an enterprise has no discontinued operations. In that case income before extraordinary items would be the benchmark number.
3. **Redemption of preferred stock.** The SEC requires that if preferred stock is redeemed, the difference between the fair value of the consideration transferred and the carrying amount of the preferred stock should be treated the same as a dividend to preferred shareholders in calculating earnings per share.
    - a. If the consideration transferred is greater than the carrying amount of the preferred stock, it should be subtracted from net income in the calculation of EPS.
    - b. If the consideration transferred is less than the carrying amount, then it should be added to net income in calculating the numerator for EPS.
  4. **Contingent issuances of common stock.** Also mentioned are **contingent issuances** of common stock (e.g., stock subscriptions). If shares are to be issued in the future with no restrictions on issuance other than the passage of time, they are to be considered issued and treated as outstanding in the computation of dilutive EPS. Other issuances that are dependent upon certain conditions being met are to be evaluated in a different respect.
    - a. If the contingency is to merely maintain the earnings levels currently being attained, then the shares are considered outstanding for the entire period and considered in the computation of dilutive EPS if the effect is dilutive.
    - b. If the requirement is to increase earnings over a period of time, the diluted EPS computation shall include those shares that would be issued based on the assumption that current amount of earnings will remain unchanged, if the effect is dilutive.
  5. **EPS on comprehensive income and other comprehensive income components.** EPS numbers below net income are not required for comprehensive income components.

**NOW REVIEW MULTIPLE-CHOICE QUESTIONS 62 THROUGH 70**

**M. Corporate Bankruptcy**

1. The **going concern** assumption is one of the basic principles underlying the primary financial statements (balance sheet, income statement and statement of cash flows). However, this assumption of continued existence is threatened in corporations that are in severe financial trouble.
  - a. A range of alternative actions is available to a company before it enters bankruptcy, such as seeking extensions on due dates of debt, restructuring its debt, or allowing a court-appointed trustee to manage the corporation.
    - (1) These pre-bankruptcy options are presented in the following modules:
      - (a) Creditor's agreements—Module 30, Bankruptcy
      - (b) Troubled debt restructurings—Module 13, Present Value, Section C
2. Bankruptcy is the final legal act for a company. In bankruptcy, the accounting and financial reporting must present the information necessary for the liquidation of the business.

### Module 15: Stockholders' Equity

- a. The **Statement of Affairs** is prepared to present the current market values of the assets and the status of the various categories of the equity interests of the corporation.
- (1) The **Statement of Affairs** classifies assets in the following order of priority (highest to lowest):
- (a) Assets pledged with fully secured creditors—assets having a fair valuation equal to or greater than the debts for which they serve as collateral
  - (b) Assets pledged with partially secured creditors—assets having a fair valuation less than their associated debts
  - (c) Free assets—uncommitted assets available for remaining equity interests
- b. The accountant must provide a prioritization of the creditors' claims against the net assets of the corporation. The legal rights of each creditor are determined by the terms of the credit agreement it has with the company and by the National Bankruptcy Act.
- (1) The equity interests are classified in the following order (highest to lowest):
- (a) Preferred claims—these claims have priority as specified in the Bankruptcy Act
  - (b) Fully secured creditors—these are claims which should be fully covered with the realizations from the assets pledged to the claims
  - (c) Partially secured creditors—these are claims which may not be fully covered by the realizations of the pledged assets for these claims; the amount of the uncovered claims goes to the unsecured creditors category
  - (d) Unsecured creditors—these are claims that have no priority and do not have any collateral claims to any specific assets
  - (e) Stockholders' equity—this represents any residual claim
- c. The historical cost valuation principles used in a balance sheet assume a going concern assumption.
- (1) As a business enters bankruptcy, the liquidation values of the assets become the most relevant measures. In addition, anticipated costs of liquidation should be recognized.
  - (2) The Statement of Affairs begins with the present book values of the company's assets in order to articulate with the balance sheet. After relating the projected proceeds from the liquidation of the assets to the various equity interests, the statement concludes with the estimated dollar amount of unsecured claims that cannot be paid (estimated deficiency).

#### EXAMPLE

The Vann Corporation's balance sheet for December 31, year 1, is shown below. The corporation is entering bankruptcy and expects to incur \$8,000 of costs for the liquidation process. The estimated current values of the assets are determined and the various equity claims are prioritized. The Statement of Affairs for Vann Corporation is presented on the following page.

*The Vann Corporation*  
**BALANCE SHEET**  
*December 31, Year 1*

<i>Assets</i>	
Cash	\$ 1,500
Marketable securities	10,000
Accounts receivable (net)	18,000
Merchandise inventory	41,000
Prepaid expenses	2,000
Land	6,000
Building (net of depreciation)	65,000
Machinery (net of depreciation)	21,000
Goodwill	<u>10,000</u>
	<u>\$174,500</u>

**Equities**

Accounts payable	\$ 30,000
Notes payable	37,000
Accrued wages	6,500
Mortgages payable	45,000
Capital stock (\$10 par)	100,000
Retained earnings (deficit)	<u>(44,000)</u>
	<u>\$174,500</u>

**NOW REVIEW MULTIPLE-CHOICE QUESTIONS 71 THROUGH 73****N. Reorganizations**

Chapter 11 of the Bankruptcy Reform Act of 1978 and The Bankruptcy Abuse and Consumer Protection Act of 2005 allow legal protection from creditors to provide time for a bankrupt corporation to return its operations to a profitable level.

1. The balance sheet, income statement, and statement of cash flows must distinguish events and transactions related with the reorganization from those related to ongoing operations.
2. Liabilities should be reported at expected amounts per the plan on the balance sheet. Liabilities should be classified as unsecured or secured liabilities before reorganization and liabilities incurred after the filing date for Chapter 11.
3. Transactions directly related to the reorganization should be reported separately on the income statement in the period incurred, and disclosure should be made of any anticipated changes in common stock or common stock equivalents.
4. Cash flows related to the reorganization should be reported separately from those related to regular operations.
5. At confirmation of the plan of reorganization, an entity may be considered a new entity for reporting purposes if the reorganization value of assets before confirmation is less than liabilities incurred after petition for Chapter 11 and voting shareholders before confirmation receive less than 50% of the voting shares of the emerging entity.
6. If the entity does not qualify as a new entity, the reorganization should be accounted for as troubled debt restructuring which is discussed in Section C of Module 13.

**O. Quasi Reorganization**

The purpose of a quasi reorganization is to allow companies to avoid formal bankruptcy proceedings through an informal proceeding. The procedure is applicable for a situation where a going concern exists except for overvalued assets and a possible deficit. The overvalued assets result in high depreciation charges and losses or lower net income. The deficit precludes payment of dividends. The procedure is applicable during a period of declining price levels (normally associated with decreased economic activity), such as the 1930s.

1. The procedures involve
  - a. Proper authorization including that from stockholders and creditors where required
  - b. Revaluation of assets to current values
  - c. Elimination of any deficit by charging paid-in capital
    - (1) First, capital surplus
    - (2) Second, capital stock
2. To write down assets: here the adjustments are taken directly to retained earnings. An alternative is to use an intermediary account such as "adjustment account" which would later be closed to retained earnings.

Retained earnings  
Assets

(write-down)

*The Vann Corporation*  
**STATEMENT OF AFFAIRS**  
*December 31, year 1*

ASSETS				EQUITIES			
Book values		Estimated current values	Amount available to unsecured claims	Book values		Amount unsecured	
	(1) Assets Pledged with Fully Secured Creditors:				(1) Creditors with Priority		
\$ 6,000	Land	\$12,000			Estimated Liquidation Expenses (accounting, legal and other costs of liquidation process)		
65,000	Building	<u>41,000</u>		\$ 0			
	Less Mortgages Payable	<u>45,000</u>	\$ 8,000	6,500	Accrued Wages	\$ 8,000	
	(2) Assets Pledged with Partially Secured Creditors:				(2) Fully Secured Creditors	<u>6,500</u>	
10,000	Marketable Securities	\$12,000		45,000	Mortgages Payable	<u>\$14,500</u>	
	Notes Payable	<u>37,000</u>			(3) Partially Secured Creditors	<u>45,000</u>	
	(3) Free Assets				Notes Payable Less		
1,500	Cash	1,500			Marketable Securities		25,000
18,000	Accounts Receivable (net)	14,000		37,000			
41,000	Merchandise Inventory	22,500			(4) Unsecured Creditors Accounts Payable		
2,000	Prepaid Expenses	0					
21,000	Machinery	13,200			(5) Stockholders' Equity		30,000
10,000	Goodwill	<u>0</u>	<u>51,200</u>	100,000	Capital Stock		
				(44,000)	Retained Earnings (deficit)		
	Estimated amount available		59,200				
	Less: creditors with priority		<u>(14,500)</u>				
	Net Estimated amount available to unsecured creditors		44,700				
	(81 cents on the dollar)		44,700				
	Estimated deficiency to unsecured creditors		<u>10,300</u>				
\$ <u>174,500</u>			<u>\$55,000</u>	<u>\$ 174,500</u>			<u>\$55,000</u>

3. To eliminate the deficit

Paid-in capital	(deficit)
Retained earnings	(deficit)

4. In many cases, paid-in capital in excess of par value will be insufficient, and the par or stated value of the capital stock must be reduced to eliminate the deficit.

Existing paid-in capital	(amount on the books)
Capital stock	(total reduction in par)
Retained earnings	(deficit)
Paid-in capital from quasi reorganization	(forced figure)

- The paid-in capital arises from reducing the par or stated value from, for example, \$100 to \$50 rather than to \$59.415. The \$59.415 would come from dividing the shares outstanding into the retained earnings deficit.
- Retained earnings must be dated for ten years (less than ten years justified under exceptional circumstances) after a quasi reorganization takes place. Disclosure similar to “since quasi reorganization of June 30, 2010,” would be appropriate.

**NOW REVIEW MULTIPLE-CHOICE QUESTIONS 74 THROUGH 77**

**P. Stock Rights**

1. Generally, before additional stock is offered to the public, stock rights are issued to existing shareholders to prevent involuntary dilution of their voting rights (e.g., the preemptive privilege). The stock rights, evidenced by warrants, indicate the number and price at which the shares may be purchased. At issuance, the issuer makes only a memorandum entry. Upon exercise, the following entry is made:

Cash	(proceeds)
Common stock	(par)
Paid-in capital	(plug)

2. Information relating to stock rights outstanding must be disclosed. Detachable stock rights issued with preferred stock are treated like those on bonds (see Module 13, Section B.6.). Treatment of stock rights by recipients is discussed in Module 16, Section G.

**Q. Employee Stock Ownership Plan (ESOP)**

An employee stock ownership plan (ESOP) is a qualified stock bonus plan designed to invest primarily in qualifying employer securities, including stock and other marketable obligations.

- In some instances, the ESOP will borrow funds from a bank or other lender in order to acquire shares of the employer's stock.
  - If such an obligation of the ESOP is guaranteed by the employer (assumption by the employer of the ESOP's debt), it should be recorded as a liability in the employer's financial statements.
  - The offsetting debit to the liability should be accounted for as a reduction of shareholders' equity.
    - Shareholders' equity will increase symmetrically with the reduction of the liability as the ESOP makes payments on the debt.
  - Assets held by an ESOP should not be included in the employer's financial statements, because such assets are owned by the employees, not the employer.
  - Additionally, the employer should charge to compensation expense the amount the employer contributed or committed to be contributed to an ESOP with respect to a given year. This is done regardless of whether or not the ESOP has borrowed funds.

**NOW REVIEW MULTIPLE-CHOICE QUESTIONS 78 THROUGH 86**

**R. Ratios**

The following ratios use stockholders' equity components in their calculations:

1. **Dividend payout**—measures percentage of earnings distributed as dividends

$$\frac{\text{Dividends per share}}{\text{Earnings per share}}$$

2. **Book value of common stock** (at a point in time)—not a meaningful measure because assets are carried at historical costs

$$\frac{\text{Common stockholders' equity}}{\text{Common shares outstanding}}$$

3. **Rate of return on common stockholders' equity**—measures the return earned on the stockholders' investment in the firm

$$\frac{\text{Net income available to common stockholders}}{\text{Common stockholders' equity}}$$

4. **Debt to equity**—shows creditors the corporation's ability to sustain losses

$$\frac{\text{Total debt (all liabilities)}}{\text{Stockholders' equity}}$$

**NOW REVIEW MULTIPLE-CHOICE QUESTIONS 87 THROUGH 91**

**S. Research Component—Accounting Standards Codification**

1. Stockholders' equity includes a variety of transactions and accounts that are addressed in several places in the Codification. The Statement of Shareholder Equity is found in ASC Topic 215. Earnings per Share rules are in ASC Topic 260. Accounting rules for specific shareholder equity transactions are found in ASC Topic 505, *Equity*. ASC Topic 505 includes accounting for stock dividends and stock splits, treasury stock, and equity-based payments to nonemployees. Although share-based payments to employees and nonemployees were previously covered by one accounting standard, SFAS 123(R), the rules for share-based payments are now located in two areas of the Codification. Share-based payments to nonemployees are located in ASC Topic 505 and are referred to as equity-based payments. Share-based payments to employees are located in ASC Topic 718, *Compensation—Stock Compensation*. Notice that Topic 718 is further divided into the following subtopics:

718-20 *Awards Classified as Equity*

718-30 *Awards Classified as Liabilities*

718-40 *Employee Stock Ownership Plans*

718-50 *Employee Share Purchase Plans*

2. A list of useful keywords for research is shown below.
- a. Basic stockholders' equity definitions and issues

Appropriation retained earnings	Earned surplus	Undistributed profits
Capital stock	Retained earnings	
Capital surplus	Retained income	

## b. Stock dividends, stock splits, property dividends, treasury stock

Gains on sales treasury stock	Sales of treasury stock	Stock retirement
Nonmonetary asset transfer	Stock dividend	Stock split-up
Nonreciprocal transfer to owners	Stock purchased	Treasury stock
Recipient stock dividend	Stock retired	

## c. Earnings per share

Antidilutive effect	Convertible securities	Numerator EPS
Basic EPS	Denominator EPS	Options EPS
Contingent issuable shares	Diluted EPS	Treasury stock method
Contingently issuable shares EPS	Dilutive potential shares	Warrants EPS
Conversion rate EPS	If-converted method	Weighted-average common shares

## d. Capital structure disclosures

Dividend liquidation preferences	Per-share amounts	Redeemable stock
Information about securities	Redeemable preferred stock	

## e. Stock options, stock warrants, conversion of bonds

Black-Scholes	Grand date option	Restricted stock
Compensation cost option	Intrinsic value method	Service inception date
Compensatory plans	Measurement date option	Service period
Employee stock option	Measuring compensation	Share-based payments
Employee stock purchase plan	Noncompensatory plans	Stock-based compensation
Expected volatility	Nonvested stock options	Vested employee options
Fair value method	Option pricing model	Volatility
Fixed award	Requisite service period	

## f. Comprehensive income

Classified items income	Display of income	Reclassification adjustments
Comprehensive income	Other comprehensive income	

**T. International Financial Reporting Standards (IFRS)**

- Accounting for shareholders' equity may be influenced by the laws of a particular jurisdiction or country. Therefore, IFRS does not contain a comprehensive set of requirements for reporting shareholders' equity. Instead, IFRS provides some rules as to the minimum required disclosures. **Note that in this area, there may be vocabulary differences when describing certain components of shareholders' equity.**
  - IFRS requires disclosure of the issued share capital, retained earnings, and other components of equity. The par value and the number of authorized, issued, and outstanding shares must be disclosed.
    - If shares were issued but not fully paid (referred to as "subscribed stock" in the US and "calls" in other countries), the amount not collected is shown as a contra account in the equity section.
    - A schedule must be presented that reconciles the number of shares of stock at the beginning and end of each period.
  - Additional items that are disclosed in the shareholders' equity section are the capital contributions in excess of par (also called additional paid-in capital, or "share premium"), the revaluation reserve, reserves for other items, and retained earnings.
    - Mandatorily redeemable shares or puttable shares may not be treated as equity and should be classified as liabilities.
    - Compound financial instruments that have the features of both debt and equity must be separated into a liability component and an equity component and recognized in the appropriate section of the balance sheet.
    - Noncontrolling interest is included in the shareholders' equity section of the balance sheet.
- Preferred shares that are convertible into ordinary shares are recorded in the preferred share account. Later, if the shares are converted, the book value method is used to account for the conversion of preferred stock into common stock.
- Shares issued for services or property should be recorded at the fair value of the property or services.

- a. If the fair value of the property or services is not available, then the shares should be recorded at the fair value of the shares.
  - b. However, if convertible debt is issued, the instrument is viewed as having a debt feature and an equity feature and should be allocated accordingly.
    - (1) The amount allocated to liabilities is the fair value of the liability component, and the residual amount is allocated to equity.
4. Notes to the financial statements should describe the rights, preferences, and restrictions with respect to dividends for each class of stock, cumulative dividends in arrears, reacquired shares, and shares reserved for future issuances under options and sales contracts.
  5. Cash dividends are recorded in the same way as US GAAP. Although IFRS does not address share (stock) dividends, guidance is based on national accounting rules.
    - a. If dividends have been proposed but not declared or formally approved, such dividends must be reported in the notes to the financial statements.
    - b. In addition, information regarding dividends declared after the end of the period but prior to issuance of the financial statements should be disclosed in the notes to the financial statements.
  6. If ordinary and preferred shares are issued to investors as a unit (referred to as share units), the proceeds are allocated in proportion to the relative market values of the securities issued.
    - a. If only one security is publicly traded, that security is valued at market value, and the residual is allocated to the other security.
    - b. If the market value of neither security is known, then an appraisal value may be used.
  7. For share subscriptions, the accounting relies on the laws of the particular jurisdiction. In some instances, the subscription receivable is shown as either a current or noncurrent asset based upon the payment due date. However, in other instances, the subscription receivable is a contra account and reduces shareholders' equity.
  8. For US GAAP, donated assets are recognized at fair value and as revenue when the contribution is received. IFRS does not currently address donated assets.
  9. Treasury shares are the entity's shares that have been reacquired. There are three methods for accounting for treasury shares: cost method, par value method, and constructive retirement method.
    - a. The cost method and par method entries are the same as US GAAP.
    - b. The construction retirement method is similar to the par value method except that the par value of the reacquired shares is charged to the share account instead of the treasury stock account.
      - (1) The constructive retirement method is used when management does not intend to reissue the shares or the jurisdiction of incorporation requires that reacquired shares be retired.
  10. Share-Based Payments. IFRS accounting for share-based payments and US GAAP are similar due to the convergence project. However, some vocabulary differences exist.
    - a. IFRS has three categories for share-based payments: equity-settled, cash-settled, or a choice to settle in either cash or equity.
      - (1) Equity-settled share-based payments to **nonemployees** are valued at fair value of goods or services received if it can be measured reliably. If the fair value of goods or services cannot be measured, then the fair value of the equity instrument is used.
      - (2) Equity-settled payments to **employees** are valued at the fair value of the security. A debit is made to either an expense or an asset, and a credit is made to equity. For cash-settled, share-based payments, such as stock appreciation rights or options, a liability is measured at the fair value at the measurement date. The liability is then remeasured at every reporting date, and additional income or expense is recognized in profit or loss.

**NOW REVIEW MULTIPLE-CHOICE QUESTIONS 92 THROUGH 94****KEY TERMS**

**Basic EPS.** Measures the performance of the entity over the reporting period.

**Book value of common stock (at a point in time).** Not a meaningful measure because assets are carried at historical costs.

**Callable.** The corporation has the option to repurchase the preferred stock at a specified price.

**Convertible.** Preferred stockholders have an option of exchanging their stock for common stock at a specified ratio.

**Cost method.** Treasury stock is debited for the cost of treasury stock.
