**Cumulative.** Dividends not paid in any year (dividends in arrears) must be made up before distributions can be made to common stockholders.

**Debt to equity.** Shows creditors the corporation's ability to sustain losses.

**Diluted EPS.** Measures the performance of the entity over the reporting period (same as basic EPS) while also taking into account the effect of all dilutive potential common shares that were outstanding during the period.

**Dividend payout.** Measures percentage of earnings distributed as dividends.

**Employee Stock Ownership Plan (ESOP).** A qualified stock bonus plan designed to invest primarily in qualifying employer securities, including stock and other marketable obligations.

**Intrinsic value.** The difference between the market value of the stock and the price the employee must pay.

**Liquidating dividends (dividends based on other than earnings).** A return of capital to stockholders.

**Par value method.** All capital balances associated with the treasury shares are removed upon acquisition.

**Participating.** Share with common stockholders in dividend distributions after both preferred and common stockholders receive a specified level of dividend payment.

**Preferred stock.** Stock with preferential rights.

**Property dividends.** Dividends payable in an asset other than cash; the entries are similar to those of cash dividend.

**Quasi reorganization.** Allows companies to avoid formal bankruptcy proceedings through an informal proceeding.

**Rate of return on common stockholders' equity.** Measures the return earned on the stockholders' investment in the firm.

**Scrip dividends.** Issuance of promises to pay dividends in the future (may bear interest) instead of cash.

**Share-based payments.** Transactions wherein an entity acquires goods or services by issuing shares (stock), share options, or other equity instruments.

**Stock appreciation rights (SAR).** Allows employees to receive stock or cash equal in amount to the difference between the market value and some predetermined amount per share for a certain number of shares.

**Stock splits.** Change the number of shares outstanding and the par value per share.

**Treasury stock.** A firm's own stock repurchased on the open market.

## Multiple-Choice Questions (1–94)

### A. Common Stock

1. East Co. issued 1,000 shares of its \$5 par common stock to Howe as compensation for 1,000 hours of legal services performed. Howe usually bills \$160 per hour for legal services. On the date of issuance, the stock was trading on a public exchange at \$140 per share. By what amount should the additional paid-in capital account increase as a result of this transaction?
- \$135,000
  - \$140,000
  - \$155,000
  - \$160,000
2. On July 1, year 1, Cove Corp., a closely held corporation, issued 6% bonds with a maturity value of \$60,000, together with 1,000 shares of its \$5 par value common stock, for a combined cash amount of \$110,000. The market value of Cove's stock cannot be ascertained. If the bonds were issued separately, they would have sold for \$40,000 on an 8% yield to maturity basis. What amount should Cove report for additional paid-in capital on the issuance of the stock?
- \$75,000
  - \$65,000
  - \$55,000
  - \$45,000
3. Beck Corp. issued 200,000 shares of common stock when it began operations in year 1 and issued an additional 100,000 shares in year 2. Beck also issued preferred stock convertible to 100,000 shares of common stock. In year 3, Beck purchased 75,000 shares of its common stock and held it in Treasury. At December 31, year 3, how many shares of Beck's common stock were outstanding?
- 400,000
  - 325,000
  - 300,000
  - 225,000
4. A corporation was organized in January year 1 with authorized capital of \$10 par value common stock. On February 1, year 1, shares were issued at par for cash. On March 1, year 1, the corporation's attorney accepted 5,000 shares of the common stock in settlement for legal services with a fair value of \$60,000. Additional paid-in capital would increase on
- |    | February 1, year 1 | March 1, year 1 |
|----|--------------------|-----------------|
| a. | Yes                | No              |
| b. | Yes                | Yes             |
| c. | No                 | No              |
| d. | No                 | Yes             |
5. On April 1, year 1, Hyde Corp., a newly formed company, had the following stock issued and outstanding:
- Common stock, no par, \$1 stated value, 20,000 shares originally issued for \$30 per share.
  - Preferred stock, \$10 par value, 6,000 shares originally issued for \$50 per share.
- Hyde's April 1, year 1 statement of stockholders' equity should report
- |    | Common stock | Preferred stock | Additional paid-in capital |
|----|--------------|-----------------|----------------------------|
| a. | \$20,000     | \$60,000        | \$820,000                  |
| b. | \$20,000     | \$300,000       | \$580,000                  |
| c. | \$600,000    | \$300,000       | \$0                        |
| d. | \$600,000    | \$60,000        | \$240,000                  |
6. On March 1, year 1, Rya Corp. issued 1,000 shares of its \$20 par value common stock and 2,000 shares of its \$20 par value convertible preferred stock for a total of \$80,000. At this date, Rya's common stock was selling for \$36 per share, and the convertible preferred stock was selling for \$27 per share. What amount of the proceeds should be allocated to Rya's convertible preferred stock?
- \$60,000
  - \$54,000
  - \$48,000
  - \$44,000
7. During year 1, Brad Co. issued 5,000 shares of \$100 par convertible preferred stock for \$110 per share. One share of preferred stock can be converted into three shares of Brad's \$25 par common stock at the option of the preferred shareholder. On December 31, year 3, when the market value of the common stock was \$40 per share, all of the preferred stock was converted. What amount should Brad credit to Common Stock and to Additional Paid-in Capital—Common Stock as a result of the conversion?
- |    | Common stock | Additional paid-in capital |
|----|--------------|----------------------------|
| a. | \$375,000    | \$175,000                  |
| b. | \$375,000    | \$225,000                  |
| c. | \$500,000    | \$50,000                   |
| d. | \$600,000    | \$0                        |
8. Quoit, Inc. issued preferred stock with detachable common stock warrants. The issue price exceeded the sum of the warrants' fair value and the preferred stock's par value. The preferred stock's fair value was not determinable. What amount should be assigned to the warrants outstanding?
- Total proceeds.
  - Excess of proceeds over the par value of the preferred stock.
  - The proportion of the proceeds that the warrants' fair value bears to the preferred stock's par value.
  - The fair value of the warrants.
9. Blue Co. issued preferred stock with detachable common stock warrants at a price that exceeded both the par value and the market value of the preferred stock. At the time the

### B. Preferred Stock

warrants are exercised, Blue's total stockholders' equity is increased by the

	Cash received upon exercise of the warrants	Carrying amount of warrants
a.	Yes	No
b.	Yes	Yes
c.	No	No
d.	No	Yes

**C. Stock Subscriptions**

10. When collectibility is reasonably assured, the excess of the subscription price over the stated value of the no par common stock subscribed should be recorded as

- a. No par common stock.
- b. Additional paid-in capital when the subscription is recorded.
- c. Additional paid-in capital when the subscription is collected.
- d. Additional paid-in capital when the common stock is issued.

11. On December 1, year 1, shares of authorized common stock were issued on a subscription basis at a price in excess of par value. A total of 20% of the subscription price of each share was collected as a down payment on December 1, year 1, with the remaining 80% of the subscription price of each share due in year 2. Collectibility was reasonably assured. At December 31, year 1, the stockholders' equity section of the balance sheet would report additional paid-in capital for the excess of the subscription price over the par value of the shares of common stock subscribed and

- a. Common stock issued for 20% of the par value of the shares of common stock subscribed.
- b. Common stock issued for the par value of the shares of common stock subscribed.
- c. Common stock subscribed for 80% of the par value of the shares of common stock subscribed.
- d. Common stock subscribed for the par value of the shares of common stock subscribed.

**D. Treasury Stock Transactions**

12. In year 1, Seda Corp. acquired 6,000 shares of its \$1 par value common stock at \$36 per share. During year 2, Seda issued 3,000 of these shares at \$50 per share. Seda uses the cost method to account for its treasury stock transactions. What accounts and amounts should Seda credit in year 2 to record the issuance of the 3,000 shares?

	Treasury stock	Additional paid-in capital	Retained earnings	Common stock
a.		\$102,000	\$42,000	\$6,000
b.		\$144,000		\$6,000
c.	\$108,000	\$ 42,000		
d.	\$108,000		\$42,000	

13. At December 31, year 1, Rama Corp. had 20,000 shares of \$1 par value treasury stock that had been acquired in year 1 at \$12 per share. In May year 2, Rama issued 15,000 of these treasury shares at \$10 per share. The cost method is used to record treasury stock transactions. Rama is located in a state where laws relating to acquisition of treasury stock restrict the availability of retained earnings for declaration of dividends. At December 31, year 2, what amount should Rama show in notes to financial statements as a restriction of retained earnings as a result of its treasury stock transactions?

- a. \$5,000
- b. \$10,000
- c. \$60,000
- d. \$90,000

14. United, Inc.'s unadjusted current assets section and stockholders' equity section of its December 31, year 1 balance sheet are as follows:

<i>Current assets</i>	
Cash	\$ 60,000
Investments in trading securities (including \$300,000 of United, Inc. common stock)	400,000
Trade accounts receivable	340,000
Inventories	<u>148,000</u>
Total	<u>\$ 948,000</u>
<i>Stockholders' equity</i>	
Common stock	\$2,224,000
Retained earnings (deficit)	<u>(224,000)</u>
Total	<u>\$2,000,000</u>

The investments and inventories are reported at their costs, which approximate market values. In its year 1 statement of stockholders' equity, United's total amount of equity at December 31, year 1, is

- a. \$2,224,000
- b. \$2,000,000
- c. \$1,924,000
- d. \$1,700,000

15. Cyan Corp. issued 20,000 shares of \$5 par common stock at \$10 per share. On December 31, year 1, Cyan's retained earnings were \$300,000. In March year 2, Cyan reacquired 5,000 shares of its common stock at \$20 per share. In June year 2, Cyan sold 1,000 of these shares to its corporate officers for \$25 per share. Cyan uses the cost method to record treasury stock. Net income for the year ended December 31, year 2, was \$60,000. At December 31, year 2, what amount should Cyan report as retained earnings?

- a. \$360,000
- b. \$365,000
- c. \$375,000
- d. \$380,000

16. Victor Corporation was organized on January 2, year 1, with 100,000 authorized shares of \$10 par value common stock. During year 1 Victor had the following capital transactions:

January 5—issued 75,000 shares at \$14 per share.  
December 27—purchased 5,000 shares at \$11 per share.

Victor used the par value method to record the purchase of the treasury shares. What would be the balance in the paid-in capital from treasury stock account at December 31, year 1?

- \$0
- \$5,000
- \$15,000
- \$20,000

17. On incorporation, Dee Inc. issued common stock at a price in excess of its par value. No other stock transactions occurred except treasury stock was acquired for an amount exceeding this issue price. If Dee uses the par value method of accounting for treasury stock appropriate for retired stock, what is the effect of the acquisition on the following?

	Net common stock	Additional paid-in capital	Retained earnings
a.	No effect	Decrease	No effect
b.	Decrease	Decrease	Decrease
c.	Decrease	No effect	Decrease
d.	No effect	Decrease	Decrease

18. Posy Corp. acquired treasury shares at an amount greater than their par value, but less than their original issue price. Compared to the cost method of accounting for treasury stock, does the par value method report a greater amount for additional paid-in capital and a greater amount for retained earnings?

	Additional paid-in capital	Retained earnings
a.	Yes	Yes
b.	Yes	No
c.	No	No
d.	No	Yes

### E. Retirement of Stock

19. In year 1, Rona Corp. issued 5,000 shares of \$10 par value common stock for \$100 per share. In year 3, Rona reacquired 2,000 of its shares at \$150 per share from the estate of one of its deceased officers and immediately canceled these 2,000 shares. Rona uses the cost method in accounting for its treasury stock transactions. In connection with the retirement of these 2,000 shares, Rona should debit

	Additional paid-in capital	Retained earnings
a.	\$20,000	\$280,000
b.	\$100,000	\$180,000
c.	\$180,000	\$100,000
d.	\$280,000	\$0

20. The following accounts were among those reported on Luna Corp.'s balance sheet at December 31, year 1:

Available-for-sale securities (market value \$140,000)	\$ 80,000
Preferred stock, \$20 par value, 20,000 shares issued and outstanding	400,000
Additional paid-in capital on preferred stock	30,000
Retained earnings	900,000

On January 20, year 2, Luna exchanged all of the available-for-sale securities for 5,000 shares of Luna's preferred stock. Market values at the date of the exchange were \$150,000 for the available-for-sale securities and \$30 per share for the preferred stock. The 5,000 shares of preferred stock were retired immediately after the exchange. Which of the following journal entries should Luna record in connection with this transaction?

	Debit	Credit
a. Preferred stock	100,000	
Additional paid-in capital on preferred stock	7,500	
Retained earnings	42,500	
Available-for-sale securities		80,000
Gain on exchange of securities		70,000
b. Preferred stock	100,000	
Additional paid-in capital on preferred stock	30,000	
Available-for-sale securities		80,000
Additional paid-in capital from retirement of preferred stock		50,000
c. Preferred stock	150,000	
Available-for-sale securities		80,000
Additional paid-in capital on preferred stock		70,000
d. Preferred stock	150,000	
Available-for-sale securities		80,000
Gain on exchange of securities		70,000

21. On December 31, year 1, Pack Corp.'s board of directors canceled 50,000 shares of \$2.50 par value common stock held in treasury at an average cost of \$13 per share. Before recording the cancellation of the treasury stock, Pack had the following balances in its stockholders' equity accounts:

Common stock	\$540,000
Additional paid-in capital	750,000
Retained earnings	900,000
Treasury stock, at cost	650,000

In its balance sheet at December 31, year 1, Pack should report a common stock balance of

- \$0
- \$250,000

- c. \$415,000
- d. \$540,000

**22.** In year 1, Fogg, Inc. issued \$10 par value common stock for \$25 per share. No other common stock transactions occurred until March 31, year 3, when Fogg acquired some of the issued shares for \$20 per share and retired them. Which of the following statements correctly states an effect of this acquisition and retirement?

- a. Year 3 net income is decreased.
- b. Year 3 net income is increased.
- c. Additional paid-in capital is decreased.
- d. Retained earnings is increased.

### F. Dividends

**23.** Plack Co. purchased 10,000 shares (2% ownership) of Ty Corp. on February 14, year 1. Plack received a stock dividend of 2,000 shares on April 30, year 1, when the market value per share was \$35. Ty paid a cash dividend of \$2 per share on December 15, year 1. In its year 1 income statement, what amount should Plack report as dividend income?

- a. \$20,000
- b. \$24,000
- c. \$90,000
- d. \$94,000

**24.** Arp Corp.'s outstanding capital stock at December 15, year 1, consisted of the following:

- 30,000 shares of 5% cumulative preferred stock, par value \$10 per share, fully participating as to dividends. No dividends were in arrears.
- 200,000 shares of common stock, par value \$1 per share.

On December 15, year 1, Arp declared dividends of \$100,000. What was the amount of dividends payable to Arp's common stockholders?

- a. \$10,000
- b. \$34,000
- c. \$40,000
- d. \$47,500

**25.** At December 31, year 2 and year 3, Apex Co. had 3,000 shares of \$100 par, 5% cumulative preferred stock outstanding. No dividends were in arrears as of December 31, year 1. Apex did not declare a dividend during year 2. During year 3, Apex paid a cash dividend of \$10,000 on its preferred stock. Apex should report dividends in arrears in its year 3 financial statements as a(n)

- a. Accrued liability of \$15,000.
- b. Disclosure of \$15,000.
- c. Accrued liability of \$20,000.
- d. Disclosure of \$20,000.

**26.** East Corp., a calendar-year company, had sufficient retained earnings in year 1 as a basis for dividends, but was temporarily short of cash. East declared a dividend of \$100,000 on April 1, year 1, and issued promissory notes to its stockholders in lieu of cash. The notes, which were dated

April 1, year 1, had a maturity date of March 31, year 2, and a 10% interest rate. How should East account for the scrip dividend and related interest?

- a. Debit retained earnings for \$110,000 on April 1, year 1.
- b. Debit retained earnings for \$110,000 on March 31, year 2.
- c. Debit retained earnings for \$100,000 on April 1, year 1, and debit interest expense for \$10,000 on March 31, year 2.
- d. Debit retained earnings for \$100,000 on April 1, year 1, and debit interest expense for \$7,500 on December 31, year 1.

**27.** On January 2, year 2, Lake Mining Co.'s board of directors declared a cash dividend of \$400,000 to stockholders of record on January 18, year 2, payable on February 10, year 2. The dividend is permissible under law in Lake's state of incorporation. Selected data from Lake's December 31, year 1 balance sheet are as follows:

Accumulated depletion	\$100,000
Capital stock	500,000
Additional paid-in capital	150,000
Retained earnings	300,000

The \$400,000 dividend includes a liquidating dividend of

- a. \$0
- b. \$100,000
- c. \$150,000
- d. \$300,000

**28.** On June 27, year 1, Brite Co. distributed to its common stockholders 100,000 outstanding common shares of its investment in Quik, Inc., an unrelated party. The carrying amount on Brite's books of Quik's \$1 par common stock was \$2 per share. Immediately after the distribution, the market price of Quik's stock was \$2.50 per share. In its income statement for the year ended June 30, year 1, what amount should Brite report as gain before income taxes on disposal of the stock?

- a. \$250,000
- b. \$200,000
- c. \$50,000
- d. \$0

**29.** On December 1, year 1, Nilo Corp. declared a property dividend of marketable securities to be distributed on December 31, year 1, to stockholders of record on December 15, year 1. On December 1, year 1, the trading securities had a carrying amount of \$60,000 and a fair value of \$78,000. What is the effect of this property dividend on Nilo's year 1 retained earnings, after all nominal accounts are closed?

- a. \$0.
- b. \$18,000 increase.
- c. \$60,000 decrease.
- d. \$78,000 decrease.

30. Long Co. had 100,000 shares of common stock issued and outstanding at January 1, year 1. During year 1, Long took the following actions:

March 15	—	Declared a 2-for-1 stock split, when the fair value of the stock was \$80 per share.
December 15	—	Declared a \$.50 per share cash dividend.

In Long's statement of stockholders' equity for year 1, what amount should Long report as dividends?

- a. \$50,000
- b. \$100,000
- c. \$850,000
- d. \$950,000

31. A company declared a cash dividend on its common stock on December 15, year 1, payable on January 12, year 2. How would this dividend affect stockholders' equity on the following dates?

	December 15, Year 1	December 31, Year 1	January 12, Year 2
a.	Decrease	No effect	Decrease
b.	Decrease	No effect	No effect
c.	No effect	Decrease	No effect
d.	No effect	No effect	Decrease

32. Ole Corp. declared and paid a liquidating dividend of \$100,000. This distribution resulted in a decrease in Ole's

	Paid-in capital	Retained earnings
a.	No	No
b.	Yes	Yes
c.	No	Yes
d.	Yes	No

33. Instead of the usual cash dividend, Evie Corp. declared and distributed a property dividend from its overstocked merchandise. The excess of the merchandise's carrying amount over its market value should be

- a. Ignored.
- b. Reported as a separately disclosed reduction of retained earnings.
- c. Reported as an extraordinary loss, net of income taxes.
- d. Reported as a reduction in income before extraordinary items.

34. The following stock dividends were declared and distributed by Sol Corp.:

Percentage of common share outstanding at declaration date	Fair value	Par value
10	\$15,000	\$10,000
28	40,000	30,800

What aggregate amount should be debited to retained earnings for these stock dividends?

- a. \$40,800
- b. \$45,800

- c. \$50,000
- d. \$55,000

35. Ray Corp. declared a 5% stock dividend on its 10,000 issued and outstanding shares of \$2 par value common stock, which had a fair value of \$5 per share before the stock dividend was declared. This stock dividend was distributed sixty days after the declaration date. By what amount did Ray's current liabilities increase as a result of the stock dividend declaration?

- a. \$0
- b. \$500
- c. \$1,000
- d. \$2,500

### G. Stock Splits

36. How would total stockholders' equity be affected by the declaration of each of the following?

	Stock dividend	Stock split
a.	No effect	Increase
b.	Decrease	Decrease
c.	Decrease	No effect
d.	No effect	No effect

37. On July 1, year 1, Bart Corporation has 200,000 shares of \$10 par common stock outstanding and the market price of the stock is \$12 per share. On the same date, Bart declared a 1-for-2 reverse stock split. The par of the stock was increased from \$10 to \$20 and one new \$20 par share was issued for each two \$10 par shares outstanding. Immediately before the 1-for-2 reverse stock split, Bart's additional paid-in capital was \$450,000. What should be the balance in Bart's additional paid-in capital account immediately after the reverse stock split is effected?

- a. \$0
- b. \$450,000
- c. \$650,000
- d. \$850,000

38. How would a stock split in which the par value per share decreases in proportion to the number of additional shares issued affect each of the following?

	Additional paid-in capital	Retained earnings
a.	Increase	No effect
b.	No effect	No effect
c.	No effect	Decrease
d.	Increase	Decrease

### H. Appropriations of Retained Earnings (Reserves)

39. At December 31, year 1, Eagle Corp. reported \$1,750,000 of appropriated retained earnings for the construction of a new office building, which was completed in year 2 at a total cost of \$1,500,000. In year 2, Eagle appropriated \$1,200,000 of retained earnings for the construction of a new plant. Also,

\$2,000,000 of cash was restricted for the retirement of bonds due in year 3. In its year 2 balance sheet, Eagle should report what amount of appropriated retained earnings?

- a. \$1,200,000
- b. \$1,450,000
- c. \$2,950,000
- d. \$3,200,000

40. The following information pertains to Meg Corp.:

- Dividends on its 1,000 shares of 6%, \$10 par value cumulative preferred stock have not been declared or paid for three years.
- Treasury stock that cost \$15,000 was reissued for \$8,000.

What amount of retained earnings should be appropriated as a result of these items?

- a. \$0
- b. \$1,800
- c. \$7,000
- d. \$8,800

41. A retained earnings appropriation can be used to

- a. Absorb a fire loss when a company is self-insured.
- b. Provide for a contingent loss that is probable and reasonably estimable.
- c. Smooth periodic income.
- d. Restrict earnings available for dividends.

### I. Share-Based Payments

42. On January 1, year 1, Doro Corp. granted an employee an option to purchase 3,000 shares of Doro's \$5 par value common stock at \$20 per share. The option became exercisable on December 31, year 2, after the employee completed two years of service. The option was exercised on January 10, year 3. The market prices of Doro's stock and stock options were as follows:

Date	Market price of stock	Market price of similar stock option
January 1, year 1	\$30	\$8
December 31, year 2	50	9
January 10, year 3	45	11

For year 1, Doro should recognize compensation expense of

- a. \$45,000
- b. \$30,000
- c. \$15,000
- d. \$12,000

43. In connection with a stock option plan for the benefit of key employees, Ward Corp. intends to distribute treasury shares when the options are exercised. These shares were bought in year 1 at \$42 per share. On January 1, year 2, Ward granted stock options for 10,000 shares at \$38 per share as additional compensation for services to be rendered over the

next three years. The options are exercisable during a four-year period beginning January 1, year 5, by grantees still employed by Ward. Market price of Ward's stock was \$47 per share at the grant date. The fair value of a similar stock option with the same terms was \$12 at the grant date. No stock options were terminated during year 2. In Ward's December 31, year 2 income statement, what amount should be reported as compensation expense pertaining to the options?

- a. \$90,000
- b. \$40,000
- c. \$30,000
- d. \$0

Items 44 and 45 are based on the following:

On January 2, year 1, Kine Co. granted Morgan, its president, compensatory stock options to buy 1,000 shares of Kine's \$10 par common stock. The options call for a price of \$20 per share and are exercisable for three years following the grant date. Morgan exercised the options on December 31, year 1. The market price of the stock was \$50 on January 2, year 1, and \$70 on December 31, year 1. The fair value of a similar stock option with the same terms was \$28 on the grant date.

44. What is compensation expense for year 1 for the share-based payments?

- a. \$9,333
- b. \$10,000
- c. \$20,000
- d. \$28,000

45. By what net amount should stockholders' equity increase as a result of the grant and exercise of the options?

- a. \$20,000
- b. \$30,000
- c. \$50,000
- d. \$70,000

46. On January 2, year 1, Morey Corp. granted Dean, its president, 20,000 stock appreciation rights for past services. Those rights are exercisable immediately and expire on January 1, year 4. On exercise, Dean is entitled to receive cash for the excess of the stock's market price on the exercise date over the market price on the grant date. Dean did not exercise any of the rights during year 1. The market price of Morey's stock was \$30 on January 2, year 1, and \$45 on December 31, year 1. As a result of the stock appreciation rights, Morey should recognize compensation expense for year 1 of

- a. \$0
- b. \$100,000
- c. \$300,000
- d. \$600,000

47. Wall Corp.'s employee stock purchase plan specifies the following:

- For every \$1 withheld from employees' wages for the purchase of Wall's common stock, Wall contributes \$2.
- The stock is purchased from Wall's treasury stock at market price on the date of purchase.

The following information pertains to the plan's year 1 transactions:

Employee withholdings for the year	\$ 350,000
Market value of 150,000 shares issued	1,050,000
Carrying amount of treasury stock issued (cost)	900,000

Before payroll taxes, what amount should Wall recognize as expense in year 1 for the stock purchase plan?

- \$1,050,000
- \$900,000
- \$700,000
- \$550,000

48. In accounting for stock-based compensation, what interest rate is used to discount both the exercise price of the option and the future dividend stream?

- The firm's known incremental borrowing rate.
- The current market rate that firms in that particular industry use to discount cash flows.
- The risk-free interest rate.
- Any rate that firms can justify as being reasonable.

49. In what circumstances is compensation expense immediately recognized?

- In all circumstances.
- In circumstances when the options are exercisable within two years for services rendered over the next two years.
- In circumstances when options are granted for prior service, and the options are immediately exercisable.
- In no circumstances is compensation expense immediately recognized.

50. Compensation cost for a share-based payment to employees that is classified as a liability is measured as

- The change in fair value of the instrument for each reporting period.
- The total fair value at grant date.
- The present value of cash payments due over the life of the grant.
- The actual cash outlay for the period.

51. What is the measurement date for a share-based payment to employees that is classified as a liability?

- The service inception date.
- The grant date.
- The settlement date.
- The end of the reporting period.

52. Shafer Corporation (a nonpublic company) established an employee stock option plan on January 1, year 1. The plan allows its employees to acquire 20,000 shares of its \$5 par value common stock at \$70 per share, when the market price is \$75. The options may not be exercised until five years from the grant date. The risk-free interest rate is 6%, and the stock is expected to pay dividends of \$3 annually. The fair value of a similar option at the grant date is \$6.40. What is the amount of deferred compensation expense that should be recorded in year one?

- \$20,000
- \$25,000
- \$100,000
- \$128,000

53. Galaxy has a tax benefit and cash retained of \$20,000 as a result of share-based payments to employees. How is this tax benefit disclosed in the financial statements?

- As a component of other comprehensive income.
- As a prior period adjustment.
- As a current liability on the balance sheet.
- As a cash inflow from financing activities on the statement of cash flows.

54. On July 1, year 1, Jordan Corp. granted employees share-based payments in the form of compensatory stock options. How should Jordan account for the outstanding options in calculating earnings per share for year 1 if the options are **not** antidilutive?

- Include the options in the denominator of basic and diluted earnings per share for the entire year.
- Include the options in the denominator of diluted earnings per share weighted by number of months outstanding.
- Include the options in the denominator of diluted earnings per share weighted by number of months outstanding.
- Ignore the options in the calculation of diluted earnings per share.

### K. Basic Earnings Per Share

55. At December 31, year 2 and year 1, Gow Corp. had 100,000 shares of common stock and 10,000 shares of 5%, \$100 par value cumulative preferred stock outstanding. No dividends were declared on either the preferred or common stock in year 2 or year 1. Net income for year 2 was \$1,000,000. For year 2, basic earnings per share amounted to

- \$10.00
- \$9.50
- \$9.00
- \$5.00

56. Ute Co. had the following capital structure during year 1 and year 2:

Preferred stock, \$10 par, 4% cumulative, 25,000 shares issued and outstanding	\$ 250,000
Common stock, \$5 par, 200,000 shares issued and outstanding	1,000,000

Ute reported net income of \$500,000 for the year ended December 31, year 2. Ute paid no preferred dividends during year 1 and paid \$16,000 in preferred dividends during year 2. In its December 31, year 2 income statement, what amount should Ute report as basic earnings per share?

- \$2.42
- \$2.45
- \$2.48
- \$2.50

57. The following information pertains to Jet Corp.'s outstanding stock for year 1:

<b>Common stock, \$5 par value</b>	
Shares outstanding, 1/1/Y1	20,000
2-for-1 stock split, 4/1/Y1	20,000
Shares issued, 7/1/Y1	10,000
<b>Preferred stock, \$10 par value, 5% cumulative</b>	
Shares outstanding, 1/1/Y1	4,000

What are the number of shares Jet should use to calculate year 1 basic earnings per share?

- a. 40,000
- b. 45,000
- c. 50,000
- d. 54,000

58. Timp, Inc. had the following common stock balances and transactions during year 1

1/1/Y1	Common stock outstanding	30,000
2/1/Y1	Issued a 10% common stock dividend	3,000
7/1/Y1	Issued common stock for cash	<u>8,000</u>
12/31/Y1	Common stock outstanding	<u>41,000</u>

What were Timp's year 1 weighted-average shares outstanding?

- a. 30,000
- b. 34,000
- c. 36,750
- d. 37,000

59. Strauch Co. has one class of common stock outstanding and no other securities that are potentially convertible into common stock. During year 1, 100,000 shares of common stock were outstanding. In year 2, two distributions of additional common shares occurred: On April 1, 20,000 shares of treasury stock were sold, and on July 1, a 2-for-1 stock split was issued. Net income was \$410,000 in year 2 and \$350,000 in year 1. What amounts should Strauch report as basic earnings per share in its year 2 and year 1 comparative income statements?

	Year 2	Year 1
a.	\$1.78	\$3.50
b.	\$1.78	\$1.75
c.	\$2.34	\$1.75
d.	\$2.34	\$3.50

60. Earnings per share data must be reported on the income statement for

	Cumulative effect of a change in accounting principle	Extraordinary items
a.	Yes	No
b.	No	No
c.	No	Yes
d.	Yes	Yes

61. On January 31, year 2, Pack, Inc. split its common stock 2 for 1, and Young, Inc. issued a 5% stock dividend. Both companies issued their December 31, year 1 financial statements on March 1, year 2. Should Pack's year 1, basic earnings per share (BEPS) take into consideration the stock split, and should Young's year 1 BEPS take into consideration the stock dividend?

	Pack's year 1 BEPS	Young's year 1 BEPS
a.	Yes	No
b.	No	No
c.	Yes	Yes
d.	No	Yes

**L. Diluted Earnings Per Share**

62. Mann, Inc. had 300,000 shares of common stock issued and outstanding at December 31, year 1. On July 1, year 2, an additional 50,000 shares of common stock were issued for cash. Mann also had unexercised stock options to purchase 40,000 shares of common stock at \$15 per share outstanding at the beginning and end of year 2. The average market price of Mann's common stock was \$20 during year 2. What is the number of shares that should be used in computing diluted earnings per share for the year ended December 31, year 2?

- a. 325,000
- b. 335,000
- c. 360,000
- d. 365,000

63. Peters Corp.'s capital structure was as follows:

	December 31	
	Year 1	Year 2
Outstanding shares of stock:		
Common	110,000	110,000
Convertible preferred	10,000	10,000

During year 2, Peters paid dividends of \$3.00 per share on its preferred stock. The preferred shares are convertible into 20,000 shares of common stock and are considered common stock equivalents. Net income for year 2 was \$850,000. Assume that the income tax rate is 30%. The diluted earnings per share for year 2 is

- a. \$6.31
- b. \$6.54
- c. \$7.08
- d. \$7.45

64. Cox Corporation had 1,200,000 shares of common stock outstanding on January 1 and December 31, year 2. In connection with the acquisition of a subsidiary company in June year 1, Cox is required to issue 50,000 additional shares of its common stock on July 1, year 3, to the former owners of the subsidiary. Cox paid \$200,000 in preferred stock dividends in year 2, and reported net income of \$3,400,000 for the year. Cox's diluted earnings per share for year 2 should be

- a. \$2.83
- b. \$2.72

- c. \$2.67  
d. \$2.56

65. On June 30, year 1, Lomond, Inc. issued twenty \$10,000, 7% bonds at par. Each bond was convertible into 200 shares of common stock. On January 1, year 2, 10,000 shares of common stock were outstanding. The bondholders converted all the bonds on July 1, year 2. The following amounts were reported in Lomond's income statement for the year ended December 31, year 2:

Revenues	\$977,000
Operating expenses	920,000
Interest on bonds	<u>7,000</u>
Income before income tax	<u>50,000</u>
Income tax at 30%	<u>15,000</u>
Net income	<u>\$ 35,000</u>

What is Lomond's year 2 diluted earnings per share?

- a. \$2.50  
b. \$2.85  
c. \$2.92  
d. \$3.50

66. West Co. had earnings per share of \$15.00 for year 1 before considering the effects of any convertible securities. No conversion or exercise of convertible securities occurred during year 1. However, possible conversion of convertible bonds, not considered common stock equivalents, would have reduced earnings per share by \$0.75. The effect of possible exercise of common stock options would have increased earnings per share by \$0.10. What amount should West report as diluted earnings per share for year 1?

- a. \$14.25  
b. \$14.35  
c. \$15.00  
d. \$15.10

67. In determining diluted earnings per share, dividends on nonconvertible cumulative preferred stock should be

- a. Disregarded.  
b. Added back to net income whether declared or not.  
c. Deducted from net income only if declared.  
d. Deducted from net income whether declared or not.

68. The if-converted method of computing earnings per share data assumes conversion of convertible securities as of the

- a. Beginning of the earliest period reported (or at time of issuance, if later).  
b. Beginning of the earliest period reported (regardless of time of issuance).  
c. Middle of the earliest period reported (regardless of time of issuance).  
d. Ending of the earliest period reported (regardless of time of issuance).

69. In determining earnings per share, interest expense, net of applicable income taxes, on convertible debt that is dilutive should be

- a. Added back to weighted-average common shares outstanding for diluted earnings per share.  
b. Added back to net income for diluted earnings per share.  
c. Deducted from net income for diluted earnings per share.  
d. Deducted from weighted-average common shares outstanding for diluted earnings per share.

70. For contingent issue agreements requiring passage of time or earnings threshold that is met, before issuing stock, these should be

	Included in basic earnings per share	Included in computing diluted earnings per share
a.	No	No
b.	No	Yes
c.	Yes	No
d.	Yes	Yes

### M. Corporate Bankruptcy

71. Kent Co. filed a voluntary bankruptcy petition on August 15, year 1, and the statement of affairs reflects the following amounts:

	Book value	Estimated current value
<b>Assets</b>		
Assets pledged with fully secured creditors	\$ 300,000	\$370,000
Assets pledged with partially secured creditors	180,000	120,000
Free assets	<u>420,000</u>	<u>320,000</u>
	<u>\$ 900,000</u>	<u>\$810,000</u>
<b>Liabilities</b>		
Liabilities with priority	\$ 70,000	
Fully secured creditors	260,000	
Partially secured creditors	200,000	
Unsecured creditors	<u>540,000</u>	
	<u>\$1,070,000</u>	

Assume that the assets are converted to cash at the estimated current values and the business is liquidated. What amount of cash will be available to pay unsecured nonpriority claims?

- a. \$240,000  
b. \$280,000  
c. \$320,000  
d. \$360,000

72. Seco Corp. was forced into bankruptcy and is in the process of liquidating assets and paying claims. Unsecured claims will be paid at the rate of 40 cents on the dollar. Hale holds a \$30,000 noninterest-bearing note receivable from Seco

collateralized by an asset with a book value of \$35,000 and a liquidation value of \$5,000. The amount to be realized by Hale on this note is

- \$5,000
- \$12,000
- \$15,000
- \$17,000

**73.** Kamy Corp. is in liquidation under of the Federal Bankruptcy Code. The bankruptcy trustee has established a new set of books for the bankruptcy estate. After assuming custody of the estate, the trustee discovered an unrecorded invoice of \$1,000 for machinery repairs performed before the bankruptcy filing. In addition, a truck with a carrying amount of \$20,000 was sold for \$12,000 cash. This truck was bought and paid for in the year before the bankruptcy. What amount should be debited to estate equity as a result of these transactions?

- \$0
- \$1,000
- \$8,000
- \$9,000

### N. Reorganizations

**74.** On December 30, year 1, Hale Corp. paid \$400,000 cash and issued 80,000 shares of its \$1 par value common stock to its unsecured creditors on a pro rata basis pursuant to a reorganization plan under Chapter 11 of the bankruptcy statutes. Hale owed these unsecured creditors a total of \$1,200,000. Hale's common stock was trading at \$1.25 per share on December 30, year 1. As a result of this transaction, Hale's total stockholders' equity had a net increase of

- \$1,200,000
- \$800,000
- \$100,000
- \$80,000

### O. Quasi Reorganization

**75.** The **primary** purpose of a quasi reorganization is to give a corporation the opportunity to

- Obtain relief from its creditors.
- Revalue understated assets to their fair values.
- Eliminate a deficit in retained earnings.
- Distribute the stock of a newly created subsidiary to its stockholders in exchange for part of their stock in the corporation.

**76.** When a company goes through a quasi reorganization, its balance sheet carrying amounts are stated at

- Original cost.
- Original book value.
- Replacement value.
- Fair value.

**77.** The stockholders' equity section of Brown Co.'s December 31, year 1 balance sheet consisted of the following:

Common stock, \$30 par, 10,000 shares	
authorized and outstanding	\$300,000
Additional paid-in capital	150,000
Retained earnings (deficit)	(210,000)

On January 2, year 2, Brown put into effect a stockholder-approved quasi reorganization by reducing the par value of the stock to \$5 and eliminating the deficit against additional paid-in capital. Immediately after the quasi reorganization, what amount should Brown report as additional paid-in capital?

- \$(60,000)
- \$150,000
- \$190,000
- \$400,000

### P. Stock Rights

**78.** On July 1, year 1, Vail Corp. issued rights to stockholders to subscribe to additional shares of its common stock. One right was issued for each share owned. A stockholder could purchase one additional share for 10 rights plus \$15 cash. The rights expired on September 30, year 1. On July 1, year 1, the market price of a share with the right attached was \$40, while the market price of one right alone was \$2. Vail's stockholders' equity on June 30, year 1, comprised the following:

Common stock, \$25 par value, 4,000 shares	
issued and outstanding	\$100,000
Additional paid-in capital	60,000
Retained earnings	80,000

By what amount should Vail's retained earnings decrease as a result of issuance of the stock rights on July 1, year 1?

- \$0
- \$5,000
- \$8,000
- \$10,000

**79.** In September year 1, West Corp. made a dividend distribution of one right for each of its 120,000 shares of outstanding common stock. Each right was exercisable for the purchase of 1/100 of a share of West's \$50 variable rate preferred stock at an exercise price of \$80 per share. On March 20, year 3, none of the rights had been exercised, and West redeemed them by paying each stockholder \$0.10 per right. As a result of this redemption, West's stockholders' equity was reduced by

- \$120
- \$2,400
- \$12,000
- \$36,000

**80.** On November 2, year 1, Finsbury, Inc. issued warrants to its stockholders giving them the right to purchase additional \$20 par value common shares at a price of \$30. The stockholders exercised all warrants on March 1, year 2. The shares had market prices of \$33, \$35, and \$40 on November 2, year 1; December 31, year 1; and March 1, year 2, respectively. What were the effects of the warrants on Finsbury's additional paid-in capital and net income?

	Additional paid-in capital	Net income
a.	Increased in year 2	No effect
b.	Increased in year 1	No effect
c.	Increased in year 2	Decreased in year 1 and year 2
d.	Increased in year 1	Decreased in year 1 and year 2

**81.** A company issued rights to its existing shareholders to purchase, for \$30 per share, unissued shares of \$15 par value common stock. Additional paid-in capital will be credited when the

	Rights are issued	Rights lapse
a.	Yes	No
b.	No	No
c.	No	Yes
d.	Yes	Yes

### Q. Employee Stock Ownership Plan (ESOP)

Items 82 and 83 are based on the following:

On January 1, year 1, Fay Corporation established an employee stock ownership plan (ESOP). Selected transactions relating to the ESOP during year 1 were as follows:

- On April 1, year 1, Fay contributed \$30,000 cash and 3,000 shares of its \$10 par common stock to the ESOP. On this date the market price of the stock was \$18 a share.
- On October 1, year 1, the ESOP borrowed \$100,000 from Union National Bank and acquired 5,000 shares of Fay's common stock in the open market at \$17 a share. The note is for one year, bears interest at 10%, and is guaranteed by Fay.
- On December 15, year 1, the ESOP distributed 6,000 shares of Fay common stock to employees of Fay in accordance with the plan formula.

**82.** In its year 1 income statement, how much should Fay report as compensation expense relating to the ESOP?

- \$184,000
- \$120,000
- \$84,000
- \$60,000

**83.** In Fay's December 31, year 1 balance sheet, how much should be reported as a reduction of shareholders' equity and as an endorsed note payable in respect of the ESOP?

	Reduction of shareholders' equity	Endorsed note payable
a.	\$0	\$0
b.	\$0	\$100,000
c.	\$100,000	\$0
d.	\$100,000	\$100,000

### Stockholders' Equity: Comprehensive

**84.** Zinc Co.'s adjusted trial balance at December 31, year 1, includes the following account balances:

Common stock, \$3 par	\$600,000
Additional paid-in capital	800,000
Treasury stock, at cost	50,000
Net unrealized loss on available-for-sale securities	20,000
Retained earnings: appropriated for uninsured earthquake losses	150,000
Retained earnings: unappropriated	200,000

What amount should Zinc report as total stockholders' equity in its December 31, year 1 balance sheet?

- \$1,680,000
- \$1,720,000
- \$1,780,000
- \$1,820,000

**85.** Rudd Corp. had 700,000 shares of common stock authorized and 300,000 shares outstanding at December 31, year 1. The following events occurred during year 2:

January 31	Declared 10% stock dividend
June 30	Purchased 100,000 shares
August 1	Reissued 50,000 shares
November 30	Declared 2-for-1 stock split

At December 31, year 2, how many shares of common stock did Rudd have outstanding?

- 560,000
- 600,000
- 630,000
- 660,000

**86.** Nest Co. issued 100,000 shares of common stock. Of these, 5,000 were held as treasury stock at December 31, year 1. During year 2, transactions involving Nest's common stock were as follows:

May 3	1,000 shares of treasury stock were sold.
August 6	10,000 shares of previously unissued stock were sold.
November 18	A 2-for-1 stock split took effect.

Laws in Nest's state of incorporation protect treasury stock from dilution. At December 31, year 2, how many shares of Nest's common stock were issued and outstanding?

	Shares	
	Issued	Outstanding
a.	220,000	212,000
b.	220,000	216,000
c.	222,000	214,000
d.	222,000	218,000

**R. Ratios**

87. The following information pertains to Ali Corp. as of and for the year ended December 31, year 1:

Liabilities	\$ 60,000
Stockholders' equity	\$500,000
Shares of common stock issued and outstanding	10,000
Net income	\$ 30,000

During year 1, Ali's officers exercised stock options for 1,000 shares of stock at an option price of \$8 per share. This transaction is reflected in the above balances. What was the effect of exercising the stock options?

- a. Debt to equity ratio decreased to 12%.
- b. Earnings per share increased by \$0.33.
- c. Asset turnover increased to 5.4%.
- d. No ratios were affected.

88. Selected information for Irvington Company is as follows:

	December 31	
	Year 1	Year 2
Preferred stock, 8%, par \$100, nonconvertible, noncumulative	\$125,000	\$125,000
Common stock	300,000	400,000
Retained earnings	75,000	185,000
Dividends paid on preferred stock for year ended	10,000	10,000
Net income for year ended	60,000	120,000

Irvington's return on common stockholders' equity, rounded to the nearest percentage point, for year 2 is

- a. 17%
- b. 19%
- c. 23%
- d. 25%

89. Hoyt Corp.'s current balance sheet reports the following stockholders' equity:

5% cumulative preferred stock, par value \$100 per share; 2,500 shares issued and outstanding	\$250,000
Common stock, par value \$3.50 per share; 100,000 shares issued and outstanding	350,000
Additional paid-in capital in excess of par value of common stock	125,000
Retained earnings	300,000

Dividends in arrears on the preferred stock amount to \$25,000. If Hoyt were to be liquidated, the preferred stockholders would receive par value plus a premium of \$50,000. The book value per share of common stock is

- a. \$7.75
- b. \$7.50
- c. \$7.25
- d. \$7.00

90. Grid Corp. acquired some of its own common shares at a price greater than both their par value and original issue price but less than their book value. Grid uses the cost method of accounting for treasury stock. What is the impact of this acquisition on total stockholders' equity and the book value per common share?

	Total stockholders' equity	Book value per share
a.	Increase	Increase
b.	Increase	Decrease
c.	Decrease	Increase
d.	Decrease	Decrease

91. How are dividends per share for common stock used in the calculation of the following?

	Dividend per share payout ratio	Earnings per share
a.	Numerator	Numerator
b.	Numerator	Not used
c.	Denominator	Not used
d.	Denominator	Denominator

**T. International Financial Reporting Standards (IFRS)**

92. Logan Corporation issues convertible bonds for \$500,000. At the date of issuance, it is determined that the fair value of the bonds is \$480,000. Logan prepares its financial statements in accordance with IFRS. How should the issuance of the bonds be recognized?

- a. As a bond liability for \$500,000.
- b. As a bond liability for \$480,000 and other comprehensive income of \$20,000.
- c. As a bond liability for \$480,000 and an equity component of \$20,000.
- d. As a bond liability for \$500,000 and a contra liability of \$20,000.

93. Vestre Corporation prepares its financial statements under IFRS. Recently the company issued convertible debt. How should the company record this debt?

- a. The instrument should be presented solely as debt.
- b. The instrument should be presented between debt and equity.
- c. The instrument should be presented solely as equity.
- d. The instrument should be presented as part debt and part equity.

94. Under IFRS, which of the following is **not** a method that may be used to account for treasury stock?

- a. Cost method.
- b. Par value method.
- c. Retained earnings method.
- d. Constructive retirement method.

5. (a) When the common stock was issued, it was recorded at stated value with the excess recorded as additional paid-in capital.

Cash	600,000	
Common stock		20,000
Addl. paid-in capital		580,000

The preferred stock was recorded at par value with the excess credited to additional paid-in capital.

Cash	300,000	
Preferred stock		60,000
Addl. paid-in capital		240,000

Therefore, at 4/1/Y1, the balances are common stock (\$20,000), preferred stock (\$60,000), and additional paid-in capital (\$580,000 + \$240,000 = \$820,000).

6. (c) In a lump-sum issuance of common and preferred stock, the proceeds (\$80,000) are generally allocated based on the relative fair market values of the securities issued. The FV of the convertible preferred stock is \$54,000 (\$27 × 2,000) and the FV of the common stock is \$36,000 (\$36 × 1,000). The proceeds are allocated as follows:

Convertible preferred	$\frac{\$54,000}{\$90,000}$	×	\$80,000	=	<u>\$48,000</u>
Common	$\frac{\$36,000}{\$90,000}$	×	\$80,000	=	<u>\$32,000</u>

7. (a) All 5,000 shares of convertible preferred stock were converted to common stock at a rate of 3 shares of common for every share of preferred. Therefore, 15,000 shares of common stock were issued (5,000 × 3). The common stock account is credited for the par value of these shares (15,000 × \$25 = \$375,000). APIC - CS (\$550,000 – \$375,000 = \$175,000) is credited for the difference between the carrying amount of the preferred stock (5,000 × \$110 = \$550,000) and the par value of the common stock. The journal entry is

Preferred stock	500,000	
APIC-PS	50,000	
Common stock		375,000
APIC-CS		175,000

Note that the \$40 market value of the common stock is ignored. The book value method must be used for conversion of preferred stock, so no gains or losses can be recognized.

8. (d) When an issuance of debt, or in this case preferred stock, contains detachable common stock warrants the total proceeds from the sale should be allocated to both the preferred stock and the detachable stock warrants. This treatment arises due to the separability of the stock and the detachable warrants. The allocation of the proceeds is based on the relative fair values of both the stock and the warrants at the time of the issuance. However, in instances where only one of the fair values is known, the known fair value will be used to allocate proceeds to the security in which the fair value is

determinable. The remainder is then allocated to the security for which the fair value is unknown. Therefore, because only the fair value of the warrants is known, answer (d) is correct. Answers (a) and (b) are incorrect because fair market value is used to allocate proceeds to the warrants, not the total proceeds or excess proceeds over par value. Answer (c) is incorrect because proceeds are allocated in proportion to both fair values, if determinable, not the fair market value and par value.

9. (a) When the preferred stock and detachable warrants are issued, the following journal entry is made:

Cash	(cash received)
Preferred stock	(par value)
APIC—preferred stock	(FV of preferred stock – par value)
APIC—stock warrants	(plug)

When the stock warrants are exercised, the following journal entry is made:

Cash	(cash received)
APIC—stock warrants	(original amount credited)
Common stock	(par value)
APIC—common stock	(plug)

Therefore, stockholders' equity is increased by the cash received upon the exercise of the common stock warrants. The carrying amount of the warrants increased total stockholders' equity when the preferred stock was issued, not when the warrants were issued.

10. (b) When no par common stock is sold on a subscription basis at a price above the stock's stated value, the stock is not issued until the full subscription price is received. The journal entry on the subscription contract date would be

Cash	(amount received—if any)
Subscription receivable	(balance due)
Common stock subscribed	(stated value)
Additional paid-in capital	(plug)

The journal entry on the date the balance of the subscription is collected and the common stock issued would be

Cash	(balance due)
Common stock subscribed	(stated value)
Common stock	(stated value)
Subscription receivable	(balance due)

Additional paid-in capital increases on the date that the stock is subscribed, not paid for or issued.

11. (d) When stock is sold on a subscription basis, the full price of the stock is not received initially, and the stock is not issued until the full subscription price is received. On the subscription contract date of December 1, year 2, the journal entry would be

Cash	(amount received)
Subscriptions receivable	(balance due)
Common stock subscribed	(par)
Additional paid-in capital	(plug)

**12. (c)** Under the cost method, the treasury stock account is debited for the cost of the shares acquired. If the treasury shares are reissued at a price in excess of the acquisition cost, the excess is credited to an account titled Paid-in Capital from Treasury Stock. This question refers to it as Additional Paid-in Capital because typically companies do not segregate the two accounts on the balance sheet for reporting purposes. If the treasury shares are reissued at less than the acquisition cost, the deficiency is treated first as a reduction to any paid-in capital related to previous reissuances or retirements of treasury stock of the same class. If the balance in Paid-in Capital from Treasury Stock is not sufficient to absorb the deficiency, the remainder is recorded as a reduction of retained earnings. As the shares in this question were reissued at a price in excess of the acquisition price, the following journal entry would be made at the time of reissue:

Cash (3,000 × \$50)	150,000	
Treasury stock (3,000 × \$36)		108,000
Additional paid-in capital		
(\$150,000 – \$108,000)		42,000

**13. (c)** The entry that Rama made on acquisition of treasury stock was as follows using the **cost method**:

Treasury stock		
(20,000 × \$12)	240,000	
Cash		240,000

When some of the shares are later reissued, the entry is

Cash (15,000 × \$10)	150,000	
Retained earnings	30,000	
Treasury stock		
(15,000 × \$12)		180,000

It is assumed there was no balance in APIC—Treasury stock prior to this entry. If the problem had stated there was a credit balance, APIC—Treasury stock would be debited before retained earnings to the extent a credit balance existed in APIC—Treasury stock. When retained earnings are legally restricted the restriction must be disclosed. In this case, the net treasury stock account balance is \$60,000 (\$240,000 – \$180,000), and this is the amount of retained earnings that must be disclosed as legally restricted.

**14. (d)** The unadjusted stockholders' equity section shows a total of \$2,000,000. However, analysis of the current asset section reveals that United has incorrectly classified \$300,000 of treasury stock as a current asset. Although this account has a debit balance, it is **not an asset**. Treasury stock should be reported as a reduction of stockholders' equity. Therefore, total equity at 12/31/Y1 should be \$1,700,000 (\$2,000,000 – \$300,000).

**15. (a)** Under the cost method, when treasury stock is acquired, **treasury stock** is debited and **cash** is credited for the cost.

Treasury stock	100,000	
Cash		100,000

When the treasury stock is resold at an amount above cost, **cash** is debited for the proceeds, **treasury stock** is credited at cost, and the difference is credited to **additional paid-in capital—treasury stock**.

Cash	25,000	
Treasury stock		20,000
APIC—TS		5,000

Neither of these two transactions affect **retained earnings**. Therefore, 12/31/Y2 retained earnings consists of the 12/31/Y1 balance (\$300,000) plus year 2 net income (\$60,000), or \$360,000.

**16. (c)** The requirement is to determine the balance in the paid-in capital from treasury stock account at 12/31/Y1. Using the par value method, treasury stock is debited for par value (5,000 × \$10, or \$50,000) when purchased. Any excess over par from the original issuance (5,000 × \$4, or \$20,000) is removed from the appropriate paid-in capital account. In effect, the total original issuance price (5,000 × \$14, or \$70,000) is charged to the two accounts. Any difference between the original issue price (\$70,000) and the cost of the treasury stock (5,000 × \$11, or \$55,000) is credited to paid-in capital from treasury stock, as illustrated below.

Treasury stock	50,000	(5,000 × \$10)
APIC	20,000	(5,000 × \$4)
Cash	55,000	(5,000 × \$11)
PIC—Treasury stock	15,000	(\$70,000 – \$55,000)

**17. (b)** When Dee Inc. issued common stock at a price in excess of its par value, the following journal entry was made:

Cash	(Cash received)	
Common stock		(Par)
Additional paid-in capital		(Excess of cash capital received over par)

When Dee Inc. acquires treasury stock using the par method for an amount exceeding the issue price the following journal entry is made:

Treasury stock	(Par)
Additional paid-in capital	(Excess of original issue price over par)
Retained earnings	(Excess of acquisition price over issue price)
Cash	(Cash paid)

**Net** common stock decreases by the par value of treasury stock acquired. Additional paid-in capital decreases by the excess of

the original issue price over the par value. Retained earnings decreases by the excess of the acquisition price over the original issue price.

**18. (c)** In this case, the par value method does not report a greater amount for additional paid-in capital or retained earnings than the cost method. The entries for an acquisition of treasury shares at greater than par but less than the original issue price are as follows:

Cost method		Par value method	
Treasury stock	xxx	Treasury stock	xxx
Cash		PIC in excess of	
	xxx	par	xxx
		Cash	xxx
		PIC from	
		treasury stock	xxx

Since under the par value method the original paid-in capital in excess of par must be removed from the accounts upon reacquisition, the par value method actually reports a decrease in additional paid-in capital. On the other hand, under the cost method no change in additional paid-in capital is recorded. There is no change in retained earnings under either method.

**19. (c)** When accounting for the retirement of stock, common stock and additional paid-in capital are removed from the books based on the original issuance of the stock. Cash is credited for the cost of the shares. Any difference is debited to **retained earnings** or credited to **paid-in capital from retirement**. The entry in this case is

Common stock	20,000 (2,000 × \$10)
APIC	180,000 (2,000 × \$90)
Retained earnings	100,000 (2,000 × \$50)
Cash	300,000

Therefore, APIC should be debited for \$180,000 and retained earnings should be debited for \$100,000.

**20. (a)** In this problem, Luna Corp. is exchanging its available-for-sale securities (AFS) for its preferred stock (i.e., they are retiring some of their preferred stock by exchanging AFS). Upon disposition of the AFS, a gain of \$70,000, which is the difference between the carrying amount (\$80,000) and the FV (\$150,000), must be recognized. Upon retirement of the stock, the preferred stock is debited for the \$100,000 par amount (5,000 shares × \$20 par). The additional paid-in capital (APIC) is debited for \$7,500, which is 1/4 of the original APIC (i.e., 5,000 of the 20,000 shares were retired). The remainder of the FV of the preferred stock (\$42,500 = \$150,000 – \$100,000 – \$7,500) is debited to retained earnings.

**21. (c)** When accounting for the retirement of treasury stock that was initially recorded using the cost method, common stock and additional paid-in capital are removed from the books based on the original issuance of the stock. Treasury stock is credited for the cost of the shares acquired. Any difference is debited to retained earnings or credited to paid-in capital from retirement. In this problem, common stock should be debited for \$125,000 (50,000 shares × \$2.50), and the common stock balance at December 31, year 1, is \$415,000 (\$540,000 – \$125,000).

**22. (c)** The requirement is to determine which of the statements correctly identifies an effect of the acquisition and retirement of common stock. The entry to record the retirement of common stock appears as follows:

Common stock (par)	xxx	
Additional paid-in capital	xxx	
Retained earnings	xxx	
Cash		xxx

Additional paid-in capital is debited to the extent it exists. In this case, based on the original issuance, the additional paid-in capital (APIC) balance was \$15 per share on the shares retired. When stock is repurchased, if the APIC balance is depleted to zero, retained earnings must also be debited. In this case, retained earnings would not be needed, however. Common stock would be debited for \$10 per share and additional paid-in capital would be debited for \$10 a share. Excess APIC remains, so retained earnings are not needed to retire the stock. When common stock is repurchased and retired, additional paid-in capital decreases. When common stock is retired, net income is never affected; only stockholders' equity balances are affected. If retained earnings are needed to retire stock, the account decreases, not increases.

**23. (b)** Since this is an investment accounted for on the cost basis, the dividend income should be the amount of cash dividends received. Since Plack Co. had 12,000 shares at the time the cash dividend was paid, the total amount of cash dividends received is \$24,000 (12,000 × \$2.00).

**24. (c)** When preferred stock is participating, there may be different agreements as to how the participation feature is to be executed. However, in the absence of any specific agreement, the following procedure should be used:

After the preferred stock is allocated its current year dividend, the common stock will receive a "like" percentage of par value outstanding. If there are remaining declared dividends, this amount should be shared by both the preferred and common stock in proportion to the par value dollars outstanding of each stock as follows:

Current year's dividend:			
Preferred, 5% of \$300,000			
(30,000 shares × \$10 Par)	\$15,000		
Common, 5% of \$200,000			
(200,000 shares × \$1 Par)	<u>10,000</u>		<u>\$ 25,000</u>
Amount available for participation			
(\$100,000 – \$25,000)			\$ 75,000
Par value of stock that is to participate			
(\$300,000 + \$200,000)			\$500,000
Proportional share of participating dividend:			
Preferred	$\frac{\$300,000}{\$500,000}$	×	75,000 = \$ 45,000
Common	$\frac{\$200,000}{\$500,000}$	×	75,000 = \$ 30,000

Thus, the dividends payable to common shareholders is \$40,000 (\$10,000 + \$30,000).

**25. (d)** For **cumulative** preferred stock, dividends not paid in **any** year will accumulate and must be paid in a later year before any dividends can be paid to common stockholders. The unpaid prior year dividends are called “dividends in arrears.” The balance of dividends in arrears should be disclosed in the financial statements rather than accrued, as they are not considered a liability until they are declared. Dividends in arrears at 12/31/Y3 total \$20,000, as computed below.

Year 2	$\$300,000 \times 5\%$	=	\$15,000
Year 3	$\$300,000 \times 5\%$	=	<u>15,000</u>
Total cumulative preferred dividends			\$30,000
Less year 3 dividend payment			<u>(10,000)</u>
Balance of dividends in arrears			<u>\$20,000</u>

Answer (c) is incorrect because dividends in arrears are not considered to be a liability until they are declared. They should be disclosed parenthetically or in the notes to the financial statements. Answer (b) is incorrect because the total dividends amount needs to reflect both the year 2 and year 3 unpaid dividends since it is cumulative preferred stock. Answer (a) is incorrect because the dividends in arrears would not be considered a liability until they are declared and the \$15,000 amount is the incorrect balance as discussed above.

**26. (d)** The interest is not an expense or liability until incurred, thus, none of it is recorded on April 1. The April 1 entry would be

Retained earnings	100,000	
Scrip dividends payable		100,000

By December 31 (the year-end for this calendar-year company), nine months' interest had been incurred, which would not be paid until the maturity date of 3/31/Y2. The \$7,500 of interest expense ( $\$100,000 \times 10\% \times 9/12$ ) must be accrued at 12/31/Y1 with the following entry:

Interest expense	7,500	
Interest payable		7,500

**27. (b)** Dividends that are based on funds other than retained earnings are considered to be liquidating dividends. The cash dividend declared of \$400,000 is first assumed to be a return on capital for the distribution of the retained earnings balance of \$300,000. The excess \$400,000 dividend – \$300,000 RE = \$100,000 is considered to be a return of capital or a liquidating dividend rather than a return on capital. Note that the amount of liquidating dividend also equals the balance in accumulated depletion. Companies in the extractive industries may pay dividends equal to the accumulated income **and** depletion.

**28. (c)** A transfer of a nonmonetary asset to a stockholder or to another entity in a nonreciprocal transfer should be recorded at the fair value of the asset transferred, and a gain or loss should be recognized on the disposition of the asset. The fair value of the nonmonetary asset distributed is measured by the amount that would be realized in an outright sale at or near the time of distribution. In this case, a gain should be recognized for the difference between the fair value of \$2.50 per share and the carrying amount of \$2 per share, or a total gain of \$50,000 [ $100,000 \times (\$2.50 - \$2.00)$ ].

**29. (c)** A transfer of a nonmonetary asset to a stockholder or to another entity in a nonreciprocal transfer should be recorded at the fair market value of the asset transferred, and a gain or loss should be recognized on the disposition of the asset. At the date of declaration, Nilo records

Trading securities	18,000	
Gain on disposition of securities		18,000
Retained earnings (dividends)	78,000	
Property dividends payable		78,000

At the date of distribution, Nilo records

Property dividends payable	78,000	
Trading securities		78,000

After all nominal accounts are closed, the effect on retained earnings from the above entries would be \$60,000 (\$78,000 debit to retained earnings less \$18,000 credit to retained earnings when the “gain on disposition” account is closed out).

**30. (b)** A stock split is **not** a dividend. Stock splits change the number of shares outstanding and the par value per share. Par value per share is reduced in proportion to the increase in the number of shares. Therefore, the total par value outstanding does not change, and no journal entry is required. The only dividend to be reported in Long's year 1 statement of stockholders' equity is the 12/15 cash dividend. The stock split increased the number of shares outstanding to 200,000 ( $100,000 \times 2$ ), so the amount of the cash dividend is \$100,000 ( $200,000 \times \$0.50$ ).

**31. (b)** The requirement is to determine the effect of a cash dividend on stockholders' equity at the three dates listed. On the date of declaration, December 15, year 1, the following entry should be made:

Retained earnings	xxx	
Dividends payable		xxx

Thus, at December 15, year 1, stockholders' equity is reduced due to the debit to retained earnings. On December 31, year 1, there is no effect on stockholders' equity because an entry would not be recorded. On January 12, year 2, the following entry would be made:

Dividends payable	xxx	
Cash		xxx

The net effect of this entry is to decrease assets and liabilities by an equal amount. Thus, stockholders' equity (or net assets) would be unaffected.

**32. (d)** Any dividend not based on earnings must be a reduction of corporate paid-in capital and, to that extent, it is a liquidating dividend. The following journal entries would be made for this situation:

At date of declaration:		
Additional paid-in capital	100,000	
Dividends payable		100,000
At date of payment:		
Dividends payable	100,000	
Cash		100,000

Thus, a liquidating dividend would decrease Ole's paid-in capital, not its retained earnings.

**33. (d)** A property dividend is a nonreciprocal transfer of nonmonetary assets between an enterprise and its owners. A nonreciprocal transfer of nonmonetary assets to a stockholder or another entity shall be recorded at the fair value of the asset transferred. Additionally, a gain or loss shall be recognized on the disposition of the asset. Accordingly, Evie Corp. should record the following journal entries to reflect the property dividend:

At the date of declaration:			
Loss on decline in inventory value			
(Carrying amount – Market value)	xxx		
Merchandise inventory		xxx	
Retained earnings (market value)	xxx		
Property dividends payable			xxx
At the date of distribution:			
Property dividends payable	xxx		
Merchandise inventory		xxx	

The loss recorded in the above journal entry does not qualify as unusual and infrequent, thus it is not an extraordinary item. The loss should be reported as a reduction in income before discontinued operations and extraordinary items.

**34. (b)** The requirement is to determine the amount to be debited to retained earnings for these stock dividends. The issuance of a stock dividend less than **20–25%** (a “small” stock dividend) requires that the **market value** of the stock be transferred from retained earnings, and a dividend greater than **20–25%** (a “large” stock dividend) requires the **par value** of the stock to be transferred from retained earnings. Thus, a 10% stock dividend is considered to be “small” and should be transferred from retained earnings at the FV of \$15,000. A 28% stock dividend is considered to be “large” and should be transferred at the par value of \$30,800. The aggregate amount to be transferred from retained earnings is \$45,800.

**35. (a)** When the stock dividend is less than 20–25% of the common shares outstanding at the time of the declaration, generally accepted accounting principles require that the FV of the stock issued be transferred from retained earnings. At the date of declaration, the following entry would be made:

Retained earnings (Stock dividends declared) (.05 × 10,000 shares × \$5)	2,500		
Common stock dividend distributable (.05 × 10,000 × \$2)		1,000	
Additional paid-in capital (plug)			1,500

Note from the entry above that no asset or liability has been affected. The entry merely reflects a reclassification within the equity accounts. When a balance sheet is prepared between the dates of declaration and distribution, the common stock dividend distributable should be shown in the stockholders' equity section as an addition to capital stock.

**36. (d)** A stock dividend is an issuance by a corporation of its own common shares to its common shareholders without

consideration to give the recipient shareholders evidence of a part of their respective interests in accumulated corporate earnings without distribution of cash or other property. A stock split is defined as an issuance by a corporation of common shares to its common shareholders without consideration... prompted mainly by a desire to increase the number of outstanding shares for the purpose of effecting a reduction in their unit market price and, thereby, of obtaining wider distribution and improved marketability of the shares. Thus, neither of these transactions results in a transfer of assets among the shareholders and the corporation. While the allocation of stockholders' equity among the various accounts (retained earnings, common stock, and additional paid-in capital) will change, the **total** stockholders' equity is **not** affected.

**37. (b)** The requirement is to determine the balance of additional paid-in capital immediately after a reverse stock split. Stock splits change the number of shares outstanding and the par value per share, but the total par value outstanding does not change. Stock splits do not affect any account balances, including additional paid-in capital. Therefore, the balance of additional paid-in capital remains at \$450,000.

**38. (b)** A stock split does not affect either the balance of the additional paid-in capital or the retained earnings accounts. The number of shares outstanding and the par value per share merely change in proportion to each other. When this occurs, only a memorandum entry is made.

**39. (a)** The requirement is to determine the amount of appropriated retained earnings Eagle should report in its year 2 balance sheet. The entry to record the appropriation of retained earnings in year 2 for the construction of a new plant is as follows:

RE (or Unappropriated RE)	\$1,200,000		
RE Appropriated for plant expansion			\$1,200,000

The cash restricted for the retirement of bonds due in year 2 should **not** be reported as an appropriation of retained earnings because the facts in the question do not indicate that appropriation was made by management. When an appropriation is no longer needed, it must be returned directly to unappropriated retained earnings by reversing the entry that created it. Therefore, when the office building was completed in year 2, the following entry was made:

RE Appropriated for plant expansion	\$1,750,000		
RE (or Unappropriated RE)			\$1,750,000

The total cost to complete the building has no effect on appropriated retained earnings.

**40. (a)** Retained earnings are typically appropriated due to legal requirements, contractual requirements, or through the discretion of the board of directors. Dividends in arrears are not considered a liability to the company, and retained earnings would not be appropriated for this amount. In many cases, retained earnings must be appropriated for an amount equal to the cost of treasury stock acquired. However, this appropriation would be removed upon reissuance of the treasury stock.

**41. (d)** Appropriations of retained earnings are not prohibited provided that the appropriation is clearly identified as such in the stockholders' equity section of the balance sheet. Costs or losses cannot be charged to an appropriation of retained earnings. A contingent loss that is probable and reasonably estimable should be accrued as a loss and liability.

**42. (d)** Employee compensation expense as the result of a stock option plan is calculated as the fair value of the equity instrument **at the date of grant** times the number of option shares.

$$3,000 \text{ shares} \times \$8 \text{ fair value of option} = \$24,000$$

The total compensation expense must be recognized over the requisite service period for which the option plan represents compensation. If not otherwise specified, the required service period (two years) is assumed to be the period benefited. Therefore, year 1 compensation expense is \$12,000 ( $\$24,000 \div 2$ ). Note that compensation expense is not affected by changes in the market value of the stock after the measurement date.

**43. (b)** Total compensation expense as a result of a stock option plan is calculated as the fair value of the equity instruments at the date of grant times the number of options.

$$10,000 \text{ options} \times \$12 \text{ fair value of option} = \$120,000$$

The total compensation expense must be recognized over the requisite service period for which the option plan represents compensation. Therefore, year 2 compensation expense is \$40,000 ( $\$120,000 \div 3 \text{ years}$ ). Note that the cost of treasury stock distributed in an option plan does not determine compensation expense.

**44. (d)** The fair value of the stock option at date of grant was \$28 ( $\$28 \times 1,000 \text{ shares} = \$28,000$ ). The entire amount is recognized because the options are exercisable immediately for three years after the grant date.

**45. (a)** The net increase in stockholders' equity (SE) as a result of the grant and exercise of the options is equal to the increase in cash ( $1,000 \text{ shares} \times \$20 \text{ option price} = \$20,000$ ). The journal entry to record the options has no effect on SE because a SE account will be credited while a contra SE account will be debited as follows:

Deferred compensation	28,000	
Paid-in capital stock options		28,000
(1,000 shares $\times$ \$28 per option)		

The entry to recognize compensation expense has no effect on SE because the debit decreases SE while the credit increases SE by reducing the contra account as follows:

Compensation expense	28,000	
Deferred compensation		28,000

The only entry which does affect SE is the entry for the exercise of the options, which decreases SE by \$28,000 while increasing it by \$48,000 (a net increase of \$20,000).

Cash ( $1,000 \times \$20$ )	20,000	
Paid-in capital stock options ( $1,000 \times \$28$ )	28,000	
Common stock ( $1,000 \times \$10$ )		10,000
Paid-in capital in $\times$ of PV (plug)		38,000

Thus, the net increase in stockholders' equity is \$20,000.

**46. (c)** The 20,000 stock appreciation rights (SAR) each entitle the holder to receive cash equal to the excess of the market price of the stock on the exercise date over the market price on the grant date (\$30). Since these SAR are payment for past services and are exercisable immediately, there is no required service period. Therefore, the expense computed at 12/31/Y1 does **not** have to be allocated to more than one period. At 12/31/Y1, compensation expense is measured based on the excess of the 12/31/Y1 market price (\$45) over the predetermined price (\$30), resulting in compensation expense of \$300,000 [ $20,000 (\$45 - \$30)$ ]. Note that if Dean were **required** to work three years **before** the SAR could be exercised, the expense would be allocated over the three years of required service ( $\$300,000 \times 1/3 = \$100,000$ ).

**47. (c)** When accounting for stock compensation plans, total compensation expense is computed as the excess of the fair value of the equity instrument over the amount contributed by employees. In this case, the fair value of the 150,000 shares issued in year 1 is \$1,050,000, and the employees' contributions for these shares is \$350,000. Therefore, Wall should recognize \$700,000 ( $\$1,050,000 - \$350,000$ ) as expense in year 1 for the stock compensation plan.

**48. (c)** The rate of interest used to discount both the exercise price and dividends is the risk-free interest rate.

**49. (c)** If the stock options are for past services, as indicated when the options are immediately exercisable by the holders, compensation cost must be fully expensed at the grant date. Answer (a) is incorrect because usually deferred compensation expense is recognized. Answer (b) is incorrect because deferred compensation expense is recognized when service has not yet been provided. Answer (d) is incorrect because when options are provided for prior service compensation expense must immediately be recognized.

**50. (a)** Compensation cost for a share-based payment to employees that is classified as a liability is measured by the change in fair value of the instrument for each reporting period.

**51. (c)** The final measurement date is the settlement date for share-based payments to employees classified as liabilities.

**52. (d)** Accounting for stock-based compensation using the fair value method is as follows:

Fair value of option at grant date	6.40
Times # of options	$\times 20,000$
Deferred compensation expense	<u>\$128,000</u>

**53. (d)** Cash retained as a result of excess tax benefits in connection with share-based payments to employees should be recognized as a cash inflow from financing activities in the statement of cash flows.

**54. (c)** The options should be included in the denominator of diluted earnings per share unless the shares are antidilutive. If the equity share options are outstanding for only a part of a period, the shares are weighted to reflect the period of time outstanding.

55. (b) The formula for basic earnings per share (BEPS) is

$$\frac{\$1,000,000 \text{ net income} - \$50,000 \text{ preferred dividends}}{100,000 \text{ common shares outstanding}} = \$9.50$$

In calculating the numerator, the claims of preferred shareholders against year 2 earnings should be deducted to arrive at the year 2 earnings attributable to common shareholders. This amount is \$50,000 (5% × \$100 × 10,000 shares). The \$50,000 preferred dividends in arrears is not deducted to compute the numerator in determining year 2 BEPS. This is because the \$50,000 dividends in arrears is a claim of preferred shareholders against year 1 earnings and would reduce year 1 BEPS.

56. (b) The formula for basic earnings per share (BEPS) is

$$\frac{\$500,000 \text{ net income} - 10,000 \text{ preferred dividends}}{200,000 \text{ common shares outstanding}} = \$2.45$$

In calculating the numerator, the claims of preferred shareholders against year 2 earnings should be deducted to arrive at the year 2 earnings attributable to common shareholders. This amount is \$10,000 (\$250,000 × 4%). During year 1, the BEPS numerator would have been reduced by \$10,000 even though no preferred dividends were declared, because the cumulative feature means that \$10,000 of year 1 earnings are reserved for, and will ultimately be paid to, preferred stockholders. In year 2, the year 1 dividends in arrears are paid, as well as \$6,000 of the \$10,000 year 2 preferred dividend. Even though only \$6,000 is paid, the entire \$10,000 is subtracted for reasons explained above.

57. (b) For EPS purposes, shares of stock issued as a result of stock dividends or splits should be considered outstanding for the entire period in which they were issued. Therefore, both the original 20,000 shares and the additional 20,000 issued in the 4/1 stock split are treated as outstanding for the entire year (20,000 × 2 = 40,000). The 7/1 issuance of 10,000 shares results in a weighted-average of 5,000 shares (10,000 × 6/12) because the shares were outstanding for only six months during the year. Therefore, Jet should use 45,000 shares (40,000 + 5,000) to calculate EPS.

58. (d) The computation of weighted-average shares outstanding is

Date	# of shares		Fraction	=	WA
1/1	30,000	×	12/12	=	30,000
2/1	3,000	×	12/12	=	3,000
7/1	8,000	×	6/12	=	4,000
					<u>37,000</u>

The 3,000 shares issued as a result of a stock dividend are weighted at 12/12 instead of 11/12 because for EPS purposes stock dividends are treated as if they occurred at the beginning of the year.

59. (b) The formula for computing BEPS for a simple capital structure is

$$\frac{\text{Net income} - \text{Applicable pref. stock dividends}}{\text{Weighted-average \# of common shares outstanding}}$$

Net income is \$410,000 and \$350,000 in year 2 and year 1, respectively, and there are no preferred dividends. The weighted-average number of common shares outstanding must be computed for year 2. Stock dividends and stock splits are handled retroactively for comparability. The year 2 computation is

Dates	Number of Shares	Fraction	WA
1/1 to 3/31	100,000 × 2 = 200,000	3/12	50,000
4/1 to 6/30	(100,000 + 20,000) × 2 = 240,000	3/12	60,000
7/1 to 12/31	120,000 × 2 = 240,000	6/12	<u>120,000</u>
			<u>230,000</u>

The year 1 weighted-average of 100,000 is retroactively restated to 200,000 for comparability. Therefore, the BEPS amounts are

$$\frac{\$410,000}{230,000} = \$1.78 \quad \text{Year 2} \qquad \frac{\$350,000}{200,000} = \$1.75 \quad \text{Year 1}$$

60. (b) Earnings per share must be shown on the face of the income statement for income from continuing operations and net income. EPS for discontinued operations and extraordinary items may be shown on the income statement or in the notes.

61. (c) If the number of common shares outstanding increases as a result of a stock dividend or stock split or decreases as a result of a reverse split, the computations of EPS should give retroactive recognition for all periods presented. If these events take place after the close of the period but before completion of the financial report, the per share computations should be based on the new number of shares. Note that when per share computations reflect such changes in the number of shares after the close of the period, this fact should be disclosed.

62. (b) The requirement is to determine the number of shares that should be used in computing year 2 diluted earnings per share. The first step is to compute the weighted-average number of common shares outstanding. 300,000 shares were outstanding the entire year, and 50,000 more shares were outstanding for six months, resulting in a weighted-average of 325,000 [300,000 + (50,000 × 6/12)].

Second, the stock options increase the number of shares used in the computation **only** if they are dilutive. The stock options are dilutive because the exercise price is less than the market value. Thus, the denominator effect of the options must be computed. This is done using the **treasury stock method**, as illustrated below.

Assumed proceeds (40,000 × \$15)	\$600,000
Shares issued	<u>40,000</u>
Shares reacquired (\$600,000 ÷ \$20)	(30,000)
Shares issued, not reacquired	<u>10,000</u>

Therefore, the number of shares used for computing diluted earnings per share is 335,000 (325,000 + 10,000).

**63. (b)** Diluted earnings per share is based on common stock and all dilutive potential common shares. To determine if a security is dilutive, EPS, including the effect of the dilutive security, must be compared to the basic EPS. In this case, basic EPS is \$7.45.

$$\frac{850,000 \text{ (NI)} - 30,000 \text{ (pref. div.)}}{110,000 \text{ shares}} = \$7.45$$

The effect of the convertible preferred stock is to increase the numerator by \$30,000 (\$3.00 dividend per share × 10,000 shares) for the amount of the preferred dividends that would not be paid (assuming conversion) and increase the denominator by 20,000 shares. This security is dilutive because it decreases the EPS from \$7.45 to \$6.54.

$$\frac{850,000 - 30,000 + 30,000}{110,000 + 20,000} = \$6.54$$

If the EPS increases due to the inclusion of a security, that security is antidilutive and should not be included.

**64. (d)** The requirement is to compute the diluted earnings per share for year 2. Therefore, **all** potential common shares that **reduce** current EPS must be included in the computation. The formula for diluted EPS is

$$\frac{\text{Net income available to common shareholders}}{\text{Weighted-average common shares outstanding}}$$

The net income available to common shareholders is \$3,200,000. This is the net income of \$3,400,000 less the preferred stock dividend of \$200,000. The weighted-average common shares outstanding is 1,250,000. This is computed as the actual common shares outstanding for the full year of 1,200,000 plus the contingent common shares of 50,000 that were outstanding for the full year because the contingency was incurred in year 1. Thus,

$$\text{Diluted EPS} = \frac{\$3,200,000}{1,250,000} = \$2.56$$

**65. (b)** The effect of convertible bonds is included in diluted EPS under the if converted method, if they are dilutive. The bonds are dilutive as shown below.

$$\text{Basic EPS} = \frac{\$35,000}{(1/2) 10,000 + (1/2) 14,000} = \$2.92$$

$$\text{Incremental per share effect} = \frac{\begin{matrix} (7\% \times \$10,000) - \\ 30\% (7\% \times \$10,000) \end{matrix}}{200 \text{ shares per bond}} = \frac{\$490}{200} = \$2.45$$

Since \$2.45 < \$2.92, the bonds are dilutive. Under the if converted method, the assumption is made that the bonds were converted at the beginning of the current year (1/1) or later in the current year if the bonds were issued during the current year. In this case, conversion is assumed for the first six months of year 2 only because the bonds were actually converted on July 1. Under their assumed conversion, the numerator would increase because bond interest expense would not have been incurred for the first six months of the year [1/2 (\$14,000 – 30% × \$14,000) = \$4,900]. The denominator would increase because the 4,000 shares (20 × 200) would have been outstanding for the first six months of the year (4,000 × 6/12 = 2,000). Therefore, diluted EPS is \$2.85.

$$\frac{\$35,000 + \$4,900}{12,000 + 2,000} = \frac{\$39,900}{14,000} = \$2.85$$

**66. (a)** Diluted EPS takes into account the effect of all dilutive potential common shares that were outstanding during the period. Thus, the possible conversion of convertible bonds would be included because they are dilutive (i.e., EPS would be reduced), but the possible exercise of common stock options would not be included because they are antidilutive (i.e., EPS would be increased). Diluted EPS = \$15.00 – \$.75 = \$14.25.

**67. (d)** The requirement is to determine the treatment of nonconvertible cumulative preferred dividends in determining diluted EPS. Dividends on nonconvertible cumulative preferred shares should be deducted from net income whether an actual liability exists or not. This is because cumulative preferred stock owners must receive any dividends in arrears before future dividend distributions can be made to common stockholders.

**68. (a)** The if-converted method of computing earnings per share assumes that convertible securities are converted at the beginning of the earliest period reported or, if later, at the time of issuance.

**69. (b)** If convertible securities are deemed to be dilutive, then interest expense should be added back to net income when computing diluted earnings per share.

**70. (b)** The effect of contingent issue agreements are not included in basic earnings per share. They are included in diluted earnings per share if the contingency is met.

**71. (d)** The total cash available to pay **all** unsecured claims, including priority claims, is the cash obtained from free assets (\$320,000) and any excess cash available from assets pledged with fully secured creditors after they are used to satisfy those claims (\$370,000 – \$260,000 = \$110,000). Therefore, total cash available is \$430,000 (\$320,000 + \$110,000). After paying priority claims, \$360,000 will remain to pay all unsecured nonpriority claims (\$430,000 – \$70,000).

**72. (c)** Bankruptcy law requires that the claims of secured creditors be satisfied before any unsecured claims are paid. Hale is a secured creditor in the amount of \$5,000 (the liquidation value of the collateral). The remainder of Hale's claim (\$30,000 – \$5,000 = \$25,000) is an unsecured claim, because it is not secured by any collateral. Therefore, Hale will receive a total of \$15,000 on this note: \$5,000 received in full as a secured creditor, and \$10,000 received as an unsecured creditor (\$25,000 × \$.40).

**73. (d)** A bankruptcy trustee may establish a new set of accounting records to maintain accountability for the bankruptcy estate. Once the trustee assumes custody of the estate, the trustee will enter any unrecorded assets or liabilities in the estate equity account. Any gains or losses and liquidation expenses incurred will also be recorded. In the Kamy Corp. bankruptcy, both the \$8,000 loss on sale of the truck (\$20,000 carrying value – \$12,000 cash selling price) and the \$1,000 unrecorded liability would be debited to the estate equity account as follows:

Estate equity	1,000	
Accounts payable		1,000
Cash	12,000	
Estate equity	8,000	
Truck		20,000

**74. (b)** The requirement is to determine the net increase in total stockholders' equity as a result of the payments to unsecured creditors pursuant to a reorganization plan under Chapter 11. The net increase in stockholders' equity can be determined as follows:

Fair value of liabilities owed to unsecured creditors	\$1,200,000
Cash paid	(400,000)
Common stock issued (80,000 × \$1.25)	<u>(100,000)</u>
Gain on settlement of debt	<u>\$ 700,000</u>

The gain on the settlement of debt would be included in the income statement and closed to retained earnings. The net increase in stockholders' equity would equal \$800,000 (\$700,000 gain + \$100,000 FV of stock issued).

**75. (c)** Although assets are often revalued to fair value during a quasi reorganization, the **primary** purpose of a quasi reorganization is to eliminate a deficit in retained earnings so that dividends may be paid without waiting years to eliminate the deficit through future earnings. A quasi reorganization does not directly allow a corporation to obtain relief from creditors or result in a distribution of stock.

**76. (d)** In certain instances an entity may elect to restate its assets, capital stock, and surplus through a readjustment (or "quasi reorganization") and thus avail itself of permission to relieve its future income account or earned surplus account of charges which would otherwise be made there against. In such instances, the entity should present a **fair (value)** balance sheet as of the date of the reorganization.

**77. (c)** A quasi reorganization generally involves (1) revaluing assets, (2) reducing par, and (3) writing the deficit off against additional paid-in capital. In this case, no mention is made of the first step, revaluing assets. The second step, reducing par, results in a decrease to **common stock** and an increase to **additional paid-in capital** of \$250,000 [10,000 × (\$30 – \$5)]. The third step, writing off the deficit, increases **retained earnings** by \$210,000 (creating a \$0 balance) and decrease **additional paid-in capital** by the same amount. Immediately after the quasi reorganization, Brown should report additional paid-in capital of \$190,000 (\$150,000 + \$250,000 – \$210,000).

**78. (a)** When a corporation issues rights to its stockholders, it only makes a memorandum entry. If rights are later exercised, the corporation would make the following entry:

Cash	xxx	
Common stock		xxx
Additional paid-in capital		xxx

**79. (c)** The only time a journal entry is recorded for the issuance and exercise of stock rights is on the date of exercise. At the date of issuance, only a memorandum entry is recorded. The redemption of the rights issued to the shareholders should be treated like a dividend. Accordingly, retained earnings will be decreased by the amount paid to the shareholders (120,000 × \$0.10 = \$12,000).

**80. (a)** The requirement is to determine the effects of the stock warrants on the additional paid-in capital account and on net income. When a corporation issues stock warrants to its stockholders it only makes a memorandum entry. Then, when the warrants are exercised, the following entry is made:

Cash	xxx	
Common stock		xxx
Additional paid-in capital		xxx

Net income is not affected by the exercise of stock warrants because the transaction represents a process of raising capital and is not related to the earnings process. Additional paid-in capital is not affected until the exercise date in year 2.

**81. (b)** Note that the only time an entry related to the issuance and exercise of stock rights, which affects the equity accounts of a corporation, is recorded is on the date of exercise. At the date of issuance, only a memorandum entry is recorded, and on the date of the rights lapsing, no entry is recorded which would affect the company's equity accounts. Thus, the correct answer is (b): the additional paid-in capital account would not be credited at the time the rights are issued or at the date on which the rights lapse.

**82. (c)** The amount contributed or committed to be contributed to an employee stock ownership plan (ESOP) in a given year should be the measure of the amount to be charged to expense by the employer. Therefore, Fay should record year 1 compensation expense of \$84,000 [contribution of \$30,000 cash and common stock with a FV of \$54,000 (3,000 × \$18)].

**83. (d)** An obligation of an Employee Stock Ownership Plan (ESOP) should be recorded as a liability in the financial statements of the employer when the obligation is covered by either a guarantee of the employer or a commitment by the employer to make future contributions to the ESOP sufficient to meet the debt service requirements. Therefore, the note payable of \$100,000 (which is guaranteed by Fay) should be reported in Fay's 12/31/Y1 balance sheet. The offsetting debit to the employer's liability should be reported as a reduction of stockholders' equity. Therefore, Fay should also report \$100,000 as a reduction of stockholders' equity.

**84. (a)** All of the accounts given are stockholders' equity accounts. Total stockholders' equity is computed below.

Paid-in capital		\$ 600,000	
Common stock		<u>800,000</u>	
Addl. paid-in capital		1,400,000	
Retained earnings			
Appropriated	\$150,000		
Unappropriated	<u>200,000</u>	<u>350,000</u>	
			1,750,000
Accumulated other comprehensive income			
Unrealized loss on available-for-sale securities		(20,000)	
Less: Treasury stock		<u>(50,000)</u>	
			<u>\$1,680,000</u>

Both **treasury stock** and **net unrealized loss on available-for-sale securities** are contra stockholders' equity accounts.

**85. (a)** The number of shares outstanding is equal to the issued shares less treasury shares (TS). The table below shows the effects of each of the stock transactions on the common shares outstanding.

	<b>Outstanding shares</b>
1/1/Y2	300,000
1/31/Y2 declaration of 10% stock dividend	30,000
6/30/Y2 purchase of TS	(100,000)
8/1/Y2 sale of TS	<u>50,000</u>
Subtotal	280,000
11/30/Y2 stock split	× <u>2</u>
12/31/Y2	<u>560,000</u>

**86. (a)** Shares issued and outstanding are computed below.

	<b>Issued</b>	<b>Outstanding</b>
12/31/Y1	100,000	95,000
5/3/Y2		1,000
8/6/Y2	<u>10,000</u>	<u>10,000</u>
Subtotal	110,000	106,000
11/18/Y2	<u>110,000</u>	<u>106,000</u>
12/31/Y2	<u>220,000</u>	<u>212,000</u>

At 12/31/Y1, shares issued were 100,000 and outstanding 95,000 (100,000 issued less 5,000 treasury). The reissuance of treasury stock does not increase shares issued, but does increase shares outstanding by 1,000 to 96,000 (100,000 issued less 4,000 treasury). The issuance of previously unissued stock on 8/6/Y2 increases both issued and outstanding shares by 10,000, bringing the totals to 110,000 issued and 106,000 outstanding prior to the stock split. Since treasury stock is protected from dilution, shares issued, treasury shares, and outstanding shares are all doubled by the stock split.

**87. (a)** The requirement is to determine the effect on Ali Corp. of exercising the stock options. First, the debt to equity ratio is calculated as follows:

$$\text{Debt to equity} = \frac{\text{Total liabilities}}{\text{Common stockholders' equity}}$$

The figures given in the problem reflect the account balances **after** the exercise of the stock options. Thus, Ali's debt to equity ratio after the exercise is

$$\frac{\$60,000}{\$500,000} = 12\%$$

When the options were exercised, total stockholders' equity would have increased by the amount of the option price as follows:

Common stock	↑	by par value × 1,000 shares
Paid-in-capital	↑	(by option price-par) × 1,000 shares

Note that the information given is incomplete as to whether compensation was recorded under the stock option plan. However, even if compensation was recorded, the entries are made only to accounts that impact stockholders' equity, and the net effect is no change. Thus, the only change is an increase resulting from the exercise of the options. Since common stockholders' equity increased, the denominator of the debt to equity ratio also increased. As the denominator becomes larger and the numerator remains constant, the quotient becomes smaller. Therefore, the debt to equity ratio must have **decreased** to its current level of 12%. Answer (b) is incorrect because earnings per share decreased by \$0.33. Answer (c) is incorrect because not enough information is given to calculate the asset turnover. Answer (d) is incorrect because the debt to equity ratio, rate of return on common stock, earnings per share, price earnings ratio, and book value per share were all affected by exercising the stock options.

**88. (c)** The requirement is to determine Irvington's return on common stockholders' equity for year 2, which is computed by dividing net income available to common stockholders (net income less preferred dividends) by average common stockholders' equity.

$$\frac{\$120,000 - \$10,000}{(\$375,000 + \$585,000) / 2} = 23\%$$

**89. (d)** The requirement is to determine the book value per common share. The book value per common share is the amount each share would receive if the company were liquidated. The book value per common share is calculated as follows:

	Preferred	Common
Preferred stock, 5%	\$250,000	
Common stock		\$350,000
APIC in excess of par value of common stock		125,000
Retained earnings:		
Dividends in arrears	25,000	
Liquidation premium	50,000	
Remainder to common (Plug)		<u>225,000</u>
Totals	<u>\$325,000</u>	<u>\$700,000</u>
Shares outstanding		<u>100,000</u>
Book value per share		<u>\$ 7.00</u>

Note that when calculating the remainder to common, total stockholders' equity before the liquidation must be equal to the amount after the assumed liquidation.

**90. (c)** Under the cost method, treasury stock is debited for the cost of the treasury stock, thus decreasing total stockholders' equity. However, the book value per share will increase due to the acquisition of the treasury stock. Book value per share is calculated by dividing common stockholders' equity by the shares outstanding. An example will help illustrate.

Stockholders' equity	
Common stock (30,000 shares)	
\$5 par	\$150,000
Additional paid-in capital	550,000
Retained earnings	<u>250,000</u>
	\$950,000
Book value per share =	$\frac{\$950,000}{30,000} = \$31.67$

Per the facts in the question, treasury stock was acquired at more than par and original issue price, but less than book value per share. Therefore, the acquisition price must be greater than \$23.33 per share (700,000 ÷ 30,000) and less than \$31.67 per share.

Let's say 1,000 shares of treasury stock were acquired at \$27.00 per share.

$$\begin{aligned} \text{Book value per share} &= \frac{\$950,000 - (1,000 \times \$27)}{30,000 - 1,000} \\ &= \frac{\$923,000}{29,000} \\ &= \$31.83 \end{aligned}$$

The book value per share increased after the acquisition of the treasury stock.

**91. (b)** Dividends per share is used in the numerator of the dividend payout ratio as shown below.

$$\text{Dividend payout ratio} = \frac{\text{Dividends per share}}{\text{Earnings per share}}$$

However, dividends per share are not used in the calculation of earnings per share.

$$\text{Earnings per share} = \frac{\text{Net income} - \text{Preferred dividends}}{\text{Weighted-average number of shares outstanding}}$$

**92. (c)** The requirement is to identify how Logan should recognize the issuance of the bonds. Answer (c) is correct because IFRS provides that financial instruments with characteristics of both debt and equity are compound instruments and must be separated into its respective components. The liability is valued at the fair value at the date of issuance and the residual value is assigned to the equity component. Therefore, the bond should be recorded at its fair value of \$480,000 and an equity component should be recorded for 20,000. Answers (a), (b), and (d) are incorrect.

**93. (d)** The requirement is to identify the correct statement about recording convertible debt under IFRS. Answer (d) is correct because IFRS requires the proceeds to be allocated between debt and equity.

**94. (c)** The requirement is to identify the item that does not describe a method that may be used to account for treasury stock under IFRS. Answer (c) is correct because the retained earnings method is not a method that is used to account for treasury stock. The cost method, par value method, and constructive retirement method are all methods that may be used to account for treasury stock under IFRS.

----------	--------------------------	------

Items 1 through 10 require you to select the **best** response from the responses to be selected.

#### Responses to be selected

- A. Contains no potentially dilutive securities
- B. A form of compensation which allows employees to receive stock or cash for the difference between the stated value and the market value
- C. Legal or contractual restrictions on the number of shares an employee may own
- D. Issuance of additional shares in order to reduce the market value
- E. Purchase by the corporation of its own stock
- F. The value of treasury shares are recorded at cost of acquisition
- G. A dividend paid which is considered a return of the shareholders' investment
- H. Actions by the board of directors to disclose amounts not available for dividends
- I. The balance of the treasury stock account reflects the par value
- J. A form of compensation which allows employees to purchase shares at a specified price
- K. A dividend issued in the form of a note payable
- L. A stock transaction resulting in a reduced number of shares outstanding and a higher market value
- M. Assumes convertible securities were converted at the beginning of the period

### Task-Based Simulation 2

Statement of Retained Earnings	Authoritative Literature	Help
--------------------------------	--------------------------	------

Min Co. is a publicly held company whose shares are traded in the over-the-counter market. The stockholders' equity accounts at December 31, year 1, had the following balances:

Preferred stock, \$100 par value, 6% cumulative; 5,000 shares authorized; 2,000 issued and outstanding	\$ 200,000
Common stock, \$1 par value, 150,000 shares authorized; 100,000 issued and outstanding	100,000
Additional paid-in capital	800,000
Retained earnings	1,586,000
Total stockholders' equity	<u>\$2,686,000</u>

Transactions during year 2 and other information relating to the stockholders' equity accounts were as follows:

- February 1, year 2—Issued 13,000 shares of common stock to Ram Co. in exchange for land. On the date issued, the stock had a market price of \$11 per share. The land had a carrying value on Ram's books of \$135,000, and an assessed value for property taxes of \$90,000.
- March 1, year 2—Purchased 5,000 shares of its own common stock to be held as treasury stock for \$14 per share. Min uses the cost method to account for treasury stock. Transactions in treasury stock are legal in Min's state of incorporation.
- May 10, year 2—Declared a property dividend of marketable securities held by Min to common shareholders. The securities had a carrying value of \$600,000; fair value on relevant dates were

Date of declaration (May 10, year 2)	\$720,000
Date of record (May 25, year 2)	758,000
Date of distribution (June 1, year 2)	736,000

- October 1, year 2—Reissued 2,000 shares of treasury stock for \$16 per share.
- November 4, year 2—Declared a cash dividend of \$1.50 per share to all common shareholders of record November 15, year 2. The dividend was paid on November 25, year 2.
- December 20, year 2—Declared the required annual cash dividend on preferred stock for year 2. The dividend was paid on January 5, year 3.
- January 16, year 3—Before closing the accounting records for year 2, Min became aware that no amortization had been recorded for year 1 for a patent purchased on July 1, year 1. Amortization expense was properly recorded in year 2. The patent was properly capitalized at \$320,000 and had an estimated useful life of eight years when purchased. Min's income tax rate is 30%. The appropriate correcting entry was recorded on the same day.
- Adjusted net income for year 2 was \$838,000.

Calculate the following amounts to be reported on Min's financial statements at December 31, year 2.

	<b>Amount</b>
1. Prior period adjustment, year 2	_____
2. Preferred dividends, year 2	_____
3. Common dividends—cash, year 2	_____
4. Common dividends—property, year 2	_____
5. Number of common shares issued at December 31, year 2	_____
6. Amount of common stock issued	_____
7. Additional paid-in capital, including treasury stock transactions	_____
8. Treasury stock	_____

Items 9 and 10 represent other financial information for year 1 and year 2.

9. Book value per share at December 31, year 1, before prior period adjustment	_____
10. Numerator used in calculation of year 2 earnings per share for the year	_____

#### Situation

M Corporation was incorporated in year 1. During year 1, the company issued 100,000 shares of \$1 par value common stock for \$27 per share. During year 2, the company had the following transactions.

1/2/Y2	Issued 10,000 shares of \$100 par value cumulative preferred stock at par. The preferred stock was convertible into five shares of common stock and had a dividend rate of 6%.
3/1/Y2	Issued 3,000 shares of common stock for legal service performed. The value of the legal services was \$100,000. The stock was actively traded on a stock exchange and valued on 3/1/Y2 at \$32 per share.
7/1/Y2	Issued 40,000 shares of common stock for \$42 per share.
10/1/Y2	Repurchased 16,000 shares of treasury stock for \$34 per share. M Corp. uses the cost method to account for treasury shares.
12/1/Y2	Sold 3,000 shares of treasury stock for \$29 per share.
12/30/Y2	Declared and paid a dividend of \$0.20 per share on common stock and a 6% dividend on the preferred stock.

During year 1, M Corporation had net income of \$250,000 and paid dividends of \$28,000. During year 2, M Corporation had net income of \$380,000.

Indicate the impact that the transactions for M Company have on its owner equity accounts. Place the appropriate amounts in the table below. If an amount is negative, show the amount in parentheses.

Date	Transaction	Preferred stock	APIC—Preferred stock	Common stock	APIC—Common stock	Retained earnings	Treasury stock	APIC—Treasury stock
1/01	Beginning balance							
1/2/Y2	Issue preferred stock at par							
3/1/Y2	Issue common stock for services							
7/1/Y2	Issue common stock for cash							
10/1/Y2	Repurchase treasury stock							
12/1/Y2	Sell treasury stock							
12/30/Y2	Declare and pay dividends							
12/31/Y2	Net income							
12/31/Y2	Ending Balance

### Task-Based Simulation 8

<b>Journal Entries</b>	<b>Authoritative Literature</b>	<b>Help</b>
------------------------	---------------------------------	-------------

Field Co.'s stockholders' equity account balances at December 31, year 5, were as follows:

Common stock	\$ 800,000
Additional paid-in capital	1,600,000
Retained earnings	1,845,000

The following year 6 transactions and other information relate to the stockholders' equity accounts:

- Field had 400,000 authorized shares of \$5 par common stock, of which 160,000 shares were issued and outstanding.
- On March 5, year 6, Field acquired 5,000 shares of its common stock for \$10 per share to hold as treasury stock. The shares were originally issued at \$15 per share. Field uses the cost method to account for treasury stock. Treasury stock is permitted in Field's state of incorporation.
- On July 15, year 6, Field declared and distributed a property dividend of inventory. The inventory had a \$75,000 carrying value and a \$60,000 fair market value.
- On January 2, year 1, Field granted stock options to employees to purchase 20,000 shares of Field's common stock at \$18 per share, which was the market price on that date. The options may be exercised within a three-year period beginning January 2, year 6. The measurement date is the same as the grant date. On October 1, year 6, employees exercised all 20,000 options when the market value of the stock was \$25 per share. Field issued new shares to settle the transaction. The stock options were accounted for in accordance with the intrinsic value method, which was in effect at the time.
- Field's net income for year 6 was \$240,000.

Prepare journal entries for the following transactions in year 6.

1. Treasury stock purchased on March 5, year 6

2. Declaration and distribution of a property dividend on July 15, year 6

3. Issue of common stock on October 1, year 6

### Explanations

- (I) In accordance with the par value method, treasury shares are recorded at par value by debiting treasury stock when acquired. Any additional paid-in capital from the original issue of the acquired shares is also debited, cash is credited, and either additional paid-in capital—treasury stock is credited or retained earnings are debited for the difference between cash and the other two debits previously mentioned.
- (H) Appropriations of retained earnings are actions by the board of directors to disclose amounts not available for dividends.
- (D) A stock split changes the number of shares outstanding and the par value per share. The purpose of a stock split is to reduce the market price per share.
- (A) A simple capital structure for a corporation exists if there are no potentially dilutive securities.
- (M) The if-converted method for convertible securities assumes that the securities were converted at the later of the beginning of the period or the date of issue. The method thus increases the weighted-average number of shares in the denominator of the EPS equation. Since the method assumes conversion at the beginning of the period, no preferred dividends or interest would be considered to have been paid.
- (K) A scrip dividend is a dividend issued by the corporation in the form of a note payable.
- (B) A stock appreciation right allows an employee to receive the excess of the market value of the stock over a preestablished value in the form of cash, shares of stock, or both on the exercise date.
- (J) A stock option is a form of compensation given to employees which allows them to purchase shares of stock at a specified price.
- (G) A dividend paid to shareholders in excess of the retained earnings balance which is considered to be a return of capital and a liquidating dividend.
- (E) When a corporation purchases its own stock in the market, the stock is termed treasury stock. Treasury stock is not an asset as a corporation cannot invest in itself. Treasury stock is recorded in a contra equity account.

## Task-Based Simulation 2

Statement of Retained Earnings		
	Authoritative Literature	Help

This problem is a collection of miscellaneous stockholders' equity problems. The candidate should start the problem by scanning the required information to determine the amounts to be calculated. While scanning, the candidate should recognize that some of the required items are related, such as number 2 (preferred dividends) in the Statement of Retained Earnings, and numbers 1, 2, 4 and 6 in the Financial Statement Disclosures. These relationships require that the candidate label each answer, so that it will be possible to quickly find that answer when it is used in a subsequent problem.

Unlike many previous exam problems, the order of the information concerning the transactions does not coincide with the order of the required answers. This arrangement makes it necessary to read the required amount and then hunt for the transaction information needed to calculate that required amount.

- 1. (\$14,000)** Prior period adjustment is the term generally applied to corrections of errors of prior periods. In this problem no amortization had been recorded in a prior year—an error. Since this is not a self-correcting error, it still existed in year 2. The calculation is cost (\$320,000) ÷ useful life (eight years) for 1/2 year (purchased July 1). Prior period adjustments are disclosed net of tax (30%).  $\$320,000/8 \times 1/2 \times (1 - .3) = \$14,000$ .
- 2. (\$12,000)** Preferred dividends are 6% and cumulative. They were declared during year 2 and paid in year 3. The declaration is sufficient to record and recognize the dividends legally; they do not have to be paid in the current year to be recognized during that time period. These dividends will be used in the numerator in question 20 when calculating the year 2 EPS. Since these dividends are cumulative, they would be used in the calculation of EPS even if they had not been declared. The amount of preferred dividends is derived by multiplying the par value of the stock by its rate.  $6\% \times \$200,000 \text{ par} = \$12,000 \text{ dividends}$ .
- 3. (\$165,000)** Common dividends—cash is calculated by the formula: Common shares outstanding × Dividend per share. In this problem the number of shares outstanding is affected by the beginning shares (100,000), shares issued (13,000), and treasury shares purchased and sold (5,000 purchased, 2,000 sold) prior to the dividend date of November 4.  $100,000 + 13,000 - 5,000 + 2,000 = 110,000 \text{ shares outstanding} \times \text{dividend rate } \$1.50 = \$165,000$ .
- 4. (\$720,000)** Common dividends—property differs from cash dividends because the property may be carried in the accounts at an amount which does not equal its fair value (cash is always at its fair value). Management intends to distribute the property at its fair value, therefore it is necessary to bring the property to fair value on the date management is legally forced to distribute it (the declaration date). Value fluctuations beyond that date are irrelevant.
- 5. (113,000)** The number of shares issued differs from the number of shares outstanding which was used in question 3 under Calculations. Shares issued include those outstanding as well as those held in the treasury. Shares outstanding from question 3 above, 110,000 plus 3,000 treasury shares = 113,000 shares.
- 6. (\$113,000)** Amount of common stock issued—This question takes the answer from question 1 above (113,000 shares) and multiplies that figure by the par value of each share, \$1.
- 7. (\$934,000)** The additional paid-in capital, including treasury stock transactions, is derived by adding the beginning balance (\$800,000) to the excess (\$10) of issue price (\$11) over par value (\$1) for the shares issued (13,000) to acquire land on February 1, year 2. In addition, the sale of the treasury stock (2,000 shares) at an amount (\$16) greater than cost (\$14) gives rise to a nonoperating gain that cannot be included in net income since it was both not related to operations and is a transaction in the company's own stock.  $\$800,000 + (13,000 \times \$10) + [2,000 \times (\$16 - \$14)] = \$934,000$ .
- 8. (\$42,000)** Treasury stock—Since Min Co. follows the cost method of accounting for treasury stock, this answer is derived by multiplying the shares of treasury stock (3,000) by their cost (\$14).  $3,000 \times \$14 = \$42,000$ .
- 9. (\$24.86)** Book value per share is a concept that relates common stockholders' equity to shares of common stock. The "per share" referred to is always the **common** shares unless the problem states some other type of shares. In this case it is to be calculated before the prior period adjustment. It is necessary to subtract preferred stock's total liquidating value ( $\$100 \times 2,000 \text{ sh} = \$200,000$ ) from total stockholders' equity (\$2,686,000) to obtain common stockholders' equity. In this problem no liquidating value is given, so par value is used. The resulting amount ( $\$2,686,000 - \$200,000 = \$2,486,000$ ) is divided by the common shares outstanding (100,000) to obtain book value per share (\$24.86).  $(\$2,686,000 - \$200,000) \div 100,000 = \$24.86$ .
- 10. (\$826,000)** The formula for calculating earnings per share is  $(\text{NI} - \text{Preferred dividends}) \div \text{Wtd.-avg. shares outstanding}$ . The numerator is income available to common stockholders. The problem states that adjusted net income for year 2 was \$838,000. The word "adjusted" tells the candidate that net income includes all information concerning transactions in the problem and need not be changed in any way. Preferred dividends (\$12,000) were calculated in question 2. above.  $\$838,000 - \$12,000 = \$826,000$ .

	Authoritative Literature	Help

Date	Transaction	Preferred stock	APIC—Preferred stock	Common stock	APIC—common stock	Retained earnings	Treasury stock	APIC—treasury stock
1/01/Y2	Beginning balance			100,000	2,600,000	222,000		
1/2/Y2	Issue preferred stock at par	1,000,000						
3/1/Y2	Issue common stock for services			3,000	93,000			
7/1/Y2	Issue common stock for cash			40,000	1,640,000			
10/1/Y2	Repurchase treasury stock						(544,000)	
12/1/Y2	Sell treasury stock					(15,000)	102,000	
12/30/Y2	Declare and pay dividends					(86,000)		
12/31/Y2	Net income					380,000		
12/31/Y2	Ending balance	1,000,000	0	143,000	4,333,000	501,000	(442,000)	0

### Explanations

- Preferred stock  $10,000 \times \$100 = \$1,000,000$
- Value of services = Fair value of stock which is more reliable since stock is traded on the open market.  $3,000 \text{ shares} \times \$32 \text{ per share} = \$96,000$
- Common stock:  $40,000 \text{ shares of common stock} \times \$1 \text{ par} = \$40,000$  to common stock account;  $\$40,000 \times 41 = \$1,640,000$  to APIC
- Treasury stock is recorded at cost.  $16,000 \text{ shares} \times \$34 \text{ per share} = \$544,000$
- Treasury stock is reduced by the cost paid  $3,000 \times \$34 \text{ per share} = \$102,000$ . There is a \$5 per share loss on the treasury shares which is debited to retained earnings  $3,000 \text{ shares} \times \$5 = \$15,000$
- Dividends to preferred shareholders =  $10,000 \times \$100 \text{ par} = \$1,000,000 \times 6\% = \$60,000$  preferred dividends
- Dividends to common shareholders. Number of common shares outstanding equals  $100,000 \text{ shares} + 3,000 \text{ shares issued} + 40,000 \text{ shares issued} - 16,000 \text{ treasury shares purchased} + 3,000 \text{ treasury shares reissued} = 130,000 \text{ outstanding shares} \times \$0.20 = \$26,000$ . Therefore, total dividend is \$86,000

### Ending Balances

- Preferred stock: Issued at par.  $10,000 \text{ shares} \times \$100 = \$1,000,000$
- Common stock:  $\$100,000 + \$3,000 + \$40,000 = \$143,000$
- Additional paid-in capital—Common stock:  $\$2,600,000 + \$93,000 + \$1,640,000 = \$4,333,000$
- Retained earnings:  $\$250,000 - \$28,000 = \$222,000$  at end of year 1
- Retained earnings for year 2:  $\$222,000 - \$15,000 - \$86,000 + \$380,000 = \$501,000$
- Treasury stock:  $\$544,000 - \$102,000 = \$442,000$

Calculation EPS		
	Authoritative Literature	Help

Basic earnings per share

Numerator	320,000
Denominator	118,750
Basic earnings per share	2.6947

Diluted earnings per share

Numerator	380,000
Denominator	168,750
Diluted earnings per share	2.2519

**Explanations**

Numerator: \$380,000 net income – \$60,000 in preferred dividends = \$320,000. Denominator – Weighted-average common shares.

Date	# shares	Time outstanding	WACS
1/1	100,000	12/12	100,000
3/1	3,000	10/12	2,500
7/1	40,000	6/12	20,000
10/1	(16,000) treasury shares	3/12	(4,000)
12/1	3,000 treasury shares sold	1/12	<u>250</u>
Total WACS outstanding			<u>118,750</u>

WACS outstanding: Basic EPS 118,750 + Convertible preferred (10,000 shares preferred × 5 shares common) 50,000 = 168,750.

| 6. If a company has cumulative preferred stock, all dividends in arrears must be subtracted from net income in the numerator of basic earnings per share.                                  | <input type="radio"/>            | <input checked="" type="radio"/> |
| 7. Cash dividends become a liability to the corporation when declared.   | <input checked="" type="radio"/> | <input type="radio"/>            |
| 8. Stock issued for services should be recorded at the fair market value of the services rendered if that value is greater than the fair market value of the stock traded on the exchange. | <input type="radio"/>            | <input checked="" type="radio"/> |

### Explanations

- (F) Mandatorily redeemable preferred is classified as a liability on the balance sheet.
- (F) Property dividends are valued at fair market value of the property at the date of declaration.
- (F) When a company makes a liquidating dividend, a company usually debits additional paid-in capital rather than retained earnings. Common stock cannot be debited because it is considered legal capital which is only eliminated upon the dissolution of the corporation.
- (T) All dividends are liabilities on the dates declared.
- (F) Large stock dividends are recorded at par. A stock dividend of 40% of the shares outstanding is considered a large stock dividend.
- (F) If a company has cumulative preferred stock, only the current year dividends in arrears are subtracted from net income in the numerator of basic earnings per share.
- (T) All dividends are liabilities on the dates declared.
- (F) The more objective measurement of the value of the goods or services exchanged for stock is the fair market value of the stock if the stock is traded on a stock exchange.

<b>Retained Earnings</b>	<b>Authoritative Literature</b>	<b>Help</b>

*Field Company*  
**STATEMENT OF RETAINED EARNINGS**  
*For the Year Ending December 31, Year 6*

Beginning retained earnings, 1-1-Y6	1,845,000
Net income	240,000
Dividends	<u>(60,000)</u>
End retained earnings, 12-31-Y6	2,025,000

*Field Company*  
**STOCKHOLDERS' EQUITY SECTION OF BALANCE SHEET**  
*December 31, Year 6*

Common Stock [1]	900,000
Additional paid-in capital [2]	1,860,000
Retained earnings	2,025,000
Treasury stock	(50,000)
Accumulated other comprehensive income	0
Total stockholders' equity	4,735,000

[1] Shares issued:  $160,000 + 20,000 = 180,000 \times \$5 = \$900,000$

[2] Additional paid-in capital  $\$1,600,000 + [20,000 \times (\$18 - \$5)] = \$1,860,000$  ( $\$1,600,000 + \$260,000$ )

### Explanations

To prepare the stockholders' equity section of Field's December 31, year 6 balance sheet, certain computations need to be made first.

- The common stock authorized does not change throughout the problem; it is 400,000 shares. The number of shares outstanding increases by the 20,000 shares issued when the stock options were exercised. The balance in the common stock account is the number of shares issued times the par value of the common stock ( $180,000 \times \$5 = \$900,000$ ).
- The treasury stock is accounted for by the cost method, which means the treasury stock is recorded at cost ( $5,000 \text{ shares} \times \$10 = \$50,000$ ). The journal entry for the treasury stock is

Treasury stock                      50,000

Cash                                      50,000

- The information given indicates that the intrinsic value method is used. Because the intrinsic value method is used, compensation cost is zero and no entry is made until the options are recognized. Additional paid-in capital is the amount of money received for

stock above the par value. The exercise or option price of the stock options exercised was \$18 per share. The \$13 per share paid above the par value of the stock needs to be added to the additional paid-in capital account, so \$260,000 ( $\$13 \times 20,000$  shares) should be added to the beginning balance of \$1,600,000 for a total of \$1,860,000 in the additional paid-in capital account.

4. The formula for retained earnings is

Beginning balance  
 Add: Net income  
 Less: Dividends  
 Ending balance

The amount of the dividends is the fair market value of the property distributed, which is \$60,000 in this case. A \$15,000 loss is recognized from the property dividend for the difference between the \$75,000 carrying value and market value of the inventory. However, this loss would already be included in year 2 net income. Retained earnings is calculated as follows:

Beginning balance	\$1,845,000
Add: Net income	240,000
Less: Dividend	<u>(60,000)</u>
Ending balance	<u>\$2,025,000</u>

# Module 16: Investments

## Overview

Investments in debt and equity securities are accounted for using ASC Topics 320, 323, 325, and 825 (SFAS 115, APB 18, or SFAS 159). The accounting treatment for investments is different depending upon the percentage of ownership, the classification of the security, and the election of the fair value option for reporting financial assets. This module will begin by covering the rules for trading, available-for-sale, and held-to-maturity securities. The coverage includes discussions on the initial recording of the securities, subsequent accounting, transfers between categories, and financial statement presentation.

This module also covers the equity method of accounting for investments where significant influence exists. After you understand the reporting rules for investments the fair value option will be discussed.

<b>A. Concepts of Accounting and Investment Percentage</b>	<b>639</b>
<b>B. Investments in Which Significant Influence Does <i>Not</i> Exist</b>	<b>640</b>
<b>C. Investments Where Significant Influence <i>Does</i> Exist</b>	<b>647</b>

<i>Multiple-Choice Answers and Explanations</i>	<b>664</b>
<i>Simulations</i>	<b>672</b>
<i>Simulation Solutions</i>	<b>679</b>

## A. Concepts of Accounting and Investment Percentage

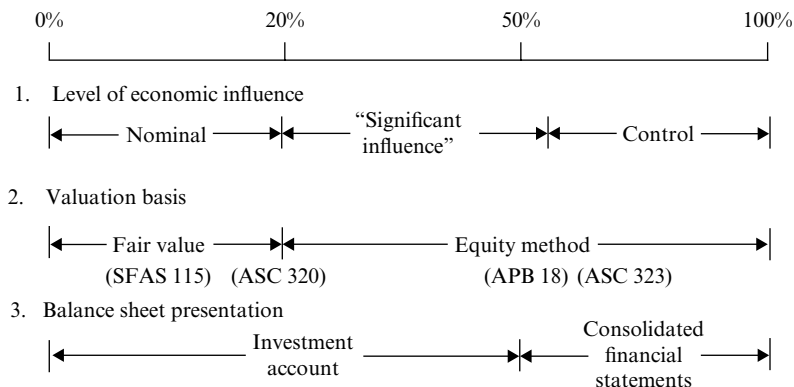

- Debt securities** are “any security representing a creditor relationship with an entity.”
  - This includes corporate debt, convertible bonds, US Treasury and municipal securities, redeemable preferred stock, commercial paper, and other secured debt instruments.
  - Excluded are unsecured trade receivables and consumer loans and notes receivable because they are not normally traded on organized exchanges and because of cost/benefit considerations.
  - Investments in debt securities are classified into three categories: trading securities, available-for-sale securities, and held-to-maturity securities.
    - Debt securities are discussed in Section B of this module and also in Module 13, Section B.
- Equity securities** include ownership interests (common, preferred, and other capital stock), rights to acquire ownership interests (rights, warrants, call options), and rights to dispose of ownership interests (put options).
  - The accounting rules for investments in the common stock of another corporation are generally based on the percentage of the voting stock obtained.
    - Investments of less than 20% of the outstanding stock*

In most cases, “small” investments in marketable equity securities are classified into two categories: trading securities and available-for-sale securities. Discussion of these smaller investments is presented in Section B of this module.
    - Investments between 20% and 50% of the outstanding stock*

At 20% or more ownership, the investor is presumed to be able to significantly influence the operating or financial decisions of the investee. Most investments in this range will result in significant influence; however, the 20% level is just a guide.

- (a) An example in which an investor owning between 20% and 50% may not be able to exercise influence over the investee is when the majority ownership is concentrated among a small group of investors who ignore the views of the minority investor.
  - (b) The equity method of accounting is used for investments resulting in significant influence.
  - (c) Investments where significant influence does exist are discussed in Section C of this module.
- (3) *Investments of more than 50% of the outstanding stock*  
At more than 50% ownership, the investor has control because of its majority ownership of the voting stock.
- (a) Most of these investments will require the preparation of consolidated financial statements. Consolidations are discussed in Module 18.
3. Securities are originally recorded at cost, including any broker's fees, taxes, etc.; this amount is the best estimate of fair value at acquisition.
- a. Cost equals the cash paid or, in noncash transactions, the fair value of either the securities received or the resources sacrificed, whichever is more clearly determinable.
    - (1) The fair value of debt securities equals the present value of their future cash inflows.
      - (a) The present value is calculated using the current market rate of interest for similar instruments with similar risk.
      - (b) Any accrued interest is accounted for separately.
    - (2) The fair value of equity securities must be readily determinable from quotes obtainable from a securities exchange registered with the SEC or from the over-the-counter market.
      - (a) Investments which are considered to be nontradeable or investments which do not have determinable fair values should be carried at cost and adjusted only for permanent declines in value.
  - b. The exhibit that follows illustrates the major concepts of accounting for investments in equity securities.

**PERCENTAGE OF OUTSTANDING VOTING STOCK ACQUIRED**

- (1) Several exceptions to these general concepts exist. These exceptions are noted in the following discussions.

**B. Investments in Which Significant Influence Does *Not* Exist**

Investments which do not confer significant influence over the operating or financial decisions of the investee consist of all debt securities and generally all small (less than 20%) investments in equity securities. Such investments should be segregated into held-to-maturity securities (debt securities only), trading securities, and available-for-sale securities; the appropriateness of the classification should be reviewed at each reporting date.

**1. Held-to-Maturity Securities (amortized cost)**

- a. This category includes only debt securities and requires the positive intent and ability to hold the securities to maturity (not simply an absence of intent to sell).
- b. Held-to-maturity securities are carried at amortized cost (acquisition cost adjusted for amortization of premium or discount) using effective interest method; thus, unrealized holding gains and losses are not reported.
  - (1) However, realized gains and losses are included in earnings, as are interest income and premium and discount amortization.

- c. These securities are classified on the balance sheet as current or noncurrent on an individual basis, and on the statement of cash flows as investing activities.
- d. In rare instances, the investor company's intent to hold a security to maturity may change without casting doubt on its intent to hold other debt securities to maturity.
  - (1) The circumstances must be nonrecurring and unforeseeable, such as the continuing deterioration of the issuer's credit.
  - (2) Premature sale of held-to-maturity securities may be considered as maturities if either of the following conditions are met:
    - (a) The sale occurs so close to the maturity date that interest rate risk is virtually eliminated, or
    - (b) The sale occurs after at least 85% of the principal has been collected.
- e. Investments in held-to-maturity securities are accounted for under the cost method (unless the fair value option is elected), which requires that they be carried at amortized cost (acquisition cost adjusted for amortization of premium or discount). Coverage of accounting for these appears under bond investments in Module 13B.

## 2. Trading Securities (subsequently measured at fair value)

- a. Debt and equity securities purchased and held principally for the purpose of generating gains on current resale are classified as trading securities.
- b. Trading securities are accounted for according to the cost adjusted for fair value method, under which the carrying amount is adjusted at financial statement dates for subsequent changes in fair value (i.e., they are carried at fair value). (See Module 9, Section D, for a discussion of ASC Topic 820 [SFAS 157] and fair value measurements.)
- c. Trading securities are generally held by brokers, bankers, and other financial institutions which engage in active buying and selling activities.
- d. Both unrealized and realized gains and losses are included in income.
  - (1) However, to the extent that realized gains/losses have been previously reported as unrealized, only changes in the current period shall be reported as realized in the period of sale.
- e. Other components of earnings include dividend and interest revenue.
  - (1) Dividends on equity securities are recognized as income when declared by the investee.
  - (2) However, if dividends received exceed cumulative earnings since acquisition, the excess is accounted for as a liquidating dividend.
- f. Trading securities are reported on the balance sheet as either current or noncurrent as appropriate.
- g. Trading securities are reported on the statement of cash flows as either operating or investing activities based on the nature and purpose of the securities acquired.
- h. Debt securities reported at fair value require special accounting treatment.
  - (1) The securities are to be carried at market value while interest and amortization are to be calculated using the effective interest method. Therefore, any unrealized gain or loss is actually the difference between fair value and amortized cost, that is, the adjustment equals the change in fair value during the period, plus premium amortization (decrease in book value) or minus discount amortization (increase in book value).
  - (2) Both the interest revenue and the unrealized holding gain/loss are included in current earnings.
  - (3) An example of accounting for trading debt securities is presented in the comprehensive example at the end of Section B.

## 3. Available-for-Sale Securities (subsequently measured at fair value)

- a. Available-for-sale securities include debt and equity securities not categorized as either held-to-maturity securities or trading securities. For example, a company such as a manufacturing firm may purchase securities to make use of idle cash. These securities are not actively traded, nor will they necessarily be held to maturity.
- b. Included in earnings are realized gains and losses (which include previously unrealized holding gains and losses) and dividend and interest income.

- c. Available-for-sale securities are accounted for according to the cost adjusted for fair value method, under which the carrying amount is adjusted at financial statement dates for subsequent changes in fair value (i.e., they are carried at fair value).
- d. Unrealized gains and losses on available-for-sale debt and equity securities are calculated in the same manner as those on trading securities.
  - (1) These gains and losses, however, are not recognized in income of the period. Instead, the changes in fair value during a period (unrealized gains/losses) are reported as other comprehensive income (see Module 9, Section D), and the accumulated unrealized gain/loss on marketable securities account is presented as accumulated other comprehensive income in stockholders' equity.
- e. The following chart summarizes the three categories of marketable securities and the accounting treatment of each.

#### ACCOUNTING AND REPORTING OF MARKETABLE DEBT AND EQUITY SECURITIES

Category	Definition	How the security is reported on the balance sheet	How unrealized holding gains and losses are reported on the income statement*	How realized gains and losses are reported on the income statement
<b>Trading (trading securities)</b>	<b>Debt and equity</b> securities bought and held principally for the purpose of selling them in the near term	Reported at fair value and grouped with current assets on the balance sheet	Unrealized gains and losses are included in earnings in the period they occur	Realized gains and losses not already recognized as unrealized components are recognized
<b>Available-for-sale</b>	<b>Debt and equity</b> securities not classified as trading or held-to-maturity	Reported at fair value and may be classified as current or noncurrent	Unrealized gains and losses for a period are excluded from earnings and reported as other comprehensive income (If decline is "other than temporary" then recognized in earnings)	Realized gains and losses are recognized (which include unrealized holding gains and losses recognized previously as unrealized)
<b>Held-to-maturity</b>	<b>Debt</b> securities that the organization has the positive intent and ability to hold to the maturity date	Reported at amortized cost and may be classified as current or noncurrent	Unrealized gains and losses are excluded from earnings (unless decline is "other than temporary")	Realized gains and losses are recognized in accordance with amortized cost method

\*Or on the statement where items of other comprehensive income are reported.

- f. The fair value of a debt security minus its amortized cost represents the correct unrealized gain or loss for this security in the accumulated other comprehensive income account at year-end.
  - (1) The adjusting entry for this account at the end of the period will equal the difference between the account's balance before adjustment and the cumulative unrealized gain or loss on the debt and equity securities at the end of the period.
- g. Available-for-sale securities are classified on the balance sheet as current or noncurrent on an individual basis based on management's intent concerning the holding period and appear on the statement of cash flows as investing activities.

**EXAMPLE**

On 1/01/Y1, when interest rates were 12%, STC Corp. purchased the following securities:

Security description	Acquisition cost
• Shaner Enterprise ten-year, 10%, \$1,000 face value bonds (STC Corp. intends to hold the bond until it matures)	\$ 887
• Harmony Corporation five-year, 14%, \$5,000 face value bond (STC Corp. expects that interest rates will fall and the bond will be sold at a profit)	\$5,360
• 100 shares Keswick Corporation common stock (STC anticipates that the price of the stock will rise 10%, at which time the stock will be sold)	\$2,200
• 150 shares Rusell Inc. common stock (STC has no immediate plans to sell this stock)	\$5,600

The Shaner bond must be classified as held-to-maturity and carried at amortized cost since management has the ability and intent to hold the investment to the maturity date. The Harmony and Keswick securities are classified as trading securities because STC intends to hold these investments for only a short period of time expressly to realize a quick profit. The Rusell Inc. stock is classified as available-for-sale because STC has not expressed an intent to hold the stock for current resale. The Harmony, Keswick, and Rusell investments are all carried at fair value.

At the end of year 1, the fair values of the Keswick and Rusell stock are \$2,700 and \$5,190, respectively. Interest rates have fallen to 10%, boosting the value of the Harmony bond to \$5,634. Interest income, premium amortization, and unrealized gain on this bond are calculated as

Date	14% Cash interest	12% Effective interest	Premium amortization	Carrying value	Fair value	Unrealized gain (loss)
1/01/Y1				\$5,360	\$5,360	
12/31/Y1	\$700	\$643	\$57	5,303	5,634	\$331

**NOTE:** The unrealized gain (\$331) equals the increase in fair value (\$274) plus the premium amortization (\$57).

Interest income and discount/premium amortization must be recorded for the bonds in any of the three portfolios. Both the Harmony and Shaner bonds were purchased to yield 12%. The adjusting journal entries required at 12/31/Y1 are

Interest receivable	100	
Investment in Shaner bond—held-to-maturity	6	
Interest income (\$887 × 12%)		106
Interest receivable	700	
Investment in Harmony securities—trading		57
Interest income		643

On 12/31/Y1 after the two adjusting entries above are posted, the carrying values and fair values are

	12/31/Y1 Carrying amount	12/31/Y1 Fair value
Held-to-maturity:		
Shaner bond	\$ 893	NA
Trading:		
Harmony bond	5,303	\$5,634
Keswick stock	2,200	2,700
Available-for-sale:		
Rusell stock	5,600	5,190

At this time, the adjusting journal valuation entries are made for the trading and the available-for-sale portfolios of securities, as follows:

Investment in Harmony securities—trading	331	
Unrealized gain on holding debt securities (income statement) (\$5,634 FV – \$5,303 CV)		331

Investment in Keswick securities—trading	500	
Unrealized gain on holding equity securities (income statement)		
(\$2,700 FV – \$2,200 CV)	500	
Unrealized loss on Rusell securities—available- for-sale		
(other comprehensive income account)	410	
Investment in Rusell securities—available- for-sale		
(\$5,600 CV – \$5,190 FV)	410	

The unrealized holding gain on trading securities is a nominal account which is closed to income at 12/31/Y1. The unrealized loss on available-for-sale securities is closed out to the “accumulated other comprehensive income” account at year-end, which is presented in the stockholders’ equity section of the 12/31/Y1 balance sheet. It is important to note that the increases and decreases in fair value recorded above may alternatively be recorded in a separate fair value adjustment account (contra asset account). If a fair value adjustment account is used to carry the holding gains and losses, then the fair value adjustment account and the investment account would be netted for presentation purposes. The carrying amount of the Shaner bond at 12/31/Y1 is \$893 (\$887 + \$6).

Now assume that in July year 2, 75 of the 150 shares of Rusell stock were sold for \$30 per share. The entry to record the sale is

Cash (\$30 × 75)	2,250	
Loss on sale of securities	550	
Investment in Rusell securities—available-for-sale*		2,595
Reclassification adjustment of unrealized loss on Rusell securities—available-for-sale		205

\*Carrying value = \$5,190 (\$5,600 – 410) fair value on books ÷ 150 shares = \$34.60/share. \$2,595 = \$34.60 × 75 shares

The loss on sale of securities equals the initial acquisition cost of the securities less the sales price. Because the Rusell securities are classified as available-for-sale, the proportionate amount of unrealized holding gains or losses ( $\$205 = \frac{1}{2} \times \$410$ ) which had accumulated in the stockholders’ equity account would be reclassified and becomes part of the realized loss for inclusion in earnings of the period of the sale.

**NOTE:** The accumulated other comprehensive income account in stockholders’ equity is a “holding account” for the difference between the initial acquisition cost of the available-for-sale security and its current fair value at the balance sheet date.

No other holding gains or losses beyond the \$410 holding loss recognized on December 31, year 1, had accumulated since December 31, year 1. When the available-for-sale security is sold, the amount of the previously recognized unrealized holding gain or loss is reclassified and becomes part of the realized gain or loss on the sale of available-for-sale securities. The realized gain or loss on the sale is then the difference between the selling price and the initial acquisition cost ( $\$550 = \$2,250 - \$2,800$  acquisition cost of 75 shares).

In September year 2, Keswick Corp. declared a 10% stock dividend. Stock dividends should not be reflected in income. The stock’s current carrying value of \$2,700 should be allocated to the additional shares received from the dividend. Since STC holds 100 shares, the dividend will be 10 shares, resulting in a total of 110 shares. After the dividend, the 110 shares will each have a carrying value of \$24.55 ( $\$2,700 \div 110$ ) which will be adjusted to fair value at the end of the reporting period.

STC Corp. periodically reviews its intent to hold or actively trade its securities. At 12/31/Y2, when interest rates are 8%, STC decides that it will hold the Harmony bond indefinitely. Because this bond was originally classified as trading, it must be transferred to available-for-sale. Fair value on this date is \$5,773. The entries to record interest income and to transfer the bond are

Interest receivable	700	
Investment in Harmony securities—trading		64
Interest income		636
Investment in Harmony securities—trading	204	
Unrealized gain on holding debt securities		204
Investment in Harmony securities—available-for-sale	5,773	
Investment in Harmony securities—trading		5,773

The holding gain of \$204 (\$5,773 FV 12/Y2 – \$5,634 FV 12/Y1 plus premium amortization of \$64) is recognized in current earnings, and the value recorded in the available-for-sale portfolio reflects the fair value of \$5,773 at the transfer date. Note that from this point forward any holding gains or losses should be recognized as other comprehensive income and included in accumulated other comprehensive income in stockholders' equity in accordance with the available-for-sale classification.

Also on 12/31/Y2, STC sold its held-for-trading Keswick stock for \$32 per share. This transaction was recorded as follows:

Cash (\$32 × 110 shares)	3,520
Investment in Keswick securities—trading	2,700
Gain on sale of securities	820

On 12/31/Y2, STC also recorded the appropriate entries for amortization of the Shaner bond (\$7 discount amortization and \$107 interest income) and to adjust the Rusell stock to its current fair value of \$29 per share.

Finally, on 12/31/Y2 STC discovered that Shaner Enterprise is experiencing financial difficulty due to mismanagement, and the full amount of the bond will not be collected. This impairment would be considered other than temporary, so the investment in Shaner Enterprise bonds must be reduced to its current fair value of \$500. The realized loss of \$400 (\$900 12/31/Y2 current carrying value – \$500 FV) is reported in earnings, and no write-up will be allowed if a recovery is made at a later date.

To summarize STC Corp.'s marketable securities transactions for year 1 and year 2, Taccounts for each security are shown below, followed by earnings information relating to the investments.

Harmony Bond—Trading				Harmony Bond—Available-for-Sale			
1/01/Y1 Acquisition	5,360	57	12/31/Y1 Amort.	12/31/Y2 Transfer	5,773

#### 4. Transfers between Categories

- a. The classification of securities should be reviewed at each balance sheet date. Although a reclassification should be rare, a company may deem it necessary to transfer a security from one category to another.
- (1) Such transfers are accounted for at fair value, taking into consideration any unrealized holding gains or losses.
    - (a) For example, when a security is transferred from trading securities, any recognized unrealized gain or loss as of the date of transfer should not be reversed.
    - (b) On the other hand, in a transfer to trading securities, unrealized holding gains and losses are recognized immediately.
    - (c) Held-to-maturity securities reclassified to available-for-sale securities must be restated to fair value; any unrealized holding gain or loss that results is reported as accumulated other comprehensive income in stockholders' equity.
    - (d) However, transfers **from** held-to-maturity should be rare.
    - (e) Unrealized holding gain or loss on securities transferred to held-to-maturity from available-for-sale is also reported as accumulated other comprehensive income in stockholders' equity, but this gain or loss is then amortized over the remaining life of the security as an adjustment to yield.
  - (2) The treatment of securities transfers is summarized in the chart that follows.

#### *Securities transferred to:*

		Held-to-maturity	Available-for-sale	Trading
<i>Securities transferred from:</i>	Held-to-maturity		Report unrealized G/L as accumulated other comprehensive income in SE	Recognize unrealized G/L immediately
	Available-for-sale	Report unrealized G/L as accumulated other comprehensive income in SE & amortize the gain or loss over remaining life of security		Recognize unrealized G/L immediately
	Trading	Do not reverse unrealized G/L previously recognized in income	Do not reverse unrealized G/L previously recognized in income	

#### 5. Income Statement Presentation

- a. Since held-to-maturity and available-for-sale securities are held for some length of time, these securities may become impaired at some point.
- (1) If the decline in value is other than temporary, then the impaired security must be written down to fair value and the realized loss included in earnings.
  - (2) Any subsequent recovery would not be recognized in earnings unless realized through sale of the security.

- (3) An other than temporary impairment cannot occur in the context of trading securities because holding gains and losses are recognized in current earnings without limitation.
- b. Cash dividends or interest income should be included in the current period's income.
- c. Stock dividends should not be reflected in income.
  - (1) Additional shares received from a stock dividend should be added to the original shares and the per share value should be calculated upon the original shares' carrying value.
  - (2) At the end of the period the carrying value of the stock is adjusted to the fair value, and any unrealized holding gain or loss is recorded.
- d. Realized and **unrealized** gains and losses on trading securities are included in the current period's earnings.
  - (1) Only realized gains and losses on sales of available-for-sale and held-to-maturity securities should be included in earnings.
  - (2) Unrealized gains (losses) on available-for-sale securities are reported as other comprehensive income in one of three ways (see Module 9, Section D).
  - (3) Amortization of any unrealized holding gain or loss on securities transferred to held-to-maturity from available-for-sale is included in income.

**NOW REVIEW MULTIPLE-CHOICE QUESTIONS 1 THROUGH 31**

**C. Investments Where Significant Influence *Does* Exist**

Use of the equity method is required for investments which give the investor the ability to exercise significant influence over the operating and financial policies of the investee.

1. Ownership of 20% or more of the outstanding stock will result in that ability.
  - a. Exceptions to the use of the equity method (i.e., the cost adjusted for fair value method) are related to an assessment of the investor's level of influence over the investee.
    - (1) The cost adjusted for fair value method should be used if an investment of more than 20% is judged to be temporary, if the investment is in a company operating in a foreign country which has severe restrictions on the operations of companies and on the transfer of monies outside the country, and for other investments of more than 20% that do not result in significant influence.
  - b. There may be unusual circumstances in which a less than 20% investor may have significant influence over the investee, in which case the equity method must be used to account for the investment.
2. **Cost adjusted for fair value method**—The cost adjusted for fair value and the equity methods differ in the treatment of the investment account and in the recognition of earnings from the investment.
  - a. The cost adjusted for fair value method first records the cost of the investment in the investment account.
  - b. Income is recognized for dividends distributed from income of the investee earned since the date the investor acquired the stock.
    - (1) Any dividends distributed by the investee which exceed earnings since the acquisition date are classified as return of capital and recorded as a reduction of the investment account.
  - c. Under the cost adjusted for fair value method, equity securities must be adjusted for subsequent changes in fair value, and the unrealized holding gain or loss on equity securities for the period equals the current fair value minus the previous period's fair value on the books.
3. **Equity method**—The equity method also begins with recording the cost of the investment in the investment account but the two methods differ from this point on.
  - a. A basic concept of the equity method is the reciprocal relationship formed between the investment account on the investor's books and the book values of the net assets on the investee's books.
  - b. As changes in the investee's net assets occur (e.g., earnings, dividends, etc.), the investor will recognize in the investment account the percentage of ownership share of those changes.

c. Another aspect of the equity method is the computation and accounting for the difference between the cost of the investment and the book value of the acquired asset share at the investment date.

(1) The abundance of advanced accounting texts currently in print use an assortment of terms to describe the characteristics of this concept. For purposes of uniformity, the following boldfaced terms shall be used throughout this module.

**Differential**, which is the difference between the cost of the investment and the underlying book value of the net assets of the investee. This difference can be either positive or negative, as follows:

**Excess of Cost over Book Value**, which is generally attributable to

- **Excess of fair value over book value**, when the fair values of the investee's assets are greater than their book values, and
- **Goodwill**, when the investee has high earnings potential for which the investor has paid more than the fair values of the other net assets

**Excess of Book Value over Cost**, which is generally attributable to

- **Excess of book value over fair value**, when the book values of the net assets of the investee are greater than their fair values, and
- **Excess of fair value over cost**, when the cost of the investment is less than even the fair values of the investee's net assets. Some authors term this "negative goodwill."

If the differential is related to assets with finite useful lives, it will be amortized to the investment account. Goodwill will not be amortized; it will be written down if the investment is determined to be impaired.

#### EXAMPLE

A Company purchased 20 shares of B Company's 100 shares of common stock outstanding for \$25,000. The book value of B's total net worth (i.e., stockholders' equity) at the date of the investment was \$120,000. Any excess of cost over book value is due to equipment that has a ten-year remaining useful life.

Investment cost		\$ 25,000
Book value of B Company	\$120,000	
Percentage owned	<u>20%</u>	
Investor's share		<u>24,000</u>
Excess of cost over book value (due to equipment)		<u>\$1,000</u>
Amortization over forty years		
\$1,000 ÷ 10 years = \$100		

d. Under the equity method, the Income from Investment account is a parallel income statement account to the Investment in Stock balance sheet account. These two accounts should include all the income recognition and amortization resulting from the investment.

**NOTE:** Under the equity method, dividends received from the investee are a reduction in the Investment balance sheet account and are **not** part of the Income from Investment account.

e. Alternative levels of recording the results of intercompany transactions and amortization in both the investment and investment income accounts are used in accounting practice. The alternatives are presented below.

- (1) **Cost adjusted for fair value method**—No intercompany transactions or amortization are recognized in either the investment account or investment income account under this method.
- (2) **"Partial" equity**—Includes recognition of percentage share of income or loss, dividends, and any changes in the investment percentage. This method is often used for investments that will be consolidated. Thus, amortization and other adjustments are made on the worksheets, not in the investment account.

- (3) **“Full” equity**—In addition to the factors above, this level includes any necessary amortization or write-off of the differential between the investment cost and book value of the investment. This level also recognizes the effects of any intercompany transactions (e.g., inventory, fixed assets, and bonds) between the investor and investee corporations. All unconsolidated investments are reported in the financial statements using the “full” equity method.

**EXAMPLE**

Assume the same facts for A Company and B Company as stated above. In addition, B Company earned \$10,000 income for the year and paid \$6,000 in dividends. There were no intercompany transactions. If A Company does not have significant influence over B Company, the investment would be accounted for by the cost adjusted for fair value method. If A Company can significantly influence B Company, the equity method is used to account for and report the investment. The appropriate entries are

<b>Cost adjusted for fair value method</b>		<b>Equity method</b>	
1. To record purchase of 20% interest			
Investment in stock of B	25,000	Investment in stock of B	25,000
Cash	25,000	Cash	25,000
2. To record percentage of share of investee’s reported income			
No entry		Investment in stock of B	2,000
		Income from investment (20% × \$10,000)	2,000
3. To record percentage share of dividend received as distribution of income			
Cash	1,200	Cash	1,200
Dividend income from investment (20% × \$6,000)	1,200	Investment in stock of B	1,200
4. To record amortization of equipment in accordance with ASC Topic 323			
No entry (no differential amortization under this method)		Income from investment	100
		Investment in stock of B	100

The differences in the account balances under the equity method vs. the cost adjusted for fair value method reflect the different income recognition processes and underlying asset valuation concepts of the two methods. The investment account balance under the cost adjusted for fair value method remains at the investment cost of \$25,000 (although subsequent changes in fair value would require that the investment account be adjusted to fair value), while under the equity method, the investment balance increases to \$25,700. The \$700 difference is the investor’s share of the increase in the investee’s undistributed earnings less the investor’s amortization of the differential (excess of cost over the book value of the investment).

The amount of the investment income to be recognized by the investor also depends upon the length of time during the year the investment is owned.

For example, assume that A Company acquired the 20% interest on July 1, year 2, and B Company earned \$10,000 of income ratably over the period from January 1 to December 31, year 2. The entry to record A Company’s percentage share of B Company’s income for the period of July 1 to December 31, year 2, would be

<b>Cost adjusted for fair value method</b>	<b>Equity method</b>
No entry	Investment in stock of B 1,000
	Income from investment (20% × \$10,000 × 6/12) 1,000

The receipt of the \$1,200 dividends after the acquisition date would require additional analysis since the \$1,200 dividend received is greater than the investor’s share of the investee’s income (\$1,000) since acquisition. The difference of \$200 (\$1,200 – \$1,000) is a return of capital under the cost adjusted for fair value method, and is recorded as follows:

<b>Cost adjusted for fair value method</b>		<b>Equity method</b>	
Cash	1,200	Cash	1,200
Dividend income from investment	1,000	Investment in stock of B	1,200
Investment in stock of B	200		

The amortization of equipment will also be prorated to the time period the investment was held.

4. **Changes to or from the equity method**—when an investor changes from the cost adjusted for fair value to the equity method, the investment account must be adjusted retroactively and prior years' income and retained earnings must be retroactively restated.
- a. A change to the equity method would be made if an investor made additional purchases of stock and, for the first time, is able to exercise significant influence over the operating and financial decisions of the investee.
- (1) Remember that ASC Topic 323 (APB 18) states that investments of 20% or more of the investee's outstanding stock carry the "presumption" that the investor has the ability to exercise significant influence. Therefore, in most cases, when an investment of less than 20% increases to more than 20%, the investor will retroactively change from the cost adjusted for fair value method to the equity method.
- (a) The retroactive change to the equity method requires a prior period adjustment for the difference in the investment account and retained earnings account between the amounts that were recognized in prior periods under the cost adjusted for fair value method and the amounts that would have been recognized if the equity method had been used.
- 1] In the full-year investment example on the previous page where A Company had a \$25,000 balance in its Investment in B account under the cost adjusted for fair value method and \$25,700 under the equity method, if A changed from the cost to the equity method because of its increased influence over B, the change entry would be

Investment in B Company	700	
Retained earnings		700
(\$700 = \$2,000 – \$1,200 – \$100)		

- (b) In addition, any balance in the Unrealized holding gain or loss account must be reversed.
- 1] Assume that the fair value of the B Company stock had increased from \$25,000 to \$27,000 as of the end of the year of acquisition. The investment account would have been debited for \$2,000 and the Unrealized gain on MES account credited for \$2,000 to bring the carrying value of the stock up to its fair value. Upon retroactive change to the equity method, the following reversing entry would be made:

Unrealized gain on MES	2,000	
Investment in stock of B		2,000

- (2) If the change is made at any time point other than the beginning of the fiscal period, the change entry would also include an adjustment to the period's Income from investment account to record the difference between the cost adjusted for fair value and equity methods handling of the investor's share of the investee's income for the current period.

- b. When an investor discontinues using the equity method because of an inability to influence the investee's financial and operating policies, no retroactive restatement is allowed.
- (1) An example of this would be a disposal of stock resulting in a decrease in the percentage of stock owned from more than 20% to less than 20%.
- (2) The earnings or losses that relate to the shares retained by the investor that were previously recognized by the investor should remain as a part of the carrying amount.
- (a) However, if dividends received by the investor in subsequent periods exceed the investor's share of the investee's earnings for such periods, the excess should be accounted for as a return of capital and recorded as a reduction in the investment carrying amount.
- c. A T-account is used to exhibit the major changes in the Investment in stock account under the equity method.

Investment in Stock	
Original cost of investment	Percentage share of investee's losses since acquisition
Percentage share of investee's income since acquisition	Percentage share of dividends received
Amortization of excess of book value over cost	Amortization of excess of cost over book value
Increase above "significant influence" ownership— retroactive adjustment for change to equity	Disposal or sales of investment in stock

- d. In addition to the above, several adjustments may be added if the “full equity” method is used. This method eliminates the effects of intercompany profits from transactions such as sales of inventory between the investor and investee corporations. This method is rarely required on the exam but candidates should briefly review these additions in association with the discussion of the elimination entries required for consolidated working papers presented later in Module 18.

Investment in Stock (continued)	
Realized portion of intercompany profit from last period confirmed this period	Elimination of unrealized portion of intercompany profit transactions from current period

**NOW REVIEW MULTIPLE-CHOICE QUESTIONS 32 THROUGH 48**

#### D. Equity Method and Deferred Income Taxes

1. Recognition of deferred taxes may be required when the equity method is used.
  - a. The difference between the income recognized using the equity method and the dividends received from the investee represents a temporary difference for which interperiod allocation is necessary.

**NOTE:** Companies are allowed to exclude 80% of the dividend income from domestic investees. If an investor owns 80% or more of the investee’s stock, the dividend exclusion is increased to 100% (i.e., no taxes are due on investee dividend distributions). The dividend exclusion (dividends received deduction) is a permanent difference.

2. A discussion of deferred income taxes arising from equity method investments and several examples are provided in Module 14, Deferred Taxes.

#### E. The Fair Value Option

1. An entity may elect to value its securities at fair value.
  - a. A firm can elect the fair value option on an instrument-by-instrument basis.
  - b. If the firm elects the fair value option for reporting available-for-sale or held-to-maturity securities, the security is revalued to fair value and any gain or loss is recorded in earnings for the period.
  - c. Likewise, if the fair value option is elected for instruments that would otherwise be reported using the equity method, the securities are revalued to fair value. Any gain or loss is recorded in earnings for the period.
  - d. If the fair value option is elected for instruments that would normally use the equity method, it must be applied to all interests in that entity (i.e., both debt and equity instruments would be valued at fair value).
2. The fair value option can be elected on the date an investment is first recognized, or when the investment no longer qualifies for fair value treatment.
  - a. For example, if Company A has a trading security in Company B stock and acquires more than 20% of Company B, the rules of the equity method of reporting would normally be applied. However, if the fair value option is elected, Company A is no longer required to use the equity method, but instead values the security at year-end at fair value. Any unrealized gain or loss is recognized in earnings for the period.
3. The rules for the statement of cash flows continue to apply for determining the classification of a purchase or sale of security on the statement of cash flows. Additional disclosures in the notes to the financial statements are required if the fair value option is elected. Refer to the outline of SFAS 159 (ASC Topic 825) for these disclosures.

#### F. Stock Dividends and Splits

Stock dividends and stock splits are not recorded as income. The recipient continues to own the same proportion of the investee as before the stock split or stock dividend. The investor should make a memo entry to record the receipt of the additional shares and recompute the per share cost of the stock.

#### G. Stock Rights

1. Investors in common stock occasionally receive stock rights to purchase additional common stock below the existing market price. The investee company has probably issued the stock rights to satisfy the investor’s

preemptive right to maintain an existing level of ownership of the investee. It is possible to waive these preemptive rights in some jurisdictions.

2. Rights are issued below the existing market price to encourage the exercise of the rights (i.e., the investor's use thereof resulting in acquisitions of additional shares of stock).
  - a. The rights are separable, having their own markets, and should be accounted for separately from the investment in common stock.
  - b. The rights represent a possible dilution of investor ownership and should be recorded by allocating the cost of the stock between the market value of the rights and the market value of the stock.

(1) This is accomplished by multiplying the following ratio by the cost basis of the stock:

$$\frac{\text{Market value of right}}{\text{Market value of right} + \text{Market value of stock}}$$

3. The following entry is made to record the receipt of the rights:

Investment in stock rights	xx	
Investment in common stock		xx

4. The rights can be sold or exercised. The entry for exercise is

Investment in common stock	xx	
Investment in stock rights		xx
Cash		xx

5. If the stock rights lapse

Loss on expiration of stock rights	xx	
Investment in stock rights		xx

### EXAMPLE

A Company acquired 1,000 shares of common stock in B Company for \$12,000. A Company subsequently received two stock rights for every share owned in B Company. Four rights and \$12 are required to purchase one new share of common stock. At the date of issuance the market value of the stock rights and the common stock is \$5 and \$20, respectively. The entry to record the receipt of the rights is as follows:

Investment in stock rights	4,000	
Investment in common stock		4,000

The \$4,000 above was computed as follows:

Total market value of rights	2,000 rights × \$5 =	\$10,000
Total market value of shares	1,000 shares × \$20 =	<u>\$20,000</u>
Combined market value		\$30,000
Cost allocated to stock rights	$\frac{\$10,000}{\$30,000} \times \$12,000 =$	\$4,000

Cost allocated to common stock	$\frac{\$20,000}{\$30,000} \times \$12,000 =$	\$8,000
--------------------------------	---	---------

If A uses 800 rights to purchase 200 additional shares of stock, the following entry would be made to record the transaction.

**NOTE:** \$2 (\$4,000 ÷ 2,000 rights) of cost is assigned to each stock right and \$8 (\$8,000 ÷ 1,000 shares) of cost to each share of stock.

Investment in common stock	4,000	
Investment in stock rights		1,600*
Cash		2,400**

\* (800 rights × \$2/right)  
 \*\* (200 shares × \$12/share)

If 1,000 stock rights are sold outright for \$5 per right, the following entry would be made to record the transaction.

Cash	5,000*	
Investment in stock rights		2,000**
Gain on sale of rights		3,000

\* (1,000 rights × \$5/right)  
 \*\* (1,000 rights × \$2/right)

If the 200 remaining stock rights are permitted to expire, the following entry would be made:

Loss on expiration of stock rights	400*	
Investment in stock rights		400*

\* (200 rights × \$2/right)

The journal entries above can be summarized as follows:

	Investment in common stock			Investment in stock rights		
Purchase, 1,000 shares @ \$12	12,000	4,000	←	4,000	1,600	Exercise of 800 rights
						Cost allocated to stock rights
Purchase, 200 shares by exercise of rights	4,000				2,000	Sale of 1,000 rights
					400	Expiration of 200 rights
	12,000			-		

**NOW REVIEW MULTIPLE-CHOICE QUESTIONS 49 THROUGH 52**

**H. Cash Surrender Value of Life Insurance**

- The cash surrender value of life insurance policies represents a noncurrent investment when the company is the beneficiary (rather than insured employees). The entry to record insurance premiums that increase cash surrender value is

Insurance expense	(plug)	
Cash surrender value	(increase in CSV)	
Cash		(total premium)

- Cash surrender value remains a noncurrent asset unless the company plans to cash in the policy within the next period.
- During the first few years of a policy, no cash surrender value may attach to the policy. During this period, the entire insurance premium would be expense. In addition, any dividends received from the life insurance policy are not recorded as revenue, but instead are offset against insurance expense.

**I. Research Component—Accounting Standards Codification**

- Research for investments is found in three topics in the Codification: ASC Topics 320, 323, and 825. ASC Topic 320, *Investments—Debt and Equity Securities*, outlines the rules for trading securities, available-for-sale

securities, and held-to-maturity securities. ASC Topic 323, *Investments—Equity Method and Joint Ventures*, covers the accounting rules for securities where significant influence exists and the equity method of accounting is required. ASC Topic 825, *Financial Instruments*, outlines the rules for electing the fair value option for reporting investments in debt and equity.

2. Keywords for research are listed below.

Asset-liability management	Fair value investment	Other comprehensive income loss
Available-for-sale	Fair value option	Readily determinable fair value
Carrying amount investment	Fair value security	Security maturity date
Cash flows securities	50% or less	Shares of investee
Classified securities	Held-to-maturity	Significant influence
Change intent	Increase in ownership investee	Trading
Debt equity securities	Intent indefinite period	Transfer between categories
Decline in fair value	Intercompany profits	Unrealized holding gains
Disclosure securities	Interest income	Unrealized holding losses
Dividend income	Investments equity securities	Voting privileges
Enterprise disclose	Loss temporary decline	
Equity method investment	Other comprehensive income gain	

**NOW REVIEW MULTIPLE-CHOICE QUESTIONS 53 THROUGH 59**

**J. International Financial Reporting Standards (IFRS)**

- As discussed earlier in fixed assets, the term investment is used in the area of investment property as well as investments in financial instruments of other entities. The accounting rules for investment property were covered under the section on fixed assets.
- The term “investments” refers to investments that are held for trading (HFT), available for sale (AFS), and held to maturity (HTM), as well as investments accounted for using the equity method, and investments that require consolidated financial statements. The accounting for investments is covered by various IASs, depending upon the type of investment.
- A financial instrument should be classified as either fair value through profit or loss (FVTPL), held to maturity (HTM), available for sale (AFS), or loans and receivables.
  - The FVTPL category includes financial assets in the held for trading (HFT) category.
  - HTM instruments have fixed and determinable payments and fixed maturity dates.
  - Held for trading (HFT) securities are securities that the entity has the intent to sell in the near term.
  - Available for sale financial assets are those that are not classified as FVTPL, HTM, or loans and receivables.
- If an asset is classified as fair value through profit or loss (FVTPL), it is remeasured to fair value at the end of each accounting period, and any profit or loss is recorded in that period.
  - An election can be made to use the FVTPL method for accounting purposes for an asset normally classified as available for sale (AFS) or held to maturity (HTM).
    - However, if an equity security has no active market in which to determine fair value, then the equity security may not be classified as FVTPL.
  - Once the item is classified as FVTPL, it may not be subsequently reclassified.
  - Any equity instrument that does not have a quoted market price or a determinable fair value should be accounted for using the cost method.
- If FVTPL is not elected, different rules apply.
  - If the investment is classified as held to maturity (HTM), the investment is recorded at cost, and is subsequently measured at amortized cost using the effective interest method.
  - Similarly, if a financial asset is classified as loans or receivables, it is accounted for by using amortized cost and the effective interest method.
  - If the investment is classified as available-for-sale (AFS), the asset is measured at fair value, and any income or loss is recognized in other comprehensive income for the period.

- (1) If a debt security is classified as available-for-sale, any premium or discount must be amortized using the effective interest method on the income statement, with the increase or decrease in fair value reported in other comprehensive income.
6. Investments in associates (affiliates) are accounted for using either the equity method or, for certain entities, the FVTPL method.
  - a. To qualify for the equity method, the entity must have significant influence over the investee.
    - (1) Significant influence is presumed when the investor owns between 20% and 50% of the voting power of another entity.
  - b. Consistent with US GAAP, the equity method requires the investment to be recorded at cost, with the investor's share of profit or loss recognized at year-end in the investment account, and the investor's share of dividend distributions recognized as a reduction in the investment account.
    - (1) If the cost of the investment is greater than the investor's share of the fair value of net assets, it is not recorded as goodwill.
      - (a) However, this portion of the cost of the investment over the carrying amount is amortized as the assets are realized.
    - (2) If the cost is less than the fair value of net assets (goodwill is negative), this difference is recognized as income in the year of acquisition.
    - (3) An impairment of an investment is recognized if the carrying amount of the investment is greater than its recoverable amount.

**NOW REVIEW MULTIPLE-CHOICE QUESTIONS 60 THROUGH 64**

## KEY TERMS

**Amortized cost.** Acquisition cost adjusted for amortization of premium or discount.

**Available-for-sale securities.** Include debt and equity securities not categorized as either held-to-maturity securities or trading securities.

**Debt securities.** "Any security representing a creditor relationship with an entity."

**Differential.** The difference between the cost of the investment and the underlying book value of the net assets of the investee.

**Equity method.** Required for investments which give the investor the ability to exercise significant influence over the operating and financial policies of the investee.

**Equity securities.** Include ownership interests (common, preferred, and other capital stock), rights to acquire ownership interests (put options).

**Fair value option.** An entity may elect to value its securities at fair value.

**Held-to-maturity securities (amortized cost).** This category includes only debt securities and requires the positive intent and ability to hold the securities to maturity (not simply an absence of intent to sell).

**Trading securities (subsequently measured at fair value).** Debt and equity securities purchased and held principally for the purpose of generating gains on current resale are classified as trading securities.

## Multiple-Choice Questions (1–64)

### A. Concepts of Accounting and Investment Percentage

1. Puff Co. acquired 40% of Straw, Inc.'s voting common stock on January 2, year 1, for \$400,000. The carrying amount of Straw's net assets at the purchase date totaled \$900,000. Fair values equaled carrying amounts for all items except equipment, for which fair values exceeded carrying amounts by \$100,000. The equipment has a five-year life. During year 1, Straw reported net income of \$150,000. What amount of income from this investment should Puff report in its year 1 income statement if Puff uses the equity method to account for the investment?
- \$40,000
  - \$52,000
  - \$56,000
  - \$60,000

#### B.1. No Significant Influence: Held-to-Maturity Securities

2. On April 1, year 1, Saxe, Inc. purchased \$200,000 face value, 9% US Treasury Notes for \$198,500, including accrued interest of \$4,500. The notes mature July 1, year 2, and pay interest semiannually on January 1 and July 1. Saxe uses the straight-line method of amortization and intends to hold the notes to maturity. Saxe does not elect the fair value option for recording the securities. In its October 31, year 1 balance sheet, the carrying amount of this investment should be
- \$194,000
  - \$196,800
  - \$197,200
  - \$199,000

3. Kale Co. purchased bonds at a discount on the open market as an investment and intends to hold these bonds to maturity. Kale does not elect the fair value option for the bonds. Kale should account for these bonds at
- Cost.
  - Amortized cost.
  - Fair value.
  - Lower of cost or market.

4. For a marketable debt securities portfolio classified as held-to-maturity, which of the following amounts should be included in the period's net income, assuming the fair value option is **not** elected.
- Unrealized temporary losses during the period.
  - Realized gains during the period.
  - Changes in the valuation allowance during the period.
- III only.
  - II only.
  - I and II.
  - I, II, and III.

5. Bing Corporation purchased bonds at a discount on the open market as an investment and intends to hold these bonds to maturity. Assume that Bing elects the fair value option. Bing should account for these bonds at

- Cost.
- Amortized cost.
- Fair value.
- Lower of cost or market.

6. For a marketable debt securities portfolio classified as held-to-maturity, which of the following amounts should be included in the period's net income, assuming the company elects the fair value option of reporting all of its financial instruments in the portfolio?

- Unrealized temporary losses during the period.
  - Realized gains during the period.
  - Changes in the valuation allowance during the period.
  - Unrealized gains during the period.
- I only
  - I and II
  - I and III.
  - I, II, and IV.

#### B.2. No Significant Influence: Trading Securities

Items 7 and 8 are based on the following:

The following data pertains to Tyne Co.'s investments in marketable equity securities:

	Cost	Fair value	
		12/31/Y2	12/31/Y1
Trading	\$150,000	\$155,000	\$100,000
Available-for-sale	150,000	130,000	120,000

7. What amount should Tyne report as unrealized holding gain in its year 2 income statement, assuming Tyne does not elect to use the fair value option to report its investments?
- \$50,000
  - \$55,000
  - \$60,000
  - \$65,000
8. Assume Tyne does not elect the fair value option to report investments. What amount should Tyne report as net unrealized loss on marketable equity securities at December 31, year 2, in accumulated other comprehensive income in stockholders' equity?
- \$0
  - \$10,000
  - \$15,000
  - \$20,000

9. Reed Insurance Co. began operations on January 1, year 1. The following information pertains to Reed's December 31, year 1 portfolio of marketable equity securities:

	Trading securities	Available-for-sale securities
Aggregate cost	\$360,000	\$550,000
Aggregate fair value	320,000	450,000
Aggregate lower of cost or market value applied to each security in the portfolio	304,000	420,000

Reed does not elect the fair value option. If the fair value declines are judged to be temporary, what amounts should Reed report as a loss on these securities in its December 31, year 1 income statement?

	Trading securities	Available-for-sale securities
a.	\$40,000	\$0
b.	\$0	\$100,000
c.	\$40,000	\$100,000
d.	\$56,000	\$130,000

**B.3. No Significant Influence: Available-for-Sale Securities**

10. Stone does not use the fair value option to account for available-for-sale securities. Information regarding Stone Co.'s portfolio of available-for-sale securities is as follows:

Aggregate cost as of 12/31/Y2	\$170,000
Unrealized gains as of 12/31/Y2	4,000
Unrealized losses as of 12/31/Y2	26,000
Net realized gains during year 2	30,000

At December 31, year 1, Stone reported an unrealized loss of \$1,500 in other comprehensive income to reduce these securities to fair value. Under the accumulated other comprehensive income in stockholders' equity section of its December 31, year 2 balance sheet, what amount should Stone report?

- a. \$26,000
- b. \$22,000
- c. \$20,500
- d. \$0

11. Data regarding Ball Corp.'s available-for-sale securities follow:

	Cost	Fair value
December 31, year 1	\$150,000	\$130,000
December 31, year 2	150,000	160,000

Differences between cost and fair values are considered temporary. Ball does not elect the fair value option to account for available-for-sale securities. The effect on Ball's year 2 other comprehensive income would be

- a. \$30,000
- b. \$20,000
- c. \$10,000
- d. \$0

12. Alton Co. began operations on January 1, year 1. The following information pertains to Alton's December 31, year 1 portfolio of marketable equity securities:

	Trading securities	Available-for-sale securities
Aggregate cost	\$360,000	\$550,000
Aggregate fair value	320,000	450,000
Aggregate lower of cost or market value applied to each security in the portfolio	304,000	420,000

Alton elects the fair value option for all financial instruments. If the fair value declines are judged to be temporary, what amounts should Alton report as a loss on these securities in its December 1, year 1 income statement?

	Trading securities	Available-for-sale securities
a.	\$40,000	\$0
b.	\$0	\$100,000
c.	\$40,000	\$100,000
d.	\$56,000	\$130,000

13. Information regarding Shelton Co.'s portfolio of available-for-sale securities is as follows:

Aggregate cost as of 12/31/Y1	\$150,000
Unrealized gains as of 12/31/Y1	14,000
Unrealized losses as of 12/31/Y1	26,000
Net realized gains during year 1	30,000

Shelton elects to use the fair value option for reporting all available-for-sale securities. At December 31, year 1, what total amount should Shelton report on its income statement?

- a. \$4,000 gain
- b. \$18,000 gain
- c. \$30,000 gain
- d. \$44,000 gain

14. Data regarding Shannon Corp.'s available-for-sale securities follow:

	Cost	Fair value
December 31, year 1	\$150,000	\$130,000
December 31, year 2	150,000	160,000

Differences between cost and fair values are considered temporary. Shannon elects to use the fair value option for reporting all available-for-sale securities. The effect of accounting for available-for-sale securities on other comprehensive income in year 2 would be

- a. \$30,000
- b. \$20,000
- c. \$10,000
- d. \$0

15. Antonio Corp. acquired a portfolio of marketable equity securities that it does not intend to sell in the near term. Antonio elects the fair value option for reporting its financial assets. How should Antonio classify

these securities, and how should it report unrealized gains and losses?

Classify as	Report as a
a. Trading securities	Component of income from continuing operations
b. Available-for-sale securities	Separate component of other comprehensive income
c. Trading securities	Separate component of other comprehensive income
d. Available-for-sale securities	Component of income from continuing operations

16. During year 1, Rex Company purchased marketable equity securities as a short-term investment. These securities are classified as available-for-sale. Rex does not elect the fair value option to account for available-for-sale securities. The cost and fair value at December 31, year 1, were as follows:

Security	Cost	Fair value
A—100 shares	\$2,800	\$3,400
B—1,000 shares	17,000	15,300
C—2,000 shares	<u>31,500</u>	<u>29,500</u>
	\$51,300	\$48,200

Rex sold 1,000 shares of Company B stock on January 31, year 2, for \$15 per share, incurring \$1,500 in brokerage commission and taxes. On the sale, Rex should report a realized loss of

- \$300
- \$1,800
- \$2,000
- \$3,500

17. Cap Corp. reported accrued investment interest receivable of \$38,000 and \$46,500 at January 1 and December 31, year 1, respectively. During year 1, cash collections from the investments included the following:

Capital gains distributions	\$145,000
Interest	152,000

What amount should Cap report as interest revenue from investments for year 1?

- \$160,500
- \$153,500
- \$152,000
- \$143,500

18. Nola has a portfolio of marketable equity securities that it does not intend to sell in the near term. Assume that Nola does not elect the fair value option to report these securities. How should Nola classify these securities, and how should it report unrealized gains and losses from these securities?

Classify as	Report as a
a. Trading securities	Component of income from continuing operations
b. Available-for-sale securities	Separate component of other comprehensive income
c. Trading securities	Separate component of other comprehensive income
d. Available-for-sale securities	Component of income from continuing operations

19. On December 29, year 2, BJ Co. sold a marketable equity security that had been purchased on January 4, year 1. BJ owned no other marketable equity security. An unrealized loss was reported in year 1 as other comprehensive income. A realized gain was reported in the year 2 income statement. Was the marketable equity security classified as available-for-sale and did its year 1 fair value decline exceed its year 2 fair value recovery?

	Available-for-sale	Year 1 fair value decline exceeded year 2 fair value recovery
a.	Yes	Yes
b.	Yes	No
c.	No	Yes
d.	No	No

20. On January 10, year 1, Box, Inc. purchased marketable equity securities of Knox, Inc. and Scot, Inc., neither of which Box could significantly influence. Box classified both securities as available-for-sale. At December 31, year 1, the cost of each investment was greater than its fair value. The loss on the Knox investment was considered other-than-temporary and that on Scot was considered temporary. How should Box report the effects of these investing activities in its year 1 income statement, assuming Box does not elect the fair value option to account for these securities?

- Excess of cost of Knox stock over its fair value.
- Excess of cost of Scot stock over its fair value.
  - An unrealized loss equal to I plus II.
  - An unrealized loss equal to I only.
  - A realized loss equal to I only.
  - No income statement effect.

21. On both December 31, year 1, and December 31, year 2, Kopp Co.'s only marketable equity security had the same fair value, which was below cost. Kopp considered the decline in value to be temporary in year 1 but other than temporary in year 2. At the end of both years the security was classified as a noncurrent asset. Kopp considers the investment to be available-for-sale. Assume that Kopp does not elect the fair value option to account for its available-for-sale securities. What should be the effects of the determination that the decline was other than temporary on Kopp's year 2 net noncurrent assets and net income?

- No effect on both net noncurrent assets and net income.
- No effect on net noncurrent assets and decrease in net income.
- Decrease in net noncurrent assets and **no** effect on net income.
- Decrease in both net noncurrent assets and net income.

22. For the last ten years, Woody Co. has owned cumulative preferred stock issued by Hadley, Inc. During year 2, Hadley declared and paid both the year 2 dividend and the year 1 dividend in arrears. How should Woody report the year 1 dividend in arrears that was received in year 2?

- As a reduction in cumulative preferred dividends receivable.

- b. As a retroactive change of the prior period financial statements.
- c. Include, net of income taxes, after year 2 income from continuing operations.
- d. Include in year 2 income from continuing operations.

**Items 23 and 24** are based on the following:

Deed Co. owns 2% of Beck Cosmetic Retailers. A property dividend by Beck consisted of merchandise with a fair value lower than the listed retail price. Deed in turn gave the merchandise to its employees as a holiday bonus.

**23.** How should Deed report the receipt and distribution of the merchandise in its income statement?

- a. At fair value for both dividend revenue and employee compensation expense.
- b. At listed retail price for both dividend revenue and employee compensation expense.
- c. At fair value for dividend revenue and listed retail price for employee compensation expense.
- d. By disclosure only.

**24.** How should Deed report the receipt and distribution of the merchandise in its statement of cash flows?

- a. As both an inflow and outflow for operating activities.
- b. As both an inflow and outflow for investing activities.
- c. As an inflow for investing activities and outflow for operating activities.
- d. As a noncash activity.

**25.** Pal Corp.'s year 1 dividend revenue included only part of the dividends received from its Ima Corp. investment. Pal Corp. has an investment in Ima Corp. that it intends to hold indefinitely. The balance of the dividend reduced Pal's carrying amount for its Ima investment. This reflects the fact that Pal accounts for its Ima investment

- a. As an available-for-sale investment, and only a portion of Ima's year 1 dividends represent earnings after Pal's acquisition.
- b. As an available-for-sale investment and its carrying amount exceeded the proportionate share of Ima's fair value.
- c. As an equity investment, and Ima incurred a loss in year 1.
- d. As an equity investment, and its carrying amount exceeded the proportionate share of Ima's fair value.

**26.** In its financial statements, Pare, Inc. uses the cost method of accounting for its 15% ownership of Sabe Co. At December 31, year 1, Pare has a receivable from Sabe. How should the receivable be reported in Pare's December 31, year 1 balance sheet?

- a. The total receivable should be reported separately.
- b. The total receivable should be included as part of the investment in Sabe, without separate disclosure.
- c. 85% of the receivable should be reported separately, with the balance offset against Sabe's payable to Pare.
- d. The total receivable should be offset against Sabe's payable to Pare, without separate disclosure.

### ***B.4. No Significant Influence: Transfers between Categories***

**Items 27 and 28** are based on the following:

Sun Corp. had investments in marketable debt securities costing \$650,000 that were classified as available-for-sale. On June 30, year 2, Sun decided to hold the investments to maturity and accordingly reclassified them to the held-to-maturity category on that date. The investments' fair value was \$575,000 at December 31, year 1, \$530,000 at June 30, year 2, and \$490,000 at December 31, year 2. Sun does not elect the fair value option to account for these investments.

**27.** What amount of loss from investments should Sun report in its year 2 income statement?

- a. \$45,000
- b. \$85,000
- c. \$120,000
- d. \$0

**28.** What amount should Sun report as net unrealized loss on marketable debt securities in its year 2 statement of stockholders' equity?

- a. \$40,000
- b. \$45,000
- c. \$160,000
- d. \$120,000

**29.** A marketable debt security is transferred from available-for-sale to held-to-maturity securities. At the transfer date, the security's carrying amount exceeds its fair value. Assume the fair value option is not elected to report this security. What amount is used at the transfer date to record the security in the held-to-maturity portfolio?

- a. Fair value, regardless of whether the decline in fair value below cost is considered permanent or temporary.
- b. Fair value, only if the decline in fair value below cost is considered permanent.
- c. Cost, if the decline in fair value below cost is considered temporary.
- d. Cost, regardless of whether the decline in fair value below cost is considered permanent or temporary.

**Items 30 and 31** are based on the following:

Jill Corp. had investments in marketable debt securities purchased on January 1, year 1, for \$650,000 that were classified as trading securities and accounted for using the cost adjusted to fair value method. On June 30, year 2, Jill decided to hold the investments to maturity and accordingly reclassified them to the held-to-maturity category on that date. The investments' fair value was \$575,000 at December 31, year 1, \$530,000 at June 30, year 2, and \$490,000 at December 31, year 2. Jill elects the fair value option for reporting these held-to-maturity securities.

**30.** What amount of loss from investments should Jill report in its year 2 income statement?

- a. \$40,000
- b. \$85,000
- c. \$160,000
- d. \$0

**31.** What amount should Jill report as net unrealized loss on marketable debt securities in other comprehensive income in its year 2 statement of stockholders' equity?

- a. \$0
- b. \$40,000
- c. \$45,000
- d. \$120,000

### **C. Investment Where Significant Influence Does Exist**

**Items 32 through 34** are based on the following:

Grant, Inc. acquired 30% of South Co.'s voting stock for \$200,000 on January 2, year 1. Grant's 30% interest in South gave Grant the ability to exercise significant influence over South's operating and financial policies. During year 1, South earned \$80,000 and paid dividends of \$50,000. South reported earnings of \$100,000 for the six months ended June 30, year 2, and \$200,000 for the year ended December 31, year 2. On July 1, year 2, Grant sold half of its stock in South for \$150,000 cash. South paid dividends of \$60,000 on October 1, year 2. Grant does not elect the fair value option to report this investment.

**32.** Before income taxes, what amount should Grant include in its year 1 income statement as a result of the investment?

- a. \$15,000
- b. \$24,000
- c. \$50,000
- d. \$80,000

**33.** In Grant's December 31, year 1 balance sheet, what should be the carrying amount of this investment?

- a. \$200,000
- b. \$209,000
- c. \$224,000
- d. \$230,000

**34.** In its year 2 income statement, what amount should Grant report as gain from the sale of half of its investment?

- a. \$24,500
- b. \$30,500
- c. \$35,000
- d. \$45,500

**35.** Moss Corp. owns 20% of Dubro Corp.'s preferred stock and 80% of its common stock. Dubro's stock outstanding at December 31, year 1, is as follows:

10% cumulative preferred stock	\$100,000
Common stock	700,000

Dubro reported net income of \$60,000 for the year ended December 31, year 1. Assume that Moss does not elect the fair

value option to report the investment in Dubro. What amount should Moss record as equity in earnings of Dubro for the year ended December 31, year 1?

- a. \$42,000
- b. \$48,000
- c. \$48,400
- d. \$50,000

**36.** Sage, Inc. bought 40% of Adams Corp.'s outstanding common stock on January 2, year 1, for \$400,000. The carrying amount of Adams' net assets at the purchase date totaled \$900,000. Fair values and carrying amounts were the same for all items except for plant and inventory, for which fair values exceeded their carrying amounts by \$90,000 and \$10,000, respectively. The plant has an eighteen-year life. All inventory was sold during year 1. During year 1, Adams reported net income of \$120,000 and paid a \$20,000 cash dividend. Assume that Sage uses the equity method to account for this investment. What amount should Sage report in its income statement from its investment in Adams for the year ended December 31, year 1?

- a. \$48,000
- b. \$42,000
- c. \$36,000
- d. \$32,000

**37.** Pear Co.'s income statement for the year ended December 31, year 1, as prepared by Pear's controller, reported income before taxes of \$125,000. The auditor questioned the following amounts that had been included in income before taxes:

Unrealized gain on available-for-sale investment	\$40,000
Equity in earnings of Cinn Co.	20,000
Dividends received from Cinn	8,000
Adjustments to profits of prior years for arithmetical errors in depreciation	(35,000)

Pear owns 40% of Cinn's common stock. Pear accounts for its investment in Cinn in accordance with the requirements of the equity method. Pear's December 31, year 1 income statement should report income before taxes of

- a. \$85,000
- b. \$117,000
- c. \$112,000
- d. \$152,000

**38.** On January 2, year 1, Saxe Company purchased 20% of Lex Corporation's common stock for \$150,000. Saxe Corporation intends to hold the stock indefinitely. This investment did not give Saxe the ability to exercise significant influence over Lex. During year 1 Lex reported net income of \$175,000 and paid cash dividends of \$100,000 on its common stock. There was no change in the fair value of the common stock during the year. The balance in Saxe's investment in Lex Corporation account at December 31, year 1 should be

- a. \$130,000
- b. \$150,000
- c. \$165,000
- d. \$185,000

39. On January 2, year 1, Well Co. purchased 10% of Rea, Inc.'s outstanding common shares for \$400,000. Well is the largest single shareholder in Rea, and Well's officers are a majority on Rea's board of directors. Rea reported net income of \$500,000 for year 1, and paid dividends of \$150,000. Well does not elect the fair value option to report its investment in Rea. In its December 31, year 1 balance sheet, what amount should Well report as investment in Rea?

- a. \$450,000
- b. \$435,000
- c. \$400,000
- d. \$385,000

40. On January 2, year 1, Kean Co. purchased a 30% interest in Pod Co. for \$250,000. On this date, Pod's stockholders' equity was \$500,000. The carrying amounts of Pod's identifiable net assets approximated their fair values, except for land whose fair value exceeded its carrying amount by \$200,000. Pod reported net income of \$100,000 for year 1, and paid no dividends. Kean accounts for this investment using the equity method. In its December 31, year 1 balance sheet, what amount should Kean report as investment in subsidiary?

- a. \$210,000
- b. \$220,000
- c. \$270,000
- d. \$280,000

41. On January 1, year 1, Mega Corp. acquired 10% of the outstanding voting stock of Penny, Inc. On January 2, year 2, Mega gained the ability to exercise significant influence over financial and operating control of Penny by acquiring an additional 20% of Penny's outstanding stock. The two purchases were made at prices proportionate to the value assigned to Penny's net assets, which equaled their carrying amounts. Mega does not elect the fair value option to report its investment in Penny. For the years ended December 31, year 1 and year 2, Penny reported the following:

	Year 1	Year 2
Dividends paid	\$200,000	\$300,000
Net income	600,000	650,000

In year 2, what amounts should Mega report as current year investment income and as an adjustment, before income taxes, to year 1 investment income?

	Year 2 investment income	Adjustment to year 1 investment income
a.	\$195,000	\$160,000
b.	\$195,000	\$100,000
c.	\$195,000	\$40,000
d.	\$105,000	\$40,000

42. Pare, Inc. purchased 10% of Tot Co.'s 100,000 outstanding shares of common stock on January 2, year 1, for \$50,000. On December 31, year 1, Pare purchased an additional 20,000 shares of Tot for \$150,000. There was no goodwill as a result of either acquisition, and Tot had not issued any additional stock during year 1. Tot reported

earnings of \$300,000 for year 1. Pare does not elect the fair value option to report its investment in Tot. What amount should Pare report in its December 31, year 1 balance sheet as investment in Tot?

- a. \$170,000
- b. \$200,000
- c. \$230,000
- d. \$290,000

43. When the equity method is used to account for investments in common stock, which of the following affects the investor's reported investment income?

	Equipment amortization related to purchase	Cash dividends from investee
a.	Yes	Yes
b.	No	Yes
c.	No	No
d.	Yes	No

44. Park Co. uses the equity method to account for its January 1, year 1 purchase of Tun Inc.'s common stock. On January 1, year 1, the fair values of Tun's FIFO inventory and land exceeded their carrying amounts. How do these excesses of fair values over carrying amounts affect Park's reported equity in Tun's year 1 earnings?

	Inventory excess	Land excess
a.	Decrease	Decrease
b.	Decrease	No effect
c.	Increase	Increase
d.	Increase	No effect

45. An investor in common stock received dividends in excess of the investor's share of investee's earnings subsequent to the date of the investment. How will the investor's investment account be affected by those dividends for each of the following investments?

	Available-for-sale securities	Equity method investment
a.	No effect	No effect
b.	Decrease	No effect
c.	No effect	Decrease
d.	Decrease	Decrease

46. Peel Co. received a cash dividend from a common stock investment. Should Peel report an increase in the investment account if it has classified the stock as available-for-sale or uses the equity method of accounting?

	Available-for-sale	Equity
a.	No	No
b.	Yes	Yes
c.	Yes	No
d.	No	Yes

47. On January 1, year 1, Point, Inc. purchased 10% of Iona Co.'s common stock. Point purchased additional shares bringing its ownership up to 40% of Iona's common stock outstanding on August 1, year 1. During October year 1, Iona declared and paid a cash dividend on all of its outstanding common stock. Point uses the equity method to account for

its investment in Iona. How much income from the Iona investment should Point's year 1 income statement report?

- 10% of Iona's income for January 1 to July 31, year 1, plus 40% of Iona's income for August 1 to December 31, year 1.
- 40% of Iona's income for August 1 to December 31, year 1 only.
- 40% of Iona's year 1 income.
- Amount equal to dividends received from Iona.

48. In its financial statements, Pulham Corp. uses the equity method of accounting for its 30% ownership of Angles Corp. At December 31, year 1, Pulham has a receivable from Angles. How should the receivable be reported in Pulham's year 1 financial statements?

- None of the receivable should be reported, but the entire receivable should be offset against Angles' payable to Pulham.
- 70% of the receivable should be separately reported, with the balance offset against 30% of Angles' payable to Pulham.
- The total receivable should be disclosed separately.
- The total receivable should be included as part of the investment in Angles, without separate disclosure.

### F. Stock Dividends and Splits

49. Wood Co. owns 2,000 shares of Arlo, Inc.'s 20,000 shares of \$100 par, 6% cumulative, nonparticipating preferred stock and 1,000 shares (2%) of Arlo's common stock. During year 2, Arlo declared and paid dividends of \$240,000 on preferred stock. No dividends had been declared or paid during year 1. In addition, Wood received a 5% common stock dividend from Arlo when the quoted market price of Arlo's common stock was \$10 per share. What amount should Wood report as dividend income in its year 2 income statement?

- \$12,000
- \$12,500
- \$24,000
- \$24,500

50. Stock dividends on common stock should be recorded at their fair value by the investor when the related investment is accounted for under which of the following methods?

	Cost	Equity	Fair value
a.	Yes	Yes	Yes
b.	Yes	No	No
c.	No	Yes	Yes
d.	No	No	No

### G. Stock Rights

51. On March 4, year 1, Evan Co. purchased 1,000 shares of LVC common stock at \$80 per share. On September 26, year 1, Evan received 1,000 stock rights to purchase an additional 1,000 shares at \$90 per share. The stock rights had an expiration date of February 1, year 2. On September 30, year 1, LVC's common stock had a market value, ex-rights, of \$95

per share and the stock rights had a market value of \$5 each. What amount should Evan report on its September 30, year 1 balance sheet as the cost of its investment in stock rights?

- \$4,000
- \$5,000
- \$10,000
- \$15,000

52. On January 3, year 1, Falk Co. purchased 500 shares of Milo Corp. common stock for \$36,000. On December 2, year 3, Falk received 500 stock rights from Milo. Each right entitles the holder to acquire one share of stock for \$85. The market price of Milo's stock was \$100 a share immediately before the rights were issued, and \$90 a share immediately after the rights were issued. Falk sold its rights on December 3, year 3, for \$10 a right. Falk's gain from the sale of the rights is

- \$0
- \$1,000
- \$1,400
- \$5,000

### H. Cash Surrender Value of Life Insurance

53. In year 1, Chain, Inc. purchased a \$1,000,000 life insurance policy on its president, of which Chain is the beneficiary. Information regarding the policy for the year ended December 31, year 4, follows:

Cash surrender value, 1/1/Y4	\$87,000
Cash surrender value, 12/31/Y4	108,000
Annual advance premium paid 1/1/Y4	40,000

During year 4, dividends of \$6,000 were applied to increase the cash surrender value of the policy. What amount should Chain report as life insurance expense for year 4?

- \$40,000
- \$25,000
- \$19,000
- \$13,000

54. An increase in the cash surrender value of a life insurance policy owned by a company would be recorded by

- Decreasing annual insurance expense.
- Increasing investment income.
- Recording a memorandum entry only.
- Decreasing a deferred charge.

55. Upon the death of an officer, Jung Co. received the proceeds of a life insurance policy held by Jung on the officer. The proceeds were not taxable. The policy's cash surrender value had been recorded on Jung's books at the time of payment. What amount of revenue should Jung report in its statements?

- Proceeds received.
- Proceeds received less cash surrender value.
- Proceeds received plus cash surrender value.
- None.

**Miscellaneous**

Items 56 through 58 are based on the following data:

Lake Corporation's accounting records showed the following investments at January 1, year 3:

Common stock:	
Kar Corp. (1,000 shares)	\$ 10,000
Aub Corp. (5,000 shares)	100,000
Real estate:	
Parking lot (leased to Day Co.)	300,000
Other:	
Trademark (at cost, less accumulated amortization)	<u>25,000</u>
Total investments	<u>\$435,000</u>

Lake owns 1% of Kar and 30% of Aub. Lake's directors constitute a majority of Aub's directors. The Day lease, which commenced on January 1, year 1, is for ten years, at an annual rental of \$48,000. In addition, on January 1, year 1, Day paid a nonrefundable deposit of \$50,000, as well as a security deposit of \$8,000 to be refunded upon expiration of the lease. The trademark was licensed to Barr Co. for royalties of 10% of sales of the trademarked items. Royalties are payable semiannually on March 1 (for sales in July through December of the prior year), and on September 1 (for sales in January through June of the same year).

During the year ended December 31, year 3, Lake received cash dividends of \$1,000 from Kar, and \$15,000 from Aub, whose year 3 net incomes were \$75,000 and \$150,000, respectively. Lake also received \$48,000 rent from Day in year 3 and the following royalties from Barr:

	March 1	September 1
Year 2	\$3,000	\$5,000
Year 3	4,000	7,000

Barr estimated that sales of the trademarked items would total \$20,000 for the last half of year 3.

56. In Lake's year 3 income statement, how much should be reported for dividend revenue?

- a. \$16,000
- b. \$2,400
- c. \$1,000
- d. \$150

57. In Lake's year 3 income statement, how much should be reported for royalty revenue?

- a. \$14,000
- b. \$13,000
- c. \$11,000
- d. \$9,000

58. In Lake's year 3 income statement, how much should be reported for rental revenue?

- a. \$43,000
- b. \$48,000
- c. \$53,000
- d. \$53,800

59. Band Co. uses the equity method to account for its investment in Guard, Inc. common stock. How should Band record a 2% stock dividend received from Guard?

- a. As dividend revenue at Guard's carrying value of the stock.
- b. As dividend revenue at the market value of the stock.
- c. As a reduction in the total cost of Guard stock owned.
- d. As a memorandum entry reducing the unit cost of all Guard stock owned.

**J. International Financial Reporting Standards (IFRS)**

60. On March 1, year 1, Acadia purchased 1,000 shares of common stock of Marston Corp. for \$50,000 and classified the investment as available-for-sale securities. On December 31, year 1, the Marston stock had a fair value of \$53,000. Acadia Corp. prepares its financial statements in accordance with IFRS. Acadia elects to use fair value through profit or loss to record its investments in available-for-sale securities. How is the gain on the investment in Marston stock reported in Acadia's year 1 financial statements?

- a. As a \$3,000 gain in other comprehensive income.
- b. No gain or loss is reported in year 1.
- c. As a \$3,000 prior period adjustment to retained earnings.
- d. As a \$3,000 gain in current earnings of the period.

61. Under IFRS any investment may be accounted for by fair value through profit and loss providing

- a. It is traded in an active market.
- b. It is an equity instrument.
- c. It is a debt instrument.
- d. The instrument matures within 2 years.

62. Under IFRS, investments are classified in any of the following different ways, **except**

- a. Fair value through profit and loss.
- b. Held to maturity.
- c. Tradable.
- d. Available for sale.

63. Under IFRS if a company uses the fair value method for accounting for an investment any changes in fair value are recognized in

- a. Other comprehensive income.
- b. Retained earnings.
- c. Profit and loss.
- d. Revaluation surplus.

64. Under IFRS an equity investment may be accounted for using the equity method if the investor has significant influence over the investee. Significant influence is indicated by ownership of

- a. At least 10%.
- b. From 20 to 50%.
- c. More than 50%.
- d. More than 70%.

### Explanations

1. (b) The investment should be accounted for on the equity basis and the calculation of Puff's income from the investment is shown below.

Straw's net income		\$150,000	
		$\times \frac{40}{100}$	
Puff's share of Straw's net income		\$60,000	
Less: Puff's depreciation of excess value of equipment			
Excess cost	\$100,000		
		$\times \frac{40}{100}$	
Puff's share	\$40,000		
Remaining useful life	$\div 5$		
Puff's share of excess depreciation for year 1		(8,000)	
Income from investment on the equity basis		<u>\$52,000</u>	

2. (b) Held-to-maturity securities are to be carried at amortized cost. Therefore, the investment is recorded on 4/1/Y1 at its cost of \$194,000 (\$198,500 less accrued interest of \$4,500). The carrying amount is calculated as cost plus amortized discount, which at 10/31/Y1 is \$196,800 [\$194,000 + (\$6,000  $\times$  7/15)].

3. (b) **Held-to-maturity** securities, which include only debt securities, are reported on the balance sheet at **amortized cost** without adjustment to fair value. If the investment in bonds had been classified as trading or available-for-sale, answer (c) would be correct. **Trading** securities are reported at **fair value** with holding gains or losses flowing through the income statements. **Available-for-sale** securities are reported at **fair value** with holding gains or losses reported as a component of other comprehensive income. Cost and lower of cost or market are not used as reporting bases for bond investments.

4. (b) Held-to-maturity securities are carried at cost, so unrealized holding gains and losses are not reported. However, realized gains and losses on held-to-maturity securities should always be included in the income statement of the appropriate period. No valuation allowance exists for any marketable debt or equity securities. Realized gains for the period are the only item listed that is included in that period's net income.

5. (c) A company may elect to value held-to-maturity securities at fair value. Any increase or decrease in value is reported as a gain or loss and included in earnings for the period. Answer (a) is incorrect because bonds are recorded at cost, but reported at amortized cost at year-end. Answer (b) is incorrect because Bing elected the fair value option. Answer (d) is incorrect because investments are not recorded at lower of cost or market.

6. (d) A company may elect to value held-to-maturity securities at fair value. Any increase or decrease in value, whether realized or unrealized, is reported in earnings for the period. Therefore, I, II, and IV should be reported in earnings if the fair value option of reporting is elected. Changes in the valuation allowance are not relevant because when an election is made to use the fair value option, any related allowance accounts are removed from the balance sheet.

7. (b) Debt and equity securities that are classified as **trading securities** are reported at fair value with unrealized gains and losses included in earnings. During year 2, Tyne had an unrealized holding gain of \$55,000 (\$155,000 – \$100,000) on its trading securities. The unrealized holding gain on **available-for-sale** securities (\$130,000 – \$120,000 = \$10,000) is excluded from earnings and reported as other comprehensive income.

8. (d) The requirement is to determine the accumulated other comprehensive income to be reported in the December 31, year 2 statement of stockholders' equity. Unrealized gains and losses on **trading securities** are included

in earnings. Unrealized gains and losses on **available-for-sale** securities are excluded from earnings and reported as accumulated other comprehensive income in a separate component of shareholders' equity. This amount is the net unrealized loss on available-for-sale securities at 12/31/Y2 which is \$20,000 (\$150,000 – \$130,000).

**9. (a)** Unrealized holding gains and losses for trading securities are to be reported in earnings. On the other hand, this statement also states that unrealized gains or losses on available-for-sale securities should be excluded from earnings and reported as other comprehensive income. Therefore, only the \$40,000 (\$360,000 – \$320,000) unrealized loss on trading securities is included in income.

**10. (b)** Available-for-sale securities are reported at fair value on the balance sheet. At 12/31/Y2, Stone has incurred gross unrealized gains of \$4,000 and gross unrealized losses of \$26,000 on its available-for-sale securities. Therefore, at 12/31/Y2, the net unrealized loss is \$22,000 (\$26,000 – \$4,000). Stone would have to increase the balance in accumulated other comprehensive income from \$1,500 to \$22,000 at 12/31/Y2.

**11. (a)** Unrealized holding gains and losses on available-for-sale securities should be reported as other comprehensive income. At 12/31/Y1, available-for-sale securities would have been reported in the balance sheet at their fair value of \$130,000, with a corresponding unrealized loss of \$20,000. At 12/31/Y2, the fair value of these securities is \$160,000. Therefore, an unrealized gain of \$30,000 (\$160,000 – \$130,000) would result in other comprehensive income of \$30,000 as **accumulated** other comprehensive income.

**12. (c)** A \$40,000 loss is recorded on the income statement for the loss on trading securities. An election can be made to value available-for-sale securities at fair value. Therefore, the available-for-sale securities are valued at fair value, and the loss of \$100,000 is reported on the income statement.

**13. (b)** A company may elect the fair value option for reporting available-for-sale securities. If the fair value option is elected, realized and unrealized gains and losses from available-for-sale securities are included in earnings of the period. Therefore, the net gain of \$18,000 (\$14,000 unrealized gains + \$30,000 realized gains – \$26,000 unrealized losses) is reported on the income statement for the period.

**14. (d)** If Shannon elects the fair value option for reporting available-for-sale securities, any unrealized gains or losses are recorded in earnings for the period. In year 1, Shannon would report a loss on the income statement of \$20,000, and the available-for-sale securities would be carried on the balance sheet at the fair value of \$130,000. On December 31, year 2, the securities would be valued at \$160,000 and an unrealized gain of \$30,000 (\$160,000 – \$130,000) would be recognized on the year 2 income statement. Therefore, under the provisions of ASC Topic 825 (SFAS 159), there would be no entry to other comprehensive income for available-for-sale securities.

**15. (d)** Marketable equity securities that are not intended to be sold in the near future are classified as available-for-sale securities. A company may elect to record an available-for-sale

security at its fair value, and any unrealized gains or losses may be recognized as a component of income from continuing operations on the income statement. Answer (a) is incorrect because Antonio does not intend to sell the asset in the near future; therefore, it cannot be classified as a trading security. Answer (b) is incorrect because when the fair value option is elected, the unrealized gain or loss is reported in earnings, not in other comprehensive income. Answer (c) is incorrect because the securities are not classified as trading and the gain is not recognized in OCI.

**16. (d)** The securities purchased by Rex are classified as available-for-sale securities and accounted for at fair value. At 12/31/Y1, the fair value of security B was \$15,300; an unrealized loss of \$1,700 resulted in other comprehensive income in that amount. At 1/31/Y2, the stock was sold when its fair value was \$15,000 and the following entry would have been made:

Cash (net)	13,500		
Loss on sale of stock	3,500		
Investment in Security B		15,300	
Unrealized loss on Sec. B.		1,700	

The unrealized loss of \$1,700 on Security B is a credit. It would be netted with unrealized gains and/or losses recognized in year 2. The effect is to offset the \$1,700 loss recognized in year 1 that was closed to other comprehensive income, net retained earnings, thus avoiding double counting.

**17. (a)** The capital gains distribution (\$145,000) would not be reported as interest revenue. The solutions approach is to set up a T-account for interest receivable.

	Interest Receivable		
Beg. bal.	38,000		
Int. rev.	?	152,000	Int. collected
End. bal.	46,500		

Beginning and ending balances are given in the question. Interest receivable would be credited for cash collections to reduce the receivable.

Cash	152,000	
Interest receivable		152,000

Interest receivable would be debited for interest revenue.

Interest receivable	xxx	
Interest revenue		xxx

Solve for interest revenue (\$46,500 + \$152,000 – \$38,000 = \$160,500).

**18. (b)** Marketable equity securities (MES) are classified as either trading (held for current resale) or available-for-sale (if not categorized as trading). Since Nola does not intend to sell these securities in the near term, they should be classified as available-for-sale. MES are carried at fair value. The unrealized gains or losses of available-for-sale MES are reported as a separate component of other comprehensive income. It is important to note that unrealized gains or losses

on **trading** securities would be reported as a component of income from continuing operations on the income statement. Thus, answer (b) is correct because the securities would be classified as available-for-sale and unrealized gains and losses from these securities would be reported as other comprehensive income.

**19. (b)** Unrealized losses on available-for-sale securities are reported as a separate component of other comprehensive income, while unrealized gains and losses on trading securities are recognized in income and unrealized gains and losses on held-to-maturity securities are ignored. Thus, this security is classified as available-for-sale. A realized gain will be reported only if the security was sold for a price in excess of its cost. Therefore, the year 1 price decline was **less than** the year 2 price recovery. For example, assume that the investment was purchased for \$1,000 on 1/07/Y1. At 12/31/Y1, its fair value was \$800, and on 12/29/Y2 its fair value was \$1,200. The following entries would have been made:

1/07/Y1	Investment	1,000	
	Cash		1,000
12/31/Y1	Unrealized loss	200	
	Investment		200
12/29/Y2	Cash	1,200	
	Investment		800
	Unrealized loss		200
	<b>Gain on sale of securities</b>		<b>200</b>

**20. (c)** The requirement is to determine how the losses on the securities classified as available-for-sale should be reported. A decline in fair value of a security which is considered to be **other-than-temporary** should be reported on the income statement in the current period. A decline in fair value which is considered to be **temporary** would be recorded as an unrealized loss, and recognized as other comprehensive income. Therefore, answer (c) is correct as the loss on the Knox stock is considered to be other-than-temporary and it would be reported on the income statement. Answer (a) is incorrect because the unrealized loss on the Scot stock would be reported as other comprehensive income. Answer (b) is incorrect because the loss on the Knox stock is considered to be a realized loss as it is other-than-temporary. Answer (d) is incorrect because the other-than-temporary decline in Knox stock results in a realized loss that is reported on the income statement.

**21. (b)** The carrying amount of a marketable equity security classified as available-for-sale shall be the fair value and the unrealized holding gain or loss should be reported as other comprehensive income. In year 1 when the value declined, the portfolio was reported at fair value with an unrealized holding loss recorded as other comprehensive income. In year 2, the decline is considered to be other than temporary. Thus, the security must be written down to fair value and a realized loss recognized. However, since there is no actual change in value, in year 2 the security will be reported at the same amount (Cost – Write-down of asset) as in year 1. Therefore, there is no effect on **net** noncurrent assets in year 2. However, net income will be affected because a realized loss

is recorded on the income statement. Note that the unrealized loss account charged to other comprehensive income in year 1 would be credited and the realized loss account would be debited for the same amount. The allowance accounts will be closed against each other because the new basis after the write-down will equal the lower FV amount. Answer (a) is incorrect because net income is affected. Note that if the decline was merely temporary, there would be no net income effect because temporary declines in value of noncurrent portfolios are reported as other comprehensive income, rather than net income. Answer (c) is incorrect because there is no net decrease in noncurrent assets, but there is a net income effect. Answer (d) is incorrect because only net income decreases.

**22. (d)** Dividends in arrears are not a receivable to the cumulative preferred stockholder until the issuing corporation's board of directors formally declares the dividend. In this case, Hadley, Inc. did not declare the year 1 dividends in arrears until year 2. At the year 2 dividend declaration date, Woody Co. records dividends receivable and dividend income. Dividend income is included in income from continuing operations.

**23. (a)** A nonmonetary asset (the merchandise in this case) received in a nonreciprocal transfer should be recorded at the fair value of the asset received. Additionally, the transfer of a nonmonetary asset to a stockholder or other entity (Deed's employees in this case) should be recorded at the fair value of the asset received.

**24. (d)** Noncash transactions should be excluded from the statement of cash flows to better achieve the statement's objectives. However, information about noncash investing and financing transactions be must reported in related disclosures.

**25. (a)** An investor carries an investment in the stock of an investee at fair value, and recognizes as income dividends received that are distributed from the net accumulated earnings of the investee **since the date of acquisition** by the investor. Dividends received in excess of earnings subsequent to the date of investment are considered to be return of investment or a liquidating dividend and are recorded as reductions of the cost of the investment. Therefore, Pal Corp.'s accounting treatment of the dividend it received from Ima Corp. indicates that Pal is accounting for the securities as an available-for-sale investment in Ima. Answer (b) is incorrect because Ima's fair value does not impact Pal's treatment of dividends received. Answers (c) and (d) are incorrect because all dividends received are treated as reductions in an investee's carrying value under the equity method.

**26. (a)** Intercompany receivables and payables are not eliminated unless consolidated financial statements are prepared. Since Pare only has a 15% interest in Sabe, consolidated financial statements would not be prepared. Thus, on the 12/31/Y1 balance sheet, Pare should separately report the total amount of the receivable.

**27. (d)** The requirement is to determine the amount of loss on investments to be reported in Sun's year 2 income statement. This transfer is accounted for at fair value and any holding gains or losses on securities that are transferred to held-to-maturity from available-for-sale be reported as

accumulated other comprehensive income. This amount is then amortized over the remaining life of the security as an adjustment to yield. Since cost is greater than fair value by \$75,000 at 12/31/Y1 (\$650,000 cost – \$575,000 fair value), the following entry would be recorded:

Unrealized loss	75,000	
Marketable debt securities		75,000

Then on June 30, year 2, when Sun decides to hold the investments to maturity, an additional \$45,000 will be recorded in the valuation account (\$575,000 value on books – \$530,000 FV) to reflect the change in FV. The following entry would be recorded:

Unrealized loss	45,000	
Marketable debt securities		45,000

Each year the unrealized loss would be reported as other comprehensive income that would be closed to “accumulated other comprehensive income.”

**28. (d)** When a security is transferred to held-to-maturity from available-for-sale the unrealized holding gain or loss continues to be reported as a separate component of stockholders’ equity. Held-to-maturity securities are carried at amortized cost, and any unrealized holding gains or losses are not reported. Thus, the balance in the “accumulated other comprehensive income” in stockholders’ equity on the year 2 statement of stockholders’ equity would be \$120,000 (\$75,000 amount reported at 12/31/Y1 plus the \$45,000 amount reported at June 30, year 2). The \$120,000 will be amortized over the remaining life of the security as an adjustment to yield. The additional decline in value from 6/30/Y2 to 12/31/Y2 would not be reported, as held-to-maturity securities do not report unrealized losses.

**29. (a)** The transfer of a security between categories of investments shall be accounted for at fair value.” If fair value is less than the security’s carrying amount at the date of transfer, it is irrelevant whether the decline is temporary or permanent.

**30. (b)** An election can be made to use the fair value option when financial assets cease to qualify for fair value treatment due to specialized accounting rules. On June 30, year 2, the trading securities were reclassified to the held-to-maturity category, and an election was made to report them at fair value. On June 30, year 2, the held-to-maturity securities were valued at \$530,000, and Jill would recognize a loss of \$45,000 (\$575,000 – \$530,000). At December 31, year 2, the securities declined in value an additional \$40,000. Therefore, the total loss recognized in year 2 was \$85,000 (\$45,000 + \$40,000). Answer (a) is incorrect because the entire amount of loss in fair value should be recognized in year 2. Answer (c) is incorrect because the loss from January 1, year 1 to December 31, year 1, would have been recognized in year 1 because it was classified as a trading security. Answer (d) is incorrect because if the fair value option is elected, unrealized gains and losses are recognized in the current year’s earnings.

**31. (a)** Jill would recognize the unrealized loss on trading securities in the income statement. On June 30, year 2, when the securities were classified as held-to-maturity, Jill elected

the fair value option for reporting the investment. Therefore, any unrealized gain or loss on the held-to-maturity securities would be reported in earnings for the period. An unrealized gain or a temporary loss on available-for-sale securities would be reported in other comprehensive income only if the fair value option were not elected. Held-to-maturity securities would be valued at amortized cost if the fair value option of reporting were not elected. Therefore, answers (b), (c), and (d) are incorrect because Jill elects the fair value option on the held-to-maturity securities.

**32. (b)** This investment should be accounted for using the equity method since Grant owns a 30% interest and can exercise significant influence over South. Grant’s share of South’s year 1 earnings (30% × \$80,000 = \$24,000) would be recognized as investment revenue under the equity method. If there was any excess of cost over book value of assets with finite useful lives, resulting from the purchase of the investment, it would be amortized, reducing investment revenue. However, not enough information was given to determine if there was an excess. The dividends received by Grant (30% × \$50,000 = \$15,000) do not affect investment revenue using the equity method; they are recorded as a reduction of the investment account.

**33. (b)** The equity method is used because Grant owns a 30% interest and can exercise significant influence. Under this method, the investment account is increased by Grant’s equity in South’s earnings (30% × \$80,000 = \$24,000) and is decreased by Grant’s dividends received from South (30% × \$50,000 = \$15,000). This results in a 12/31/Y1 carrying amount for the investment of \$209,000, as indicated in the following T-account.

	Investment in South		
1/2/Y1	200,000		
Equity in earnings	24,000	15,000	Dividends
12/31/Y1	209,000		

**34. (b)** The equity method is used because Grant owns a 30% interest and can exercise significant influence. Under this method, the investment account is increased by Grant’s equity in South’s earnings (30% × \$80,000 = \$24,000 in year 1; 30% × \$100,000 = \$30,000 for first six months of year 2) and is decreased by Grant’s dividends received from South (30% × \$50,000 = \$15,000 in year 2; none in first six months of year 1). This results in a 7/1/Y2 carrying amount of \$239,000, as indicated in the T-account below.

	Investment in South		
1/2/Y1	200,000		
Equity in earnings	24,000	15,000	Dividends
Equity in earnings	30,000		
7/1/Y2	239,000		

The gain on sale is the excess of the proceeds (\$150,000) over the carrying amount of the shares sold (1/2 × \$239,000 = \$119,500), or \$30,500 (\$150,000 – \$119,500).

**35. (a)** An investor's share of the income of a company in which it holds a 20% or greater investment is referred to as the investor's equity in earnings of the investee. The investor's share of the investee's earnings should be computed after deducting the investee's cumulative preferred dividends (whether declared or not). In this case, the income available to common stockholders is \$50,000 [ $\$60,000$  income  $- (10\% \times \$100,000$  total pref. div.)], so Moss Corp.'s equity in earnings is \$40,000 ( $80\%$  ownership  $\times \$50,000$ ). Since \$40,000 is not one of the answer choices, apparently the candidate is expected to include the preferred dividend revenue of \$2,000 [ $20\%$  ownership  $\times (\$100,000 \times 10\%$  total pref. div.)] on the income statement in the equity in earnings line item. Although preferred dividends are usually classified separately, answer (a) is the best answer given. The answer, therefore, is \$42,000.

Equity in earnings	\$40,000
Dividend revenue	<u>2,000</u>
	<u>\$42,000</u>

**36. (b)** Sage paid \$400,000 for its 40% investment in Adams when Adams' net assets had a carrying amount of \$900,000. Therefore, the book value Sage purchased is \$360,000 ( $40\% \times \$900,000$ ), resulting in an excess of cost over book value of \$40,000 ( $\$400,000 - \$360,000$ ). This excess must be attributed to specific assets of Adams; any amount not attributed to specific assets is attributed to goodwill. In this case, the excess is attributed to plant assets ( $40\% \times \$90,000 = \$36,000$ ) and inventory ( $40\% \times \$10,000 = \$4,000$ ). The portion attributed to plant assets is amortized over eighteen years, while the portion attributed to inventory is expensed immediately (since all inventory was sold during year 1). Therefore, Sage's investment income is \$42,000, as computed below.

Share of income ( $40\% \times \$120,000$ )	\$48,000
Excess amortization [ $(\$36,000/18) + \$4,000$ ]	<u>(6,000)</u>
	<u>\$42,000</u>

**37. (c)** The unrealized gain on the available-for-sale securities is improperly included in Pear's \$125,000 income before taxes. Unrealized holding gains and losses on available-for-sale securities are reported as a separate component of stockholders' equity. The equity in Cinn's earnings is properly included in Pear Co.'s pretax income. However, the dividends from Cinn are also improperly included in income because under the equity method, dividends received are a reduction of the investment account rather than dividend revenue. The adjustments to profits of prior years for arithmetic errors in depreciation (\$35,000) should be recorded as a retroactive adjustment to beginning retained earnings and should **not** have been deducted when computing year 1 income before taxes. Therefore, year 1 income before taxes should be \$112,000 as computed below.

Tentative income	\$125,000
Unrealized holding gain	(40,000)
Dividends received	(8,000)
Prior period adjustment	<u>35,000</u>
Correct income	<u>\$112,000</u>

**38. (b)** The equity method is to be used when the investor owns 20% or more of the investee's voting stock, unless

there is evidence that the investor does **not** have the ability to exercise significant influence over the investee. Since this is the case, Saxe must carry the stock at fair value in the available-for-sale category. Under this method, dividends received are to be recognized as income to the investor, and the investment account is unaffected. Also, under this method, the investor's share of the investee's net income is not recognized. Any changes in the fair value of the stock would be reflected in the book value of the stock with a corresponding amount in a separate account in stockholders' equity. As there has been no change in the fair value, the investment account would still have a balance of \$150,000 at 12/31/Y1. Note that the dividends received by Saxe were distributed from Lex's net accumulated earnings since the date of acquisition by Saxe. However, if dividends received had been in excess of earnings subsequent to the investment date, they are considered a return of capital and would be recorded as a reduction in the investment account.

**39. (b)** Ownership of less than 20% leads to the presumption of **no substantial influence** unless evidence to the contrary exists. Well's position as Rea's largest single shareholder and the presence of Well's officers as a **majority** of Rea's board of directors constitute evidence that Well **does have significant influence** despite less than 20% ownership. Therefore, the equity method is used. The investment account had a beginning balance of \$400,000 (purchase price). This amount is increased by Well's equity in Rea's earnings ( $10\%$  ownership  $\times \$500,000$  income = \$50,000) and decreased by Well's dividends received from Rea ( $10\%$  share  $\times \$150,000$  total div. = \$15,000), resulting in a balance of \$435,000 (see T-account below).

	Investment in Rea		
1/2/Y1	400,000		
Equity in earnings	50,000	15,000	Dividends
12/31/Y1	435,000		

**40. (d)** The investment should have been originally recorded at the \$250,000 purchase price. This amount would be increased by Kean's share of Pod's earnings ( $30\% \times \$100,000 = \$30,000$ ), decreased by the amortization of excess of cost over book value, and decreased by dividends received by Kean (none in this case). The book value Kean purchased is \$150,000 ( $30\% \times \$500,000$ ), resulting in an excess of cost over book value of \$100,000 ( $\$250,000 - \$150,000$ ). This excess must be attributed to the specific assets of Pod that have a fair value greater than their book value; any amount not attributed to specific assets is attributed to goodwill. In this case, the excess would be attributed first to land ( $30\% \times \$200,000 = \$60,000$ ) and the remainder to goodwill ( $\$100,000 - \$60,000 = \$40,000$ ). The portion attributed to land and goodwill should not be amortized. Therefore, Kean's 12/31/Y1 balance of the investment in subsidiary is \$280,000 as computed below.

Original cost	\$250,000
Share of income ( $30\% \times \$100,000$ )	<u>30,000</u>
	<u>\$280,000</u>

**41. (c)** When an investment that has been accounted for using another method qualifies for the use of the equity method

due to a change in ownership level (such as from 10% to 30%), the change to the equity method should be reported **retroactively**. At the date of the change (1/2/Y2), the **investment** account and **retained earnings** are adjusted as if the equity method had been used all along, and the results of operations in prior years are restated to reflect the equity method. In year 2, use of the equity method results in recognition of investment income of \$195,000 (30% × \$650,000 investee income). Year 1 investment income must be restated from the previously reported dividend income (10% × \$200,000 = \$20,000) to equity method income (10% × \$600,000 = \$60,000), an adjustment of \$40,000 (\$60,000 – \$20,000 = \$40,000).

42. (c) The requirement is to determine the balance in the December 31, year 1 investment account. When an investment that has been accounted for using another method qualifies for the use of the equity method due to a change in ownership level (in this case, from 10% to 30%), the change to the equity method should be applied retroactively. At the date of the change (12/31/Y1), the accounts are adjusted as if the equity method had been used all along. If the equity method had been used beginning at 1/2/Y1, Pare would have recorded its share of Tot’s earnings (10% × \$300,000 = \$30,000) as investment revenue and as an increase in the investment account. Therefore, at 12/31/Y1, Pare’s investment in Tot would be reported at \$230,000.

	Investment in Tot
1/2/Y1 purchase	50,000
12/31/Y1 purchase	150,000
Equity in earnings	30,000
	230,000

43. (d) Under the equity method, a reciprocal relationship is formed between the investment account on the investor’s books and the book values of the net assets on the investee’s books. As changes in the investee’s net assets occur (earnings, dividends, etc.), the investor will recognize the percentage of ownership share of that change in the investment account. Therefore, cash dividends from the investee will be recorded in the investment account, not the investment income account. The entry includes a debit to cash and a credit to the investment account. Another aspect of the equity method is the amortization of the equipment related to the purchase. The investment income account and the investment in stock account should include all the income recognitions and amortizations resulting from the investment. The entry to record the equipment amortization is a debit to Investment income and a credit to Investment in stock.

44. (b) When the equity method is used, the investor should amortize any portion of the excess of fair values over carrying amounts (differential) that relates to depreciable or amortizable assets held by the investee. Amortization of the differential results in a reduction of the investment account and a reduction in the equity of the investee’s earnings. For inventory, an excess of FV over cost, FIFO cost in this case, has the same effect on the investment account and equity in investee earnings in the period in which the goods are sold. Therefore, the portion of the differential that relates to inventory would decrease Park’s reported equity in Tun’s earnings, and

answers (c) and (d) are incorrect. Land is not a depreciable asset, so there would be no amortization of the differential related to land, and answer (a) is incorrect.

45. (d) Dividends received in excess of earnings subsequent to the date of investment are considered a return of investment and are recorded as reductions of cost of the investment. Additionally, under the equity method, “dividends received from an investee reduce the carrying amount of the investment.”

46. (a) The requirement is to determine the effects of a cash dividend on an investors investment account, accounted for both as an available-for-sale security, and under the equity method. Dividends received on available-for-sale securities are to be recognized as income to the investor and the investment account is unaffected. If the dividends received are in excess of earnings to date, then they would be considered a return of the investment and would result in a reduction of the investment account. Under the equity method, the receipt of cash dividends reduces the carrying value of the investment. Therefore, answer (a) is correct as the receipt of a cash dividend would not result in an increase in the investment account under either method.

47. (a) The requirement is to determine the amount of investment income to be reported in the year 1 income statement. When an investment which has been accounted for using a different method qualifies for the use of the equity method, due to a change in ownership level (such as 10% to 40%), then the change to the equity method should be reported **retroactively**. At the date of the change, the investment account and the retained earnings account are adjusted as if the equity method had been used all along. Therefore answer (a) is correct as Point owned 10% of Iona’s stock from January 1 to July 31, year 1, and 40% of Iona’s stock from August 1 to December 31, year 1. Answers (b) and (c) are incorrect because income should be recognized under the equity method according to the percentage of ownership existing during each of the periods. Answer (d) is incorrect because when Iona reports its earnings to Point, Point will record its share of the revenue. When Point receives the dividends, (which may be in a different period than Point recognized its share of Iona’s income), the carrying amount of the investment will be reduced by the amount received. Therefore, the income recognized does not usually equal the dividends received.

48. (c) The equity method is used when accounting for investments in which the investor has the ability to exercise significant influence over the operating and financial policies of the investee. Ownership of 20% or more of the outstanding common stock demonstrates this ability. In this case, Pulham Corp. owns 30% of Angles and properly uses the equity method. Under the equity method intercompany profits and losses are eliminated. However, receivables and payables are not eliminated as they are in the case of consolidated financial statements. On the December 31, year 1 balance sheet, Pulham should separately disclose the total amount of the receivable. Additionally, this receivable should be shown separately from other receivables.

49. (c) Arlo’s annual preferred stock dividend is \$120,000 (\$2,000,000 × 6%). The \$240,000 dividend paid includes

\$120,000 dividends in arrears from year 1 and \$120,000 for year 2. Therefore, Wood would receive **\$24,000 of cash dividends** ( $\$200,000 \times 6\% \times 2$ ) which would be reported as **dividend income** in year 2 (preferred dividends in arrears are not recognized as income until declared). No dividend income is recognized when an investor receives a proportional **stock** dividend, because the investor continues to own the same proportion of the investee as before the stock dividend, and the investee has not distributed any assets to the investor.

**50. (d)** Regardless of the accounting method used, no dividend revenue is recognized when an investor receives a proportional **stock** dividend, because the investor continues to own the same proportion of the investee as before the stock dividend. In addition, the investee has not distributed any assets to the investor. Therefore, **no entry** is prepared to record the receipt of a stock dividend. The investor simply makes a memo entry to record the additional number of shares owned, while leaving the balance in the investment account unchanged. The balance is then spread over the total number of shares (Previous holdings + Stock dividend) to determine the new per share cost of the stock.

**51. (a)** When stock rights are received, the cost of the investment ( $1,000 \times \$80 = \$80,000$ ) is allocated between the stock and the rights based on the relative fair market value of each, as calculated below.

FMV of stock	$1,000 \times \$95 =$	\$95,000
FMV of rights	$1,000 \times \$5 =$	<u>5,000</u>
Total FMV		<u>\$100,000</u>

The cost allocated to the stock is \$76,000 ( $\$80,000 \times 95/100$ ) and the cost allocated to the rights is \$4,000 ( $\$80,000 \times 5/100$ ).

**52. (c)** When the rights are received, the cost of the investment (\$36,000) is allocated between the stock and the rights based on their relative fair market values, calculated below.

FMV of stock	$500 \times \$90 =$	\$45,000
FMV of rights	$500 \times \$10 =$	<u>5,000</u>
Total FMV		<u>\$50,000</u>

The cost allocated to the stock is \$32,400 ( $\$45,000 / \$50,000$ , or 90%, of \$36,000) and to the rights is \$3,600 ( $\$5,000 / \$50,000$ , or 10%, of \$36,000). The net proceeds from the sale of the rights is \$5,000 ( $500 \times \$10$ ), so the gain on the sale of the rights is \$1,400 ( $\$5,000 - \$3,600$ ).

**53. (c)** The cash surrender value (CSV) of the life insurance policy increased by \$21,000 during year 4 ( $\$108,000 - \$87,000$ ). Therefore, part of the premium paid is not expense but a payment to increase the CSV. The formula to compute insurance expense is

$$\text{Cash paid} - (\text{Ending CSV} - \text{Beginning CSV}) - \text{Cash divs. received} \\ \$40,000 - (\$108,000 - \$87,000) - \$0 = \$19,000$$

The dividends in this problem are **not** cash dividends received. They are dividends that the insurance company applied to increase the CSV. They are not separately considered in the formula above because the effect of the dividends is reflected in

the increase in CSV, which **is** included in the formula. Year 4 journal entries are presented below.

Cash surr. value	\$15,000	( $\$21,000 - \$6,000$ )
Ins. expense	25,000	
Cash		\$40,000
Cash surr. value	\$6,000	
Ins. expense		\$6,000

**54. (a)** When a company insures the lives of employees and names itself the beneficiary, the cash surrender value of the policies is considered an asset. During the first few years of a policy, no cash surrender value may accrue. If no increase in cash surrender value (CSV) occurs, the journal entry to record a premium paid would be

Insurance expense	xxx
Cash	xxx

However, if cash surrender value increases, part of the cash paid is recorded as an increase in the CSV. The entry is

Insurance expense	xx
Cash surrender value	xx
Cash	xxx

Therefore, the increase in CSV decreases insurance expense because the same amount of cash paid must be allocated between the two accounts. The increase in CSV does **not** affect investment income or deferred charges.

**55. (b)** When a company insures the lives of employees and names itself as the beneficiary, the cash surrender value (CSV) of the policy is considered an asset. Premiums paid are debited to CSV for the increase in CSV that year and to insurance expense for the excess of cash paid over increase in CSV. Upon the death of the insured employee, the company recognizes a gain for the excess of proceeds received over CSV.

**56. (c)** In determining the amount which should be reported in Lake's year 3 income statement as dividend revenue, the first step is to determine what method should be used in accounting for Lake's investments. The equity method of accounting for an investment in common stock should be followed by an investor whose investment in common stock gives it the ability to exercise significant influence over the operating and financial policies of an investee even though the investor may hold 50% or less of the voting stock. Ability to exercise that influence may be indicated in several ways, such as representation on the board of directors. Another important consideration is the extent of ownership by an investor. The Board concluded that an investment of 20% or more of the voting stock of an investee should lead to a presumption, in the absence of evidence to the contrary, that an investor has the ability to exercise significant influence over an investee. Conversely, an investment of less than 20% of the voting stock of an investee should lead to a presumption that an investor does **not** have the ability to exercise significant influence unless such ability can be demonstrated. Lake's 30% ownership of Aub and its representation on Aub's board of directors clearly indicate that the investment in Aub should be

accounted for using the equity method. Lake's 1% ownership in Kar and lack of evidence in this problem that Lake has "significant influence" over Kar indicate that this investment should be accounted for using the cost adjusted for fair value method. When the **equity** method is used, dividends received from an investee reduce the carrying amount of the investment (i.e., are **not** reported as dividend revenue). However, the investor recognizes dividends received from investees as **income** under the **cost adjusted for fair value** method. Therefore, the \$1,000 of cash dividends from Kar would be reported as dividend revenue by Lake, while the \$15,000 of cash dividends from Aub would reduce the carrying amount of Lake's investment in Aub.

**57. (d)** Lake's royalty revenue results from the licensing of their trademark to Barr Co. Lake receives royalties of 10% of Barr's sales of trademarked items. To determine royalty revenue for year 3, it must first be realized that the royalty payment on September 1, year 3, is for sales in January through June of year 3. This royalty payment of \$7,000 is the first portion of royalty revenue for year 3. The second portion of royalty revenue is for Barr's sales of trademarked items for July through December of year 3. This second portion consists of 10% of Barr's estimated sales of trademarked items for the last half of year 3. Royalty revenue for the second half of year 3 is then \$2,000 ( $10\% \times \$20,000$ ). Therefore, answer (d) is correct because royalty revenue would be \$9,000 for year 3 and is comprised of the \$7,000 royalty payment received on September 1, year 3, plus 10% of estimated sales for months July through December.

**58. (c)** Lake receives rental revenue from leasing a parking lot to Day Co. The annual rental payment made by Day Co. to Lake is \$48,000. However, Day Co. also paid a nonrefundable deposit of \$50,000 on January 1, year 1. This \$50,000 deposit, since it is nonrefundable, is considered unearned revenue that must be recognized over the life of the lease on a straight-line basis. Therefore, in addition to the \$48,000 annual rental payment, \$5,000 ( $\$50,000 \div 10$  years) of the nonrefundable deposit will be recognized as rental revenue in year 3. Thus, answer (c) is correct because \$53,000 will be recognized as rental revenue in year 3. Note that the \$8,000 security deposit

will not be revenue because it is to be refunded at the end of the lease period. It is deferred in its entirety and recorded as a long-term liability. Only a nonrefundable deposit would be recognized as rental revenue over the life of the lease.

**59. (d)** Stock dividends are not income to the recipient, but rather, are an adjustment of the per share basis of the investment. Answer (c) is incorrect because no change in the total investment cost is made when an investor receives stock dividends. Answer (d) is correct because some companies make a memorandum journal entry to note the receipt of the stock dividend and the adjustment of the per share basis of the investment.

**60. (d)** The requirement is to identify how the gain is reported. Answer (d) is correct because IFRS requires that if an asset is classified as fair value through profit or loss, it is remeasured to fair value and any profit or loss is recorded in the period. Therefore, Acadia should recognize a \$3,000 gain in current earnings of the period. Answers (a), (b), and (c) are incorrect.

**61. (a)** The requirement is to identify for an investment to be accounted for using fair value through profit and loss. Answer (a) is correct because the investment must be traded in an active market to be accounted for using fair value through profit and loss.

**62. (c)** The requirement is to identify the item that does not represent a category of investments under IFRS. Answer (c) is correct because IFRS includes the classifications of fair value through profit and loss, held to maturity, and available for sale. It does not include tradable.

**63. (c)** The requirement is to identify how changes in fair value are recognized for an investment accounted for under IFRS. Answer (c) is correct because gains or losses are recognized in profit and loss of the period.

**64. (b)** The requirement is to identify the percentage of ownership that indicates significant influence under IFRS. Answer (b) is correct because like US GAAP the percentage is from 20 to 50%.

### Task-Based Simulation 5

Classification of Securities	Authoritative Literature	Help

Items 1 through 4 are based on the following:

Cane Co. purchased various securities during year 1 to be classified as held-to-maturity securities, trading securities, or available-for-sale securities.

Items 1 through 4 describe various securities purchased by Cane. For each item, select from the following list the appropriate category for each security. A category may be used once, more than once, or not at all.

#### Categories

- H. Held-to-maturity
- T. Trading
- A. Available-for-sale

	Category		
	(H)	(T)	(A)
1. Debt securities bought and held for the purpose of selling in the near term.	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>
2. US Treasury bonds that Cane has both the positive intent and the ability to hold to maturity.	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>
3. \$3 million debt security bought and held for the purpose of selling in three years to finance payment of Cane's \$2 million long-term note payable when it matures.	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>
4. Convertible preferred stock that Cane does not intend to sell in the near term.	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>

### Task-Based Simulation 6

Journal Entries	Authoritative Literature	Help

#### Situation

Harold Johnson, an investor in Acme Co., asked you for advice on the propriety of Acme's financial reporting for two of its investments. Assume that Acme does not elect the fair value option for reporting its financial assets and liabilities. You obtained the following information related to the investments from Acme's December 31, year 1 financial statements:

- 20% ownership interest in Kern Co., represented by 200,000 shares of outstanding common stock purchased on January 2, year 1, for \$600,000.
- 20% ownership interest in Wand Co., represented by 20,000 shares of outstanding common stock purchased on January 2, year 1, for \$300,000.
- On January 2, year 1, the carrying values of the acquired shares of both investments equaled their purchase price.

- Kern reported earnings of \$400,000 for the year ended December 31, year 1, and declared and paid dividends of \$100,000 during year 1.
- Wand reported earnings of \$350,000 for the year ended December 31, year 1, and declared and paid dividends of \$60,000 during year 1.
- On December 31, year 1, Kern’s and Wand’s common stock were trading over-the-counter at \$18 and \$20 per share, respectively.
- The investment in Kern is accounted for using the equity method.
- The investment in Wand is accounted for as available-for-sale securities.

You recalculated the amounts reported in Acme’s December 31, year 1 financial statements, and determined that they were correct. Stressing that the information available in the financial statements was limited, you advised Johnson that, assuming Acme properly applied generally accepted accounting principles, Acme may have appropriately used two different methods to account for its investments in Kern and Wand, even though the investments represent equal ownership interests.

1. Prepare the journal entry for Acme’s investment in Kern Co. on January 2, year 1.
2. Prepare the journal entry for the dividends received from Kern in year 1.
3. Prepare the journal entry required for Kern’s reported income for the year ending on December 31, year 1.

**Task-Based Simulation 10**

<b>Available-for-Sale Securities</b>		
	<b>Authoritative Literature</b>	<b>Help</b>

At December 31, year 1, Poe Corp. properly reported as available-for-sale securities the following marketable equity securities:

	<b>Cost</b>	<b>Fair value</b>
Axe Corp., 1,000 shares, \$2.40 convertible preferred stock	\$ 40,000	\$ 42,000
Purl, Inc., 6,000 shares of common stock	60,000	66,000
Day Co., 2,000 shares of common stock	<u>55,000</u>	<u>40,000</u>
Total available-for-sale securities	<u>\$155,000</u>	<u>\$148,000</u>

On January 2, year 2, Poe purchased 100,000 shares of Scott Corp. common stock for \$1,700,000, representing 30% of Scott’s outstanding common stock and an underlying equity of \$1,400,000 in Scott’s net assets on January 2. Poe had no other financial transactions with Scott during year 2. As a result of Poe’s 30% ownership of Scott, Poe has the ability to exercise significant influence over Scott’s financial and operating policies.

During year 2, Poe disposed of the following securities:

- January 18—sold 2,500 shares of Purl for \$13 per share.
- June 1—sold 500 shares of Day, after a 10% stock dividend was received, for \$21 per share.
- October 1—converted 500 shares of Axe’s preferred stock into 1,500 shares of Axe’s common stock, when the market price was \$60 per share for the preferred stock and \$21 per share for the common stock.

The following year 2 dividend information pertains to stock owned by Poe:

- February 14—Day issued a 10% stock dividend, when the market price of Day’s common stock was \$22 per share.
- April 5 and October 5—Axe paid dividends of \$1.20 per share on its \$2.40 preferred stock, to stockholders of record on March 9 and September 9, respectively. Axe did not pay dividends on its common stock during year 2.
- June 30—Purl paid a \$1.00 per share dividend on its common stock.
- March 1, June 1, September 1, and December 1—Scott paid quarterly dividends of \$0.50 per share on each of these dates. Scott’s net income for the year ended December 31, year 2, was \$1,200,000.

At December 31, year 2, Poe’s management intended to hold Scott’s stock on a long-term basis. The remaining investments were considered temporary. Market prices per share of the marketable equity securities were as follows:

	<b>At December 31</b>	
	<b>Year 2</b>	<b>Year 1</b>
Axe Corp.—preferred	\$56	\$42
Axe Corp.—common	20	18
Purl, Inc.—common	11	11
Day Co.—common	22	20
Scott Corp.—common	16	18

All of the foregoing stocks are listed on major stock exchanges. Declines in fair value from cost would not be considered permanent. Poe does not elect the fair value option for reporting its financial assets and liabilities.

Complete the following schedule for the available-for-sale securities of Poe Corp. as of December 31, year 2.

*Poe Corp.*  
**SCHEDULE OF AVAILABLE-FOR-SALE  
 SECURITIES**  
*December 31, Year 2*

	Number of shares	Cost	Beginning carrying amount at fair value	Ending market price per share	Fair value	Cumulative gain or (loss)	Unrealized gain or (loss) in year 2
Axe—preferred							
Axe—common							
Purl—common							
Day—common

3. Amortize unrealized holding gain/loss over life of security.	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input checked="" type="radio"/>
4. Report at amortized cost.	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input checked="" type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>
5. Report unrealized holding gains/losses as other comprehensive income and close to accumulated other comprehensive income, a separate component of stockholders' equity.	<input checked="" type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>
6. Classify as a current asset.	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input checked="" type="radio"/>	<input type="radio"/>
7. Subsequent recovery not recognized unless realized.	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input checked="" type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>

### *Explanations*

- (H)** Purchases and sales of trading portfolio securities be classified as operating activities on the statement of cash flows due to the short-term, profit-seeking nature of the investment. In contrast, available-for-sale and held-to-maturity securities are classified as investing activities.
- (H)** Unrealized holding gains and losses on trading securities are included in income of the period.
- (I)** Unrealized holding gains and losses on securities transferred to held-to-maturity from available-for-sale are reported as a separate component of stockholders' equity (accumulated other comprehensive income) and amortized over the remaining life of the security.
- (D)** Held-to-maturity securities are carried at amortized cost.
- (A)** Unrealized holding gains and losses on available-for-sale securities are reported as other comprehensive income, whereas those on trading securities are included in income and those on held-to-maturity securities are not reported.
- (H)** Trading securities appear on the balance sheet as current assets.
- (E)** When a decline in value of a security is deemed to be other than temporary, the impaired security is written down to fair value. Any subsequent recovery may not be recognized in earnings unless realized through sale of the security.

**Task-Based Simulation 2**

<b>Accounting Treatment</b>		
	<b>Authoritative Literature</b>	<b>Help</b>

	True	False
1. Held-to-maturity securities are classified as current or noncurrent on an individual basis.	<input checked="" type="radio"/>	<input type="radio"/>
2. For trading securities, some realized gains/losses are excluded from earnings.	<input checked="" type="radio"/>	<input type="radio"/>
3. A premature sale of held-to-maturity securities may be considered maturity if at least 80% of the principal has already been collected.	<input type="radio"/>	<input checked="" type="radio"/>
4. Dividends received on available-for-sale securities decrease the investment account.	<input type="radio"/>	<input checked="" type="radio"/>
5. A company that owns more than 50% of the outstanding shares of stock of another company must use the fair value method.	<input type="radio"/>	<input checked="" type="radio"/>

**Explanations**

- (T)** Held-to-maturity securities are classified as current or noncurrent according to how soon they will mature, (i.e., a security maturing within one year is classified as current, while one with a more distant maturity date is considered noncurrent).
- (T)** Some unrealized holding gains and losses on trading securities could have already been included in income as unrealized components. Thus, to recognize them again upon realization would result in an erroneous doubling of the actual gain/loss.
- (F)** Premature sale of held-to-maturity securities are considered at maturity if either (1) the sale occurs so close to maturity that interest rate risk is virtually eliminated, or (2) the sale occurs after at least 85% of the principal has been collected.
- (F)** Dividends received on available-for-sale securities are treated as dividend income on the income statement.
- (F)** A company that owns more than 50% of the outstanding shares of stock should use the equity method and prepare consolidated financial statements (assuming the company exercises control).

2. Carrying amount of security DEF at December 31, year 2.	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input checked="" type="radio"/>	<input type="radio"/>	<input type="radio"/>
3. Carrying amount of security JKL at December 31, year 2.	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input checked="" type="radio"/>	<input type="radio"/>

	Amount												
	(A)	(B)	(C)	(D)	(E)	(F)	(G)	(H)	(I)	(J)	(K)	Gain	Loss
4. Recognized gain or loss on sale of security GHI.	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input checked="" type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input checked="" type="radio"/>
5. Unrealized gain or loss to be reported in year 2 net income.	<input type="radio"/>	<input checked="" type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input checked="" type="radio"/>
6. Unrealized gain or loss to be reported at December 31, year 2, as a separate component of stockholders' equity entitled "accumulated other comprehensive income."	<input type="radio"/>	<input type="radio"/>	<input checked="" type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input checked="" type="radio"/>

**Explanations**

1. **(G; \$100,000)** Held-to-maturity securities shall be measured at amortized cost. Since this debt security was purchased at par, there is neither a discount nor a premium to amortize, therefore amortized cost equals par or \$100,000. Ignore fair value.
2. **(I; \$155,000)** Investments in securities that are not classified as held-to-maturity and that have readily determinable fair values shall be measured at fair value. \$155,000 is fair value.
3. **(J; \$160,000)** Same explanation as question 2. Since security JKL is not a debt security classified as held-to-maturity and since it has a readily determinable fair value it shall be . . .measured at fair value.
4. **(D, L)** Recognized gains and losses on the sale of available-for-sale securities are measured as the difference between original cost (\$190,000) and the selling price of the securities (\$175,000). The unrealized loss that existed in accumulated other comprehensive income in the equity section prior to the sale (\$25,000) will be reversed as a credit to unrealized loss and that reversal will be reported as other comprehensive income and closed to accumulated other comprehensive income that is reported in the equity section of the balance sheet (see question 10 below). The journal entry to record the sale would be

Cash	175,000	
Realized loss on sale of A-F-S securities	15,000	
A-F-S securities		165,000
Unrealized loss on A-F-S securities		25,000

5. **(B, L)** The only unrealized gains or losses on securities reported in the net income relate to value changes in trading securities. In this case the value of the JKL securities has decreased from \$160,000 to \$155,000.
6. **(C, L)** The 1/1/Y2 balance of the unrealized gain or loss on A-F-S securities reported in the equity section was \$20,000, the difference between the 1/1/Y2 \$25,000 unrealized loss of GHI (\$190,000 – \$165,000) and the 1/1/Y2 \$5,000 unrealized gain of JKL (\$175,000 – \$170,000). The changes during the year were (1) the \$25,000 reversal (credit) of the unrealized loss of GHI when it was sold and (2) the \$15,000 loss (\$175,000 – \$160,000) in value during the year of JKL. The Other Comprehensive Income account would appear as follows:

Other Comprehensive Income		
Beg. bal.	–	
12/31/Y2 JKL	15,000	12/31/Y2 Reverse GHI 25,000
Close to Accumulated Other Comprehensive Income	10,000	

The Accumulated Other Comprehensive Income account would appear as follows:

Accumulated Other Comprehensive Income		
1/1/Y2	20,000	
		10,000 12/31/Y2 Close from Other Comprehensive Income
12/31/Y2 Balance	10,000

Classification of Securities		
	Authoritative Literature	Help

- |   | Category                         |                                  |                                  |
|---|----------------------------------|----------------------------------|----------------------------------|
|   | (H)                              | (T)                              | (A)                              |
| 1. Debt securities bought and held for the purpose of selling in the near term.   | <input type="radio"/>            | <input checked="" type="radio"/> | <input type="radio"/>            |
| 2. US Treasury bonds that Cane has both the positive intent and the ability to hold to maturity.  | <input checked="" type="radio"/> | <input type="radio"/>            | <input type="radio"/>            |
| 3. \$3 million debt security bought and held for the purpose of selling in three years to finance payment of Cane's \$2 million long-term note payable when it matures. | <input type="radio"/>            | <input type="radio"/>            | <input checked="" type="radio"/> |
| 4. Convertible preferred stock that Cane does not intend to sell in the near term.  | <input type="radio"/>            | <input type="radio"/>            | <input checked="" type="radio"/> |

*Explanations*

- (T)** Trading. Securities that are bought and held principally for the purpose of selling them in the near term (thus held for only a short period of time) shall be classified as **trading securities**.
- (H)** Held-to-maturity. Investments in debt securities shall be classified as **held-to-maturity** and measured at amortized cost only if the reporting enterprise has the positive intent and ability to hold those securities to maturity. Both conditions are met in this case.
- (A)** Available-for-sale. The company does not have the positive intent to hold this debt security to maturity, therefore the security cannot be classified as held-to-maturity. Also, since it will be sold beyond the "near term," it cannot be classified as "trading." Investments not classified as trading (nor as held-to-maturity securities) shall be classified as **available-for-sale securities**.
- (A)** Available-for-sale. Since this security is neither a debt security nor a security that will be sold in the near term, it is classified as available-for-sale.

## Task-Based Simulation 6

Journal Entries		
	Authoritative Literature	Help

- The journal entry for the investment in Kern Co. on January 2, year 1.

Investment in Kern	600,000	
Cash		600,000

- The journal entry for the dividends received from Kern in year 1.

Cash	20,000	
Investment in Kern		20,000
[100,000 × 20% = 20,000]		

- The journal entry required for Kern's reported income for the year ending December 31, year 1.

Investment in Kern	80,000	
Income from Kern		80,000
[400,000 × 20% = 80,000]		

**Task-Based Simulation 7**

<b>Financial Statement Disclosures</b>	<b>Authoritative Literature</b>	<b>Help</b>

Carrying value of Kern investment	\$660,000
Carrying value of Wand investment	\$400,000
Income on Income Statement	
Kern investment	\$80,000
Wand investment	\$12,000
Other comprehensive income	
Kern investment	\$ --
Wand investment	\$100,000

**Explanations**

Carrying value of Kern.

**Kern**

**Balance sheet**—Acme reported its investment in Kern at a carrying amount of \$660,000

*Calculations:*

$$\text{Equity in earnings} = \$80,000 (\$400,000 \times 20\%)$$

$$\text{Dividend rec'd} = \$20,000 (\$100,000 \times 20\%)$$

$$\text{Carrying amount} = \$600,000 + \$80,000 - \$20,000 = \$660,000$$

Carrying value of Wand.

**Wand**

**Balance sheet**—Acme reported its investment in Wand at a fair value of \$400,000

*Calculation:*

$$20,000 \text{ shares} \times \$20 \text{ per share} = \$400,000$$

**Income Statement Amounts**

Income from Kern       $\$400,000 \times 20\% = \$80,000$

Income from Wand      \$12,000 dividend income

Dividend income \$12,000

*Calculation:*

$$\$60,000 \times 20\% = \$12,000$$

**Other Comprehensive Income**

Kern Investment      \$0

Wand investment      Unrealized gain      \$100,000

*Calculation:*

$$\$400,000 - \$300,000 = \$100,000$$

1. Unrealized gains from trading securities are reported in other comprehensive income.	<input type="radio"/>	<input checked="" type="radio"/>
2. Investments in stocks and bonds may be classified as trading securities, available-for-sale securities, and held-to-maturity securities.	<input type="radio"/>	<input checked="" type="radio"/>
3. X Company has significant influence over Y Company and owns 35% of the voting stock of Y Company. X Company must use the equity method of accounting for the investment in Y Company.	<input checked="" type="radio"/>	<input type="radio"/>
4. Unrealized gains and losses from available-for-sale securities that result from the change in fair value during the period should be reported as other comprehensive income.	<input checked="" type="radio"/>	<input type="radio"/>
5. The temporary unrealized gain or loss from held-to-maturity securities must be reported in income for the current period.	<input type="radio"/>	<input checked="" type="radio"/>
6. If a security is transferred from available-for-sale to trading securities classification, unrealized holding gains and losses are recognized immediately in the income statement.	<input checked="" type="radio"/>	<input type="radio"/>
7. The equity method of accounting requires a company to include the percent of income of the investee in the investor company's net income for the period.	<input checked="" type="radio"/>	<input type="radio"/>
8. The equity method of accounting requires that a company adjust the cost of the investee to fair value at the end of each period.	<input type="radio"/>	<input checked="" type="radio"/>
9. A company that receives stock dividends records income equal to the fair value of the stock on the date the dividend is declared.	<input type="radio"/>	<input checked="" type="radio"/>
10. Held-to-maturity securities are carried at amortized cost using the effective interest method.	<input checked="" type="radio"/>	<input type="radio"/>

### Explanations

- (F) Unrealized gains from trading securities are reported in income for the period.
- (F) Stocks cannot be classified as held-to-maturity because they have no maturity date.
- (T) The equity method is required when an investor exercises significant influence over the investee.
- (T) Unrealized gains and losses are reported as other comprehensive income.
- (F) The temporary unrealized gain from held-to-maturity securities is excluded from earnings; instead, the held-to-maturities are reported at amortized cost.
- (T) Unrealized gains or losses are recognized when transferred.
- (T) The investor recognizes its share of income as earned.
- (F) In the equity method, the investor does not revalue the stock to fair value. The equity method requires that the investor record the percentage share of net income and percentage share of dividends of the investee.

9. (F) Stock dividends require a memo entry to show receipt of additional shares of stock. The company then recomputes the cost per share based upon the new number of shares.

10. (T) Held-to-maturity securities are carried at amortized cost.

# Module 17: Statement of Cash Flows

## Overview

The primary purposes of the statement of **cash flows** are to provide information about an entity's cash receipts and cash payments and to disclose information about the financing and investing activities of an entity. As such, the statement divides cash receipts and cash payments into three sections: operating, investing, and financing.

1. **Operating activities** include delivering or producing goods for sale and providing services. Generally, operating activities are related to net income and the current asset and current liability sections of the balance sheet.
2. **Investing activities** include the acquisition or disposition of long-term productive assets or securities. Investing activities are generally related to the noncurrent section of the balance sheet.
3. **Financing activities** include obtaining resources from creditors and repaying amounts borrowed. Generally, financing activities are related to the noncurrent liability and equity sections of the balance sheet.

A. Objectives of the Statement of Cash Flows	687
B. Statement of Cash Flows Classification	688
C. Direct or Indirect Presentation in Reporting Operating Activities	689
D. Example of Statement of Cash Flows	692
E. Capital Leases	699
F. Research Component—Accounting Standards Codification	699
G. International Financial Reporting Standards (IFRS)	699
Key Terms	700
Multiple-Choice Questions	701
Multiple-Choice Answers and Explanations	706
Simulations	712
Simulation Solutions	718

This module also covers the two methods of presenting cash flows from operating activities: direct or indirect. The FASB prefers the direct method. Cash flow presentations for investing and financing activities do not differ between the two methods.

### A. Objectives of the Statement of Cash Flows (see outline of SFAS 95, [ASC Topic 230] in Appendix A)

1. The primary purposes of this statement are to provide information about an entity's cash receipts and cash payments and to disclose information about the financing and investing activities of an entity. This statement should help the users of the statement assess:
  - a. An entity's ability to generate positive future cash flows;
  - b. An entity's ability to meet its obligations and pay dividends;
  - c. The reasons for differences between income and associated cash receipts and payments; and
  - d. The cash and noncash aspects of an entity's investing and financing transactions.
2. In order to facilitate the users in making those assessments, a statement of cash flows shall report cash receipts and cash payments of an entity's operations, its investing transactions, and its financing transactions. A separate schedule accompanying the statement should also report the effects of investing and financing transactions that **do not affect cash**.
3. The statement of cash flows is required to be prepared based on changes during the period in cash and cash equivalents. Cash equivalents include short-term, highly liquid investments that (1) are readily convertible to known amounts of cash and (2) are so near their maturity (original maturity of three months or less from **date of purchase** by the enterprise) that they present negligible risk of changes in value because of changes in interest rates. Treasury bills, commercial paper, and money market funds are all examples of cash equivalents.

**B. Statement of Cash Flows Classification**

1. Cash receipts and cash payments are to be classified into operating, financing, and investing activities.
  - a. Operating activities include delivering or producing goods for sale and providing services.
    - (1) Operating activities include all transactions that are **not** investing and financing activities.
    - (2) More specifically, cash flows from operations should not include cash flows from transactions whose effects are included in income but are investing and financing activities.
      - (a) For example, a gain (loss) on extinguishment of debt should properly be classified as a financing activity, and a gain (loss) from disposal of property should be classified as an investing activity.
  - b. Investing activities include the acquisition and disposition of long-term productive assets or securities that are not considered cash equivalents.
    - (1) Investing activities also include the lending of money and collection on loans.
  - c. Financing activities include obtaining resources from owners and returning the investment.
    - (1) Also included is obtaining resources from creditors and repaying the amount borrowed.
2. The FASB has listed the following as examples of classifications of transactions.

**ACTIVITIES REPORTED ON THE STATEMENT OF CASH FLOWS**

Description of the activity	Positive cash flow	Negative cash flow
<b>Operating activities (direct method):</b>		
• Cash received from customers	xx	
• Cash received from interest	xx	
• Cash received from dividends	xx	
• Cash received from sales of securities classified as trading	xx	
• Cash paid to suppliers		xx
• Cash paid for operating expenses		xx
• Cash paid for interest		xx
• Cash paid for income taxes		xx
• Cash paid for securities classified as trading (based on nature and purpose acquired)		xx
<b>Investing activities:</b>		
• Proceeds from sales of property, plant, and equipment	xx	
• Proceeds from sales of investments in stocks (available for sale) and bonds (available for sale)	xx	
• Cash paid for securities classified as trading (based on nature and purpose acquired)		xx
• Proceeds from the sale or redemption of investments in bonds classified as held to maturity	xx	
• Proceeds from collection of loans (principal only)	xx	
• Proceeds from selling components of the company	xx	
• Acquisition of property, plant, and equipment (capital expenditures)		xx
• Acquisition of investments in stocks and bonds (available for sale or held to maturity)		xx
• Making loans to other entities		xx
• Acquiring other businesses		xx
<b>Financing activities:</b>		
• Proceeds from issuing common and preferred stock	xx	
• Proceeds from reissuing treasury stock	xx	

Description of the activity	Positive cash flow	Negative cash flow
• Proceeds from issuing short-term debt	xx	
• Proceeds from issuing long-term debt	xx	
• Paying cash dividends		xx
• Repurchasing common stock (treasury stock)		xx
• Repaying short-term loans (principal only)		xx
• Repaying long-term loans, including capital lease obligations (principal only)		xx

**Noncash investing and financing activities (reported in a separate schedule):**

- Acquiring an asset through a capital lease
- Conversion of debt to equity
- Exchange of noncash assets or liabilities for other noncash assets or liabilities
- Issuance of stock to acquire assets

a. Cash flows from trading securities are classified as operating or investing activities based on the nature and purpose for which the securities were acquired.

**NOTE:** Noncash investing and financing activities should be excluded from the statement itself. These transactions involve no cash inflows and outflows, but they have a significant effect on the prospective cash flows of a company. Therefore, they must be distinguished from activities that involved cash receipts and payments and must be reported in a separate schedule or in the footnotes to the financial statements.

b. In the statement, the inflows and outflows for each category (operating, investing, and financing) should be shown separately, and the **net** cash flows (the difference between the inflows and outflows) should be reported.

**NOW REVIEW MULTIPLE-CHOICE QUESTIONS 1 THROUGH 15**

**C. Direct or Indirect Presentation in Reporting Operating Activities**

1. The FASB decided that the preferable method of presenting net cash flows from operating activities is by **directly** showing major classes of operating cash receipts and payments.
  - a. However, the **indirect (reconciliation) method** is also permitted.
  - b. When the direct method is used, it is also necessary to present a separate accompanying schedule showing the indirect method.
  - c. The **direct method** is discussed first, followed by a discussion of the **indirect method**.
2. Under the direct approach, cash flow elements of operating activities are derived from the accrual basis components of net income.
  - a. In converting to the cash basis, accounts that should be analyzed under operating activities are those which are debited or credited when recording transactions that affect the income statement.
    - (1) These transactions include transactions with outsiders and adjusting entries.
    - (2) For example, these accounts include sales, cost of sales, operating expenses, and tax expense, as well as assets and liabilities which are related to them, such as accounts receivable, inventory, accounts payable, accrued expenses, and prepaid expenses.

**NOTE:** Interest expense and interest revenue are included within operating activities.

(3) Formulas for conversion of various income statement amounts from the accrual basis to the cash basis are summarized in the following table:

Accrual basis		Additions		Deductions		Cash basis
Net sales	+	Beginning AR	-	( Ending AR AR written off )	=	Cash received from customers
Cost of goods sold	+	( Ending inventory Beginning Ap )	-	( Depreciation and amortization* Beginning inventory Ending Ap )	=	Cash paid to suppliers
Operating expenses	+	( Ending prepaid expenses Beginning accrued expenses payable )	-	( Depreciation and amortization Beginning prepaid expenses Ending accrued expenses payable )	=	Cash paid for operating expenses

\* Applies to a manufacturing entity

- b. A T-account analysis method may be used instead of the above formulas to determine cash received and cash paid. T-account analysis provides a quick, systematic way to accumulate the information needed to prepare the statement.
- c. The direct approach would be presented in the statement of cash flows as follows:

***Cash flows from operating activities***

Cash received from dividends	\$ 500	
Cash received from interest	1,000	
Cash received from sale of goods	<u>9,000</u>	
Cash provided by operating activities		\$10,500
Cash paid to suppliers	5,000	
Cash paid for operating expenses	500	
Cash paid for interest	500	
Cash paid for taxes	<u>500</u>	
Cash disbursed from operating activities		<u>6,500</u>
Net cash flows from operating activities		<u>\$ 4,000</u>

3. The other way of reporting net cash flows from operations is known as the **indirect method**.
  - a. This is done by starting with income from continuing operations and adjusting for changes in operating related accounts (e.g., inventory and accounts payable) and noncash expenses, revenues, losses, and gains.
    - (1) Noncash items that were subtracted in determining income must be added back in determining net cash flows from operations. Each of these noncash items is a charge against income but does not decrease cash.
    - (2) Items to be added back include depreciation, amortization of intangibles, amortization of discount on bonds payable, bad debt expense, and any increase in the deferred tax liability. Note each of these items is charged against income but does not decrease cash.
    - (3) Noncash items that were added in determining income must be subtracted from net income in determining net cash flows from operations. Each of these noncash items is an increase to income but does not increase cash.
    - (4) Items to be deducted from income include decreases in the deferred tax liability and amortization of the premium on bonds payable.
    - (5) Finally, gains (losses) on fixed assets require adjustment, since the cash received is not measured by the gain (loss), that is, a fixed asset with a book value of \$10, sold for \$15 in cash, provides \$15 in cash but is reported as only a \$5 gain on the income statement. The \$15 is shown as a separate item on the cash flow statement under investing activities and the \$5 gain is subtracted from income. Losses on asset disposals are added back to income.
  - b. When preparing the cash flows from operating activities section of a Statement of Cash Flows under the indirect method, reconstructing journal entries may help in determining if an item should be added or subtracted to net income.

**EXAMPLE**

If accounts receivable increased by \$20,000 over the year, the journal entry that would result in an increase to accounts receivable would be

Accounts receivable	xx
Sales	xx

This entry results in an increase to net income (through sales), but cash is not affected. Therefore, the amount of the increase is deducted from net income in determining cash flows from operating activities.

If accounts payable decreased by \$35,000, the entry for a decrease in accounts payable would be

Accounts payable	xx
Cash	xx

Since the corresponding credit results in a decrease to cash, the amount of this decrease should be deducted from net income in determining cash flows from operating activities.

- c. When the **indirect** method is used, separate disclosure of cash flows related to extraordinary items and discontinued operations is permitted, but is not required.
- (1) If an entity chooses to disclose this information, disclosure must be consistent for all periods affected.
  - (2) Extraordinary items, if disclosed, should be added to (or subtracted from) operating activities (adjustment to net income) at the gross amount, not the net-of-tax amount.
    - (a) Under either method, the extraordinary item should be included in financing or investing activities, whichever is appropriate.

**ADJUSTMENTS TO NET INCOME FOR INDIRECT METHOD**

<b>Add to net income</b>	<b>Deduct from net income</b>
<b>Decreases in:</b>	<b>Increases in:</b>
Accounts receivable (net)	Accounts receivable (net)
Inventories	Inventories
Prepaid expenses	Prepaid expenses
Deferred tax asset	Deferred tax asset
<b>Increases in:</b>	<b>Decreases in:</b>
Accounts payable	Accounts payable
Income taxes payable	Income taxes payable
Deferred tax liability	Deferred tax liability
Interest payable	Interest payable
Other accrued payables	Other accrued payables
Unearned revenue	Unearned revenue
<b>Other items:</b>	<b>Other items:</b>
<ul style="list-style-type: none"> <li>• Losses from disposals of property, plant, and equipment and available-for-sale investments</li> <li>• Depreciation expense</li> <li>• Amortization expense related to intangible assets and bond discounts</li> <li>• Bad debts expense (if adjustment for accounts receivable is based upon the gross, not the net, change in accounts receivable)</li> <li>• Losses from early extinguishments of debt</li> </ul>	<ul style="list-style-type: none"> <li>• Gains from disposals of property, plant and equipment and available-for-sale investments</li> <li>• Undistributed income from equity method investments (equity income less the cash dividends received during the period)</li> <li>• Amortization of a bond premium</li> <li>• Gains from early extinguishments of debt</li> </ul>

5. The direct and indirect approaches will both be illustrated throughout the remainder of this module.

**NOW REVIEW MULTIPLE-CHOICE QUESTIONS 16 THROUGH 29**

**D. Example of Statement of Cash Flows**

The following information pertains to the Haner Company at December 31, year 1. Comparative balance sheets for year 1 and year 2 are as follows:

<b>EXAMPLE</b>	<b>Year 2</b>	<b>Year 1</b>	<b>Net change</b>
Cash	\$ 9,000	\$ 8,000	\$ 1,000
Treasury bills	4,000	3,000	1,000
Accounts receivable	4,000	5,000	(1,000)
Inventory	1,000	2,000	(1,000)
Prepaid insurance	2,000	3,000	(1,000)
Investment in Simba Co. (held-for-trading)	15,000	15,000	–
Market increase adjustment (trading)	3,000	–	3,000
Investment in ABC Co. (available-for-sale)	15,400	22,000	(6,600)
Market decrease adjustment (available-for-sale)	(3,500)	–	(3,500)
Fixed assets	22,000	17,000	5,000
Accumulated depreciation	(5,000)	(4,000)	(1,000)
Deferred tax asset	<u>1,400</u>	<u>–</u>	<u>1,400</u>
	<u>\$68,300</u>	<u>\$71,000</u>	<u>\$(2,700)</u>
Accounts payable	\$ 4,000	\$ 7,000	\$(3,000)
Income tax payable	3,000	1,000	2,000
Deferred tax liability	6,360	3,000	3,360
Bonds payable	5,000	10,000	(5,000)
Common stock	20,000	20,000	–
Accumulated other comprehensive income			
Unrealized loss on available-for-sale securities (net of tax)	(2,100)	–	(2,100)
Retained earnings	<u>32,040</u>	<u>30,000</u>	<u>2,040</u>
	<u>\$68,300</u>	<u>\$71,000</u>	<u>\$(2,700)</u>
<b>Income Statement</b> for year 2 is as follows:		<b>Statement of Comprehensive Income</b> for year 2 is as follows:	
Net sales	\$50,000	Net income	\$7,080
Cost of goods sold	(20,000)	Other comprehensive income	
Gross profit	30,000	Unrealized loss on available-for-sale securities, (net of tax of \$2,000)	\$(3,000)
Operating expenses	(17,000)	Less:	
Income from operations	13,000	Reclassification on sale of available-for-sale securities, (net of tax of \$600)	(900) (2,100)
Other revenue and gains	\$5,000	Comprehensive income	<u>\$4,980</u>

Other expenses and losses	(2,560)	<u>2,440</u>
Income before extraordinary item and income taxes		15,440
Income tax expense:		
Current portion	5,000	
Deferred portion	<u>3,360</u>	<u>8,360</u>
Net income		<u>\$ 7,080</u>

**Additional information includes**

- Treasury bills have a maturity of less than three months from date of purchase.
- Fixed assets costing \$5,000 with a book value of \$2,000 were sold for \$4,000.
- Three-year insurance policy was purchased in year 1.
- At 12/31/Y2, available-for-sale investments with a book value of \$6,600 at 12/31/Y1 and \$5,100 at 12/31/Y2 sold for \$5,100.
- Additional bonds were issued on 12/31/Y2 for \$4,000. There was no premium or discount.
- Bonds with a book value of \$9,000 were retired on 12/31/Y2.
- Other revenue and gains include a \$3,000 unrealized gain recognized for trading securities.
- Other expenses and losses consist of \$1,060 interest paid and \$1,500 realized loss on available-for-sale securities.
- Changes in investments:
  - No changes in fair value of the investments occurred prior to year 2.
  - There were no sales or purchases of trading securities during year 2.
  - The tax rate is 40%.

**1. Procedural Steps**

- a. The first step is to calculate the change in cash and cash equivalents.

	<b>Year 2</b>	<b>Year 1</b>	<b>Change</b>
Cash	\$9,000	\$8,000	+\$1,000
Treasury bills	4,000	3,000	+ <u>1,000</u>
Net change in cash and cash equivalents			+ <u>\$2,000</u>

- b. Calculate net cash flows from operating activities

(1) Indirect approach

Net income	\$ 7,080	
Decrease in accounts receivable	1,000	(a)
Decrease in inventory	1,000	(b)
Decrease in prepaid insurance	1,000	(c)
Decrease in accounts payable	(3,000)	(d)
Increase in income tax payable	2,000	(e)
Increase in deferred tax liability	3,360	(f)
Unrealized gain on trading securities	(3,000)	(g)
Realized loss on available-for-sale securities	1,500	(h)
Gain on sale of fixed assets	(2,000)	(i)
Depreciation expense	4,000	(j)
Net cash flows from operating activities		<u>\$12,940</u>

Reconstructing journal entries may serve to explain the effect on net income of an increase or decrease of a particular account.

- (a) **Accounts receivable.** For accounts receivable to decrease, the journal entry must have been

Cash	xx	
Accounts receivable		xx

Cash increased as a result of the collection of accounts receivable. The \$1,000 decrease in accounts receivable should be added to net income.

- (b) **Inventory.** For inventory to decrease, the entry must have been

Cost of goods sold	xx	
Inventory		xx

Expenses (CGS) increased without an additional cash outlay for inventory, so the \$1,000 decrease is added back to net income.

- (c) **Prepaid insurance.** For prepaid insurance to decrease, the entry must have been

Insurance expense	xx	
Prepaid insurance		xx

Because expenses increased without a corresponding cash outlay, the \$1,000 decrease in prepaid insurance should be added to net income.

- (d) **Accounts payable.** For accounts payable to decrease, the entry must have been

Accounts payable	xx	
Cash		xx

The entry involves a cash outlay, so the \$3,000 decrease in accounts payable is deducted from net income.

- (e) **Income tax payable.** For income tax payable to increase, the entry must have been

Income tax expense	xx	
Income tax payable		xx

Expenses increased without an actual cash outlay; therefore the \$2,000 increase in the liability is added back to net income.

- (f) **Deferred tax liability.** For deferred tax liability to increase, the entry must have been

Income tax expense	xx	
Deferred tax liability		xx

Expenses increased without an actual cash outlay; therefore the \$3,360 increase in the liability, which is a noncash expense, is added back to net income.

- (g) **Unrealized gain on trading securities.** The entry to record the unrealized gain on trading securities would have been

Investment in Simba Co.—held-for-trading	3,000	
Unrealized holding gain		3,000

Since unrealized gains on trading securities are recognized as income but do not involve a cash inflow, such gains must be subtracted from net income.

- (h) **Realized loss on available-for-sale securities.** When \$5,100 stock in ABC Co. was sold, the previously unrealized loss of \$1,500 (\$5,100 FV at 12/31/Y2 – \$6,600 FV at 12/31/Y1) which arose in year 2 became realized. The entry to record the sale would have been

Cash	5,100	
Realized loss	1,500	
Available for sale		6,600

Because the realized loss does not involve any cash outflow, it must be added back to net income. Note that a \$1,500 unrealized loss would have been recognized in financial statements prepared during year 2. The entry to remove this amount from the other comprehensive income account entitled “Unrealized loss on available-for-sale securities account” and the tax effect is

Adjustment to market (available-for-sale securities)	1,500	
Deferred tax benefit—unrealized loss	600	
Unrealized loss on available-for-sale securities		1,500
Deferred tax asset		600

Since an unrealized loss on AFS securities of \$3,500 was recognized during year 2 (from year 1 to year 2), a \$5,000 decline in FV must have occurred in year 2, as shown below. The deferred tax asset of \$1,400 came from recognizing the future benefit of the unrealized loss of \$3,500. The entry was

Deferred tax asset	1,400
Deferred tax expense (benefit)	1,400

		Market Adjustment (Available-for-Sale Securities)				Available-for-Sale Securities	
		—	Year 1 Bal.	Year 1 Bal.	22,000		
Sale	1,500	5,000	Year 2 Unreal. loss		6,600	Sale	
		3,500	Year 2 Bal.	Year 2 Bal.	15,400		

		Accumulated Other Comprehensive Income				Unrealized Loss on AFS Securities	
		—	Year 1 Bal.	—	1,500	Realized upon sale	
		1,400	Closing entry	Unreal. Loss recog. During year	5,000		
Closing entry	3,500				3,500	Closing entry	
Year 2 Bal.	2,100		Year 2 Bal.	Year 2 Bal.	—		

		Deferred Tax Benefit—Unrealized Loss				Deferred Tax Asset	
Sale	600	—	Year 1 Bal.	—	600	Sale	
Closing entry	1,400	2,000	Year 2 adj.	Year 2 Adj.	2,000		
Year 2 Bal.	—		Year 2 Bal.	Year 2 Bal.	1,400		

Because unrealized gains/losses on available-for-sale securities do not affect cash flows, no adjustment for this change is necessary on the statement of cash flows.

- (i) **Gain on sale of fixed assets.** The entry to record the sale would have been

Cash	4,000
Accumulated depreciation	3,000
Gain on sale	2,000
Asset	5,000

The total amount of cash received in payment for the asset, not just the amount of the gain, represents the cash inflow. Since cash inflow from the sale (including the amount of the gain) appears in the investing section, the gain should be subtracted from net income.

- (j)
- Depreciation expense.**
- The entry to record depreciation is

Depreciation expense	4,000	
Accumulated depreciation		4,000

Because expenses increased without a corresponding cash outlay, the amount recorded for depreciation expense should be added to net income. In this case, the increase in accumulated depreciation must take into consideration the accumulated depreciation removed with the sale of the asset.

	AD		
AD of sold asset	3,000*	4,000	Beg. bal.
		4,000	Depreciation (plug)
		5,000	End. bal.

\* \$5,000 Cost – \$2,000 book value

- (2) Direct approach

Cash received from customers		\$51,000 (a)
Cash provided by operating activities		
Cash paid to suppliers	22,000 (b)	
Cash paid for operating expenses	12,000 (c)	
Cash paid for interest	1,060 (d)	
Cash paid for income taxes	<u>3,000 (e)</u>	
Cash disbursed for operating activities		<u>38,060</u>
Net cash flows from operating activities		<u>\$12,940</u>

- (a) **Cash received from customers.** Net sales + Beginning AR – Ending AR = Cash received from customers (\$50,000 + \$5,000 – \$4,000 = \$51,000). Cash received from customers also may be calculated by analyzing T-accounts.

	Accounts Receivable		
Beg. bal.	5,000		
Sales	50,000	51,000	Cash collected
End. bal.	4,000		

- (b) **Cash paid to suppliers.** Cost of goods sold + Beginning AP – Ending AP + Ending inventory – Beginning inventory = Cash paid to suppliers (\$20,000 + \$7,000 – \$4,000 + \$1,000 – \$2,000 = \$22,000). This is a two-account analysis. The amount for cash paid to suppliers equals the debit to accounts payable, but to solve for that amount, you must first determine purchases. To calculate purchases you must analyze the inventory account.

Step 1. Calculate purchases

	Inventory		
Beg. bal.	2,000	20,000	CGS
Purchases	19,000		
End. bal.	1,000		

Step 2. Calculate cash payments to suppliers

	Accounts Payable		
		7,000	Beg. bal.
Cash paid to suppliers	22,000	19,000	Purchases
		4,000	End. bal.

Note that the \$2,000 difference between the \$20,000 CGS (accrual-basis amount) and the \$22,000 cash payments made to suppliers (cash-basis amount) equals the difference between the \$1,000 decrease in inventory and the \$3,000 decrease in accounts payable when the indirect method is used. However, under the indirect method the difference is deducted from net income. This is because when the direct method is used, expenses such as CGS are examined as **outflows** of cash, whereas when the indirect method is used, net income (revenue-expenses, including CGS) is treated as a net cash **inflow**.

- (c) **Cash paid for operating expenses.** Operating expenses + Ending prepaid expenses – Beginning prepaid expenses – Depreciation expense (and other noncash operating expenses) = Cash paid for operating expenses (\$17,000 + \$2,000 – \$3,000 – \$4,000 = \$12,000). The two accounts in this problem that relate to operating expenses are accumulated depreciation and prepaid insurance.

	Prepaid Insurance			Accumulated Depreciation	
Beg. bal.	3,000			4,000	Beg. bal.
		Insurance expense	AD of sold asset	4,000	Depreciation expense
End. bal.	2,000			3,000	End. bal.

Since neither the expiration of prepaid insurance nor depreciation expense required a cash outlay, cash basis operating expenses are accrual expenses of \$17,000 less depreciation (\$4,000) and insurance expense (\$1,000), or \$12,000.

- (d) **Cash paid for interest.** No analysis needed; amount was given in problem
- (e) **Cash paid for income taxes.** Current portion of income tax expense + Beginning income tax payable – Ending income tax payable = Cash paid for income taxes (\$5,000 + \$1,000 – \$3,000 = \$3,000). The journal entry for income tax expense is

Income tax expense—current	5,000	
Income tax expense—deferred	1,360	
Income tax payable (current portion)		5,000
Deferred tax liability		1,360

Therefore, taxes paid are \$3,000, as shown in the T-account below.

	Income Tax Payable		
		1,000	Beg. bal.
Income taxes paid	3,000	5,000	Current portion
		3,000	End. bal.

- c. Analyze other accounts and determine whether the change is a cash inflow or outflow and whether it is a financing, an investing, or a noncash investing and financing activity.
- (1) Investments in ABC Co. decreased by \$5,100 when this portion was sold (cash inflow, investing activity). The entry to record the sale was

Cash	5,100	
Investment in ABC Co.— available-for-sale		5,100

- (2) Fixed assets increased by \$5,000 after \$5,000 of assets were sold for \$4,000 (cash inflow, investing activity). Thus, \$10,000 of fixed assets were purchased (cash outflow, investing activity).

	Fixed Assets		
Beg. bal.	\$17,000		
Purchase of new assets	10,000	5,000	Sold asset
End. bal.	22,000		

- (3) Bonds payable increased by \$4,000 when additional bonds were issued (cash inflow, financing activity).

- (4) Bonds payable decreased by \$9,000 when they were retired (cash outflow, financing activity). The entry to record the retirement of debt was

Bonds payable	9,000	
Cash		9,000

- (5) Common stock had no change.  
 (6) Retained earnings increased \$2,040 after net income of \$7,080, indicating a dividend of \$5,040 (cash outflow, financing activity).

	Retained Earnings		
		30,000	Beg. bal.
Cash dividend	5,050	7,080	Net income
		32,040	End. bal.

- d. Prepare formal statement

**Haner Company**  
**STATEMENT OF CASH FLOWS**  
*For the Year Ended December 31, Year 2*

<i>Cash flows from operating activities:</i>		
Cash received from customers	\$51,000	
Cash provided by operating activities		\$ 51,000
Cash paid to suppliers	22,000	
Cash paid for operating expenses	12,000	
Cash paid for income taxes	3,000	
Cash paid for interest expense	<u>1,060</u>	
Cash disbursed for operating activities		<u>38,060</u>
Net cash flows from operating activities		\$ 12,940
<i>Cash flows from investing activities:</i>		
Proceeds from sale of investments	\$ 5,100	
Proceeds from sale of fixed assets	4,000	
Acquisition of fixed assets	<u>(10,000)</u>	
Net cash used by investing activities		(900)
<i>Cash flows from financing activities:</i>		
Proceeds from sale of bonds	\$ 4,000	
Repayment of long-term debt	(9,000)	
Dividends paid	<u>(5,040)</u>	
Net cash used by financing activities		<u>(10,040)</u>
Net increase in cash and cash equivalents		\$ 2,000
Cash and cash equivalents at beginning of year		<u>11,000</u>
Cash and cash equivalents at end of year		<u>\$ 13,000</u>

**Reconciliation of net income to cash provided by operating activities:**

[This schedule would include the amounts from D.1.b.(1) (near the beginning of this example) starting with N and ending with Net cash flows from operating activities of \$13,040.]

**Disclosure of accounting policy:**

For purposes of the statement of cash flows, the Company considers all highly liquid debt instruments purchased with a maturity of three months or less to be cash equivalents.

**NOTE:** If the reconciliation approach for operating activities had been shown in the body of the statement instead of the direct approach, an additional schedule showing interest paid and income taxes paid would be necessary.

**NOW REVIEW MULTIPLE-CHOICE QUESTIONS 30 THROUGH 37**

**E. Capital Leases**

In the period an entity enters into a capital lease, a noncash financing and investing activity in the amount of the present value of the minimum lease payments is reported following the cash flow statement. As payments are made by the lessee, the principal reduction component is reported as a cash outflow under financing activities. The interest component is reported in the operating activities section under the direct method. Under the indirect method, interest paid must be disclosed as supplementary information.

**F. Research Component—Accounting Standards Codification**

1. ASC Topic 230 outlines the accounting rules for the statement of cash flows. Typical research issues may involve determining the cash equivalents of the enterprise; classifying items as either operating, investing, or financing activities; and identifying significant noncash transactions. Note that ASC Topic 230 specifically prohibits reporting cash flow per share information on the statement of cash flows.
2. Below are keywords for researching issues on the statement of cash flows. Note that in some paragraphs in FARS, the word “transaction” or “transactions” (rather than “activity”) is used to discuss whether an item is included in the operating, investing, or financing section of the statement of cash flows.

Cash equivalents	Noncash activities
Financing activities	Noncash transactions
Financing transactions	Operating activities
Investing activities	Operating transactions
Investing transactions	Reconciliation of net income

**G. International Financial Reporting Standards (IFRS)**

1. **Statement of cash flows.** The accounting rules for the statement of cash flows are similar to US GAAP.
  - a. For IFRS, cash flows include the inflows and outflows of both cash and cash equivalents.
    - (1) Cash equivalents include cash on hand, bank balances for immediate use, other demand deposits, and short-term investments with maturities of three months or less.
  - b. Both the direct method and indirect method are acceptable methods for preparing the statement of cash flows.
    - (1) However, for the indirect method, operating activities may be presented using a modified approach.
    - (2) This modified indirect method shows revenues and expenses in operating activities, and then reports the changes in working capital accounts.

2. As in US GAAP, the statement of cash flows is divided into three parts: operating, investing, and financing activities. At the bottom of the statement of cash flows, a reconciliation must be made with the amounts in the statement of cash flows and the cash and cash equivalents reported in the statement of financial position.
3. The most significant difference between IFRS and US GAAP is where certain items are presented on the statement of cash flows.
  - a. For example, interest and dividends received may be reported on the statement of cash flows as operating or investing activities.
  - b. Interest and dividends paid may be reported either in the operating activities or the financing activities sections.
    - (1) Although the entity has discretion on where interest and dividends are reported, it must be reported on a consistent basis.
  - c. Cash from the purchase and sale of trading securities are classified as operating activities.
  - d. Cash advances and loans (bank overdrafts) are also usually classified as operating activities.
  - e. Taxes paid on income must be disclosed separately in operating activities.
    - (1) However, cash flows from certain taxes may be classified elsewhere if they are related to investing or financing activities.
  - f. In addition, the effects of noncash transactions are not reported on the statement of cash flows. Instead, significant noncash activities must be disclosed in the notes to the financial statements.

**NOW REVIEW MULTIPLE-CHOICE QUESTIONS 38 THROUGH 39**

## KEY TERMS

**Cash equivalents.** Short-term, highly liquid investments that (1) are readily convertible to known amounts of cash and (2) are so near their maturity (original of three months or less from **date of purchase** by the enterprise) that they present negligible risk of changes in value because of changes in interest rates.

**Direct approach.** Cash flow elements of operating activities are derived from the accrual basis components of net income.

**Indirect method.** Starts with income from continuing operations and adjusts for changes in operating related accounts (e.g., inventory and accounts payable) and noncash expenses, revenues, losses, and gains.

**Statement of Cash Flow.** Provides information about an entity's cash receipts and cash payments and discloses information about the financing and investing activities of an entity.

## Multiple-Choice Questions (1–39)

### A. Objectives of the Statement of Cash Flows

1. At December 31, year 1, Kale Co. had the following balances in the accounts it maintains at First State Bank:

Checking account #101	\$175,000
Checking account #201	(10,000)
Money market account	25,000
90-day certificate of deposit, due 2/28/Y2	50,000
180-day certificate of deposit, due 3/15/Y2	80,000

Kale classifies investments with original maturities of three months or less as cash equivalents. In its December 31, year 1 balance sheet, what amount should Kale report as cash and cash equivalents?

- \$190,000
- \$200,000
- \$240,000
- \$320,000

2. The **primary** purpose of a statement of cash flows is to provide relevant information about

- Differences between net income and associated cash receipts and disbursements.
- An enterprise's ability to generate future positive net cash flows.
- The cash receipts and cash disbursements of an enterprise during a period.
- An enterprise's ability to meet cash operating needs.

3. Mend Co. purchased a three-month US Treasury bill. Mend's policy is to treat as cash equivalents all highly liquid investments with an original maturity of three months or less when purchased. How should this purchase be reported in Mend's statement of cash flows?

- As an outflow from operating activities.
- As an outflow from investing activities.
- As an outflow from financing activities.
- Not reported.

### B. Statement of Cash Flows Classification

4. Alp, Inc. had the following activities during year 1:

- Acquired 2,000 shares of stock in Maybel, Inc. for \$26,000. Alp intends to hold the stock as a long-term investment.
- Sold an investment in Rate Motors for \$35,000 when the carrying value was \$33,000.
- Acquired a \$50,000, four-year certificate of deposit from a bank. (During the year, interest of \$3,750 was paid to Alp.)
- Collected dividends of \$1,200 on stock investments.

In Alp's year 1 statement of cash flows, net cash used in investing activities should be

- \$37,250
- \$38,050
- \$39,800
- \$41,000

5. In year 1, a tornado completely destroyed a building belonging to Holland Corp. The building cost \$100,000 and had accumulated depreciation of \$48,000 at the time of the loss. Holland received a cash settlement from the insurance company and reported an extraordinary loss of \$21,000. In Holland's year 1 cash flow statement, the net change reported in the cash flows from investing activities section should be a

- \$10,000 increase.
- \$21,000 decrease.
- \$31,000 increase.
- \$52,000 decrease.

6. In a statement of cash flows, if used equipment is sold at a gain, the amount shown as a cash inflow from investing activities equals the carrying amount of the equipment

- Plus the gain.
- Plus the gain and less the amount of tax attributable to the gain.
- Plus both the gain and the amount of tax attributable to the gain.
- With **no** addition or subtraction.

7. On September 1, year 1, Canary Co. sold used equipment for a cash amount equaling its carrying amount for both book and tax purposes. On September 15, year 1, Canary replaced the equipment by paying cash and signing a note payable for new equipment. The cash paid for the new equipment exceeded the cash received for the old equipment. How should these equipment transactions be reported in Canary's year 1 statement of cash flows?

- Cash outflow equal to the cash paid less the cash received.
- Cash outflow equal to the cash paid and note payable less the cash received.
- Cash inflow equal to the cash received and a cash outflow equal to the cash paid and note payable.
- Cash inflow equal to the cash received and a cash outflow equal to the cash paid.

**Items 8 and 9** are based on the following:

A company acquired a building, paying a portion of the purchase price in cash and issuing a mortgage note payable to the seller for the balance.

8. In a statement of cash flows, what amount is included in investing activities for the above transaction?

- Cash payment.
- Acquisition price.
- Zero.
- Mortgage amount.

9. In a statement of cash flows, what amount is included in financing activities for the above transaction?

- Cash payment.
- Acquisition price.
- Zero.
- Mortgage amount.

10. Fara Co. reported bonds payable of \$47,000 at December 31, year 1, and \$50,000 at December 31, year 2. During year 2, Fara issued \$20,000 of bonds payable in exchange for equipment. There was no amortization of bond premium or discount during the year. What amount should Fara report in its year 2 statement of cash flows for redemption of bonds payable?

- \$3,000
- \$17,000
- \$20,000
- \$23,000

Items 11 and 12 are based on the following:

In preparing its cash flow statement for the year ended December 31, year 1, Reve Co. collected the following data:

Gain on sale of equipment	\$ (6,000)
Proceeds from sale of equipment	10,000
Purchase of A.S., Inc. bonds (par value \$200,000)	(180,000)
Amortization of bond discount	2,000
Dividends declared	(45,000)
Dividends paid	(38,000)
Proceeds from sale of treasury stock (carrying amount \$65,000)	75,000

In its December 31, year 1 statement of cash flows,

11. What amount should Reve report as net cash used in investing activities?

- \$170,000
- \$176,000
- \$188,000
- \$194,000

12. What amount should Reve report as net cash provided by financing activities?

- \$20,000
- \$27,000
- \$30,000
- \$37,000

13. On July 1, year 1, Dewey Co. signed a twenty-year building lease that it reported as a capital lease. Dewey paid the monthly lease payments when due. How should Dewey report the effect of the lease payments in the financing activities section of its year 1 statement of cash flows?

- An inflow equal to the present value of future lease payments at July 1, year 1, less year 1 principal and interest payments.
- An outflow equal to the year 1 principal and interest payments on the lease.

- An outflow equal to the year 1 principal payments only.
- The lease payments should **not** be reported in the financing activities section.

14. Which of the following should be reported when preparing a statement of cash flows?

	Conversion of long-term debt to common stock	Conversion of preferred stock
a.	No	No
b.	No	Yes
c.	Yes	Yes
d.	Yes	No

15. Which of the following information should be disclosed as supplemental information in the statement of cash flows?

	Cash flow per share	Conversion of debt to equity
a.	Yes	Yes
b.	Yes	No
c.	No	Yes
d.	No	No

### C. Direct or Indirect Presentation in Reporting Operating Activities

16. Which of the following is **not** disclosed on the statement of cash flows when prepared under the direct method, either on the face of the statement or in a separate schedule?

- The major classes of gross cash receipts and gross cash payments.
- The amount of income taxes paid.
- A reconciliation of net income to net cash flow from operations.
- A reconciliation of ending retained earnings to net cash flow from operations.

Items 17 through 21 are based on the following:

Flax Corp. uses the direct method to prepare its statement of cash flows. Flax's trial balances at December 31, year 2 and year 1 are as follows:

	December 31	
	Year 2	Year 1
<b>Debits</b>		
Cash	\$ 35,000	\$ 32,000
Accounts receivable	33,000	30,000
Inventory	31,000	47,000
Property, plant, & equipment	100,000	95,000
Unamortized bond discount	4,500	5,000
Cost of goods sold	250,000	380,000
Selling expenses	141,500	172,000
General and administrative expenses	137,000	151,300
Interest expense	4,300	2,600
Income tax expense	<u>20,400</u>	<u>61,200</u>
	<u>\$756,700</u>	<u>\$976,100</u>

	December 31	
	Year 2	Year 1
<b>Credits</b>		
Allowance for uncollectible accounts	\$ 1,300	\$ 1,100
Accumulated depreciation	16,500	15,000
Trade accounts payable	25,000	17,500
Income taxes payable	21,000	27,100
Deferred income taxes	5,300	4,600
8% callable bonds payable	45,000	20,000
Common stock	50,000	40,000
Additional paid-in capital	9,100	7,500
Retained earnings	44,700	64,600
Sales	<u>538,800</u>	<u>778,700</u>
	<u>\$756,700</u>	<u>\$976,100</u>

- Flax purchased \$5,000 in equipment during year 2.
- Flax allocated one third of its depreciation expense to selling expenses and the remainder to general and administrative expenses. There were no write-offs of accounts receivable during year 2.

What amounts should Flax report in its statement of cash flows for the year ended December 31, year 2, for the following:

17. Cash collected from customers?

- a. \$541,800
- b. \$541,600
- c. \$536,000
- d. \$535,800

18. Cash paid for goods to be sold?

- a. \$258,500
- b. \$257,500
- c. \$242,500
- d. \$226,500

19. Cash paid for interest?

- a. \$4,800
- b. \$4,300
- c. \$3,800
- d. \$1,700

20. Cash paid for income taxes?

- a. \$25,800
- b. \$20,400
- c. \$19,700
- d. \$15,000

21. Cash paid for selling expenses?

- a. \$142,000
- b. \$141,500
- c. \$141,000
- d. \$140,000

22. In a statement of cash flows, which of the following would increase reported cash flows from operating activities using the direct method? (Ignore income tax considerations.)

- a. Dividends received from investments.
- b. Gain on sale of equipment.

- c. Gain on early retirement of bonds.
- d. Change from straight-line to accelerated depreciation.

23. A company's wages payable increased from the beginning to the end of the year. In the company's statement of cash flows in which the operating activities section is prepared under the direct method, the cash paid for wages would be

- a. Salary expense plus wages payable at the beginning of the year.
- b. Salary expense plus the increase in wages payable from the beginning to the end of the year.
- c. Salary expense less the increase in wages payable from the beginning to the end of the year.
- d. The same as salary expense.

24. Metro, Inc. reported net income of \$150,000 for year 1. Changes occurred in several balance sheet accounts during year 1 as follows:

Investment in Videogold, Inc. stock, carried on the equity basis	\$5,500 increase
Accumulated depreciation, caused by major repair to projection equipment	2,100 decrease
Premium on bonds payable	1,400 decrease
Deferred income tax liability (long-term)	1,800 increase

In Metro's year 1 cash flow statement, the reported net cash provided by operating activities should be

- a. \$150,400
- b. \$148,300
- c. \$144,900
- d. \$142,800

25. Lino Co.'s worksheet for the preparation of its year 1 statement of cash flows included the following:

	December 31	January 1
Accounts receivable	\$29,000	\$23,000
Allowance for uncollectible accounts	1,000	800
Prepaid rent expense	8,200	12,400
Accounts payable	22,400	19,400

Lino's year 1 net income is \$150,000. What amount should Lino include as net cash provided by operating activities in the statement of cash flows?

- a. \$151,400
- b. \$151,000
- c. \$148,600
- d. \$145,400

26. In a statement of cash flows (using indirect approach for operating activities) an increase in inventories should be presented as a(n)

- a. Outflow of cash.
- b. Inflow and outflow of cash.
- c. Addition to net income.
- d. Deduction from net income.

27. How should a gain from the sale of used equipment for cash be reported in a statement of cash flows using the indirect method?

- In investment activities as a reduction of the cash inflow from the sale.
- In investment activities as a cash outflow.
- In operating activities as a deduction from income.
- In operating activities as an addition to income.

28. Would the following be added back to net income when reporting operating activities' cash flows by the indirect method?

	Excess of treasury stock acquisition cost over sales proceeds (cost method)	Bond discount amortization
a.	Yes	Yes
b.	No	No
c.	No	Yes
d.	Yes	No

29. Which of the following should **not** be disclosed in an enterprise's statement of cash flows prepared using the indirect method?

- Interest paid, net of amounts capitalized.
- Income taxes paid.
- Cash flow per share.
- Dividends paid on preferred stock.

### D. Example of Statement of Cash Flows

Items 30 through 32 are based on the following:

The differences in Beal Inc.'s balance sheet accounts at December 31, year 2 and year 1, are presented below.

	Increase (Decrease)
<b>Assets</b>	
Cash and cash equivalents	\$ 120,000
Available-for-sale securities	300,000
Accounts receivable, net	—
Inventory	80,000
Long-term investments	(100,000)
Plant assets	700,000
Accumulated depreciation	—
	<u>\$1,100,000</u>
<b>Liabilities and Stockholders' Equity</b>	
Accounts payable and accrued liabilities	\$ (5,000)
Dividends payable	160,000
Short-term bank debt	325,000
Long-term debt	110,000
Common stock, \$10 par	100,000
Additional paid-in capital	120,000
Retained earnings	<u>290,000</u>
	<u>\$1,100,000</u>

The following additional information relates to year 2:

- Net income was \$790,000.
- Cash dividends of \$500,000 were declared.

- Building costing \$600,000 and having a carrying amount of \$350,000 was sold for \$350,000.
- Equipment costing \$110,000 was acquired through issuance of long-term debt.
- A long-term investment was sold for \$135,000. There were no other transactions affecting long-term investments.
- 10,000 shares of common stock were issued for \$22 a share.

In Beal's year 2 statement of cash flows,

30. Net cash provided by operating activities was

- \$1,160,000
- \$1,040,000
- \$920,000
- \$705,000

31. Net cash used in investing activities was

- \$1,005,000
- \$1,190,000
- \$1,275,000
- \$1,600,000

32. Net cash provided by financing activities was

- \$20,000
- \$45,000
- \$150,000
- \$205,000

Items 33 through 36 relate to data to be reported in the statement of cash flows of Debbie Dress Shops, Inc. based on the following information:

#### Debbie Dress Shops, Inc. BALANCE SHEETS

	December 31	
	Year 2	Year 1
<b>Assets</b>		
Current assets:		
Cash	\$ 300,000	\$ 200,000
Accounts receivable—net	840,000	580,000
Merchandise inventory	660,000	420,000
Prepaid expenses	<u>100,000</u>	<u>50,000</u>
Total current assets	<u>1,900,000</u>	<u>1,250,000</u>
Long-term investments	<u>80,000</u>	—
Land, buildings, and fixtures	1,130,000	600,000
Less accumulated depreciation	<u>110,000</u>	<u>50,000</u>
	<u>1,020,000</u>	<u>550,000</u>
Total assets	<u>\$3,000,000</u>	<u>\$1,800,000</u>
<b>Equities</b>		
Current liabilities:		
Accounts payable	\$ 530,000	\$ 440,000
Accrued expenses	140,000	130,000
Dividends payable	<u>70,000</u>	—
Total current liabilities	<u>740,000</u>	<u>570,000</u>
Note payable—due year 4	<u>500,000</u>	—
Stockholders' equity:		
Common stock	1,200,000	900,000
Retained earnings	<u>560,000</u>	<u>330,000</u>
	<u>1,760,000</u>	<u>1,230,000</u>
Total liabilities and stockholders' equity	<u>\$3,000,000</u>	<u>\$1,800,000</u>

**Debbie Dress Shops, Inc.**  
**INCOME STATEMENTS**

	<b>Year ended December 31</b>	
	<b>Year 2</b>	<b>Year 1</b>
Net credit sales	\$6,400,000	\$4,000,000
Cost of goods sold	<u>5,000,000</u>	<u>3,200,000</u>
Gross profit	1,400,000	800,000
Expenses (including income taxes)	<u>1,000,000</u>	<u>520,000</u>
Net income	<u>\$ 400,000</u>	<u>\$ 280,000</u>

Additional information available included the following:

- All accounts receivable and accounts payable are related to trade merchandise. Accounts payable are recorded net and always are paid to take all of the discount allowed. The allowance for doubtful accounts at the end of year 2 was the same as at the end of year 1; no receivables were charged against the allowance during year 2.
- The proceeds from the note payable were used to finance a new store building. Capital stock was sold to provide additional working capital.

**33.** Cash collected during year 2 from accounts receivable amounted to

- \$5,560,000
- \$5,840,000
- \$6,140,000
- \$6,400,000

**34.** Cash payments during year 2 on accounts payable to suppliers amounted to

- \$4,670,000
- \$4,910,000
- \$5,000,000
- \$5,150,000

**35.** Net cash provided by financing activities for year 2 totaled

- \$140,000
- \$300,000
- \$500,000
- \$700,000

**36.** Net cash used in investing activities during year 2 was

- \$80,000
- \$530,000
- \$610,000
- \$660,000

**37.** Bee Co. uses the direct write-off method to account for uncollectible accounts receivable. During an accounting period, Bee's cash collections from customers equal sales adjusted for the addition or deduction of the following amounts:

	<b>Accounts written off</b>	<b>Increase in accounts receivable balance</b>
a.	Deduction	Deduction
b.	Addition	Deduction
c.	Deduction	Addition
d.	Addition	Addition

**G. International Financial Reporting  
Standards (IFRS)**

**38.** Rice Corporation prepares its financial statements in accordance with IFRS. Rice must report amounts paid for interest on a note payable on the statement of cash flows

- In operating activities.
- In financing activities.
- Either in operating activities or financing activities.
- Either in investing activities or financing activities.

**39.** Filigree Corporation prepares its financial statements in accordance with IFRS. Filigree acquired equipment by issuing 5,000 shares of its common stock. How should this transaction be reported on the statement of cash flows?

- As an outflow of cash from investing activities and an inflow of cash from financing activities.
- As an inflow of cash from financing activities and an outflow of cash from operating activities.
- At the bottom of the statement of cash flows as a significant noncash transaction.
- In the notes to the financial statements as a significant noncash transaction.

## Multiple-Choice Answers and Explanations

### Answers

9. c	— —	18. d	— —	27. c	— —	36. c	— —	2nd: ___/39 = ___%	

### Explanations

1. (c) The 12/31/Y1 cash and cash equivalents balance is \$240,000, as computed below.

Checking account #101	\$175,000
Checking account #201	(10,000)
Money market account	25,000
90-day CD	<u>50,000</u>
Total cash and cash equivalents	<u>\$240,000</u>

Bank overdrafts (like account #201) are normally reported as a current liability. However, when available cash is present in another account **in the same bank**, as in this case, offsetting is required. The money market account of \$25,000 and the 90-day CD of \$50,000 are considered cash equivalents because they had original maturities of three months or less. The 180-day CD of \$80,000 is excluded because its original maturity was more than three months.

2. (c) The **primary** purpose of a statement of cash flows is to provide relevant information about the enterprise's cash receipts and cash payments during a period. Answers (a), (b), and (d) are incorrect because, although they represent uses of the statement of cash flows, they are not the primary use.

3. (d) The statement of cash flows is required to be prepared based on inflows and outflows of cash and cash equivalents during the period. The purchase of a cash equivalent using cash is **not** an outflow of cash and cash equivalents; it is merely a change in the composition of cash and cash equivalents. Cash has decreased and cash equivalents have increased, but total cash and cash equivalents is unchanged. Therefore this purchase is **not** reported in the statement of cash flows.

4. (d) Investing activities include all cash flows involving **assets**, other than operating items. The investing activities are

Purchase of inv. in stock	\$(26,000)
Sale of inv. in stock	35,000
Acquisition of CD	<u>(50,000)</u>
Net cash used	<u>(41,000)</u>

The gain on sale of investment in Rate Motors (\$35,000 – \$33,000 = \$2,000), the interest earned (\$3,750), and dividends earned (\$1,200) are all operating items. Note that the sale of investment is reported in the investing section at the cash inflow amount (\$35,000), not at the carrying value of the investment (\$33,000). If the CD had been for three months instead of four years, it would be part of “Cash and Cash equivalents” and would not be shown under investing activities.

5. (c) The building which was destroyed had a book value of \$52,000 (\$100,000 – \$48,000). The cash settlement from the insurance company resulted in a loss of \$21,000. Therefore, the cash inflow from this investing activity must be \$31,000 as shown below.

Proceeds	–	Book value	=	Loss
?	–	\$52,000	=	(\$21,000)
\$31,000	–	\$52,000	=	(\$21,000)

Note that the \$21,000 extraordinary loss must be before any income tax effect because ASC Topic 230 requires that any tax effect be left in operating activities.

6. (a) The cash inflow from the sale of equipment is the carrying amount plus the gain. Answers (b) and (c) are incorrect because the tax attributable to the gain is a cash outflow in the operating activities section of the statement of cash flows. Note that when using the indirect method, the gain is deducted from operating activities, as to not double count the gain.

7. (d) The requirement is to determine how the equipment transactions should be reported in the statement of cash flows. Companies are required to report the gross amounts of cash receipts and cash payments, rather than net amounts. Therefore, the gross cash inflow from the sale of equipment and the gross outflow for the payment of new equipment should be reported. Answer (a) is incorrect because both gross inflow and outflow should be reported, rather than reporting the net cash flow from the transaction. Answer (b) is incorrect because gross cash flows, not net, are reported and because a note payable is not reported since the transaction results in

no actual inflow or outflow in the period in which the payable occurs. This noncash activity would be reported in a separate schedule or in the footnotes. Noncash transactions commonly recognized in a separate schedule in the financial statements include: conversion of debt to equity and acquisition of assets by assuming liabilities, including lease obligations. Answer (c) is incorrect because the note payable is not reported on the statement of cash flows; rather it is shown in a separate schedule.

8. (a) Payments at the time of purchase or soon before or after purchase to acquire property, plant, and equipment and other productive assets are categorized as cash outflows for investing activities. Generally, these payments only include advance payments, down payments, or payments made at the time of purchase or soon before or after purchase. Therefore, only the cash payment is considered a cash outflow for investing activities.

9. (c) Noncash investing and financing activities include acquiring assets by assuming directly related liabilities, such as purchasing a building by incurring a mortgage to the seller. This type of transaction does not involve the flow of cash. Therefore, cash flows for financing activities related to this transaction would be zero. Note that the cash down payment would be reported as a cash outflow for **investing** activities. The amount of the mortgage payment would be included in the noncash activities at the bottom of the statement of cash flows.

10. (b) To determine the cash paid for redemption of bonds payable, the solutions approach is to set up a T-account for bonds payable.

		Bonds Payable	
		47,000	12/31/Y1
Bonds redeemed	?	20,000	Bonds issued
		50,000	12/31/Y2

The amount of bonds redeemed can be computed as \$17,000. (\$47,000 + \$20,000 – \$50,000 = \$17,000)

11. (a) Investing activities include all cash flows involving **assets** other than operating items. The investing activities are

Proceeds from sale of equipment	\$ 10,000
Purchase of A.S., Inc. bonds	(180,000)
Net cash used in investing activities	<u>\$(170,000)</u>

The gain on sale of equipment (\$6,000) and amortization of bond discount (\$2,000) are net income adjustments in the operating section, while dividends paid (\$38,000) and proceeds from sale of treasury stock (\$75,000) are financing items. The excess of dividends declared over dividends paid is a noncash financing activity.

12. (d) Financing activities include all cash flows involving **liabilities and owners' equity** other than operating items. The financing activities are

Dividends paid	\$(38,000)
Proceeds from sale of treasury stock	<u>75,000</u>
Net cash provided by financing activities	<u>\$ 37,000</u>

The excess of dividends declared over dividends paid is a **noncash** financing activity. The gain on sale of equipment (\$6,000) and amortization of bond discount (\$2,000) are net income adjustments in the operating section, while the proceeds from sale of equipment (\$10,000) and purchase of A.S., Inc. bonds (\$180,000) are investing items.

13. (c) Financing activities include the repayment of debt principal or, as in this case, the payment of the capital lease obligation. Thus, the cash outflow is equal to the year 1 principal payments only. The interest on the capital lease is classified as an operating cash outflow.

14. (c) Information about all investing and financing activities of an enterprise during a period that affect recognized assets and liabilities but that do not affect cash receipts or cash payments in the period should be reported in a supplemental schedule to the financial statements. This schedule includes all noncash investing and financing activities for the period. The conversion of long-term debt into common stock does not have any effect on cash flow, and it also results in a reduction of liabilities and an increase in stockholders' equity. Therefore, the conversion of long-term debt into common stock should be reported as a noncash financing activity in the supplemental schedule. Mandatorily redeemable preferred stock should be classified as a liability. On the date the preferred stock is redeemable, it is considered liability. Therefore, when the preferred stock is converted into common stock, the conversion should be reported as a noncash financing activity in the supplemental schedule.

15. (c) Noncash investing and financing activities are reported as supplemental information to the statement of cash flows because while they do not affect cash in the current year, they may have a significant effect on the prospective cash flows of the company. Therefore, conversion of debt to equity is disclosed as supplemental information to the statement of cash flows. However, cash flow per share should **not** be reported on the statement of cash flows because it may be misleading and may be incorrectly used as a measure of profitability.

16. (d) Under either the direct method or indirect method, the major classes of gross cash receipts and gross cash payments must be reported in the statement of cash flows. Under the direct method, the amount of income taxes paid is one of the components of net cash flows from operating activities; under the indirect method, it is a required supplemental disclosure. A reconciliation of net income to net cash flow from operations is a required supplemental disclosure under the direct method, and is included in the body of the statement under the indirect method. Only a reconciliation of ending retained earnings to net cash flow from operations is **not** required under either method.

17. (d) Cash collected from customers can be computed using either a formula or a T-account. The formula is

$$\text{Sales} - [\text{End AR} - (\text{Beg AR} - \text{Write-offs})] = \text{Collections}$$

$$\$538,800 - [\$33,000 - (\$30,000 - \$0)] = \underline{\underline{\$535,800}}$$

In the formula above, sales is adjusted for the **change in AR, exclusive of write-offs**, because write-offs represent sales

(and AR) which will never be collected in cash. In this problem, there were no write-offs, so it must be assumed that the change in the allowance account results solely from bad debt expense (no write-offs). Since there are no write-offs, the increase in AR (\$33,000 – \$30,000 = \$3,000) is subtracted from sales because those sales increased AR instead of cash. The T-account solution is below.

Accounts Receivable			
12/31/Y1	30,000		
Sales	538,800	0	Write-offs
		?	Collections = 535,800
12/31/Y2	33,000		

18. (d) Cash paid for goods to be sold can be computed using either a formula or T-accounts. The formula is

$$\begin{aligned}
 \text{CGS} &+ (\text{End. inv.} - \text{Beg. inv.}) - (\text{End. AP} - \text{Beg. AP}) = \text{Cash paid} \\
 \$250,000 &+ (\$31,000 - \$47,000) - (\$25,000 - \$17,500) = \text{Cash paid} \\
 \$250,000 &- \$16,000 - \$7,500 = \$226,500
 \end{aligned}$$

The decrease in inventory (\$16,000) is subtracted from CGS because that portion of CGS resulted from a use of inventory purchased in prior years, rather than from a cash payment. The increase in AP is subtracted because that portion of CGS was not paid this year. Using T-accounts, first purchases are computed using the inventory account, then payments are computed using the accounts payable account.

Inventory		
12/31/Y1	47,000	
Purchases	?	250,000 CGS
12/31/Y2	31,000	

1. Purchases = \$234,000

Accounts Payable		
		17,500 12/31/Y1
Payments	?	234,000 Purchases
		25,000 12/31/Y2

2. Payments = \$226,500

19. (c) The trial balance does **not** include prepaid interest or interest payable, both of which would affect the computation of cash paid for interest. In the absence of those accounts, cash paid for interest is equal to interest expense plus (minus) bond premium (discount) amortization.

$$\begin{aligned}
 \text{Interest expense} &- \text{Discount amortization} = \text{Cash paid} \\
 \$4,300 &- (\$5,000 - \$4,500) = \$3,800
 \end{aligned}$$

Flax's year 2 entry to record interest expense was

Interest expense	4,300	
Cash		3,800
Discount on bonds payable		500

20. (a) Cash paid for income taxes can be computed using the following formula:

$$\begin{aligned}
 \text{Inc. tax expense} &- \left( \begin{array}{cc} \text{End.} & \text{Beg.} \\ \text{inc. tax} & - \text{in. tax} \\ \text{payable} & \text{payable} \end{array} \right) - \left( \begin{array}{cc} \text{End.} & \text{Beg.} \\ \text{def. tax} & - \text{def. tax} \\ \text{liability} & \text{liability} \end{array} \right) = \text{Cash paid for inc. tax} \\
 \$20,400 &- (\$21,000 - \$27,000) - (\$5,300 - \$4,600) = \text{Cash paid} \\
 \$20,400 &+ \$6,100 - \$700 = \$25,800
 \end{aligned}$$

The decrease in income taxes payable is added to income tax expense because cash was used to decrease the liability as well as to pay tax expense. The increase in the deferred tax liability is deducted from income tax expense because that portion of tax expense was deferred (not paid in cash). Flax's summary journal entry to record income taxes for year 2 is

Inc. tax expense	20,400	
Inc. tax payable	6,100	
Cash		25,800
Deferred taxes		700

21. (c) In general, cash paid for selling expenses is affected by prepaid selling expenses, accrued selling expenses, depreciation and/or amortization expense, and possibly bad debts expense. In this case, there are no prepaid or accrued selling expenses in the trial balances, and bad debts expense is apparently included in general and administrative expenses (see discussion below). Therefore, cash paid for selling expenses is \$141,000 (\$141,500 selling expenses less \$500 depreciation expense). Total depreciation expense can be determined from the change in the accumulated depreciation account (\$16,500 – \$15,000 = \$1,500), and 1/3 of that amount is selling expense (1/3 × \$1,500 = \$500). Note that bad debt expense (\$1,300 – \$1,100 = \$200) must be included in general and administrative expenses, because the answer obtained by assuming it is part of selling expenses (\$141,000 – \$200 = \$140,800) is not given as one of the four choices.

22. (a) Businesses are encouraged to use the direct method of reporting operating activities under which major classes of cash receipts and cash payments are shown. The minimum cash flows to be disclosed under this method are cash collected from customers, interest and dividends received, cash paid to employees and suppliers, income taxes paid, and interest paid.

23. (c) In a statement of cash flows in which the operating activities section is prepared using the direct method, the cash paid for wages would be equal to the accrual-basis salary expense, plus/minus any decrease/increase in the wages payable account. (The logic is essentially the same as an accrual-basis to cash-basis adjustment.)

24. (c) Net income was \$150,000. Three of the four items given are net income adjustments (the major repair to projection equipment [\$2,100] is a cash outflow under

investing activities), resulting in net cash provided by operating activities of \$144,900.

Net income	\$150,000
Equity method income	(5,500)
Premium amortization	(1,400)
Increase in def. tax liability	<u>1,800</u>
Cash provided by operating activities	<u>\$144,900</u>

When equity method income is recorded, the offsetting debit is to the investment account, not cash; when premium on bonds payable is amortized, the credit to interest expense is offset by a debit to the premium account, not cash. Therefore, both of these items **increase** income without increasing cash, and must be **deducted** as a net income adjustment. For the deferred tax items, when income tax expense is debited, the offsetting credit is to deferred tax liability, not cash. Therefore, this item **decreases** net income without decreasing cash, and it must be **added back** as a net income adjustment. Note that there should normally be depreciation expense as a net income adjustment, but it is not given.

**25. (a)** Based only on the items given, net cash provided by operating activities is \$151,400, as computed below.

Net income	\$150,000
Increase in net AR	
[\$29,000 – 1,000] – (\$23,000 – \$800)	(5,800)
Decrease in prepaid rent (\$12,400 – \$8,200)	4,200
Increase in AP (\$22,400 – \$19,400)	<u>3,000</u>
Cash provided by ops.	<u>\$151,400</u>

The increase in net AR is deducted from net income because it indicates that cash collected is less than sales revenue. The decrease in prepaid rent is added because it reflects rent expense that was **not** a cash payment, but an allocation of previously recorded prepaid rent. Finally, the increase in AP is added because it also represents an expense (cost of goods sold) that was not yet paid.

**26. (d)** The objective of a statement of cash flows is to explain what caused the change in the cash balance. The first step in this process is to determine cash provided by operations. When presenting cash from operating activities under the indirect approach, net income must be adjusted for changes in current assets other than cash and in current liabilities. These adjustments are required because items that resulted from noncash events must be removed from accrual-based income. For example, when inventory increases during the period, inventory sold is less than inventory purchased. Considering only the increase in the inventory account, cost of goods sold on an accrual basis is less than it would have been if cash basis were being used. In converting to the cash basis, the increase in inventory must be subtracted from net income to arrive at cash from operations. Answer (a) is incorrect because even though an increase in inventories requires an outflow of cash, inventories are shown as adjustments to net income under the indirect method. Answer (b) is incorrect because changes in inventories are shown as adjustments to net income under the indirect method. Answer (c) is incorrect

because an increase in an inventory would be a deduction from net income, not an addition.

**27. (c)** When using the indirect method for reporting net cash flows from operations, you start with net income from continuing operations and adjust for changes in operating related accounts (i.e., inventory, accounts payable) and noncash expenses, revenues, gains and losses. The proceeds from the sale of equipment is reported as an inflow in the investing section of the statement of cash flows, at its gross amount. This gross amount includes the gain. Therefore, to avoid double counting and to properly classify cash inflows, the gain is subtracted from net income to show the proper cash balance from operating activities.

**28. (c)** Under the indirect method of reporting cash flows from operations, income from continuing operations is adjusted for changes in operating related accounts and noncash expenses, revenues, losses, and gains. Noncash items that were subtracted in determining income must be added back in. This would include amortization of bond discount, as it is a charge against income but does not decrease cash. The excess of treasury stock acquisition cost over sales proceeds would not be added back to net income. Under the cost method, this loss would not be included in net income but would be charged back to a paid-in capital account or retained earnings. The acquisition and sale of treasury stock, furthermore, would be financing activities.

**29. (c)** Cash flow per share should **not** be reported on the statement of cash flows because it may be misleading and may be incorrectly used as a measure of profitability. Answers (a) and (b) are incorrect because, when the indirect method is used, separate disclosure is required for **interest paid** (net of amounts capitalized) and **income taxes paid**. Answer (d) is incorrect because, regardless of the method used, **dividends paid** on preferred stock are reported as a **financing activity**.

**30. (c)** Net cash provided by operating activities can be computed by using either the **direct** or **indirect** approach. In this case, there is not enough information to use the direct approach. In the indirect approach, net income is adjusted for noncash items, as shown below.

Net income	\$790,000
Gain on sale of LT investment	(35,000)
Increase in inventory	(80,000)
Depreciation expense	250,000
Decrease in AP and accrued liabs.	<u>(5,000)</u>
	<u>\$920,000</u>

The additional information indicates that a LT investment was sold for \$135,000. The listing of accounts shows a decrease in LT investments of \$100,000. The gain on sale (\$135,000 – \$100,000 = \$35,000) is deducted because the total cash effect of this transaction (\$135,000) will be reported as an investing activity. Two of the working capital accounts that changed are related to net income. The increase in inventory (\$80,000) is deducted because cash was used to increase inventory. The decrease in accounts payable and accrued liabilities is

deducted because cash was used to pay these liabilities. The increase of \$300,000 for Available-for-Sale Securities is an investing activity. The only other information or account given which affects net income is accumulated depreciation. Although this account did not show any net decrease or increase during year 2, we know it was decreased by \$250,000 when the building was sold (\$600,000 cost less \$350,000 carrying amount equals \$250,000 accumulated depreciation). Therefore, depreciation expense of \$250,000 must have increased the accumulated depreciation account to result in a net effect for the year of \$0. Depreciation expense is added because it is a noncash expense.

An alternative method of computing net cash provided by operating activities is to back into the answer after determining cash used in investing activities and cash provided by financing activities.

Cash provided by Operating Activities	\$	?
Cash used in Investing Activities		(1,005,000)
Cash provided by Financing Activities		<u>205,000</u>
Net increase in Cash	\$	<u>120,000</u>

The problem tells us that cash and cash equivalents increased by \$120,000. Therefore, cash provided by operating activities is \$920,000 (\$920,000 – \$1,005,000 + \$205,000 = \$120,000).

**31. (a) Investing** activities include all cash flows involving **assets**, other than operating items. **Financing** activities include all cash flows involving **liabilities and equity**, other than operating items. The common stock issued is a financing activity. In this case, the changes in the inventory and accumulated depreciation accounts are operating items. The cash flows involving the other assets, listed below, are investing activities

Purchase of AFS securities	\$	(300,000)
Sale of LT investments		135,000
Sale of plant assets		350,000
Purchase of plant assets		<u>(1,190,000)</u>
	\$	<u>(1,005,000)</u>

The amounts above were given, except for the purchase of plant assets, the amount of which can be determined from the following T-account:

	Plant Assets		
Cost of equip. acquired	110,000	600,000	Cost of
Cost of plant assets purchased	?		bldg. sold
Net increase	700,000		

The equipment acquired through issuance of LT debt is a **noncash** investing and financing activity so it does not affect net **cash** used in investing activities.

**32. (d) Financing** activities include all cash flows involving **liabilities and equity**, other than operating items. **Investing** activities include all cash flows involving **assets**, other than operating items. In this case, the change in the **accounts payable and accrued liabilities** account is an operating item.

The part of the change in **retained earnings** caused by net income (\$790,000) is also an operating item. The cash flows involving the other liability and equity accounts, listed below, are financing activities.

Payment of dividends	\$(340,000)
(\$500,000 – \$160,000)	
Issuance of ST debt	325,000
Issuance of common stock (10,000 × \$22)	<u>220,000</u>
	<u>\$ 205,000</u>

The problem states that \$500,000 of dividends were **declared**, and this is confirmed by the change in the retained earnings account (\$790,000 net income – \$500,000 dividends declared = \$290,000 net increase). However, since dividends payable increased by \$160,000, only \$340,000 of dividends were paid (\$500,000 – \$160,000). The issuance of common stock (10,000 shares × \$22 per share = \$220,000) is confirmed by the increases in the common stock and additional paid-in capital accounts (\$100,000 + \$120,000 = \$220,000). The issuance of LT debt for equipment (\$110,000) is a noncash financing and investing activity, so it does not affect net cash provided by financing activities. Note that the answers to the three related questions can be verified by comparing them to the increase in cash and cash equivalents (\$120,000) given in the problem.

Cash provided by oper. acts.	\$ 920,000
Cash used in inv. acts.	(1,005,000)
Cash provided by fin. acts.	<u>205,000</u>
Increase in cash and cash equivalents	<u>\$ 120,000</u>

**33. (c)** The requirement is to calculate the amount of cash collected during year 2 from accounts receivable. The solutions approach is to prepare a T-account for accounts receivable. The allowance account has no effect on this analysis, because the problem states that the balance in this account has not changed and no accounts receivable were written off. Net credit sales are the only debit to accounts receivable because all accounts receivable relate to trade merchandise. In the T-account below, you must solve for the missing credit to determine that \$6,140,000 was collected on account during year 2.

	AR—Net		
12/31/Y1 balance	580,000	?	Year 2 Collections
Year 2 net credit sales	6,400,000		
12/31/Y2 balance	840,000		

**NOTE:** Based on the information given in this problem, no bad debt expense was recorded during year 2. However unrealistic this assumption might be, it is important to simply work with the information as given.

34. (d) The requirement is to calculate the amount of cash payments during year 2 on accounts payable. The solutions approach is to visualize the accounts payable T-account.

		Accounts Payable	
		440,000	12/31/Y1
Payments	?	?	Purchases
		530,000	12/31/Y2

It is apparent that to determine payments to suppliers, purchases of trade merchandise must first be computed. The cost of goods sold statement can be used to compute purchases.

Beginning inventory	\$ 420,000
+ Purchases	+ ?
- Ending inventory	- 660,000
<u>Cost of goods sold</u>	<u>\$5,000,000</u>

$$\begin{aligned} \text{Purchases} &= \$5,000,000 - (\$420,000 - \$660,000) \\ &= \$5,240,000 \end{aligned}$$

Finally, the purchases are entered into the accounts payable T-account, and payments to suppliers of \$5,150,000 can be plugged in.

		Accounts Payable	
		440,000	12/31/Y1
Payments	5,150,000	5,240,000	Purchases
		530,000	12/31/Y2

35. (d) The requirement is to determine net cash flows provided by financing activities in year 2. The solutions approach is to work through the comparative balance sheets noting increases and decreases in liability accounts other than those related to operations and increases or decreases in stockholders' equity accounts. The additional information given must be considered in connection with these changes. Notice the note payable was issued for cash and the proceeds were used to purchase a building. Cash inflows from financing activities include proceeds from long-term borrowing, and issuance of capital stock.

Proceeds from long-term note	\$500,000
Proceeds from issuance of common stock	<u>300,000</u>
	<u>\$800,000</u>

To determine the amount of dividends paid, it is necessary to analyze both the retained earnings and the dividends payable accounts.

		Dividends Payable		Retained Earnings	
		-	12/31/Y1	?	330,000
Dividends			Dividends		12/31/Y1
paid	?	?	declared		400,000
		70,000	12/31/Y2		560,000
					Net income
					12/31/Y2

$$\text{Dividends declared} = \$330,000 + 400,000 - 560,000 = \$170,000$$

$$\text{Dividends paid} = \$0 + 170,000 - 70,000 = \$100,000$$

Net cash flows provided by financing activities is \$700,000 (\$800,000 - \$100,000).

36. (c) The requirement is to compute the cash used in investing activities during year 2. The two assets other than those related to operations shown on the balance sheet (long-term investments and land, building, and fixtures) have increased from 12/31/Y1 to 12/31/Y2, indicating cash purchases since the additional information does not suggest any other means of acquisition. Therefore, cash outflows from investing activities include \$80,000 for long-term investments and \$530,000 (\$1,130,000 - \$600,000) for land, building, and fixtures. Notice that the building was purchased for \$500,000, so fixtures or land must have been acquired for \$30,000.

37. (a) The solutions approach is to set up T-accounts for the related accounts.

Sales		AR	
	Sales	Beg. Bal.	Collections
		Sales	Write-offs
		End. Bal.	

Sales are debited to AR and credited to sales; collections are debited to cash and credited to AR. Under the direct write-off method, write-offs of customer accounts are debited to bad debts expense, and credited to AR. To adjust sales to cash collections from customers, Bee must subtract the increase in accounts receivable (because Bee has not yet received cash for the sales remaining in AR). Bee must also subtract the accounts written off, because these sales have not resulted in cash receipts (and probably never will).

38. (c) The requirement is to identify where finance costs are presented in the statement of cash flows. Answer (c) is correct because under IFRS finance costs (interest expense) may be reported in either the operating or financing section of the statement of cash flows. However, once it is disclosed in a particular section, it must be reported on a consistent basis. Therefore, answers (a), (b) and (d) are incorrect.

39. (d) The requirement is to identify how the transaction should be reported on the statement of cash flows. Answer (d) is correct because this transaction did not involve an exchange of cash; therefore, it is not included on the statement of cash flows. IFRS requires that significant noncash transactions be reported in the notes to the financial statements. (Note that for US GAAP, if there are only a few significant noncash transactions, they may be reported at the bottom of the statement of cash flows, or they may be reported in a separate schedule in the notes to the financial statements.)

Interest income	(14,000)		
Interest expense	46,000		
Depreciation	88,000		
Loss on sale of equipment	7,000		
Gain on extinguishment of bonds	(90,000)		
Income tax expense	105,000		
	\$ 0	\$ 0	\$ 300,000

#### Additional information

- During year 10 equipment with an original cost of \$50,000 was sold for cash, and equipment costing \$125,000 was purchased.
- On January 1, year 10, bonds with a par value of \$500,000 and related premium of \$75,000 were redeemed. The \$1,000 face value, 10% par bonds had been issued on January 1, year 1, to yield 8%. Interest is payable annually every December 31 through year 20.
- Probe's tax payments during year 10 were debited to Income Taxes Payable. Probe recorded a deferred income tax liability of \$42,000 based on temporary differences of \$120,000 and an enacted tax rate of 35% at December 31, year 9; prior to year 9 there were no temporary differences. Probe's year 10 financial statement income before income taxes was greater than its year 10 taxable income, due entirely to temporary differences, by \$60,000. Probe's cumulative net taxable temporary differences at December 31, year 10, were \$180,000. Probe's enacted tax rate for the current and future years is 35%.
- 60,000 shares of common stock, \$2.50 par, were outstanding on December 31, year 9. Probe issued an additional 80,000 shares on April 1, year 10.
- There were no changes to retained earnings other than dividends declared.

Prepare a statement of cash flows using the **indirect method**. Select the titles and the numbers from the lists provided. You may use a number more than once, if necessary. You should also enter the following amounts:

- Subtotals for each class of activity.
- Net change in cash for the year.
- Reconciliation to cash amounts.

Complete the following statement of cash flows using the **indirect method**. (Select from titles and amounts from the tables that follow.)

<i>Probe Co.</i>

### Situation

The following is a condensed trial balance of Clark Co., a publicly held company, after adjustments for income tax expense.

*Clark Co.*  
**CONDENSED TRIAL BALANCE**

	12/31/Y10 Balances Dr. (Cr.)	12/31/Y9 Balances Dr. (Cr.)	Net change Dr. (Cr.)
Cash	\$ 484,000	\$ 817,000	\$(333,000)
Accounts receivable, net	670,000	610,000	60,000
Property, plant, and equipment	1,070,000	995,000	75,000
Accumulated depreciation	(345,000)	(280,000)	(65,000)
Dividends payable	(25,000)	(10,000)	(15,000)
Income taxes payable	(60,000)	(150,000)	90,000
Deferred income tax liability	(63,000)	(42,000)	(21,000)
Bonds payable	(500,000)	(1,000,000)	500,000
Unamortized premium on bonds	(71,000)	(150,000)	79,000
Common stock	(350,000)	(150,000)	(200,000)
Additional paid-in capital	(430,000)	(375,000)	(55,000)
Retained earnings	(185,000)	(265,000)	80,000
Sales	(2,420,000)		
Cost of sales	1,863,000		
Selling and administrative expenses	220,000		
Interest income	(14,000)		
Interest expense	46,000		
Depreciation	88,000		

	12/31/Y10 Balances Dr. (Cr.)	12/31/Y9 Balances Dr. (Cr.)	Net change Dr. (Cr.)
Loss on sale of equipment	7,000		
Gain on extinguishment of bonds	(90,000)		
Income tax expense	105,000		
	\$ 0	\$ 0	\$300,000

**Additional information**

- During year 10 equipment with an original cost of \$50,000 was sold for cash, and equipment costing \$125,000 was purchased.
- On January 1, year 10, bonds with a par value of \$500,000 and related premium of \$75,000 were redeemed. The \$1,000 face value, 10% par bonds had been issued on January 1, year 1, to yield 8%. Interest is payable annually every December 31 through year 19.
- Clark’s tax payments during year 10 were debited to Income Taxes Payable. Clark recorded a deferred income tax liability of \$42,000 based on temporary differences of \$120,000 and an enacted tax rate of 35% at December 31, year 9; prior to year 9 there were no temporary differences. Clark’s year 10 financial statement income before income taxes was greater than its year 10 taxable income, due entirely to temporary differences, by \$60,000. Clark’s cumulative net taxable temporary differences at December 31, year 10, were \$180,000. The enacted tax rate for the current and future years is 35%.
- 60,000 shares of common stock, \$2.50 par, were outstanding on December 31, year 9. Clark issued an additional 80,000 shares on April 1, year 10.
- There were no changes to retained earnings other than dividends declared.

For each transaction in **items 1 through 7**

- Determine the amount to be reported in Clark’s year 10 statement of cash flows prepared using the **direct method**.
- Select from the list the appropriate classification of the item on the statement of cash flows.
- Indicate whether the item is a cash inflow or cash outflow.

Calculate the amount, and select the classification and direction from the items shown below.

Classification of Activity	Direction of Cash Flow
Operating	Inflow
Investing	Outflow
Financing	
Supplementary information	
Not reported on Clark’s statement of cash flows	

	Amount	Classification of Activity	Direction of Cash Flow
1. Cash paid for income taxes			
2. Cash paid for interest			
3. Redemption of bonds payable			
4. Issuance of common stock			
5. Cash dividends paid			
6. Proceeds from sale of equipment			
7. Cash collections from customers

Item	Amount	Classification on Statement of Cash Flows	Cash Inflow/Cash Outflow
1. Cash paid for income taxes	174,000	Operating Activity	Outflow
2. Cash paid for interest	50,000	Operating Activity	Outflow
3. Redemption of bonds payable	485,000	Financing Activity	Outflow
4. Issuance of common stock	255,000	Financing Activity	Inflow
5. Cash dividends paid	65,000	Financing Activity	Outflow
6. Proceeds from sale of equipment	20,000	Investing	Inflow
7. Cash collections from customers	2,360,000	Operating Activity	Inflow

### Explanations

1. (\$174,000, O) The payments for income taxes during the year were debited to the income taxes payable account. To arrive at the amount of payments, a T-account can be used as follows:

Income Taxes Payable	
	150,000 12/31/Y9
Payments	<input type="text" value="174,000"/> 84,000 Income Tax Accrual
	60,000 12/31/Y10

Note that the deferred tax liability account increased by \$21,000 ( $\$120,000 \times 35\%$ ). Therefore, the entry for tax expense for year 10 would have been

Tax Expense	105,000
Deferred Tax Liability	21,000
Taxes Payable	84,000

Using the direct method, the payment of taxes would appear in the operating section of the cash flow statement.

2. **(\$50,000, O)** Interest paid on the bonds in year 10 would be \$50,000 ( $\$500,000 \times 10\%$ ). Alternatively, the \$46,000 plus the \$4,000 premium amortization (see explanation for the next item below) also results in \$50,000 as the amount paid for interest. The amount paid for interest would be included in the operating activities section of the cash flow statements if the direct method is used. (Note: The amount of cash paid for interest would be reported separately as supplementary information for a statement of cash flows using the indirect method.)

3. **(\$485,000, F)** Through the following T-account analyses, a journal entry for the redemption of the bonds payable can be determined:

	Bonds Payable			Unamortized Premium on Bonds			
		1,000,000	12/31/Y9	Amortization	4,000	150,000	12/31/Y9
Redemption	500,000			Redemption	75,000		
		500,000	12/31/Y10			71,000	12/31/Y10
	Gain on Extinguishment of Bonds			Cash			
		90,000	12/31/Y10		?		

Journal entry for redemption

Bonds payable	500,000
Unamortized premium on bonds	75,000
Gain on extinguishment of bonds	90,000
Cash	485,000

This amount paid for the redemption of the bonds would be separately reported in the financing section on the statement of cash flows prepared using the indirect method. Financing activities include obtaining resources from owners and returning the investment, as well as obtaining resources from creditors and **repaying the amounts borrowed**.

4. **(\$255,000, F)** An additional 80,000 shares of \$2.50 par value common stock were issued during year 10. The following T-accounts depict the changes in the common stock and additional paid-in capital accounts:

Common Stock			
	150,000	12/31/Y9	
	200,000	Issuance	(80,000 × \$2.50)
	350,000	12/31/Y10	
Additional Paid-in Capital			
	375,000	12/31/Y9	
	55,000	Issuance	
	430,000	12/31/Y10	

The journal entry for the issuance of the stock would have been

Cash	255,000	
Common stock		200,000
Additional paid-in capital		55,000

This amount received for the issuance of the common stock would be reported separately in the financing section of the statement of cash flows prepared using the indirect method. Financing activities include **obtaining resources from owners** and returning the investment, as well as obtaining resources from creditors and repaying the amounts borrowed.

5. (\$65,000, F) The problem states that there were no changes to retained earnings during the year other than dividends declared. Therefore, the following T-account analyses depict the dividend activity during the year:

	Retained Earnings		
		265,000	12/31/Y9
Dividends declared	80,000		
		185,000	12/31/Y10

	Dividends Payable			Cash
		10,000	12/31/Y9	
Dividends paid	?	80,000	Accrual during year 10	?
		25,000	12/31/Y10	

The following journal entry would have been made:

Retained earnings	80,000
Dividends payable	80,000
Dividends payable	65,000
Cash	65,000

This amount paid for the dividends would be reported separately in the financing section of the statement of cash flows prepared using the indirect method. Financing activities include obtaining resources from owners and **returning the investment**, as well as obtaining resources from creditors and repaying the amounts borrowed.

6. (\$20,000, I) The following T-account analyses depict the sale of the equipment during year 10:

	Property, Plant and Equipment		
12/31/Y9	995,000		
		50,000	Sale
Purchase	125,000		
12/31/Y10	1,070,000		

		Accumulated Depreciation	
		280,000	12/31/Y9
Depreciation on sold asset	23,000	88,000	Depreciation expense
		345,000	12/31/Y10

		Loss on Sale of Equipment	Cash	
12/31/Y10	7,000			?

The following journal entry would have been made for the sale of the equipment:

Cash	20,000	
Accumulated depreciation	23,000	
Loss on sale of equipment	7,000	
Property, plant and equipment		50,000

The proceeds from the sale of equipment would be reported separately in the investing section of the statement of cash flows. Included in the investing section are the acquisition and disposition of long-term productive assets or securities (not considered cash equivalents), as well as the lending of money and collection of loans.

7. (\$2,360,000, 0) The following T-account analysis depicts the cash received from customers. Assume all sales are made on account.

		Accounts Receivable	
12/31/Y10	610,000		
Sale on Account	2,420,000		
		2,360,000	Collections on account
12/31/Y2	670,000		

Therefore, the cash collections on account were  $610,000 + 2,420,000 - 670,000 = 2,360,000$ .

# Module 18: Business Combinations and Consolidations

## Overview

This module covers business combinations and consolidations. To qualify for treatment as a business combination, the entity must meet the definition of a business. If an entity is not considered a business, the transaction is accounted for as an asset acquisition and goodwill is not recognized.

Acquisition accounting is the method to account for a business combination and it consists of four steps: (1) identifying the acquirer; (2) determining the acquisition date; (3) recognizing and measuring assets acquired, liabilities assumed, and noncontrolling interest in the acquirer; and (4) recognizing goodwill. Each of these steps is discussed in detail. Numerous examples relating to variations in acquisition accounting are presented along with the calculation of goodwill and intercompany eliminating entries.

This module also discusses required disclosures, combined financial statements, and push-down accounting. Push-down accounting is required by the SEC. It requires the subsidiary to revalue its assets and liabilities to fair value.

## A. Scope—Acquisition Method

1. ASC Topic 805 (SFAS 141[Revised]) applies to business acquisitions.
  - a. It does not apply to the formation of joint ventures, the acquisition of assets or groups of assets that do not constitute a business, or the combination of entities under common control.
2. **Asset acquisition** scope exception
  - a. If the assets and liabilities acquired do not constitute a business, then the transaction is accounted for as an asset acquisition.

- b. In an asset acquisition, the assets are recorded at the amount of cash paid, or the cost of the assets.
    - (1) If the assets are not acquired with cash, then the assets are recorded at either fair value of the assets given up (transferred) by the acquiring entity, or the fair value of the assets acquired, whichever is more reliable.
  - c. If assets are acquired in a group, the cost of each asset is determined by allocating the total cost to the individual assets based on their relative fair values.
  - d. **No goodwill is recorded in an asset acquisition.**
3. Common control scope exception
- a. ASC Topic 805 (SFAS 141[R]) also does not apply to entities under common control.
    - (1) For example, an entity may create a new corporation and transfer some or all of its assets to the new corporation, or a parent may transfer the net assets of a wholly owned subsidiary into the parent and then liquidate the subsidiary.
  - b. These types of changes are considered a change in legal organization, not a change in the reporting entity.
    - (1) In situations where entities are under common control, the assets and liabilities transferred are recorded at their carrying amounts at the date of the transfer.
4. Definition of a business
- a. To qualify for treatment as a business combination, the entity must meet the definition of a business.
    - (1) A **business** is defined as “an integrated set of activities and assets that is capable of being conducted and managed for the purpose of providing a return in the form of dividends, lower costs, or other economic benefits directly to investors or other owners, members or participants.”
    - (2) A business normally consists of inputs, processes, and outputs. However, outputs are NOT required for the entity to qualify as a business.
5. Common terminology
- a. The **acquiree** is the business that is being acquired.
  - b. The **acquirer** is the entity that obtains control of the acquiree.
  - c. The **acquisition date** is the date on which the acquirer obtains control of the acquiree.
  - d. A **business combination** is a transaction or event in which the acquirer obtains control of one or more businesses.
  - e. **Control** is defined as a controlling financial interest by ownership of a majority of the voting shares of stock. The general rule is that ownership either directly or indirectly by one company of more than 50% of the outstanding voting shares of another company constitutes control.

## B. The Acquisition Method for Business Combinations

1. If an acquisition qualifies as a business combination, then the acquisition method is used. The four steps in applying the acquisition method are as follows:
  - a. Identify the acquirer.
  - b. Determine the acquisition date.
  - c. Recognize and measure identifiable assets acquired, liabilities assumed, and noncontrolling (minority) interest in the acquiree.
  - d. Recognize and measure goodwill, or recognize a gain from a bargain purchase.
2. Acquirer identification.
  - a. Acquirer identification is the first step in a business combination.
  - b. Distinguishing between the acquirer and the acquiree is important because only the acquiree’s assets are re-valued to fair value at the acquisition date.
  - c. Normally the acquirer is the entity that obtains control of the acquiree.
    - (1) The acquirer is usually the entity that transfers cash or incurs the liabilities in order to acquire the other firm.
    - (2) However, if it is unclear which entity is the acquirer, one of the combining entities must be identified as the acquirer by examining the facts and circumstances.

- (a) The entity that retains the largest portion of voting rights is usually the acquirer.
  - (b) The acquirer may also be determined by identifying the company that retains more individuals on its governing body or in its senior management.
  - (c) If the business was acquired by exchanging equity interests, the acquirer is usually the entity that pays a premium over the fair value of the equity interests of the other firm.
  - (d) The acquirer may also be determined by identifying the entity that is significantly larger in size, measured by its assets, revenues, or earnings.
3. Acquisition date identification.
- a. Acquisition date identification is the second step in a business combination.
  - b. The acquisition date is important for two reasons:
    - (1) The acquisition date is the date when the identifiable assets and the liabilities of the acquiree are measured at fair values, and
    - (2) The acquirer recognizes net income of the acquiree only after the date of acquisition.
  - c. Acquisition date determination:
    - (1) The date on which the acquirer obtains control over the acquiree. Usually, the date on which the acquirer transfers the consideration, acquires the assets, and assumes the liabilities of the acquiree.
      - (a) However, it is possible that the acquirer could obtain control either before or after the closing date when the consideration is transferred. In that case, the facts and circumstances should be examined to determine the date at which control was acquired.
4. Recognition and Measurement.
- a. Recognition and measurement of identifiable assets, liabilities and noncontrolling interest is the third step in a business combination.
  - b. On the acquisition date, the identifiable assets acquired, the liabilities assumed, and any noncontrolling interest (previously referred to as minority interest) are measured at fair value. The acquirer also recognizes assets that were not previously recognized on the acquiree's books if the assets are identifiable.
    - (1) An asset is an **identifiable asset** if it arises from a contractual or legal right, or if it is separable.
    - (2) An asset is separable if it can be separated or divided from the entity and sold, transferred, licensed, rented, or exchanged.
  - c. At the acquisition date, the acquirer must classify the assets acquired and liabilities assumed so that GAAP can be applied.
    - (1) Examples of items that must be classified include trading, available-for-sale, and held-to-maturity securities, derivatives, and embedded derivative instruments.
    - (2) Leases, however, are classified as either an operating or a capital lease based upon their contractual terms at the inception of the contracts.
      - (a) Therefore, if the lease was a capital lease for the acquiree, then it is classified as a capital lease on the books of the acquirer.
      - (b) Similarly, if the lease was an operating lease on the books of the acquiree, then the lease continues to be an operating lease on the books of the acquirer.
      - (c) An exception to this rule occurs when a lease contract is modified. If a lease contract is modified at the date of acquisition, the new terms of the modified contract are used to classify the lease.
  - d. On the date of acquisition, the acquirer should recognize any newly identified intangible assets of the acquiree that meet the contractual-legal or separability criteria. Examples of items that meet the contractual-legal or separability criteria include the following items:
    - (1) Marketing-related intangibles, such as trademarks, trade names, service marks, certification marks, newspaper mastheads, internet domain names, and noncompetition agreements.
    - (2) Customer-related intangibles, such as customer lists, order or production backlog, customer contracts, and noncontractual customer relationships.
    - (3) Artistic-related intangible assets, such as plays, operas, ballets, books, magazines, newspapers, literary works, musical works, pictures, photographs, videos, motion pictures, films, music videos, and television programs.

- (4) Contract-based intangibles, such as licensing, royalty, advertising, construction, management, lease, or franchise agreements. Other examples include construction permits, operating and broadcast rights, supply or service contracts, employment contracts, and drilling, water, air, and timber cutting rights.
  - (5) Technology-based intangibles, such as patented technology, computer software and mask works, unpatented technology, and databases. Another example is trade secrets, such as secret formulas, processes, and recipes.
  - (6) Items that do not meet the contractual-legal or separability criteria may not be recognized as assets.
    - (a) Nonqualifying assets include the value of an assembled workforce, intellectual capital, and potential contracts.
5. Recognize goodwill
- a. Goodwill recognition is the fourth step in a business combination.
  - b. At the date of acquisition, the assets and liabilities of the acquiree are measured at fair value.
    - (1) If the acquirer has previously held equity interests in the acquiree, these shares are revalued to fair value at acquisition date.
    - (2) Any noncontrolling interest is also valued at fair value at acquisition date.
    - (3) After the assets, liabilities, previously held interests, and noncontrolling interest are valued at fair value, the goodwill or gain from a bargain purchase is calculated, as illustrated below.
 

Fair value of consideration transferred (cost to the acquirer)	
Plus:	Fair value of previously held equity interests in acquiree
Plus:	Fair value of noncontrolling interest
Less:	<u>Fair value of net identifiable assets</u>
	Goodwill or gain from bargain purchase
    - (4) If the fair value of net identifiable assets is less than the aggregate of the consideration transferred, plus the acquisition date fair value of previously held interests, plus the fair value of noncontrolling interest, goodwill is recognized.
      - (a) **Goodwill** is defined as “an asset representing the future economic benefits that arises from other assets acquired in a business combination that are not individually identified and separately recognized.”
      - (b) Although an intangible asset is defined as an asset that lacks physical substance for purposes of business combinations, goodwill is not considered an intangible asset. Instead, goodwill is classified separately, and the accounting rules for goodwill apply.
    - (5) If the fair value of net identifiable assets exceeds the aggregate of the consideration transferred, plus the acquisition date fair value of previously held interests, plus the fair value of the noncontrolling interest, then a bargain purchase occurs. A gain is recognized by the acquirer in the current period for the bargain purchase.
  - c. The consideration transferred is measured at fair value at the acquisition date.
    - (1) Consideration may include assets transferred, liabilities incurred, and equity interests issued by the acquirer.
    - (2) If the fair values of the acquirer’s assets or liabilities transferred are different from their carrying values, the acquirer should recognize a gain or loss on the assets transferred in earnings of the current period.
    - (3) However, if the acquirer retains control of the transferred assets or liabilities, then the assets and liabilities are measured at their carrying amounts immediately before the acquisition date.
    - (4) If the acquirer transfers contingent consideration, then the fair value of the contingent consideration is included as part of the consideration paid for the acquiree. Measurement of contingent consideration is discussed later in this module.
6. Step acquisition.
- a. Sometimes the acquirer obtains control through a step acquisition, wherein the acquirer invests in less than 50% of the voting shares of the acquiree, and at a later date, acquires enough shares to obtain voting control.
  - b. Depending upon the percentage of ownership previously acquired, the acquirer may have accounted for shares of stock using the cost adjusted for fair value method, the equity method, or the fair value option.

- c. In a step acquisition, the acquisition date fair value of the previously held shares is also included in the acquisition cost. If the fair values of the previously held shares at the acquisition date are not equal to their carrying values, a gain or loss is recognized in the current period.
  - d. If the acquirer had previously recognized any changes in fair value of the securities in other comprehensive income, then the amounts recognized in other comprehensive income should be reclassified and included as a gain or loss on the income statement in the current period.
7. Noncontrolling interest.
- a. Noncontrolling interest is measured by using the active market prices on the acquisition date for the equity shares not held by the acquirer.

**NOTE:** The fair values of the acquirer's investment and the noncontrolling interest may not be the same on a per-share basis.

- (1) This difference can be attributed to the acquirer paying a premium to obtain control of the acquiree, or to a noncontrolling interest discount due to lack of control.
  - (2) This difference should be ignored, and the noncontrolling interest should be valued by multiplying the active market price on the acquisition date times the number of shares held by the noncontrolling parties.
- b. Noncontrolling interest should be classified as equity in the statement of financial position of the consolidated financial statements. On the statement of earnings, consolidated net income is adjusted to disclose the net income or loss attributed to the noncontrolling interest. Comprehensive income is also adjusted to include the comprehensive income attributed to the noncontrolling interest.
8. Acquisition-related costs
- a. Acquisition-related costs for a business acquisition are normally treated as an expense in the period in which the costs are incurred or the services are received.
  - b. Acquisition-related costs may include finder's, advisory, legal, accounting, valuation, consulting and other professional fees. They also include general administrative costs.
  - c. Although the costs of registering and issuing debt and equity securities are considered part of acquisition costs, these costs are not expensed in the period of the acquisition, but are recognized in accordance with other GAAP.
    - (1) Costs of registering and issuing common stock are normally netted against the proceeds of the stock and reduce the paid-in capital in excess of par account.
    - (2) Bond issue costs are treated as a deferred charge and amortized on a straight-line basis over the life of the bond.

### C. Consolidated Financial Statements

1. An acquisition of more than 50% of the outstanding voting stock will normally result in control and require the preparation of consolidated financial statements.
- a. The complete consolidation process is presented in the next section of this module.
  - b. The investment account will be eliminated in the consolidation working papers and will be replaced with the specific assets and liabilities of the investee corporation.
  - c. Consolidation is generally required for investments of more than 50% of the outstanding voting stock except when the control is not held by the majority owner, Examples of noncontrol include
    - (1) The investee is in legal reorganization or bankruptcy.
    - (2) The investee operates in a foreign country, which has severe restrictions on the financial transactions of its business firms or is subject to material political or economic uncertainty that casts significant doubt on the parent's ability to control the subsidiary.
      - (a) In these limited cases, the investment will be reported as a long-term investment in an unconsolidated subsidiary on the investor's balance sheet.
      - (b) The cost method is used unless the acquirer qualifies to use the equity method or elects to use the fair value option for reporting financial assets. As you recall from Module 16 on investments, the equity method is used in cases where the investor has significant influence over the investee.

2. Variable interest entities
  - a. In certain instances, control over an entity may be achieved through arrangements that do not involve ownership or voting interests.
  - b. Special rules apply to **variable interest entities** (VIEs, also referred to as special-purpose entities) in which control is achieved based on contractual, ownership, or other pecuniary interests that change with changes in the entity's net asset value.
  - c. The initial determination of whether a legal entity is a VIE is made on the date the reporting entity becomes involved with the legal entity.
    - (1) The status of a VIE is reconsidered if certain events occur such as a change in the legal entity's contractual arrangements or characteristics, a change in the equity investment by investors, or changes in facts and circumstances that change the power from voting rights or similar rights to direct the activities of the VIE.
  - d. If an entity has a controlling financial interest in the VIE, the entity is considered **the primary beneficiary** of the VIE. A primary beneficiary is required to consolidate the VIE in its financial statements.
    - (1) An entity has a controlling financial interest in a VIE if both of the following conditions exist:
      - (a) The entity has the power to direct the activities of a VIE that most significantly impact the VIE's economic performance.
      - (b) The entity has the obligation to absorb losses of the VIE that could potentially be significant to the VIE, or has the right to receive benefits from the VIE that could potentially be significant to the VIE.
    - (2) A qualitative approach is used to determine if the entity has the power to control the VIE.
      - (a) If power is shared among unrelated parties and consent of the other parties is required to direct the activities of the VIE, then no one party has the power to direct the activities of the VIE. In such cases where power is shared, none of the parties is required to consolidate the VIE.
        - 1] If power is shared by unrelated parties and the nature of the activities directed by each party is not the same, then the entities must identify which party has the power to direct the activities that most significantly affect the VIE's economic performance.
        - 2] If the party that has the power to direct the economic performance is also obligated to absorb the losses or receive the benefits, that entity is the primary beneficiary and must consolidate the VIE.
      - (b) An entity should determine whether it is the primary beneficiary on the date it becomes involved with a VIE. The reporting entity must also reassess whether it is the primary beneficiary throughout its involvement with the VIE.
      - (c) Kick-out rights are the ability to remove the reporting entity who has the power to direct the activities that most significantly impact the VIE's economic performance.
      - (d) Participating rights are the ability to block the actions of a reporting entity with power to direct the activities of the VIE.
      - (e) Kick-out and participating rights will not affect an entity from being considered the primary beneficiary unless those rights are held by a single equity holder who has the ability to exercise those rights.
  - e. Additional disclosures are required for entities that have interests in VIEs.
    - (1) The primary beneficiary that is required to consolidate the VIE must present separately on the face of the statement of financial position the assets of the VIE that can be used only to settle obligations of the consolidated VIE and the liabilities of the VIE for which creditors do not have recourse to the general credit of the primary beneficiary. Disclosures in the notes to financial statements by the primary beneficiary that consolidates the VIE are
      - (a) The carrying amounts and classification of the VIE's assets and liabilities that are consolidated, as well as qualitative information about the assets and restrictions on the assets.
      - (b) Lack of recourse if creditors have no recourse to the general credit of the primary beneficiary.
      - (c) Terms of arrangements.

- (2) A reporting entity that is not the primary beneficiary is not required to consolidate the VIE, but must disclose the following:
  - (a) The carrying amounts and classification of the assets and liabilities that relate to the reporting entity's variable interest in the VIE.
  - (b) The maximum exposure to loss from involvement with the VIE.
  - (c) A comparison of the carrying amounts of assets and liabilities and the maximum exposure to loss, together with supporting information explaining the differences in amounts.
  - (d) Information about any liquidity arrangements, guarantees, or other commitments by third parties that may affect the fair value or risk of the interest in the VIE.
  - (e) If applicable, significant factors considered and judgments in determining that the power to direct the activities of the VIE is shared.
- (3) All entities with interests in VIEs (both primary beneficiaries and other holders of variable interests in VIEs that are not required to consolidate) must disclose the following:
  - (a) The methodology for determining whether the reporting entity is the primary beneficiary of a VIE.
  - (b) If facts and circumstances regarding consolidation of VIE have changed.
  - (c) Whether the reporting entity has provided financial or other support to the VIE that was not contractually required during the periods presented.
  - (d) Qualitative and quantitative information about the reporting entity's involvement with the VIE, including nature, purpose, size, and activities of the VIE, and how the VIE is financed.
3. The concept of consolidated statements is that the resources of two or more companies are under the control of the parent company.
  - a. Consolidated statements are prepared as if the group of legal entities were one economic entity group.
  - b. Consolidated statements are presumed to be more meaningful for management, owners, and creditors of the acquirer company and they are required for fair presentation of the financially related companies.
  - c. Individual company statements should continue to be prepared for noncontrolling ownership and creditors of the acquiree companies.
4. The accounting principles used to record and report events for a single legal entity are also applicable to a consolidated economic entity of two or more companies.
  - a. The concept of the reporting entity is expanded to include more than one company, but all other accounting principles are applied in the same way as for an individual company.
  - b. The consolidation process eliminates reciprocal items that are shown on both the acquirer's and acquiree's books. These eliminations are necessary to avoid double counting the same items, which would misstate the financials of the combined economic entity.
5. Consolidated financial statements are prepared from worksheets, which begin with the trial balances of the acquirer and acquiree companies.
  - a. Eliminating worksheet entries are made to reflect the two separate companies' results of operations and financial position as one combined economic entity.
  - b. The entire consolidation process takes place **only on a worksheet**; no consolidation elimination entries are ever recorded on either the parent's or subsidiary's books.
6. Consolidated balance sheets are typically prepared at the date of combination to determine the initial financial position of the economic entity.
  - a. Any intercompany accounts between the acquirer and acquiree must be eliminated against each other.
  - b. The "Investment in acquiree's stock" account from the acquirer's books will be eliminated against the reciprocal accounts of the acquiree's stockholders' equity.
  - c. The remaining accounts are then combined to prepare the consolidated balance sheet.
7. The preparation of consolidated statements after the date of combination becomes a little more complex because the acquirer and acquiree income statements may include reciprocal intercompany accounts, which must be eliminated.

8. The next section of the module will present an example of the preparation of a consolidated balance sheet at the date of combination for the acquisition method. You should carefully review the date of combination consolidation process before proceeding to the preparation of consolidation statements subsequent to combination.

**NOW REVIEW MULTIPLE-CHOICE QUESTIONS 1 THROUGH 15**

**D. Pelican Corp. and Swan Corp.—Acquisition of Swan, 100% Acquisition**

A presentation of the date of combination entries for the acquisition method will be made first for a 100% acquisition. This problem will be expanded to present the method for preparing the income statement, statement of retained earnings, and balance sheet at year-end for a 100% acquisition. The example will then be modified to apply the accounting for less than a 100% acquisition with noncontrolling interest.

**EXAMPLE**

On January 1, year 2, Pelican Corporation acquired Swan Corporation by acquiring all of Swan's outstanding stock by issuing 16,000 shares of Pelican \$1 par value common stock, with a fair value of \$10 per share. The balance sheets for Pelican and Swan immediately before the acquisition are shown below.

*Pelican Company and Swan Company*  
**BALANCE SHEETS 1/1/Y2**  
*(Immediately before combination)*

<b>Assets</b>	<b>Pelican Corp.</b>	<b>Swan Corp.</b>
Cash	\$ 30,000	\$ 24,000
Accounts receivable	35,000	9,000
Inventories	23,000	16,000
Equipment	240,000	60,000
Accumulated depreciation	(40,000)	(10,000)
Patents	—	12,000
Total assets	<u>\$288,000</u>	<u>\$111,000</u>
<b>Liabilities and Equity</b>		
Accounts payable	\$ 6,000	\$ 7,000
Bonds payable	80,000	—
Capital stock (\$10 par)	120,000	60,000
Additional paid-in capital	20,000	10,000
Retained earnings	<u>62,000</u>	<u>34,000</u>
Total liabilities and equity	<u>\$288,000</u>	<u>\$111,000</u>

**Additional Information:**

1. At the time of the acquisition, it was determined that Swan had a client list with a fair value of \$5,000, and a trademark with a fair value of \$14,000. The client list has a remaining life of five years, and the trademark has a remaining life of ten years.
2. The fair values of Swan's assets and liabilities on the date of the acquisition are shown below.
3. The existing equipment of Swan will be depreciated over its remaining useful life of four years.
4. The patent on Swan's books will be depreciated over a remaining life of six years.

*Swan Corporation*  
**BALANCE SHEETS 1/1/Y2**  
*(Immediately before combination)*

<i>Assets</i>	<b>Book value</b>	<b>Fair value</b>	<b>Difference between BV and FV</b>
Cash	\$ 24,000	24,000	\$ --
Accounts receivable	9,000	9,000	--
Inventories	16,000	17,000	1,000
Equipment	60,000	72,000	12,000
Less: Accumulated depreciation	(10,000)	(12,000)*	(2,000)
Patents	12,000	15,000	3,000
Client list	--	5,000	5,000
Trademark	--	14,000	14,000
Total assets	\$111,000	\$144,000	
<i>Liabilities and Equity</i>			
Accounts payable	\$ 7,000	\$ 7,000	--
Bonds payable	--	--	
Capital stock (\$10 par)	60,000		
Additional paid-in capital	10,000		
Retained earnings	34,000		
Total liabilities and equity	\$111,000		

\* When the asset is revalued and increased by 20% ( $\$60,000 \times 20\% = \$12,000$ ), there is also a corresponding increase in the accumulated depreciation account ( $\$10,000 \times 20\% = \$2,000$ ).

**NOTE:** Although there are no previously held interests or noncontrolling interest in this example, these items are shown in the following formulas for completeness.

The entry to record the investment in Swan is

Investment in Swan	160,000	
Common stock (Pelican)		16,000
Additional paid-in capital		144,000

*To record the issuance of 16,000 shares of Pelican's \$1 par value stock with a fair value of \$10 per share to acquire Swan Corp.*

**Goodwill should be calculated using a three-step process.**

Step 1: Compute the difference between (1) the aggregate of acquisition cost, the fair value of previously held shares, and the fair value of noncontrolling interest and (2) the book value of Swan's net assets:

Acquisition cost	\$160,000
Plus: Fair value of previously held shares	--
Plus: Fair value of noncontrolling interest	--
Less: Book value of Swan (\$111,000 assets – \$7,000 liabilities)	<u>104,000</u>
Differential	<u>\$ 56,000</u>

This differential can be attributed to assets written up to fair value, newly identified intangible assets, and goodwill.

Step 2: Compute the fair value of net identifiable assets.

Book value (\$111,000 assets – \$7,000 liability)	\$104,000
Plus: Asset write-ups (\$1,000 + \$12,000 – \$2,000 + \$3,000)	14,000
Plus: Newly identified Intangibles (\$5,000 + \$14,000)	<u>19,000</u>
Fair value of net identifiable assets	<u>\$137,000</u>

Step 3: Compute goodwill.

Acquisition cost	\$160,000
Plus: Fair value of previously held shares	--
Plus: Fair value of noncontrolling interest	--
Less: Fair value of net identifiable assets	<u>(137,000)</u>
Goodwill	<u>\$ 23,000</u>

If the cost of acquisition is greater than the fair value of the net identifiable assets acquired, then goodwill is recorded as a noncurrent asset on the balance sheet. In this situation, Pelican would report goodwill of \$23,000 on the date of acquisition. After the date of acquisition, goodwill is tested for impairment each year.

Assuming Pelican paid \$120,000 for Swan

Acquisition cost	\$120,000
Plus: Fair value of previously held shares	
Plus: Fair value of noncontrolling interest	--
Less: Fair value, net identifiable assets	<u>(137,000)</u>
Bargain Purchase	<u>\$ (17,000)</u>

The \$17,000 bargain purchase would be recorded as a gain in the current period on Pelican's income statement.

#### E. Pelican Corp. and Swan Corp.—Date of Combination Consolidated Balance Sheet—Acquisition Method (100% Acquisition)

At the date of acquisition, a consolidated balance sheet is prepared. This section continues our example of Pelican's 100% acquisition of Swan. The entry below is the entry recorded on Pelican's books at the date of acquisition.

#### EXAMPLE

##### 1. Investment Entry on Pelican Company's Books

The entry to record the 100% acquisition on Pelican Company's books was

Investment in stock of Swan Corp.	160,000
Common stock	16,000
Additional paid-in capital	144,000

*To record the issuance of 16,000 shares of Pelican's \$1 par value stock with a fair value of \$10 per share to acquire 100% of Swan Corp.*

Although common stock is used for the consideration in our example, Pelican could have used debentures, cash, or any other form of consideration acceptable to Swan's stockholders to make the business acquisition.

The following is the worksheet to prepare the consolidated balance sheet immediately after Pelican's acquisition of Swan. Notice that the balance sheet of Pelican has changed from the balance sheet issued prior to the acquisition of Swan. The investment account increased Pelican's assets by \$160,000, the acquisition cost of the investment. Also the capital stock and additional paid-in capital account of Pelican (the acquirer) have increased for the 16,000 shares of \$1 par value Pelican stock issued. Common stock increased \$16,000 (\$1 par × 16,000 shares), and additional paid-in capital increased by \$144,000 (\$9 × 16,000 shares).

**PELICAN CORP. AND SWAN CORP.—CONSOLIDATED WORKING PAPERS***For Date of Acquisition—1/1/Y2***Acquisition Method—100% Acquisition**

	Pelican	Swan	Adjustments and eliminations		Consolidated balances
			Debit	Credit	
Balance sheet 1/1/Y2					
Cash	30,000	24,000			54,000
Accounts receivable	35,000	9,000			44,000
Inventories	23,000	16,000	(b) 1,000		40,000
Equipment	240,000	60,000	(b) 12,000		312,000
Accumulated depreciation	(40,000)	(10,000)		(b) 2,000	(52,000)
Investment in stock of Swan	160,000			(a) 160,000	--
Difference between cost and book value			(a) 56,000	(b) 56,000	--
Goodwill	--		(b) 23,000		23,000
Patents	--	12,000	(b) 3,000		15,000
Client list	--		(b) 5,000		5,000
Trademark	--		(b) 14,000		14,000
Total assets	448,000	111,000			455,000
Accounts payable	6,000	7,000			13,000
Bonds payable	80,000	--			80,000
Capital stock	136,000	60,000	(a) 60,000		136,000
Additional paid-in capital	164,000	10,000	(a) 10,000		164,000
Retained earnings	62,000	34,000	(a) 34,000		62,000
Total liabilities and equity	448,000	111,000	218,000	218,000	455,000

**2. Difference between Acquisition Cost and Book Value of Acquiree**

To prepare the consolidated balance sheet, calculate the difference between (1) the aggregate of the acquisition cost, plus the fair value of previously held shares, plus the fair value of noncontrolling interest, and (2) the acquirer's interest in the net book value of the assets of the acquiree. This difference can be attributed to undervalued assets, newly identified intangible assets, and goodwill as shown below:

**Swan Corp.**

Undervalued assets	
Inventory	1,000
Equipment	12,000
Accumulated depreciation	(2,000)
Patents	3,000
New identifiable intangible assets	
Client list	5,000
Trademark	14,000
Goodwill	<u>23,000</u>
Total undervalued assets, new intangible assets, and goodwill	<u>56,000</u>

The difference of \$56,000 will be accounted for by preparing consolidated working paper entries to eliminate the acquiree's equity accounts, revalue the acquiree's existing assets to fair values,

record any newly identified intangible assets, and record goodwill. Note that the book value of the acquiree can also be calculated by adding the equity accounts of the acquiree at date of acquisition. A reconciliation of the cost to acquire Swan and the book value of Swan can also be calculated by using the equity accounts of Swan as shown below.

Acquisition cost		\$160,000
Plus: Fair value of previously held shares		
Plus: Fair value of noncontrolling interest		
Less: Book value at date of acquisition		
Swan Corp.'s:		
Capital stock	(60,000)	
Additional paid-in capital	(10,000)	
Retained earnings	(34,000)	
Total		(104,000)
Differential		\$ <u>56,000</u>

Again, this difference is due to undervalued assets, newly identified intangible assets, and unrecorded goodwill.

### 3. Completing the Consolidated Trial Balance Worksheet

The worksheet on the date of acquisition is completed in two steps.

Step 1: Eliminate the acquiree's equity accounts, the acquirer's investment account, and establish the differential (the difference between acquisition cost and the book value of the acquiree's net assets).

Step 2: Eliminate the differential account and record asset write-ups to fair value, new identifiable intangible assets, and goodwill.

The elimination entries are then posted to the worksheet, and the consolidated worksheet is totaled.

The Step 1 entry is to eliminate the acquiree's equity account, eliminate the investment account on the acquirer's books, and record the differential as shown below.

(a) Capital stock—B Co.	60,000	
Additional paid-in capital—Swan Corp.	10,000	
Retained earnings—Swan Corp.	34,000	
Differential	56,000	
Investment in stock of Swan Corp.		160,000

**NOTE:** Swan's stockholders' equity accounts are eliminated. Also an account called "Differential" is debited in the workpaper entry. The differential account is a temporary account to record the difference between the cost of the investment in Swan on the Pelican's books and the book value of Pelican's 100% interest in Swan.

The next step is to allocate the differential to the specific accounts by making the following workpaper entry:

(b) Inventories	1,000	
Equipment	12,000	
Patents	3,000	
Goodwill	23,000	
Client list	5,000	
Trademark	14,000	
Accumulated depreciation		2,000
Differential		56,000

This entry reflects the allocations prepared in Step 2 and recognizes the Pelican’s revaluation of assets to fair value, the newly identified intangible assets, and goodwill.

Our example does not include any other intercompany accounts as of the date of combination. If any existed, they would be eliminated to fairly present the consolidated entity. Examples of other reciprocal accounts will be shown later in this module.

When the consolidated worksheet is finished, check the worksheet for possible errors. First, you should reduce the investment in Swan’s account to zero. If the entries for write-up of existing assets to fair value, recording newly identified intangible assets, and recording goodwill are done accurately, the differential account will also be zero. The common stock account and additional paid-in capital account in the consolidated worksheet should reflect only the balances of the acquirer’s accounts. At date of acquisition, the retained earnings account will only reflect the balance of the acquirer’s account. Finally, check to see that the acquiree’s equity accounts are eliminated.

**NOW REVIEW MULTIPLE-CHOICE QUESTION 16 THROUGH 25**

**F. Consolidated Financial Statements Subsequent to Acquisition**

1. The concepts used to prepare subsequent consolidated statements are essentially the same as those used to prepare the consolidated balance sheet at the acquisition date.
  - a. The income statement and statement of retained earnings are added to reflect the results of operations since the acquisition date.
  - b. Furthermore, some additional reciprocal accounts may have to be eliminated because of intercompany transactions between the acquirer and the acquiree.
  - c. Please note that the financial statements of a consolidated entity are prepared using the same accounting principles that would be employed by a single, unconsolidated enterprise. The only difference is that some reciprocal accounts appearing on both companies’ books must be eliminated against each other before the two corporations may be presented as one consolidated economic entity.
  - d. Your review should concentrate on the accounts and amounts appearing on the consolidated statements (amounts in the last column of the worksheet). This “end-result” focus will help provide the understanding of why certain elimination entries are necessary.
  
2. An expanded version of the consolidated worksheet is necessary if the income statement and retained earnings statement must also be prepared.
  - a. A comprehensive format often called “the three statement layout” is an integrated vertical array of the income statement, the retained earnings statement, and the balance sheet.
  - b. The net income of the period is carried to the retained earnings statement and the ending retained earnings are carried down to the balance sheet.
  - c. If you are required to prepare just the consolidated balance sheet, then eliminating entries involving nominal accounts (income statement accounts and the “Dividends declared” account) would be made directly against the ending balance of retained earnings presented on the balance sheet.
  
3. The following discussion assumes the acquirer is using the partial equity method to account for the majority investment.
  - a. Some firms may use the cost method during the period to account for investment income because it requires fewer book adjustments to the investment account.
    - (1) In cases where the cost method is used during the period, one approach is to adjust the investment and investment income accounts to the equity method through an entry on the workpaper and the consolidation process may then be continued.
    - (2) Assuming that an income statement and retained earnings statement are being prepared in addition to the balance sheet, the general form of this restatement from cost to equity entry is made on the workpapers.

Dividend income (for income recognized using cost method)	xx	
Investment in acquiree (% of undistributed income of sub)	xx	
Equity in subsidiary’s income (for income recognized using equity method)		xx

- (3) Additional workpaper restatement entries would be required to recognize the equity income in prior periods if the investment were owned for more than one period and to recognize the amortizations of any differential for all periods the investment was held. After these entries are made, the investment and equity in the acquiree's income accounts would be stated on the equity basis and the consolidation process may be continued.

**NOTE:** The formal consolidated statements will be the same regardless of the method used by the acquirer to account for the investment on its books.

- b. The concept of measurement used in the preparation of the consolidated statements is equivalent to the full equity method and the elimination process will result in statements presented under that concept. Regardless of which method was used to initially record the investment, when the consolidated worksheet is finished, the investment in acquiree must be zero.

**NOW REVIEW MULTIPLE-CHOICE QUESTIONS 26 THROUGH 41**

### G. Intercompany Transactions and Profit Confirmations

1. Three general types of intercompany transactions may occur between the acquirer and acquiree companies:
  - a. Intercompany sales of merchandise,
  - b. Transactions in fixed assets, and
  - c. Intercompany debt/equity transactions.
    - (1) Intercompany transactions require special handling because the profit or loss from these events must be properly presented on the consolidated financial statements.
    - (2) These events may generate "unrealized profit" (also referred to as unconfirmed profit) which is a profit or gain shown in the trial balance from one of the company's books that should not be shown in the consolidated financial statements.
    - (3) Intercompany bond transactions may require recognition of a gain or loss on the consolidated financials, which is not in the trial balances of either the acquirer or acquiree companies.
2. **Intercompany Inventory Transactions**
  - a. Unrealized profit in ending inventory arises through intercompany sales above cost that are not resold to third parties prior to year-end.
    - (1) The profit on the selling corporation's books is overstated, because an arm's-length transaction has not yet taken place.
    - (2) The inventory is overstated on the purchaser's books for the amount of the unrealized intercompany profit.
    - (3) An exhibit of the relationships is shown below.

- (a) Companies A and B are two separate legal entities and will each record the sale or purchase of goods. From a consolidated or economic entity viewpoint, however, the intercompany transaction is a transfer of assets which cannot result in revenue recognition until these goods are sold to a third party.
- (b) Assuming a sale from Company A to Company B (a "downstream" intercompany sale), the sale income of Company A cannot be recognized until the goods are sold to third parties by Company B.
- (c) In addition, the ending inventory of Company B is overstated by the amount of profit in the inventory acquired from Company A.
- (d) Once intercompany sales have been sold to third parties, the earning process has been verified by an arm's-length transaction with third parties. Thus, recognition of previously unrecognized profit may occur at that time.

### 3. Intercompany Fixed Asset Transactions

- a. Unrealized profits on fixed assets arise through intercompany sales of fixed assets above undepreciated cost. From a consolidated viewpoint, the transaction represents the internal transfer of assets and no gain (loss) should be recognized. Any gain (loss) must be eliminated and the carrying value of the transferred asset must be returned to its initial book value basis.
  - (1) In subsequent periods, in the case of an intercompany gain, depreciation expense is overstated, because an overvalued asset is being depreciated on the books of the company showing the asset. This overstatement of depreciation must also be eliminated in the consolidation process. In essence, the company that acquired the intercompany asset is including the intercompany gain (loss) in its depreciation expense.

### 4. Intercompany Bond Transactions

- a. When one consolidated company buys bonds of another consolidated company, there are several reciprocal items to eliminate: investment in bonds and bonds payable, interest income and interest expense, and interest payable and interest receivable. Intercompany gains and losses **cannot** arise from direct intercompany bond purchases. The book value would be the same on both books and the interest accounts would be reciprocal. The effective interest method for debt transactions between acquirer and acquiree companies is not required. Straight-line amortizations of premiums or discounts are sometimes used in these instances.
- b. Gains and losses on intercompany bond holdings occur when
  - (1) Already outstanding bonds of the acquirer (acquiree) are purchased by an acquiree (acquirer),
  - (2) From a third party, and
  - (3) For an amount different from the carrying value of the issuer.
- c. From a consolidated viewpoint, these bonds are viewed as retired. However, the bonds are still recorded as liabilities on the issuer's separate books and as investment in bonds on the purchasing corporation's books.
  - (1) The eliminating entry is to recognize the imputed gain (loss) on the consolidated "retirement of debt" in the year of intercompany bond purchase. Gains on early extinguishment of debt are no longer routinely considered extraordinary.

## H. Pelican Corp. and Swan Corp. — Subsequent Consolidated Financial Statements

The following information extends the basic example of Pelican and Swan begun earlier in this module. The example illustrates the major consolidation concepts and procedures most likely to appear on the CPA exam. The following intercompany transactions occurred during year 2.

### EXAMPLE

During year 2, Pelican sold merchandise to Swan for \$30,000. The merchandise originally cost Pelican \$24,000. During year 2, Swan sold 40% of the merchandise purchased from Pelican to third parties for \$15,000. On December 31, year 2, Swan's inventory included 60% of the merchandise purchased from Pelican.

During year 2, Swan sold merchandise to Pelican for \$16,000. The cost of goods sold to Swan was \$11,000. During year 2, Pelican subsequently sold all of these goods to an unrelated third party for \$23,000.

Swan reduced its intercompany account payable to Pelican to a balance of \$3,000 as of December 31, year 2, by making a payment of \$1,000 on December 30. This \$1,000 payment was still in transit on December 31, year 2.

On January 2, year 2, Swan acquired equipment from Pelican for \$8,000. The equipment was originally purchased by Pelican for \$12,000 and had a book value of \$5,000 at the date of sale to Swan. Pelican was depreciating the equipment over an estimated ten-year useful life with no salvage value. Swan has determined the equipment's estimated remaining life is four years as of January 2, year 2, when the equipment was purchased. Swan uses straight-line depreciation with no salvage value and a four-year remaining life to depreciate the equipment.

On December 31, year 2, Swan purchased for \$39,000, 50% of the \$80,000 of outstanding bonds issued by Pelican to third parties. The bonds mature on December 31, year 7, and were originally issued at par. The bonds pay interest annually on December 31 of each year and the interest was paid to the prior investor immediately before Swan's purchase of the bonds.

The consolidated worksheet for the preparation of consolidated financial statements as of December 31, year 2, is presented below.

To begin the problem, the investment account balance at the statement date should be reconciled to ensure the acquirer made the proper entries under the method of accounting used to account for the investment.

**NOTE:** Pelican is using the partial equity method, without amortizations. The amortizations of the excess of cost over book value will be recognized only on the worksheets. This method is the one typically followed on the CPA exam; however, be sure you determine the method used in the exam problem—do not assume!

The “proof” of the investment account of Pelican is

<b>Investment in Stock of Swan Corp.</b>			
Original cost	160,000		
100% of Swan Corp.’s Income	38,000	15,000	100% of Swan Corp.’s dividends declared
Bal. 12/31/Y2	183,000		

Any errors will require correcting entries before the consolidation process is continued. Correcting entries will be posted to the books of the appropriate company; eliminating entries are **not** posted to either company’s books. Eliminating entries are only recorded on the worksheet in order to prepare consolidated financial statements.

The difference between the investment cost and the book value of the net assets acquired was determined and allocated in the preparation of the date of acquisition consolidated statements presented earlier in this section. For purposes of brevity, that process will not be duplicated here since the same computations are used in preparing financial statements for as long as the investment is owned.

**PELICAN CORP. AND SWAN CORP. CONSOLIDATED WORKING PAPERS**  
Year Ended December 31, Year 2

**Acquisition Method—100% Acquisition**

**Subsequent, partial equity**

	Pelican	Swan	Adjustments and eliminations		Consolidated balances

1/1/Y2 Retained earnings						
Pelican Corp.	62,000					62,000
Swan Corp.		34,000	(i)	34,000		--
Add net income (from above)	118,000	38,000		92,400	44,200	107,800
Total	180,000	72,000				169,800
Deduct dividends	(26,000)	(15,000)			15,000 (h)	(26,000)
Balance December 31, year 2	<u>154,000</u>	<u>57,000</u>		<u>126,400</u>	<u>59,200</u>	<u>143,800</u>

This eliminates the remaining intercompany receivable/payable owed by Swan to Pelican. This eliminating entry is necessary to avoid overstating the consolidated entity's balance sheet. The receivable/payable is not extinguished and Swan must still transfer \$3,000 to Pelican in the future.

(c) Sales	30,000	
Cost of goods sold		26,400
Inventory		3,600

This eliminates the effects of the intercompany sale of merchandise by Pelican to Swan. When Swan purchased the inventory, Swan recorded the items in its inventory account at a cost of \$30,000. Swan sold 40% of the goods to third parties for \$15,000. Therefore, the revenue recognized for the period should be \$15,000. Swan's cost of goods sold related to the sale to third parties was \$12,000 (40% × \$30,000). The remaining inventory, which is 60% of the amount purchased, is \$18,000 (60% × \$30,000). Although Swan has \$18,000 of goods remaining in its ending inventory, the value of the inventory is overstated. A reconstruction of the entries for the sales, cost of goods sold, and inventory related to the intercompany sale is shown below.

	<b>Pelican Corp.</b>	<b>Swan Corp.</b>
Sales	\$30,000	\$15,000
Cost of goods sold	<u>(24,000)</u>	<u>(12,000)</u>
Gross profit	6,000	3,000
Inventory purchased	24,000	\$30,000
Inventory sold	(24,000)	<u>12,000</u>
Ending inventory	--	18,000

Since 60% of the inventory remains, the original cost to Pelican for the remaining inventory is \$14,400 (60% × \$24,000). If 40% of the inventory has been sold, then the actual cost of the inventory sold should be \$9,600 (40% × \$24,000 [Pelican's cost]). Therefore, an adjusting entry must be made to eliminate the overstatement of sales, cost of goods sold, and inventory. Analyzing the calculations above, the sale made to third parties was \$15,000. This is the only sale amount that should be reflected in the consolidated financial statements. Therefore, the \$30,000 sale recorded by Pelican must be eliminated. The total cost of goods sold without eliminations is \$36,000, but this amount must be reduced by \$26,400 to \$9,600 (40% × \$24,000), which is the cost to Pelican. Inventory is currently stated at \$18,000, but the actual cost (Pelican's cost) of the remaining inventory is \$14,400 (60% × 24,000). Therefore, inventory must be reduced by the difference \$3,600 (\$18,000 – \$14,400).

(d) Sales	16,000	
Cost of goods sold		16,000

This entry eliminates the effects of the sale of merchandise by Swan to Pelican. Since all of the goods were sold to third parties, there is no effect on ending inventory. The effects of the sale are illustrated below.

	<b>Swan Corp.</b>	<b>Pelican Corp.</b>
Sales	\$16,000	\$23,000
Cost of goods sold	<u>(11,000)</u>	<u>(16,000)</u>

An elimination entry must be made to prevent double counting sales and cost of goods sold by Swan to Pelican. The sale by Pelican to third parties for \$23,000 must remain on the books. The cost of goods sold of \$11,000, the original cost of purchasing the inventory, is the correct cost of goods sold. Therefore, the sale of \$16,000 and the cost of goods sold of \$16,000 must be eliminated.

(e) Equipment	4,000	
Gain on sale of equipment	3,000	
Accumulated depreciation		7,000

This entry eliminates the gain on the intercompany sale of the equipment, eliminates the overstatement of equipment, and restores accumulated depreciation to its balance as of the date of acquisition. To understand this entry, reconstruct the accounts for both Pelican and Swan.

Pelican's books		Swan's books	
Historical cost	\$12,000	Historical cost	\$8,000
Less: Accum. depr.	<u>(7,000)</u>		
Book value	\$ 5,000		
Fair value received	\$ 8,000		
Less: Book value	<u>(5,000)</u>		
Gain on sale of asset	\$ 3,000		

If the intercompany sale had not occurred, Pelican would not have recorded a gain of \$3,000. The asset would continue to be valued at historical cost of \$12,000 (instead of \$8,000) with accumulated depreciation of \$7,000. Because Swan recorded the asset at \$8,000 in its records, the equipment account is not recorded at cost. The entry adjusts the accounts to eliminate the effects of the intercompany transaction.

(f) Accumulated depreciation	800	
Depreciation expense		800

This entry eliminates the excess depreciation taken on the equipment by Swan. The depreciation recorded when Pelican owned the equipment was \$12,000 cost divided by ten years, or \$1,200 per year. Swan acquired the asset at a cost of \$8,000 and depreciates the asset over a four-year useful life. The depreciation recorded by Swan for the asset was \$8,000 divided by 4 years, or \$2,000 depreciation expense per year. The excess depreciation of \$800 (\$2,000 – \$1,200) must be eliminated.

(g) Bonds payable	40,000	
Investment in bonds of Pelican Corp.		39,000
Gain on extinguishment of debt		1,000

This entry eliminates the book value of Pelican's debt against the bond investment account of Swan. To the consolidated entity, this transaction must be shown as a retirement of debt even though Pelican still has the outstanding intercompany debt to Swan. In future periods, Swan will amortize the discount, thereby bringing the investment account up to par value and a retained earnings account will be used in the eliminating entry instead of the gain account.

(h) Income from Swan	38,000	
Dividends declared—Swan Corp.		15,000
Investment in stock of Swan Corp.		23,000

This elimination entry adjusts the investment account back to its balance at the beginning of the period and also eliminates the income from subsidiary account and the dividends from subsidiary account.

(i) Capital stock—Swan Corp.	60,000	
Additional paid-in capital—Swan Corp.	10,000	
Retained earnings—Swan Corp.	34,000	
Differential	56,000	
Investment in stock of Swan Corp.		160,000

This entry eliminates Swan's stockholders' equity at the beginning of the year, 1/1/Y2.

**NOTE:** The changes **during** the year were eliminated in entry (f) above. The differential account reflects the excess of investment cost greater than the book value of the assets acquired on the date of acquisition. Notice that in a three-part worksheet with an income statement, statement of retained earnings, and balance sheet, the eliminating entry for beginning retained earnings is posted to the retained earnings section of the worksheet.

(j) Inventories	1,000	
Equipment	12,000	
Patents	3,000	
Goodwill	23,000	
Client List	5,000	
Trademark	14,000	
Accumulated depreciation		2,000
Differential		56,000

This entry allocates the differential (excess of investment cost over the book values of the assets acquired). Note that this entry is the same as the allocation entry made to prepare consolidated financial statements for January 1, year 2, the date of acquisition.

(k) Depreciation and amortization expense	5,400	
Accumulated depreciation		2,500
Patents		500
Client list		1,000
Trademarks		1,400

This records depreciation on the net write-up on the equipment to fair value of \$10,000 (equipment less accumulated depreciation). The entry also amortizes the write-up on the patent to fair value, and amortizes the newly acquired identifiable intangible assets.

As indicated earlier in the problem, the existing equipment has a remaining useful life of four years, and the patent has a remaining useful life of six years. The depreciation and amortization expense entry of \$5,400 is calculated by totaling the following amounts:

Depreciation expense on equipment write-up (\$10,000/4 years)	\$2,500
Patent amortization (\$3,000/ 6 years)	500
Client list amortization (\$5,000/ 5 years)	1,000
Trademark amortization (\$14,000/11 years)	<u>1,400</u>
Total depreciation and amortization	<u>\$5,400</u>

After all adjusting and eliminating entries are made and posted to the worksheet, the worksheet is totaled. Notice that the total adjustments to the income statement (debit of \$92,400 and credit of \$42,200) are posted as adjustments to net income in the retained earnings section of the worksheet. Notice that the total adjustments to retained earnings (debit of \$126,400 and credit of \$59,200) are carried down and posted as adjustments to retained earnings on the balance sheet. The consolidated balances are then totaled. In the consolidated balance column, notice that net income flows into the retained earnings part of the worksheet, and the ending balance in retained earnings flows to the balance sheet.

**NOW REVIEW MULTIPLE-CHOICE QUESTIONS 42 THROUGH 54**

### I. Noncontrolling Interest

- The acquirer often acquires less than 100% (but more than 50%) of the acquiree's outstanding stock. Under the acquisition method, the consolidated financial statements will include all of the assets, liabilities, revenues, and expenses of these less than wholly owned businesses.
- The percentage of the stock not owned by the acquirer represents the noncontrolling interest's share of the fair values of the acquiree.
- Noncontrolling interest is disclosed as a separate line item on the balance sheet in owner's equity. In addition, the portion of net income and comprehensive income attributed to the noncontrolling interest must be disclosed on the acquirer's income statement.
- The following procedures apply to cases of less than 100% business acquisition.
  - The equity accounts of the acquiree are eliminated in consolidation, and a noncontrolling interest is established for the fair value of the shares of stock held by the noncontrolling interest at the date of acquisition.
  - The effects of intercompany transactions are eliminated.

- c. A portion of net income and dividends of the acquiree are allocated to the noncontrolling interest.
5. The financial statements are consolidated and combined with the parent including 100% of the acquiree's revenues and expenses after the date of acquisition. The noncontrolling interest's share of the acquiree's income is shown as a deduction on the consolidated income statement.
6. The following problem illustrates the worksheets for a company that acquires less than 100% of the acquiree.

**EXAMPLE**

On January 1, year 2, Pearl purchases 90% of Sapphire by issuing 15,000 shares of Pearl's \$1 par value common stock with a fair value of \$10 per share on the date of acquisition. At the date of acquisition Sapphire had 600 shares of stock outstanding with a value of \$17.50 per share. Assume the book values of Sapphire's assets are equal to their fair values on the acquisition date. The financial statements at the date of acquisition for Pearl and Sapphire were as follows:

**Pearl Corp. and Sapphire Corp.**  
**BALANCE SHEETS 1/1/Y2**  
*(Immediately before combination)*

<i>Assets</i>	<b>Pearl Corp.</b>	<b>Sapphire Corp.</b>
Cash	\$ 30,000	\$ 24,000
Accounts receivable	35,000	9,000
Inventories	23,000	16,000
Equipment	240,000	60,000
Accumulated depreciation	(40,000)	(10,000)
Patents	—	12,000
Total assets	<u>\$288,000</u>	<u>\$111,000</u>
<b><i>Liabilities and Equity</i></b>		
Accounts payable	\$ 6,000	\$ 6,000
Bonds payable	80,000	—
Capital stock (\$10 par)	120,000	60,000
Additional paid-in capital	20,000	10,000
Retained earnings	<u>62,000</u>	<u>35,000</u>
Total liabilities and equity	<u>\$288,000</u>	<u>\$111,000</u>

The entry to record the investment in Sapphire is

Investment in Sapphire	150,000	
Common stock (Pearl)		15,000
Additional paid-in capital		135,000

To calculate goodwill, we use the three-step process.

Step 1: Compute the difference between (1) the acquisition cost, plus the fair value of previously acquired shares, plus the fair value of the noncontrolling interest, and (2) the book value of Sapphire's net assets. This is referred to as the differential or difference between fair value and book value.

Acquisition cost	\$150,000	
Plus: Fair value of previously acquired shares*	—	
Plus: Fair value of noncontrolling interest	10,500	(600 shares × \$17.50 fair value)
Less: Book value of Sapphire	105,000	(\$111,000 total assets – \$6,000 liability)
Differential	<u>\$ 55,500</u>	

\* In this example, no shares of stock were previously acquired.

Step 2: Compute the fair value of net identifiable assets.

Book value of Sapphire	\$105,000
Plus: Asset write-ups*	--
Plus: Newly identified intangibles*	--
Fair value of net identifiable assets	<u>\$105,000</u>

\* In this case, the fair value of net identifiable asset is equal to the book value because there are no asset write-ups or newly identified intangibles.

Step 3: Compute goodwill.

Acquisition cost	\$150,000
+ Fair value of previously acquired shares	--
Plus: FV of noncontrolling interest	10,500 (600 shares × \$17.50 per share)
Less: Fair value, net identifiable assets	<u>(105,000)</u>
Goodwill	<u>\$ 55,500</u>

Goodwill is then allocated between the controlling interest and noncontrolling interest, as shown below.

	<b>Pearl</b> (90%)	<b>Sapphire</b> (10%)
FV of consideration given and noncontrolling interest shares	\$150,000	\$ 10,500
Less: FV of net identifiable assets (\$105,000)	<u>(94,500)</u>	<u>(10,500)</u>
Goodwill allocation	\$ 55,500	\$ 0

Goodwill is allocated to the controlling interest and noncontrolling interest, so that it may be tested for impairment at the end of each reporting period. In this case, no goodwill is allocated to the noncontrolling interest because the fair value of the noncontrolling interest is equal to the noncontrolling interest's share of the fair value of net identifiable assets. If the noncontrolling interest's share of net identifiable assets were less than the fair value of the noncontrolling interest's shares, then a portion of the goodwill would be allocated to the noncontrolling interest. If the consideration paid by the acquirer plus the fair value of noncontrolling interest is less than the fair value of the net identifiable assets, then a **bargain purchase** occurs. The entire gain on the bargain purchase is recognized by the acquirer. No gain on the bargain purchase is recognized by the noncontrolling interest.

- a. On the date of acquisition, the working paper eliminations for a less-than-100% acquisition are similar to a 100% acquisition. However, entries must be made for the noncontrolling interest. When there is a noncontrolling interest, the entries required at date of acquisition are modified slightly.
- (1) Step 1: Eliminate the acquiree's equity accounts and the acquirer's investment account, establish the differential (the difference between acquisition cost and the book value of the acquiree's net assets), and record the fair value of the noncontrolling interest.
  - (2) Step 2: Eliminate the differential account, and record the asset write-ups to fair value, the new identifiable intangible assets, and goodwill.

**EXAMPLE**

Using the information from the prior example, the Step 1 entry is illustrated below.

(a) Capital stock—Sapphire Corp.	60,000	
Additional paid-in capital—Sapphire Corp.	10,000	
Retained earnings—Sapphire Corp.	35,000	
Differential	55,500	
Investment in stock of Sapphire Corp.		150,000
Noncontrolling interest in Sapphire		10,500

**NOTE:** 100% of Sapphire's stockholders' equity accounts are eliminated. Also, an account called "Differential" is debited in the workpaper entry.

Step 2 allocates the differential to the specific accounts. In this case, all of the differential is attributed to goodwill. The following entry is made to record goodwill:

(b) Goodwill	55,500	
Differential		55,500

These entries are then posted to the worksheet in order to prepare consolidated financial statements.

**PEARL CORP. AND SAPPHIRE CORP.—CONSOLIDATED WORKING PAPERS**  
*For Date of Acquisition—1/1/Y2*

Acquisition Method—90% Acquisition

	Pearl	Sapphire	Adjustments and eliminations		Noncontrolling interest	Consolidated balances
			Debit	Credit		
Balance sheet 1/1/Y2						
Cash	30,000	24,000				54,000
Accounts receivable	35,000	9,000				44,000
Inventories	23,000	16,000				39,000
Equipment	240,000	60,000				300,000
Accumulated depreciation	(40,000)	(10,000)				(50,000)
Investment in stock of Sapphire Corp.	150,000			(a) 150,000		--
Difference between cost and book value			(a) 55,500	(b) 55,500		--
Goodwill	--		(b) 55,500			55,500
Patents	--	12,000				12,000
Total assets	<u>438,000</u>	<u>111,000</u>				<u>454,500</u>
Accounts payable	6,000	6,000				12,000
Bonds payable	80,000	--				80,000
Capital stock	135,000	60,000	(a) 60,000			135,000
Additional paid-in capital	155,000	10,000	(a) 10,000			155,000
Noncontrolling interest in Sapphire					10,500	10,500
Retained earnings	<u>62,000</u>	<u>35,000</u>	(a) <u>35,000</u>			<u>62,000</u>
Total liabilities and equity	<u>438,000</u>	<u>111,000</u>	<u>216,000</u>	<u>216,000</u>		<u>454,500</u>

When consolidated financial statements are prepared in subsequent years, the working paper eliminations are similar to the 100% acquisition method with a few exceptions. The next worksheet is a continuation of our 90% acquisition of Sapphire for the end of the year subsequent to acquisition. Assume the following additional facts for Pearl and Sapphire:

1. During year 2, Sapphire has \$38,000 of net income and pays a dividend of \$15,000.
2. Pearl sold \$30,000 of goods to Sapphire. Pearl's cost of goods sold was \$18,000. All of the goods remain in Sapphire's inventory.
3. At December 31, year 2, Sapphire owes Pearl \$5,000 for a portion of the inventory purchased in 2.

Step 1. Eliminate the acquiree's equity accounts, write-up assets to fair value, recognize newly acquired intangibles, and record noncontrolling interests.

(a) Capital stock—Sapphire Corp.	60,000	
Additional paid-in capital—Sapphire Corp.	10,000	
Retained earnings—Sapphire Corp.	35,000	
Differential	55,500	
Investment in stock of Sapphire Corp.		150,000
Noncontrolling interest in Sapphire		10,500
(b) Goodwill	55,500	
Differential		55,500

Note that in this problem, the book value of assets equals the fair value, so no asset write-ups and no newly acquired intangible assets are recorded.

Step 2. Prepare the eliminating entries for intercompany transactions.

(c) Accounts payable	5,000	
Accounts receivable		5,000

This entry eliminates the remaining intercompany receivable/payable owed by Sapphire to Pearl.

(d) Sales	30,000	
Cost of goods sold		18,000
Inventory		12,000

This entry eliminates the intercompany sale of merchandise by Pearl to Sapphire for \$30,000, eliminates the cost of goods sold, and restores the inventory to its original historical cost. Also, note that this is a "downstream" sale from the parent to the subsidiary; therefore, the entire transaction must be eliminated.

After the intercompany transactions are eliminated, the income and dividend accounts of the subsidiary must be eliminated.

(e) Income from Sapphire	34,200	
Dividend from Sapphire		13,500
Investment in Sapphire		20,700

This entry eliminates the income from Sapphire recorded on Pearl's books under the equity method, and eliminates the dividends from Sapphire. Note that since only 90% of Sapphire's income was recorded by Pearl, only \$34,200 (90% × \$38,000) is included in the elimination entry. Also, note that since only 90% of Sapphire's \$15,000 dividends declared were paid to Pearl, only \$13,500 (90% × \$15,000) in dividends are eliminated. The portion that is not eliminated will be included in the balance of the noncontrolling interest in acquiree. Notice that in a three-part worksheet with an income statement, statement of retained earnings, and balance sheet, the debit to income from Sapphire is posted in the income statement portion of the worksheet. The credit to dividends from Sapphire is posted in the retained earnings section of the balance sheet.

There are several differences in the worksheet for a less-than-100% acquisition. Notice that in our example for the 90% acquisition, the initial noncontrolling interest is established by crediting noncontrolling interest for the fair value of the shares of the Sapphire stock at date of acquisition. Also, notice in the income statement portion of the worksheet, that the net income attributable to the noncontrolling interest is subtracted to determine the amount of net income attributable to the acquirer. In the retained earnings section, the net income attributable to the noncontrolling interest less the dividends paid to the noncontrolling interest will be the change in the noncontrolling interest

account. The change in noncontrolling interest is added to the beginning balance in noncontrolling interest to arrive at end-of-year controlling interest.

To check for accuracy, it is important to reconcile the noncontrolling interest account. In our example, the noncontrolling interest deduction on the income statement is computed as follows:

Sapphire Corp.'s reported income	\$ 38,000
Noncontrolling interest share (10%)	( 3,800)
Acquirer's interest in acquiree's income	<u>\$34,200</u>

The noncontrolling interest's share of the fair value of net identifiable assets at date of acquisition is shown on the consolidated balance sheet in the owners' equity section. The computation for the noncontrolling interest shown in the balance sheet for our example is

Fair value of noncontrolling interest at date of acquisition	\$10,500
Plus: % of noncontrolling interest's share of net income	3,800
Less: % of noncontrolling interest's share of dividends	(1,500)
End of year balance, noncontrolling interest	<u>\$12,800</u>

**PEARL CORP. AND SAPPHIRE CORP. CONSOLIDATED WORKING PAPERS**  
*Year Ended December 31, Year 2*

Acquisition Method—90% Acquisition

Total liabilities and equity	535,200	145,000	285,200	285,200	2,300	548,000

7. The remainder of the consolidation process is just worksheet techniques, as described below.
  - a. Take all income items across horizontally and foot the adjustments, noncontrolling interest, and consolidated columns down to the net income line.
  - b. Take the amounts on the net income line (on income statement) in the adjustments, noncontrolling interest, and consolidated balances columns **down to** retained earnings items across the consolidated balances column. Foot and crossfoot the retained earnings statement.
  - c. Take the amounts of ending retained earnings in each of the four columns down to the ending retained earnings line in the balance sheet. Foot the noncontrolling interest column and place its total in the consolidated balances column. Take all the balance sheet items across to consolidated balances column.
8. Take a few minutes to study this worksheet so that you understand how to subtotal and total the three areas of the worksheet.

**NOTE:** The totals flow from the income statement section to the retained earnings section of the worksheet. Notice how the adjustments to retained earnings flow to the balance sheet.

9. Business consolidation problems may require only the completion of a balance sheet. If you encounter only a balance sheet in a simulation exercise, remember that the entries posted to net income and retained earnings can be posted directly to the appropriate accounts in the stockholders' equity and noncontrolling interest accounts on the balance sheet. Intercompany transactions that involve nominal accounts on the income statement, as well as dividends declared, would be posted to the retained earnings account.
10. More complex business combination problems with noncontrolling interests involve the write-up of assets to fair value, the subsequent depreciation of the increase in fair value on depreciable assets, intercompany sales of inventory by the subsidiary to the parent (upstream sales), and gains and losses from the intercompany sale of fixed assets. ASC Topic 805 states the following:

*The amount of intra-entity income or loss to be eliminated in accordance with paragraph 810-10-45-1 is not affected by the existence of a noncontrolling interest. The complete elimination of the intercompany income or loss is consistent with the underlying assumption that consolidated financial statements represent the financial position and operating results of a single economic entity. The elimination of the intercompany income or loss may be allocated between the parent and noncontrolling interests.*

11. Currently, alternative methods for eliminating intercompany transactions may be used when a noncontrolling interest exists.
  - a. The entire intercompany transaction may be eliminated (similar to the 100% acquisition problem earlier in this module for Pelican and Swan).
  - b. Another alternative for an acquisition of less than 100% is to allocate the income or loss on intercompany transactions between the parent and the noncontrolling interest. This would apply to situations in which the subsidiary sold inventory or fixed assets to the parent (upstream sales).
  - c. Another issue that was not addressed by the FASB is whether the depreciation on asset write-ups should be allocated to the acquirer and the noncontrolling interest. Current practice and accounting texts discuss the logic of allocating the additional depreciation between the acquirer and the noncontrolling interest.
  - d. Inasmuch as there are alternative approaches for these transactions, either answer would be acceptable.

**NOW REVIEW MULTIPLE-CHOICE QUESTIONS 55 THROUGH 67**

#### J. Additional Issues Regarding Business Combinations

1. **Incomplete Information**—At the date of acquisition, the accounting for a business combination may be incomplete. For example, the acquirer may not have complete information on valuing certain assets or liabilities.
  - a. If the information is not yet complete by the end of the reporting period, then provisional amounts are recorded for those items.
    - (1) These provisional amounts may be retrospectively adjusted during the **measurement period**.
    - (2) The measurement period ends when the acquirer receives information or learns the information is not obtainable.
    - (3) The measurement period may not exceed one year from date of acquisition.
  - b. Any changes in the provisional amounts are recognized by retrospectively adjusted the provisional amounts recognized at acquisition date and making a corresponding adjustment to goodwill.
  - c. Once the measurement period has ended, the acquirer accounts for changes as a correction of an error by making a prior period adjustment and restating the financial statements.
2. **Transfer of Assets**—As discussed earlier, consideration transferred may include cash, assets, liabilities incurred by the acquirer, equity interests of the acquirer, and contingent consideration.
  - a. Any assets transferred by the acquirer as part of the consideration in a business acquisition should be remeasured to fair value. Any gain or loss on the remeasurement should be included in earnings for the period.
  - b. If the assets remain within the combined entity after the business combination or the acquirer retains control of those assets, then the assets are measured at their carrying values.
3. **Contingent Consideration**—Contingent consideration may be transferred in a business acquisition by promising to pay additional cash or to issue additional shares of the equity of the acquirer. The contingent consideration is measured at fair value at acquisition date.

- a. After the date of acquisition, additional information may indicate the initial value has changed.
    - (1) If the changes in value occur during the measurement period, then it is treated as a change in a provisional amount and accounted for by an adjustment to goodwill.
    - (2) After the measurement date, a change in the fair value of contingent consideration classified as an asset or liability is reported in earnings of the period.
  - b. Any contingent consideration classified as equity is not remeasured.
  - c. Any settlement of contingent consideration classified as equity is accounted for within owner's equity.
4. **Recognition and Measurement Issues**—Normally, assets and liabilities are measured at fair values and classified at date of acquisition so that the appropriate GAAP rules are applied. Other accounting exceptions exist for recognition and measurement of certain items. Below is a discussion of each of these items.
- a. **Lease classification.** As we discussed earlier, an exception exists for leases. A lease should be recorded on the acquirer's book based on its classification at the inception of the lease. However, if the lease terms are modified or changed at date of acquisition, then the lease is classified as required by the modified terms.
  - b. **Operating lease.** If the acquiree is a lessee in operating leases, the acquirer determines whether the lease terms are favorable or unfavorable compared to market terms at the acquisition date. If the terms are favorable, an intangible asset can be recognized apart from goodwill. If the terms are unfavorable, then a liability should be recognized.
    - (1) If the acquiree is the lessor in an operating lease, the underlying asset is measured at fair value. The acquirer may also recognize a separate asset or liability if the lease terms are favorable or unfavorable with regard to market terms.
  - c. **Contingencies.** Contingencies of the acquiree are considered as contractual contingencies or noncontractual contingencies.
    - (1) The acquirer should recognize any contractual contingencies at fair value at the acquisition date.
    - (2) For noncontractual contingencies, the acquirer must assess whether it is "more likely than not" that the contingency gives rise to either an asset or a liability as defined in SFAC 6.
      - (a) If the noncontractual contingency is more likely than not to meet the definition of an asset, then it is measured at fair value at date of acquisition.
      - (b) If the noncontractual contingency is not likely to give rise to either an asset or a liability, the rules for contingencies are applied.
    - (3) Recall, that the rules for contingencies use the distinction of probable, reasonably possible, or remote to determine the appropriate accounting.
      - (a) Subsequent to acquisition date, if new information is obtained about the possible outcome of the contingency, the acquirer would measure the asset at the lower of its acquisition-date fair value, or the best estimate of its future settlement amount.
      - (b) A liability is subsequently measured at the higher of its acquisition-date fair value or the amount recognized by applying the rules for accounting for contingencies.
    - (4) The acquirer may only derecognize an asset or liability arising from a contingency when the contingency is resolved.
  - d. **Income taxes.** Income taxes of the acquiree are measured at the acquisition date.
  - e. **Employee benefits.** Employee benefits of the acquiree are recognized at date of acquisition. This includes compensated absences, pensions, other postemployment benefits, and deferred compensation agreements.
  - f. **Indemnification contracts.** Occasionally, the seller of a business may contractually indemnify (guarantee against loss) the acquirer for some uncertainty of contingency. If the seller indemnifies the acquirer, then the acquirer has an indemnification asset, which is measured at fair value at acquisition date.
  - g. **Reacquired rights**—Occasionally, the seller of the business may reacquire a right that has been transferred previous to the business acquisition. Examples of reacquired right include rights to use a trade name under a franchise agreement or rights to use technology.
    - (1) For example, assume that Company A licenses a trade name to Company B. Company A may or may not have recognized this right as an asset on its books. Later, Company A reacquires the right to the license when it acquires Company B in a business acquisition. At the date of acquisition, Company A, the acquirer, would measure the fair value of this reacquired right and recognize it as an intangible asset on the balance sheet. The reacquired right would be amortized over the remaining contract period.

- h. **Valuation allowances.** At the date of acquisition, the assets of the acquiree are measured at fair value. Uncertainties about cash flows should be considered in the fair value measurements. Therefore, the acquirer would not recognize a separate valuation allowance for cash flows that are considered uncollectible or uncertain at the acquisition date.
- i. **Share-based payment awards.** If the acquirer is required to replace the acquiree's share-based payment awards with new share-based payment awards of the acquirer, then the fair value of the replacement awards are included in the consideration transferred in the business acquisition. If the acquirer is not required to replace the awards, but voluntarily chooses to do so, then the fair value of the replacement awards is recognized as compensation cost in the postcombination financial statements.
- j. **Assets held for sale.** If the acquiree has assets held for sale at the acquisition date, the acquirer measures the assets held for sale at fair value less cost to sell.

#### K. Additional Disclosures

1. The following items should be disclosed in the notes to the financial statements for business combinations that occur during the reporting period.
  - a. Name and description of the acquiree.
  - b. Acquisition date.
  - c. Percentage of voting equity shares acquired.
  - d. Primary reasons for the business combination and how acquirer obtained control of acquiree.
  - e. Qualitative description of the factors that make up the goodwill recognized.
  - f. Acquisition-date fair value of total consideration transferred and the fair value of each major class of consideration including cash, other assets, liabilities assumed, contingent consideration, and equity instruments (including the number of instruments issued and method of determining fair value).
  - g. For contingent consideration and indemnification assets, the amount recognized, a description of arrangement, basis for determining amount of payment, and an estimate of the range of outcomes.
  - h. The amounts recognized at the acquisition date for each major class of assets acquired and liabilities assumed.
  - i. For assets and liabilities arising from contingencies, the amounts recognized and the nature of recognized and unrecognized contingencies, together with a range of outcomes for the contingencies.
  - j. The total amount of goodwill expected to be deducted for tax purposes.
  - k. If segment information is reported, the amount of goodwill by reportable segment.
  - l. For transactions recognized separately from the business combination, description, accounting, amounts and line items where it is recognized.
  - m. Amounts of acquisition-related costs recognized as expense and where those expenses are recognized in the income statement. Amounts of acquisition-related costs not recognized in the income statement.
  - n. The gain recognized from bargain purchase and the reason for the gain.
  - o. The fair value of any noncontrolling interest in the acquiree at acquisition date, and the valuation techniques used to measure fair value of the noncontrolling interest.
  - p. If the business was acquired in stages, the acquisition-date fair value of the equity interest in the acquiree held immediately before the acquisition date, as well as the amount of gain or loss recognized as a result of remeasuring those securities to fair value, valuation techniques, and information on valuation inputs.
  - q. If the acquirer is a public company, the amount of revenue and earnings of the acquiree since acquisition date that is included in the consolidated income statement. Also, supplemental pro forma information for revenue and earnings as if the combination had occurred at the beginning of the period, and pro forma comparative statements for the prior reporting period as if the combination had occurred in the beginning of the prior period.
  - r. If the acquisition occurs after the reporting date but before the financial statements are issued, the acquirer should make the disclosures of the business combination information listed above.
  - s. Any information that enables users of financial statements to evaluate the financial effects of adjustments recognized in the current reporting period related to business combinations that occurred in the current or previous period.
  - t. If accounting for a business combination is incomplete, the reason why it is incomplete, and the assets, liabilities, equity interests or items that are incomplete, and the nature and amount of any measurement period adjustments recognized during the period.
  - u. Any changes in a contingent consideration asset or liability, differences arising from settlement, and changes in the range of outcomes and reasons for changes.
  - v. A reconciliation of the carrying amount of goodwill at the beginning and end of the period.

**L. Combined Financial Statements**

1. **Combined financial statements** is the term used to describe financial statements prepared for companies that are owned by the same parent company or individual. These statements are often prepared when several subsidiaries of a common parent are not consolidated. Combined financial statements are prepared by combining all of the separate companies' financial statement classifications. Intercompany transactions, balances, and profit (loss) should be eliminated in the same way as in consolidated statements.

**NOW REVIEW MULTIPLE-CHOICE QUESTIONS 68 THROUGH 77**

**M. Push-Down Accounting**

1. "Push-down accounting" describes the method used to prepare the separate financial statements for significant, very large subsidiaries that are either wholly owned or substantially owned ( $\geq 90\%$ ). For publicly traded companies, the SEC requires a onetime adjustment under the acquisition method to revalue the subsidiary's assets and liabilities to fair value, and this entry is made directly on the books of the subsidiary.
2. Push-down accounting requires the subsidiary to record an entry revaluing all assets and liabilities with a balancing entry to a revaluation capital account. The revaluation capital account will be eliminated in consolidation against the investment in subsidiary account.
3. Push-down accounting will have no effect on the presentation of the consolidated financial statements or the separate financial statements of the parent company. However, the subsidiary's financial statements would be reported at fair value rather than historical cost.
4. Advocates of push-down accounting believe that a change of ownership through an acquisition-combination justifies the use of a new basis for the acquired entity. Thus, the new basis should be pushed down or directly recorded on the acquired entity's books.

**N. Research Component—Accounting Standards Codification**

ASC Topic 805 applies to business combinations. ASC topic 810 provides the rules for consolidation. Below is a list of keywords for searching business combination issues.

Acquired research and development	Contingent consideration	Intercompany balances
Acquirer	Contractual rights	Intercompany profit or loss
Acquiree	Contractual-legal criterion	Legal rights
Allocate cost assets	Controlling interest	Noncontrolling interest
Allocating cost asset	Costs registering securities	Obtains control
Asset apart from goodwill	Date of acquisition	Parent-company
Assigning amounts to assets	Derecognized	Purchase method
Bargain purchase	Disclosure financial statement	Reportable segment
Business combinations	Fair value exchanged	Reporting unit
Combined entity notes to financial statements	Financial assets	Rights transferable or separable
Combined financial statements	Goodwill	Separability criterion
Commonly controlled companies	Initial measurement	Stock dividends subsidiary
Consolidated financial statements	Initial recognition	Subsequent accounting acquisition
Consolidation purposes	Intangible asset class	
Contingency	Intangible assets acquired	
	Intangible assets subject to amortization	

**O. International Financial Reporting Standards (IFRS)**

1. IFRS requires business combinations to be accounted for using the acquisition method. Although the accounting for business combinations is similar for US GAAP and IFRS, it is different in several respects.
2. Under US GAAP noncontrolling interest is recorded at its fair value. IFRS, on the other hand, allows noncontrolling interest to be valued at either fair value (inclusive of goodwill) or the proportionate share of the value of the identifiable net assets of the acquiree (exclusive of goodwill).

- a. If the noncontrolling interest is valued at fair value, the noncontrolling interest is calculated by determining the market price for equity shares not held by the acquirer. If the market value is not available, other valuation techniques may be used to measure the fair value.
  - b. The second method for valuing noncontrolling interest is to calculate the fair value of net assets acquired and multiply that amount times the percentage of shares owned by the noncontrolling interest. Note that these two methods may result in different amounts of goodwill being recognized by the acquirer.  
The calculation of goodwill is
 

Consideration transferred
+ Noncontrolling interest in acquiree (valued at % of FV or % share of net assets)
+ Fair value of previously held interests in acquiree
– <u>Fair value of net assets acquired</u>
Goodwill
  - c. If goodwill is negative, a gain from bargain purchase should be recognized in the current period on the income statement.
3. Consolidated financial statements are required for all parent and subsidiaries wherein the parent has control. Similar to US GAAP, control is presumed if the entity has more than 50% of the voting shares of another entity. However, under IFRS, a parent may exclude a subsidiary only if three conditions are met: (1) is it wholly or partially owned and its other owners do not object to nonconsolidation; (2) it does not have any debt or equity instruments publicly traded; and (3) its parent prepares consolidated financial statements that comply with IFRS.
  4. The SEC requires the use of “push-down” accounting as described in M. above whereas IFRS disallows its use.

**NOW REVIEW MULTIPLE-CHOICE QUESTIONS 78 THROUGH 79**

## KEY TERMS

**Business.** “An integrated set of activities and assets that is capable of being conducted and managed for the purpose of providing a return in the form of dividends, lower costs, or other economic benefits directly to.”

**Acquiree.** The business that is being acquired.

**Acquirer.** The entity that obtains control of the acquiree.

**Acquisition date.** The date on which the acquirer obtains control of the acquiree.

**Business combination.** A transaction or event in which the acquirer obtains control of one or more businesses.

**Control.** A controlling financial interest by ownership of a majority of the voting shares of stock. The general rule is that ownership either directly or indirectly by one company or more than 50% of the outstanding voting shares of another company constitutes control.

**Identifiable asset.** Arises from a contractual or legal right, or if it is separable.

**Separable.** It can be separated or divided from the entity and sold, transferred, licensed, rented, or exchanged.

**Goodwill.** “An asset representing the future economic benefits that arises from other assets acquired in a business combination that are not individually identified and separately recognized.”

**Variable interest entities (VIE).** Control is achieved based on contractual, ownership, or other pecuniary interest that change with changes in the entity’s net asset value.

**Primary beneficiary.** An entity that has a controlling financial interest in a VIE.

**Combined financial statements.** The term used to describe financial statements prepared for companies that are owned by the same parent company or individual.

**Contingent consideration.** A promise to pay additional cash or to issue additional shares of the equity of the acquirer.

**Bargain purchase.** If the consideration paid by the acquirer plus the fair value of noncontrolling interest is less than the fair value of the net identifiable assets.

### Multiple-Choice Questions (1–79)

#### A–C. Accounting for the Combination

1. On April 1, year 1, Dart Co. paid \$620,000 for all the issued and outstanding common stock of Wall Corp. The recorded assets and liabilities of Wall Corp. on April 1, year 1, follow:

Cash	\$ 60,000
Inventory	180,000
Property and equipment (net of accumulated depreciation of \$220,000)	320,000
Goodwill	100,000
Liabilities	<u>(120,000)</u>
Net assets	<u>\$ 540,000</u>

On April 1, year 1, Wall's inventory had a fair value of \$150,000, and the property and equipment (net) had a fair value of \$380,000. What is the amount of goodwill resulting from the business combination?

- \$150,000
- \$120,000
- \$50,000
- \$20,000

2. Which of the following expenses related to the business acquisition should be included, in total, in the determination of net income of the combined corporation for the period in which the expenses are incurred?

	Fees of finders and consultants	Registration fees for equity securities issued
a.	Yes	Yes
b.	Yes	No
c.	No	Yes
d.	No	No

3. On August 31, year 1, Wood Corp. issued 100,000 shares of its \$20 par value common stock for the net assets of Pine, Inc., in a business combination accounted for by the acquisition method. The market value of Wood's common stock on August 31 was \$36 per share. Wood paid a fee of \$160,000 to the consultant who arranged this acquisition. Costs of registering and issuing the equity securities amounted to \$80,000. No goodwill was involved in the acquisition. What amount should Wood capitalize as the cost of acquiring Pine's net assets?

- \$3,600,000
- \$3,680,000
- \$3,760,000
- \$3,840,000

#### Items 4 and 5 are based on the following:

On December 31, year 1, Saxe Corporation was acquired by Poe Corporation. In the business combination, Poe issued 200,000 shares of its \$10 par common stock, with a market price of \$18 a share, for all of Saxe's common stock. The

stockholders' equity section of each company's balance sheet immediately before the combination was

	Poe	Saxe
Common stock	\$3,000,000	\$1,500,000
Additional paid-in capital	1,300,000	150,000
Retained earnings	<u>2,500,000</u>	<u>850,000</u>
	<u>\$6,800,000</u>	<u>\$2,500,000</u>

4. In the December 31, year 1 consolidated balance sheet, additional paid-in capital should be reported at

- \$950,000
- \$1,300,000
- \$1,450,000
- \$2,900,000

5. In the December 31, year 1 consolidated balance sheet, common stock should be reported at

- \$3,000,000
- \$3,500,000
- \$4,000,000
- \$5,000,000

6. On December 31, year 1, Neal Co. issued 100,000 shares of its \$10 par value common stock in exchange for all of Frey Inc.'s outstanding stock. The fair value of Neal's common stock on December 31, year 1, was \$19 per share. The carrying amounts and fair values of Frey's assets and liabilities on December 31, year 1, were as follows:

	Carrying amount	Fair value
Cash	\$ 240,000	\$ 240,000
Receivables	270,000	270,000
Inventory	435,000	405,000
Property, plant, and equipment	1,305,000	1,440,000
Liabilities	<u>(525,000)</u>	<u>(525,000)</u>
Net assets	<u>\$1,725,000</u>	<u>\$1,830,000</u>

What is the amount of goodwill resulting from the business combination?

- \$175,000
- \$105,000
- \$70,000
- \$0

7. Consolidated financial statements are typically prepared when one company has a controlling financial interest in another **unless**

- The subsidiary is a finance company.
- The fiscal year-ends of the two companies are more than three months apart.
- The investee is in bankruptcy.
- The two companies are in unrelated industries, such as manufacturing and real estate.

8. On January 1, year 1, Lake Corporation acquired 100% of the outstanding common stock of Shore Corporation for \$800,000. On the date of acquisition, the fair value of Shore's net identifiable assets is \$820,000. The book value of Shore Corporation's net assets is \$760,000. In Lake's year 1 financial statements, Lake should recognize

- a. Goodwill on the balance sheet.
- b. A gain from bargain purchase.
- c. A reduction in certain noncurrent assets on the balance sheet.
- d. An extraordinary gain.

9. A business combination is accounted for appropriately as an acquisition. Which of the following should be deducted in determining the combined corporation's net income for the current period?

	Direct costs of acquisition	General expenses related to acquisition
a.	Yes	No
b.	Yes	Yes
c.	No	Yes
d.	No	No

10. Which of the following situations would require the use of the acquisition method in a business combination?

- a. The acquisition of a group of assets.
- b. The formation of a joint venture.
- c. The purchase of more than 50% of a business.
- d. All of the above would require the use of the acquisition method.

11. ASC Topic 805 (SFAS 141[R]) sets forth certain steps in accounting for an acquisition. Which of the following is **not** one of those steps?

- a. Prepare pro forma financial statements prior to acquisition.
- b. Determine the acquisition date.
- c. Identify the acquirer.
- d. Expense the costs and general expenses of the acquisition in the period of acquisition.

12. Kennedy Company is acquiring Ross Company in an acquisition. What date should be used as the acquisition date for the transaction?

- a. The date Kennedy signs the contract to purchase the business.
- b. The date Kennedy obtains control of Ross.
- c. The date that all contingencies related to the transaction are resolved.
- d. The date Kennedy purchased more than 20% of the stock of Ross.

13. Lebow Corp. acquired control of Wilson Corp. by purchasing stock in steps. Which of the following regarding this type of acquisition is true?

- a. The cost of acquisition equals the amount paid for the previously held shares plus the fair value of shares issued at the date of acquisition.

- b. The previously held shares should be remeasured at fair value on the acquisition date, and any gain on previously held shares should be included in other comprehensive income for the period.
- c. The previously held shares should be remeasured at fair value on the acquisition date and the gain recognized in earnings of the period.
- d. The acquisition cost includes only the newly issued shares measured at fair value on the date of acquisition.

14. In accounting for a business combination, which of the following intangibles should **not** be recognized as an asset apart from goodwill?

- a. Trademarks.
- b. Lease agreements.
- c. Employee quality.
- d. Patents.

15. With respect to the allocation of the cost of a business acquisition, ASC Topic 805 (SFAS 141[R]) requires

- a. Cost to be allocated to the assets based on their carrying values.
- b. Cost to be allocated based on relative fair values.
- c. Cost to be allocated based on original costs.
- d. None of the above.

***D. and E. Date of Combination Consolidated Balance Sheet—Acquisition Accounting***

Items 16 through 20 are based on the following:

On January 1, year 1, Polk Corp. and Strass Corp. had condensed balance sheets as follows:

	Polk	Strass
Current assets	\$ 70,000	\$20,000
Noncurrent assets	<u>90,000</u>	<u>40,000</u>
Total assets	<u>\$160,000</u>	<u>\$60,000</u>
Current liabilities	\$ 30,000	\$10,000
Long-term debt	50,000	--
Stockholders' equity	<u>80,000</u>	<u>50,000</u>
Total liabilities and stockholders' equity	<u>\$160,000</u>	<u>\$60,000</u>

On January 2, year 1, Polk borrowed \$60,000 and used the proceeds to purchase 90% of the outstanding common shares of Strass. This debt is payable in ten equal annual principal payments, plus interest, beginning December 30, year 1. The excess cost of the investment over Strass' book value of acquired net assets should be allocated 60% to inventory and 40% to goodwill. On January 1, year 1, the fair value of Polk shares held by noncontrolling parties was \$10,000.

On Polk's January 2, year 1 consolidated balance sheet,

16. Current assets should be

- a. \$90,000
- b. \$99,000
- c. \$100,000
- d. \$102,000

17. Noncurrent assets should be

- a. \$130,000
- b. \$136,000
- c. \$138,000
- d. \$140,000

18. Current liabilities should be

- a. \$50,000
- b. \$46,000
- c. \$40,000
- d. \$30,000

19. Noncurrent liabilities should be

- a. \$115,000
- b. \$109,000
- c. \$104,000
- d. \$55,000

20. Stockholders' equity including noncontrolling interests should be

- a. \$80,000
- b. \$85,000
- c. \$90,000
- d. \$130,000

21. On November 30, year 1, Parlor, Inc. purchased for cash at \$15 per share all 250,000 shares of the outstanding common stock of Shaw Co. At November 30, year 1, Shaw's balance sheet showed a carrying amount of net assets of \$3,000,000. At that date, the fair value of Shaw's property, plant and equipment exceeded its carrying amount by \$400,000. In its November 30, year 1 consolidated balance sheet, what amount should Parlor report as goodwill?

- a. \$750,000
- b. \$400,000
- c. \$350,000
- d. \$0

22. On April 1, year 1, Parson Corp. purchased 80% of the outstanding stock of Sloan Corp. for \$700,000 cash. Parson determined that the fair value of the net identifiable assets was \$800,000 on the date of acquisition. The fair value of Sloan's stock at date of acquisition was \$18 per share. Sloan had a total of 50,000 shares of stock issued and outstanding prior to the acquisition. What is the amount of goodwill that should be recorded by Parson at date of acquisition?

- a. \$0
- b. \$60,000
- c. \$80,000
- d. \$120,000

23. A subsidiary, acquired for cash in a business combination, owned inventories with a market value greater than the book value as of the date of combination. A consolidated balance sheet prepared immediately after the acquisition would include this difference as part of

- a. Deferred credits.
- b. Goodwill.
- c. Inventories.
- d. Retained earnings.

24. Company J acquired all of the outstanding common stock of Company K in exchange for cash. The acquisition price exceeds the fair value of net assets acquired. How should Company J determine the amounts to be reported for the plant and equipment and long-term debt acquired from Company K?

	Plant and equipment	Long-term debt
a.	K's carrying amount	K's carrying amount
b.	K's carrying amount	Fair value
c.	Fair value	K's carrying amount
d.	Fair value	Fair value

25. In a business combination accounted for as an acquisition the appraised values of the identifiable assets acquired exceeded the acquisition price. How should the excess appraised value be reported?

- a. As negative goodwill.
- b. As additional paid-in capital.
- c. As a reduction of the values assigned to certain assets and an extraordinary gain for any unallocated portion.
- d. As a gain in net income for the period.

### F. Consolidated Financial Statements Subsequent to Acquisition

26. Wright Corp. has several subsidiaries that are included in its consolidated financial statements. In its December 31, year 1 trial balance, Wright had the following intercompany balances before eliminations:

	Debit	Credit
Current receivable due from Main Co.	\$ 32,000	
Noncurrent receivable from Main Co.	114,000	
Cash advance to Corn Corp.	6,000	
Cash advance from King Co.		\$ 15,000
Intercompany payable to King Co.		101,000

In its December 31, year 1 consolidated balance sheet, what amount should Wright report as intercompany receivables?

- a. \$152,000
- b. \$146,000
- c. \$36,000
- d. \$0

27. Shep Co. has a receivable from its parent, Pep Co. Should this receivable be separately reported in Shep's balance sheet and in Pep's consolidated balance sheet?

	Shep's balance sheet	Pep's consolidated balance sheet
a.	Yes	No
b.	Yes	Yes
c.	No	No
d.	No	Yes

Items 28 through 30 are based on the following:

Selected information from the separate and consolidated balance sheets and income statements of Pard, Inc. and its

subsidiary, Spin Co., as of December 31, year 1, and for the year then ended is as follows:

	Pard	Spin	Consolidated
<b>Balance sheet accounts</b>			
Accounts receivable	\$ 26,000	\$ 19,000	\$ 39,000
Inventory	30,000	25,000	52,000
Investment in Spin	67,000	--	--
Goodwill	--	--	30,000
Noncontrolling interest	--	--	10,000
Stockholders' equity	154,000	50,000	154,000
<b>Income statement accounts</b>			
Revenues	\$200,000	\$140,000	\$308,000
Cost of goods sold	<u>150,000</u>	<u>110,000</u>	<u>231,000</u>
Gross profit	50,000	30,000	77,000
Equity in earnings of Spin			
Spin	20,000	--	--
Net income	36,000	20,000	40,000

**Additional information**

- During year 1, Pard sold goods to Spin at the same markup on cost that Pard uses for all sales. At December 31, year 1, Spin had not paid for all of these goods and still held 37.5% of them in inventory.
- Pard acquired its interest in Spin on January 2, year 1.

28. What was the amount of intercompany sales from Pard to Spin during year 1?

- a. \$3,000
- b. \$6,000
- c. \$29,000
- d. \$32,000

29. At December 31, year 1, what was the amount of Spin's payable to Pard for intercompany sales?

- a. \$3,000
- b. \$6,000
- c. \$29,000
- d. \$32,000

30. In Pard's consolidated balance sheet, what was the carrying amount of the inventory that Spin purchased from Pard?

- a. \$3,000
- b. \$6,000
- c. \$9,000
- d. \$12,000

31. On January 1, year 1, Palm, Inc. purchased 80% of the stock of Stone Corp. for \$4,000,000 cash. Prior to the acquisition, Stone had 100,000 shares of stock outstanding. On the date of acquisition, Stone's stock had a fair value of \$52 per share. During the year Stone reported \$280,000 in net income and paid dividends of \$50,000. What is the balance in the noncontrolling interest account on Palm's balance sheet on December 31, year 1?

- a. \$1,000,000
- b. \$1,040,000
- c. \$1,086,000
- d. \$1,096,000

32. On January 1, year 1, Owen Corp. purchased all of Sharp Corp.'s common stock for \$1,200,000. On that date, the fair values of Sharp's assets and liabilities equaled their carrying amounts of \$1,320,000 and \$320,000, respectively. During year 1, Sharp paid cash dividends of \$20,000.

Selected information from the separate balance sheets and income statements of Owen and Sharp as of December 31, year 1, and for the year then ended follows:

	Owen	Sharp
<b>Balance sheet accounts</b>		
Investment in subsidiary	\$1,320,000	--
Retained earnings	1,240,000	560,000
Total stockholders' equity	2,620,000	1,120,000
<b>Income statement accounts</b>		
Operating income	420,000	200,000
Equity in earnings of Sharp	140,000	--
Net income	400,000	140,000

In Owen's December 31, year 1 consolidated balance sheet, what amount should be reported as total retained earnings?

- a. \$1,240,000
- b. \$1,360,000
- c. \$1,380,000
- d. \$1,800,000

33. When a parent-subsidiary relationship exists, consolidated financial statements are prepared in recognition of the accounting concept of

- a. Reliability.
- b. Materiality.
- c. Legal entity.
- d. Economic entity.

34. A subsidiary was acquired for cash in a business combination on January 1, year 1. The consideration given exceeded the fair value of identifiable net assets. The acquired company owned equipment with a market value in excess of the carrying amount as of the date of combination. A consolidated balance sheet prepared on December 31, year 1, would

- a. Report the unamortized portion of the excess of the market value over the carrying amount of the equipment as part of goodwill.
- b. Report the unamortized portion of the excess of the market value over the carrying amount of the equipment as part of plant and equipment.
- c. Report the excess of the market value over the carrying amount of the equipment as part of plant and equipment.
- d. Not report the excess of the market value over the carrying amount of the equipment because it would be expensed in the year of the acquisition.

35. Pride, Inc. owns 80% of Simba, Inc.'s outstanding common stock. Simba, in turn, owns 10% of Pride's outstanding common stock. What percentage of the common stock cash dividends declared by the individual companies should be reported as dividends declared in the consolidated financial statements?

	Dividends declared by Pride	Dividends declared by Simba
a.	90%	0%
b.	90%	20%
c.	100%	0%
d.	100%	20%

36. It is generally presumed that an entity is a variable interest entity subject to consolidation if its equity is

- Less than 50% of total assets.
- Less than 25% of total assets.
- Less than 10% of total assets.
- Less than 10% of total liabilities.

37. Morton Inc., Gilman Co., and Willis Corporation established a special-purpose entity (SPE) (variable interest entity) to perform leasing activities for the three corporations.

If at the time of formation the SPE is determined to be a variable interest entity subject to consolidation, which of the corporations should consolidate the SPE?

- The corporation with the largest interest in the entity.
- The corporation that is the primary beneficiary.
- The corporation that has the most voting equity interest.
- Each corporation should consolidate one-third of the SPE.

38. The determination of whether an interest holder must consolidate a variable interest entity is made

- By reassessing on an ongoing basis.
- When the interest holder initially gets involved with the variable interest entity.
- Every time the cash flows of the variable interest entity change.
- Interests in variable interest entities are never consolidated.

39. Matt Co. included a foreign subsidiary in its year 5 consolidated financial statements. The subsidiary was acquired in year 1 and was excluded from previous consolidations. The change was caused by the elimination of foreign exchange controls. Including the subsidiary in the year 5 consolidated financial statements results in an accounting change that should be reported

- By footnote disclosure only.
- Currently and prospectively.
- Currently with footnote disclosure of pro forma effects of retroactive application.
- By restating the financial statements of all prior periods presented.

40. On June 30, year 1, Purl Corp. issued 150,000 shares of its \$20 par common stock for which it received all of Scott Corp.'s common stock. The fair value of the common stock issued is equal to the book value of Scott Corp.'s net assets. Both corporations continued to operate as separate businesses, maintaining accounting records with years ending December 31. Net income from separate company operations and dividends paid were

	Purl	Scott
<i>Net income</i>		
Six months ended 6/30/Y1	\$750,000	\$225,000
Six months ended 12/31/Y1	825,000	375,000
<i>Dividends paid</i>		
March 25, year 1	950,000	--
November 15, year 1	--	300,000

On December 31, year 1, Scott held in its inventory merchandise acquired from Purl on December 1, year 1, for \$150,000, which included a \$45,000 markup. In the year 1 consolidated income statement, net income should be reported at

- \$1,650,000
- \$1,905,000
- \$1,950,000
- \$2,130,000

41. On January 1, year 2, Pane Corp. exchanged 150,000 shares of its \$20 par value common stock for all of Sky Corp.'s common stock. At that date, the fair value of Pane's common stock issued was equal to the book value of Sky's net assets. Both corporations continued to operate as separate businesses, maintaining accounting records with years ending December 31. Pane uses the equity method to account for its investment in Sky. Information from separate company operations follows:

	Pane	Sky
Retained earnings—12/31/Y1	\$3,200,000	\$925,000
Net income—six months ended 6/30/Y2	800,000	275,000
Dividends paid—3/25/Y2	750,000	--

What amount of retained earnings would Pane report in its June 30, year 2 consolidated balance sheet?

- \$5,200,000
- \$4,450,000
- \$3,525,000
- \$3,250,000

### G. and H. Intercompany Transactions and Profit Confirmation and Subsequent Consolidated Financial Statements

Items 42 and 43 are based on the following:

Scroll, Inc., a wholly owned subsidiary of Pirm, Inc., began operations on January 1, year 1. The following information is from the condensed year 1 income statements of Pirm and Scroll:

	Pirm	Scroll
Sales to Scroll	\$100,000	\$ --
Sales to others	400,000	300,000
	500,000	300,000
Cost of goods sold:		
Acquired from Pirm	--	80,000
Acquired from others	350,000	190,000

Gross profit	150,000	30,000
Depreciation	40,000	10,000
Other expenses	<u>60,000</u>	<u>15,000</u>
Income from operations	50,000	5,000
Gain on sale of equipment to Scroll	<u>12,000</u>	<u>--</u>
Income before income taxes	<u>\$ 62,000</u>	<u>\$ 5,000</u>

What amount should Parker report as cost of sales in its year 1 consolidated income statement?

- a. \$750,000
- b. \$680,000
- c. \$500,000
- d. \$430,000

**Additional information**

- Sales by Pirn to Scroll are made on the same terms as those made to third parties.
- Equipment purchased by Scroll from Pirn for \$36,000 on January 1, year 1, is depreciated using the straight-line method over four years.

42. In Pirn's December 31, year 1, consolidating worksheet, how much intercompany profit should be eliminated from Scroll's inventory?

- a. \$30,000
- b. \$20,000
- c. \$10,000
- d. \$6,000

43. What amount should be reported as depreciation expense in Pirn's year 1 consolidated income statement?

- a. \$50,000
- b. \$47,000
- c. \$44,000
- d. \$41,000

44. Clark Co. had the following transactions with affiliated parties during year 1:

- Sales of \$60,000 to Dean, Inc., with \$20,000 gross profit. Dean had \$15,000 of this inventory on hand at year-end. Clark owns a 15% interest in Dean and does not exert significant influence.
- Purchases of raw materials totaling \$240,000 from Kent Corp., a wholly owned subsidiary. Kent's gross profit on the sale was \$48,000. Clark had \$60,000 of this inventory remaining on December 31, year 1.

Before eliminating entries, Clark had consolidated current assets of \$320,000. What amount should Clark report in its December 31, year 1 consolidated balance sheet for current assets?

- a. \$320,000
- b. \$317,000
- c. \$308,000
- d. \$303,000

45. Parker Corp. owns 80% of Smith Inc.'s common stock. During year 1, Parker sold Smith \$250,000 of inventory on the same terms as sales made to third parties. Smith sold all of the inventory purchased from Parker in year 1. The following information pertains to Smith and Parker's sales for year 1:

	Parker	Smith
Sales	\$1,000,000	\$700,000
Cost of sales	<u>400,000</u>	<u>350,000</u>
	<u>\$ 600,000</u>	<u>\$350,000</u>

46. Selected information from the separate and consolidated balance sheets and income statements of Pare, Inc. and its subsidiary, Shel Co., as of December 31, year 1, and for the year then ended is as follows:

	Pare	Shel	Consolidated
<b>Balance sheet accounts</b>			
Accounts receivable	\$ 52,000	\$ 38,000	\$ 78,000
Inventory	60,000	50,000	104,000
<b>Income statement accounts</b>			
Revenues	\$400,000	\$280,000	\$616,000
Cost of goods sold	<u>300,000</u>	<u>220,000</u>	<u>462,000</u>
Gross profit	\$100,000	\$ 60,000	\$154,000

**Additional information**

During year 1, Pare sold goods to Shel at the same markup on cost that Pare uses for all sales.

In Pare's consolidating worksheet, what amount of unrealized intercompany profit was eliminated?

- a. \$6,000
- b. \$12,000
- c. \$58,000
- d. \$64,000

47. During year 1, Pard Corp. sold goods to its 80%-owned subsidiary, Seed Corp. At December 31, year 1, one-half of these goods were included in Seed's ending inventory. Reported year 1 selling expenses were \$1,100,000 and \$400,000 for Pard and Seed, respectively. Pard's selling expenses included \$50,000 in freight-out costs for goods sold to Seed. What amount of selling expenses should be reported in Pard's year 1 consolidated income statement?

- a. \$1,500,000
- b. \$1,480,000
- c. \$1,475,000
- d. \$1,450,000

48. On January 1, year 1, Poe Corp. sold a machine for \$900,000 to Saxe Corp., its wholly owned subsidiary. Poe paid \$1,100,000 for this machine, which had accumulated depreciation of \$250,000. Poe estimated a \$100,000 salvage value and depreciated the machine on the straight-line method over twenty years, a policy which Saxe continued. In Poe's December 31, year 1 consolidated balance sheet, this machine should be included in cost and accumulated depreciation as

	Cost	Accumulated depreciation
a.	\$1,100,000	\$300,000
b.	\$1,100,000	\$290,000
c.	\$900,000	\$40,000
d.	\$850,000	\$42,500

49. Wagner, a holder of a \$1,000,000 Palmer, Inc. bonds, collected the interest due on March 31, year 1, and then sold the

bonds to Seal, Inc. for \$975,000. On that date, Palmer, a 75% owner of Seal, had a \$1,075,000 carrying amount for the bonds. What was the effect of Seal's purchase of Palmer's bond on the retained earnings and noncontrolling interest amounts reported in Palmer's March 31, year 1 consolidated balance sheet?

	Retained earnings	Noncontrolling interest
a.	\$100,000 increase	\$0
b.	\$75,000 increase	\$25,000 increase
c.	\$0	\$25,000 increase
d.	\$0	\$100,000 increase

50. Sun, Inc. is a wholly owned subsidiary of Patton, Inc. On June 1, year 1, Patton declared and paid a \$1 per share cash dividend to stockholders of record on May 15, year 1. On May 1, year 1, Sun bought 10,000 shares of Patton's common stock for \$700,000 on the open market, when the book value per share was \$30. What amount of gain should Patton report from this transaction in its consolidated income statement for the year ended December 31, year 1?

- \$0
- \$390,000
- \$400,000
- \$410,000

51. Perez, Inc. owns 80% of Senior, Inc. During year 1, Perez sold goods with a 40% gross profit to Senior. Senior sold all of these goods in year 1. For year 1 consolidated financial statements, how should the summation of Perez and Senior income statement items be adjusted?

- Sales and cost of goods sold should be reduced by the intercompany sales.
- Sales and cost of goods sold should be reduced by 80% of the intercompany sales.
- Net income should be reduced by 80% of the gross profit on intercompany sales.
- No adjustment is necessary.

52. Winston Co. owns 80% of the outstanding common stock of Foster Co. On December 31, year 2, Winston sold equipment to Foster at a price in excess of Winston's carrying amount, but less than its original cost. On a consolidated balance sheet at December 31, year 2, the carrying amount of the equipment should be reported at

- Foster's original cost.
- Winston's original cost.
- Foster's original cost less Winston's recorded gain.
- Foster's original cost less 80% of Winston's recorded gain.

53. Port, Inc. owns 100% of Salem, Inc. On January 1, year 6, Port sold Salem delivery equipment at a gain. Port had owned the equipment for two years and used a five-year straight-line depreciation rate with no residual value. Salem is using a three-year straight-line depreciation rate with no residual value for the equipment. In the consolidated income statement, Salem's recorded depreciation expense on the equipment for year 6 will be decreased by

- 20% of the gain on sale.
- 33 1/3% of the gain on sale.

- 50% of the gain on sale.
- 100% of the gain on sale.

54. P Co. purchased term bonds at a premium on the open market. These bonds represented 20% of the outstanding class of bonds issued at a discount by S Co., P's wholly owned subsidiary. P intends to hold the bonds until maturity. In a consolidated balance sheet, the difference between the bond carrying amounts in the two companies would

- Decrease retained earnings.
- Increase retained earnings.
- Be reported as a deferred debit to be amortized over the remaining life of the bonds.
- Be reported as a deferred credit to be amortized over the remaining life of the bonds.

### I. Noncontrolling Interest

55. Planet Company acquired a 70% interest in the Star Company in year 1. For the year ended December 31, year 2, Star reported net income of \$80,000. During year 2, Planet sold merchandise to Star for \$10,000 at a profit of \$2,000. The merchandise remained in Star's inventory at the end of year 2. For consolidation purposes what is the noncontrolling interest's share of Star's net income for year 2?

- \$23,400
- \$24,000
- \$24,600
- \$26,000

Items 56 and 57 are based on the following:

On January 1, year 1, Ritt Corp. purchased 80% of Shaw Corp.'s \$10 par common stock for \$975,000. On this date, the carrying amount of Shaw's net assets was \$1,000,000. The fair values of Shaw's identifiable assets and liabilities were the same as their carrying amounts except for plant assets (net) with fair values of \$100,000 in excess of their carrying amount. The fair value of the noncontrolling interest in Shaw on January 1, year 1, was \$250,000. For the year ended December 31, year 1, Shaw had net income of \$190,000 and paid cash dividends totaling \$125,000.

56. In the January 1, year 1 consolidated balance sheet, goodwill should be reported at

- \$0
- \$75,000
- \$95,000
- \$125,000

57. In the December 31, year 1 consolidated balance sheet, noncontrolling interest should be reported at

- \$200,000
- \$213,000
- \$233,000
- \$263,000

Items 58 through 60 are based on the following:

On January 2, year 1, Pare Co. purchased 75% of Kidd Co.'s outstanding common stock. On that date, the fair value of

the 25% noncontrolling interest was \$35,000. During year 1, Kidd had net income of \$20,000. Selected balance sheet data at December 31, year 1, is as follows:

	<b>Pare</b>	<b>Kidd</b>
Total assets	\$420,000	\$180,000
Liabilities	\$120,000	\$ 60,000
Common stock	100,000	50,000
Retained earnings	<u>200,000</u>	<u>70,000</u>
	<u>\$420,000</u>	<u>\$180,000</u>

During year 1 Pare and Kidd paid cash dividends of \$25,000 and \$5,000, respectively, to their shareholders. There were no other intercompany transactions.

**58.** In its December 31, year 1 consolidated statement of retained earnings, what amount should Pare report as dividends paid?

- \$5,000
- \$25,000
- \$26,250
- \$30,000

**59.** In Pare's December 31, year 1 consolidated balance sheet, what amount should be reported as noncontrolling interest in net assets?

- \$30,000
- \$35,000
- \$38,750
- \$40,000

**60.** In its December 31, year 1 consolidated balance sheet, what amount should Pare report as common stock?

- \$50,000
- \$100,000
- \$137,500
- \$150,000

**61.** In a business acquisition, consideration transferred includes which of the following?

- The fair value of assets transferred by the acquirer.
  - The fair value of the liabilities incurred by the acquirer.
  - The fair value of contingent consideration transferred by the acquirer.
  - The fair value of the equity interests issued by the acquirer as a part of the acquisition.
  - The fair value of share-based payments voluntarily exchanged for outstanding share-based payment awards of the acquiree.
- I and II.
  - I, II, and IV.
  - I, II, IV, and V.
  - I, II, III, and IV.

**62.** On June 30, year 1, Wyler Corporation acquires Boston Corporation in a transaction properly accounted for as a business acquisition. At the time of the acquisition, some of the information for valuing assets was incomplete. How should Corporation Wyler, account for the incomplete information in preparing its financial statements immediately after the acquisition?

- Do not record the uncertain items until complete information is available.
- Record a contra account to the investment account for the amounts involved.

- Record the uncertain items at the book value of the acquiree.
- Record the uncertain items at a provisional amount measured at the date of acquisition.

**63.** When does the measurement period end for a business combination in which there was incomplete accounting information on the date of acquisition?

- When the acquirer receives the information or one year from the acquisition date, whichever occurs earlier.
- On the final date when all contingencies are resolved.
- Thirty days from the date of acquisition.
- At the end of the reporting period in the year of acquisition.

**64.** Ross Corporation recorded a provisional amount for an identifiable asset at the date of its acquisition of Layton Inc. because the asset's fair value was uncertain. Before the measurement period ends, Ross obtains new information that indicates that the asset was overvalued by \$20,000. How should Ross report the effects of this new information?

- As an expense in the current period income statement.
- As an extraordinary loss on the current period income statement.
- As a reduction in recorded goodwill.
- As a gain from bargain purchase.

**65.** Able Corp. acquires Bailey Company in a transaction that is properly accounted for as a business acquisition. The acquisition contract and Bailey's share-based compensation agreement require Able stock to be exchanged for Bailey common stock issued to Bailey's employees as share-based payments. No further service is required by the employees of Bailey to qualify for the replacement awards. How should Able account for the shares of stock issued as replacement awards to employees of Bailey?

- As a cost of acquisition.
- As an expense in the current period.
- As a loss in the current period.
- As an extraordinary loss in the period.

**66.** On January 1, year 1, Post Inc. acquires Sam Company in a transaction properly accounted for as a business combination. Sam's employees have share-based payments that will expire as a consequence of the business combination. In order to maintain employee morale, Post voluntarily replaces the awards to employees 30 days after the date of acquisition. How should Post account for the replacement awards given to Sam's employees?

- Post should include the fair value of the awards as consideration paid in the cost of acquisition.
- Post should recognize compensation expense for the value of the awards in the postcombination financial statements.
- Post should recognize an extraordinary loss for the fair value of the replacement awards in its financial statements.
- Post should capitalize the cost of the awards and amortize the cost over the remaining service years of the employees.

67. When should an acquirer derecognize a contingent liability recognized as the result of an acquisition?

- When it becomes more likely than not that the firm will not be liable.
- When the contingency is resolved.
- At the end of the year of acquisition.
- When it is reasonably possible that the liability will not require payment.

### J. Additional Issues Regarding Business Combinations

68. On September 1, year 1, Phillips, Inc. issued common stock in exchange for 20% of Sago, Inc.'s outstanding common stock. On July 1, year 2, Phillips issued common stock for an additional 75% of Sago's outstanding common stock. Sago continues in existence as Phillips' subsidiary. How much of Sago's year 2 net income should be reported as attributable to Phillips?

- 20% of Sago's net income to June 30 and all of Sago's net income from July 1 to December 31.
- 20% of Sago's net income to June 30 and 95% of Sago's net income from July 1 to December 31.
- 95% of Sago's net income.
- All of Sago's net income.

### L. Combined Financial Statements

69. Mr. & Mrs. Dart own a majority of the outstanding capital stock of Wall Corp., Black Co., and West, Inc. During year 1, Wall advanced cash to Black and West in the amount of \$50,000 and \$80,000, respectively. West advanced \$70,000 in cash to Black. At December 31, year 1, none of the advances was repaid. In the combined December 31, year 1 balance sheet of these companies, what amount would be reported as receivables from affiliates?

- \$200,000
- \$130,000
- \$60,000
- \$0

70. Selected data for two subsidiaries of Dunn Corp. taken from December 31, year 1 preclosing trial balances are as follows:

	Banks Co. debit	Lamm Co. credit
Shipments to Banks	\$ --	\$150,000
Shipments from Lamm	200,000	--
Intercompany inventory profit on total shipments	--	50,000

Additional data relating to the December 31, year 1 inventory are as follows:

Inventory acquired from outside parties	\$175,000	\$250,000
Inventory acquired from Lamm	60,000	--

At December 31, year 1, the inventory reported on the combined balance sheet of the two subsidiaries should be

- \$425,000
- \$435,000
- \$470,000
- \$485,000

71. Ahm Corp. owns 90% of Bee Corp.'s common stock and 80% of Cee Corp.'s common stock. The remaining common shares of Bee and Cee are owned by their respective employees. Bee sells exclusively to Cee, Cee buys exclusively from Bee, and Cee sells exclusively to unrelated companies. Selected year 1 information for Bee and Cee follows:

	Bee Corp.	Cee Corp.
Sales	\$130,000	\$91,000
Cost of sales	100,000	65,000
Beginning inventory	None	None
Ending inventory	None	65,000

What amount should be reported as gross profit in Bee and Cee's combined income statement for the year ended December 31, year 1?

- \$26,000
- \$41,000
- \$47,800
- \$56,000

72. The following information pertains to shipments of merchandise from Home Office to Branch during year 1:

Home Office's cost of merchandise	\$160,000
Intracompany billing	200,000
Sales by Branch	250,000
Unsold merchandise at Branch on December 31, year 1	20,000

In the combined income statement of Home Office and Branch for the year ended December 31, year 1, what amount of the above transactions should be included in sales?

- \$250,000
- \$230,000
- \$200,000
- \$180,000

73. Mr. and Mrs. Gasson own 100% of the common stock of Able Corp. and 90% of the common stock of Baker Corp. Able previously paid \$4,000 for the remaining 10% interest in Baker. The condensed December 31, year 1 balance sheets of Able and Baker are as follows:

	Able	Baker
Assets	<u>\$600,000</u>	<u>\$60,000</u>
Liabilities	\$200,000	\$30,000
Common stock	100,000	20,000
Retained earnings	<u>300,000</u>	<u>10,000</u>
	<u>\$600,000</u>	<u>\$60,000</u>

In a combined balance sheet of the two corporations at December 31, year 1, what amount should be reported as total stockholders' equity?

- a. \$430,000
- b. \$426,000
- c. \$403,000
- d. \$400,000

74. Mr. Cord owns four corporations. Combined financial statements are being prepared for these corporations, which have intercompany loans of \$200,000 and intercompany profits of \$500,000. What amount of these intercompany loans and profits should be included in the combined financial statements?

	Intercompany	
	Loans	Profits
a.	\$200,000	\$0
b.	\$200,000	\$500,000
c.	\$0	\$0
d.	\$0	\$500,000

75. Combined statements may be used to present the results of operations of

	Companies under common management	Commonly controlled companies
a.	No	Yes
b.	Yes	No
c.	No	No
d.	Yes	Yes

76. Which of the following items should be treated in the same manner in both combined financial statements and consolidated statements?

	Income taxes	Noncontrolling interest
a.	No	No
b.	No	Yes
c.	Yes	Yes
d.	Yes	No

77. Which of the following items should be treated in the same manner in both combined financial statements and consolidated statements?

	Different fiscal periods	Foreign operations
a.	No	No
b.	No	Yes
c.	Yes	Yes
d.	Yes	No

**O. International Financial Reporting Standards (IFRS)**

78. Under IFRS the asset goodwill may be recognized

- a. When it is acquired by purchase.
- b. When it is internally generated or acquired by purchase.
- c. When it is clear that it exists and has value.
- d. When it has future economic benefits.

79. Under IFRS a parent may exclude a subsidiary from consolidation only if all of the following conditions exist, **except**

- a. It is wholly or partially owned and its owners do not object to nonconsolidation.
- b. It does not have any debt or equity instruments publicly traded.
- c. It has one class of stock.
- d. Its parent prepares consolidated financial statements that comply with IFRS.

### Explanations

1. (a) In an acquisition, the net assets of the acquired firm are recorded at their FV. The excess of the cost of the investment over the FV of the net assets acquired is allocated to goodwill. The cost of the investment is \$620,000, and the FV of the net assets acquired, **excluding goodwill**, is \$470,000, as computed below.

	FMV
Cash	\$ 60,000
Inventory (BV = \$180,000)	150,000
Prop. and equip. (BV = \$320,000)	380,000
Liabilities	(120,000)
Total FV	<u>\$ 470,000</u>

Therefore, the amount allocated to goodwill is \$150,000 (\$620,000 – \$470,000).

2. (b) Acquisition costs such as finder's fees are expensed in the period incurred. Registration fees for equity securities are a reduction in the issue price of the securities. Therefore, answer (b) is correct.

3. (a) In a business combination accounted for as an acquisition, the fair market value of the net assets is used as the valuation basis for the combination. In this case, the net assets of the subsidiary have an implied fair market value of \$3,600,000 which is the value of the common stock issued to Pine's shareholders (100,000 shares × \$36). The direct cost of acquisition should not be included as part of the cost of a company acquired, and the cost of registering equity securities should be a reduction of the issue price of the securities (i.e., additional paid-in capital). Thus, the \$160,000 paid for a consultant who arranged the acquisition should be expensed,

and the \$80,000 cost for registering and issuing the equity securities should be treated as a reduction of additional paid-in capital. Answer (a) is correct because the total amount to be capitalized is \$3,600,000.

4. (d) In a business combination accounted for as an acquisition, the fair market value of the net assets is used as the valuation basis for the combination. In this case, the net assets of the subsidiary have an implied fair market value of \$3,600,000 which is the value of the common stock issued to Saxe's shareholders (200,000 × \$18). Since \$3,600,000 is the basis for recording this purchase, the common stock issued is recorded at \$2,000,000 (200,000 shares × \$10 par value per share) and additional paid-in capital is recorded at \$1,600,000 (\$3,600,000 – \$2,000,000). Therefore, answer (d) is correct because additional paid-in capital should be reported at \$2,900,000 (\$1,300,000 + \$1,600,000).

5. (d) In a business combination, the common stock account of the combined entity is the number of shares outstanding multiplied by the par value of the stock. The total common stock account of the combined entity is equal to \$5,000,000, the \$3,000,000 originally outstanding plus the total par value of the stock issued in the acquisition, \$2,000,000 (200,000 × \$10).

6. (c) In a business combination accounted for as an acquisition, the fair market value of the net assets is used as the valuation basis for the combination. In this case, Frey's assets have an implied fair market value of \$1,900,000 which is the market value of the common stock issue (100,000 shares × \$19). The value assigned to goodwill is \$70,000, which is the value of the stock minus the fair value of Frey's identifiable assets (\$1,900,000 – \$1,830,000).

**7. (c)** A subsidiary should not be consolidated when it is in bankruptcy. Consolidation of all majority-owned subsidiaries is required regardless of the industry or business of the subsidiary. A difference in fiscal periods of a parent and a subsidiary does not of itself justify the exclusion of the subsidiary from consolidation.

**8. (b)** The consideration paid plus the fair value of the noncontrolling interest plus the fair value of any previous purchases of common stock is less than the fair value of the net identifiable assets acquired, the acquirer should recognize a gain from bargain purchase on the income statement. The gain would be equal to \$20,000 (\$820,000 – 800,000). Answer (a) is incorrect because goodwill is only recognized when the purchase price is greater than the fair value of the recorded assets. Answer (c) is incorrect because it describes an inappropriate method. Answer (d) is incorrect because the gain is not treated as extraordinary.

**9. (b)** The direct costs of acquisition should be an expense of the period in a business combination accounted for by the acquisition method. General expenses related to the acquisition are also deducted as incurred in determining the combined corporation's net income for the current period.

**10. (c)** Answer (c) is correct because the acquisition method applies only to acquisitions of a business. Answers (a), (b), and (d) are incorrect because none of these situations would constitute an acquisition.

**11. (a)** Preparing pro forma financial statements prior to acquisition is not required in the application of the acquisition method. Answers (b) and (c) are incorrect because identifying the acquirer and determining the acquisition date are both steps in applying the acquisition method. Answer (d) is incorrect because direct costs of acquisitions and general expenses related to an acquisition should be expensed in the period of acquisition.

**12. (b)** The acquisition date is the date the acquirer obtains control of the acquiree. Answer (a) is incorrect because the date a contract is signed usually does not correspond with the date control is acquired. Answer (c) is incorrect because the acquisition may occur before all contingencies are resolved. Answer (d) is incorrect because control constitutes owning more than 50% of the shares of stock outstanding.

**13. (c)** Any previously held shares should be remeasured at fair value as of the date control is acquired, and the gain is recognized in earnings of the period. If an unrealized gain was previously recognized in other comprehensive income, the amount recognized in other comprehensive income should also be recognized as a gain in the current period. Answer (a) is incorrect because previously held shares are remeasured to fair value on the acquisition date. Answer (b) is incorrect because any gain is recognized in earnings of the period. Answer (d) is incorrect because the previously issued shares must be revalued at the acquisition date and included as part of the cost of the acquisition.

**14. (c)** Intangibles are recognized as assets apart from goodwill if they arise from contractual or legal rights, regardless of whether those rights are transferable or separable from

the acquired entity or from other rights and obligations. If an intangible asset does not arise from contractual or other legal rights, it is recognized as an asset apart from goodwill only if it is separable (i.e., capable of being sold, transferred, or licensed). Trademarks, lease agreements, and patents all arise from contractual or legal rights. Employee quality does not and is not separable.

**15. (b)** The acquisition method is required for all business combinations. In applying the acquisition method, the acquisition cost is allocated to acquired assets and liabilities based on their relative fair values. Any excess of cost over the fair value of net identifiable assets is allocated to goodwill.

**16. (d)** The cost of the investment is \$60,000. The fair value of the noncontrolling interest, \$10,000, is added to the cost of the investment of \$60,000, to get the fair value of the net assets of the business, \$70,000. Next, the book value (\$50,000) is subtracted from the fair value to arrive at the differential of \$20,000 (\$70,000 – \$50,000), which represents the amount used to write up undervalued assets and recognize goodwill. Inventory is increased by 60% of the \$20,000, or \$12,000. Therefore, current assets should be reported at \$102,000, as calculated below.

Current assets—Polk	\$ 70,000
Current assets—Strass	20,000
Excess allocated to inventory	<u>12,000</u>
Total current assets	<u>\$102,000</u>

**17. (c)** The acquisition method requires the assets of the acquired firm to be recorded at their fair values. The fair value of the net assets of the acquiree is determined by adding the acquirer's cost to the fair value of noncontrolling interest. In this case the fair value would be equal to \$70,000 (\$60,000 + \$10,000). The excess of the fair value over book value is allocated 60% to inventory and 40% to goodwill. Goodwill would be recorded at \$8,000 (\$20,000 × 40%). Therefore, noncurrent assets should be reported at \$138,000 as calculated below.

Noncurrent assets—Polk	\$ 90,000
Noncurrent assets—Strass	40,000
Excess allocated to goodwill	<u>8,000</u>
Total noncurrent assets	<u>\$138,000</u>

**18. (b)** In the consolidated balance sheet, the parent company's "investment in subsidiary" account should be eliminated and replaced by the assets and liabilities of the subsidiary. Therefore, the consolidated balance sheet should include the current liabilities of both companies, plus the current portion of the debt incurred on 1/2/Y1 (\$60,000 ÷ 10 = \$6,000). Thus, current liabilities should be reported at \$46,000 as computed below.

Current liabilities—Polk	\$30,000
Current liabilities—Strass	10,000
Current portion of new debt	<u>6,000</u>
Total	<u>\$46,000</u>

**19. (c)** In the consolidated balance sheet, the parent company's "investment in subsidiary" account should be eliminated and replaced by the assets and liabilities of the

subsidiary. Therefore, the consolidated balance sheet should include the noncurrent liabilities of both companies, plus the noncurrent portion of the debt incurred on 1/2/Y1 (\$60,000 – \$6,000 = \$54,000).

Noncurrent liabilities—Polk	\$ 50,000
Noncurrent liabilities—Strass	0
Noncurrent portion of new debt	<u>54,000</u>
Total	<u>\$104,000</u>

**20. (c)** In the consolidated balance sheet, neither the parent company's investment account nor the subsidiary's stockholders' equity is reported. These amounts are eliminated in the same journal entry that records the excess of cost over book value. The portion of the subsidiary's stockholders' equity that is **not** eliminated is reported as noncontrolling interest in the equity section of the consolidated balance sheet. Therefore, the parent's stockholders' equity (\$90,000) equals the consolidated stockholders' equity plus the minority interest. Note that once the candidate has completed items 16 through 20, the answers can be checked using the balance sheet equation.

Current assets	+	Non-current assets	=	Current liabilities	+	Non-current liabilities	+	Stockholders' equity
\$102,000	+	\$138,000	=	\$46,000	+	\$104,000	+	\$90,000

**21. (c)** In an acquisition, the net assets of the acquired firm are recorded at their FV. The excess of the cost of the investment over the FV of the net assets acquired is allocated to goodwill. The cost of this investment is \$3,750,000 (250,000 shares × \$15), and the FV of the net assets acquired, **excluding goodwill** is \$3,400,000 (\$3,000,000 + \$400,000). Therefore, the amount allocated to goodwill is \$350,000 (\$3,750,000 – \$3,400,000).

**22. (c)** The correct answer is calculated as illustrated below.

Assets transferred	\$ 700,000
Plus: Noncontrolling interest in Sloan 10,000 shares × \$18	180,000
Less: Fair value of net identifiable assets of Sloan	<u>(800,000)</u>
Goodwill recognized	<u>\$ 80,000</u>

**23. (c)** The assets acquired would be revalued to their fair market value. Answer (c) is correct because the inventory account would then include the difference between the market value and book value. Answer (a) is incorrect because a deferred credit is never recorded. Answer (b) is incorrect because goodwill represents the excess of cost plus the fair value of previously held interests plus the fair value of noncontrolling interest less the fair value of net identifiable assets. Answer (d) is incorrect because the retained earnings account is not affected by this transaction when acquisition accounting is used.

**24. (d)** Answer (d) is correct because all assets and liabilities (including plant and equipment and long-term debt) should be reported at fair value.

**25. (d)** When the fair value of identifiable assets acquired in a business acquisition exceeds the sum of the consideration

given and the fair value of previously held interest plus the fair value of noncontrolling interests, the difference is recorded as a bargain purchase. Answer (d) is correct because a gain is recognized on the income statement in the current period. Answer (a) is incorrect because negative goodwill is not recorded. Answer (b) is incorrect because the difference is not treated as a part of additional paid-in capital. Answer (c) is incorrect because it describes the accounting treatment no longer allowed.

**26. (d)** Consolidated statements are prepared as if the parent and subsidiaries were one economic entity. From the point of view of the consolidated entity, any intercompany receivables or payables from parent to subsidiary or vice versa are **not** payable to or receivable from any **outside** company. In other words, the consolidated entity does not have a receivable or payable. Therefore, all of Wright's intercompany receivables, payables and advances are eliminated. None are reported as intercompany receivables.

**27. (a)** When a subsidiary prepares separate financial statements, intercompany receivables (and payables) should be reported in the balance sheet as a separate line item. When consolidated financial statements are prepared by the parent company, all intercompany receivables (and payables) should be eliminated to avoid overstating assets and liabilities.

**28. (d)** Pard's separate revenues are \$200,000, and Spin's separate revenues are \$140,000, resulting in a total of \$340,000 (\$200,000 + \$140,000). Since the consolidated income statement shows sales of only \$308,000, intercompany sales of \$32,000 (\$340,000 – \$308,000) from Pard to Spin must have been eliminated during consolidation.

**29. (b)** Pard's separate accounts receivable is \$26,000, and Spin's separate accounts receivable is \$19,000, resulting in a total of \$45,000 (\$26,000 + \$19,000). Since the consolidated balance sheet shows accounts receivable of only \$39,000, intercompany receivables of \$6,000 (\$45,000 – \$39,000) must have been eliminated during consolidation. Since Pard sold goods to Spin that Spin had not fully paid for by 12/31/Y1, the eliminated receivable must be Pard's receivable from Spin. Therefore, Spin's 12/31/Y1 payable to Pard is also \$6,000.

**30. (c)** Pard's intercompany sales to Spin totaled \$32,000 during year 1. Therefore, Spin recorded a purchase of inventory of \$32,000. At 12/31/Y1, Spin still held 37.5% of these goods in inventory; in Spin's books, this inventory was carried at \$12,000 (37.5% × \$32,000). In the consolidated balance sheet, the intercompany profit would be eliminated, and this inventory would be carried at Pard's original cost. Pard's sales to Spin were at the same markup on cost that Pard uses for all sales. In Pard's income statement, cost of sales is 75% of sales (\$150,000 ÷ \$200,000). Therefore, Pard's original cost for the \$12,000 of goods in Spin's inventory is \$9,000 (75% × \$12,000).

**31. (c)** The fair value of the 20,000 (100,000 × 20%) shares of noncontrolling interest in Stone on the date of acquisition is \$1,040,000 (20,000 shares × \$52 per share). This amount is adjusted for the noncontrolling interest's share of net income and dividends received as calculated below.

Fair value of noncontrolling interest, acquisition date	\$1,040,000
Plus: Share of net income (20% × \$280,000)	56,000
Less: Share of dividends (20% × 50,000)	<u>(10,000)</u>
Noncontrolling interest 12/31/Y1	<u>\$1,086,000</u>

**32. (a)** When the equity method of accounting is used the parent company's retained earnings will be equal to the consolidated retained earnings balance. It can be determined that the equity method is being followed because the account "Equity in earnings of Sharp" appears in the parent's income statement. In addition it is important to note that the balance sheet accounts presented are dated as of the end of the year; therefore, the parent company's retained earnings of \$1,240,000, should already include **all** income statement balance account adjustments. Thus, no additional income amounts will need to be added to the \$1,240,000 retained earnings balance, in order to determine the total retained earnings balance.

**33. (d)** The requirement is to determine which accounting concept relates to the preparation of consolidated financial statements. Answer (d) is correct because when a parent-subsidiary relationship exists, the financial statements of each separate entity are brought together, or consolidated. When financial statements represent a consolidated entity, the concept of economic entity applies. Answer (a) is incorrect because reliability is a concept that applies to all financial statements, not just consolidated financial statements. Reliability is a primary quality that makes accounting information useful for decision making. This quality should be found in all statements. Answer (b) is incorrect because the concept of materiality applies to all financial statements, not just consolidated financial statements. The concept of materiality, as applied to financial statements, deals with the impact an item in the financial statements will have on a user's decision-making process. Answer (c) is incorrect because the concept of legal entity refers to the form or type of combination that takes place between entities (i.e., mergers, consolidations or acquisitions), not the basis on which financial statements are prepared.

**34. (b)** In general, all assets and liabilities (including equipment) should be reported at market value. The excess of the equipment's market value over its carrying amount is allocated to the equipment and amortized over the equipment's useful life. The unamortized portion of the excess of the market value over the carrying amount of the equipment is then reported as part of plant and equipment. Only the excess of the acquisition cost over the market value of the net identifiable assets acquired is reported as goodwill. The excess of the market value over the carrying amount of the equipment is capitalized and subsequently amortized over the equipment's useful life, **not** expensed on the date of the acquisition.

**35. (a)** When two companies own stock in each other, a reciprocal ownership relationship exists. In this case, Pride (the parent) owns 80% of Simba (the sub), and Simba owns 10% of Pride. When Pride declares a cash dividend, 90% of it is

distributed to outside parties and 10% goes to Simba. Because Simba is part of the consolidated entity, its 10% share of Pride's dividend is eliminated when determining consolidated dividends declared. Thus, only 90% of dividends declared by Pride will be reported in the consolidated financial statements. When Simba declares a dividend, 80% of the dividend is distributed to Pride (the parent), and 20% is distributed to outside parties (the noncontrolling interest of Simba stock). The 80% share to Pride is eliminated when determining consolidated dividends declared because it represents an intercompany transaction. The remaining 20% to the noncontrolling interest is likewise not included in consolidated dividends declared because, from the parent company's point of view, subsidiary dividends do not represent dividends of the consolidated entity and must be eliminated.

**36. (c)** It is presumed that an entity with equity of less than 10% of total assets does not have sufficient funding to finance its activities unless there is definitive evidence to the contrary (e.g., a source of outside financing).

**37. (b)** A variable interest entity should be consolidated by the primary beneficiary. A primary beneficiary has the power to direct the activities of the VIE that most significantly impact the VIE's economic performance, and has the obligation to absorb the majority of the entity's expected losses if they occur, or receive the majority of the residual returns if they occur, or both.

**38. (a)** The determination of whether an entity is a variable interest entity and which enterprise should consolidate that entity is made at the time the enterprise initially gets involved with the variable interest entity and is reassessed on an ongoing basis.

**39. (d)** Accounting changes that result in financial statements that are, in effect, financial statements of a different reporting entity (such as presenting consolidated statements in place of statements of individual companies) should be reported by restating the financial statements of all prior periods presented so that the resulting restated prior periods' statements on a consolidated basis are the same as if the subsidiary had been consolidated since it was acquired.

**40. (b)** In an acquisition, the consolidated financial statements reflect the combined operations of the parent and subsidiary **from the date of combination**. Earnings of the subsidiary prior to the combination are **not** included with the parent's income. The parent's year 1 income is \$1,575,000 (\$750,000 + \$825,000), while the subsidiary's income after the combination is \$375,000 for a total of \$1,950,000 (\$1,575,000 + \$375,000). The unrealized inventory profit of \$45,000 must be eliminated, because from a consolidated viewpoint, revenue cannot be recognized until these goods are sold to a third party (i.e., a sale has not yet occurred). Therefore, year 1 consolidated net income is \$1,905,000 (\$1,950,000 – \$45,000). Note that the net income amounts given are from **separate company operations**, so no elimination of equity earnings or dividend income is necessary.

**41. (d)** In combined financial statements, the statements include only the adjusted retained earnings of the parent. The subsidiary's retained earnings are **not** included. Since Pane

uses the equity method to account for its investment in Sky, Pane's net income will include its share of the net earnings of Sky. Therefore, 6/30/Y2 consolidated retained earnings is equal to \$3,250,000 (\$3,200,000 + \$800,000 – \$750,000).

**42. (d)** Unrealized profit in ending inventory arises when intercompany sales are made at prices above cost and the merchandise is not resold to third parties prior to year-end. The profit is unrealized because the inventory has not yet been sold outside of the consolidated entity. In this case, Pirn sold goods to Scroll for \$100,000, which would become Scroll's cost. However, Scroll's cost of goods sold includes only \$80,000 of goods acquired from Pirn. Therefore, \$20,000 of original \$100,000 remains in Scroll's ending inventory. Since Pirn's gross profit rate is 30% ( $\$150,000 \div \$500,000$ ), the gross profit Pirn recognized on the original \$20,000 amount in Scroll's inventory was \$6,000 ( $30\% \times \$20,000$ ). This intercompany profit must be eliminated on the consolidating worksheet.

**43. (b)** When computing consolidated income, the objective is to restate the accounts as if the intercompany transactions had not occurred. When Scroll recorded depreciation, it included depreciation on the asset purchased from Pirn for \$36,000. Since Pirn recorded a \$12,000 gain when it sold the asset to Scroll, Pirn's book value at the time of sale must have been \$24,000. Therefore, consolidated depreciation expense should be based on \$24,000 rather than on \$36,000. Depreciation expense for year 1 must be decreased by \$3,000 ( $\$12,000 \text{ excess} \div 4 \text{ years}$ ). Depreciation expense in Pirn's year 1 consolidated income statement should therefore be \$47,000, as computed below.

Pirn's recorded depr.	\$40,000
Scroll's recorded depr.	10,000
Less adjustment ( $\$12,000 \div 4$ )	<u>(3,000)</u>
	<u>\$47,000</u>

**44. (c)** Unrealized profit in ending inventory arises when intercompany sales are made at prices above cost and the merchandise is not resold to third parties prior to year-end. The profit is unrealized because the inventory has not yet been sold outside of the consolidated entity. In this case, there is no unrealized profit on the sales to Dean because the consolidated statements would not include Dean, and the equity method is not applicable. (Clark owns only 15% of Dean). However, there is unrealized profit on the materials sold by Kent, a wholly owned subsidiary, to Clark. Sixty thousand dollars of the \$240,000 of materials sold by Kent to Clark remains in ending inventory. The gross profit Kent recognized on this \$60,000 of materials at the time of sale was \$12,000 ( $\$48,000 \div \$240,000 = 20\%$  gross profit rate;  $20\% \times \$60,000 = \$12,000$ ). For the consolidated entity, this \$12,000 gross profit has not been earned and must be eliminated. Therefore, consolidated current assets should be \$308,000 ( $\$320,000 - \$12,000$ ).

**45. (c)** When preparing the consolidated income statement, the objective is to restate the accounts as if the intercompany transactions had not occurred. As a result of the intercompany sale, Parker has recorded \$250,000 of sales and Smith has recorded \$250,000 cost of sales which should be eliminated (note that Parker's **cost of sales** on the original sale is the

amount left in consolidated cost of sales, and Smith's **sales** when the goods were sold to outside parties is the amount left in consolidated sales). Therefore, Parker should report \$500,000 as cost of sales in the year 1 consolidated income statement ( $\$400,000 + \$350,000 - \$250,000$ ).

**46. (a)** Pare's separate gross profit is \$100,000, and Shel's separate gross profit is \$60,000, resulting in a total of \$160,000. Since the consolidated income statement shows gross profit of only \$154,000, unrealized intercompany profit of \$6,000 ( $\$160,000 - \$154,000$ ) must have been eliminated.

**47. (d)** The requirement is to determine the amount of **selling** expenses to be reported in Pard's year 1 consolidated income statement. Pard's selling expenses for year 1 include \$50,000 in freight-out costs for goods sold to Seed, its subsidiary. This \$50,000 becomes part of Seed's inventory because it is a cost directly associated with bringing the goods to a salable condition. None of the \$50,000 represents a selling expense for the consolidated entity, and \$1,450,000 ( $\$1,100,000 + \$400,000 - \$50,000$ ) should be reported as selling expenses in the consolidated income statement.

**48. (a)** When preparing consolidated financial statements, the objective is to restate the accounts as if the intercompany transactions had not occurred. Therefore, the year 1 gain on sale of machine of \$50,000 [ $\$900,000 - (\$1,100,000 - \$250,000)$ ] must be eliminated, since the consolidated entity has not realized a gain. In effect, the machine must be reflected on the consolidated balance sheet at 1/1/Y1 at Poe's cost of \$1,100,000, and accumulated depreciation of \$250,000, instead of at a new "cost" of \$900,000. For consolidated statement purposes, year 1 depreciation is based on the original amounts [ $(\$1,100,000 - \$100,000) \times 1/20 = \$50,000$ ]. Therefore, in the 12/31/Y1 **consolidated** balance sheet, the machine is shown at a cost of \$1,100,000 less accumulated depreciation of \$300,000 ( $\$250,000 + \$50,000$ ).

**49. (a)** When Seal purchased the bonds from Wagner, the bonds were viewed as retired from a consolidated viewpoint since there is no longer any obligation to an outside party. Therefore, the consolidated entity would recognize a \$100,000 gain ( $\$1,075,000 \text{ carrying amount} - \$975,000 \text{ cash paid}$ ), which would increase consolidated retained earnings. This transaction has no effect on noncontrolling interest, since the subsidiary (Seal) has merely exchanged one asset for another (cash for investment in bonds).

**50. (a)** The requirement is to determine the amount of gain to be reported on the consolidated income statement when a wholly owned subsidiary purchases parent company stock. A parent company reports no gain or loss when a wholly owned subsidiary purchases its common stock. In effect, the consolidated entity is purchasing treasury stock when the purchase is made, and gains are not recognized on treasury stock transactions. The dividends paid by the parent to the subsidiary also do not affect income because such intercompany transactions are eliminated when consolidated financial statements are prepared. Therefore, \$0 gain should be reported by the consolidated entity.

**51. (a)** When computing consolidated income, the objective is to restate the accounts as if the intercompany transactions

had not occurred. As a result of the intercompany sales, sales and cost of goods sold are overstated and an eliminating entry is needed to reduce these accounts by the entire amount of the intercompany sales. Therefore, answer (a) is correct. Answer (b) is incorrect because sales and cost of goods sold need to be reduced by the entire amount of the intercompany sales in order to arrive at their proper consolidated amounts. Answer (c) is incorrect because net income is not affected by the intercompany sale. Sales and cost of goods sold are overstated by the same amount; thus, net income is correct for consolidated purposes. Answer (d) is incorrect because an adjustment is necessary.

**52. (c)** The key to this problem is that the equipment must be revalued at Winston's carrying amount (Winston's original cost less accumulated depreciation) in the consolidation process. Assume the following potential scenario:

Winston buys a piece of equipment on 1/1/Y2 for \$1,000. At 12/31/Y2, the equipment was depreciated \$200, and Winston's carrying value is \$800 (\$1,000 – \$200). On 12/31/Y2, Winston sells the equipment to Foster for \$900. Foster's original cost is therefore \$900, and Winston will record a \$100 gain that must be eliminated. After consolidation, the equipment is reported at \$800, Winston's carrying value. Winston's carrying value is also equal to Foster's original cost (\$900) less Winston's recorded gain (\$100). Answer (a) is incorrect because Foster's original cost includes an unrealized gain that must be eliminated. Answer (b) is incorrect because revaluing the equipment at Winston's original cost would not take into consideration the depreciation already recorded by Winston. Answer (d) is incorrect because the entire gain, not 80% of the gain, must be eliminated because this is a downstream sale from the parent to the subsidiary.

**53. (b)** The requirement is to determine by how much depreciation will be reduced. Use the solutions approach and set up a simple numerical example.

Port's original cost = \$1,000  
 Depreciation per yr = \$200  
 Selling price = \$810

If Port sells equipment for \$810, it recognizes a \$210 gain on the sale (selling price of \$810 – carrying value of the equipment \$600). Salem, Inc. will now depreciate the equipment on their books at \$810, the price that they paid. Because the gain was not realized with an entity outside of the consolidated entity, it must be eliminated. In the consolidated financial statements, equipment will be reported at its original carrying value, the gain on the sale will be removed and depreciation expense must be recorded at Port, Inc. original amount (\$200), not the amount of depreciation that Salem, Inc. records. Salem would record depreciation of \$270 (\$810/3). Therefore, depreciation must be reduced by \$70 on the consolidated financial statements to reflect the original depreciation recorded by Port. Depreciation is reduced by \$70, which as shown by the example, is 33 1/3% of the gain (\$70/\$210).

**54. (a)** This question is silent as to which year consolidated financial statements are being prepared. However, answer (a) is correct for either the year of acquisition or a subsequent year.

If financial statements were being prepared for the current year the loss would be reported as an ordinary loss on the income statement. P Co. acquired the 20% interest in S Company bonds and incurred a loss on them. This loss would be carried through to the consolidated balance sheet as a decrease in retained earnings. In subsequent years, the unamortized portion of the loss would also decrease retained earnings.

**55. (b)** Because Planet owns 70% interest in Star, the noncontrolling interest in star is 30%. Therefore, the noncontrolling interest's share in Star's net income of \$80,000 is  $30\% \times \$80,000 = \$24,000$ . Planet's sale of merchandise to Star for \$10,000 will be eliminated on the consolidated worksheet, and Planet's income will be reduced by the intercompany profit of \$2,000. This will not affect the noncontrolling interest's share of income because it was a downstream sale from the parent to the subsidiary and is eliminated by the parent.

**56. (d)** The cost of acquisition is \$975,000. The fair value of Shaw's assets is equal to their book values plus the amount of the write-up, or \$1,100,000 (\$1,000,000 + 100,000). Goodwill is calculated as follows:

Consideration transferred	\$ 975,000
Plus: Fair value of noncontrolling interest	250,000
Less: Fair value of net identifiable assets	<u>\$(1,100,000)</u>
Amount of goodwill	<u>\$ 125,000</u>

**57. (d)** The percentage of the subsidiary's stockholders' equity not owned by the parent represents the noncontrolling interest's share of the fair value of net assets of the subsidiary. The fair value of the noncontrolling interest is measured at the acquisition date, and adjusted in future periods for the portion of the acquiree's income and dividends attributable to the noncontrolling interest. Therefore, the noncontrolling interest at 12/31/Y1 is calculated as follows:

Fair value of noncontrolling interests	\$250,000
Plus: Share of net income (\$190,000 × 20%)	38,000
Less: Share of dividends (\$125,000 × 20%)	<u>(25,000)</u>
Noncontrolling interest 12/31/Y1	<u>\$263,000</u>

**58. (b)** Pare paid cash dividends of \$25,000 and Kidd, the 75%-owned subsidiary, paid cash dividends of \$5,000. The dividends paid by Pare are all payments to owners of the consolidated company and are reported as dividends paid in the consolidated statement of retained earnings. The \$5,000 dividend paid by Kidd is paid 75% to Pare, and 25% to outside parties (the noncontrolling interest in Kidd's stock). The 75% share to Pare is eliminated when determining consolidated dividends declared because it is an intracompany transaction. The remaining 25% to the noncontrolling interest is likewise not included in consolidated dividends declared because, from the parent company's point of view, subsidiary dividends do not represent dividends of the consolidated entity.

**59. (c)** The percentage of the subsidiary's stockholders' equity not owned by the parent represents the noncontrolling interest's share of the fair value of net assets of the subsidiary. The fair value of the noncontrolling interest is measured at the

acquisition date, and adjusted in future periods for the portion of the acquiree's income and dividends attributable to the noncontrolling interest. Therefore, the noncontrolling interest at 12/31/Y1 is calculated as follows:

Fair value of noncontrolling interest	\$35,000
Plus: Share of net income (25% × 20,000)	5,000
Less: Share of dividends (25% × \$5,000)	(1,250)
Noncontrolling interest 12/31/Y1	<u>\$38,750</u>

**60. (b)** In the consolidated balance sheet, neither the parent company's investment account nor the subsidiary's stockholders' equity is reported. These amounts are eliminated in the same journal entry that records the excess of cost over book value. The portion of the subsidiary's stockholders' equity that is **not** eliminated is reported as noncontrolling interest. Therefore, the amount reported as common stock in the 12/31/Y1 consolidated balance sheet consists solely of Pare's common stock (\$100,000). Kidd's common stock (\$50,000) is eliminated along with the rest of its stockholders' equity.

**61. (d)** Consideration includes the fair value of the assets transferred, the fair value of the liabilities incurred by the acquirer, the fair value of any contingent consideration, and any equity interest issued by the acquirer. Consideration does not include share-based payments exchanged voluntarily by the acquirer.

**62. (d)** If information is incomplete at the acquisition date, the items should be recorded at a provisional amount measured at the date of acquisition. Answers (a), (b), and (c) are incorrect because they do not describe appropriate ways to account for situations in which there is incomplete information.

**63. (a)** If the acquirer has incomplete accounting information on the date of acquisition, the measurement period ends when the acquirer receives the information or one year from the date of acquisition, whichever occurs first. Answer (b) is incorrect because contingent consideration is recorded at a provisional amount during the measurement period, and is remeasured each reporting period until the contingency is resolved. Remeasuring the contingency does not affect the measurement period. Answers (c) and (d) are incorrect because they do not describe the end of the measurement period.

**64. (c)** If it is determined during the measurement period that a provisional amount is not accurate, the change is recognized by retrospectively adjusting the provisional amount and making a corresponding adjustment to goodwill. Answers (a), (b), and (d) are incorrect because they describe inappropriate ways of handling the new information.

**65. (a)** If the acquirer is required to replace share-based payments, and no further service is required of the employees, the share-based payments are treated as part of the consideration transferred in the acquisition. The amount should be capitalized as a cost of acquisition of the acquiree. Answers (b), (c), and (d) are incorrect because the amount should not affect the income statement.

**66. (b)** If no further service is required to be provided and Post voluntarily replaces the awards, compensation expense is recognized in the postcombination financial statements when the awards are made. Answers (a), (c), and (d) are incorrect because they describe inappropriate ways to account for the awards.

**67. (b)** A liability for a contingency should be derecognized only after the contingency has been resolved. Answers (a), (c), and (d) are incorrect because they represent inappropriate points in time to derecognize a contingent liability.

**68. (b)** The requirement is to determine how much of Sago's year 2 net income should be reported as accruing to Phillips. In an acquisition, consolidated net income reflects the parent's net income to the date of combination and both entities' income after the combination. Phillips, Inc. can only recognize the net income of Sago, based on their 20% interest, up to the date of combination. However, after the date of combination they will recognize 95% of Sago's net income, their new ownership interest.

**69. (d) Combined financial statements** are financial statements prepared for companies that are owned by the same parent company or individual. Combined financial statements are prepared by combining all the companies' financial statement classifications. Intercompany transactions and profits should be eliminated in the same way as for consolidated statements. Therefore, **none** of the intercompany receivables should be included in the combined financial statements.

**70. (c)** The inventory reported on the 12/31/Y1 combined balance sheet should reflect the **original cost** to the companies of any inventory on hand. The inventory on hand that was acquired from outside parties should be reported at its cost (\$175,000 + \$250,000 = \$425,000). The Banks inventory on hand that was acquired from Lamm must be restated back to the cost Lamm originally paid when it was purchased from outside parties. This must be done to eliminate intercompany profits. During year 1, Lamm shipped inventory that originally cost \$150,000 to Banks at a billing price of \$200,000. Therefore, the original cost is 75% of Banks' carrying amount. Therefore, the correct inventory amount is \$470,000 [\$175,000 + \$250,000 + (\$60,000 × 75%)].

**71. (b)** Combined financial statements are prepared for companies that are owned by the same parent company or individual but are not consolidated. These statements are prepared by combining the separate companies' financial statement classifications. Intercompany transactions, balances, and profit (loss) should be eliminated. Therefore, to determine the gross profit in Bee and Cee's combined income statement, the intercompany profit resulting from Bee's sales to Cee should be eliminated. Cee sold to outsiders 50% (\$65,000/\$130,000) of the inventory purchased from Bee. The cost of sales to the combined entity is thus 50% of the \$100,000 cost of sales reported by Bee. Gross profit of the combined entity amounts to \$41,000, which is \$91,000 of sales to unrelated companies less \$50,000 cost of sales.

**72. (a)** When computing sales to be reported in the combined income statement, the objective is to restate the accounts as if the intercompany transaction had not occurred. Assuming

that there were no sales between Home Office and Branch, the correct amount of sales to be included in the combined income statement is the \$250,000 sold by Branch to unrelated customers.

**73. (b)** Combined financial statements is the term used to describe financial statements prepared for companies that are owned by the same parent company or individual. Combined financial statements are prepared by combining all of the subsidiaries' financial statement classifications. Intercompany transactions should be eliminated in the same way as for consolidated statements. Combining the stockholders' equity accounts of Able and Baker results in a total of \$430,000 (\$100,000 + \$20,000 + \$300,000 + \$10,000). The intercompany balances (Investment in Baker, \$4,000; and Common Stock, \$4,000) must be eliminated, which reduces combined stockholders' equity to \$426,000 (\$430,000 – \$4,000).

**74. (c)** **Combined financial statements** are financial statements prepared for companies that are owned by the same parent company or individual. Combined financial statements are prepared by combining all the companies' financial statement classifications. Intercompany transactions and profits should be eliminated in the same way as for consolidated statements. Therefore, **none** of the intercompany loans or profits should be included in the combined financial statements.

**75. (d)** Combined statements may be used to present the financial position and results of operations of commonly controlled companies, companies under common management, and of a group of unconsolidated subsidiaries.

**76. (c)** Where combined statements are prepared for a group of related companies, intercompany transactions and profit and losses should be eliminated. Matters such as noncontrolling interests, income taxes, foreign operations, or different fiscal periods should be treated in the same manner for both combined financial statements and consolidated statements.

**77. (c)** When combined statements are prepared for a group of related companies, and there are issues in connection with such matters as noncontrolling interests, foreign operations, different fiscal periods, or income taxes, they should be treated in the same manner as in consolidated statements.

**78. (a)** The requirement is to identify the statement that correctly describes how goodwill may be recognized under IFRS. Answer (a) is correct because goodwill can only be recognized if it is acquired by purchase.

**79. (c)** The requirement is to identify the item that is not a condition to exclude a subsidiary from consolidation under IFRS. Answer (c) is correct because it is not required that the subsidiary have only one class of stock.

## Simulations

### Task-Based Simulation 1

Concepts	Authoritative Literature	Help
----------	--------------------------	------

On January 1, year 1 Rain acquires 90% of the stock in Snow in a transaction properly accounted for as a business combination. **Items 1 through 6** below refer to accounts that may or may not be included in Rain and Snow's consolidated financial statements. The list below refers to the various possibilities of those amounts to be reported in Rain's consolidated financial statements for the year ended December 31, year 2. Both Rain and Snow paid dividends to investors. Ignore income tax considerations.

#### Responses to be selected

- A. Sum of amounts on Rain and Snow's separate unconsolidated financial statements
- B. Less than the sum of amounts on Rain and Snow's separate unconsolidated financial statements but not the same as the amount on either
- C. Same as amount for Rain only
- D. Same as amount for Snow only
- E. Eliminated entirely in consolidation
- F. Shown in consolidated financial statements but not in separate unconsolidated financial statements
- G. Neither in consolidated nor in separate unconsolidated financial statements

	(A)	(B)	(C)	(D)	(E)	(F)

Journal Entries	Authoritative Literature	Help
-----------------	--------------------------	------

On January 1, year 2, Near purchases 100% of the stock of Far in a transaction that was properly accounted for as a business combination. **Items 1 through 3** below represent transactions between Near and Far during year 2. Prepare the eliminating entries in general journal format for each of these transactions.

- On January 3, year 2, Near sold equipment with an original cost of \$30,000 and a carrying value of \$15,000 to Far for \$36,000. The equipment had a remaining life of three years and was depreciated using the straight-line method by both companies.

2. During year 2, Near sold merchandise to Far for \$60,000, which included a profit of \$20,000. At December 31, year 2, half of this merchandise remained in Far's inventory.

3. On December 31, year 2, Near paid \$91,000 to purchase \$100,000 of the outstanding bonds issued by Far. The bonds mature on December 31, year 6, and were originally issued at par (\$100,000). The bonds pay interest annually on December 31 of each year, and the interest was paid to the prior investor immediately before Near's purchase of the bonds.

<b>Financial Statement Amounts</b>		
	<b>Authoritative Literature</b>	<b>Help</b>

Presented below are selected amounts from the separate unconsolidated financial statements of Poe Corp. and its 90%-owned subsidiary, Shaw Co., at December 31, year 2. Additional information follows:

	Poe	Shaw
<i>Selected income statement amounts</i>		
Sales	\$ 710,000	\$ 530,000
Cost of goods sold	490,000	370,000
Gain on sale of equipment	--	21,000
Earnings from investment in subsidiary	63,000	--
Interest expense	--	16,000
Depreciation	25,000	20,000
<i>Selected balance sheet amounts</i>		
Cash	\$ 50,000	\$ 15,000
Inventories	229,000	150,000
Equipment	440,000	360,000
Accumulated depreciation	(200,000)	(120,000)
Investment in Shaw	191,000	--
Investment in Shaw bonds	100,000	--
Discount on bonds	(9,000)	--
Bonds payable	--	(200,000)
Common stock	(100,000)	(10,000)
Additional paid-in capital	(250,000)	(40,000)
Retained earnings	(404,000)	(140,000)
<i>Selected statement of retained earnings amounts</i>		
Beginning balance, December 31, year 1	\$ 272,000	\$ 100,000
Net income	212,000	70,000
Dividends paid	80,000	30,000

**Additional information**

- On January 2, year 2, Poe, Inc. purchased 90% of Shaw Co.'s 100,000 outstanding common stock for cash of \$155,000. On that date the fair value of the noncontrolling interest was \$1.70 per share. On that date, Shaw's stockholders' equity equaled \$150,000 and the fair values of Shaw's identifiable assets and liabilities equaled their carrying amounts. Poe has accounted for the purchase as an acquisition.
- On January 3, year 2, Poe sold equipment with an original cost of \$30,000 and a carrying value of \$15,000 to Shaw for \$36,000. The equipment had a remaining life of three years and was depreciated using the straight-line method by both companies.
- During year 2, Poe sold merchandise to Shaw for \$60,000, which included a profit of \$20,000. At December 31, year 2, half of this merchandise remained in Shaw's inventory.
- On December 31, year 2, Poe paid \$91,000 to purchase 50% of the outstanding bonds issued by Shaw. The bonds mature on December 31, 2015, and were originally issued at par. The bonds pay interest annually on December 31 of each year, and the interest was paid to the prior investor immediately before Poe's purchase of the bonds.
- On September 4, year 2, Shaw paid cash dividends of \$30,000.
- On December 31, year 2, Poe recorded its equity in Shaw's earnings.

Calculate the amounts that will appear on Poe's consolidated financial statement on December 31, year 2.

1. Cash
2. Goodwill
3. Equipment
4. Common stock
5. Investment in Shaw
6. Dividends
7. Bonds payable
8. Noncontrolling interest

### Task-Based Simulation 6

<b>Consolidation at Date of Acquisition</b>		
	<b>Authoritative Literature</b>	<b>Help</b>

On January 1, year 2, Arcelia Corporation acquired Gavino corporation by purchasing 100% of the stock of Gavino in exchange for 20,000 shares of Arcelia stock. On the date of acquisition Arcelia stock traded for \$18 per share on the stock exchange. The fair market value of Gavino’s inventory is \$10,000 higher than the book value.

The book values of each company on January 1, year 2, are shown below.

	Arcelia Corp.	Gavino Corp.
Current assets	\$320,000	\$ 70,000
Noncurrent assets	640,000	380,000
Current liabilities	210,000	50,000
Noncurrent liabilities	150,000	90,000
Owners’ equity	600,000	310,000

Calculate each of the following balance sheet amounts for Arcelia Corporation immediately following the acquisition of Gavino.

Total current assets	
Total noncurrent assets	
Total current liabilities	
Total noncurrent liabilities	
Total owners’ equity	

### Task-Based Simulation 7

<b>Intercompany Transactions and Eliminations</b>		
	<b>Authoritative Literature</b>	<b>Help</b>

On January 1, year 4, Arcelia Corporation acquired Gavino corporation by purchasing 100% of the stock of Gavino in exchange for 20,000 shares of Arcelia stock. On the date of acquisition Arcelia stock traded for \$18 per share on the stock exchange. The fair market value of Gavino’s inventory is \$10,000 higher than the book value.

The book values of each company on January 1, year 4, are shown below.

	Arcelia Corp.	Gavino Corp.
Current assets	\$320,000	\$ 70,000
Noncurrent assets	640,000	380,000
Current liabilities	210,000	50,000
Noncurrent liabilities	150,000	90,000
Owners’ equity	600,000	310,000

**Additional information**

- During year 4, the following transactions occurred:
  1. Arcelia sold inventory to Gavino for \$50,000 on account. The normal profit on sales for Arcelia is 40%. At December 31, year 4, Gavino had 20% of the goods remaining in ending inventory. At December 31, year 4, Gavino had not paid Arcelia for \$8,000 of the inventory.
  2. On October 1, year 4, Gavino Corp. sold equipment to Arcelia for \$24,000. The equipment was purchased by Gavino on 1/1/Y1 for \$60,000 and was depreciated straight-line over five years with no salvage value. Arcelia depreciated the new equipment over three years with no salvage value.
- During year 4, Arcelia did not make entries to record the income of Gavino.
- At December 31, year 4, totals from the preclosing trial balances of both firms are as follows:

**Arcelia Corporation & Subsidiaries**  
**UNADJUSTED TRIAL BALANCE**

*December 31, Year 4*

	<b>Arcelia Corp.</b>	<b>Gavino Corp.</b>
Revenues	1,000,000	400,000
Expenses	780,000	335,000
Current assets	400,000	110,000
Noncurrent assets	1,260,000	420,000
Current liabilities	300,000	70,000
Noncurrent liabilities	180,000	85,000
Owners' equity	960,000	310,000

Below is a consolidation worksheet dated December 31, year 4 (before closing the books of Arcelia and Gavino). Prepare the following worksheet with working paper eliminations and entries.

**Arcelia Corporation**  
**CONSOLIDATION WORKSHEET**

*December 31, Year 4*

	(A)	(B)	(C)	(D)	(E)	(F)	(G)
1. Cash	<input checked="" type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>
2. Investment in subsidiary	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input checked="" type="radio"/>	<input type="radio"/>	<input type="radio"/>
3. Noncontrolling interest	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input checked="" type="radio"/>	<input type="radio"/>
4. Common stock	<input type="radio"/>	<input type="radio"/>	<input checked="" type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>
5. Beginning retained earnings	<input type="radio"/>	<input type="radio"/>	<input checked="" type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>
6. Dividends paid	<input type="radio"/>	<input type="radio"/>	<input checked="" type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>

### Explanations

- (A) Consolidated statements are prepared as if the parent and subsidiaries are one economic entity. Therefore, cash is included in the consolidated balance sheet at their full amounts regardless of the percentage ownership held by the parent.
- (E) In the consolidated balance sheet, the parent company's "Investment in subsidiary" should be eliminated completely and replaced by the net assets of the subsidiary.
- (F) The percentage of the subsidiary's stockholders' equity not owned by the parent company represents the noncontrolling interest's share of the net assets of the subsidiary. This amount is only reported in the consolidated balance sheet in the equity section.
- (C) In the consolidated balance sheet the subsidiary's common stock is not reported. Therefore, the parent's common stock equals the consolidated common stock.
- (C) In the consolidated balance sheet, the subsidiary's beginning retained earnings is not reported. Therefore, the parent's beginning retained earnings equals the consolidated beginning retained earnings.
- (C) The dividends paid by the subsidiary are eliminated in the consolidated financial statements. Ninety percent of the dividends paid are eliminated along with the "Investment in subsidiary" elimination. The remaining 10% is reflected in "Noncontrolling Interest." Therefore, only the parent's dividends paid are included on the consolidated financial statements.

### Task-Based Simulation 2

Journal Entries		
	Authoritative Literature	Help

1.

Gain on equipment	21,000	
Accumulated depreciation		15,000
Equipment		6,000
Accumulated depreciation	7,000	
Depreciation expense		7,000

2.

Sales	60,000	
Cost of goods sold		50,000
Ending inventory		10,000

3.

Bonds payable	100,000	
Discount on bonds	9,000	
Gain on retirement of bonds		9,000
Investment in bonds		100,000

### Explanations

- (\$14,000)** When preparing consolidated financial statements, the objective is to restate the accounts as if the intercompany transactions had not occurred. Therefore, the year 2 gain on sale of equipment of \$21,000 (\$36,000 – \$15,000) must be eliminated, since the consolidated entity has not realized any gain. In addition, for consolidated statement purposes, year 2 depreciation is based on the original cost of the equipment to Near. This elimination entry can be made in two separate entries. The first entry eliminated the gain, and restores the accumulated depreciation and equipment accounts as if the intercompany sale were never made. The second entry adjusts the current year depreciation expense to the amount that would have been recorded if the sale were never made. New depreciation is  $\$36,000 \div 3 \text{ years} = \$12,000$  for Far. Near's depreciation was book value  $\$15,000 \div 3 \text{ years} = \$5,000$  per year. Therefore, depreciation expense must be adjusted by  $\$12,000 - \$5,000 = \$7,000$ .
- (\$10,000)** Unrealized profit in ending inventory arises when intercompany sales are made at prices above cost and the merchandise is not resold to third parties prior to year-end. The profit is unrealized because the inventory has not yet been sold outside the consolidated entity. In this case, one half of the merchandise was left in Far's inventory at year-end. For the consolidated entity, one half of the \$20,000 profit has not been earned and must be eliminated.
- (\$9,000)** When Near purchased the bonds from an investor outside the consolidated entity, the bonds are viewed as retired from a consolidated viewpoint since there is no longer any obligation to an outside party. Therefore, the consolidated entity would recognize an ordinary gain of \$9,000 (\$100,000 carrying value of the bonds – \$91,000 purchase price) on the retirement of the debt.

### Task-Based Simulation 3

Financial Statement Amounts	Authoritative Literature	Help

Calculate the amounts that will appear on Poe's consolidated financial statement in December 31, year 2.

- |                            |           |
|----------------------------|-----------|
| 1. Cash                    | \$ 65,000 |
| 2. Goodwill                | \$ 22,000 |
| 3. Equipment               | \$794,000 |
| 4. Common stock            | \$100,000 |
| 5. Investment in Shaw      | \$0       |
| 6. Dividends               | \$ 80,000 |
| 7. Bonds payable           | \$100,000 |
| 8. Noncontrolling interest | \$ 21,000 |

### Explanations

- $\$50,000 + \$15,000 = \$65,000$
- The goodwill from Poe's 90% purchase of Shaw can be determined as follows:

Acquisition cost	\$ 155,000
+ Fair value of noncontrolling interest (10,000 shares × \$1.70)	<u>17,000</u>
Fair value of interests	172,000
– Fair value of net identifiable assets	<u>(150,000)</u>
Goodwill	<u>\$ 22,000</u>

3. \$440,000 + \$360,000 – \$6,000 = \$794,000
4. \$100,000, common stock of parent
5. The investment in Shaw account is eliminated.
6. Dividends paid of the subsidiary are eliminated.
7. \$100,000. \$200,000 bonds payable – \$100,000 bonds payable eliminated
8. Noncontrolling interest

Fair value at acquisition date	\$17,000
+ 10% net income	7,000
– 10% dividend	<u>(3,000)</u>
End of year noncontrolling interest	<u>\$21,000</u>

| 8. A newly identified intangible asset must meet the contractual legal or the separability criterion to be recognized as an intangible asset at the time of consolidation.              | <input checked="" type="radio"/> | <input type="radio"/>            |

### Task-Based Simulation 6

Consolidation at Date of Acquisition	Authoritative Literature	Help

Total current assets	\$400,000
Total noncurrent assets	1,060,000
Total current liabilities	260,000
Total noncurrent liabilities	240,000
Total owners' equity	960,000

#### Explanations

**Current assets:** \$320,000 parent + \$70,000 book value subsidiary + \$10,000 inventory write-up = \$400,000

**Noncurrent assets:** \$640,000 parent + \$380,000 book value subsidiary + \$40,000 goodwill = \$1,060,000

**Total current liabilities:** \$210,000 parent + \$50,000 subsidiary = \$260,000

**Noncurrent liabilities:** \$150,000 parent + \$90,000 subsidiary = \$240,000

**Total owners' equity:** \$600,000 parent + \$360,000 new stock of parent issued in acquisition = \$960,000

Intercompany Transactions and Eliminations	Authoritative Literature	Help

*Arcelia Corporation*  
**CONSOLIDATION WORKSHEET**  
*December 31, Year 4*

	Arcelia Corp.	Gavino Corp.	Elimination entries			End balance	
				Debt	Credit		
Revenues & gains	1,000,000	400,000	(c)	50,000		1,341,000	
			(e)	9,000			
Expenses	780,000	335,000	(f)	1,000	46,000	(c)	1,070,000
Current assets	400,000	110,000	(b)	10,000	4,000	(c)	508,000
					8,000	(d)	
Noncurrent assets	1,260,000	420,000	(b)	40,000	360,000	(a)	1,350,000
			(e)	36,000	45,000	(e)	
					1,000	(f)	
Differential			(a)	50,000	50,000	(b)	
Current liabilities	300,000	70,000	(d)	8,000			362,000
Noncurrent liabilities	180,000	85,000					265,000
Owners' equity	960,000	310,000	(a)	310,000			960,000

#### Elimination entries in journal entry form

- a. Eliminate subsidiary equity accounts

Common stock & APIC	310,000	
Differential	50,000	
Investment in Gavino		360,000

- b. To record asset write-up and goodwill. Goodwill = Acquisition cost \$360,000 – FMV of net identifiable assets \$320,000 (\$460,000 – \$140,000) = \$40,000 goodwill.

Inventory	10,000	
Goodwill	40,000	
Differential		50,000

- c. Eliminate the excess sales and costs of sales and profits in inventory not sold. The intercompany sales of \$50,000 must be eliminated, along with the \$50,000 in cost of sales reduced by the amount by which ending inventory is overstated. Ending inventory is carried on Gavino’s books at \$10,000. Ending inventory should be 20% × \$30,000 cost to manufacture = \$6,000. Therefore, inventory is overstated by \$4,000 and cost of sales is overstated by \$46,000 (\$50,000 – \$4,000).

Sales	50,000	
Cost of goods sold		46,000
Ending inventory		4,000

- d. Eliminate intercompany receivable and payable

Accounts payable	8,000	
Accounts receivable		8,000

- e. Eliminate sale of equipment

Gain on sale of equipment	9,000	
Equipment	36,000	
Accumulated depreciation		45,000

- f. Restore depreciation expense as if equipment had not been sold. Normally Gavino depreciates equipment \$60,000/5 years = \$12,000 per year. Equipment sold on 10/1/Y4; therefore, Gavino recorded depreciation of 3/4 × \$12,000 = \$9,000. Arcelia’s cost is \$24,000 and depreciation is recorded straight-line over 3 years = \$8,000 per year. However, Arcelia depreciated equipment 3/12 months = \$2,000 per year. Total depreciation by both firms = \$11,000. Total depreciation if the asset was not sold = \$12,000. Therefore, an additional \$1,000 depreciation must be recorded.

Depreciation expense	1,000	
Accumulated depreciation		1,000

# Module 19: Derivative Instruments and Hedging Activities

## Overview

This module covers foreign currency **transactions** (foreign currency **translations** are discussed in Module 20), derivative instruments, and hedging activities. A **foreign currency transaction** is a transaction denominated in a currency other than the entity's functional currency. Foreign currency transactions are discussed in this module because exchange rate risk can be hedged.

A **derivative instrument** derives its value as a financial instrument from something else and must meet three specific criteria to qualify as such. These criteria are discussed in this module. The most relevant measure for reporting derivatives is fair value. Some instruments, hybrid instruments, must be bifurcated (separated) between the derivative and the basic contract.

**Hedging** instruments are derivative instruments that meet two primary criteria: (1) sufficient documentation relating to the objective of the hedge, identification of the hedge, and the assessment of the hedge must be provided and (2) the hedge must be highly effective. Hedges are classified as fair value hedges, cash flow hedges, or foreign currency hedges.

Derivative accounting and reporting can be very complex. It requires the adherence to many specific criteria to distinguish how to account for certain derivatives. The candidate is urged to spend considerable time reading through and understanding the definitions in the key terms before studying this module.

## A. Foreign Currency Transactions

1. A foreign currency transaction, according to ASC Topic 830, is a transaction denominated in a currency other than the entity's functional currency. **Denominated** means that the balance is fixed in terms of the number of units of a foreign currency regardless of changes in the exchange rate. When a US company purchases or sells goods or services (or borrows or lends money) to a foreign entity, and the transaction is denominated in foreign currency units, the US company has a foreign currency transaction in which the US dollar is the functional currency.
  - a. In these situations, the US company has "crossed currencies" and directly assumes the risk of fluctuating foreign exchange rates of the foreign currency units.
  - b. This exposed foreign currency risk may lead to recognition of foreign exchange transaction gains or losses in the income statement of the US company.
  - c. If the US company pays or receives US dollars in import and export transactions, the risk resulting from fluctuating foreign exchange rates is borne by the foreign supplier or customer, and there is no need to apply the procedures outlined in ASC Topic 830 to the transaction reported in US dollars on the US company's books.
  - d. The following example illustrates the terminology and procedures applicable to the translation of foreign currency transactions.

### EXAMPLE

Assume that US Company, an exporter, sells merchandise to a customer in Germany on December 1, year 1, for 10,000 euros (€). Receipt of €10,000 is due on January 31, year 2, and US Company prepares financial statements on December 31, year 1. At the transaction date (December 1, year 1), the spot rate for immediate exchange of foreign currencies indicates that €1 is equivalent to \$.90. This quotation is referred to as a direct quotation since the exchange rate is stated in terms of a direct translation of the currency in which the debt is measured. To find

<b>A. Foreign Currency Transactions</b>	<b>785</b>
<b>B. Derivative Instruments and Hedging Activities</b>	<b>787</b>
<b>C. Research Component—Accounting Standards Codification</b>	<b>799</b>
<b>D. International Financial Reporting Standards (IFRS)</b>	<b>799</b>
<b>Key Terms</b>	<b>800</b>
<i>Multiple-Choice Questions</i>	<b>803</b>
<i>Multiple-Choice Answers and Explanations</i>	<b>808</b>
<i>Simulations</i>	<b>813</b>
<i>Simulation Solutions</i>	<b>819</b>

the US dollar equivalent of this transaction, simply multiply the foreign currency amount, €10,000, by \$.90 to get \$9,000. Occasionally, spot rates are quoted indirectly (e.g., \$1 is equivalent to €1.1111). In the example used, since \$1 is equivalent to €1.1111, the foreign currency amount would be divided by €1.1111 to get the US dollar amount of \$9,000 (assuming the calculation is performed using four decimal places and rounded to the nearest dollar).

At December 1, year 1, the foreign currency transaction should be recorded by US Company in the following manner:

Accounts receivable (€)	9,000	
Sales		9,000

The accounts receivable and sales are measured in US dollars at the transaction date using the spot rate at the time of the transaction. While the accounts receivable is measured and reported in US dollars, the receivable is also denominated or fixed in euros. This characteristic can result in foreign exchange transaction gains or losses if the spot rate for euros changes between the transaction date and the date the transaction is settled.

2. If financial statements are prepared between the transaction date and the settlement date, the FASB requires that receivables and liabilities denominated in a currency other than the functional currency be restated to reflect the spot rates in existence at the balance sheet date.

#### EXAMPLE

Assume the same facts as the previous example and that, on December 31, year 1, the spot rate for euros is €1 = \$.93. This means that €10,000 are worth \$9,300, and that the accounts receivable denominated in euros are increased by \$300. The following journal entry should be recorded as of December 31, year 1:

Accounts receivable (€)	300	
Foreign currency transaction gain		300

**NOTE:** The sales account, which was credited on the transaction date for \$9,000, is not affected by changes in the spot rate.

- a. This treatment exemplifies the “two-transaction” viewpoint adopted by the FASB. In other words, making the sale is the result of an operating decision, while bearing the risk of fluctuating spot rates is the result of an investment decision. Therefore, the amount determined as sales revenue at the transaction date should not be altered because of an investment decision to wait until January 31, year 2, for payment of the account.
  - (1) The risk of a foreign exchange transaction loss can be avoided either by demanding immediate payment on December 1 or by entering into a forward exchange contract to hedge the exposed asset (accounts receivable).
  - (2) The fact that US Company in the example did not act in either of these two ways is reflected by the required recognition of foreign currency transaction gains or losses on this type of transaction. These gains or losses are reported on US Company’s income statement as financial (nonoperating) items in the period during which the exchange rates changed.

**NOTE:** Reporting transaction gains or losses before the transaction is settled results in reporting unrealized gains or losses. This represents an exception to the conventional realization principle which normally applies. This practice also results in a temporary difference between pretax accounting income and taxable income because foreign exchange transaction gains and losses do not enter into the determination of taxable income until the year they are realized. Thus, the recognition of foreign currency transaction gains and losses on unsettled foreign currency transactions results in deferred tax assets/liabilities (depending on whether the temporary differences result in future taxable or future deductible amounts).

**EXAMPLE**

To complete the previous illustration, assume that on January 31, year 2, the foreign currency transaction is settled when the spot rate is €1 = \$.91. Note that the account receivable is still valued at \$9,300 at this point. The receipt of euros and their conversion into dollars should be journalized as follows:

Foreign currency (€)	9,100	
Foreign currency transaction loss	200	
Accounts receivable (€)		9,300
Cash	9,100	
Foreign currency (€)		9,100

The net effect of this foreign currency transaction was the receipt of \$9,100 from a sale which was measured originally at \$9,000. This realized net foreign currency transaction gain of \$100 is reported on the income statements of more than one period—a \$300 gain in year 1 and a \$200 loss in year 2.

3. The financial statement disclosures required by ASC Topic 830 include the following:
  - a. Aggregate transaction gain (loss) that is included in the entity's net income
  - b. Significant rate changes subsequent to the date of the financial statements including effects on unsettled foreign currency transactions

**NOW REVIEW MULTIPLE-CHOICE QUESTIONS 1 THROUGH 9**
**B. Derivative Instruments and Hedging Activities**

1. Financial instruments include cash, accounts/notes receivable, accounts/notes payable, bonds, common stock, preferred stock, stock options, foreign currency forward contracts, futures contracts, various financial swaps, etc. Other contracts which are also considered financial instruments meet the following two criteria:
  - a. The contract imposes a contractual obligation on one party (to the contract) to deliver cash or another financial instrument to the second party, or to exchange financial instruments on potentially unfavorable terms with the second party;
  - b. The contract conveys a contractual right to the second party to receive cash or another financial instrument from the first party, or to exchange financial instruments on favorable terms with the first party.  
A glossary of derivative-related terms is presented at the end of this section.
  - c. It is from the above universe of financial instruments and other contracts that a subset is identified that qualifies as derivative instruments. **Derivative instruments** are so called because they derive their value as a financial instrument from something outside the instrument itself.
    - (1) For example, a call option to purchase an exchange-traded stock would qualify as a derivative instrument. The value of the call option can only be determined by the market price of the related stock.

**EXAMPLE**

A call option allows the holder to purchase 1,000 shares of stock at \$50 per share, but no determination can be made as to the value of the call option until the stock price is determined. If the market value of the stock is \$58 per share, the value of the call option is easily determined to be \$8,000 [1,000 shares × (\$58 – \$50)].

- (a) The stock price is called the “**underlying**,” the rate or price that exists outside the derivative instrument that is used to determine the value of the derivative instrument.
- (b) The 1,000 shares of stock is known as the “**notional amount**,” that is the number of units related to the derivative instrument.

- (c) Both of these terms are important for two reasons:
- 1] Their existence is a necessary condition for determining whether or not a financial instrument or other contract is a derivative instrument;
  - 2] They are determining factors in calculating the “settlement amount” of a derivative instrument.
- (d) All of these terms are discussed in more detail later in this section, but this basic understanding of derivative instruments may be helpful in working through the remaining definitions, explanations, and examples.
2. **Foundation Principles for Accounting for Derivatives and Hedging**—The basic principles driving the structure of accounting for derivatives and hedging are
- a. **Fair value measurement.** Derivative instruments meet the definition of assets and liabilities (probable future economic benefits or sacrifices of future economic benefits resulting from past transactions or events). As such they should be reported on an entity’s financial statements. The most relevant measure for reporting financial instruments is “fair value.”
    - (1) ASC Topic 820 defines **fair value** as “the price that would be received to sell an asset or paid to transfer a liability in an orderly transaction between market participants at the measurement date.”
    - (2) As a corollary to this principle, gains and losses that result from the change in the fair value of derivative instruments are **not** assets and liabilities. Therefore, gains and losses should not be reported on the balance sheet but rather should either appear in comprehensive income or be reported in current earnings.
    - (3) The details for reporting gains and losses appear in a subsequent section.
  - b. **Hedging.** Certain derivative instruments will qualify under the definition of hedging instruments. Those that qualify will be accounted for using hedge accounting, which generally provides for matching the recognition of gains and losses of the hedging instrument and the hedged asset or liability. (More details about hedge accounting are provided in a later section.) Three kinds of hedges have been defined in the standard.
    - (1) **Fair value hedge**—A hedge of the exposure to changes in the fair value of (a) a recognized asset or liability, or (b) an unrecognized firm commitment.
    - (2) **Cash flow hedge**—A hedge of the exposure to variability in the cash flows of (a) a recognized asset or liability, or (b) a forecasted transaction.
    - (3) **Foreign currency hedge**—A hedge of the foreign currency exposure of (a) an unrecognized firm commitment, (b) an available-for-sale security, (c) a forecasted transaction, or (d) a net investment in a foreign operation.

If a derivative instrument does not qualify as a hedging instrument under one of the three categories shown above, then its gains or losses must be reported and recognized in current earnings.
3. **Definition of a Derivative Instrument**—Three distinguishing characteristics of a derivative instrument, must be present for a financial instrument or other contract to be considered a derivative instrument. All three characteristics must be present.
- a. The financial instrument or other contract must contain (a) one or more **underlyings**, and (b) one or more **notional amounts** (or payment provisions or both).
    - (1) An **underlying** is any financial or physical variable that has either observable changes or objectively verifiable changes. Therefore, underlyings would include traditional financial measures such as commodity prices, interest rates, exchange rates, or indexes related to any of these items. More broadly, measures such as an entity’s credit rating, rainfall, or temperature changes would also meet the definition of an underlying.
    - (2) **Notional** amounts are the “number of currency or other units” specified in the financial instrument or other contract. In the case of options, this could include bushels of wheat, shares of stock, etc.
    - (3) The **settlement amount** of a financial instrument or other contract is calculated using the underlying(s) and notional amount(s) in some combination.
      - (a) Computation of the settlement amount may be as simple as multiplying the fair value of a stock times a specified number of shares.
      - (b) On the other hand, calculation of the settlement amount may require a very complex calculation, involving ratios, stepwise variables, and other leveraging techniques.

**NOTE:** The term “notional amount” is sometimes used interchangeably with “settlement amount.” Watch to determine if the context in which the term is used is calling for a number of units (notional amount), or a dollar value (settlement amount).

- b. The financial instrument or other contract requires no initial net investment or an initial net investment that is smaller than would be required for other types of contracts that would be expected to have a similar response to changes in market factors.
- (1) Many derivative instruments require no net investment or simply a premium as compensation for the time value of money.
    - (a) Futures contracts may require the establishment of a margin account with a balance equal to a small percentage (2–3%) of the value of the contract.
    - (b) A call option on a foreign currency contract would again only cost a small fraction of the value of the contract.
    - (c) These are typical contracts that would meet this definition and would be included in the definition of derivative instruments.
- c. The terms of the financial instrument or other contract do one of the following with regard to settlement:
- (1) Require or permit net settlement, either within the contract or by a means outside the contract.
    - (a) Net settlement means that a contract can be settled through the payment of cash rather than the exchange of the specific assets referenced in the contract.
    - (b) This type of settlement typically occurs with a currency swap or an interest rate swap.
    - (c) This definition may have some unanticipated consequences. For example, a contract with a liquidating damages clause for nonperformance, the amount of which is determined by an underlying, would meet this criterion.
  - (2) Provide for the delivery of an asset that puts the recipient in a position not substantially different from net settlement.
    - (a) This might include a futures contract where one party to the contract delivers an asset, but a “market mechanism” exists (such as an exchange) so that the asset can be readily converted to cash.
      - 1] Convertibility to cash requires an active market and is a determining factor in whether or not a financial instrument or other contract will be treated as a derivative instrument.

**NOW REVIEW MULTIPLE-CHOICE QUESTIONS 10 THROUGH 18**

#### 4. Inclusions in and Exclusions from Derivative Instruments

The following table provides a list of those financial instruments and other contracts that meet the definition of derivative instruments and those that do not meet the definition of derivative instruments or because they are specifically excluded from treatment.

##### Included

- Options to purchase (call) or sell (put) exchange-traded securities
- Futures contracts
- Interest rate swaps
- Currency swaps
- Swaptions (an option on a swap)
- Credit indexed contracts
- Interest rate caps/floors/collars

##### Excluded

- Normal purchases and sales (does not exclude “take or pay” contracts with little or no initial net investment and products that are readily convertible to cash)
- Equity securities
- Debt securities
- Regular-way (three-day settlement) security trades (this exclusion applies to “to be announced” and “when issued” trades)
- Leases
- Mortgage-backed securities
- Employee stock options

- Royalty agreements and other contracts tied to sales volumes
- Variable annuity contracts
- Adjustable rate loans
- Guaranteed investment contracts
- Nonexchanged traded contracts tied to physical variables
- Derivatives that serve as impediments to sales accounting (e.g., guaranteed residual value in a leasing arrangement)

a. **Interest rate swaps** are one of the most commonly used derivative instruments in business. The following discussion first describes an interest rate swap and then shows how it meets the definition of a derivative instrument.

(1) In a common example, two parties may agree to swap interest payments on debt. Usually this occurs when one party (Company F) has issued fixed-rate debt and believes that interest rates are going to drop, while a second party (Company V) has issued variable-rate debt and believes that interest rates are going to rise. In this case, both companies would be interested in exchanging interest payments since both believe that their interest expense would decrease as a result of the swap. Variable-rate interest may be determined by any number of indices (e.g., Fed Funds Effective Swap Rate (OIS), London Interbank Offered Rate [LIBOR], S&P 500 index, some fixed relationship to T-bill rates, AAA corporate bonds, etc.).

(a) In this example, the **notional amount** is defined as the principal portion of the debt, which would be the same for both the fixed and variable rate debt. The **underlying** is the index that determines the variable interest rate, for example, six-month LIBOR. There is no initial **net investment** required for this contract since the first payment will not occur until the first interest date arrives, and net settlement can be achieved through the payment of interest and principal at the maturity date. Therefore, all three of the criteria for a derivative instrument are present, and it is accounted for as an interest rate swap. Similar examples could be developed for the other financial instruments listed in the “included” column below.

#### 5. **Embedded Derivative Instruments and Bifurcation**

Financial instruments and other contracts may contain features which, if they stood alone, would meet the definition of a derivative instrument. These financial instruments and other contracts are known as “**hybrid instruments.**” This means that there is a basic contract, known as the “**host contract,**” that has an embedded derivative instrument. In these circumstances, the embedded derivative instrument may have to be separated from the host contract, a process known as **bifurcation**, and treated as if it were a stand-alone instrument. In this case, the host contract (excluding the embedded derivative) would be accounted for in the normal manner (as if it had never contained the embedded derivative), and the now stand-alone derivative instrument would be accounted for using the rules for derivatives.

a. Three criteria are used to determine if **bifurcation** must occur. **All** criteria must be met.

- (1) The embedded derivative meets the definition of a derivative.
- (2) The hybrid instrument is **not** regularly recorded at fair value, with changes reported in current earnings as they occur under other GAAP. If the hybrid instrument is regularly recorded at fair value, then there is no need to bifurcate the embedded derivative since the same end result is being accomplished already.
- (3) The economic characteristics and risks of the embedded derivative instrument are **not** “clearly and closely related” to the economic characteristics and risks of the host contract.

b. Below are listed a number of hybrid instruments that would normally require bifurcation:

- (1) A bond payable with an interest rate based on the S&P 500 index.
- (2) An equity instrument (stock) with a call option, allowing the issuing company to buy back the stock.
- (3) An equity instrument with a put option, requiring the issuing company to buy back the stock at the request of the holder.
- (4) A loan agreement that permits the debtor to pay off the loan prior to its maturity with the loan payoff penalty based on the short-term T-bill rates.
- (5) Loans with term-extending options whose values are based on the prime rate at the time of the extension.
- (6) Convertible debt (from the investor’s viewpoint)

c. The holder of a hybrid instrument normally requiring bifurcation can make an election **not** to bifurcate the instrument. Instead, the entire instrument is valued at fair value.

- (1) This election is irrevocable and is made on an instrument-by-instrument basis.
- (2) Changes in fair value of the hybrid instruments are recognized each year in earnings.
- (3) If a company elects to use fair value measurement on selected hybrid instruments, the balance sheet disclosure may be presented in one of two ways:
  - (a) As separate line items for the fair value and non-fair value instruments on the balance sheet,
  - (b) As an aggregate amount of all hybrid instruments with the amount of the hybrid instruments at fair value shown in parentheses.
- d. The fair value option may be applied to host financial instruments resulting from separation of an embedded nonfinancial derivative instrument from a nonfinancial hybrid instrument. If the fair value option is elected, the disclosure rules for fair value apply.

**NOW REVIEW MULTIPLE-CHOICE QUESTIONS 19 THROUGH 27**

#### 6. Hedging Instruments—General Criteria

Two primary criteria must be met in order for a derivative instrument to qualify as a hedging instrument.

- a. Sufficient documentation must be provided at the beginning of the process to identify at a minimum (1) the objective and strategy of the hedge, (2) the hedging instrument and the hedged item, and (3) how the effectiveness (see below) of the hedge will be assessed on an ongoing basis.
- b. The hedge must be “**highly effective**” throughout its life.
  - (1) Effectiveness is measured by analyzing the hedging instrument’s (the derivative instrument) ability to generate changes in fair value that offset the changes in value of the hedged item.
  - (2) At a minimum, its effectiveness will be measured every three months and whenever earnings or financial statements are reported.
  - (3) A “highly effective” hedge has been interpreted to mean that “the cumulative change in the value of the hedging instrument should be between 80 and 125% of the inverse cumulative changes in the fair value or cash flows of the hedged item.”
  - (4) The method used to assess effectiveness must be used throughout the hedge period and must be consistent with the approach used for managing risk.
  - (5) Similar hedges should usually be assessed for effectiveness in a similar manner unless a different method can be justified. (Even though a hedging instrument may meet the criterion for being highly effective, it may not eliminate variations in reported earnings, because to the extent that a hedging instrument is not 100% effective, the difference in net loss or gain in each period must be reported in current earnings.)

#### 7. Fair Value Hedges

A fair value hedge is the use of a derivative instrument to hedge the exposure to changes in the fair value of an asset or a liability.

- a. **Specific criteria.** The hedged asset/liability must meet certain criteria in order to qualify as a fair value hedge. The hedged item must be either **all** or a **specific portion** (e.g., a percentage, a contractual cash flow) of a recognized asset/liability or an unrecognized firm commitment.
  - (1) Both of these situations arise frequently in foreign currency transactions.

#### EXAMPLE

A company may enter into a firm commitment with a foreign supplier to purchase a piece of equipment, the price of which is denominated in a foreign currency and both the delivery date and the payment date are in the future. The company may decide to hedge the commitment to pay for the equipment in a foreign currency in order to protect itself from currency fluctuations between the firm commitment date and the payment date. For the period between the firm commitment date and the delivery date, the company will be hedging against an unrecognized firm commitment. For the period between the delivery date and the payment date, the company is hedging against a recognized liability. (See Section 9, Foreign Currency Hedges, below, for the accounting associated with this example.)

- (2) For an unrecognized firm commitment to qualify it must be (1) binding on both parties, (2) specific with respect to all significant terms, and (3) contain a nonperformance clause that makes performance probable.
- b. **Accounting for a fair value hedge.** Gains and losses on the hedged asset/liability and the hedging instrument will be recognized in current earnings.

**EXAMPLE**

On 1/1/Y1, Dover Corp. purchases 200 shares of Porter, Inc. stock at \$40. The securities are classified as available-for-sale. The market price moves to \$45 by the end of the year. Assume Dover does not elect the fair value option to report its shares of Porter stock. In order to protect itself from a possible decline in the stock value of its available-for-sale security, Dover purchases an at-the-money put option for \$300 on 12/31/Y1. The put option gives Dover the right, but not the obligation, to sell 200 shares of Porter stock at \$45 per share, and the option expires on 12/31/Y3. Dover designates the hedge as a fair value hedge because it is hedging changes in the security's fair value. The fair value of an option is made up of two components, the time value and the intrinsic value. At the time of purchase, the time value is the purchase price of the options and the intrinsic value is \$0 (because the option was purchased at-the-money).

Over the life of the option, the time value will drop to \$0. This is due to the fact that time value relates to the ability to exercise the option over a specified period of time. As the option moves toward the expiration date, the perceived value of the time value portion of the option will decrease as a function of the time value of money (TVM) issues and other market forces. The time value will generally decrease over the life of the option, but not necessarily in a linear fashion. The intrinsic value will vary based on the difference between the current stock price vs. the stock price on the date the option was purchased. As shown in the table below, the intrinsic value of the option increases from \$0 to \$200 between 12/31/Y1 and 12/31/Y2 because the stock price has dropped by \$1 ( $\times$  200 shares), and the hedge has been effective for that same amount. As can be seen by analyzing the two components of the put option, the market is the primary driver of the value that should be assigned to the option. As is often the case, the intrinsic value of the option is considered to be a "highly effective" hedge against changes in the stock price, while the time value is ineffective and is reflected in current earnings. Additional information is provided below.

Item	1/1/Y1	12/31/Y1	12/31/Y2	12/31/Y3
Porter stock price	\$40	\$ 45	\$ 44	\$ 42
Put option				
Time value		\$300	\$160	\$ 0
Intrinsic value		\$ 0	\$200 (200 $\times$ \$1)	\$600 (200 $\times$ \$3)

**1/1/Y1**

1. Available-for-sale securities 8,000  
    Cash 8,000

*Record the purchase of Porter stock (200  $\times$  \$40).*

**12/31/Y1**

2. Available-for-sale securities 1,000  
    Other comprehensive income 1,000

*Record the unrealized gain on Porter stock (accounting prior to the hedge in accordance with ASC Topic 320. (200  $\times$  \$5 valuation increase from holding gain to market value)*

3. Put option 300  
    Cash 300

*Record the purchase of at-the-money put option.*

**12/31/Y2**

4. Put option 200  
    Gain on hedge activity 200

*Record the increase in the intrinsic value (fair value) of the option.*

5. Loss on hedge activity 200  
    Available-for-sale securities 200

*Record the decrease in the fair value of the securities (accounting after the hedge is established) \$200 = 200 shares  $\times$  \$1 holding loss.*

NOTE: The \$200 gain on hedge activity from the put option is balanced effectively against the \$200 loss on hedge activity from the hedged available-for-sale security. The portion of the unrealized holding gain or loss on an available-for-sale security that is designated as a hedged item in a fair value hedge is recognized in earnings during the period of the hedge. This is why the \$200 holding loss on the available-for-sale securities is recognized in the period's earnings.

6. Loss on hedge activity	140	
Put option		140
<i>Record the loss related to the time value of the option. \$140 = \$300 – \$160</i>		
<b>12/31/Y3</b>		
7. Put option	400	
Gain on hedge activity		400
<i>Record the increase in the intrinsic value of the put option.</i>		
8. Loss on hedge activity	400	
Available-for-sale securities		400
<i>To record the decrease in the fair value of the securities (accounting after the hedge is established); \$400 = 200 shares × \$2 holding loss on available-for-sale securities.</i>		
9. Loss on hedge activity	160	
Put option		160
<i>Record the loss related to the time value of the option. \$140 = \$300 – \$160</i>		
10. Cash	9,000	
Put option		600
Available-for-sale securities		8,400
<i>Record the exercise of the put option (sell the 200 shares of stock @ \$45) and close out the put option investment.</i>		
11. Other comprehensive income	1,000	
Gain on Porter stock		1,000
<i>To reclassify the unrealized holding gain recognized in entry 2., from other comprehensive income to earnings, because the securities were sold.</i>		

## 8. Cash Flow Hedges

Cash flow hedges use derivative instruments to hedge the exposure to variability in expected future cash flows.

a. **Specific criteria.** Additional criteria must be met in order to qualify as a **cash flow hedge**.

- (1) The primary criterion is that the hedged asset/liability and the hedging instrument must be **“linked.”**
  - (a) **Linking** is established if the basis (the specified rate or index) for the change in cash flows is the same for the hedged asset/liability and the hedging instrument.
- (2) Cash flows do not have to be identical, but they must meet the **highly effective** threshold discussed above.
- (3) In addition, if the hedged asset/liability is a **forecasted transaction**, it must be considered **probable**, based on appropriate facts and circumstances (i.e., past history).
- (4) Also, if the forecasted hedged asset/liability is a series of transactions, they must “share the same risk exposure.”
  - (a) Purchases of a particular product from the same supplier over a period of time would meet this requirement.

b. **Accounting for a cash flow hedge.** For the hedging instrument:

- (1) The effective portion is reported in other comprehensive income, and
  - (2) The ineffective portion and/or excluded components are reported on a cumulative basis to reflect the lesser of
    - (a) The cumulative gain/loss on the derivative since the creation of the hedge, or
    - (b) The cumulative gain/loss from the change in expected cash flows from the hedged instrument since the creation of the hedge.
- 1] The above amounts need to be adjusted to reflect any reclassification of other comprehensive income to current earnings. This will occur when the hedged asset/liability affects earnings (e.g., when hedged inventory is sold and the cost of inventory passes through to cost of goods sold).

**EXAMPLE**

A commercial bakery believes that wheat prices may increase over the next few months. To protect itself against this risk, the bakery purchases call options on wheat futures to hedge the price risk of their forecasted inventory purchases. If wheat prices increase, the profit on the purchased call options will offset the higher price the bakery must pay for the wheat. If wheat prices decline, the bakery will lose the premium it paid for the call options, but can then buy the wheat at the lower price. On June 1, year 1, the bakery pays a premium of \$350 to purchase a September 30, year 1 call for 1,000 bushels of wheat at the futures price of \$16.60 per bushel. The call option is considered a cash flow hedge because the designated risk that is being hedged is the risk of changes in the cash flows relating to changes in the purchase price of the wheat. On September 30, the bakery settles its call options and purchases wheat on the open market. Pertinent wheat prices are shown below.

Spot price (June 1)	\$16.50
Futures price (as of June 1 for September 30)	\$16.60
Spot price (September 30)	\$17.30

**June 1**

1. Call option	350	
Cash		350

*Record the purchase of the call option.*

**September 30**

2. Loss on hedge activity	350	
Call option		350

*Record the expiration (change in time value) of the call option.*

3. Call option	700	
Other comprehensive income		700

*Record the increase in intrinsic value of the call option.  $\$700 = \{1,000 \text{ bushels} \times [\$17.30 \text{ (the spot price per bushel on September 30)} - \$16.60 \text{ (the futures price as of June 1 for September 30)}]\}$*

4. Cash	700	
Call option		700

*Record the cash settlement of the call option.*

5. Inventory	17,300	
Cash		17,300

*Record the purchase of the wheat at the spot price.  $\$17,300 = 1,000 \text{ bushels} \times \$17.30$*

**9. Foreign Currency Hedges**

Foreign currency denominated assets/liabilities that arise in the course of normal business are often hedged with offsetting forward exchange contracts. This process, in effect, creates a natural hedge. Normal accounting rules apply, and the FASB did not change this accounting treatment in the implementation of hedge accounting. Hedge accounting is required in four areas related to foreign currency hedges. The four foreign currency hedges are discussed below.

- a. **Unrecognized firm commitment.** Either a derivative instrument or a nonderivative financial instrument (such as a receivable in a foreign currency) can be designated as a hedge of an unrecognized firm commitment attributable to changes in foreign currency exchange rates. If the requirements for a fair value hedge are met, then this hedging arrangement can be accounted for as a **fair value hedge**, discussed above.
- b. **Available-for-sale securities.** Hedge accounting is not used for trading and held-to-maturity securities. The use of hedge accounting for transactions for securities designated as available-for-sale may be allowed in some instances. Derivative instruments can be used to hedge debt or equity available-for-sale securities. However, equity securities must meet two additional criteria.
  - (1) They cannot be traded on an exchange denominated in the investor’s functional currency.
  - (2) Dividends must be denominated in the same foreign currency as is expected to be received on the sale of the security.

If the above criteria are met, hedging instruments related to available-for-sale securities can be accounted for as **fair value hedges**, discussed above.

- c. **Foreign currency denominated forecasted transactions.** Only derivative instruments can be designated as hedges of foreign currency denominated forecasted transactions. A forecasted export sale with the price denominated in a foreign currency might qualify for this type of hedge treatment.
  - (1) Forecasted transactions are distinguished from firm commitments (discussed in a. above) because the timing of the cash flows remains uncertain.
    - (a) This additional complexity results in hedging instruments related to foreign currency denominated forecasted transactions being accounted for as cash flow hedges, discussed above.
    - (b) Hedge accounting is permissible for transactions between unrelated parties, and under special circumstances (not discussed here) for intercompany transactions.
- d. **Net investments in foreign operations.** The accounting for net investments in foreign operations has not changed from the ASC Topic 830 rules, except that the hedging instrument has to meet the new “effective” criterion. The change in the fair value of the hedging derivative is recorded in a manner consistent with a translation adjustment in other comprehensive income which is then closed to the accumulated other comprehensive income account in the equity section of the balance sheet.

**Hedge Accounting ASC Topic 815 (SFAS 133)**

**Type of Hedge**

<b>Attribute</b>	<b>Fair Value</b>	<b>Cash Flow</b>	<b>Foreign Currency (FC)</b>
Types of hedging instruments permitted	Derivatives	Derivatives	Derivatives or nonderivatives depending on the type of hedge
Balance sheet valuation of hedging instrument	Fair value	Fair value	Fair value
Recognition of gain or loss on changes in value of hedging instrument	Currently in earnings	Effective portion currently as a component of other comprehensive income (OCI) and reclassified to earnings in future period(s) that forecasted transaction affects earnings  Ineffective portion currently in earnings	<b>FC denominated firm commitment</b> Currently in earnings <b>Available-for-sale security (AFS)</b> Currently in earnings  <b>Forecasted FC transaction</b> Same as cash flow hedge  <b>Net investment in a foreign operation</b> OCI as part of the cumulative translation adjustment to the extent it is effective as a hedge
Recognition of gain or loss on changes in the fair value of the hedged item	Currently in earnings	Not applicable; these hedges are not associated with recognized assets or liabilities	<b>FC denominated firm commitment</b> Currently in earnings <b>Available-for-sale security (AFS)</b> Currently in earnings <b>Forecasted FC transaction</b> Not applicable; same as cash flow hedge

**NOW REVIEW MULTIPLE-CHOICE QUESTIONS 28 THROUGH 37**
**10. Forward Exchange Contracts**

It was stated previously that foreign currency transaction gains and losses on assets and liabilities which are denominated in a currency other than the functional currency can be hedged if a US company enters into a forward exchange contract.

- a. The following example shows how a forward exchange contract can be used as a hedge, first against a firm commitment and then, following delivery date, as a hedge against a recognized liability.
- b. The general rule for estimating the fair value of forward exchange contracts is to use the forward exchange rate for the remaining term of the contract.

**EXAMPLE**

Baker Simon, Inc. enters into a firm commitment with Dempsey Ing., Inc. of Germany, on October 1, year 1, to purchase a computerized robotic system for €6,000,000. The system will be delivered on March 1, year 2, with payment due sixty days after delivery (April 30, year 2). Baker Simon, Inc. decides to hedge this foreign currency firm commitment and enters into a forward exchange contract on the firm commitment date to receive €6,000,000 on the payment date. The applicable exchange rates are shown in the table below.

Date	Spot rates	Forward rates for April 30, year 2
October 1, year 1	€1 = \$.90	€1 = \$.91
December 31, year 1	€1 = \$.92	€1 = \$.94
March 1, year 2	€1 = \$.92	€1 = \$.935
April 30, year 2	€1 = \$.96	

- c. The following example separately presents both the forward contract receivable and the dollars payable liability in order to show all aspects of the forward contract.
  - (1) For financial reporting purposes, most companies present just the net fair value of the forward contract, which would be the difference between the current value of the forward contract receivable and the dollars payable accounts.
  - (2) The transactions which reflect the forward exchange contract, the firm commitment and the acquisition of the asset and retirement of the related liability appear as follows:

**Forward contract entries**

- (1) 10/1/Y1 (forward rate for 4/30/Y2  
€1 = \$.91)

Forward contract receivable (€)	5,460,000
Dollars payable	5,460,000

**Hedge against firm commitment entries**

This entry recognizes the existence of the forward exchange contract using the gross method. Under the net method, this entry would not appear at all, since the fair value of the forward contract is zero when the contract is initiated. The amount is calculated using the 10/1/Y1 forward rate for 4/30/Y2 ( $€6,000,000 \times \$0.91 = \$5,460,000$ ). Note that the **net** fair value of the forward exchange contract on 10/1/Y1 is zero because there is an exact amount offset of the forward contract receivable with the dollars payable liability.

**Forward contract entries**

(2) 12/31/Y1 (forward rate for 4/30/Y2  
€1 = \$.94)

Forward contract receivable (€)	180,000	
Gain on hedge activity		180,000

€6,000,000 × (\$.94 – \$.91) = \$180,000. The dollar values for this entry reflect, among other things, the change in the forward rate from 10/1/Y1 to 12/31/Y1. However, the actual amount recorded as gain or loss (gain in this case) will be determined by all market factors.

(4) 3/1/Y2 (forward rate for 4/30/Y2 €1 = \$.935)

Loss on hedge activity	30,000	
Forward contract receivable (€)	30,000	

€6,000,000 × (\$.935 – \$.94) = \$30,000. These entries again will be driven by market factors, and they are calculated the same way as entries (2) and (3) above. Notice that the decline in the forward rate from 12/31/Y1 to 3/1/Y2 resulted in a loss against the forward contract receivable and a gain against the firm commitment.

(7) 4/30/Y2 (spot rate €1 = \$.96)

Forward contract receivable (€)	150,000	
Gain on forward contract		150,000

The gain or loss (gain in this case) on the forward contract is calculated using the change in the forward to the spot rate from 3/1/Y2 to 4/30/Y2 [€6,000,000 × (\$.96 – \$.935) = \$150,000]

(9) 4/30/Y2

Dollars payable	5,460,000	
Cash		5,460,000
Foreign currency units (€)	5,760,000	
Forward contract receivable (€)		5,760,000

This entry reflects the settlement of the forward contract at the 10/1/Y1 contracted forward rate (€6,000,000 × \$.91 = \$5,460,000) and the receipt of foreign currency units valued at the spot rate (€6,000,000 × \$.96 = \$5,760,000).

**Hedge against firm commitment entries**

(3) 12/31/Y1

Loss on hedge activity	180,000	
Firm commitment		180,000

The dollar values for this entry are identical to entry (2), reflecting the fact that the hedge is highly effective (100%) and also the fact that the market recognizes the same factors in this transaction as for entry (2). This entry reflects the first use of the firm commitment account, a temporary liability account pending the receipt of the asset against which the firm commitment has been hedged.

(5) 3/1/Y2

Firm commitment	30,000	
Gain on hedge activity		30,000

(6) 3/1/Y2 (spot rate €1 = \$.92)

Equipment	5,370,000	
Firm commitment	150,000	
Accounts payable (€)		5,520,000

This entry records the receipt of the equipment (recorded at fair value determined on a discounted net present value basis), the elimination of the temporary liability account (firm commitment), and the recognition of the payable, calculated using the spot rate on the date of receipt (€6,000,000 × \$.92 = \$5,520,000).

(8) 4/30/Y2

Transaction loss	240,000	
Accounts payable (€)		240,000

The transaction loss related to the accounts payable reflects only the change in the spot rates and ignores the accrual of interest. [€6,000,000 × (\$.96 – \$.92) = \$180,000]

(10) Accounts payable (€) 5,760,000

Foreign currency units	5,760,000
------------------------	-----------

This entry reflects the use of the foreign currency units to settle the account payable.

- d. In the case of using a forward exchange contract to speculate in a specific foreign currency, the general rule to estimate the fair value of the forward contract is to use the forward exchange rate for the remainder of the term of the forward contract.

**11. Disclosures**

Disclosures related to financial instruments, both derivative and nonderivative, that are used as hedging instruments must include the following information:

- a. Objectives and the strategies for achieving them,
- b. Context to understand the instrument,

- c. Risk management policies, and
- d. A list of hedged instruments.
  - (1) These disclosures have to be separated by type of hedge and reported every time a complete set of financial statements is issued.
  - (2) In addition, disclosure requirements exist for derivative instruments that are not designated as hedging instruments.
- e. For instruments and transactions eligible for offset, the following information must be disclosed:
  - (1) The gross amount of recognized assets and liabilities.
  - (2) The amounts offset per ASC 210-20-45 or ASC 815-10-45
  - (3) The net amounts appearing in the statement of financial position.
  - (4) The amounts subject to master netting arrangements not included in the offset.
  - (5) The net amount considering items (3) and (4).

**NOW REVIEW MULTIPLE-CHOICE QUESTIONS 38 THROUGH 41**

12. **Fair Value and Concentration of Credit Risk Disclosures of Financial Instruments other than Derivatives**  
Disclosure of fair values of financial instruments is required if it is practicable to estimate fair value. This requirement pertains to both asset and liability financial instruments, whether recognized in the balance sheet or not. Disclosure of concentrations of credit risk is required.
- a. Credit risk is the risk that a loss will occur because parties to the instrument do not perform as expected.
    - (1) Such concentrations exist when a number of an entity's financial instruments are associated with similar activities and economic characteristics that could be affected by changes in similar conditions (e.g., an entity whose principal activity is to supply parts to one type of industry).

***Lenaburg, Inc.***
***Notes to Financial Statements***
**FAIR VALUE OF FINANCIAL INSTRUMENTS HELD OR ISSUED FOR PURPOSES  
OTHER THAN TRADING (in thousands) December 31, year 2**

	Carrying amount	Fair value
<b><i>Assets</i></b>		
Cash and cash equivalents	32,656	32,656
Long-term investments	12,719	14,682
<b><i>Liabilities</i></b>		
Short-term debt	3,223	3,223
Long-term debt	150,000	182,500

**FAIR VALUE OF FINANCIAL INSTRUMENTS HELD FOR TRADING PURPOSES  
(in thousands) December 31, year 2**

	Carrying amount	Fair value
<b><i>Assets</i></b>		
Short-term investments	4,074	4,074

Cash and cash equivalents—The carrying amount of cash and cash equivalents approximates fair value due to their short-term maturities.

Long-term investments—The fair value is estimated based on quoted market prices for these or similar investments.

Short-term investments—The Company holds US Treasury notes and highly liquid investments for trading purposes. The carrying value of these instruments approximates fair value.

Short- and long-term debt—The fair value of short- and long-term debt is estimated using quoted market prices for the same or similar instruments or on the current rates offered to the Company for debt of equivalent remaining maturities.

## Summary of Disclosure Standards for Financial Instruments other than Derivatives

ASC	Pertains to	Required disclosures
825-10-50	Financial Instruments (Assets and Liabilities), Whether on Balance Sheet or Not	<ul style="list-style-type: none"> <li>Fair value, when practicable to estimate</li> <li>Information pertinent to estimating fair value (carrying value, effective interest rate, maturity) if not practicable to estimate, and reasons for impracticability of estimation</li> <li>Distinguish between instruments held or issued for trading purposes and instruments held or issued for purposes other than trading</li> <li>Do not net or aggregate fair values of derivative financial instruments with fair values of nonderivative financial instruments or with fair values of other derivative financial instruments</li> </ul>
	Financial Instruments with Concentrations of Credit Risk	<ul style="list-style-type: none"> <li>Information about similar activity, region, or economic characteristics</li> <li>Maximum potential accounting loss</li> <li>Information about collateral or security requirements</li> </ul>

**NOW REVIEW MULTIPLE-CHOICE QUESTIONS 42 THROUGH 50**
**C. Research Component—Accounting Standards Codification**

ASC Topic 815, *Derivatives and Hedging*, contains the accounting and disclosure rules for derivatives and hedging. ASC Topic 830, *Foreign Currency Matters*, contains the rules for foreign currency transactions and foreign currency translations. ASC Topic 825, *Financial Instruments*, covers the accounting rules for reporting financial instruments.

A list of research terms is listed below.

At the money	Financial instrument	Insurance contracts
Bifurcation	Firm commitment hedge	Intrinsic value
Call option	Forecasted transaction hedge	LIBOR
Cash flow hedge	Foreign currency derivative	Net settlement
Changes in fair value	Foreign currency hedge	Notional amounts
Derivative instrument	Forward contract	Out of the money
Designation as hedged item	Forward exchange contract	Payment provision hedge
Discount forward contract	Futures contract	Premium forward contract
Embedded derivative	Hedged item	Put option
Embedded derivative instruments	Hybrid instrument	Regular way securities trades
Fair value financial instruments	Impediments to sales accounting	Swaption
Fair value hedge	In the money	Transaction gain or loss
Financial guarantee contracts	Initial net investment	Underlyings

**D. International Financial Reporting Standards (IFRS)**

1. A derivative is a financial instrument that (1) requires little or no initial investment, (2) changes in value in response to a change in the value of another instrument or index (called an underlying), and (3) is settled in the future.
  - a. Examples of derivatives include options, futures, forward contracts, and swaps. Derivatives are recognized in the financial statements using the fair value through profit and loss method (FVTPL).
  - b. Derivatives are remeasured at fair value, with gains and losses recorded in profit or loss for the period.

2. A hedging instrument is a type of derivative that is classified as a fair value hedge, a cash flow hedge, or a hedge of a net investment in operations.
  - a. Hedge accounting allows the optional treatment to offset profits and losses on hedged items.
  - b. If a company elects to use hedge accounting, the accounting treatment differs depending on the type of hedge.
    - (1) A fair value hedge is accounted for by recognizing the gains and losses in profit and loss of the period.
    - (2) A cash flow hedge and a hedge of a net investment are accounted for by reporting gains and losses in other comprehensive income for the period.

**NOW REVIEW MULTIPLE-CHOICE QUESTION 51**

## KEY TERMS

**At the money.** An at-the-money option is one in which the price of the underlying is equal to the strike or exercise price.

**Bifurcation.** The process of separating an embedded derivative from its host contract. This process is necessary so that hybrid instruments (a financial instrument or other contract that contains an embedded derivative) can be separated into their component parts, each being accounted for using the appropriate valuation techniques.

**Call option.** An American call option provides the holder the right to acquire an underlying at an exercise or strike price, anytime during the option term. A premium is paid by the holder for the right to benefit from the appreciation in the underlying.

**Derivative instruments.** Derivative instruments are defined by their three distinguishing characteristics. Specifically, derivative instruments are financial instruments or other contracts that have

1. One or more underlyings and one or more notional amounts (or payment provisions or both);
2. No initial net investment or a smaller net investment than required for contracts expected to have a similar response to market changes; and
3. Terms that require or permit
  - a. Net settlement
  - b. Net settlement by means outside the contract
  - c. Delivery of an asset that results in a position substantially the same as net settlement

**Discount or premium on a forward contract.** The foreign currency amount of the contract multiplied by the difference between the contracted forward rate and the spot rate at the date of inception of the contract.

**Embedded derivative.** A feature on a financial instrument or other contract, which if the feature stood alone, would meet the definition of a derivative.

**Fair value.** Defined as the amount at which the asset or liability could be bought or settled in an arm's-length transaction; measured by reference to market prices or estimated by net present value of future cash flows, options pricing models, or by other techniques.

**Financial instrument.** Financial instruments include cash, accounts/notes receivable, accounts/notes payable, bonds, common stock, preferred stock, stock options, foreign currency forward contracts, futures contracts, various financial swaps, etc. Other contracts which are also considered financial instruments meet the following two criteria: (1) the contract imposes a contractual obligation on one party (to the contract) to deliver cash or another financial instrument to the second party or to exchange potentially unfavorable terms with the second party; (2) the contract conveys a contractual right to the second party to receive cash or another financial instrument from the first party or to exchange financial instruments on favorable terms with the first party.

**Firm commitment.** An agreement with an unrelated party, binding on both, usually legally enforceable, specifying all significant terms and including a disincentive for nonperformance sufficient to make performance likely.

**Forecasted transaction.** A transaction expected to occur for which there is no firm commitment, and thus, which gives the entity no present rights or obligations. Forecasted transactions can be hedged and special hedge accounting can be applied.

**Foreign currency transactions.** Transactions whose terms are denominated in a currency other than the entity's functional currency. Foreign currency transactions arise when an enterprise (1) buys or sells on credit goods or services whose

prices are denominated in foreign currency, (2) borrows or lends funds and the amounts payable or receivable are denominated in foreign currency, (3) is a party to an unperformed forward exchange contract, or (4) for other reasons, acquires or disposes of assets, or incurs or settles liabilities denominated in foreign currency.

**Forward contract.** A forward contract is an agreement between two parties to buy and sell a specific quantity of a commodity, foreign currency, or financial instrument at an agreed-upon price, with delivery and/or settlement at a designated future date. Because a forward contract is not formally regulated by an organized exchange, each party to the contract is subject to the default of the other party.

**Forward exchange contract.** An agreement to exchange at a specified future date currencies of different countries at a specified rate (forward rate).

**Futures contract.** A futures contract is a forward-based contract to make or take delivery of a designated financial instrument, foreign currency, or commodity during a designated period, at a specified price or yield. The contract frequently has provisions for cash settlement. A futures contract is traded on a regulated exchange and, therefore, involves less credit risk than a forward contract.

**In the money.** A call option is in the money if the price of the underlying is greater than the strike or exercise price of the underlying.

**Initial net investment.** A derivative instrument is one where the initial net investment is zero or is less than the notional amount (possibly plus a premium or minus a discount). This characteristic refers to the relative amount of investment. Derivative instruments allow the opportunity to take part in the rate or price change without owning the asset or owing the liability. If an amount approximating the notional amount must be invested or received, it is not a derivative instrument. The two basic forms of derivative instruments are futures contracts and options. The futures contract involves little or no initial net investment. Settlement is usually near the delivery date. Call options, when purchased, require a premium payment that is less than the cost of purchasing the equivalent number of shares. Even though this distinguishing characteristic is the result of only one of the parties, it determines the application for both.

**Intrinsic value.** With regard to call (put) options, it is the larger of zero or the spread between the stock (exercise) price and the exercise (stock) price.

**LIBOR.** London Interbank Offer Rate. A widely used measure of average interest rates at a point in time.

**Net settlements.** To qualify as derivative instruments, one of the following settlement criteria must be met:

1. No delivery of an asset equal to the notional amount is required. For example, an interest rate swap does not involve delivery of the instrument in which the notional amount is expressed.
2. Delivery of an asset equal to the notional amount is required of one of the parties, but an exchange (or other market mechanism, institutional arrangement or side agreement) facilitates net settlement. For example, a call option has this attribute.
3. Delivery by one of the parties of an asset equal to the notional amount is required but the asset is either readily convertible to cash (as with a contract for the delivery of a marketable equity security), or is required but that asset is itself a derivative instrument (as is the case for a swaption [an option on a swap]).

This characteristic means that the derivative instrument can be settled by a net delivery of assets (the medium of exchange does not have to be cash). Contract terms based on changes in the price or rate of the notional amount that implicitly or explicitly require or permit net settlement qualify. Situations where one of the parties can liquidate their net investment or be relieved of the contract rights or obligations without significant transaction costs because of a market arrangement (broadly interpreted) or where the delivered asset can be readily converted to cash also meet the requirements for net settlement. It is assumed that an exchange traded security is readily converted to cash. Thus, commodity-based contracts for gold, oil, wheat, etc. are now included under this standard. The convertible to cash condition requires an active market and consideration of interchangeability and transaction volume. Determining if delivery of a financial asset or liability equal to the notional amount is a derivative instrument may depend upon whether it is readily convertible into cash. Different accounting will result if the notional amount is not readily converted to cash. Using the notional amount as collateral does not necessarily mean it is readily convertible to cash.

**Notional amount.** The notional amount (or payment provision) is the referenced associated asset or liability. A notional amount is commonly a number of units such as shares of stock, principal amount, face value, stated value, basis points, barrels of oil, etc. It may be that amount plus a premium or minus a discount. The interaction of the price or rate (underlying) with the referenced associated asset or liability (notional amount) determines whether settlement is required and, if so, the amount.

**Out of the money.** A call option is out of the money if the strike or exercise price is greater than the price of the underlying. A put option is out of the money if the price of the underlying is greater than the strike or exercise price.

**Put option.** An American put option provides the holder the right to sell the underlying at an exercise or strike price, anytime during the option term. A gain accrues to the holder as the market price of the underlying falls below the strike price.

**Swap.** A swap is a forward-based contract or agreement generally between two counterparties to exchange streams of cash flows over a specified period in the future.

**Swaption.** A swaption is an option on a swap that provides the holder with the right to enter into a swap at a specified future date at specified terms (freestanding option on a swap) or to extend or terminate the life of an existing swap (embedded option on a swap). These derivatives have characteristics of an option and an interest rate swap.

**Time value.** The difference between an option's price and its intrinsic value.

**Transaction gain or loss.** Transaction gains or losses result from a change in exchange rates between the functional currency and the currency in which a foreign currency transaction is denominated. They represent an increase or decrease in (1) the actual functional currency cash flows realized upon settlement of foreign currency transactions, and (2) the expected functional currency cash flows on unsettled foreign currency transactions.

**Underlyings.** An underlying is commonly a specified price or rate such as a stock price, interest rate, currency rate, commodity price, or a related index. However, any variable (financial or physical) with (1) observable changes or (2) objectively verifiable changes such as a credit rating, insurance index, climatic or geological condition (temperature, rain-fall) qualifies. Unless it is specifically excluded, a contract based on any qualifying variable is accounted for under ASC Topic 815 (SFAS 133) if it has the distinguishing characteristics stated above.

**Multiple-Choice Questions (1–51)**

**A. Foreign Currency Transactions**

1. On September 1, year 1, Bain Corp. received an order for equipment from a foreign customer for 300,000 local currency units (LCU) when the US dollar equivalent was \$96,000. Bain shipped the equipment on October 15, year 1, and billed the customer for 300,000 LCU when the US dollar equivalent was \$100,000. Bain received the customer’s remittance in full on November 16, year 1, and sold the 300,000 LCU for \$105,000. In its income statement for the year ended December 31, year 1, Bain should report as part of net income a foreign exchange transaction gain of

- a. \$0
- b. \$4,000
- c. \$5,000
- d. \$9,000

2. On September 1, year 1, Cano & Co., a US corporation, sold merchandise to a foreign firm for 250,000 Botswana pula. Terms of the sale require payment in pula on February 1, year 2. On September 1, year 1, the spot exchange rate was \$.20 per pula. At December 31, year 1, Cano’s year-end, the spot rate was \$.19, but the rate increased to \$.22 by February 1, year 2, when payment was received. How much should Cano report as foreign exchange transaction gain or loss as part of year 2 income?

- a. \$0.
- b. \$2,500 loss.
- c. \$5,000 gain.
- d. \$7,500 gain.

3. Lindy, a US corporation, bought inventory items from a supplier in Argentina on November 5, year 1, for 100,000 Argentine pesos, when the spot rate was \$.4295. At Lindy’s December 31, year 1 year-end, the spot rate was \$.4245. On January 15, year 2, Lindy bought 100,000 pesos at the spot rate of \$.4345 and paid the invoice. How much should Lindy report as part of net income for year 1 and year 2 as foreign exchange transaction gain or loss?

	Year 1	Year 2
a.	\$500	\$(1,000)
b.	\$0	\$(500)
c.	\$(500)	\$0
d.	\$(1,000)	\$500

4. Hunt Co. purchased merchandise for £300,000 from a vendor in London on November 30, year 1. Payment in British pounds was due on January 30, year 2. The exchange rates to purchase one pound were as follows:

	November 30, Year 1	December 31, Year 1
Spot-rate	\$1.65	\$1.62
30-day rate	1.64	1.59
60-day rate	1.63	1.56

In its December 31, year 1, income statement, what amount should Hunt report as foreign exchange transaction gain as part of net income?

- a. \$12,000
- b. \$9,000
- c. \$6,000
- d. \$0

5. Ball Corp. had the following foreign currency transactions during year 1:

- Merchandise was purchased from a foreign supplier on January 20, year 1, for the US dollar equivalent of \$90,000. The invoice was paid on March 20, year 1, at the US dollar equivalent of \$96,000.
- On July 1, year 1, Ball borrowed the US dollar equivalent of \$500,000 evidenced by a note that was payable in the lender’s local currency on July 1, year 3. On December 31, year 1, the US dollar equivalents of the principal amount and accrued interest were \$520,000 and \$26,000, respectively. Interest on the note is 10% per annum.

In Ball’s year 1 income statement, what amount should be included as foreign exchange transaction loss as part of net income?

- a. \$0
- b. \$6,000
- c. \$21,000
- d. \$27,000

6. On November 30, year 1, Tyrola Publishing Company, located in Colorado, executed a contract with Ernest Blyton, an author from Canada, providing for payment of 10% royalties on Canadian sales of Blyton’s book. Payment is to be made in Canadian dollars each January 10 for the previous year’s sales. Canadian sales of the book for the year ended December 31, year 2, totaled \$50,000 Canadian. Tyrola paid Blyton his year 2 royalties on January 10, year 3. Tyrola’s year 2 financial statements were issued on February 1, year 3. Spot rates for Canadian dollars were as follows:

November 30, year 1	\$.87
January 1, year 2	\$.88
December 31, year 2	\$.89
January 10, year 3	\$.90

How much should Tyrola accrue for royalties payable at December 31, year 2?

- a. \$4,350
- b. \$4,425
- c. \$4,450
- d. \$4,500

7. Shore Co. records its transactions in US dollars. A sale of goods resulted in a receivable denominated in Japanese yen, and a purchase of goods resulted in a payable denominated

in euros. Shore recorded a foreign exchange transaction gain on collection of the receivable and an exchange transaction loss on settlement of the payable. The exchange rates are expressed as so many units of foreign currency to one dollar. Did the number of foreign currency units exchangeable for a dollar increase or decrease between the contract and settlement dates?

	Yen exchangeable for \$1	Euros exchangeable for \$1
a.	Increase	Increase
b.	Decrease	Decrease
c.	Decrease	Increase
d.	Increase	Decrease

8. On October 1, year 1, Mild Co., a US company, purchased machinery from Grund, a German company, with payment due on April 1, year 2. If Mild's year 1 operating income included no foreign exchange transaction gain or loss, then the transaction could have

- Resulted in an extraordinary gain.
- Been denominated in US dollars.
- Caused a foreign currency gain to be reported as a contra account against machinery.
- Caused a foreign currency translation gain to be reported as other comprehensive income.

9. On October 1, year 1, Velec Co., a US company, contracted to purchase foreign goods requiring payment in Qatari riyals, one month after their receipt at Velec's factory. Title to the goods passed on December 15, year 1. The goods were still in transit on December 31, year 1. Exchange rates were one dollar to twenty-two riyals, twenty riyals, and twenty-one riyals on October 1, December 15, and December 31, year 1, respectively. Velec should account for the exchange rate fluctuation in year 1 as

- A loss included in net income before extraordinary items.
- A gain included in net income before extraordinary items.
- An extraordinary gain.
- An extraordinary loss.

### B.2.-3. Derivative Instruments and Hedging Activities

10. Derivatives are financial instruments that derive their value from changes in a benchmark based on any of the following **except**

- Stock prices.
- Mortgage and currency rates.
- Commodity prices.
- Discounts on accounts receivable.

11. Derivative instruments are financial instruments or other contracts that must contain

- One or more underlyings, **or** one or more notional amounts.
- No initial net investment or smaller net investment than required for similar response contracts.

- Terms that do not require or permit net settlement or delivery of an asset.
- All of the above.

12. The basic purpose of derivative financial instruments is to manage some kind of risk such as all of the following **except**

- Stock price movements.
- Interest rate variations.
- Currency fluctuations.
- Uncollectibility of accounts receivables.

13. Which of the following statements is(are) true regarding derivative financial instruments?

- Derivative financial instruments should be measured at fair value and reported in the balance sheet as assets or liabilities.
  - Gains and losses on derivative instruments not designated as hedging activities should be reported and recognized in earnings in the period of the change in fair value.
- I only.
  - II only.
  - Both I and II.
  - Neither I nor II.

14. Which of the following is an underlying, according to ASC Topic 815?

- A credit rating.
- A security price.
- An average daily temperature.
- All of the above could be underlyings.

15. If the price of the underlying is greater than the strike or exercise price of the underlying, the call option is

- At the money.
- In the money.
- On the money.
- Out of the money.

16. Which of the following is **not** a distinguishing characteristic of a derivative instrument?

- Terms that require or permit net settlement.
- Must be "highly effective" throughout its life.
- No initial net investment.
- One or more underlyings and notional amounts.

17. An example of a notional amount is

- Number of barrels of oil.
- Interest rates.
- Currency swaps.
- Stock prices.

18. Disclosures related to financial instruments, both derivative and nonderivative, used as hedging instruments must include

- A list of hedged instruments.
- Maximum potential accounting loss.
- Objectives and strategies for achieving them.
- Only a. and c.

### B.4. Inclusions in and Exclusions from Derivative Instruments

19. Which of the following financial instruments or other contracts is **not** specifically excluded from the definition of derivative instruments in ASC Topic 815?

- Leases.
- Call (put) option.
- Adjustable rate loans.
- Equity securities.

20. Which of the following is **not** a derivative instrument?

- Futures contracts.
- Credit indexed contracts.
- Interest rate swaps.
- Variable annuity contracts.

### B.5. Embedded Derivative Instruments and Bifurcation

21. Which of the following criteria must be met for bifurcation to occur?

- The embedded derivative meets the definition of a derivative instrument.
- The hybrid instrument is regularly recorded at fair value.
- Economic characteristics and risks of the embedded instrument are “clearly and closely” related to those of the host contract.
- All of the above.

22. Financial instruments sometimes contain features that separately meet the definition of a derivative instrument. These features are classified as

- Swaptions.
- Notional amounts.
- Embedded derivative instruments.
- Underlyings.

23. The process of bifurcation

- Protects an entity from loss by entering into a transaction.
- Includes entering into agreements between two counterparties to exchange cash flows over specified period of time in the future.
- Is the interaction of the price or rate with an associated asset or liability.
- Separates an embedded derivative from its host contract.

24. Alvarez Corporation has two hybrid financial instruments. According to ASC Topic 815, how can Alvarez account for these instruments?

- Alvarez must bifurcate all hybrid financial instruments and record the components separately.
- Alvarez can elect to not disclose the financial instruments on the balance sheet.
- Alvarez can elect not to bifurcate the hybrid instruments on an instrument by instrument basis.
- Alvarez can make an election that requires all hybrid financial instruments not to be bifurcated.

25. According to ASC Topic 815, when a company elects not to bifurcate a hybrid financial instrument, the entire hybrid instrument should be valued at

- Fair value.
- Net present value.
- Net realizable value.
- Book value.

26. When an election is made not to bifurcate a hybrid financial instrument, how should this be disclosed on the financial statements?

- As separate line items for the fair value and non-fair value instruments on the balance sheet.
  - As an aggregate amount of all hybrid instruments with the amount of the hybrid instruments at fair value shown in parentheses.
  - As a footnote disclosure.
- I only.
  - II and III only.
  - III only.
  - I and II only.

27. If a company elects not to bifurcate a hybrid financial instrument and records the entire instrument at fair value, which of the following is true?

- No changes in value are recorded until the hybrid instrument is sold.
- Changes in fair value of the hybrid instrument are recognized each year in other comprehensive income.
- Changes in fair value of the hybrid instrument are recognized each year in earnings.
- Changes in fair value of the hybrid instrument are recognized each year by recognizing a cumulative effect adjustment to the beginning balance of retained earnings for the period.

### B.6.–9. Hedging Instruments

28. Hedge accounting is permitted for all of the following types of hedges **except**

- Trading securities.
- Unrecognized firm commitments.
- Available-for-sale securities.
- Net investments in foreign operations.

29. Which of the following is a general criterion for a hedging instrument?

- Sufficient documentation must be provided at the beginning of the process.
- Must be “highly effective” only in the first year of the hedge’s life.
- Must contain a nonperformance clause that makes performance probable.
- Must contain one or more underlyings.

30. For an unrecognized firm commitment to qualify as a hedged item it must

- Be binding on both parties.
- Be specific with respect to all significant terms.

- c. Contain a nonperformance clause that makes performance probable.  
d. All of the above.
- 31.** A hedge of the exposure to changes in the fair value of a recognized asset or liability, or an unrecognized firm commitment, is classified as a
- Fair value hedge.
  - Cash flow hedge.
  - Foreign currency hedge.
  - Underlying.
- 32.** Gains and losses on the hedged asset/liability and the hedged instrument for a fair value hedge will be recognized
- In current earnings.
  - In other comprehensive income.
  - On a cumulative basis from the change in expected cash flows from the hedged instrument.
  - On the balance sheet either as an asset or a liability.
- 33.** Gains and losses of the effective portion of a hedging instrument will be recognized in current earnings in each reporting period for which of the following?

	Fair value hedge	Cash flow hedge
a.	Yes	No
b.	Yes	Yes
c.	No	No
d.	No	Yes

- 34.** Which of the following risks are inherent in an interest rate swap agreement?
- The risk of exchanging a lower interest rate for a higher interest rate.
  - The risk of nonperformance by the counterparty to the agreement.
- I only.
  - II only.
  - Both I and II.
  - Neither I nor II.
- 35.** Which of the following meet the definition of assets and/or liabilities?

	Derivative instruments	G/L on the fair value of derivatives
a.	Yes	No
b.	No	Yes
c.	Yes	Yes
d.	No	No

- 36.** Which of the following is **not** a type of foreign currency hedge?
- A forecasted transaction.
  - An available-for-sale security.
  - A recognized asset or liability.
  - An unrecognized firm commitment.

- 37.** Which of the following foreign currency transactions is **not** accounted for using hedge accounting?
- Available-for-sale securities.
  - Unrecognized firm commitments.
  - Net investments in foreign operations.
  - Foreign currency denominated forecasted transactions.

### B.10. Forward Exchange Contracts

Items 38 through 41 are based on the following:

On December 12, year 1, Imp Co. entered into three forward exchange contracts, each to purchase 100,000 euros in ninety days. The relevant exchange rates are as follows:

	Spot rate	Forward rate (for March 12, year 2)
November 30, year 1	\$.87	\$.89
December 12, year 1	.88	.90
December 31, year 1	.92	.93

**38.** Imp entered into the first forward contract to hedge a purchase of inventory in November year 1, payable in March year 2. At December 31, year 1, what amount of foreign currency transaction gain from this forward contract should Imp include in net income?

- \$0
- \$3,000
- \$5,000
- \$10,000

**39.** At December 31, year 1, what amount of foreign currency transaction loss should Imp include in income from the revaluation of the Accounts Payable of 100,000 euros incurred as a result of the purchase of inventory at November 30, year 1, payable in March year 2?

- \$0
- \$3,000
- \$4,000
- \$5,000

**40.** Imp entered into the second forward contract to hedge a commitment to purchase equipment being manufactured to Imp's specifications. The expected delivery date is March year 2 at which time settlement is due to the manufacturer. The hedge qualifies as a fair value hedge. At December 31, year 1, what amount of foreign currency transaction gain from this forward contract should Imp include in net income?

- \$0
- \$3,000
- \$5,000
- \$10,000

**41.** Imp entered into the third forward contract for speculation. At December 31, year 1, what amount of foreign currency transaction gain from this forward contract should Imp include in net income?

- \$0
- \$3,000
- \$5,000
- \$10,000

**B.12. Fair Value and Credit Risk Disclosures**

42. The risk of an accounting loss from a financial instrument due to possible failure of another party to perform according to terms of the contract is known as

- Off-balance-sheet risk.
- Market risk.
- Credit risk.
- Investment risk.

43. Examples of financial instruments with off-balance-sheet risk include all of the following **except**

- Outstanding loan commitments written.
- Recourse obligations on receivables.
- Warranty obligations
- Futures contracts.

44. Off-balance-sheet risk of accounting loss does **not** result from

- Financial instruments recognized as assets entailing conditional rights that result in a loss greater than the amount recognized in the balance sheet.
- Financial instruments not recognized as either assets or liabilities yet still expose the entity to risk of accounting loss.
- Financial instruments recognized as assets or liabilities where the amount recognized reflects the risk of accounting loss to the entity.
- Financial instruments recognized as liabilities that result in an ultimate obligation that is greater than the amount recognized in the balance sheet.

45. If it is not practicable for an entity to estimate the fair value of a financial instrument, which of the following should be disclosed?

- Information pertinent to estimating the fair value of the financial instrument.
  - The reasons it is **not** practicable to estimate fair value.
- I only.
  - II only.
  - Both I and II.
  - Neither I nor II.

46. Disclosure requirements for financial instruments include

- Method(s) and significant assumptions used in estimating fair value.
- Distinction between financial instruments held or issued for trading purposes and purposes other than trading.
- A note containing a summary table cross-referencing the location of other financial instruments disclosed in another area of the financial statements.
- All of the above should be disclosed.

47. Disclosure of credit risk of financial instruments with off-balance-sheet risk does **not** have to include

- The amount of accounting loss the entity would incur should any party to the financial instrument fail to perform.
- The entity's policy of requiring collateral or security.
- The class of financial instruments held.
- The specific names of the parties associated with the financial instrument.

48. Disclosure of information about significant concentrations of credit risk is required for

- All financial instruments.
- Financial instruments with off-balance-sheet credit risk only.
- Financial instruments with off-balance-sheet market risk only.
- Financial instruments with off-balance-sheet risk of accounting loss only.

49. Kline Bank has large amounts of notes receivable from companies with high debt-to-equity ratios as a result of buyout transactions. Kline is contemplating the following disclosures for the notes receivable in its year-end financial statements:

- Information about shared activity, region, or economic characteristic.
- A brief description of collateral supporting these financial instruments.

Which of the above disclosures are required under GAAP?

- I only.
- II only.
- Neither I nor II.
- Both I and II.

50. Whether recognized or unrecognized in an entity's financial statements, disclosure of the fair values of the entity's financial instruments is required when

- It is practicable to estimate those values.
- The entity maintains accurate cost records.
- Aggregated fair values are material to the entity.
- Individual fair values are material to the entity.

**D. International Financial Reporting Standards (IFRS)**

51. Under IFRS, a cash flow hedge and a hedge of a net investment are accounted for by

- Not recognizing gains and losses.
- Recognizing gains and losses in other comprehensive income.
- Recognizing gains and losses in profit and loss.
- Recognizing gains and losses when the hedge is closed out.

### Explanations

**1. (c)** When the **sale is made** on 10/15/Y1, Bain would record a receivable and sales at \$100,000, the US dollar equivalent on that date.

Accounts receivable	100,000
Sales	100,000

On 11/16/Y1, Bain receives foreign currency worth \$105,000. Since the receivable was recorded at \$100,000, a \$5,000 gain must be recorded.

Foreign currency	105,000
Accounts receivable	100,000
Foreign exchange transaction gain	5,000

The US dollar equivalent when the order was received on 9/1/Y1 (\$96,000) is not used to compute the gain because no entry is recorded on this date. The receipt and acceptance of a purchase order from a customer is an executory commitment which is not generally recorded.

**2. (d)** On 9/1/Y1, Cano obtained a receivable which will be collected in a foreign currency. A gain (loss) will result if the exchange rate on the settlement date is different from the rate existing on the transaction date. A gain (loss) must be recognized at any intervening balance sheet dates, if necessary. Therefore, Cano would recognize a \$2,500 foreign exchange transaction loss in its **year 1** income statement since a change in the exchange rate reduced the receivable (in US dollars) from \$50,000 on 9/1/Y1 ( $250,000 \times .20$ ) to \$47,500 on 12/31/Y1 ( $250,000 \times .19$ ). In year 2, a foreign exchange transaction gain of \$7,500 is recognized because the receivable (in US dollars) increased from \$47,500 on 12/31/Y1 to \$55,000 when received ( $250,000 \times .22$ ) on February 1, year 2.

**3. (a)** A transaction has occurred in which settlement will be made in Argentine pesos. Since Lindy's functional currency is the US dollar, a foreign exchange transaction gain (loss) will result if the spot rate on the settlement date is different than the rate on the transaction date. A provision must be made at

any intervening year-end date if there has been a rate change. Thus, in year 1, a \$500 foreign exchange transaction gain [ $100,000 \times (\$.4295 - \$.4245)$ ] would be recognized, while in year 2 a \$1,000 foreign exchange transaction loss [ $100,000 \times (\$.4245 - \$.4345)$ ] would be recognized.

**4. (b)** A purchase has been made for which payment will be made in British pounds. A foreign exchange transaction gain or loss will result if the spot rate on the settlement date is different from the rate used on the transaction date. A gain or loss must also be recorded at any intervening balance sheet date if there has been a rate change. Thus, at 12/31/Y1 a foreign exchange transaction gain of \$9,000 is recognized [ $300,000 \times (\$1.65 - \$1.62)$ ] as the foreign currency payable is reduced from \$495,000 ( $300,000 \times \$1.65$ ) to \$486,000 ( $300,000 \times \$1.62$ ). The thirty-day and sixty-day rates would affect Hunt only if the company had entered into forward contracts.

**5. (d)** On 1/20/Y1, Ball would record purchases and accounts payable at \$90,000. When the account was paid, the equivalent of \$96,000 was required to liquidate the \$90,000 liability, resulting in a foreign exchange transaction loss of \$6,000. Foreign exchange transaction gains (losses) are recognized at intervening balance sheet dates. The note payable originally recorded at \$500,000 was equivalent to a liability of \$520,000 at the balance sheet date, resulting in a year 1 loss of \$20,000. The interest payable of \$25,000 ( $\$500,000 \times 10\% \times 6/12$ ) was equivalent to a liability of \$26,000 at year-end, resulting in an additional year 1 loss of \$1,000. Therefore, the total year 1 foreign exchange transaction loss is \$27,000 ( $\$6,000 + \$20,000 + \$1,000$ ).

**6. (c)** The requirement is to determine the amount that Tyrola should accrue for royalties payable, 12/31/Y2. This situation is a foreign currency transaction in which settlement is denominated in other than a company's functional currency. In this case the functional currency is the US dollar because it is the currency of the primary economic environment in which the Colorado firm operates. Note that in this royalty agreement, 12/31/Y2 is the point at which the amount due to the author (50,000 Canadian dollars  $\times 10\% = 5,000$  Canadian dollars) is determined. Royalty expense is measured and the

related liability is denominated at 12/31/Y2. The year-end accrual would be  $.89 (10\% \times 50,000 \text{ Canadian dollars}) = \$4,450$ .

On January 10, year 2, Tyrola will have to purchase 5,000 Canadian dollars for payment to the Canadian author. The amount of US dollars required to accomplish this will depend on the spot rate on January 10 (\$.90 in this case). The number of US dollars required to satisfy the obligation will be \$50 greater  $[(.90 - .89) \times 5,000 \text{ Canadian dollars}]$ . This will result in a \$50 foreign exchange transaction loss which would be included in year 2 net income.

**7. (b)** In the case of the receivable denominated in Japanese yen, a foreign exchange transaction gain was recorded on the collection of the receivable. This means that more yen was received than was recorded in the receivable account. For that to happen the rate of yen exchangeable for a dollar would have had to decrease, requiring more yen to be paid at the settlement date for the same amount of dollars at the contract date. On the other hand, there was a foreign exchange transaction loss on the payable denominated in euros. This means that at the settlement date Shore Co. had to pay more euros than were recorded in the payable account. For this to occur the rate of euros exchangeable for a dollar would have had to decrease, requiring more euros to be paid at the settlement date for the same amount of dollars at the contract date.

**8. (b)** A transaction that is denominated in a currency other than the entity's functional currency, which is payable at a fixed amount at a later date, may result in an increased or decreased amount payable because of a change in the exchange rate. This increase/decrease would be classified as a foreign exchange transaction gain/loss, and would be included as a component of income. The gain/loss would not be considered extraordinary.

**9. (b)** The requirement is to determine how Velec should account for the exchange rate fluctuation in year 1. A foreign currency transaction is a transaction denominated in a currency other than the entity's functional currency. Denominated means that the balance is fixed in terms of the number of units of a foreign currency, regardless of changes in the exchange rate. When a US company buys or sells to an unrelated foreign company, and the US company agrees either to pay for goods or receive payment for the goods in foreign currency units, this is a foreign currency transaction from the point of view of the US company (the functional currency is the US dollar). In these situations, the US company has "crossed currencies" and directly assumes the risk of fluctuating foreign exchange rates of the foreign currency units. As exchange rates fluctuate, a company will record an ordinary gain or loss on their income statement, **not** an extraordinary gain or loss. Velec has an accounts payable denominated in a foreign currency (Qatari riyals) as of December 15, the date the title to the goods passes to Velec. As the value of the riyal per dollar rises above twenty riyals per dollar, Velec Co. will have to come up with less dollars to pay off the payable, as of December 31, year 1, than they would have on December 15, year 1. This creates a foreign exchange transaction gain. As shown numerically,

if 4000 riyals are assumed as being payable, on December 15 you would need \$200  $(4000/20)$  to pay off the payable. However, on December 31, \$190 would be needed  $(4000/21)$ . The difference between \$200 and \$190 represents the gain. A foreign exchange transaction gain should be included in net income, not a loss.

**10. (d)** Derivatives are financial instruments that derive their value from changes in a benchmark based on stock prices, interest rates, mortgage rates, currency rates, commodity prices, or some other agreed-upon base. Discounts on accounts receivable are not the basis of a benchmark for a derivative financial instrument.

**11. (b)** Derivative instruments must contain one or more underlyings **and** one or more notional amounts. Derivative instruments do contain terms that require or permit net settlement or delivery of an asset.

**12. (d)** Derivative financial instruments are contracts that are supposed to protect or hedge one or more of the parties from adverse movement in the underlying base. Answer (d) is correct because it does not fit the definition of a financial instrument. Risk of uncollectable accounts can be managed by effective credit policies.

**13. (c)** Derivative instruments meet the definition of assets and liabilities. As such they should be reported on the entity's financial statements. The most relevant measure for reporting financial instruments is fair value. Thus, statement I is true. If a derivative instrument does not qualify as a hedging instrument, then its gains or losses must be reported and recognized in current earnings. Thus, statement II is also true.

**14. (d)** All of the above meet the basic definition of an underlying, which is any financial or physical variable that has either observable changes or objectively verifiable changes.

**15. (b)** A call option is in the money if the price of the underlying is greater than the strike or exercise price of the underlying. An at-the-money option is one in which the price of the underlying is equal to the strike or exercise price. A call option is out of the money if the strike or exercise price is greater than the price of the underlying.

**16. (b)** Derivative instruments contain

1. One or more underlyings and one or more notional amounts
2. No initial net investment or smaller net investment than required for contracts with an expected similar response to market changes, and
3. Terms that require or permit net settlement, net settlement by means outside the contract, and delivery of an asset that is substantially the same as net settlement.

**17. (a)** Notional amounts are the referenced associated asset or liability that are commonly a number of units such as barrels of oil. Answers (b) and (d) are incorrect because they are examples of underlyings. Answer (c) is incorrect because it is an example of a derivative instrument.

**18. (d)** Disclosures related to financial instruments that are used as hedging instruments must include the following information:

1. Objectives and strategies for achieving them.
2. Context to understand the instrument.
3. Risk management policies.
4. A list of hedged instruments.

Disclosure of the maximum potential accounting loss is only required for financial instruments with concentrations of credit risk.

**19. (b)** Only call (put) options are included in the definition of derivative financial instruments. Leases are excluded because they require a payment equal to the value of the right to use the property. Equity securities and adjustable rate loans are excluded because they require an initial net investment equivalent to the fair value.

**20. (d)** Futures contracts, credit indexed contracts, and interest rate swaps are all included in derivative instruments.

**21. (a)** The hybrid instrument is **not** recorded at fair value. Economic characteristics and risks of the embedded instrument are **not** “clearly and closely” related to those of the host contract. The embedded derivative must meet the definition of a derivative instrument.

**22. (c)** An embedded derivative is a feature of a financial instrument or other contract, which if the feature stood alone, would meet the definition of a derivative.

**23. (d)** Bifurcation is the process of separating an embedded derivative from its host contract. This process is necessary so that hybrid instruments can be separated into their component parts, each being accounted for using the appropriate valuation techniques.

**24. (c)** Alvarez can elect not to bifurcate the hybrid instrument, and this election can be made on an instrument by instrument basis. Answer (a) is incorrect because an election can be made not to bifurcate an instrument. Answer (b) is incorrect because hybrid financial instruments must be disclosed. Answer (d) is incorrect because the hybrid financial instruments can be selected on an instrument by instrument basis.

**25. (a)** If a company elects not to bifurcate a hybrid financial instrument, the entire instrument is valued at fair value. Answers (b), (c), and (d) are incorrect because these valuation models are incorrect.

**26. (d)** The balance sheet disclosure may be presented in one of two ways: as a separate line item for the fair value and non-fair value instruments on the balance sheet, or as an aggregate amount of all hybrid instruments with the amount of the hybrid instruments at fair value shown in parentheses. Answers (a), (b), and (c) are incorrect because two disclosures are permissible on the balance sheet.

**27. (c)** If a company elects not to bifurcate a hybrid financial instrument, the entire instrument is recorded at fair value. Changes in fair value each year are recognized in earnings for the period. Answer (a) is incorrect because changes in fair

value must be recognized. Answer (b) is incorrect because the changes are not recognized in other comprehensive income. Answer (d) is incorrect, because an adjustment is only made to beginning retained earnings in the year that a company initially adopts the new accounting pronouncement.

**28. (a)** Hedge accounting is permitted for four types of hedges.

1. Unrecognized firm commitments.
2. Available-for-sale securities.
3. Foreign currency denominated hedge forecasted transactions.
4. Net investments in foreign operations.

Trading securities is not one of the four types.

**29. (a)** The general criteria for a hedging instrument are that sufficient documentation must be provided at the beginning of the process and the hedge must be “highly effective” throughout its life.

**30. (d)** For an unrecognized firm commitment to qualify as a hedged item it must

1. Be binding on both parties.
2. Be specific with respect to all significant items including quantity to be exchanged, the fixed price, and the timing of the transaction.
3. Contain a nonperformance clause that makes performance probable.

**31. (a)** A fair value hedge is a hedge of the exposure to changes in the fair value of a recognized asset or liability or firm commitment. Two other types of hedges are cash flow and foreign currency hedges. An underlying is commonly a specified price or rate.

**32. (a)** Gains and losses of a fair value hedge will be recognized in current earnings. The effective portion of a cash flow hedge is reported in other comprehensive income and the ineffective portion is reported on a cumulative basis to reflect the lesser of the cumulative gain/loss on the derivative or the cumulative gain/loss from the change in expected cash flows from the hedged instrument. Gains and losses from a change in the fair value of derivative instruments are not assets and liabilities and should not be reported on the balance sheet.

**33. (a)** Fair value hedges will recognize gains and losses for the effective portion of the hedging instrument in each reporting period. Cash flow hedges will recognize gains and losses for the effect portion of the hedging instrument in other comprehensive income.

**34. (c)** An interest rate swap agreement involves the exchange of cash flows determined by various interest rates. Fluctuations in interest rates after the agreement is entered into may result in the risk of exchanging a lower interest rate for a higher interest rate. Financial instruments, including swaps, also bear credit risk or the risk that a counterparty to the agreement will not perform as expected.

**35. (a)** Derivatives do meet the definition of assets/ liabilities and, therefore, should be recognized and reported as such on the financial statements. In contrast, gains and losses

that result from the change in the fair value of derivatives are not assets/liabilities and should either appear in other comprehensive income or be reported in current earnings.

**36. (c)** The four foreign currency hedges are an unrecognized firm commitment, an available-for-sale security, a foreign currency denominated forecasted transaction, and a net investment in foreign operations. A hedge of a recognized asset or liability is a fair value hedge or cash flow hedge, not a foreign currency hedge.

**37. (c)** The hedged net investment is viewed as a single asset. The provisions for recognizing the gain or loss on the hedged asset/liability and the hedging instrument rules do not apply to the hedges of net investments in foreign operations. Instead, hedges of net investments in foreign operations shall be reported in the same manner as a translation adjustment.

**38. (b)** Forward exchange contracts are measured at fair value. Each period this is accomplished by marking the forward exchange contract to market using the forward rate at the FS date. At 12/31/Y1 the forward rate is \$.93. The difference between \$.93 and \$.90, the forward rate on the date the contracts were entered into, times 100,000 euros is \$3,000, the forward exchange gain. The entry would be as follows:

Forward contract receivable	3,000	
Forward contract gain		3,000

The \$3,000 forward exchange contract gain would be included in year 1 net income.

**39. (d)** The accounting for gains and losses from foreign currency transactions requires a revaluation of exposed net assets and liabilities denominated in foreign currency units at the current spot rate. At 12/31/Y1 there is a foreign exchange transaction loss of \$5,000  $[(.92 - .87) \times 100,000 \text{ euros}]$ . Note that accounts payable was created on 11/30/Y1. The entry to record the loss is as follows:

Foreign exchange loss	5,000	
Accounts payable		5,000

The loss would be reported in year 1 net income.

**40. (b)** Hedges involving firm purchase commitments are treated in the same manner as a forward exchange contract that was entered into to hedge an exposure of a liability.

Forward contract receivable	3,000	
Forward contract gain		3,000
<i>To revalue forward contract using forward rates</i>		
Foreign exchange loss	3,000	
Firm purchase commitment		3,000
<i>To recognize loss on firm commitment</i>		

Note that this hedge is 100% effective because the gain on the forward contract and the loss on the firm purchase commitment offset each other, net.

**41. (b)** Using a forward exchange contract to speculate would result in a gain or loss each period FS are prepared. The contract would be revalued each reporting period using the forward rate. The gain or loss calculated would be reported in net income. The journal entry would be as follows:

Forward contract receivable	3,000	
Forward contract gain		3,000

**42. (c)** Credit risk is the risk of accounting loss from a financial instrument due to possible failure of another party to perform according to the terms of the contract. Off-balance-sheet risk is the possible amount of loss from an instrument that is not reflected on the balance sheet. Market risk is the risk that future changes in market prices may make a financial instrument less valuable.

**43. (c)** The value of derivative financial instruments is typically derived from the value of an underlying asset or is tied to an index. As the price of the underlying asset changes, the price of the derivative changes. Outstanding loan commitments written, recourse obligations on receivables, and futures contracts are all tied to an asset account. Warranty obligations are the result of the sale of goods.

**44. (c)** Off-balance-sheet risk is the possible amount of loss from an instrument that is not reflected on the balance sheet because a loss has not yet occurred or because the item is not recognized as an asset or liability. If the amount recognized on the balance sheet reflects the accounting loss to the entity, then there is no off-balance-sheet risk to consider.

**45. (c)** If it is not practicable for an entity to estimate the fair value of a financial instrument, (1) information pertinent to estimating fair value **and** (2) the reasons why it is not practicable to estimate fair value should be disclosed.

**46. (d)** The following disclosures are required:

- Method(s) and significant assumptions used in estimating fair value.
- A distinction between financial instruments held or issued for trading purposes and purposes other than trading.
- Information pertinent to estimating the fair value of a financial instrument if it is not practicable for the entity to estimate and the reason why estimation is not practicable.
- Derivative financial instruments may not be combined, aggregated, or netted with nonderivative or other derivative financial instruments.
- If financial instruments are disclosed in more than one area in the financial statements, one note must contain a summary table cross-referencing the location of the other instruments.

**47. (d)** The following disclosures are required about credit risk for financial instruments with off-balance-sheet credit risk:

- The amount of accounting loss the entity would incur should any party to the financial instrument fail to perform according to the terms of the contract and the collateral, if any, is of no value.

- The class of financial instruments held.
- Categorization between instruments held for trading purposes and purposes other than trading.

**48. (a)** Concentrations of credit risk exist when an entity has a business activity, economic characteristic, or location that is common to most of its financial instruments. Disclosure of information about significant concentrations of credit risk for **all** financial instruments is required.

**49. (d)** Since many of Kline Bank's debtors have high debt-to-equity ratios, this group of debtors has a similar economic characteristic, and thus, would be considered a concentration of credit risk to Kline Bank. The entity must disclose the following information regarding concentrations of credit risk:

1. Information about the shared activity, region, or economic characteristic of the group.
2. Amount of accounting loss that the entity would incur as a result of the concentrated parties' failure to perform according to the terms of the contracts.
3. Information regarding entity's policy of requiring collateral.

**50. (a)** Entities must disclose the fair market value of financial instruments, both assets and liabilities whether recognized or not recognized in the statement of financial position, for which it is practicable to estimate fair value. Pertinent descriptive information as to the fair value of the instrument is to be disclosed if an estimate of fair value cannot be made without incurring excessive costs.

**51. (b)** The requirement is to identify the appropriate accounting method for a cash flow hedge and a hedge of a net investment. Answer (b) is correct because such hedges are accounted for by recognizing gains and losses in other comprehensive income.

## Simulations

### Task-Based Simulation 2

Applicability of SFAS 133	Authoritative Literature	Help
---------------------------	--------------------------	------

This question consists of 14 items that represent financial instruments and other contracts that may be included in or excluded from the requirements of ASC Topic 815 (SFAS 133), *Derivatives and Hedging*.

For the following items, determine if they are (I) included under the requirement of ASC Topic 815, or (E) excluded from ASC Topic 815 treatment.

- I. Item meets the definition of a derivative instrument and must be accounted for using ASC Topic 815.
- E. Item is **not** required to be accounted for under ASC Topic 815, either because it does not meet the definition of derivative instrument or because the item is specifically excluded from ASC Topic 815 treatment.

	(I)	(E)
1. Leases	<input type="radio"/>	<input type="radio"/>
2. Guaranteed investment contracts	<input type="radio"/>	<input type="radio"/>
3. Futures contracts	<input type="radio"/>	<input type="radio"/>
4. Equity securities	<input type="radio"/>	<input type="radio"/>
5. Credit indexed contracts	<input type="radio"/>	<input type="radio"/>
6. Mortgage-backed securities	<input type="radio"/>	<input type="radio"/>
7. Debt securities	<input type="radio"/>	<input type="radio"/>
	(I)	(E)

### Task-Based Simulation 4

Terminology		
	Authoritative Literature	Help

Select the **best** answer for each item from the terms listed in A–O. No answer should be used more than once.

#### Answer List

- A. An agreement with an unrelated party, binding on both, usually legally enforceable, specifying all significant terms and including a disincentive for nonperformance sufficient to make performance likely.
- B. A call option where the price of the underlying is greater than the strike or exercise price of the underlying.
- C. A feature on a financial instrument or other contract, which if the feature stood alone, would meet the definition of a derivative.
- D. A forward-based contract or agreement generally between two counterparties to exchange streams of cash flows over a specified period in the future.
- E. With regard to call options, it is the larger of zero or the spread between the stock price and the exercise price.
- F. Provides the holder the right to acquire an underlying at an exercise or stock price, anytime during the option term.
- G. An agreement between the two parties to buy and sell a specific quantity of a commodity, foreign currency, or financial instrument at an agreed-upon price, with delivery and/or settlement at a designated future date.
- H. A call option where the strike or exercise price is greater than the price of the underlying.
- I. The process of separating an embedded derivative from its host contract.
- J. The referenced associated asset or liability, commonly a number of units.
- K. A specified price or rate such as a stock price, interest rate, or commodity price.
- L. An option where the price of the underlying is equal to the strike or exercise price.
- M. The difference between an option's price and its intrinsic value.
- N. Provides the holder the right to sell the underlying at an exercise or strike price, anytime during the option term.
- O. A forward-based contract to make or take delivery of a designated financial instrument, foreign currency, or commodity during a designated period, at a specified price or yield.

### Task-Based Simulation 5

Journal Entries	Authoritative Literature	
	Help	

### Situation

Logan Corporation markets their products internationally. The company buys and sells goods in Great Britain, France, and Germany. Although Logan’s functional currency is the US dollar, the transactions are denominated in the currencies for each country as shown in the table below.

Country	Currency
Great Britain	£
France	€
Germany	€

The spot rates for various dates throughout the year are shown below.

Date	US \$ per £1	US \$ per €1
January 1, year 1	1.786	1.258
March 1, year 1	1.869	1.249
April 15, year 1	1.791	1.197
November 10, year 1	1.857	1.290
December 1, year 1	1.911	1.329
December 20, year 1	1.945	1.333
December 31, year 1	1.927	1.364
January 15, year 2	1.869	1.311
Average daily rate, year 1	1.886	1.279

The following transactions are denominated in each country's local currency.

On March 1, year 1, Logan sells goods on account to Lexington Corporation, located in London, for £370,000. The account is due in 60 days. Lexington pays the full balance due on April 15, year 1.

On November 10, year 1, Logan purchases supplies from Dietmar Corporation in Germany for €190,000. On December 1, year 1, Logan pays Dietmar for the supplies.

On December 20, year 1, Logan sells goods on account to Cordier Corporation in France for €250,000. Cordier pays for the goods on January 15, year 2.

1. Prepare the journal entry for the sale of goods to Lexington on March 1.

2. Prepare the journal entry on April 15, year 1, when Lexington pays for the goods.

3. Prepare the journal entry for the purchase of supplies from Dietmar Corporation on November 10, year 1.

4. Prepare the journal entry for the payment to Dietmar on December 1, year 1.

5. Prepare the journal entry for the sale of goods to Cordier Corporation.

6. Prepare any entries necessary on December 31, year 1, with regard to the foreign currency transactions with Lexington, Dietmar, and Cordier Corporation.

7. Prepare the journal entry for Cordier's payment of goods on January 15, year 2.

## Simulation Solutions

### Task-Based Simulation 1

Concepts	Authoritative Literature	Help

	(A)	(B)	(C)	(D)	(E)
1. Tandem currencies	<input type="radio"/>	<input type="radio"/>	<input checked="" type="radio"/>	<input type="radio"/>	<input type="radio"/>
2. Discount or premium	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input checked="" type="radio"/>
3. Ineffective portion of a hedge	<input type="radio"/>	<input checked="" type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>
4. Effective portion of a hedge	<input checked="" type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>
5. Forward contract	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input checked="" type="radio"/>	<input type="radio"/>

### Explanations

- (C) Tandem currencies are two currencies other than a functional currency expected to move in tandem with each other relative to an entity's functional currency.
- (E) A discount or premium is the difference between the futures rate and the spot rate at the date of a forward contract.
- (B) The ineffective portion of a hedge has resulting gains or losses taken into income in the period in which they arise.
- (A) The effective portion of a hedge is given special hedge accounting treatment. The evaluation of effectiveness is done no less than every three months. A highly effective hedge will have a value change ranging from roughly .8 to 1.2 times the variability of the cash flows being hedged.
- (D) A forward contract is a hedge against an exposed asset position created by having an account in a denomination other than the functional currency.

### Task-Based Simulation 2

Applicability of SFAS 133	Authoritative Literature	Help

	(I)	(E)
1. Leases	<input type="radio"/>	<input checked="" type="radio"/>
2. Guaranteed investment contracts	<input type="radio"/>	<input checked="" type="radio"/>
3. Futures contracts	<input checked="" type="radio"/>	<input type="radio"/>
4. Equity securities	<input type="radio"/>	<input checked="" type="radio"/>
5. Credit indexed contracts	<input checked="" type="radio"/>	<input type="radio"/>
6. Mortgage-backed securities	<input type="radio"/>	<input checked="" type="radio"/>
7. Debt securities	<input type="radio"/>	<input checked="" type="radio"/>
8. Interest rate caps	<input checked="" type="radio"/>	<input type="radio"/>

	(I)	(E)
9. Swaptions	<input checked="" type="radio"/>	<input type="radio"/>
10. Employee stock options	<input type="radio"/>	<input checked="" type="radio"/>
11. Options to purchase or sell exchange-traded securities	<input checked="" type="radio"/>	<input type="radio"/>
12. Variable annuity contracts	<input type="radio"/>	<input checked="" type="radio"/>
13. Adjustable rate loans	<input type="radio"/>	<input checked="" type="radio"/>
14. Interest rate swaps	<input checked="" type="radio"/>	<input type="radio"/>

### *Explanations*

- (E) Leases are excluded from accounting for derivatives treatment.
- (E) Guaranteed investment contracts are not required to be accounted for under derivative rules.
- (I) Futures contracts must be accounted for using the rules for derivatives.
- (E) Equity securities do not fall under the requirements of accounting for derivatives.
- (I) Credit indexed contracts are required to be accounted for under the rules for derivatives.
- (E) Mortgage-backed securities are excluded from derivatives treatment.
- (E) Debt securities are not required to be accounted for using the rules for derivatives.
- (I) Interest rate caps must be accounted for using the rules for derivatives.
- (I) Swaptions meet the definition of a derivative instrument.
- (E) Employee stock options are excluded from derivatives treatment.
- (I) Options to purchase (call) or sell (put) exchange-traded securities are included under derivatives.
- (E) Variable annuity contracts do not fall under the requirements of accounting for derivatives.
- (E) Adjustable rate loans are not required to be accounted for under the rules for derivatives.
- (I) Interest rate swaps must be accounted for using the rules for derivatives.

**Explanations**

- (L) An at-the-money option is one in which the price of the underlying is equal to the strike or exercise price.
- (I) Bifurcation is the process of separating an embedded derivative from its host contract. This process is necessary so that hybrid instruments (a financial instrument or other contract that contains an embedded derivative) can be separated into their component parts, each being accounted for using the appropriate valuation techniques.
- (F) An American call option provides the holder the right to acquire an underlying at an exercise or strike price anytime during the option term. A premium is paid by the holder for the right to benefit from the appreciation in the underlying.
- (C) An embedded derivative is a feature on a financial instrument or other contract which, if the feature stood alone, would meet the definition of a derivative.
- (G) A forward contract is an agreement between two parties to buy and sell a specific quantity of a commodity, foreign currency, or financial instrument at an agreed-upon price, with delivery and/or settlement at a designated future date. Because a forward contract is not formally regulated by an organized exchange, each party to the contract is subject to the default of the other party.
- (O) A futures contract is a forward-based contract to make or take delivery of a designated financial instrument, foreign currency, or commodity during a designated period, at a specified price or yield. The contract frequently has provisions for cash settlement. A futures contract is traded on a regulated exchange and, therefore, involves less credit risk than a forward contract.
- (B) A call option is in the money if the price of the underlying is greater than the strike or exercise price of the underlying.
- (J) The notional amount (or payment provision) is the referenced associated asset or liability. A notional amount is commonly a number of units such as shares of stock, principal amount, face value, stated value, basis points, barrels of oil, etc. It may be that amount plus a premium or minus a discount. The interaction of the price or rate (underlying) with the referenced associated asset or liability (notional amount) determines whether settlement is required and, if so, the amount.
- (H) A call option is out of the money if the strike or exercise price is greater than the price of the underlying. A put option is out of the money if the price of the underlying is greater than the strike or exercise option.
- (N) An American put option provides the holder the right to sell the underlying at an exercise or strike price, anytime during the option term. A gain accrues to the holder as the market price of the underlying falls below the strike price.
- (D) A swap is a forward-based contract or agreement generally between two counterparties to exchange streams of cash flows over a specified period in the future.

**12. (K)** An underlying is commonly a specified price or rate such as a stock price, interest rate, currency rate, commodity price, or a related index. However, any variable (financial or physical) with (1) observable changes or (2) objectively verifiable changes such as a credit rating, insurance index, climatic or geological condition (temperature, rainfall) qualifies. Unless it is specifically excluded, a contract based on any qualifying variable is accounted for under the rules for derivatives if it has the distinguishing characteristics stated above.

€250,000 × 1.333 = \$333,250		
6. Accounts receivable (€)	7,750	
Gain on FC transaction		7,750
Adjust to spot rate on balance sheet date €250,000 × (1.364 – 1.333) = \$7,750 gain		
7. Cash	327,750	
Loss on FC transaction	13,250	
Accounts receivable (€)		341,000
€250,000 × 1.311 = \$327,750 Original A/R of \$333,250 + \$7,750 gain = \$341,000 balance in A/R as of 12/31/Y1 Loss is \$341,000 – \$327,750 = \$13,250		

### Explanations

Foreign currency transactions are recorded at the spot rate on the date of the transaction. When the account is settled in the foreign currency, the currency is exchanged at the spot rate on the date of settlement, and any gain or loss is recognized as a transaction gain/loss.

If the account is outstanding at the balance sheet date, the account receivable or payable is adjusted to the spot rate on the balance sheet date and the gain/loss from foreign currency transaction is recognized as other income for the period.

## Module 20: Miscellaneous

### Overview

This module covers personal financial statements, interim reporting, segment reporting, partnership accounting, and foreign currency translation.

The personal financial statements section covers how to report assets and liabilities and tax estimates. This topic is located in ASC Topic 274.

Interim reporting describes financial reporting for periods less than a year. This topic is located in ASC Topic 270.

Segment reporting presents disclosure standards for the components of an entity's operations, its products and services, its geographic areas, and its major customers. This topic is located in ASC Topic 280.

Partnership accounting describes and events related to formation, income allocation, dissolution, admission of a new partner, withdrawal of an existing partner, and liquidation. The ASC does not provide guidance for partnership accounting and reporting. Guidance is provided within the Uniform Partnership Acts of 1914 and 1997; and the Revised Uniform Partnership Act of 1994.

The foreign currency translation section covers translations and remeasurement. Determining if a subsidiary's transactions are denominated in a foreign currency or US dollars establishes which method should be applied. This topic is located in ASC Topic 830.

### A. Personal Financial Statements<sup>1</sup> (ASC Topic 274)

1. Personal financial statements may be prepared for an individual, husband and wife, or family. Personal financial statements (PFS) consist of
  - a. **Statement of financial condition**—presents estimated current values of assets, estimated current amounts of liabilities, estimated income taxes, and net worth at a specified date.
  - b. **Statement of changes in net worth**—presents main sources of increases (decreases) in net worth over the time period included by the statement of changes in net worth.
2. Assets and liabilities, including changes therein, should be recognized using the accrual basis of accounting. Assets and liabilities should be listed by order of liquidity and maturity, not a current/noncurrent basis.

<sup>1</sup>The source of GAAP for personal financial statements is ASC Topic 274, which has been summarized in this module.

3. In PFS, **assets** should be presented at their estimated current value. This is an amount at which the item could be exchanged assuming both parties are well informed, neither party is compelled to buy or sell, and material disposal costs are deducted to arrive at current values. **Liabilities** should be presented at the lesser of the discounted amount of cash to be paid or the current cash settlement amount. Income taxes payable should include unpaid income taxes as of the date of the statement of financial condition. Also, PFS should include the **estimated income tax** on the difference between the current value (amount) of assets (liabilities) and their respective tax bases as if they had been realized or liquidated. The table below summarizes the methods of determining “estimated current values” for assets and “estimated current amounts” for liabilities.
4. Business interests which comprise a large portion of a person’s total assets should be shown separately from other investments. An investment in a separate entity which is marketable as a going concern (e.g., closely held corporation) should be presented as one amount for its fair value. If the investment is a limited business activity, not conducted in a separate business entity, separate asset and liability amounts should be shown (e.g., investment in real estate and related mortgage). Of course, only the person’s beneficial interest in the investment is included in their PFS.

Assets and liabilities	Discounted cash flow	Market price	Appraised value	Other
• Receivables	x			
• Marketable securities		x		
• Options		x		
• Investment in life insurance				Cash value less outstanding loans
• Investment in closely held business	x		x	Liquidation value, multiple of earnings, reproduction value, adjustment of book value or cost
• Real estate	x		x	Sales of similar property
• Intangible assets	x			
• Future interests (nonforfeitable rights)	x			
• Payables and other liabilities	x			Discharge amount if lower than discounted amount
• Noncancelable commitments	x			
• Income taxes payable				Unpaid income tax for completed tax years and estimated income tax for elapsed portion of current tax year to date of financial statements
• Estimated income tax on difference between current values of assets and current amounts of liabilities and their respective tax bases				Computed as if current value of assets and liabilities had been respectively realized or liquidated considering applicable tax laws and regulations, recapture provisions and carryovers

**NOW REVIEW MULTIPLE-CHOICE QUESTIONS 1 THROUGH 17**

## Multiple-Choice Questions (1–17)

### A. Personal Financial Statements

1. Green, a calendar-year taxpayer, is preparing a personal statement of financial condition as of April 30, year 2. Green's year 1 income tax liability was paid in full on April 15, year 2. Green's tax on income earned between January and April year 2 is estimated at \$20,000. In addition, \$40,000 is estimated for income tax on the differences between the estimated current values and current amounts of Green's assets and liabilities and their tax bases at April 30, year 2. No withholdings or payments have been made towards the year 2 income tax liability. In Green's April 30, year 2 statement of financial condition, what amount should be reported, between liabilities and net worth, as estimated income taxes?

- a. \$0
- b. \$20,000
- c. \$40,000
- d. \$60,000

2. On December 31, year 1, Shane is a fully vested participant in a company-sponsored pension plan. According to the plan's administrator, Shane has at that date the nonforfeitable right to receive a lump sum of \$100,000 on December 28, year 2. The discounted amount of \$100,000 is \$90,000 at December 31, year 1. The right is not contingent on Shane's life expectancy and requires no future performance on Shane's part. In Shane's December 31, year 1, personal statement of financial condition, the vested interest in the pension plan should be reported at

- a. \$0
- b. \$90,000
- c. \$95,000
- d. \$100,000

3. The following information pertains to marketable equity securities owned by Kent:

Stock	Fair value at December 31,		Cost in Year 1
	Year 3	Year 2	
City Mfg., Inc.	\$95,500	\$93,000	\$89,900
Tri Corp.	3,400	5,600	3,600
Zee, Inc.		10,300	15,000

The Zee stock was sold in January year 3 for \$10,200. In Kent's personal statement of financial condition at December 31, year 3, what amount should be reported for marketable equity securities?

- a. \$93,300
- b. \$93,500
- c. \$94,100
- d. \$98,900

4. Clint owns 50% of Vohl Corp.'s common stock. Clint paid \$20,000 for this stock in year 1. At December 31, year 4, Clint's 50% stock ownership in Vohl had a fair value of \$180,000. Vohl's cumulative net income and cash dividends declared for the five years ended December 31, year 4, were

\$300,000 and \$40,000, respectively. In Clint's personal statement of financial condition at December 31, year 4, what amount should be shown as the investment in Vohl?

- a. \$20,000
- b. \$150,000
- c. \$170,000
- d. \$180,000

5. Jen has been employed by Komp, Inc. since February 1, year 1. Jen is covered by Komp's Section 401(k) deferred compensation plan. Jen's contributions have been 10% of salaries. Komp has made matching contributions of 5%. Jen's salaries were \$21,000 in year 1, \$23,000 in year 2, and \$26,000 in year 3. Employer contributions vest after an employee completes three years of continuous employment. The balance in Jen's 401(k) account was \$11,900 at December 31, year 3, which included earnings of \$1,200 on Jen's contributions. What amount should be reported for Jen's vested interest in the 401(k) plan in Jen's December 31, year 3 personal statement of financial condition?

- a. \$11,900
- b. \$8,200
- c. \$7,000
- d. \$1,200

6. The following information pertains to an insurance policy that Barton owns on his life:

Face amount	\$100,000
Accumulated premiums paid up to December 31, year 2	8,000
Cash value at December 31, year 2	12,000
Policy loan	3,000

In Barton's personal statement of financial condition at December 31, year 2, what amount should be reported for the investment in life insurance?

- a. \$97,000
- b. \$12,000
- c. \$9,000
- d. \$8,000

7. Ely had the following personal investments at December 31, year 1:

- Realty held as a limited business activity not conducted in a separate business entity. Mortgage payments were made with funds from sources unrelated to the realty. The cost of this realty was \$500,000, and the related mortgage payable was \$100,000 at December 31, year 1.
- Sole proprietorship marketable as a going concern. Its cost was \$900,000, and it had related accounts payable of \$80,000 at December 31, year 1.

The costs of both investments equal estimated current values. The balances of liabilities equal their estimated current amounts.

How should the foregoing information be reported in Ely's statement of financial condition at December 31, year 1?

	Assets	Liabilities
a. Investment in real estate	\$ 400,000	
Investment in sole proprietorship	820,000	
b. Investment in real estate	\$ 500,000	
Investment in sole proprietorship	820,000	
Mortgage payable		\$100,000
c. Investment in real estate	\$ 500,000	
Investment in sole proprietorship	900,000	
Mortgage payable		\$100,000
Accounts payable		80,000
d. Investments	\$1,400,000	
Accounts and mortgage payable		\$180,000

8. At December 31, year 1, Ryan had the following non-cancelable personal commitments:

Pledge to be paid to County Welfare Home thirty days after volunteers paint the walls and ceiling of the Home's recreation room	\$ 5,000
Pledge to be paid to City Hospital on the recovery of Ryan's comatose sister	\$25,000

What amount should be included in liabilities in Ryan's personal statement of financial condition at December 31, year 1?

- \$0
- \$5,000
- \$25,000
- \$30,000

9. The estimated current values of Lane's personal assets at December 31, year 1, totaled \$1,000,000, with tax bases aggregating \$600,000. Included in these assets was a vested interest in a deferred profit-sharing plan with a current value of \$80,000 and a tax basis of \$70,000. The estimated current amounts of Lane's personal liabilities equaled their tax bases at December 31, year 1. Lane's year 1 effective income tax rate was 30%. In Lane's personal statement of financial condition at December 31, year 1, what amount should be provided for estimated income taxes relating to the excess of current values over tax bases?

- \$120,000
- \$117,000
- \$3,000
- \$0

10. Shea, a calendar-year taxpayer, is preparing a personal statement of financial condition as of April 30, year 2. Shea's year 1 income tax liability was paid in full on April 15, year 2. Shea's tax on income earned from January through April year 2 is estimated at \$30,000. In addition, \$25,000 is estimated for income tax on the differences between the estimated current values of Shea's assets and the current amounts of liabilities and their tax bases at April 30, year 2. No withholdings or

payments have been made towards the year 2 income tax liability. In Shea's statement of financial condition at April 30, year 2, what is the total of the amount or amounts that should be reported for income taxes?

- \$0
- \$25,000
- \$30,000
- \$55,000

11. The following information pertains to Smith's personal assets and liabilities at December 31, year 1:

	Historical cost	Estimated current values	Estimated current amounts
Assets	\$500,000	\$900,000	
Liabilities	100,000		\$80,000

Smith's year 1 income tax rate was 30%. In Smith's personal statement of financial condition at December 31, year 1, what amount should be reported as Smith's net worth?

- \$294,000
- \$420,000
- \$694,000
- \$820,000

12. Personal financial statements usually consist of

- A statement of net worth and a statement of changes in net worth.
- A statement of net worth, an income statement, and a statement of changes in net worth.
- A statement of financial condition and a statement of changes in net worth.
- A statement of financial condition, a statement of changes in net worth, and a statement of cash flows.

13. Personal financial statements should report assets and liabilities at

- Estimated current values at the date of the financial statements and, as additional information, at historical cost.
- Estimated current values at the date of the financial statements.
- Historical cost and, as additional information, at estimated current values at the date of the financial statements.
- Historical cost.

14. A business interest that constitutes a large part of an individual's total assets should be presented in a personal statement of financial condition as

- A separate listing of the individual assets and liabilities at cost.
- Separate line items of both total assets and total liabilities at cost.
- A single amount equal to the proprietorship equity.
- A single amount equal to the estimated current value of the business interest.

15. Smith owns several works of art. At what amount should these artworks be reported in Smith's personal financial statements?

- a. Original cost.
- b. Insured amount.
- c. Smith's estimate.
- d. Appraised value.

16. For the purpose of estimating income taxes to be reported in personal financial statements, assets and liabilities measured at their tax bases should be compared to assets and liabilities measured at their

<b>Assets</b>	<b>Liabilities</b>
a. Estimated current value	Estimated current amount
b. Historical cost	Historical cost
c. Estimated current value	Historical cost
d. Historical cost	Estimated current amount

17. In personal financial statements, how should estimated income taxes on the excess of the estimated current values of assets over their tax bases be reported in the statement of financial condition?

- a. As liabilities.
- b. As deductions from the related assets.
- c. Between liabilities and net worth.
- d. In a footnote disclosure only.

## Multiple-Choice Answers and Explanations

### Answers

1. c    ___ ___	5. b    ___ ___	9. a    ___ ___	13. b    ___ ___	17. c    ___ ___
2. b    ___ ___	6. c    ___ ___	10. d    ___ ___	14. d    ___ ___	
3. d    ___ ___	7. b    ___ ___	11. c    ___ ___	15. d    ___ ___	1st: ___/17 = ___%
4. d    ___ ___	8. a    ___ ___	12. c    ___ ___	16. a    ___ ___	2nd: ___/17 = ___%

### Explanations

**1. (c)** Only the estimated amount of income taxes on the differences between the estimated current values and current amounts of assets and liabilities is presented between liabilities and net worth. Answer (a) is incorrect because the \$40,000 estimated income taxes on the differences between the estimated current values and current amounts of assets and liabilities is presented between liabilities and net worth. Answer (b) is incorrect because the \$20,000 current tax liability would be presented as a liability. Answer (d) is incorrect because the \$20,000 current tax liability would be presented as a liability while the \$40,000 amount would be presented between liabilities and net worth.

**2. (b)** In a personal statement of financial condition, assets are generally presented at estimated current values. Depending on the nature of the asset, current value can be estimated using fair market value, net realizable value, discounted cash flow, or appraised value. A future interest that is nonforfeitable should be valued using discounted cash flow. Therefore, the interest in the pension plan should be valued at \$90,000.

**3. (d)** Assets are generally presented at their estimated current values on personal financial statements. For Kent's December 31, year 3 personal statement of financial condition, the current values of the marketable equity securities held as of that date should be used. Thus, Kent should report \$98,900 (\$95,500 + \$3,400) for marketable equity securities.

**4. (d)** Assets are generally presented at their estimated current values. Depending on the nature of the asset, current value can be estimated using fair value (FV), net realizable value, discounted cash flow, or appraised value. In this problem, the fair value of the stock (\$180,000) is known and should be shown as the investment in Vohl. Note that the net income and dividends have nothing to do with the amount shown as the investment in Vohl, and this information is irrelevant.

**5. (b)** This problem requires that we determine Jen's vested interest in the 401(k) plan to be reported in her December 31, year 3 personal statement of financial condition. The problem states that employer contributions vest after an employee completes three years of service. As Jen has not completed three years of service as of December 31, year 3, none of the employer's contributions have vested. Thus, the problem is to

determine Jen's contributions and the earnings on her contributions as follows:

Year 1 contributions	\$ 2,100
Year 2 contributions	2,300
Year 3 contributions	<u>2,600</u>
	\$ 7,000
Earnings on above contributions	<u>1,200</u>
Jen's vested interest	<u>\$ 8,200</u>

**6. (c)** Assets are generally presented at their estimated current values in personal financial statements. Specifically, investments in life insurance are to be valued at their cash surrender value less outstanding loans on the policy. Therefore, the investment should be reported at \$9,000 (\$12,000 cash value – \$3,000 outstanding loan).

**7. (b)** When investments in a limited business activity are not conducted in a separate business entity, separate asset and liability amounts of the investment should be shown on the statement of financial condition. Thus, the realty (asset) and the mortgage (liability) should be reported separately at \$500,000 and \$100,000, respectively (their estimated current values). An investment in a separate entity that is marketable as a going concern (e.g., closely held corporation) should be presented as one amount. Thus, the \$80,000 in accounts payable should be netted against the current value of \$900,000 to report a net investment of \$820,000.

**8. (a)** Noncancelable personal commitments should be reported at their discounted cash flow. A commitment must have all of the following attributes: (1) are for fixed or determinable amounts; (2) are not contingent on others' life expectancies or occurrence of a particular event (e.g., disability/death); and (3) do not require future performance of service by others. As the pledge to County Welfare Home is contingent upon the volunteers painting the walls and ceiling and the pledge to City Hospital is contingent upon the recovery of Ryan's comatose sister, both liabilities should be excluded from Ryan's personal statement of financial condition at December 31, year 1.

**9. (a)** Estimated taxes that would be paid if all the assets were converted to cash and all the liabilities were paid should be included with the liabilities. Thus, \$120,000

$[(\$1,000,000 - \$600,000) \times .30]$  should be provided for estimated income taxes relating to the excess of current values over tax bases.

**10. (d)** A personal statement of financial condition presents estimated current values of assets and liabilities, estimated income taxes, and estimated net worth at a specified date. Income taxes payable should include unpaid income taxes for completed tax years, the estimated tax for the elapsed portion of the current year, and the estimated income tax on the difference between the current value of assets and the current amounts of liabilities and their respective tax bases. Thus, the amount to be reported on Shea's statement of financial condition for income taxes is \$55,000, equal to the sum of \$30,000 tax on income earned from January through April and \$25,000 estimated income tax on the difference between the current value and tax bases of assets and liabilities.

**11. (c)** Assets are generally presented at their estimated current values on personal financial statements. Therefore, the assets should be reported at their fair value of \$900,000, rather than at their cost of \$500,000. ASC Topic 274 also states that liabilities are presented at the lesser of the discounted amount of cash to be paid, or the current cash settlement amount. Therefore, the liabilities should be reported at \$80,000. Estimated taxes that would be paid if all the assets were converted to cash and all the liabilities were paid should be included with the liabilities. Thus,  $126,000 [(\$820,000 - 400,000) \times .30]$  should be provided for estimated income taxes relating to the excess of current values over tax bases. Smith's net worth should be reported as \$694,000 ( $\$900,000 - \$80,000 - \$126,000$ ).

**12. (c)** Personal financial statements consist of (1) a statement of financial condition and (2) a statement of changes in net worth.

**13. (b)** A personal financial statement presents the estimated current values of assets and liabilities. Additional information at historical cost is not required.

**14. (d)** Business interests that constitute a large part of a person's total assets should be shown separately from other investments. The estimated **current value** of an investment in a separate entity, such as a closely held corporation, a partnership, or a sole proprietorship, should be shown in **one amount** as an investment if the entity is marketable as a going concern.

**15. (d)** Assets are generally presented at their estimated current values in a personal statement of financial condition. Depending on the nature of the asset, current value can be estimated using fair market value, net realizable value, discounted cash flow, or appraised value. The best estimate of the fair value of art is the appraised value.

**16. (a)** In personal financial statements assets should be stated at their estimated current values and liabilities should be stated at the lower of the discounted value of their future cash payments or their current cash settlement amounts. These current amounts will differ from their tax bases and will give rise to **unrealized** tax gains and losses. A provision for estimated income taxes on these unrealized amounts should be incorporated into personal financial statements because when the unrealized gains and losses are realized, the related income taxes will have to be either paid or received.

**17. (c)** The estimated income taxes should be presented between liabilities and net worth in the statement of financial condition.

**B. Interim Reporting**

The term interim reporting is used to describe financial reporting for periods of less than one year, generally quarterly financial statements.

1. The primary purposes of interim reporting are to provide information which is more timely than is available in annual reports, and to highlight business turning points which could be “buried” in annual reports.
2. There are two basic conceptual approaches to interim reporting: the **discrete view** and the **integral view**.
  - a. **Discrete view**—Each interim period is a separate accounting period; interim period must stand on its own; same principles and procedures as for annual reports; no special accruals or deferrals.
  - b. **Integral view**—Each interim period is an integral part of an annual period; expectations for annual period must be reflected in interim reports; special accruals, deferrals, and allocations utilized.
  - c. The **integral view** is used for interim reporting.
3. The table below summarizes the accounting standards.

Income statement item	General rule	Exceptions
<b>Revenues</b>	Same basis as annual reports	None
<b>Cost of goods sold</b>	Same basis as annual reports	<ol style="list-style-type: none"> <li>1. Gross profit method may be used to estimate CGS and ending inventory for each interim period</li> <li>2. Liquidation of LIFO base-period inventory, if expected to be replaced by year-end, is changed to CGS at its estimated replacement cost</li> <li>3. Temporary declines in inventory market value need not be recognized</li> <li>4. Planned manufacturing variances should be deferred if expected to be absorbed by year-end</li> </ol>
<b>All other costs and expenses</b>	Same basis as annual reports	Expenditures which <b>clearly benefit</b> more than one interim period may be allocated among periods benefited (e.g., annual repairs, property taxes).
<b>Income taxes</b>	(Year-to-date income × Estimated annual effective tax rate) – (Expense recognized in previous quarters)	None
<b>Discontinued operations</b>	Recognized in interim period as incurred	None
<b>Extraordinary items</b>	Recognized in interim period as incurred. Materiality is evaluated based on expected annual results	None
<b>Change in accounting principle</b>	Retrospective application. Cumulative effect of change reflected in the carrying amounts of assets and liabilities as of the first period presented with offsetting adjustment to retained earnings for that period. Financial statements are adjusted for period-specific effects of the change.	None

- a. A key disclosure item for interim reporting is the seasonal nature of the firm’s operations. This disclosure helps prevent misleading inferences and predictions about annual results.
- b. Income tax expense is estimated each period using an estimated annual effective tax rate. The example below illustrates the application of this requirement.

**EXAMPLE**

	(a)	(b)	(c)	(d) = (b) × (c)	(e)	(f) = (d) – (e)
Qtr	Quarterly income before income taxes	Year-to-date income before income taxes	Estimated annual effective tax rate	Year-to-date income tax expense	Previous quarter's expense	Current quarter's expense
1	\$100,000	\$100,000	30%	\$ 30,000	\$ 0	\$ 30,000
2	150,000	250,000	32%	80,000	30,000	50,000
3	300,000	550,000	36%	198,000	80,000	118,000
4	200,000	750,000	35%	262,500	198,000	64,500

(1) In the prior chart, columns (a) and (c) are assumed to be given. Column (b) is obtained by accumulating column (a) figures. Column (e) is either the preceding quarter's entry in column (d) or the **cumulative** total of previous quarters in column (f).

#### 4. Research Component—Accounting Standards Codification

- The research on interim reporting is found in ASC Topic 270. A general search using the term “interim” should locate the updated rules for specific areas.
- Keywords for research are shown below.

Costs and expenses interim	Interim reporting
Costs interim periods	Inventory interim
Costs of goods sold interim periods	Seasonal variations
Interim period	

#### 5. International Financial Reporting Standards (IFRS)

IFRS does not mandate interim reporting. However, when interim reports are required, four financial statements are required: the statement of financial position, the statement of comprehensive income, the statement of changes in equity, and the statement of cash flows. For consistency purposes, the entity must use the same accounting policies as used in year-end financial statements.

**NOW REVIEW MULTIPLE-CHOICE QUESTIONS 1 THROUGH 19**

## KEY TERMS

**Discrete view.** Each interim period is a separate accounting period; interim period must stand on its own; same principles and procedures as for annual reports; no special accruals or deferrals.

**Integral view.** Each interim period is an integral part of an annual period; expectations for annual period must be reflected in interim reports; special accruals, deferrals, and allocations, utilized.

**Interim reporting.** Describe financial reporting for periods of less than one year.

## Multiple-Choice Questions (1–19)

### B. Interim Reporting

1. On January 1, year 1, Builder Associates entered into a \$1,000,000 long-term, fixed-price contract to construct a factory building for Manufacturing Company. Builder accounts for this contract under the percentage-of-completion, and estimated costs at completion at the end of each quarter for year 1 were as follows:

Quarter	Estimated percentage-of-completion	Estimated costs at completion
1	10%	\$750,000
2*	10%	\$750,000
3	25%	\$960,000
4*	25%	\$960,000

\*No work performed in the 2nd and 4th quarters.

What amounts should be reported by Builder as “Income on Construction Contract” in its quarterly income statements based on the above information?

	Gain (loss) for the three months ended			
	3/31/Y1	6/30/Y1	9/30/Y1	12/31/Y1
a.	\$0	\$0	\$0	\$10,000
b.	\$25,000	\$0	\$(15,000)	\$0
c.	\$25,000	\$0	\$0	\$0
d.	\$25,000	\$0	\$6,000	\$0

2. Kell Corp.’s \$95,000 net income for the quarter ended September 30, year 1, included the following after-tax items:

- A \$60,000 extraordinary gain, realized on April 30, year 1, was allocated equally to the second, third, and fourth quarters of year 1.
- A \$16,000 cumulative-effect loss resulting from a change in inventory valuation method was recognized on August 2, year 1.

In addition, Kell paid \$48,000 on February 1, year 1, for year 1 calendar-year property taxes. Of this amount, \$12,000 was allocated to the third quarter of year 1.

For the quarter ended September 30, year 1, Kell should report net income of

- a. \$91,000
- b. \$103,000
- c. \$111,000
- d. \$115,000

3. Vilo Corp. has estimated that total depreciation expense for the year ending December 31, year 1, will amount to \$60,000, and that year 1 year-end bonuses to employees will total \$120,000. In Vilo’s interim income statement for the six months ended June 30, year 1, what is the total amount of expense relating to these two items that should be reported?

- a. \$0
- b. \$30,000

- c. \$90,000
- d. \$180,000

4. On June 30, year 1, Mill Corp. incurred a \$100,000 net loss from disposal of a business segment. Also, on June 30, year 1, Mill paid \$40,000 for property taxes assessed for the calendar year 1. What amount of the foregoing items should be included in the determination of Mill’s net income or loss for the six-month interim period ended June 30, year 1?

- a. \$140,000
- b. \$120,000
- c. \$90,000
- d. \$70,000

5. During the first quarter of year 2, Tech Co. had income before taxes of \$200,000, and its effective income tax rate was 15%. Tech’s year 1 effective annual income tax rate was 30%, but Tech expects its year 2 effective annual income tax rate to be 25%. In its first quarter interim income statement, what amount of income tax expense should Tech report?

- a. \$0
- b. \$30,000
- c. \$50,000
- d. \$60,000

6. Bailey Company, a calendar-year corporation, has the following income before income tax provision and estimated effective annual income tax rates for the first three quarters of year 1:

Quarter	Income before income tax provision	Estimated effective annual tax rate at end of quarter
First	\$60,000	40%
Second	70,000	40%
Third	40,000	45%

Bailey’s income tax provision in its interim income statement for the third quarter should be

- a. \$18,000
- b. \$24,500
- c. \$25,500
- d. \$76,500

7. Advertising costs may be accrued or deferred to provide an appropriate expense in each period for

	Interim financial reporting	Year-end financial reporting
a.	Yes	No
b.	Yes	Yes
c.	No	No
d.	No	Yes

8. A planned volume variance in the first quarter, which is expected to be absorbed by the end of the fiscal period,

ordinarily should be deferred at the end of the first quarter if it is

	Favorable	Unfavorable
a.	Yes	No
b.	No	Yes
c.	No	No
d.	Yes	Yes

9. Due to a decline in market price in the second quarter, Petal Co. incurred an inventory loss. The market price is expected to return to previous levels by the end of the year. At the end of the year the decline had not reversed. When should the loss be reported in Petal's interim income statements?

- a. Ratably over the second, third, and fourth quarters.
- b. Ratably over the third and fourth quarters.
- c. In the second quarter only.
- d. In the fourth quarter only.

10. An inventory loss from a market price decline occurred in the first quarter. The loss was not expected to be restored in the fiscal year. However, in the third quarter the inventory had a market price recovery that exceeded the market decline that occurred in the first quarter. For interim financial reporting, the dollar amount of net inventory should

- a. Decrease in the first quarter by the amount of the market price decline and increase in the third quarter by the amount of the market price recovery.
- b. Decrease in the first quarter by the amount of the market price decline and increase in the third quarter by the amount of decrease in the first quarter.
- c. Not be affected in the first quarter and increase in the third quarter by the amount of the market price recovery that exceeded the amount of the market price decline.
- d. Not be affected in either the first quarter or the third quarter.

11. For external reporting purposes, it is appropriate to use estimated gross profit rates to determine the cost of goods sold for

	Interim financial reporting	Year-end financial reporting
a.	Yes	Yes
b.	Yes	No
c.	No	Yes
d.	No	No

12. For interim financial reporting, the computation of a company's second quarter provision for income taxes uses an effective tax rate expected to be applicable for the full fiscal year. The effective tax rate should reflect anticipated

	Foreign tax rates	Available tax planning alternatives
a.	No	Yes
b.	No	No
c.	Yes	No
d.	Yes	Yes

13. For interim financial reporting, a company's income tax provision for the second quarter of year 1 should be determined using the

- a. Effective tax rate expected to be applicable for the full year of year 1 as estimated at the end of the first quarter of year 1.
- b. Effective tax rate expected to be applicable for the full year of year 1 as estimated at the end of the second quarter of year 1.
- c. Effective tax rate expected to be applicable for second quarter of year 1.
- d. Statutory tax rate for year 1.

14. ASC Topic 270, *Interim Reporting*, states that interim financial reporting should be viewed primarily in which of the following ways?

- a. As useful only if activity is spread evenly throughout the year.
- b. As if the interim period were an annual accounting period.
- c. As reporting for an integral part of an annual period.
- d. As reporting under a comprehensive basis of accounting other than GAAP.

15. Conceptually, interim financial statements can be described as emphasizing

- a. Timeliness over reliability.
- b. Reliability over relevance.
- c. Relevance over comparability.
- d. Comparability over neutrality.

16. Wilson Corp. experienced a \$50,000 decline in the market value of its inventory in the first quarter of its fiscal year. Wilson had expected this decline to reverse in the third quarter, and in fact, the third quarter recovery exceeded the previous decline by \$10,000. Wilson's inventory did not experience any other declines in market value during the fiscal year. What amounts of loss and/or gain should Wilson report in its interim financial statements for the first and third quarters?

	First quarter	Third quarter
a.	\$0	\$0
b.	\$0	\$10,000 gain
c.	\$50,000 loss	\$50,000 gain
d.	\$50,000 loss	\$60,000 gain

17. Which of the following statements is true regarding interim reporting for companies that prepare their financial statements in accordance with IFRS?

- a. The discrete view is required for interim financial statements.
- b. Interim reports are required on a quarterly basis.
- c. Interim reports are not required for IFRS reporting.
- d. Interim reports require the preparation of only a statement of earnings and a statement of financial position.

**18.** Noble Corporation prepares its financial statements in accordance with IFRS. If Noble prepares interim financial statements, which statements are required?

- I. Statement of Financial Position
- II. Statement of Income
- III. Statement of Comprehensive Income
- IV. Statement of Cash Flows
- V. Statement of Changes in Equity

- a. I, II, and III.
- b. I, II, IV, and V.
- c. II, III, and IV.
- d. I, III, IV, and V.

**19.** Which of the following describes IFRS's requirements regarding interim financial statements?

- a. Interim financial statements are required.
- b. If interim financial statements are presented, four basic financial statements are required.
- c. If interim financial statements are presented, at least a balance sheet and profit and loss are required.
- d. Interim financial statements must be presented with the most recent annual financial statements.

## Multiple-Choice Answers and Explanations

### Answers

1. b    ___ ___	5. c    ___ ___	9. d    ___ ___	13. b    ___ ___	17. c    ___ ___
2. a    ___ ___	6. b    ___ ___	10. b    ___ ___	14. c    ___ ___	18. d    ___ ___
3. c    ___ ___	7. b    ___ ___	11. b    ___ ___	15. a    ___ ___	19. b    ___ ___
4. b    ___ ___	8. d    ___ ___	12. d    ___ ___	16. a    ___ ___	1st: ___/19 = ___%
				2nd: ___/19 = ___%

### Explanations

**1. (b)** The requirement is to compute the income to be recognized in quarterly (interim) financial statements on a construction contract using the percentage-of-completion method. The solutions approach is to compute the income on the contract at the end of each quarter by (1) applying the estimated percentage-of-completion to the total estimated income to be recognized on the contract, and (2) subtracting the income recognized in preceding quarters to arrive at the income for the latest quarter. In the second and fourth quarters there was no work done on the contract and no change in the total estimated cost of completion. In quarter three the estimated costs of completion are revised upward. Since the cumulative income to date is less than income recognized in the first quarter, it is necessary to recognize a loss in the third quarter. The loss is handled as a change in accounting estimate rather than restating the first quarter.

**Quarter 1:**

$10\% (\$1,000,000 - \$750,000) = \$25,000$  income recognized

**Quarter 2:**

-0-

**Quarter 3:**

$25\% (\$1,000,000 - \$960,000) = \$10,000$  income earned to date  
 $-\$25,000$  income recognized in previous periods =  $\$(15,000)$   
 loss for quarter

**Quarter 4:**

-0-

**2. (a)** Extraordinary items, gains or losses from disposal of a segment of a business, and unusual or infrequently occurring items should not be prorated over the balance of the fiscal year. Thus, the \$20,000 ( $\$60,000 \div 3$ ) extraordinary gain that was allocated to the third quarter should be subtracted from net income as it actually occurred in the second quarter. Consistent with the view that all accounting changes should be made effective as of the beginning of the fiscal period, the cumulative effect of the accounting change on retained earnings is computed at the beginning of the fiscal year and reported in the first interim period's income statement. If a cumulative-effect type change is made during an interim period subsequent to the first one, the prior interim reports must be restated as if the changes had been effective as of the first day of the fiscal year. Thus, the \$16,000 cumulative-effect loss should not be recognized in the third quarter. The prior interim reports should be restated and the \$16,000 loss should be added back to income of the third quarter to correct the income to be reported for the quarter. Property taxes should be allocated among the applicable quarters. As Kell

Corp. properly allocated their property taxes, no adjustment to income is needed. Kell should report \$91,000 ( $\$95,000 - \$20,000 + \$16,000$ ) as net income for the quarter ended September 30, year 1.

**3. (c)** A cost charged to expense in an annual period should be allocated among the interim periods which clearly benefit from the expense through the use of accruals and/or deferrals. Both yearly bonuses and the use of an asset (depreciation expense) benefit the entire year. The expense for the **six month** interim statement should be  $(\$60,000 + \$120,000) \div 2 = \$90,000$ .

**4. (b)** Revenues and gains should be recognized in interim reports on the same basis as used in annual reports. At June 30, year 1, Mill Corp. would report the entire \$100,000 loss on the disposal of its business segment since the loss was incurred during the interim period. ASC Topic 270 also states that a cost charged to an expense in an annual period should be allocated among the interim periods that clearly benefit from the expense through the use of accruals and/or deferrals. Since the \$40,000 property tax payment relates to the entire year 1 calendar year, \$20,000 of the payment would be reported as an expense at June 30, year 1, while the remaining \$20,000 would be reported as a prepaid expense.

**5. (c)** The tax provision for an interim period is the tax for the year to date (estimated effective rate for the year times year-to-date income) less the total tax provisions reported for previous interim periods. In this case, the requirement is to calculate the tax provision for the first quarter interim income statement. The tax expense is \$50,000 ( $\$200,000 \times 25\%$ ).

**6. (b)** The requirement is to calculate Bailey's income tax provision (expense) in its interim income statement for the third quarter. The tax provision for an interim period is the tax for the year-to-date (estimated effective rate for the year times year-to-date income) less the total tax provisions reported for previous interim periods.

Year-to-date tax (45%)(\\$170,000)	\$76,500
Previously reported tax (40% × \$130,000)	<u>52,000</u>
Third quarter tax provision	<u>\$24,500</u>

**7. (b)** Advertising costs may be deferred within a fiscal year if the benefits clearly extend beyond the interim period that the expense was paid. Also, advertising costs may be accrued and assigned to interim periods in relation to sales. Year-end accruals and deferrals of costs are also considered appropriate accounting treatment. Note, however, that deferral in year-end reporting is permitted only if the advertising has not been run in the media.

**8. (d)** A planned volume variance that is expected to be absorbed by the end of the fiscal year should be deferred at interim reporting dates.

**9. (d)** The requirement is to determine when the inventory loss should be reported. Inventory losses from market declines should not be deferred beyond the interim period in which the loss occurs. However, if the market decline is considered to be **temporary** and will be recovered by year-end, no loss needs to be recognized. A loss will be recognized in the fourth quarter only. In the second quarter the loss is considered temporary, therefore no loss is recognized. However, in the fourth quarter, when the decline does not reverse, it is deemed permanent and recognized in the fourth quarter. Losses are recognized in the period in which they occur, not ratably over several periods. Only expenses that benefit several periods (i.e., repairs and maintenance) are recognized ratably. The loss is not recorded in a period of temporary decline, only when the decline is considered to be permanent.

**10. (b)** A decline in inventory market price, expected to be other than temporary, should be recognized in the period of decline. A subsequent recovery of market value should be recognized as a cost recovery in the period of increase, but **never** above original cost. The decline should be recognized when it occurs in the first quarter. The subsequent recovery should be recognized when it occurs in the third quarter. The subsequent recovery cannot exceed the amount of decline. A nontemporary decline should be shown in the quarter of price decrease.

**11. (b)** The requirement is to determine the appropriateness of estimated gross profit rates in determining cost of goods sold for interim and year-end external financial reporting purposes. The use of estimated gross profit rates to determine the cost of goods sold for an interim period is appropriate. The method of estimation used and any significant adjustments that result from reconciliations with the annual physical inventory should be disclosed. An estimation of cost of goods sold is not allowable for year-end financial reporting. (The actual cost of the goods sold must be determined by the use of a cost flow assumption that most clearly reflects periodic income.) Thus, an estimated cost of goods sold figure may be used for interim but not year-end statements.

**12. (d)** The effective tax rate should reflect anticipated investment tax credits, foreign tax rates, percentage depletion, capital gains rates, and other available tax planning alternatives.

**13. (b)** The requirement is to determine what tax rate should be used to calculate the income tax provision for interim reporting. Each interim period is considered to be an integral part of the annual period. Therefore, expectations

for the annual period must be reflected in the interim report. The income tax expense should be calculated using the estimated annual effective tax rate. The estimated tax rate should be updated as of the end of each interim period (here, as of the second quarter). The statutory tax rate is only a part of the effective tax. The effective tax rate includes the statutory tax rate and a variety of other items.

**14. (c)** The **integral view**, used for interim reporting, holds that each interim period is an integral part of an annual period, must reflect expectations for the annual period, and must utilize special accruals, deferrals, and allocations.

**15. (a)** The primary purposes of interim reporting are to provide information which is more **timely** than is available in annual reports and to highlight business turning points which could be “buried” in annual reports. This emphasis on timeliness comes at the expense of **reliability**. Accounting information pertaining to shorter periods may require more arbitrary allocations, and may not be as verifiable or representationally faithful as information contained in annual reports. Interim reports are generally more relevant and less reliable. Interim financial statements should not be any more or less comparable than annual reports.

**16. (a)** Temporary declines in inventory market values are not recognized. Only declines that are apparently permanent or other than temporary need to be recognized. In this case, Wilson expected the decline to reverse in the third quarter; therefore, the decline is temporary and no loss would be recorded in the first quarter. Because no loss was recorded for the decline, no gain will be recognized in the third quarter for the recovery of the \$50,000 decline. Also, assuming that the inventory was valued at cost at the beginning of the fiscal year, no gain will be recorded for the recovery excess of \$10,000 since inventory may not be valued at an amount in excess of cost.

**17. (c)** Interim reports are not required for companies who prepare statements in accordance with IFRS.

**18. (d)** IFRS does not mandate interim reporting. However, when interim reports are required by regulation, four financial statements are required: (1) the statement of financial position, (2) the statement of comprehensive income, (3) the statement of changes in equity, and (4) the statement of cash flows. For consistency purposes, the entity must use the same accounting policies as used in year-end financial statements.

**19. (b)** The requirement is to identify the statement that is correct about IFRS requirements regarding interim financial statements. Answer (b) is correct because IFRS has no requirement for the presentation of interim financial statements, but if they are presented, four basic financial statements are required.

### C. Segment Reporting

1. ASC Topic 280 (SFAS 131—see outline in Appendix A) sets forth financial reporting standards for segment reporting, the disclosure of information about different components of an enterprise's operations as well as information related to the enterprise's products and services, its geographic areas, and its major customers.
  - a. The purpose of segment disclosure is to assist investors and lenders in assessing the future potential of an enterprise. Consolidated statements give the user the overall view (results of operations, financial position, cash flows). However, trends, opportunities, risk factors, etc., can get lost when data for a diversified company are merged into consolidated statements. Additionally, most intersegment transactions that are eliminated from consolidated financial information are included in segment information.
  - b. The approach used in segment reporting is a "management approach," meaning it is based on the way management organizes segments internally to make operating decisions and assess performance.
    - (1) Companies can segment their financial information by products or services, by geography, by legal entity, or by type of customer.
    - (2) The management approach facilitates consistent descriptions of an enterprise for both internal and external reporting and, in general, provides that external financial reporting closely conforms to internal reporting.
  - c. Segment reporting does not apply to not-for-profit organizations or nonpublic enterprises.
2. **Operating Segments**
  - a. An **operating segment** is defined as
    - (1) A component of an enterprise engaged in business activity for which it may earn revenues and incur expenses, about which separate financial information is available that is evaluated regularly by the chief operating decision makers in deciding how to allocate resources and in assessing performance.
  - b. A segment is significant (reportable) if it satisfies **at least one** of the following three 10% tests:
    - (1) **Revenues**—Segment revenue (including intersegment revenue) is 10% or more of combined segment revenue (including intersegment revenue)
    - (2) **Operating profit or loss**—The absolute amount of segment profit or loss is 10% or more of the **greater**, in absolute amount, of combined profit of segments reporting profit, or combined loss of segments reporting loss
    - (3) **Segment assets**—Segment assets are 10% or more of total segment assets
  - c. Operating profit or loss is unaffiliated revenue and intersegment revenue, less **all** operating expenses as defined by the chief operating decision maker to evaluate the performance of the segments.
    - (1) Since segment revenue includes **intersegment sales, transfer pricing** becomes an issue.
      - (a) FASB requires companies to use the same transfer prices for segment reporting purposes as are used internally.
      - (b) Since most segments are **profit centers**, internal transfer prices generally reflect market prices.
  - d. Common costs are operating expenses incurred by the enterprise for the benefit of more than one operating segment.
    - (1) These costs should only be allocated to a segment for external reporting purposes if they are included in the measure of the segments profit or loss that is used internally by the chief operating decision maker.
  - e. Similarly, only those assets that are included internally in the measure of the segment's assets used to make operating decisions shall be reported as assets of the segment in external financial reports.
  - f. Interperiod comparability must be considered in conjunction with the results of the 10% tests. If a segment fails to meet the tests, but has satisfied the tests in the past and is expected to in the future, it should be considered reportable in the current year for the sake of comparability. Similarly, if a segment which rarely passes the tests does so in the current year as the result of an unusual event, that segment may be excluded to preserve comparability.
  - g. There are some limitations to the number of segments which are to be reported.
    - (1) There must be enough segments separately reported so that at least 75% of unaffiliated revenues are shown by reportable segments (75% test).

- (2) If the 75% test is not satisfied, additional segments must be designated as reportable until the test is satisfied.
- (3) Also, the number of reportable segments should not be so large (ten is a rule of thumb) as to make the information less useful.
- (a) The following example illustrates the three 10% tests (revenues, operating profit or loss, and identifiable assets) and the 75% test:

**EXAMPLE**

Segment	Unaffiliated revenue	Intersegment revenue	Total revenue	Operating profit (loss)	Segment assets
A	\$ 90	\$ 90	\$ 180	\$ 20	\$ 70
B	120		120	10	50
C	110	20	130	(40)	90
D	200		200	0	140
E	330	110	440	(100)	230
F	380		380	60	260
Total	\$1,230	\$220	\$1,450	\$ (50)	\$840

**Revenues test:**  $(10\%)(\$1,450) = \$145$

Reportable segments: A, D, E, F

**Operating profit or loss test:**  $(10\%)(\$140) = \$14$

Reportable segments: A, C, E, F

NOTE: Operating loss (\$140) is greater than operating profit, \$90

**Segment assets test:**  $(10\%)(\$840) = \$84$

Reportable segments: C, D, E, F

**Reportable segments:** Those segments which pass **at least one** of the 10% tests. Segments A, C, D, E, and F are reportable in this example.

**75% test:**  $(75\%)(\$1,230) = \$922.50$

Segments A, C, D, E, and F have total unaffiliated revenue of \$1,110, which is greater than \$922.50.

The 75% test is satisfied; no additional segments need be reported.

- (4) Certain other factors must be considered when identifying reportable segments. An enterprise may consider aggregating two or more operating segments if they have similar economic characteristics and if the segments are similar in each of the following areas:
- The nature of the products and services
  - The nature of the production processes
  - The type of customer for their products and services
  - The methods used to distribute their products or provide their services
  - The nature of the regulatory environment

- (5) Aggregation can occur prior to performing the 10% tests if the enterprise desires.
- (6) Additionally, the enterprise may combine information on operating segments that do not meet any of the 10% tests to produce a reportable segment, but only if the segments meet a majority of the aggregation criteria presented above. It should be noted that information about operating segments that do not meet any of the 10% thresholds may still be disclosed separately, rather than as an aggregated total.

### 3. Segment Disclosures

Several disclosures are required regarding the enterprise's reportable segments. They include

- a. **General information**—An explanation of how management identified the enterprise's reportable segments, including whether operating segments have been aggregated. Additionally, a description of the types of products and services from which each reportable segment derives its revenues.
- b. **Certain information about reported segment profit and loss, segment assets, and the basis of measurement**—The enterprise shall disclose the following about each reportable segment if the specified amounts are reviewed by the chief operating decision maker:
  - (1) Revenues from external customers
  - (2) Intersegment revenues
  - (3) Interest revenue and expense (reported separately unless majority of segment's revenues are from interest and management relies primarily on net interest revenue to assess performance)
  - (4) Depreciation, depletion, and amortization expense
  - (5) Unusual items, extraordinary items
  - (6) Equity in the net income of investees accounted for by the equity method
  - (7) Income tax expense or benefit
  - (8) Significant noncash items

Also, the basis of measurement for these items must be disclosed, including differences in measurement practices between a segment and the complete entity and differences in measurement practices in a segment between periods.

- c. **Reconciliations**—The enterprise will need to reconcile the segment amounts disclosed to the corresponding enterprise amounts.
- d. **Interim period information**—Although the interim disclosures are not as extensive as in the annual financial report, certain segment disclosures are required in interim financial reports.

### 4. Restatement of Previously Reported Segment Information

Segment reporting is required on a comparative basis. Therefore, the information must be restated to preserve comparability whenever the enterprise has changed the structure of its internal organization in a manner that causes a change to its reportable segments. The enterprise must explicitly disclose that it has restated the segment information of earlier periods.

### 5. Enterprise-Wide Disclosures about Products and Services, Geographic Areas, and Major Customers

The enterprise-wide disclosures are required for all enterprises, even those that have a single reportable segment. Disclosures need to be provided only if not provided as part of the segment information. Disclosures are required regardless of whether the information is used in making operating decisions.

- a. **Products and services.** Revenue from external customers for each product and service shall be reported by the enterprise, unless it is impractical to do so.
- b. **Geographic areas.** An enterprise shall report revenues from external customers and long-lived assets attributable to its domestic operations and **foreign operations**, unless it is impractical to do so. If revenues or assets of an individual foreign country are material, then these amounts should be separately disclosed. In addition, the enterprise's basis for attributing revenue to individual countries shall be disclosed.
- c. **Major customers.** Certain disclosures are made concerning major customers if the following 10% test is met. If 10% or more of **consolidated revenue** comes from a **single** external customer, the enterprise must disclose this fact in addition to the amount of such revenues, and the identity of the segment or segments making the sales. (A group of customers under common control, such as subsidiaries of a parent, is regarded as a single customer. Similarly, the various agencies of a government are considered to be a single customer.)

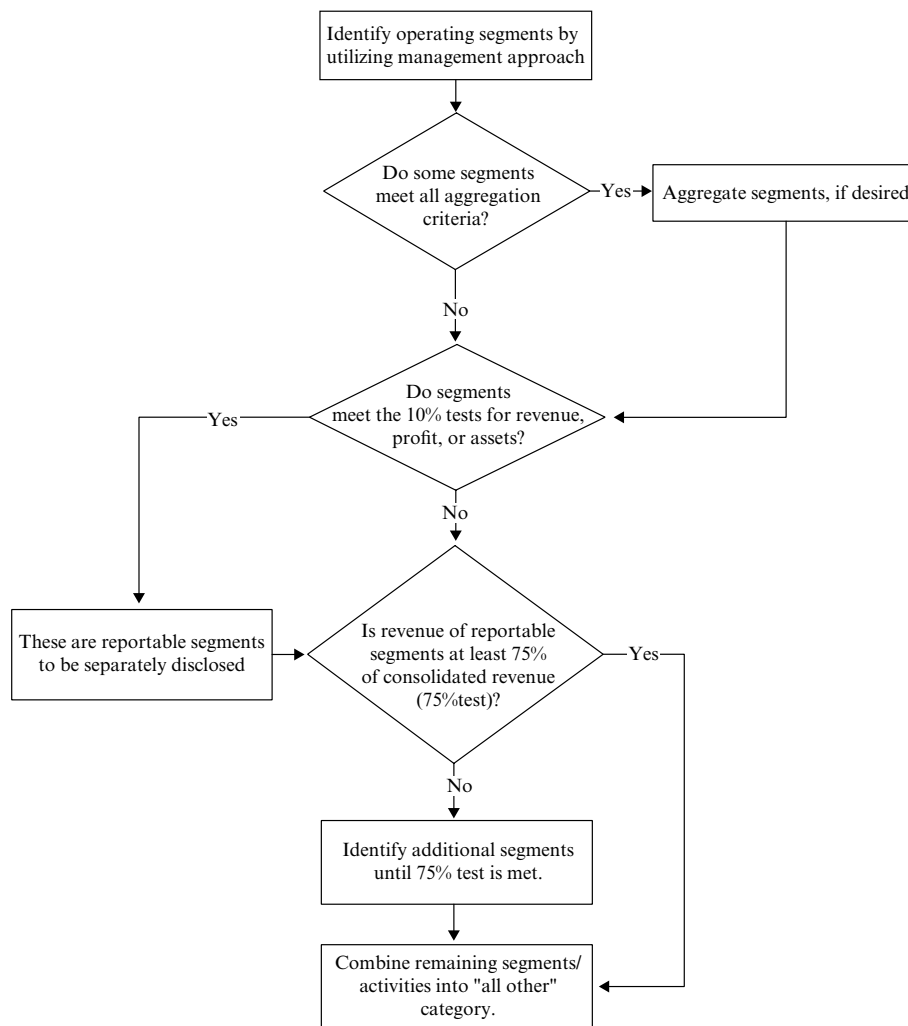

6. **Research Component—Accounting Standards Codification**

ASC Topic 280 uses a management approach to segment and enterprise reporting. A careful analysis of the vocabulary used in the standards is slightly different than most individuals would use in discussion. For example, we may use the term “total revenue” whereas the standard uses the term “combined revenue.” Instead of using the word “tests,” the standard refers to them as “quantitative thresholds.” Although these differences seem trivial, they will affect your ability to find the material using a keyword search.

- a. Below is a list of keywords that are useful in researching ASC Topic 280. If you add the word “segment” or “segments” to your search string, it may significantly reduce the number of irrelevant paragraphs.

Aggregation segments	Enterprise disclosure	Management approach
Combined assets segments	External revenue segments	Operating segment
Combined profit segments	Geographic areas	Products services segment
Combined revenue operating segments	Geographic information	Reportable segment
Enterprise disclose	Major customer	Single reportable segment

**Flowchart for Identifying Reportable Operating Segments\***

\*Adapted from ASC Topic 280.

**7. International Financial Reporting Standards (IFRS)**

- a. IFRS 8 on segment reporting includes guidance very similar to US GAAP. It requires a management approach to identifying operating segments. An operating segment is a reportable segment if it meets one of the following defined quantitative thresholds:
- (1) The segments revenue (including internal and external sales) is 10% or more of combined revenue of all segments,
  - (2) The absolute value of the profit or loss is 10% or more than the greater (in absolute value) of the (1) combined reported profit of all segments that did not report a loss or (2) the combined reported loss of all segments that reported a loss, or
  - (3) The assets are 10% or more of the combined assets of all segments.
- b. In addition, the total external revenue by reportable segments must be at least 75% of the entity's revenue; otherwise additional segments must be identified and reported. Note that these thresholds are the same as for US GAAP.

**NOW REVIEW MULTIPLE-CHOICE QUESTIONS 1 THROUGH 12**

**KEY TERMS**

**Management approach.** Segment reporting is based on the way management organizes segments internally to make operating decisions and assess performance.

**Operating segment.** A component of an enterprise engaged in business activity for which it may earn revenues and incur expenses, about which separate financial information is available that is evaluated regularly by the chief operating decision makers in deciding how to allocate resources and in assessing performance.

**Segment assets.** Segment assets are 10% or more of total segment assets.

**Segment operating profit or loss.** The absolute amount of segment profit or loss is 10% or more of the greater, in absolute amount, of combined profit of segments reporting profit, or combined loss of segments reporting loss.

**Segment revenues.** Segment revenue (including intersegment revenue) is 10% or more of combined segment revenue (including intersegment revenue).

## Multiple-Choice Questions (1–12)

### C. Segment Reporting

1. Correy Corp. and its divisions (each is an operating segment) are engaged solely in manufacturing operations. The following data (consistent with prior years' data) pertain to the operations conducted for the year ended December 31, year 1:

(Industry operating segment)	Total revenue	Operating profit	Identifiable assets at 12/31/Y1
A	\$10,000,000	\$1,750,000	\$20,000,000
B	8,000,000	1,400,000	17,500,000
C	6,000,000	1,200,000	12,500,000
D	3,000,000	550,000	7,500,000
E	4,250,000	675,000	7,000,000
F	1,500,000	225,000	3,000,000
	<u>\$32,750,000</u>	<u>\$5,800,000</u>	<u>\$67,500,000</u>

In its segment information for year 1, how many reportable segments does Correy have?

- Three.
- Four.
- Five.
- Six.

2. The following information pertains to Aria Corp. and its operating segments for the year ended December 31, year 1:

Sales to unaffiliated customers	\$2,000,000
Intersegment sales of products similar to those sold to unaffiliated customers	600,000
Interest earned on loans to other industry segments	40,000

Aria and all of its divisions are engaged solely in manufacturing operations and evaluates divisional performance based on controllable contribution. Aria has a reportable segment if that segment's revenue exceeds

- \$264,000
- \$260,000
- \$204,000
- \$200,000

Items 3 and 4 are based on the following:

Grum Corp., a publicly owned corporation, is subject to the requirements for segment reporting. In its income statement for the year ended December 31, year 1, Grum reported revenues of \$50,000,000, operating expenses of \$47,000,000, and net income of \$3,000,000. Operating expenses include payroll costs of \$15,000,000. Grum's combined identifiable assets of all industry segments at December 31, year 1, were \$40,000,000. Reported revenues include \$30,000,000 of sales to external customers.

3. In its year 1 financial statements, Grum should disclose major customer data if sales to any single customer amount to at least

- \$300,000
- \$1,500,000
- \$4,000,000
- \$5,000,000

4. External revenue reported by operating segments must be at least

- \$22,500,000
- \$15,000,000
- \$12,500,000
- \$37,500,000

5. Enterprise-wide disclosures include disclosures about

	Geographic areas	Allocated costs
a.	Yes	Yes
b.	Yes	No
c.	No	Yes
d.	No	No

6. Enterprise-wide disclosures are required by publicly held companies with

	Only one reportable segment	More than one reportable segment
a.	Yes	Yes
b.	Yes	No
c.	No	Yes
d.	No	No

7. An enterprise must disclose all of the following about each reportable segment if the amounts are used by the chief operating decision maker, **except**

- Depreciation expense.
- Allocated expenses.
- Interest expense.
- Income tax expense.

8. In financial reporting for segments of a business, an enterprise shall disclose all of the following **except**

- Types of products and services from which each reportable segment derives its revenues.
- The title of the chief operating decision maker of each reportable segment.
- Factors used to identify the enterprises reportable segments.
- The basis of measurement of segment profit or loss and segment assets.

9. In financial reporting for segments of a business enterprise, segment data may be aggregated

- Before performing the 10% tests if a majority of the aggregation criteria are met.
- If the segments do not meet the 10% tests but meet all of the aggregation criteria.

- c. Before performing the 10% tests if all of the aggregation criteria are met.
- d. If any one of the aggregation criteria are met.

**10.** The method used to determine what information to report for business segments is referred to as the

- a. Segment approach.
- b. Operating approach.
- c. Enterprise approach.
- d. Management approach.

**11.** Taylor Corp., a publicly owned corporation, assesses performance and makes operating decisions using the following information for its reportable segments:

Total revenues	\$768,000
Total profit and loss	40,600

Included in the total profit and loss are intersegment profits of \$6,100. In addition, Taylor has \$500 of common costs for its

reportable segments that are not allocated in reports used internally. For purposes of segment reporting, Taylor should report segment profit of

- a. \$35,000
- b. \$34,500
- c. \$41,100
- d. \$40,600

**12.** Rocket Corporation prepares its financial statements in accordance with IFRS. For segment reporting purposes, which tests must Rocket apply to determine if a unit or component is an operating segment?

- a. Revenue test and asset test.
- b. Revenue test, asset test, and profit or loss test.
- c. Revenue test, asset test, and expense test.
- d. Revenue test, asset test, and cash flow test.

## Multiple-Choice Answers and Explanations

### Answers

1. c    ___ ___	4. a    ___ ___	7. b    ___ ___	10. d    ___ ___	1st: ___/12 = ___%
2. b    ___ ___	5. b    ___ ___	8. b    ___ ___	11. d    ___ ___	2nd: ___/12 = ___%
3. d    ___ ___	6. a    ___ ___	9. c    ___ ___	12. b    ___ ___	

### Explanations

**1. (c)** A division is a reportable segment if it is significant. A division is significant if it satisfies at least **one** of the three 10% tests:

1. **Revenue** is 10% or more of the combined segment revenue (including intersegment revenue).
2. **Operating profit** (loss) is 10% or more of the greater of the **absolute** combined segment profit or loss.
3. **Identifiable assets** are 10% or more of the combined segment identifiable assets.

Industry A, B, C, and E pass the revenue and operating profit tests, but A, B, C, D, and E all pass the identifiable assets test. Since a division only has to pass one of the three 10% tests to be considered a reportable segment, Corey Corp. has five reportable segments.

**2. (b)** Selected data for a segment is reported separately if one of three criteria is met. One of these criteria is met when a segment's revenue is greater than or equal to 10% of the combined revenues of all industry segments. Combined revenue includes sales to unaffiliated customers and intersegment sales or transfers. Thus, Aria has a reportable segment if that segment's revenues exceed \$260,000  $[(\$2,000,000 + \$600,000) \times 10\%]$ . The \$40,000 interest would not be included in combined revenue because it is not controllable at the division level.

**3. (d)** If 10% or more of the revenue of an enterprise is derived from sales to any single customer, that fact and the amount of revenue from each customer shall be disclosed. In this problem, Grum reported revenues of \$50,000,000 and thus should disclose major customer data if sales to any single customer amount to \$5,000,000  $(\$50,000,000 \times 10\%)$ .

**4. (a)** There must be enough segments reported so that at least 75% of unaffiliated revenues is shown by reportable segments (75% test). Sales to external customers total \$30,000,000 so external revenues reported by operating segments must be at least \$22,500,000  $(\$30,000,000 \times 75\%)$ .

**5. (b)** Enterprise-wide disclosures about products and services, geographic areas, and major customers are required for all enterprises.

**6. (a)** Enterprise-wide disclosures are to be reported by all public business enterprises, including those with a single reportable segment because the criteria for splitting the enterprise into reportable segments are not met.

**7. (b)** The enterprise shall disclose the following about each reportable segment if the specified amounts are reviewed by the chief operating decision maker:

- a. Revenues from external customers
- b. Intra-segment revenues
- c. Interest revenue and expense (reported separately unless majority of segment's revenues are from interest and management relies primarily on net interest revenue to assess performance)
- d. Depreciation, depletion, and amortization expense
- e. Unusual items, extraordinary items
- f. Equity in the net income of investees accounted for by the equity method
- g. Income tax expense or benefit
- h. Significant noncash items

Allocated expenses are not specifically included as a required disclosure.

**8. (b)** An enterprise shall disclose general information, including factors used to identify reportable segments and the types of products and services from which each reportable segment derives its revenues. An enterprise shall disclose certain information about reported segment profit and loss, assets, and basis of measurement. The accounting standards do not require disclosures about the term chief operating decision maker and specifically states that this term identifies a function, not necessarily a manager with a specific title.

**9. (c)** Two or more operating segments may be aggregated into a single operating segment if all of the aggregation criteria are met or if after performing the 10% test a majority of the aggregation criteria are met.

**10. (d)** The method chosen for determining what information to report is referred to as the management approach.

**11. (d)** An enterprise shall report a measure of profit and loss based on the measure reported to the chief operating decision maker for purposes of making decisions. The information used by management includes intersegment profits and should be included, but common costs are not allocated to the segments when assessing performance and should not be included.

**12. (b)** IFRS 8 on segment reporting includes guidance very similar to US GAAP. It requires a management approach to identifying operating segments. The three tests required include a revenue test, profit or loss test, and an asset test.

#### Explanations

**Revenue threshold:** Total revenues  $\$14,200 \times 10\% = \$1,420$ . Segment should be reported if it exceeds this revenue amount.

**Income threshold:** Total profit =  $\$4,560$ . Total loss =  $\$1,200$ . Segment should be reported if the profit/loss in absolute value is greater than 10% of  $\$4,560$  (the larger amount of profit or loss),  $\$456$ .

**Asset threshold:** Total assets  $\$69,920 \times 10\% = \$6,992$ . Segment should be reported if it exceeds this asset amount.

**Segment is reportable** if it meets any one of the three threshold tests.

A meets all tests.

B and C do not meet any of the tests.

D meets income and asset test.

E meets revenue and income/loss test.

F meets all three tests.

ASC	280	10	50	22
-----	-----	----	----	----

**D. Partnership Accounting**

There are no authoritative pronouncements concerning the accounting for partnerships; thus, all of the principles described below have evolved through accounting practice.

**NOTE:** Partnership accounting typically is tested through a few multiple-choice questions on the Financial Accounting and Reporting Exam. Occasionally, the material is tested through a problem.

**1. Partnership Formation**

- a. The partnership is a separate **accounting entity** (not to be confused with a separate legal entity), and therefore its assets and liabilities should remain separate and distinct from the individual partner's personal assets and liabilities.
  - (1) Thus, all assets contributed to the partnership are recorded by the partnership at their **fair market values**. All liabilities assumed by the partnership are recorded at their **present values**.
- b. Upon formation, the amount credited to each partner's capital account is the difference between the fair market value of the assets contributed and the present value of the liabilities assumed from that partner.
  - (1) The capital accounts represent the residual equity of the partnership.
  - (2) The capital account of each partner reflects all of the activity of an individual partner: contributions, withdrawals, and the distributive share of net income (loss).
  - (3) In some cases, a **drawing** account is used as a clearing account for each partner's transactions with only the net effect of each period's activity shown in the capital account.

**EXAMPLE****Partnership Formation**

A and B form a partnership. A contributes cash of \$50,000, while B contributed land with a fair market value of \$50,000 and the partnership assumes a liability on the land of \$25,000.

The entry to record the formation of the partnership is

Cash	50,000	
Land	50,000	
		Liabilities 25,000
		A Capital 50,000
		B Capital 25,000

**NOW REVIEW MULTIPLE-CHOICE QUESTIONS 1 THROUGH 4**

**2. Allocation of Partnership Income (Loss)**

- a. The partners should have a written agreement (articles of copartnership) specifying the manner in which partnership income (loss) is to be distributed.

**NOTE:** In the absence of a predetermined agreement, the profit and loss (P&L) is divided equally among the partners.

- b. It is important to remember that P&L should **not** be distributed using a ratio based on the partners' capital balances unless this is the ratio specified in the articles of copartnership.
- c. A number of issues arise which complicate the allocation of partnership income (loss).

- (1) Partners may receive interest on their capital balances. If so, it must be determined what will constitute the capital balance (e.g., the year-end amount or some type of weighted-average).
- (2) Some of the partners may receive a salary.
- (3) Some of the partners may receive a bonus on distributable net income. If so, you need to determine if the bonus should be computed before or after salary and interest allocations.
- (4) A formula needs to be determined for allocating the remaining income. The formula agreed upon is usually termed the **residual, remainder, or profit (loss) sharing ratio**.
- (5) Finally, the partners should decide upon how income is to be allocated if net income is insufficient to cover partners' salaries, bonuses, and interest allocations.
  - (a) These allocations are usually made even if the effect is to create a negative remainder. This remainder is usually allocated in accordance with the profit (loss) ratio.
  - (b) However, it is important to note that partners may choose to allocate losses (or a negative remainder) in a different manner than income.

**EXAMPLE****Partnership P&L Distribution**

Partners receive 5% interest on beginning capital balances

Partner B receives a \$6,000 salary

Partner C receives a 10% bonus after interest and salaries

The P&L ratios are A — 50%, B — 30%, C — 20%

Assuming partnership net income of \$18,250, the following distribution schedule would be prepared:

	A	B	C	Total
P&L ratio	50%	30%	20%	
Beginning capital balance	<u>30,000</u>	<u>10,000</u>	<u>5,000</u>	<u>45,000</u>
Net income				(18,250)
5% interest	1,500	500	250	2,250
Salary		6,000		6,000
Bonus			1,000*	1,000
Distribution of residual	<u>4,500</u>	<u>2,700</u>	<u>1,800</u>	<u>9,000</u>
Total	<u>6,000</u>	<u>9,200</u>	<u>3,050</u>	--
Ending capital balances	<u><u>36,000</u></u>	<u><u>19,200</u></u>	<u><u>8,050</u></u>	

\*  $(\$18,250 - \$8,250) \times .10 = \$1,000$

Note that if the interest, salary, and bonus allocation had exceeded net income, the excess would have been deducted on the distribution schedule in the P&L ratio.

**NOW REVIEW MULTIPLE-CHOICE QUESTIONS 5 THROUGH 9**

### 3. Partnership Dissolution (Changes in Ownership)

Partnership dissolution occurs whenever there is a change in ownership (e.g., the addition of a new partner, or the retirement or death of an existing partner). This is not to be confused with partnership liquidation, which is the winding up of partnership affairs and termination of the business. Under dissolution the partnership business continues, but under different ownership.

- a. When partnership dissolution occurs a new accounting entity results.
  - (1) The partnership should first adjust its records so that all accounts are properly stated at the date of dissolution.
  - (2) After the income (loss) has been properly allocated to the existing partners' capital accounts, all assets and liabilities should be adjusted to their fair market value and their present values, respectively.
    - (a) The latter step is performed because the dissolution results in a new accounting entity.

- (3) After all adjustments have been made, the accounting for dissolution depends on the type of transaction that caused the dissolution. These transactions can be broken down into two types:
- (a) Transactions between the partnership and a partner (e.g., a new partner contributes assets, or a retiring partner withdraws assets)
  - (b) Transactions between partners (e.g., a new partner purchases an interest from one or more existing partners, or a retiring partner sells his/her interest to one or more existing partners).

**b. Transactions between a partner and the partnership**

**(1) Admission of a new partner**

When a new partner is admitted to the partnership essentially three cases can result. The new partner can invest assets into the partnership and receive a capital balance:

(a) Equal to his/her purchase price

- 1] If the new partner's capital balance is equal to the assets invested, then the entry debits the asset(s) contributed and credits the new partner's capital account for the fair value of the asset(s) contributed.

(b) Greater than his/her purchase price

(c) Less than his/her purchase price

- 1] If the new partner's capital balance is not equal to the assets invested [as in situation (b) and (c) above], then either the bonus or goodwill method must be used to account for the difference.

- a] **Bonus method**—The old partnership capital plus the new partner's asset contribution is equal to the new partnership capital. The new partner's capital is allocated his purchase share (e.g., 40%) and the old partner's capital accounts are adjusted as if they had been paid (or as if they paid) a bonus. The adjustment to the old partners' capital accounts is made in accordance with their profit (loss) sharing ratio.

- i] The bonus method implies that the old partners either received a bonus from the new partner, or they paid a bonus to the new partner. As a result the old partners' capital accounts are either debited to reflect a bonus paid, or credited to reflect a bonus received. The new partner's capital account is **never** equal to the amount of assets contributed in a case where the bonus method is used.

- b] **Goodwill method**—The old partnership capital plus the new partner's asset contribution is **not** equal to the new partnership capital. This is because goodwill is recorded on the partnership books for the difference between the total identifiable assets of the partnership (not including goodwill) and the deemed value of the partnership entity (which includes goodwill). Under the goodwill method, valuation of the new partnership is the objective.

- i] How the value of the partnership is determined depends on whether the book value acquired is greater or less than the asset(s) invested. If the book value acquired is less than the asset(s) invested, the value is determined based upon the new partner's contribution, and goodwill is allocated to the old partners' accounts. If the book value acquired is greater than the asset(s) contributed, the value is based upon the existing capital accounts, and goodwill is attributed to the new partner.

**EXAMPLE**

**Partnership Dissolution—Bonus Method**

Total old capital for ABC Partnership is \$60,000.

Partner	A	B	C
Capital	\$10,000	\$20,000	\$30,000
P&L Ratio	40%	40%	20%

**Case 1**

D is admitted to the partnership and is given a 20% interest in the capital in return for a cash contribution of \$30,000.

Cash	30,000	
D Capital		18,000
A Capital		4,800
B Capital		4,800
C Capital		2,400

The total partnership capital to be shown on the books is \$90,000 (\$60,000 + \$30,000) of which D is entitled to a 20% interest, or a capital balance of \$18,000. The remaining \$12,000 is treated as a bonus to the old partners and is allocated to their capital accounts in accordance with their P&L ratio.

**Case 2**

D is admitted to the partnership and is given a 20% interest in the capital in return for a cash contribution of \$10,000.

Cash	10,000	
A Capital		1,600
B Capital		1,600
C Capital		800
D Capital		14,000

The total partnership capital to be shown on the books is \$70,000 (\$60,000 + \$10,000) of which D is entitled to a 20% interest, or a capital balance of \$14,000. The difference of \$4,000 (\$10,000 – \$14,000) is allocated to the old partners' accounts as if they had paid a bonus to the new partner.

**EXAMPLE****Partnership Dissolution—Goodwill Method**

Use the same original data as given above.

**Case 1**

D is admitted to the partnership and is given a 20% interest in the capital in return for a cash contribution of \$20,000. The partners elect to record goodwill. The book value acquired  $[(\$60,000 + \$20,000) \times 20\% = \$16,000]$  is less than the asset contributed.

The value of the partnership is determined based upon the contribution of the new partner. In this case it is assumed that the partnership value is \$100,000 (\$20,000/20%). The resulting goodwill is \$20,000 (\$100,000 – \$80,000). The \$80,000 represents the total current capital, exclusive of goodwill, \$60,000 of which is attributable to the old partners and \$20,000 of which is attributable to the new partner.

Goodwill	20,000	
A Capital		8,000
B Capital		8,000
C Capital		4,000
Cash	20,000	
D Capital		20,000

Goodwill was allocated to the old partners in their P&L ratio. Also note that the capital balance of D represents 20% of the total capital of the partnership.

**Case 2**

D is admitted to the partnership and is given a 20% interest in the capital in return for a cash contribution of \$10,000. The partners elect to record goodwill. The book value acquired  $[(\$60,000 + \$10,000) \times 20\% = \$14,000]$  is greater than the asset contributed.

The partnership value is based upon the capital accounts of the existing partners. Because D is entitled to a 20% interest, the \$60,000 capital of the old partners must represent 80% of the capital. This means that the total value of the partnership is \$75,000 (\$60,000/80%). D's total contribution consists of the \$10,000 in cash and \$5,000 of goodwill. The goodwill is determined as the difference between the cash contribution and the 20% of the partnership capital.

Cash	10,000	
Goodwill	5,000	
D Capital		15,000

**NOTE:** In this last case no adjustment is made to the capital accounts of partners A, B, and C.

- The decision as to whether the bonus or goodwill method should be used rests with the partners involved. In other words, the bonus and goodwill methods are alternative solutions to the same problem.
- The table below summarizes the bonus and goodwill situations discussed above:

**When to Apply Bonus Method**

**When to Apply Goodwill Method**

$$\begin{matrix} \text{New} \\ \text{Partnership} \\ \text{Capital} \end{matrix} = \begin{matrix} \text{Old} \\ \text{Partner's} \\ \text{Capital} \end{matrix} + \begin{matrix} \text{New} \\ \text{Partner's Asset} \\ \text{Investment} \end{matrix}$$

$$\begin{matrix} \text{New} \\ \text{Partnership} \\ \text{Capital} \end{matrix} = \begin{matrix} \text{Old} \\ \text{Partner's} \\ \text{Capital} \end{matrix} + \begin{matrix} \text{New} \\ \text{Partner's Asset} \\ \text{Investment} \end{matrix}$$

**Which Partner(s) Receive Bonus**

**Which Partner(s) Goodwill Is Recognized**

• **New Partner**

New Partner's Capital Credit > New Partner's Asset Investment  
(The difference represents the bonus.)

• **New Partner's Goodwill**

New Partner's Capital Credit > New Partner's Asset Investment  
(The difference represents goodwill.)

• **Old Partners**

New Partner's Capital Credit > New Partner's Asset Investment  
(The difference represents the bonus allocated to old partners in their P&L Ratio.)

• **Old Partners' Goodwill**

New Partner's Capital Credit = New Partner's Asset Investment  
(Goodwill is allocated to old partners in their P & L Ratio.)

**NOW REVIEW MULTIPLE-CHOICE QUESTIONS 10 THROUGH 15**

**(2) Partner death or withdrawal**

The death or withdrawal of a partner is treated in much the same manner as the admission of a new partner. However, there is no new capital account to be recorded; we are dealing only with the capital accounts of the original partners. Either the bonus or goodwill method may be used. The key thing to remember in regard to a partner's withdrawal from the partnership is that the withdrawing partner's capital account must be adjusted to the amount that the withdrawing partner is expected to receive.

**EXAMPLE**

**Partner Withdrawal**

Assume the same partnership data as given for the ABC partnership earlier.

**Case 1**

Assume that A withdraws from the partnership after reaching an agreement with partners B & C that would pay him \$16,000. The remaining partners elect not to record goodwill.

B Capital	4,000	
C Capital	2,000	
A Capital		6,000
A Capital	16,000	
Cash		16,000

The \$6,000 bonus is determined as the difference between the current balance of A's capital account and the amount of his buyout agreement. This "bonus" is then allocated between the remaining partners' capital accounts in proportion to their P&L ratios.

### Case 2

Assume again that A withdraws from the partnership pursuant to the same agreement except that this time the partners elect to record goodwill.

The first step is to determine the amount of goodwill to be recorded. In this case we know that A's capital account must have a balance of \$16,000, the agreed buyout payment he is to receive. In order to accomplish this, the total partnership assets must be increased by some amount of which \$6,000 represents 40%, A's P&L ratio. Therefore, the amount of goodwill to be recorded is \$15,000 ( $\$6,000/40\%$ ).

Goodwill	15,000	
A Capital		6,000
B Capital		6,000
C Capital		3,000
A Capital	16,000	
Cash		16,000

**NOTE:** In this case all of the partners' capital accounts are adjusted to record the goodwill in accordance with their P&L ratios.

### c. Transactions between partners

- (1) The sale of a partnership interest is a transaction only between the partners. Thus, the treatment accorded the transaction is determined by the partners involved.
- (2) There are two means of dealing with such a transaction.
  - (a) The first is to simply transfer a portion of the existing partners' capital to a new capital account for the buying partner.
  - (b) The other method available for recording a transaction between partners involves the recording of implied goodwill.

### EXAMPLE

#### Sale of a Partnership Interest—No Goodwill Recorded

Assume the following for the AB partnership:

Partner	A	B
Capital	\$50,000	\$50,000
P&L Ratio	60%	40%

### Case 1

Assume that C wishes to enter the partnership by buying 50% of the partnership interest from both A and B for a total of \$80,000. It is important to note that the \$80,000 is being paid to the individual partners and not to the partnership. Thus, we are only concerned with the proper adjustment between the capital accounts, not the recording of the cash. This approach ignores the price that C paid for the partnership interest.

A Capital	25,000	
B Capital	25,000	
C Capital		50,000

**EXAMPLE****Sale of Partnership Interest—Recording Goodwill**

Assume the same facts presented above for the sale of the partnership interest except that in this case the partners elect to record goodwill.

**Case 1**

Assuming that C paid \$80,000 for a 50% interest in the partnership the implied value of the partnership assets is \$160,000 (\$80,000/50%). Because total capital prior to the purchase is only \$100,000, the amount of goodwill that must be recorded is \$60,000. The goodwill is allocated to the prior partners' accounts in proportion to their P&L ratios. Note that this entry is made before an adjustment is made to reflect C's admission to the partnership.

Goodwill	60,000	
A Capital		36,000
B Capital		24,000

Now we can record the sale of the partnership interest to C. The capital balance of A is now \$86,000 (\$50,000 + \$36,000) while the capital balance of B is \$74,000 (\$50,000 + \$24,000). Recall that C is to receive 50% of each balance.

A Capital	43,000	
B Capital	37,000	
C Capital		80,000

**NOTE:** In this situation the capital balance of C after the purchase is equal to the amount of the purchase price. Again no entry is made to record the receipt of cash because the cash goes directly to the individual partners, A and B.

**NOW REVIEW MULTIPLE-CHOICE QUESTIONS 16 THROUGH 20**

**4. Partnership Liquidation**

- a. A liquidation is the winding up of the partnership business. That is, it sells all of its noncash assets, pays its liabilities, and makes a final liquidating distribution to the remaining partners.
 

There are four basic steps to a partnership liquidation.

  - (1) Any operating income or loss up to the date of the liquidation should be computed and allocated to the partners' capital accounts on the basis of their P&L ratio.
  - (2) All noncash assets are sold and converted to cash. The gain (loss) realized on the sale of such assets is allocated to the partners' capital accounts on the basis of their P&L ratio.
  - (3) Any creditors' claims, including liquidation expenses or anticipated future claims, are satisfied through the payment or reserve of cash.
  - (4) The remaining unreserved cash is distributed to the remaining partners in accordance with the balance in their capital accounts. Note that this is **not** necessarily the P&L ratio.
- b. Two factors that may complicate the liquidation process are the existence of loans or advances between the partnership and one or more of the partners, or the creation of a deficit in a partner's capital account because of the allocation of a loss.
  - (1) When loans exist between the partnership and a partner, the capital account and the loan(s) are combined to give a net amount. This is often referred to as the **right of offset**.
  - (2) When a deficit exists, the amount of the deficit is allocated to the remaining solvent partners' capital accounts on the basis of their relative P&L ratio.

**NOTE:** If the partner with the capital deficit is personally solvent, he has a liability to the remaining partners for the amount of the deficit.

- c. There are two topics that appear with regularity on the CPA examination in regard to the liquidation of a partnership. They are the **statement of partnership liquidation** and the determination of a “**safe payment**” in an installment liquidation.

(1) **Statement of partnership liquidation**

The statement of partnership liquidation shows in detail all of the transactions associated with the liquidation of the partnership.

- (a) The liquidation of a partnership can take one of two forms: **simple** or **installment**.

- 1] A **simple liquidation** (illustrated below) is one in which all of the assets are sold in bulk and all of the creditors' claims are satisfied before a single liquidating distribution is made to the partners.
  - a] Because the assets are sold in bulk there is a tendency to realize greater losses than if the assets were sold over a period of time. As a result, many partnerships liquidate on an installment basis.
- 2] In an **installment liquidation** the assets are sold over a period of time and the cash is distributed to the partners as it becomes available.

**EXAMPLE**

**Statement of Partnership Liquidation—Simple Liquidation**

Assume the following:

The capital balances are as given below.

The P&L ratio is 5:3:2 for A, B, and C, respectively.

**STATEMENT OF PARTNERSHIP LIQUIDATION**

	<b>Cash</b>	<b>Other assets</b>	<b>Liabilities</b>	<b>A (50%)</b>	<b>Capital B (30%)</b>	<b>C (20%)</b>
Balances	5,000	75,000	45,000	12,000	17,000	6,000
Sale of assets (\$20,000 loss)	<u>40,000</u>	<u>(60,000)</u>	_____	<u>(10,000)</u>	<u>(6,000)</u>	<u>(4,000)</u>
	45,000	15,000	45,000	2,000	11,000	2,000
Payment of liabilities	<u>(45,000)</u>	_____	<u>(45,000)</u>	_____	_____	_____
	0	15,000	0	2,000	11,000	2,000
Sale of assets (\$5,000 loss)	<u>10,000</u>	<u>(15,000)</u>	_____	<u>(2,500)</u>	<u>(1,500)</u>	<u>(1,000)</u>
	10,000	0	0	(500)	9,500	1,000
Distribution of A's deficit	_____	_____	_____	<u>500</u>	<u>(300)</u>	<u>(200)</u>
	10,000	0	0	0	9,200	800
Final distribution of cash	<u>(10,000)</u>	=====	=====	=====	<u>(9,200)</u>	<u>(800)</u>

**NOTE:** After the noncash assets have been sold and the creditors satisfied, a \$500 deficit remains in A's capital account. The deficit is allocated to the remaining solvent partners on the basis of their relative P&L ratios, in this case, 3:2. A is liable to the partnership for the \$500. If A is personally solvent and repays the \$500, then \$300 will go to B and \$200 will go to C.

- (b) If in the above example there had been liquidation expenses or loans between the partnership and partners, these would have to be recognized in the statement prior to any distribution to partners. A loan receivable from or payable to a partner is simply offset to (closed against) that partner's capital account.

(2) **Installment method of cash distribution**

- (a) There are two keys to preparing a statement of partnership liquidation under the **installment method**:
- 1] The determination of the available cash balance at any given point in time and
  - 2] The determination of which partner(s) is(are) to receive the payment of that cash.

- (b) The reason that the cash is not distributed in accordance with the P&L ratio is twofold:
  - 1] The final cash distribution is based upon the balance in each partner’s capital account, **not** the P&L ratio, and
  - 2] There will be situations, as illustrated in the previous example, where one or more partners will have deficit balances in their capital accounts. If this is the case, they should **never** receive a cash distribution, even if the deficit does not arise until late in the liquidation process.
- (c) The determination of the available cash balance is generally very straightforward. The beginning cash balance (cash on hand at the start of the liquidation process) is adjusted for the cash receipts from receivables, sale of noncash assets, payment to creditors, and liquidation expenses incurred.
  - 1] A situation may occur where a certain amount of cash is to be reserved for payment of future liabilities that may arise. If this is the case, this cash should be treated as an escrowed, or restricted, asset which makes it unavailable for current distribution to the partners.
- (d) The determination of which partner(s) is(are) to receive the available cash is somewhat more difficult. There are a number of ways to make this computation, all of which are equally correct in the eyes of the examiners.
  - 1] This determination can be made at the beginning of the liquidation process or at the time of each payment. In making this determination there are two key assumptions that must be made:
    - a] The individual partners are assumed to be personally insolvent, and
    - b] The remaining noncash assets are deemed to be worthless (thus creating a maximum possible amount of loss).
- (e) One method of determining the amount of the “**safe payment**” is the use of an **Installment Cash Distribution Schedule**. This schedule is prepared by determining the amount of loss required to eliminate each partner’s capital account.
  - 1] As noted above, all of the remaining noncash assets are to be considered worthless at the time a safe payment is determined. Thus, if we determine the amount of loss required to eliminate each partner’s capital balance, we can determine the order in which the partners should receive the cash payments.
  - 2] When preparing this schedule it is important to make sure that the proper capital balance is used.
    - a] The capital balance used **must** be inclusive of any loans or advances between the partnership and partners. Thus, the capital balance at the beginning of the liquidation process is increased by any amount owed to the partner by the partnership, and decreased by any amount owed to the partnership by the partner.

**EXAMPLE**

**SCHEDULE OF POSSIBLE LOSSES**

	<b>Total</b>	<b>A (50%)</b>	<b>B (30%)</b>	<b>C (20%)</b>
Net capital balances	\$35,000	\$12,000	\$17,000	\$ 6,000
Loss to eliminate A	<u>24,000</u>	(12,000)	(7,200)	(4,800)
		0	\$ 9,800	\$ 1,200
Additional loss to eliminate C	3,000*		(1,800)	(1,200)
			8,000	0
Additional loss to eliminate B	<u>8,000</u>		(8,000)	
	<u>\$35,000</u>		0	

\* Allocated 60:40

The total capital balance of \$35,000 indicates that if the noncash assets are sold for \$35,000 less than their book value, then none of the partners will receive a cash distribution. The purpose of this schedule is to determine how much of a loss each partner’s capital account can withstand based on that partner’s P&L ratio. In this example A’s capital would be eliminated if the partnership incurred a \$24,000 (\$12,000/50%) loss, B’s would be eliminated by a \$56,667 (\$17,000/30%) loss, and C’s by a \$30,000 (\$6,000/20%) loss. A is assumed to be eliminated first because it would take the smallest amount of loss to

eliminate his account. Once A is eliminated as a partner, the P&L ratios change to reflect the relative P&L ratio of the remaining partners, in this case B and C. Based on the remaining capital balances and the relative P&L ratio, it would take a \$16,333 (\$9,800/60%) loss to eliminate B and a \$3,000 (\$1,200/40%) loss to eliminate C. Now that C is eliminated B will share all of the profits and losses as a sole partner (i.e., 100%). It will now take an \$8,000 loss to eliminate B's capital. The resulting installment cash distribution schedule would appear as follows.

#### Schedule of Possible Losses and Installment Cash Distribution

Assume the same data as used for the previous example.

This schedule assumes that all creditors have already received full payment; thus, the cash amount represents available cash:

#### INSTALLMENT CASH DISTRIBUTION SCHEDULE

Partner		A	B	C
First	\$ 8,000		100%	
Next	3,000		60%	40%
Next	24,000	50%	30%	20%
Any other		50%	30%	20%

While the example shown in Section 4.c.1 was not an installment liquidation, the Installment Cash Distribution Schedule shown above could still be used to determine how the available cash of \$10,000 is to be distributed. This is illustrated below.

Partner		A	B	C
First	\$ 8,000		\$8,000	
Next	<u>2,000</u>	_____	<u>1,200</u>	\$800
Total	\$10,000	---	\$9,200	\$800

**NOTE:** It is important to note that this method is acceptable for most purposes; however, a CPA exam problem may require the "safe payment" approach where the amount of the safe payment is computed at a specific point in time.

### NOW REVIEW MULTIPLE-CHOICE QUESTIONS 21 THROUGH 22

#### 5. Incorporation of a Partnership

- a. The incorporation of a partnership results in the formation of a new accounting (and legal) entity. This means that the partnership must adjust its records up to the date of incorporation.
  - (1) First, the partnership closes its books and recognizes any income or loss up to the date of incorporation.
  - (2) Second, the books of the partnership are adjusted to reflect the fair market value of the partnership assets and the present value of partnership liabilities.
  - (3) A corresponding adjustment is made to the capital accounts in accordance with the partners' P&L ratio.
 Third, common stock is distributed to the partners in accordance with the amounts in their capital accounts.

**NOTE:** The entries to record the receipt of stock by the corporation are different depending upon whether the corporation retains the partnership books or establishes new books.

- b. Retention of the partnership books means that the issuance of common stock results in the closing of the partners' capital accounts with credits going to common stock and additional paid-in capital.
- c. Establishing new books means that the assets and liabilities are closed out and the difference between their net value and the value of the corporate stock is debited to an asset "capital stock from corporation." This account is then credited and the partners' capital accounts debited to record the distribution of stock.

**NOW REVIEW MULTIPLE-CHOICE QUESTION 23****6. Research Component**

Because there are no authoritative pronouncements in the accounting standards for partnerships, research in the partnership area is limited to the concepts statements that apply for all for-profit entities. You should be prepared to answer conceptual questions on typical accounting concepts such as revenue recognition, matching, valuation, allocation, and other accrual basis accounting concepts that are applicable to all business entities.

**KEY TERMS**

**Bonus method.** The old partnership capital plus the new partner's asset contribution is equal to the new partnership capital.

**Dissolution.** Occurs whenever there is a change in ownership (e.g., the addition of a new partner, or the retirement or death of an existing partner).

**Goodwill method.** The old partnership capital plus the new partner's asset contribution is not equal to the new partnership capital.

**Installment liquidation.** The assets are sold over a period of time and the cash is distributed to the partners as it becomes available.

**Liquidation.** The winding up of partnership affairs and termination of the business.

**Right of offset.** When loans exist between the partnership and a partner, the capital account and the loan(s) are combined to give a net amount.

**Simple liquidation.** One in which all the assets are sold in bulk and all of the creditors' claims are satisfied before a single liquidating distribution is made to the partners.

**Statement of partnership liquidation.** Shows in detail all of the transactions associated with the liquidation of the partnership.

## Multiple-Choice Questions (1–23)

### D.1. Partnership Formation

1. Roberts and Smith drafted a partnership agreement that lists the following assets contributed at the partnership's formation:

	Contributed by	
	Roberts	Smith
Cash	\$20,000	\$30,000
Inventory	--	15,000
Building	--	40,000
Furniture & equipment	15,000	--

The building is subject to a mortgage of \$10,000, which the partnership has assumed. The partnership agreement also specifies that profits and losses are to be distributed evenly. What amounts should be recorded as capital for Roberts and Smith at the formation of the partnership?

	Roberts	Smith
a.	\$35,000	\$85,000
b.	\$35,000	\$75,000
c.	\$55,000	\$55,000
d.	\$60,000	\$60,000

2. On April 30, year 1, Algee, Belger, and Ceda formed a partnership by combining their separate business proprietorships. Algee contributed cash of \$50,000. Belger contributed property with a \$36,000 carrying amount, a \$40,000 original cost, and \$80,000 fair value. The partnership accepted responsibility for the \$35,000 mortgage attached to the property. Ceda contributed equipment with a \$30,000 carrying amount, a \$75,000 original cost, and \$55,000 fair value. The partnership agreement specifies that profits and losses are to be shared equally but is silent regarding capital contributions. Which partner has the largest April 30, year 1 capital account balance?

- a. Algee.
- b. Belger.
- c. Ceda.
- d. All capital account balances are equal.

3. Abel and Carr formed a partnership and agreed to divide initial capital equally, even though Abel contributed \$100,000 and Carr contributed \$84,000 in identifiable assets. Under the bonus approach to adjust the capital accounts, Carr's unidentifiable asset should be debited for

- a. \$46,000
- b. \$16,000
- c. \$8,000
- d. \$0

4. When property other than cash is invested in a partnership, at what amount should the noncash property be credited to the contributing partner's capital account?

- a. Fair value at the date of contribution.
- b. Contributing partner's original cost.
- c. Assessed valuation for property tax purposes.
- d. Contributing partner's tax basis.

### D.2. Allocation of Partnership Income (Loss)

5. Red and White formed a partnership in year 1. The partnership agreement provides for annual salary allowances of \$55,000 for Red and \$45,000 for White. The partners share profits equally and losses in a 60/40 ratio. The partnership had earnings of \$80,000 for year 1 before any allowance to partners. What amount of these earnings should be credited to each partner's capital account?

	Red	White
a.	\$40,000	\$40,000
b.	\$43,000	\$37,000
c.	\$44,000	\$36,000
d.	\$45,000	\$35,000

6. Fox, Greg, and Howe are partners with average capital balances during year 1 of \$120,000, \$60,000, and \$40,000, respectively. Partners receive 10% interest on their average capital balances. After deducting salaries of \$30,000 to Fox and \$20,000 to Howe, the residual profit or loss is divided equally. In year 1 the partnership sustained a \$33,000 loss before interest and salaries to partners. By what amount should Fox's capital account change?

- a. \$7,000 increase.
- b. \$11,000 decrease.
- c. \$35,000 decrease.
- d. \$42,000 increase.

7. The partnership agreement of Axel, Berg & Cobb provides for the year-end allocation of net income in the following order:

- First, Axel is to receive 10% of net income up to \$100,000 and 20% over \$100,000.
- Second, Berg and Cobb each are to receive 5% of the remaining income over \$150,000.
- The balance of income is to be allocated equally among the three partners.

The partnership's year 1 net income was \$250,000 before any allocations to partners. What amount should be allocated to Axel?

- a. \$101,000
- b. \$103,000
- c. \$108,000
- d. \$110,000

8. The partnership agreement of Reid and Simm provides that interest at 10% per year is to be credited to each partner on the basis of weighted-average capital balances. A summary of Simm's capital account for the year ended December 31, year 1, is as follows:

Balance, January 1	\$140,000
Additional investment, July 1	40,000
Withdrawal, August 1	(15,000)
Balance, December 31	165,000

What amount of interest should be credited to Simm's capital account for year 1?

- a. \$15,250
- b. \$15,375
- c. \$16,500
- d. \$17,250

9. The Flat and Iron partnership agreement provides for Flat to receive a 20% bonus on profits before the bonus. Remaining profits and losses are divided between Flat and Iron in the ratio of 2:3, respectively. Which partner has a greater advantage when the partnership has a profit or when it has a loss?

	Profit	Loss
a.	Flat	Iron
b.	Flat	Flat
c.	Iron	Flat
d.	Iron	Iron

**D.3.b.(1) Admission of a New Partner**

10. Blau and Rubi are partners who share profits and losses in the ratio of 6:4, respectively. On May 1, year 1, their respective capital accounts were as follows:

Blau	\$60,000
Rubi	50,000

On that date, Lind was admitted as a partner with a one-third interest in capital and profits for an investment of \$40,000. The new partnership began with total capital of \$150,000. Immediately after Lind's admission, Blau's capital should be

- a. \$50,000
- b. \$54,000
- c. \$56,667
- d. \$60,000

11. Kern and Pate are partners with capital balances of \$60,000 and \$20,000, respectively. Profits and losses are divided in the ratio of 60:40. Kern and Pate decided to form a new partnership with Grant, who invested land valued at \$15,000 for a 20% capital interest in the new partnership. Grant's cost of the land was \$12,000. The partnership elected to use the bonus method to record the admission of Grant into the partnership. Grant's capital account should be credited for

- a. \$12,000
- b. \$15,000
- c. \$16,000
- d. \$19,000

12. Dunn and Grey are partners with capital account balances of \$60,000 and \$90,000, respectively. They agree to admit Zorn as a partner with a one-third interest in capital and profits, for an investment of \$100,000, after revaluing the assets of Dunn and Grey. Goodwill to the original partners should be

- a. \$0
- b. \$33,333
- c. \$50,000
- d. \$66,667

Items 13 and 14 are based on the following:

The following condensed balance sheet is presented for the partnership of Alfa and Beda, who share profits and losses in the ratio of 60:40, respectively:

Cash	\$ 45,000
Other assets	625,000
Beda, loan	<u>30,000</u>
	<u>\$700,000</u>
Accounts payable	\$120,000
Alfa, capital	<u>348,000</u>
Beda, capital	<u>232,000</u>
	<u>\$700,000</u>

13. The assets and liabilities are fairly valued on the balance sheet. Alfa and Beda decide to admit Capp as a new partner with 20% interest. No goodwill or bonus is to be recorded. What amount should Capp contribute in cash or other assets?

- a. \$110,000
- b. \$116,000
- c. \$140,000
- d. \$145,000

14. Instead of admitting a new partner, Alfa and Beda decide to liquidate the partnership. If the other assets are sold for \$500,000, what amount of the available cash should be distributed to Alfa?

- a. \$255,000
- b. \$273,000
- c. \$327,000
- d. \$348,000

15. In the Adel-Brick partnership, Adel and Brick had a capital ratio of 3:1 and a profit and loss ratio of 2:1, respectively. The bonus method was used to record Colter's admittance as a new partner. What ratio would be used to allocate, to Adel and Brick, the excess of Colter's contribution over the amount credited to Colter's capital account?

- a. Adel and Brick's new relative capital ratio.
- b. Adel and Brick's new relative profit and loss ratio.
- c. Adel and Brick's old capital ratio.
- d. Adel and Brick's old profit and loss ratio.

**D.3.b.(2) Partner Death or Withdrawal**

Items 16 and 17 are based on the following:

On June 30, year 1, the condensed balance sheet for the partnership of Eddy, Fox, and Grimm, together with their respective profit and loss sharing percentages were as follows:

Assets, net of liabilities	\$320,000
Eddy, capital (50%)	<u>\$160,000</u>
Fox, capital (30%)	96,000
Grimm, capital (20%)	<u>64,000</u>
	<u>\$320,000</u>

16. Eddy decided to retire from the partnership and by mutual agreement is to be paid \$180,000 out of partnership funds for his interest. Total goodwill implicit in the agreement is

to be recorded. After Eddy's retirement, what are the capital balances of the other partners?

	<b>Fox</b>	<b>Grimm</b>
a.	\$84,000	\$56,000
b.	\$102,000	\$68,000
c.	\$108,000	\$72,000
d.	\$120,000	\$80,000

17. Assume instead that Eddy remains in the partnership and that Hamm is admitted as a new partner with a 25% interest in the capital of the new partnership for a cash payment of \$140,000. Total goodwill implicit in the transaction is to be recorded. Immediately after admission of Hamm, Eddy's capital account balance should be

- \$280,000
- \$210,000
- \$160,000
- \$140,000

18. On June 30, year 1, the balance sheet for the partnership of Coll, Maduro, and Prieto, together with their respective profit and loss ratios, were as follows:

Assets, at cost	<u>\$180,000</u>
Coll, loan	<u>\$ 9,000</u>
Coll, capital (20%)	42,000
Maduro, capital (20%)	39,000
Prieto, capital (60%)	<u>90,000</u>
Total	<u>\$180,000</u>

Coll has decided to retire from the partnership. By mutual agreement, the assets are to be adjusted to their fair value of \$216,000 at June 30, year 1. It was agreed that the partnership would pay Coll \$61,200 cash for Coll's partnership interest, including Coll's loan which is to be repaid in full. No goodwill is to be recorded. After Coll's retirement, what is the balance of Maduro's capital account?

- \$36,450
- \$39,000
- \$45,450
- \$46,200

19. Allen retired from the partnership of Allen, Beck, and Chale. Allen's cash settlement from the partnership was based on new goodwill determined at the date of retirement plus the carrying amount of the other net assets. As a consequence of the settlement, the capital accounts of Beck and Chale were decreased. In accounting for Allen's withdrawal, the partnership could have used the

	<b>Bonus method</b>	<b>Goodwill method</b>
a.	No	Yes
b.	No	No
c.	Yes	Yes
d.	Yes	No

20. When Mill retired from the partnership of Mill, Yale, and Lear, the final settlement of Mill's interest exceeded Mill's capital balance. Under the bonus method, the excess

- Was recorded as goodwill.
- Was recorded as an expense.

- Reduced the capital balances of Yale and Lear.
- Had **no** effect on the capital balances of Yale and Lear.

#### D.4. Partnership Liquidation

21. The following condensed balance sheet is presented for the partnership of Smith and Jones, who share profits and losses in the ratio of 60:40, respectively:

Other assets	\$450,000
Smith, loan	<u>20,000</u>
	<u>\$470,000</u>
Accounts payable	\$120,000
Smith, capital	195,000
Jones, capital	<u>155,000</u>
	<u>\$470,000</u>

The partners have decided to liquidate the partnership. If the other assets are sold for \$385,000, what amount of the available cash should be distributed to Smith?

- \$136,000
- \$156,000
- \$159,000
- \$195,000

22. On January 1, year 1, the partners of Cobb, Davis, and Eddy, who share profits and losses in the ratio of 5:3:2, respectively, decided to liquidate their partnership. On this date the partnership condensed balance sheet was as follows:

<b>Assets</b>	
Cash	\$ 50,000
Other assets	<u>250,000</u>
	<u>\$300,000</u>
<b>Liabilities and Capital</b>	
Liabilities	\$ 60,000
Cobb, capital	80,000
Davis, capital	90,000
Eddy, capital	<u>70,000</u>
	<u>\$300,000</u>

On January 15, year 1, the first cash sale of other assets with a carrying amount of \$150,000 realized \$120,000. Safe installment payments to the partners were made the same date. How much cash should be distributed to each partner?

	<b>Cobb</b>	<b>Davis</b>	<b>Eddy</b>
a.	\$15,000	\$51,000	\$44,000
b.	\$40,000	\$45,000	\$35,000
c.	\$55,000	\$33,000	\$22,000
d.	\$60,000	\$36,000	\$24,000

#### D.5. Incorporation of a Partnership

23. Jay & Kay partnership's balance sheet at December 31, year 1, reported the following:

Total assets	\$100,000
Total liabilities	20,000
Jay, capital	40,000
Kay, capital	40,000

On January 2, year 2, Jay and Kay dissolved their partnership and transferred all assets and liabilities to a newly formed corporation. At the date of incorporation, the fair value of the net assets was \$12,000 more than the carrying amount on the partnership's books, of which \$7,000 was assigned to tangible assets and \$5,000 was assigned to goodwill. Jay and Kay were each issued 5,000 shares of the corporation's \$1 par value common stock. Immediately following incorporation,

additional paid-in capital in excess of par should be credited for

- a. \$68,000
- b. \$70,000
- c. \$77,000
- d. \$82,000

## Multiple-Choice Answers and Explanations

### Answers

1. b    —    —	6. a    —    —	11. d    —    —	16. c    —    —	21. a    —    —
2. c    —    —	7. c    —    —	12. c    —    —	17. b    —    —	22. a    —    —
3. d    —    —	8. b    —    —	13. d    —    —	18. c    —    —	23. d    —    —

### Explanations

1. (b) The requirement is to determine the amounts to be recorded as capital for Roberts and Smith at the formation of the partnership. Unless otherwise agreed upon by the partners, individual capital accounts should be credited for the fair market value (on the date of contribution) of the net assets contributed by that partner. It is necessary to assume that the amounts listed are fair market values. The amount of net assets that Roberts contributed is \$35,000 (\$20,000 + \$15,000). The fair market value of the net assets Smith contributed is \$75,000 (\$30,000 + \$15,000 + \$40,000 – \$10,000). The partners' profit and loss sharing ratio does not affect the initial recording of the capital accounts.

2. (c) The requirement is to determine which partner has the largest capital account balance. Use the solutions approach to solve the problem.

	Algee	Belger	Ceda
Partner contribution	50,000	80,000	55,000
Less: Liabilities assumed by the partnership	<u>0</u>	<u>(35,000)</u>	<u>0</u>
Ending capital balance	\$50,000	\$45,000	\$55,000

Each partner values his contribution to the partnership at its fair market value. The fair market value becomes the partner's balance in his capital account and is basis to the partnership under generally accepted accounting principles. Any liabilities assumed by the partnership, reduces the partners' capital balance by the amount assumed.

3. (d) Under the bonus method, unidentifiable assets (i.e., goodwill) are not recognized. The total resulting capital is the FV of the tangible investments of the partners. Thus, there would be no unidentifiable assets recognized by the creation of this new partnership.

4. (a) Noncash assets contributed to an entity should be recorded at fair market value at the date of contribution. The creation of a new entity creates a new accountability for these assets. The partner's original cost relates to a previous accountability. The assessed valuation and the tax basis may differ from fair market value.

5. (b) Credits to partners' capital accounts are based upon earnings after allowance for interest, salary and bonus. The earnings before any allowance of \$80,000 is reduced by the salary allowances of \$100,000 and results in a loss of \$20,000.

The \$20,000 loss is then distributed to the partners in relation to their profit and loss ratios as follows:

	Red	White	Total
Profit before allowance			\$ 80,000
Salary allowances	\$55,000	\$45,000	(100,000)
Loss after allowances 60/40	(12,000)	(8,000)	(20,000)
Earnings credited to partners	<u>\$43,000</u>	<u>\$37,000</u>	<u>\$ 80,000</u>

It is important to note that the losses are distributed 60/40 while profits are shared equally.

6. (a) When dividing the partnership loss of \$33,000, first interest and salaries are allocated to the partners, **increasing** their capital balances. This allocation of interest and salaries will also increase the amount of loss. This increased loss amount would then be allocated to the partners, **decreasing** their capital accounts. The computations are shown below.

	Fox	Greg	Howe
Interest allowance (10% of avg. cap. balances)	\$12,000	\$ 6,000	\$ 4,000
Salaries	30,000		20,000
Residual* (\$105,000 ÷ 3)	(35,000)	(35,000)	(35,000)
Increase (decrease) in cap. account	<u>\$ 7,000</u>	<u>\$(29,000)</u>	<u>\$(11,000)</u>

\* The residual loss of \$105,000 is the loss resulting after the interest and salary allowances are deducted [\$33,000 loss – (\$12,000 + \$6,000 + \$4,000) – (\$30,000 + \$20,000)].

Thus, Fox's account increases by \$7,000.

7. (c) The distribution of the partnership net income of \$250,000 occurs in three steps as follows:

Step	Axel	Berg	Cobb
1. Axel: 10% of first \$100,000, 20% over \$100,000	\$ 10,000 30,000		
2. Berg & Cobb: 5% of remaining income over \$150,000 [(\$250,000 – \$10,000 – \$30,000 – \$150,000) × .05]		\$ 3,000	\$ 3,000
Step	Axel	Berg	Cobb
3. Remaining allocated equally: [(\$250,000 – \$10,000 – \$30,000 – \$3,000) × 1/3]	68,000	68,000	68,000
Totals	<u>\$108,000</u>	<u>\$71,000</u>	<u>\$71,000</u>

Thus, \$108,000 would be distributed to Axel.

8. (b) We must first determine Simm’s weighted-average capital balance for year 1 as follows:

<b>Capital bal.</b>	×	<b># of months/12</b>	=	<b>Weighted-avg.</b>
140,000	×	6/12	=	\$ 70,000
180,000	×	1/12	=	15,000
165,000	×	5/12	=	<u>68,750</u>
				<u>\$153,750</u>

The problem states that interest of 10% per year is to be credited to each partner’s capital account, and 10% of Simm’s weighted-average capital balance of \$153,750 is \$15,375.

9. (b) In both the case of a profit or a loss, Flat will have a greater advantage. When there is a profit, Flat will obtain a 20% bonus on profits before the bonus, and also take 40% of the profit after the bonus. Iron on the other hand, will only receive 60% of the profit after the bonus. The following example illustrates this:

	<b>Flat</b>	<b>Iron</b>	<b>Profit</b>
P & L ratio	40%	60%	1,000
20% Bonus	200	0	<u>(200)</u>
			800
Share in profit	<u>320</u>	<u>480</u>	
Total distribution	<u>520</u>	<u>480</u>	

In the case of a loss, it can easily be seen that since Flat has a smaller percentage share in the loss that he has a greater advantage.

10. (b) The requirement is to calculate the balances in the capital accounts of a partnership after the admission of a new partner. In this case, the new partner is investing \$40,000 for a 1/3 interest in the new total capital of \$150,000. No goodwill is recorded because the new capital (\$150,000) equals the total of the old capital (\$110,000) and Carter’s investment (\$40,000). However, a bonus of \$10,000 is being credited to the new partner’s capital account because his interest (1/3 of \$150,000, or \$50,000) exceeds his investment (\$40,000). The bonus to the new partner is charged to the old partners in their profit and loss ratios as shown below.

Blau [60,000 – 3/5 (10,000)]	\$54,000
Rubi [50,000 – 2/5 (10,000)]	46,000
Lind (150,000 ÷ 3)	<u>50,000</u>
	<u>\$150,000</u>

11. (d) The requirement is to determine the balance in the new partner’s capital account after admission using the bonus method. In this case, Grant is investing land with a FV of \$15,000 for a 1/5 interest in the new total capital of \$95,000. Using the bonus method, the new capital \$95,000 equals the total of the old capital plus Grant’s investment (\$60,000 + \$20,000 + \$15,000). Thus, a bonus of \$4,000 is being credited to Grant’s capital account because his interest (1/5 of \$95,000, or \$19,000) exceeds his investment (\$15,000). The bonus to the new partner is charged to the old partners’ capital accounts in their profit and loss ratios.

12. (c) The requirement is to determine the amount of goodwill implied by Zorn’s investment. Zorn is investing

\$100,000 for a 1/3 interest in the partnership. Therefore, \$100,000 represents 1/3 of the value of the equity of the new partnership (\$100,000 ÷ 1/3 = \$300,000). The tangible portion of the equity is \$250,000 (\$60,000 + \$90,000 + \$100,000). Thus, the total implied goodwill is \$50,000 (\$300,000 – \$250,000).

13. (d) If no goodwill or bonus is to be recorded, the formula to determine the necessary contribution is

$$\text{Partnership interest of new partner} \times \left( \begin{array}{l} \text{Capital bal.} \\ \text{of existing} \\ \text{partners} \end{array} + \begin{array}{l} \text{Amount} \\ \text{to be} \\ \text{contributed} \end{array} \right) = \begin{array}{l} \text{Amount} \\ \text{to be} \\ \text{contributed} \end{array}$$

$$\begin{aligned} 20\% \times (\$580,000 + x) &= x \\ \$116,000 + .2x &= x \\ \$116,000 &= .8x \\ \$145,000 &= x \end{aligned}$$

An alternative computation is to divide the old partner’s capital (\$580,000) by their interest after the new partner’s admission. The result is the total capital after admission (\$580,000 ÷ 80% = \$725,000). To compute the new partner’s contribution, the old partners’ capital can be subtracted from total capital (\$725,000 – \$580,000 = \$145,000), or total capital can be multiplied by 20% (20% × \$725,000 = \$145,000).

14. (b) To determine the amount of cash distributed during liquidation, the solutions approach is to prepare an abbreviated statement of partnership liquidation. In a partnership liquidation, cash is distributed based on the capital balances of the partners **after** adjusting them for any income (loss) to the date of liquidation and any loans or advances between the partners and the partnership. The abbreviated statement follows:

	<b>Alfa</b>	<b>Beda</b>	<b>Total</b>
Beg. capital balance	\$348,000	\$232,000	\$580,000
Adj. for loans		(30,000)	(30,000)
Adj. for loss on sale of assets*			
(60-40)	<u>(75,000)</u>	<u>(50,000)</u>	<u>(125,000)</u>
Adj. capital balance	<u>\$273,000</u>	<u>152,000</u>	<u>\$425,000</u>
	* (\$500,000 – \$625,000)		

Note that the total cash available also equals \$425,000.

Beginning cash	\$ 45,000
Proceeds from sale	500,000
Payment of AP	<u>(120,000)</u>
	<u>\$425,000</u>

Therefore, Alfa can receive \$273,000 in cash in full liquidation of his capital balance.

15. (d) The bonus method implies that the old partners either received a bonus from the new partner, or they paid a bonus to the new partner. In this case, Colter, the new partner, contributed an amount in excess of the amount credited to Colter’s capital account. Accordingly, the excess should be treated as a bonus to Adel and Brick. This bonus should be treated as an adjustment to the old partners’ capital accounts and should be allocated by using Adel and Brick’s old profit and loss ratio.

**16. (c)** Eddy is to be paid \$180,000 for his 50% interest in the partnership. This implies that the net assets of the partnership are worth \$360,000 ( $\$180,000 \div 50\%$ ). Since the net assets are currently reported at \$320,000, implied goodwill is \$40,000 ( $\$360,000 - \$320,000$ ). When goodwill is recorded, the goodwill account is debited and the partners' capital accounts are credited for their share of the goodwill. Therefore, the capital balances of Fox and Grimm are \$108,000 and \$72,000, as computed below.

	Fox	Grimm
Previous capital balance	\$96,000	\$64,000
Share of goodwill		
Fox ( $30\% \times \$40,000$ )	12,000	
Grimm ( $20\% \times \$40,000$ )	--	8,000
New capital balance	<u>\$108,000</u>	<u>\$72,000</u>

**17. (b)** Hamm will pay \$140,000 for a 25% interest in the partnership. This implies that the net assets of the partnership, including the new investment, are worth \$560,000 ( $\$140,000 \div 25\%$ ). Net assets are currently reported at \$320,000, and Hamm's cash payment of \$140,000 brings that total up to \$460,000. Therefore, implied goodwill is \$100,000 [ $\$560,000 - (\$320,000 + \$140,000)$ ]. When goodwill is recorded, the goodwill account is debited and the partners' capital accounts are credited for their share of goodwill. Therefore, Eddy's capital balance (\$160,000) is increased by his share of the goodwill ( $50\% \times \$100,000 = \$50,000$ ), to result in a balance of \$210,000 ( $\$160,000 + \$50,000$ ).

**18. (c)** The requirement is to determine the balance in Maduro's capital account after Coll's retirement. When a partner withdraws from a partnership a determination of the fair value of the entity must be made. Since it is stated in the problem that the withdrawing partner is selling his interest to the partnership and that no goodwill is to be recorded, the bonus method must be employed after restatement of assets to FV. The capital accounts after restatement to FV would be

Coll  
 $[\$42,000 + 20\%(\$216,000 - \$180,000)] = \$49,200$

Maduro  
 $[\$39,000 + 20\%(\$216,000 - \$180,000)] = \$46,200$

Prieto  
 $[\$90,000 + 60\%(\$216,000 - \$180,000)] = \$111,600$

The bonus paid to Coll is the difference between the cash paid to him for his partnership interest and the balance of that interest plus his loan balance.

$$\text{Bonus} = [\$61,200 - (\$49,200 + \$9,000)] = \$3,000$$

Maduro's capital account would be reduced by his proportionate share of the bonus, based on the profit and loss ratio of the remaining partners [ $20\% / (20\% + 60\%) = 25\%$ ].

$$\text{Maduro's capital } [\$46,200 - 25\% (\$3,000)] = \$45,450$$

**19. (d)** Under both the bonus and goodwill methods, the assets of the partnership must first be restated to their fair market value. Then, the withdrawing partner's capital account must be adjusted to the amount that the withdrawing partner is expected to receive. When the bonus method is used, no new goodwill is recorded. Instead, the existing partners' capital

accounts are reduced by the amount necessary to increase the withdrawing partner's capital to the amount s/he is to be paid. When the goodwill method is used, new goodwill is recorded, and each partner's capital account is increased accordingly. Therefore, the bonus method results in a **decrease** of existing partners' capital accounts, while the goodwill method results in an **increase** of existing partners' capital accounts.

**20. (c)** Under the bonus method, adjustments are made only among partner's capital accounts (no goodwill is recorded on the partnership books). Since Mill's partnership interest exceeded the amount of Mill's capital balance, the excess interest would reduce the capital balances of Yale and Lear. Only under the goodwill method can the excess interest be recorded as goodwill. Under no circumstances should the excess partnership interest be recorded as an expense.

**21. (a)** This situation represents a simple liquidation since all assets are distributed at one point in time rather than in installments. In a simple liquidation all of the noncash assets are sold and the proceeds from their sale are compared to their book value to compute the gain or loss. The gain or loss on the assets is then distributed to the partners' accounts before any of the cash is distributed. The partner loan should not be considered a noncash asset for the purpose of determining gain or loss, thus, Smith is responsible to the partnership for the repayment of the entire amount of the loan. The repayment of the loan reduces that partner's (Smith) distribution as follows:

Partner balances	Smith	Jones	Total
before liquidation			
Loan (debit)	\$(20,000)		\$(20,000)
Capital (credit)	<u>195,000</u>	\$155,000	<u>350,000</u>
Net balances	\$175,000	\$155,000	\$330,000
Loss on sale of other assets (450 - 385)	<u>39,000</u>	<u>26,000</u>	<u>(65,000)</u>
Cash available for partners	<u>\$136,000</u>	<u>\$129,000</u>	\$265,000
Cash available for credits			<u>120,000</u>
Total cash from sale of noncash assets			<u>\$385,000</u>

**22. (a)** A schedule of safe payments must be prepared to determine the amount of cash to be distributed to each partner at January 15, year 1. The first cash sale of other assets with a total book value of \$150,000 realized \$120,000 in cash, resulting in a \$30,000 loss. This loss is allocated among the partners based upon their profit and loss ratios. The schedule is completed based upon the assumption that the remaining other assets are totally worthless, and their book values are distributed to the partners as losses, based upon the partners' profit and loss ratios. The cash payments to each partner can be found at the bottom of the schedule.

	Cash	O/A	Liab.
Beginning	\$50	\$250	\$60
Sale of assets	+ <u>120</u>	- <u>150</u>	--
	170	100	60
Dist. to creditors	- <u>60</u>	--	- <u>60</u>
	110	100	0
Disposal of other assets	--	- <u>100</u>	--
Dist. to partners	- <u>110</u>	--	--
	<u>0</u>	<u>0</u>	<u>0</u>

	<b>C</b>	<b>Capital D</b>	<b>E</b>
Beginning	\$80,000	\$90,000	\$70,000
Sale of assets	<u>-15,000</u>	<u>-9,000</u>	<u>-6,000</u>
	65,000	81,000	64,000
Disposal of other assets	<u>-50,000</u>	<u>-30,000</u>	<u>-20,000</u>
	15,000	51,000	44,000
Dist. to partners	<u>-15,000</u>	<u>-51,000</u>	<u>-44,000</u>
	<u>0</u>	<u>0</u>	<u>0</u>

Thus, the cash should be distributed as follows: \$15,000 to Cobb, \$51,000 to Davis, and \$44,000 to Eddy.

**23. (d)** When a partnership incorporates, assets and liabilities must be revalued to their fair market values on the date of incorporation. In this case, the net assets have a fair market value of \$92,000 (\$80,000 + \$12,000) and the amount to be credited to Additional Paid-in Capital is \$82,000 (\$92,000 – \$10,000 par value).

## Simulations

### Task-Based Simulation 1

<b>Liquidation Schedule</b>		
	<b>Authoritative Literature</b>	<b>Help</b>

#### *Situation*

On January 1, year 2, the partners of Dove, Eagle, and Falcon who share profits and losses in the ratio of 5:3:2, respectively decided to liquidate their partnership. On this date, the partnership's condensed balance sheet was as follows:

<i>Assets</i>	
Cash	\$80,000
Note receivable—(loan to Eagle)	20,000
Plant, property, and equipment	<u>300,000</u>
	<u>400,000</u>
<i>Liabilities and Capital</i>	
Liabilities	120,000
Dove, capital	150,000
Eagle, capital	70,000
Falcon, capital	60,000

On January 30, year 2, the first cash sale of other assets with a carrying amount of \$120,000 was sold for \$150,000. On February 5, year 2, the remaining assets were sold for \$100,000.

Prepare a Schedule of Partnership Liquidation for the partnership. Indicate the cash distribution to each partner. (For a more realistic exam experience, prepare the schedule using a spreadsheet program such as Excel.)

*Partnership of Dove, Eagle, and Falcon*  
**SCHEDULE OF PARTNERSHIP LIQUIDATION**  
*February 5, Year 2*

	Cash	Notes receivable	Plant, property, and equip.	Liabilities	Dove	Eagle	Falcon
Balances							
Partner loans							
Sale of assets, Jan. 30							
Sale of assets, Feb. 5							
Payment of liabilities							
Amount distributed to each partner

<b>Incorporation of Partnership</b>	<b>Authoritative Literature</b>	<b>Help</b>

**Situation**

The partners of Ray, Shay, and Tay partnership have chosen to incorporate the partnership on January 30, year 2. After adjusting the partnership's books to fair value, the capital balances of the partners are as follows:

Ray	\$175,000
Shay	\$65,000
Tay	\$70,000

The new company, RST Corp., is incorporated in the state of Delaware with 300,000 authorized shares of \$2 par value common stock. The corporation retains the partnership's books and closes the partners' capital accounts. Ray receives 50,000 shares of stock, Shay receives 30,000 shares of stock, and Tay receives 20,000 shares of stock.

Prepare the journal entry to record the incorporation of the partnership.

### Task-Based Simulation 4

Allocation of Income	Authoritative Literature	Help

#### Situation

On January 2, year 1, Alkire and Higdon drafted a partnership agreement to create a new partnership. The following items were contributed by each of the partners:

	Alkire	Higdon
Cash	\$40,000	\$60,000
Inventory		10,000
Building		180,000
Equipment	60,000	

The building is subject to a mortgage of \$50,000 which the partnership has assumed. The partnership agreement specifies that each partner receives 10% interest on his beginning capital balance. Alkire receives an annual salary of \$15,000; Higdon receives an annual salary of \$20,000. The residual profit or loss is divided using a 2:3 ratio with 2 parts assigned to Alkire and 3 parts assigned to Higdon.

During year 1 the partnership had income of \$185,000. Assume there were no drawings during year 1.

Record the journal entry for each partner's contribution to the partnership.

- Journal entry for Alkire's contribution
- Journal entry for Higdon's contribution

Complete the following schedule showing the allocation of partnership income for each partner.

	Alkire	Higdon
Beginning capital balance		
Interest on capital balance		
Annual salary		
Remainder		
Ending capital balance		

### Task-Based Simulation 5

Admission of New Partner	Authoritative Literature	Help

On January 1, year 2, Kate and Lars decide to admit a new partner, Mark, for a 1/6 interest in the firm for \$175,000. The bonus method is used to record the admission of the new partner. The book value of the firm before admitting Mark was \$485,000, and the capital balance of Kate and Lars were \$173,000 and \$312,000 respectively. Kate and Lars had a 2:3 profit sharing ratio with 2 parts assigned to Kate and 3 parts assigned to Lars. After admitting the new partner, the partnership agreement is amended as follows:

Each partner receives 10% interest on his beginning capital balance. Each partner receives an annual salary of \$20,000. The residual profit or loss is divided in a ratio of 30% to Kate, 50% to Lars, and 20% to Mark.

Record the entry for admission of Mark to the partnership.

**Task-Based Simulation 6**

<b>Partnership Liquidation</b>	<b>Authoritative Literature</b>	<b>Help</b>

On 12/31/Y3, the partnership of DEF is dissolved. On that date, after closing the books, the following information is available:

Cash	\$160,000
Loan to E	50,000
Other assets	700,000
Liabilities	110,000
Capital, D	200,000
Capital, E	400,000
Capital, F	200,000

Other information necessary for the liquidation is as follows:

During the month of January year 4, assets with a book value of \$180,000 were sold for \$210,000. The profit and loss sharing ratio is 30% to D, 50% to E, and 20% to F.

Prepare a schedule of safe payments as of January 31, year 4.

*Partnership of DEF*  
**SCHEDULE OF SAFE PAYMENTS**  
*January 31, Year 4*

	<b>Cash</b>	<b>Notes receivable</b>	<b>Plant, property, and equip.</b>	<b>Liabilities</b>	<b>Capital—D</b>	<b>Capital—E</b>	<b>Capital—F</b>
Balances	\$160,000	\$50,000	\$700,000	\$110,000	\$200,000	\$400,000	\$200,000
Partner loans							
Sale of assets, Jan.							
Payment of liabilities							
Loss on other assets							
Safe payment to partners							

## Simulation Solutions

### Task-Based Simulation 1

<b>Liquidation Schedule</b>	<b>Authoritative Literature</b>	<b>Help</b>

#### *Explanation*

*Partnership of Dove, Eagle, and Falcon*  
**SCHEDULE OF PARTNERSHIP LIQUIDATION**  
*February 5, Year 2*

	Cash	Notes receivable	Plant, property, and equip.	Liabilities	Dove	Eagle	Falcon
Balances	\$80,000	\$20,000	\$300,000	\$120,000	\$150,000	\$70,000	\$60,000
Partner loans		(20,000)				(20,000)	
Sale of assets, Jan. 30	150,000		(120,000)		15,000	9,000	6,000
Sale of assets, Feb. 5	100,000		(180,000)		(40,000)	(24,000)	(16,000)
Payment of liabilities	(120,000)			(120,000)			
Amount distributed to each partner	<u>\$210,000</u>	<u>\$ --</u>	<u>\$ --</u>	<u>\$ --</u>	<u>\$125,000</u>	<u>\$35,000</u>	<u>\$50,000</u>

#### *Steps in partnership liquidation schedule*

1. Net out loans to partners.
2. Sale of assets on January 30: FV received minus book value given up = Gain/Loss on sale of assets \$150,000 – \$120,000 = \$30,000 gain. Allocate gain as follows: Dove 50% × \$30,000 = \$15,000; Eagle \$30,000 × 30% = \$9,000; Falcon \$30,000 × 20% = \$6,000.
3. Sale of assets on February 5: \$100,000 received – \$180,000 carrying value = \$80,000 loss. Allocate as follows: Dove \$80,000 × 50% = \$40,000 loss; Eagle \$80,000 × 30% = \$24,000 loss; Falcon \$80,000 × 20% = \$16,000 loss.
4. Pay liabilities \$120,000.
5. Amount to distribute to partners: Dove = \$125,000; Eagle = \$35,000; Falcon = \$50,000.

### Task-Based Simulation 2

<b>Schedule of Safe Payments</b>	<b>Authoritative Literature</b>	<b>Help</b>

*Partnership of Dove, Eagle, and Falcon*  
**SCHEDULE OF SAFE PAYMENTS**  
*January 30, Year 2*

	Cash	Notes receivable	Plant, property, and equip.	Liabilities	Dove	Eagle	Falcon
Balances	80,000	20,000	300,000	120,000	150,000	70,000	60,000
Partner loans		(20,000)				(20,000)	
Sale of assets, Jan. 30	<u>180,000</u>		(160,000)		<u>10,000</u>	<u>6,000</u>	<u>4,000</u>
Subtotal	260,000	0	140,000	120,000	160,000	56,000	64,000
Payment of liabilities	(120,000)			(120,000)	<u>0</u>	<u>0</u>	<u>0</u>
Subtotal	140,000		(140,000)	0	160,000	56,000	64,000
Assume total loss on other assets			<u>140,000</u>		(70,000)	(42,000)	(28,000)
Amount distributed to each partner	<u>140,000</u>				<u>90,000</u>	<u>14,000</u>	<u>36,000</u>

**Explanation**

Steps in the schedule of safe payments

1. Net out loans to partners.
2. Sale of assets results in a \$20,000 gain which is allocated on a 5:3:2 basis.
  - Dove receives  $50\% \times \$20,000 = \$10,000$
  - Eagle receives  $30\% \times \$20,000 = \$6,000$
  - Falcon receives  $20\% \times \$20,000 = \$4,000$
3. Pay liabilities with cash.
4. Assume a total loss on other assets of \$140,000.
  - Dove receives  $50\% \times \$140,000$  of loss = \$70,000 loss
  - Eagle receives  $30\% \times \$140,000 = \$42,000$  loss
  - Falcon receives  $20\% \times \$140,000 = \$28,000$  loss
5. Safe payment is made based on balances in the capital accounts.

**Task-Based Simulation 3**

<b>Incorporation of Partnership</b>	<b>Authoritative Literature</b>	<b>Help</b>

Ray, capital	175,000	
Shay, capital	65,000	
Tay, capital	70,000	
Common stock		200,000
Additional paid-in capital		110,000

**Task-Based Simulation 4**

<b>Allocation of Income</b>	<b>Authoritative Literature</b>	<b>Help</b>

Journal entry for Alkire’s contribution

Cash	40,000	
Equipment	60,000	
Capital, Alkire		100,000

Journal entry for Higdon’s contribution

Cash	60,000	
Inventory	10,000	
Building	180,000	
Note payable		50,000
Capital, Higdon		200,000

	<b>Alkire</b>	<b>Higdon</b>
Beginning capital balance	\$100,000	\$200,000
Interest on capital balance	10,000	20,000
Annual salary	15,000	20,000
Remainder	<u>48,000</u>	<u>72,000</u>
Ending capital balance	\$173,000	\$312,000

**Explanation**

Each partner receives 10% on beginning capital balance. Each partner receives his respective income (\$15,000 to Alkire and \$20,000 to Higdon). The amount distributed thus far is \$65,000. The remainder to be distributed is \$120,000 ( $185,000 - 30,000 - 35,000$ ). Two-fifths of this remainder  $2/5 \times 120,000 = 48,000$  is allocated to Alkire;  $3/5 \times 120,000 = 72,000$  is allocated to Higdon. The total income allocated to Alkire is \$73,000; total income allocated to Higdon is \$112,000.

**Task-Based Simulation 5**

Admission of New Partner	Authoritative Literature	Help

Entry for admission of Mark to the partnership

Cash	175,000	
Capital, Mark		110,000
Capital, Kate		26,000
Capital, Lars		39,000

**Explanation**

The book value of the partnership after the income distribution in year 1 was \$485,000 (A = \$173,000 and B = \$312,000). After Mark's contribution, the value of the partnership is  $\$485,000 + \$175,000 = \$660,000$ . A one-sixth interest in the partnership is  $\$660,000 \times 1/6 = \$110,000$ . Using the bonus method, we calculate a bonus of  $\$175,000 - \$110,000 = \$65,000$ . Using the 2:3 profit sharing ratio, the amount allocated to Kate is  $2/5 \times \$65,000 = \$26,000$ ; the amount allocated to Lars is  $3/5 \times \$65,000 = \$39,000$ .

**Task-Based Simulation 6**

Partnership Liquidation	Authoritative Literature	Help

**Partnership of DEF**  
**SCHEDULE OF SAFE PAYMENTS**  
*January 31, Year 4*

	Cash	Notes receivable	Plant, property, and equip.	Liabilities	Capital—D	Capital—E	Capital—F
Balances	\$160,000	\$50,000	\$700,000	\$110,000	\$200,000	\$400,000	\$200,000
Partner loans		(50,000)				(50,000)	
Sale of assets, Jan. (1)	210,000		(180,000)		9,000	15,000	(6,000)
Payment of liabilities	(110,000)			(110,000)			
Loss on other assets			(520,000)		(156,000)	(260,000)	(104,000)
Safe payment to partners	\$260,000				53,000	105,000	102,000

**Explanation**

(1) The sale of assets produced a \$30,000 dividend gain, which is distributed to the partners based on the new profit sharing ratio: 30% to D (9,000), 50% to E (15,000), and 20% to F (6,000). Liabilities are paid. A total loss is assumed on other assets and the assumed loss of \$520,000 is distributed 30% to D (156,000), 50% to E (260,000), and 20% to F (104,000).

## E. Foreign Currency Translation

### 1. Objective of Foreign Currency Translation

- a. The rules for the translation of foreign currency into US dollars apply to two major areas.
  - (1) Foreign currency transactions which are denominated in other than a company's functional currency (e.g., exports, imports, loans), and
  - (2) Foreign currency financial statements of branches, divisions, subsidiaries, and other investees which are incorporated with the financial statements of a US company by combination, consolidation, or the equity method
- b. The objectives of translation are
  - (1) To provide information relative to the expected economic effects of rate changes on an enterprise's cash flows and equity, and
  - (2) To provide information in consolidated statements relative to the financial results and relationships of each individual foreign consolidated entity as reflected by the functional currency of each reporting entity

The first objective influences the rules for the translation of foreign currency transactions, while both objectives influence the rules for the translation of foreign currency financial statements. After working through this module, read through the outline of ASC Topic 830 (SFAS 52).

### 2. Translation of Foreign Currency Statements

#### EXAMPLE

Assume that a US company has a 100% owned subsidiary in France. The subsidiary's operations consist of leasing space in an office building. Its balance sheet at December 31, year 3, and its income statement for year 3 are presented below.

<i>French Company</i>			
<b>BALANCE SHEET</b>			
<i>December 31, year 3</i>			
<i>Assets</i>	<b>Euros</b>	<i>Liabilities and Owners' Equity</i>	<b>Euros</b>
Cash	60	Accounts payable	100
Accounts receivable (net)	100	Mortgage payable	200
Land	200	Common stock	100
Building	500	Retained earnings	<u>360</u>
Less accumulated depr.	(100)	Total liabilities and	
Total assets	<u>€760</u>	Owners' equity	<u>€760</u>

<i>French Company</i>	
<b>INCOME STATEMENT</b>	
<i>For Year Ended December 31, year 3</i>	
Revenues	€260
Operating Expenses (excluding depreciation expense)	140
Depreciation expense	<u>20</u>
Net Income	<u>€100</u>

In addition to the information above, the following data are also needed for the translation process:

1. Transactions involving land, building, mortgage payable, and common stock all occurred in year 1.
2. No dividends were paid during the period year 1–3.
3. Exchange rates for various dates follow.

€1 = \$.90 in year 1

€1 = \$1.05 at beginning of year 3

€1 = \$1.12 at end of year 3

€1 = \$1.10 weighted-average for year 3

- a. If the US company wants to present consolidated financial statements which include the results of its French subsidiary, the financial statements of the French company must be translated into US dollars. However, before this can be accomplished, the management of the US company must determine the functional currency of its French subsidiary. An entity's functional currency is the currency of the primary economic environment in which the entity operates; normally, that is the currency of the environment in which an entity primarily generates and expends cash. The decision concerning the functional currency is important

because, once determined, it should be used consistently, unless it is clear that economic facts and circumstances have changed. The selection of the functional currency depends upon an evaluation of several factors. These factors include the following:

- (1) Cash flows—Do the foreign entity's cash flows directly affect the parent's cash flows and are they immediately available for remittance to the parent?
  - (2) Sales prices—Are the foreign entity's sales prices responsive to exchange rate changes and to international competition?
  - (3) Sales markets—Is the foreign entity's sales market the parent's country or are sales denominated in the parent's currency?
  - (4) Expenses—Are the foreign entity's expenses incurred in the parent's country?
  - (5) Financing—Is the foreign entity's financing primarily from the parent or is it denominated in the parent's currency?
  - (6) Intercompany transactions—Is there a high volume of intercompany transactions between the parent and foreign entity?
- b. If the answers to the questions above are predominantly yes, the functional currency would be the reporting currency of the parent (i.e., the US dollar). On the other hand, if the answers to the questions were predominantly no, the functional currency would be the foreign currency. In the example described previously, the euro would be the functional currency if the answers were no.

**NOTE:** That the functional currency does not necessarily have to be the local currency of the foreign country when the answers to the questions are negative. In other words, it is possible for a foreign currency other than the euro to be the functional currency of our French company. For example, Swiss francs or British pounds could be the functional currency for the French company if one of these currencies is the currency of the primary economic environment in which the entity operates. However, assume these other possibilities are not alternatives in the example mentioned previously.

- c. If the circumstances indicate the euro to be the functional currency, the current rate method is used for translation of the foreign currency financial statements. The rules for applying the current rate method are
- (1) All assets and liabilities are translated using the current rate at the balance sheet date.
  - (2) All revenues and expenses are translated at the rates in effect when these items are recognized during the period. Due to practical considerations, however, weighted-average rates can be used to translate revenues and expenses which were incurred throughout the year.
  - (3) Owners' equity accounts are translated using historical exchange rates.
  - (4) Dividends are translated at the historic rate on the date of declaration.
  - (5) The translation adjustment for the period is reported as other comprehensive income under one of several acceptable reporting alternatives and the parent company's share of the accumulated amount is reported as accumulated other comprehensive income in the stockholders' equity section of the consolidated balance sheet.
- d. This current rate method is illustrated below for the French financial statements shown previously.

### EXAMPLE

#### Current Rate Method

<i>French Company</i>			
<b>BALANCE SHEET</b>			
<i>December 31, year 3</i>			
<i>(Euro is Functional Currency)</i>			
	Euros	Exchange rates	US dollars
<i>Assets</i>			
Cash	60	1.12	67.20
Accounts receivable (net)	100	1.12	112.00
Land	200	1.12	224.00
Building (net)	400	1.12	448.00
Totals	<u>€760</u>		<u>\$851.20</u>

**Liabilities and Owners' Equity**

Accounts payable	100	1.12	112.00
Mortgage payable	200	1.12	224.00
Common stock	100	.90	90.00
Retained earnings, 12/31/Y3	360	see income statement	352.00
Translation adjustment (gain)			<u>73.20</u> (plug)
Totals	<u>€760</u>		<u>\$851.20</u>

**French Company**  
**COMBINED INCOME AND RETAINED EARNINGS STATEMENT**  
*For the Year Ending December 31, year 3*

	<b>Euros</b>	<b>Exchange rates</b>	<b>US dollars</b>
Revenues	260	1.10	\$286
Operating expenses (excluding €20 of depreciation expense)	(140)	1.10	(154)
Depreciation expense	<u>(20)</u>	1.10	<u>(22)</u>
Net income	<u>100</u>		<u>110</u>
<b>Retained earnings calculation:</b>			
Retained earnings at 1/1/Y3	<u>260</u>		242*
Net income	100		110
Retained earnings at 12/31/Y3	<u>€ 360</u>		<u>\$352</u>

\* The US dollar amount of retained earnings results from applying weighted-average exchange rates to translate revenues and expenses during the period year 1 through year 3. Retained earnings cannot be translated using a single exchange rate. The beginning retained earnings would be taken from the prior period's translated financial statements.

The translation adjustments result from translating all assets and liabilities at the current rate, while owners' equity is translated using historical rates. Common stock was issued in year 1 when the exchange rate was €1 = \$.90. The beginning balance of retained earnings for year 3 was accumulated during the period year 1 through year 3. The new balance in ending retained earnings is placed on the balance sheet, and the translation adjustment is a plug figure to bring the balance sheet back into balance. In this situation, there is a translation gain of \$73.20 that is credited to other comprehensive income.

You can use a trial balance technique as shown below. Translate all balance sheet and income statement items as indicated in the rules for the current rate method. The foreign currency translation gain/loss is the amount that will bring the trial balance back into balance.

**French Company**  
**TRIAL BALANCE**  
*December 31, year 3*

	<b>Euros</b>			<b>US dollars</b>	
	<b>DR</b>	<b>CR</b>	<b>Exchange rates</b>	<b>DR</b>	<b>CR</b>

Totals	<u>€920</u>	<u>€920</u>		\$1,027.20	\$954.00
Translation adjustment (gain)					<u>73.20</u>
Totals				<u>\$1,027.20</u>	<u>\$1,027.20</u>

- e. The previous illustration of the current rate technique assumed the euro to be the functional currency. Assume, however, that the circumstances were evaluated by the US company, and the US dollar was chosen as the functional currency. Under this alternative, the foreign currency financial statements are remeasured into US dollars.
- (1) The remeasurement process is intended to produce the same result as if the entity's books of record had been maintained in the functional currency.
  - (2) If the US dollar is the functional currency, the remeasurement of foreign currency financial statements into US dollars results in a remeasurement gain or loss that is included in the subsidiary's income for the period.
  - (3) The remeasurement process begins by classifying assets and liabilities as either monetary or nonmonetary items and then applying the appropriate exchange rate depending on whether the item is monetary or nonmonetary. The following rules apply to the remeasurement process:
    - (a) Monetary assets and monetary liabilities are remeasured using the current rate at the balance sheet date.
    - (b) Nonmonetary assets and liabilities (e.g., land, building) which have historical cost balances are remeasured using historical exchange rates at the date the item entered the subsidiary.
    - (c) Owners' equity accounts such as common stock and additional paid in capital are translated using historic rates.
    - (d) Dividends is translated at the historic rate at the date of declaration.
    - (e) Retained earnings is brought forward from the translated statement of the previous year.
    - (f) Revenues and most expenses that occur during a period are remeasured, for practical purposes, using the weighted-average exchange rate for the period. However, revenues and expenses that represent allocations of historical balances (e.g. depreciation) are remeasured using the same historical exchange rates as used for those items on the balance sheet.
    - (g) The remeasurement loss is reported on the consolidated income statement. The loss is the result of a remeasurement process which assumes that the US dollar is the functional currency.
    - (h) The calculation of the remeasurement loss is the result of the rules employed in the remeasurement process. In mechanical terms, the remeasurement loss is the amount needed to make the debits equal the credits in the French company's US dollar trial balance.
  - (4) The remeasurement process is illustrated below for the French subsidiary.

**EXAMPLE****Remeasurement Method**

*French Company*  
**BALANCE SHEET**  
*December 31, year 3*  
*(US dollar is Functional Currency)*

		Euros	Exchange rates	US dollars
<i>Assets</i>	(Classification)	60		
Cash	(Monetary)	100	1.12	67.20
Accounts receivable (net)	(Monetary)	200	1.12	112.00
Land	(Nonmonetary)	400	.90	180.00
Building (net)	(Nonmonetary)	<u>€760</u>	.90	360.00
Totals				<u>\$719.20</u>
<i>Liabilities and Owners' Equity</i>				
Accounts payable	(Monetary)	100	1.12	112.00
Mortgage payable	(Monetary)	200	1.12	224.00
Common stock		100	.90	90.00
Retained earnings, 12/31/Y3		360		293.20 (plug) (A)
Totals		<u>€760</u>		<u>\$719.20</u>

The end retained earnings number is a plug figure to bring the balance sheet back into balance (A). This number is then used as end retained earnings in the statement of retained earnings to calculate net income after the remeasurement gain or loss (B). The remeasurement gain or loss (C) is the plug figure needed on the income statement to arrive at the calculated net income figure (B).

*French Company*  
**COMBINED INCOME AND RETAINED EARNINGS STATEMENT**  
*For the Year Ending December 31, year 3*

	Euros	Exchange rates	US dol- lars	
Revenues	260	1.10	286.00	
Expenses (exclusive of depreciation)	(140)	1.10	(154.00)	
Depreciation	(20)	.90	(18.00)	
Earnings before remeasurement loss			114.00	
Remeasurement loss	--	--	(40.80)	(plug) (C)
Net income (loss)	<u>100</u>		<u>73.20</u>	(Taken from R/E Stmt)
<b>Calculation of retained earnings, net Income and measurement loss:</b>				
Retained earnings at 1/1/Y3	<u>260</u>		<u>220.00</u> *	(given in problem)
Net income			73.20	(plug) (B)
Retained earnings at 12/31/Y3	<u>€360</u>		\$293.20	(plug from balance sheet)

\* Retained earnings of \$220 includes remeasured income from the period year 1 through year 2, which includes remeasurement losses applicable to those years due to the strengthening of the euro compared to the US dollar. Beginning retained earnings were taken from the prior period's financial statements.

An easier way to calculate the foreign currency translation gain or loss is to use the trial balance approach. The remeasurement gain/loss is the amount needed to bring the trial balance back into balance. The trial balance approach is shown below.

*French Company*  
**TRIAL BALANCE**  
*December 31, year 3*

	Euro		Exchange rates	US dollars		
	DR	CR		DR	CR	
Cash	60		1.12	67.20		
Accounts rec. (net)	100		1.12	112.00		
Land	200		.90	180.00		
Building (net)	400		.90	360.00		
Accounts payable		100	1.12		112.00	
Mortgage payable		200	1.12		224.00	
Common stock		100	.90		90.00	
Retained earnings 1/1/Y3		260			<u>220.00</u> *	(given in problem)
Revenues		260	1.10		286.00	
Expenses	140		1.10	154.00		
Depreciation exp.	<u>20</u>		.90	<u>18.00</u>		
Totals	<u>€920</u>	<u>€920</u>		\$891.20	\$932.00	
Remeasurement loss				<u>40.80</u>	<u>--</u>	(plug)
Totals				<u>\$932.00</u>	<u>\$932.00</u>	

(5) The significant points to remember about the French illustration are summarized below.

- (a) Before foreign currency financial statements can be translated into US dollars, a decision must be made regarding the functional currency.
- (b) If the functional currency is the foreign currency, the current rate method is used to translate to US dollars.

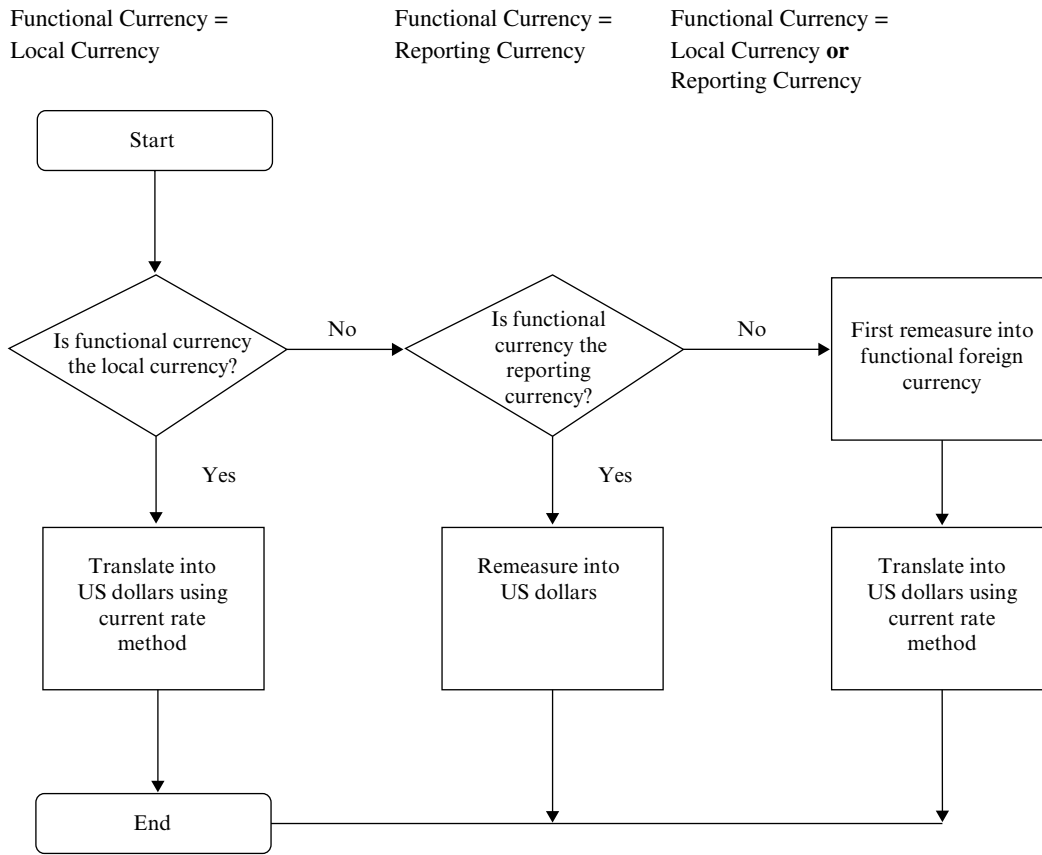

- 1] All assets and liabilities are translated using the current rate at the balance sheet date.
- 2] Owners' equity is translated using historical rates while revenues (and gains) and expenses (and losses) are translated at the rates in existence during the period when the transactions occurred.

- 3] A weighted-average rate can be used for items occurring numerous times throughout the period.
  - 4] The translation adjustments (debit or credit) which result from the application of these rules are reported as a separate item in owners' equity in the consolidated balance sheet of the US parent.
- (c) If the functional currency is not the reporting currency (the US dollar), the foreign currency financial statements are remeasured into US dollars.
- 1] All foreign currency balances are restated to US dollars using either historical or current exchange rates.
  - 2] Foreign currency balances which reflect prices from past transactions (e.g., inventories carried at cost, prepaid insurance, property, plant, and equipment, etc.) are remeasured using historical rates while foreign currency balances which reflect prices from current transactions (e.g., inventories and trading and available-for-sale securities carried at market, etc.) are remeasured using the current rate.
  - 3] Monetary assets and liabilities are remeasured using the current rate. (Deferred taxes are remeasured using the current rate.)
  - 4] Remeasurement gains/losses that result from the remeasurement process are reported on the consolidated income statement under "Other Income (Expense)."
- (6) The above summary can be arranged in tabular form as shown below.

Functional currency	Functional currency determinants	Translation method	Reporting
Local currency of foreign company	<ol style="list-style-type: none"> <li>a. Operations not integrated with parent's operations</li> <li>b. Buying and selling activities primarily in local currency</li> <li>c. Cash flows not immediately available for remittance to parent</li> </ol>	Current Rate (All assets/liabilities translated using current rate; revenues/expenses use weighted-average rate; equity accounts use historical rates)	Translation adjustments are reported as other comprehensive income under one of several acceptable reporting alternatives and as accumulated other comprehensive income in the equity section of consolidated balance sheet. Analysis of changes in accumulated translation adjustments disclosed via footnote
US dollar	<ol style="list-style-type: none"> <li>a. Operations integrated with parent's operations</li> <li>b. Buying and selling activities primarily in US and/or US dollars</li> <li>c. Cash flows immediately available for remittance to parent</li> </ol>	Remeasurement (Monetary assets/liabilities use current rate; historical cost balances use historical rates; revenues/expenses use weighted-average rates and historical rates, the latter for allocations such as depr. exp.).	Remeasurement gain/loss is reported on the consolidated income statement.

3. A few comments concerning the translation of foreign currency financial statements in highly inflationary economies should be made. If the cumulative inflation rate is  $\geq 100\%$  over a three-year period in a foreign country, the foreign currency statements of a company located in that country are remeasured into the reporting currency (i.e., the US dollar). In other words, it is assumed the US dollar is the functional currency. The following flowchart summarizes the requirements of foreign currency financial statements.

**FOREIGN CURRENCY FINANCIAL STATEMENTS**

**NOW REVIEW MULTIPLE-CHOICE QUESTIONS 1 THROUGH 9**

**4. Research Component—Accounting Standards Codification**

ASC Topic 830 addresses the issues related to translation of financial statements. A list of keywords helpful in locating foreign currency translation issues is shown below.

- |                              |                                   |                                 |
|------------------------------|-----------------------------------|---------------------------------|
| Exchange rate                | Foreign operations                | Reporting currency              |
| Foreign currency             | Functional currency               | Translation adjustment(s)       |
| Foreign currency statements  | Highly inflationary economy       | Translation financial statement |
| Foreign currency translation | Primary economic environment      |                                 |
| Foreign entity               | Remeasurement functional currency |                                 |

**5. International Financial Reporting Standards (IFRS)**

- a. Currencies are defined as either foreign, functional currency, or presentation currency. The functional currency is the currency of the primary economic environment in which the entity operates. A foreign currency is a currency other than the functional currency. The presentation currency is the currency in which financial statements are presented. Similar to US GAAP, the three-step process for translating financial statements is as follows:
  - (1) Determine the functional currency.
  - (2) Translate items into the functional currency.
  - (3) Translate items into the presentation currency.

- b. When translating financial statement items, the items are classified into two categories: monetary and nonmonetary items.
- (1) Monetary items are translated at the year-end spot rate.
  - (2) Nonmonetary items measured at historical cost are translated at the historical exchange rate.
  - (3) Nonmonetary items measured at fair value are translated at the rate in effect when fair value was determined.
  - (4) If the functional currency is the same as the presentation currency, any gains and losses on translation are recognized in profit or loss in the period. However, there are several exceptions to this rule.
  - (5) Currency gains or losses on nonmonetary items for which gains and losses are recorded in other comprehensive income should also be reported in other comprehensive income.
- c. If the functional currency is not the same as the presentation currency, then any translation gains and losses are recorded in other comprehensive income. In this case, assets and liabilities are recorded at the closing exchange rate, and income and expenses are recorded at the rate when the transaction occurred.

**NOW REVIEW MULTIPLE-CHOICE QUESTIONS 10 THROUGH 13**

## KEY TERMS

**Foreign Currency Statements.** Financial statements that employ as the unit of measure a functional currency that is not the reporting currency of the enterprise.

**Foreign Currency Translation.** The process of expressing in the reporting currency of the enterprise those amounts that are denominated or measured in a different currency.

**Functional Currency.** An entity's functional currency is the currency of the primary economic environment in which the entity operates; normally, that is the currency of the environment in which an entity primarily generates and expends cash.

**Local Currency.** The currency of a particular country being referred to.

**Remeasurement.** If an entity's books and records are not kept in its functional currency, remeasurement into the functional currency is required. Monetary balances are translated using the current exchange rate and nonmonetary balances are translated using historical exchange rates. If the US dollar is the functional currency, remeasurement into the reporting currency (the US dollar) makes translation unnecessary.

**Reporting Currency.** The currency in which an enterprise prepares its financial statements.

**Translation Adjustments.** Translation adjustments result from the process of translating financial statements from the entity's functional currency into the reporting currency.

## Multiple-Choice Questions (1–13)

### E.2. Translation of Foreign Currency Statements

1. Certain balance sheet accounts of a foreign subsidiary of Rowan, Inc., at December 31, year 1, have been translated into US dollars as follows:

	Translated at	
	Current rates	Historical rates
Note receivable, long-term	\$240,000	\$200,000
Prepaid rent	85,000	80,000
Patent	<u>150,000</u>	<u>170,000</u>
	<u>\$475,000</u>	<u>\$450,000</u>

The subsidiary's functional currency is the currency of the country in which it is located. What total amount should be included in Rowan's December 31, year 1 consolidated balance sheet for the above accounts?

- \$450,000
- \$455,000
- \$475,000
- \$495,000

2. A wholly owned subsidiary of Ward, Inc. has certain expense accounts for the year ended December 31, year 3, stated in local currency units (LCU) as follows:

	LCU
Depreciation of equipment (related assets were purchased January 1, year 1)	120,000
Provision for doubtful accounts	80,000
Rent	200,000

The exchange rates at various dates are as follows:

	Dollar equivalent of 1 LCU
December 31, year 3	\$.40
Average for year ended 12/31/Y3	.44
January 1, year 1	.50

Assume that the LCU is the subsidiary's functional currency and that the charges to the expense accounts occurred approximately evenly during the year. What total dollar amount should be included in Ward's year 3 consolidated income statement to reflect these expenses?

- \$160,000
- \$168,000
- \$176,000
- \$183,200

3. Which of the following should be reported as a stockholders' equity account?

- Discount on convertible bonds.
- Premium on convertible bonds.
- Cumulative foreign exchange translation loss.
- Organization costs.

4. A foreign subsidiary's functional currency is its local currency, which has not experienced significant inflation. The weighted-average exchange rate for the current year would be the appropriate exchange rate for translating

	Sales to customers	Wages expense
a.	No	No
b.	Yes	Yes
c.	No	Yes
d.	Yes	No

5. The functional currency of Nash, Inc.'s subsidiary is the euro. Nash borrowed euros as a partial hedge of its investment in the subsidiary. In preparing consolidated financial statements, Nash's translation loss on its investment in the subsidiary exceeded its exchange gain on the borrowing. How should the effects of the loss and gain be reported in Nash's consolidated financial statements?

- The translation loss less the exchange gain is reported as other comprehensive income.
- The translation loss less the exchange gain is reported in net income.
- The translation loss is reported as other comprehensive income and the exchange gain is reported in net income.
- The translation loss is reported in net income and the exchange gain is reported as other comprehensive income.

6. A balance arising from the translation or remeasurement of a subsidiary's foreign currency financial statements is reported in the consolidated income statement when the subsidiary's functional currency is the

	Foreign currency	US dollar
a.	No	No
b.	No	Yes
c.	Yes	No
d.	Yes	Yes

7. When remeasuring foreign currency financial statements into the functional currency, which of the following items would be remeasured using historical exchange rate?

- Inventories carried at cost.
- Marketable equity securities reported at market values.
- Bonds payable.
- Accrued liabilities.

8. Park Co.'s wholly owned subsidiary, Schnell Corp., maintains its accounting records in euros. Because all of Schnell's branch offices are in Switzerland, its functional currency is the Swiss franc. Remeasurement of Schnell's year 1 financial statements resulted in a \$7,600 gain, and translation of its financial statements resulted in an \$8,100 gain. What amount should Park report as a foreign exchange gain as net income in its income statement for the year ended December 31, year 1?

- \$0
- \$7,600
- \$8,100
- \$15,700

9. In preparing consolidated financial statements of a US parent company with a foreign subsidiary, the foreign subsidiary's functional currency is the currency
- In which the subsidiary maintains its accounting records.
  - Of the country in which the subsidiary is located.
  - Of the country in which the parent is located.
  - Of the environment in which the subsidiary primarily generates and expends cash.

### ***E.5. International Financial Reporting Standards (IFRS)***

10. For IFRS reporting purposes, currencies are defined as
- International and functional.
  - Foreign, functional, and presentation.
  - Domestic and international.
  - Operating, international, and presentation.
11. For IFRS reporting, the functional currency is
- The currency in which the company reports its earnings.
  - The currency in which the company primarily conducts banking activities.
  - The currency in which the company primarily operates.
  - The currency in which the company presents its financial statements.
12. For IFRS reporting, if the functional currency is the same as the presentation currency, any translation gains or losses are generally reported as
- A gain or loss on the statement of income.
  - A gain or loss in other comprehensive income.
  - A gain or loss directly in the retained earnings account.
  - An extraordinary item on the statement of income.
13. Which of the following is **not** a IFRS requirement regarding foreign currency translation?
- Nonmonetary items measured at historical cost are translated at the historical exchange rate.
  - Monetary items are translated at the year-end spot rate.
  - If the functional currency is the same as the presentation currency gains or losses are reported in profit and loss for the period.
  - If the functional currency is not the same as the presentation currency gains or losses are deferred to future periods.

## Multiple-Choice Answers and Explanations

### Answers

1. c    ___ ___	4. b    ___ ___	7. a    ___ ___	10. b   ___ ___	13. d   ___ ___
2. c    ___ ___	5. a    ___ ___	8. b    ___ ___	11. c   ___ ___	1st: ___/13 = ___%
3. c    ___ ___	6. b    ___ ___	9. d    ___ ___	12. a   ___ ___	2nd: ___/13 = ___%

### Explanations

**1. (c)** When the **functional currency** of a foreign subsidiary is the **foreign currency**, asset and liability accounts are **translated** using the **current** exchange rate (the rate of translation in effect at the balance sheet date). Therefore, these accounts should be included in the balance sheet at \$475,000. Note that if the **functional currency** was the **US dollar**, balance sheet accounts would be **remeasured** using a combination of **historical and current rates**.

**2. (c)** The requirement is to determine the total amount of various expenses incurred by a foreign subsidiary which should be reported in the year 3 consolidated income statement. If the foreign currency is the functional currency of the subsidiary, the **current rate** method should be used to translate the financial statements. In this method, revenues and expenses are translated at the rates in effect at the time these items were recognized during the period. Because translation at the date the revenues and expenses were recognized is generally deemed impractical, an appropriate weighted-average rate may be used to translate these items. This results in a translated expense of \$176,000  $[(\$120,000 + \$80,000 + \$200,000) \times .44]$ .

**3. (c)** The requirement is to determine which item is reported in the stockholders' equity section. Accumulated gains and losses on certain foreign currency transactions should be reported as a component of stockholders' equity entitled other comprehensive income. Answers (a), (b), and (d) are incorrect because these items are reported on the balance sheet in the assets and liabilities sections and are amortized over their respective lives.

**4. (b)** The current rate method for the translation of foreign currency financial statements is used when a foreign subsidiary's functional currency is its local currency. Using the current rate method, revenue and expenses should be translated into US dollars at the weighted-average rate for the current year. Thus, both sales to customers and wages expense should be translated at the weighted-average rate.

**5. (a)** Translation adjustments resulting from the translation of foreign currency statements should be reported separately as components of other comprehensive income, accumulated other comprehensive income, and stockholders' equity. Additionally, gains and losses on certain foreign currency transactions should also be reported similarly. Those gains and losses which should be excluded from net income and instead reported as components of other comprehensive income and of accumulated other comprehensive income in stockholders' equity include foreign currency transactions designated as

economic hedges of a net investment in a foreign entity.

Thus, both the translation loss and the exchange gain are to be reported as other comprehensive income and accumulated other comprehensive income in the stockholders' equity section of the balance sheet. Because the translation loss on the investment exceeds the exchange gain on the borrowing, the translation loss less the exchange gain is the amount to be reported as separate components of other comprehensive income and accumulated other comprehensive income equity in the consolidated financial statements.

**6. (b)** **Translation** adjustments result from translating an entity's financial statements into the reporting currency. Such adjustments, which result when the entity's functional currency is the **foreign currency**, should not be included in net income. Instead, such adjustments should be reported as other comprehensive income and accumulated other comprehensive income in the stockholders' equity section of the balance sheet. If the functional currency is the **reporting currency** (US dollar), a **remeasurement** process takes place, with the resulting gain or loss included in net income.

**7. (a)** The requirement is to determine which item would be remeasured using historical exchange rates when foreign currency financial statements are being remeasured into the functional currency. When an entity's books are not maintained in the functional currency, it is necessary to use historical exchange rates in the remeasurement process of certain accounts. Among the accounts listed is inventories carried at cost. Only marketable equity securities reported at **cost** would be remeasured using historical exchange rates. Bonds payable and accrued liabilities would be remeasured at the current rate.

**8. (b)** Schnell's accounting records are kept in euros, and its functional currency is the Swiss franc. Before Schnell's financial statements can be consolidated with Park's financial statements, they must be remeasured from euros to Swiss francs, and then translated from Swiss francs to US dollars. As a result of these restatements, there is a remeasurement gain of \$7,600, and a credit translation adjustment of \$8,100. A remeasurement gain or loss is included in net income, but a translation adjustment is **not**. Therefore, Park would report a foreign exchange gain of \$7,600 in its year 1 income statement.

**9. (d)** An entity's functional currency is the currency of the primary economic environment in which the entity operates; normally, that is the currency of the environment in which an entity primarily generates and expends cash.

**10. (b)** For IFRS reporting purposes, currencies are defined as foreign, functional, and presentation currencies.

**11. (c)** For IFRS reporting, the functional currency is the currency of the primary economic environment in which the company operates.

**12. (a)** If the functional currency is the same as the presentation currency, any translation gain or loss is reported in current earnings on the income statement. However, there are several exceptions to this rule. Currency gains or losses on nonmonetary items for which gains and losses are recorded in

other comprehensive income should also be reported in other comprehensive income.

**13. (d)** The requirement is to identify the statement that is incorrect regarding foreign currency translation under IFRS. Answer (d) is correct because under IFRS, if the functional currency is not the same as the presentation currency, gains or losses are charged to other comprehensive income.

## Task-Based Simulation 2

Translation of Financial Statements	Authoritative Literature	Help

### Situation

Your client, Jay, Inc., prepares consolidated financial statements, which include two subsidiaries, Jay Co. of Australia (Jay A), and Jay Co. of France (Jay F). Jay A operates with US dollars, but maintains its financial statements in Australian dollars. Jay F operates primarily with euros and maintains its financial statements in euros.

Your client has asked for assistance with translating the financial statements of Jay F into US dollars. Below are the financial statements of Jay F in euros.

*Jay F*  
**INCOME STATEMENT**  
*For the year ended December 31, Year 3*

	In euros
Revenue	650,000
Cost of goods sold	(390,000)
Gross profit	260,000
Sales expense	(50,000)
General and administrative expense	(110,000)
Depreciation expense	(15,000)
Net income	85,000

*Jay F*  
**STATEMENT OF RETAINED EARNINGS**  
*For the year ended December 31, Year 3*

	In euros
Beginning retained earnings, 1/1/Y3	140,000
Add: Net income	85,000
Less: Dividends	0
End retained earnings, 12/3/Y3	225,000

*Jay F*  
**BALANCE SHEET**  
*December 31, Year 3*

	In euros
Assets:	
Cash	18,000
Accounts receivable	42,000
Inventory	137,000
Land	120,000
Building	250,000
Less: Accumulated depreciation	(30,000)
Total assets	537,000

Liabilities:	
Accounts payable	49,000
Note payable, due 12/5/Y9	100,000
Common stock	50,000
Additional paid-in capital	113,000
Retained earnings	<u>225,000</u>
Total liabilities and owners' equity	537,000

**Additional information**

Jay F began operations on January 2, year 1. All outstanding stock was issued on January 2, year 1. Jay F earned the following income since the company began operations. No dividends have been paid to date.

Year	Income
Year 1	60,000
Year 2	80,000

The exchange rates are as follows:

Date	Dollars per euro
January 2, year 1	1.10
January 1, year 3	1.24
December 31, year 3	1.36
Weighted-average rate year 1	1.15
Weighted-average rate for year 2	1.18
Weighted-average rate for year 3	1.31

Complete the following table for the foreign currency translation into US dollars for Jay F.

*Jay F*  
**INCOME STATEMENT**  
*For the year ended December 31, Year 3*

	In euros	Exchange rate	US dollars

Complete the following table for the foreign currency translation into US dollars for Jay F.

*Jay F*  
**INCOME STATEMENT**  
*For the year ended December 31, Year 3*

	In euros	Exchange rate	US dollars
Revenue	650,000	1.31	\$851,500
Cost of goods sold	(390,000)	1.31	(510,000)
Gross profit	260,000	1.31	340,600
Sales expense	(50,000)	1.31	(65,500)
General and administrative expense	(110,000)	1.31	(144,100)
Depreciation expense	(15,000)	1.31	(19,650)
Net income	85,000	1.31	\$111,350

Complete the following table to translate the retained earnings of Jay F into US dollars.

*Jay F*  
**STATEMENT OF RETAINED EARNINGS**  
*For the year ended December 31, Year 3*

	In euros	Exchange rate	US dollars
Beginning retained earnings, 1/1/Y3			
Year 1 net income	60,000	1.15	\$69,000
Year 2 net income	80,000	1.18	94,400
Net income for year 3	85,000	1.31	111,350
Less: Dividends	0		
End retained earnings, 12/31/Y3	225,000		\$274,750

Complete the following table to translate the balance sheet accounts of Jay F into US dollars.

*Jay F*  
**BALANCE SHEET**  
*December 31, Year 3*

	In euros	Exchange rate	Translation into US dollars
<b>Assets:</b>			
Cash	18,000	1.36	\$24,480
Accounts receivable	42,000	1.36	57,120
Inventory	137,000	1.36	186,320
Land	120,000	1.36	163,200
Building	250,000	1.36	340,000
Less: Accumulated depreciation	(30,000)	1.36	(40,800)
Total assets	537,000		\$730,320
<b>Liabilities:</b>			
Accounts payable	49,000	1.36	\$66,640
Note payable, due 12/5/Y9	100,000	1.36	136,000
Common stock	50,000	1.10	55,000
Additional paid in capital	113,000	1.10	124,300
Retained earnings	225,000		274,750
Other comprehensive income (foreign currency translation adjustment)	0		73,630
Total liabilities and owners' equity	537,000		\$730,320

***Explanation***

For Jay F, the functional currency is the foreign currency (euros).

Therefore, the current rate method is used.

The following rules apply to the current rate method:

- Assets and liabilities—use current rate at balance sheet date
- Revenues and expenses—use weighted-average rate (or rate at time of exchange if known)
- Owners' equity—use historical rates
- Dividends—use historical rates

Because Jay F's retained earnings is from three years, each year must be translated at the appropriate rate. The weighted-average rate is used for each year.

The translation gain is the plug figure to bring the balance sheet into balance, and is reported as "other comprehensive income" in the owners' equity section of the balance sheet.

Total assets = \$730,320

Total liabilities + Owners' equity **before** translation adjustment = \$656,690

Translation adjustment = \$730,320 – 656,690 = \$73,630.

# Module 21: Governmental (State and Local) Accounting

## Overview

Governmental accounting has some similarities to commercial accounting. For example, governmental accounting uses the double-entry system, journals, ledgers, trial balances, financial statements, internal control, etc. However, differences arise due to the objectives and environment of government. The major differences include

1. The absence of a profit motive, except for enterprise activities, such as utilities
2. A legal emphasis that involves restrictions both in the raising and spending of revenues
3. An inability to “match” revenues with expenditures, as revenues are often provided by persons other than those receiving the services
4. An emphasis on accountability or stewardship of resources entrusted to public officials
5. The use of fund accounting and reporting, as well as government-wide reporting
6. The recording of the budget in governmental funds which legally adopt a budget (i.e., General Fund)
7. The use of modified accrual accounting rather than full accrual accounting in some funds (governmental fund types)

Before beginning the reading you should review the key terms at the end of the module.

<i>Multiple-Choice Questions</i>	<b>953</b>
<i>Multiple-Choice Answers and Explanations</i>	<b>968</b>

**A. The Governmental Accounting Standards Board**

The Governmental Accounting Standards Board (GASB), which has the authority to establish standards of financial reporting for all units of state and local governments, was created in 1984. It should be noted that the Financial Accounting Standards Board (FASB) has the authority to establish standards for nongovernmental not-for-profit organizations. GASB Statement No. 55 established a hierarchy of sources of generally accepted accounting principles (GAAP) for states and local governments as shown below (in descending order of authority):

1. Officially established accounting principles—GASB Statements and Interpretations.
2. GASB Technical Bulletins and AICPA Industry Audit and Accounting Guides and Statements of Position cleared by the GASB.
3. AICPA Practice Bulletins cleared by the GASB and consensus positions of groups of accountants organized by the GASB.
4. Implementation guides published by the GASB staff and practices that are widely recognized and prevalent.

In 2010, the GASB issued Statement No. 62 which incorporated into GASB's authoritative literature certain accounting and financial reporting guidance that is included in the following pronouncements issued on or before November 30, 1989:

1. FASB Statements and Interpretations
2. Accounting Principles Board Opinions
3. Accounting Research Bulletins

Major topics in GASB Statement No. 62 include

1. Capitalization of interest cost
2. Revenue recognition for exchange transactions
3. Revenue recognition when the right of return exists
4. Classification of items in the statement of net position
5. Special and extraordinary items
6. Comparative financial statements
7. Related parties
8. Prior-period adjustments
9. Accounting changes and error corrections
10. Disclosure of accounting policies
11. Contingencies
12. Long-term construction contracts
13. Extinguishment of debts
14. Troubled-debt restructuring
15. Foreign currency transactions
16. Imputation of interest costs
17. Inventory
18. Investments in common stock
19. Leases
20. Nonmonetary transactions
21. Real estate transactions
22. Research and development arrangements
23. Guidance for specialized industries, such as broadcasters and insurance entities

For these areas accounting by state and local government is similar to the accounting by business enterprises.

**B. Governmental Accounting Concepts**

GASB Concept Statements are much like the FASB Concepts Statements in that they set forth fundamentals on which governmental accounting and reporting standards will be based.

1. Objectives of Financial Reporting
  - a. GASB Concepts Statement No. 1 establishes the objectives of general purpose external financial reporting by state and local governmental entities and applies to both governmental-type and business-type activities.
  - b. The nature of the governmental environment affects the financial reporting of governmental-type activities. The governmental environment is characterized by representative forms of government with separation of powers, a prevalence of intergovernmental revenues, and services that are provided to taxpayers. The budget is very significant in accounting for government-type activities because it expresses public policy, funding

- intent, and provides control over government expenditures. Control over revenues and expenditures is also provided by the use of fund accounting.
- c. Governmental business-type activities are more akin to private business activities. Generally, they involve exchanges that involve charging fees for providing particular services. However, many business-type activities receive subsidies, grants, or taxes from the general government, making them part of the government and publicly accountable.
  - d. Concepts Statement No. 1 identified three primary users of the external state and local governmental financial reports:
    - (1) The citizenry,
    - (2) Legislative and oversight bodies, and
    - (3) Investors and creditors.
  - e. Government financial reports are primarily used to compare actual financial results with budgets, to assess financial condition and results of operations, to assist in determining compliance with finance-related laws and regulations, and to assist in evaluating effectiveness and efficiency.
  - f. State and local governmental financial reports should possess the basic characteristics of understandability, reliability, relevance, timeliness, consistency, and comparability. See Section A in Module 9 for definitions of these characteristics.
2. Service Efforts and Accomplishments Reporting (SEA Reporting)
- a. GASB Concepts Statement No. 2 (as amended by Concepts Statement No. 5) describes the objective, elements and characteristics of SEA reporting. The objective of SEA Reporting is to provide more complete information about a governmental entity's performance than can be provided by traditional financial statements and schedules. Such information is necessary for assessing accountability and making informed decisions.
  - b. Ideally a governmental entity should (1) establish and communicate clear, relevant goals and objectives, set measurable targets for accomplishment, and develop and report indicators that measure its progress. The elements of SEA reporting include measures of service effort, measures of service accomplishments (output and outcome measures), measures that relate service efforts to service accomplishments (efficiency and cost-outcome measures) and narrative or explanatory information.
3. Communication Methods in General-Purpose External Financial Reports
- a. GASB Concepts Statement No. 3 provides a conceptual basis for selecting communication methods to present items of information within general-purpose external reports that contain financial statements. The alternative methods of communication include recognition in the basic financial statements, disclosure in notes to the basic financial statements, presentation as required supplementary information, and presentation as supplementary information.
  - b. GASB Concepts Statement No. 4 establishes definitions for the seven elements of historically based financial statements of state and local governments. The elements of a statement of financial position are defined as
    - (1) Assets—resources with present service capacity that the government presently controls.
    - (2) Liabilities—present obligations to sacrifice resources that the government has little or no discretion to avoid.
    - (3) Deferred outflow of resources—a consumption of net assets by the government that is applicable to a future reporting period. This is similar to an asset (e.g., a prepaid asset).
    - (4) Deferred inflow of resources—an acquisition of net assets by the government that is applicable to a future reporting period. This is similar to a liability (e.g., unearned revenue).
    - (5) Net position—the residual of all other elements presented in a statement of financial position.
  - c. The elements of the resource flows statements are defined as
    - (1) Outflow of resources—a consumption of net assets by the government that is applicable to the reporting period.
    - (2) Inflow of resources—an acquisition of net assets by the government that is applicable to the reporting period.

### C. The Government Reporting Model

Governmental accounting focuses on two types of accountability: operational accountability and fiscal accountability. Operational accountability is demonstrated by government-wide financial statements which illustrate how effective and efficient the organization has been at using its resources, and the resources available to meet its future obligations. Fiscal accountability is illustrated by fund financial statements which show the

organization's compliance with laws and regulations affecting its spending activities. The integrated approach refers to the fact that government financial statements show operational and fiscal accountability and the relationship between the two. The integrated approach requires a reconciliation between the government-wide financial statements and the fund financial statements.

GASB Statement No. 34, as amended by GASB Statement No. 63, provides the minimum requirements for basic financial statements and required supplemental information (RSI) to be in compliance with GAAP. These requirements for **general-purpose** governmental units (i.e., states, cities, counties) are

- Management's Discussion and Analysis (MD&A) (Required Supplementary Information)
- Government-Wide Financial Statements
  - Statement of Net Position
  - Statement of Activities
- Fund Financial Statements
  - Governmental Funds
    - Balance Sheet
    - Statement of Revenues, Expenditures, and Changes in Fund Balances
  - Proprietary Funds
    - Statement of Net Position
    - Statement of Revenues, Expenses, and Changes in Fund Net Position
    - Statement of Cash Flows
  - Fiduciary Funds
    - Statement of Fiduciary Net Position
    - Statement of Changes in Fiduciary Net Position
- Notes to the Financial Statements
- Required Supplementary Information (RSI) other than Management's Discussion and Analysis
  - Ten-Year Schedules of Selected Information (For entities that provide pensions through pension funds that are administered through trust funds. The required information varies depending on the nature of the plan.)
  - Budgetary Comparison Schedules
  - Information about Infrastructure Assets (for Entities Reported Using the Modified Approach)
  - Claims Development Information When the Government Sponsors a Public Entity Risk Pool

In addition, general-purpose governments may choose to provide certain **other supplementary information**, including combining statements for nonmajor funds. If a government wishes to prepare a complete **Comprehensive Annual Financial Report (CAFR)**, three major sections would be included. First, an **introductory section** (unaudited) would include a letter of transmittal, organization chart, and list of principal officials. Second, a **financial section** would be prepared, including an auditor's report, the required information, and other supplementary information listed above. Finally, a **statistical section** would include a number of schedules such as net position by component, changes in net position, revenue capacity, debt capacity, and demographic and economic statistics.

**Special-purpose governments** include park districts, tollway authorities, school districts, and sanitation districts. GASB has categorized special-purpose governments as those that are engaged in governmental activities, business-type activities, fiduciary activities, and both governmental and business-type activities. Special-purpose governments that are engaged in governmental activities and have more than one program and special-purpose governments that are engaged in both governmental and business-type activities must prepare both the government-wide and fund financial statements. Special-purpose governments that are engaged in a single governmental activity (such as a cemetery district) may combine the government-wide and fund financial statements or use other methods allowed by GASB. Special-purpose governments that are engaged in only business-type activities or fiduciary activities are not required to prepare the government-wide statements, but only prepare the proprietary or fiduciary fund statements. All governments must include the MD&A, Notes, and RSI.

**NOTE:** Public colleges and universities and other governmental not-for-profit organizations may choose to report as special-purpose governments engaged in only business-type activities, engaged in only governmental activities, or engaged in both governmental and business-type activities.

#### D. The Reporting Entity

The GASB carefully defines the **reporting entity** in an effort to ensure that all boards, commissions, agencies, etc. that are under the control of the reporting entity are included. The reporting entity consists of a primary government and appropriate component units. A **primary government** is either (1) a state government, (2) a general-purpose local government, or (3) a special-purpose local government that has a separately elected governing body, is legally separate, and is fiscally independent of other state or local governments. A **component unit** is a legally separate organization for which the elected officials of a primary government are financially accountable. As clarified by GASB Statement No. 61, financial accountability for a legally separate organization is assumed in the following circumstances:

1. The primary government appoints a voting majority of the organization's governing body and (1) it is able to impose its will on that organization, or (2) there is a potential for the organization to provide specific financial benefits to, or impose specific financial burdens on, the primary government.
2. The organization is fiscally dependent on and there is a potential for the organization to provide specific financial benefits to, or burdens on, the primary government regardless of the primary government's influence on the governing board.

A component unit is also one in which the nature and significance of their relationships with a primary government is such that omission would cause the primary government's financial statements to be misleading. Generally, the financial statements would be misleading if they excluded organizations that are closely related to, or financially integrated with, the primary unit.

Most component units are reported, in the government-wide financial statements, in a separate column or columns to the right of the information related to the primary government (**discretely presented**). However, component units should be **blended** with the primary government figures in the following circumstances:

1. The governing body of the component unit is substantially the same as that of the primary government and (1) there is a financial benefit or burden relationship between the primary government and the component unit, or (2) management of the primary government has operational responsibility for the component unit.
2. The component unit provides services entirely, or almost entirely, for the primary government or for the benefit of the primary government.
3. The component unit's total debt outstanding, including leases, is expected to be repaid entirely or almost entirely by the primary government.

GASB Statement No. 39, *Determining Whether Certain Organizations Are Component Units—An Amendment of GASB Statement No. 14*, requires that a fund-raising foundation and similar organization whose primary purpose is to raise or hold significant resources for the benefit of a specific governmental unit should be reported as a component unit of that government.

#### E. Management's Discussion and Analysis

The **Management's Discussion and Analysis (MD&A)** provides, in plain English terms, an overview of the government's financial activities. This section is to provide a comparison of the current year results with the results of the prior year, with emphasis on the prior year. Included will be

- A brief discussion of the financial statements
- Condensed financial information from the government-wide financial statements and individual fund statements
- An analysis of significant variations between the original budget, final budget, and actual results for the year
- A description of significant capital asset and long-term debt activity for the year
- A discussion by governments that use the modified approach to report infrastructure assets regarding the condition of these capital assets and changes from the prior year
- A description of any known facts, decisions, or conditions that would have a significant effect on the government's financial position or results of operations.

MD&A is considered to be Required Supplementary Information (RSI). The nature of RSI is described in Section I. Only items required by GASB are included.

#### F. Government-Wide Financial Statements

The **government-wide** statements include the Statement of Net Position and the Statement of Activities, both of which are reproduced in this module. The government-wide statements are prepared on the economic resources measurement focus and accrual basis of accounting. All activities of the primary government are included, with the exception of fiduciary activities, as well as discretely presented component units.

1. The **Statement of Net Position** is similar to a balance sheet, except that the form, "Assets + Deferred Outflows of Resources – Liabilities – Deferred Inflows of Resources = Net Position" is used. Governmental accounting

standards provide that (1) deferred outflows should be reported in a separate section following assets, and (2) deferred inflows should be reported in a separate section following liabilities. The statement then arrives at net position which includes the net effects of assets, deferred outflows of resources, liabilities, and deferred inflows of resources. Remember that a deferred outflow of resources is a consumption of net assets that is applicable to a future reporting period. An example would be where a government hedges a future transaction and the fair value becomes negative. A deferred inflow of resources is an acquisition of net assets that is applicable to a future reporting period. An example would be concession arrangement that involves the sale by a government of the future income from a toll road. The payment from the toll operator represents deferred revenue that should be recognized in the applicable future periods. Therefore it is similar to a liability.

If deferred outflows or deferred inflows are disclosed in the aggregate, the notes to the financial statements should describe the different types of deferred amounts. In addition, an explanation in the notes is required if the amount reported for a component of net position is significantly affected by the difference between deferred inflows or outflows and their related assets and liabilities.

GASB Statement No. 65, *Items Previously Recognized as Assets and Liabilities*, clarifies which financial statement items should continue to be presented as assets and liabilities, which should be reclassified as deferred outflows and deferred inflows, and which items should be treated as current period expenditures (outflows) or current period inflows.

#### Examples of Deferred Outflows of Resources

- Grant expenditures paid in advance of meeting timing requirements
- Deferred amounts from refunding of debt (debits)
- Cost to acquire rights to future revenues

#### Examples of Deferred Outflows of Resources

- Deferred loss from sale and leaseback
- Negative fair value of government hedge of a future transaction

#### Examples of Items that Continue to Be Reported as Assets

- Prepayments
- Net pension plan position in excess of employer's total liability
- Capitalized incurred costs for regulated activities

#### Examples of Items Reported as Current Outflows

- Debt issuance costs
- Initial direct cost incurred by lessor for operating leases
- Fees related to purchased loans

#### Examples of Deferred Inflows of Resources

- Grant amounts received in advance of meeting timing requirements
- Deferred amounts from refunding debt (credits)
- Proceeds from sale of future revenues

#### Examples of Deferred Inflows of Resources

- Deferred gain from a sale-leaseback transaction
- Positive fair value of government hedge of a future transaction
- Advance of revenue from imposed nonexchange transactions

#### Examples of Items that Continue to Be Reported as Liabilities

- Advances of derived tax revenues
- Grant amounts received in advance of meeting requirements other than timing
- Receipt of prepayment
- Loan commitment fees
- Refunds imposed by a regulator

#### Examples of Items Reported as Current Inflows

- Loan origination fees related to lending activities
- Commitment fees charged to make a loan
- Loan origination fees for mortgage loans held for investment

Full accrual accounting is to be used on the statement of net position, including the recording and depreciation of fixed assets, including infrastructure. Capital assets generally are presented in the asset section of the statement of net position net of related depreciation. Note that "net position" is broken down into three categories: (1) net investment in capital assets, (2) restricted, and (3) unrestricted. The term "net investment in capital assets" is computed by taking the value of capital (fixed) assets, less accumulated depreciation, less the debt associated with the acquisition or improvement of the capital assets. Deferred outflows of resources and deferred inflows of resources that are related to the acquisition, construction, or improvement of those assets or the related debt should also be included in this component of net position. The term "restricted," as defined by GASB means "(a) externally imposed by creditors (such as through debt covenants), grantors, contributors, or laws or regulations of other governments, and (b) imposed by law through constitutional provisions or enabling legislation." Unrestricted net position is a "plug" figure, computed by taking the total net position and subtracting the net investment in capital assets and the restricted net position.

Note also that the columns are separated into (1) governmental activities, (2) business-type activities, (3) total primary government, and (4) component units. Governmental activities are those that are financed primarily through taxes and other nonexchange transactions. Business-type activities are those normally financed through user charges. The terms "primary government" and "component units" are described above. If a government has more component units than can be displayed effectively in the Statement of Net Position, then the detail of each component unit should be disclosed in the notes to the financial statements.

- The **Statement of Activities** reports revenues and expenses on the full accrual basis. This is a consolidated statement except that interfund transactions are not eliminated, when those transactions are between governmental and business-type activities, and between the primary government and discretely presented component units. Expenses are reported by function. Revenues are also reported on the accrual basis and may be exchange revenues or nonexchange revenues. **Exchange revenues** are reported when goods or services are transferred for payment of (approximately) equal value, as is true for business enterprises. **Nonexchange transactions** are reported in accord with Section K. below.

Program revenues, those that are directly associated with the functional expense categories, are deducted to arrive at the net expense or revenue. Note that program revenues include (1) charges for services, (2) operating grants and contributions, and (3) capital grants and contributions, although program revenues are not limited to the three categories. Examples of program revenue would be the fees charged for park operations under “culture and recreation,” and fines and forfeits, such as fines for traffic violations. Charges for services are deducted from the function which creates the revenues. Grants and contributions (both operating and capital) are reported in the function to which their use is restricted. The net expense or revenue is broken out between governmental activities, business-type activities, and component units, the same as in the Statement of Net Position. General revenues are deducted from the net expenses to obtain net revenues. General revenues include all taxes levied by the reporting government and other nonexchange revenues not restricted to a particular program. After that, separate additions or deductions are made for special items, extraordinary items, and transfers (between categories). If a government had contributions to term and permanent endowments and contributions to permanent fund principal, these would also be shown after general revenues. Finally, the net position at the beginning and end of the year are reconciled. (This is called an “all-inclusive activity” statement.)

**Extraordinary items** are those that are both unusual in nature and infrequent in occurrence (the same as for business enterprises). **Special items** are those events within the control of management that are either unusual in nature or infrequent in occurrence. An example of a special item would be the gain on sale of park land.

Alternatively, the internal balances could be reported on separate lines as assets and liabilities. A notation would need to be added to inform the reader that the “Total” column is adjusted for those amounts.

SOURCE: Revised from GASB 34, pp. 208-9.

All governments are required to report those expenses that are directly associated with each function on the appropriate line. If a government chooses to allocate some indirect expenses to functions, separate columns should show the direct, indirect, and total costs charged to each function. Direct expenses include depreciation that can be directly charged. Depreciation expense that serves all functions may be allocated as an indirect expense or charged to general government or as unallocated depreciation expense. Depreciation expense for general **infrastructure assets** (roads, bridges, storm sewers, etc.) should not be allocated but shown as an expense of that function that normally is used for capital outlay (public works, for example) or as a separate line. Interest on long-term debt would be included in direct expenses if the interest is due to a single function. Most interest, however, cannot be identified with a single function and should be shown in a separate line. Interest is capitalized for business-type activities but not for governmental activities.

A government may choose to use a **modified approach for recording eligible infrastructure assets**. Under the modified approach eligible infrastructure assets are **not required to be depreciated** as long as the following two requirements are met: (1) the government manages the eligible infrastructure assets using an asset management system and (2) the government documents that the eligible infrastructure assets are being preserved approximately at (or above) a condition level established and disclosed by the government. Under the modified approach, if a government meets the above criteria and infrastructure, assets are not depreciated and all expenditures (except for additions and improvements) made for eligible infrastructure assets should be expensed in the period incurred. Expenditures for additions and improvements of eligible infrastructure assets should be capitalized.

3. GASB No. 68, *Accounting and Financial Reporting for Pensions*, provides guidance when a state or local government has an employee pension plan administered through a trust or equivalent arrangement with the following characteristics:

- Contributions from employers or nonemployer contributing entities to the pension plan and the related earnings are irrevocable.
- Pension plan assets are dedicated to providing pensions to plan members in accordance with the benefit terms, and
- Pension plan assets are legally protected from the creditors of employers and the pension plan administrator. If the plan is a defined benefit pension plan, plan assets also are legally protected from creditors of the plan members.

If the entity has a **single-employer defined benefit plan or an agent defined benefit plan**, the state or local government should report, in the statement of net position, a net pension liability, which is measured as the portion of the actuarial present value of projected benefit payments attributable to past periods of employee service minus the pension plan's fiduciary net position. The net pension liability should be measured as of a date (the measurement date) which should be no earlier than the end of the employer's prior fiscal year, consistently applied from year to year.

In developing the net pension liability, the entity should use the following guidance:

1. The selection of all assumptions should be in conformity with Actuarial Standards of Practice issued by the Actuarial Standards Board.
2. The projected benefits payments should include all benefits to be provided to current active and inactive employees through the pension plan in accordance with the benefit terms and any additional legal agreements to provide benefits including automatic or substantially automatic postemployment benefit changes and cost-of-living adjustments (COLAs).
3. The discount rate should be the single rate that reflects (a) the long-term expected rate of return on pension plan investments expected to be used to finance the payment of benefits to the extent that the pension plan's fiduciary net position is projected to be sufficient to make the projected benefit payments and the pension plan assets are expected to be invested to achieve that return, or (b) the yield or index rate for 20-year, tax-exempt general obligation municipal bonds with an average rating of AA/Aa or higher to the extent the conditions in (a) are not met.
4. The entry age actuarial cost method should be used to attribute the actuarial present value of projected benefit payments of each employee to periods.

GASB No. 68 requires the recording of an amount for pension expense that includes recognition of annual service cost and interest on the pension liability along with the effect on the net pension liability of changes in benefit terms. Other components of pension expense (e.g., changes in economic and demographic assumptions, and differences between assumptions and actual experience) are recognized over a closed period that is determined

by the average remaining service period of the plan members. The effects on the net pension liability of differences expected and actual investment returns is recognized in pension expense over a closed period of five years.

If the government has a **cost-sharing defined benefit plan**, it must record a liability and expense equal to its proportionate share of the collective net pension liability and expense for the plan.

If the government has a **defined contribution plan**, pension expense should be accrued equal to the amount of contributions or credits to employees' accounts that are defined by the benefit terms as attributable to current period service, net of forfeited amounts that are removed from employees' accounts. The government should record a change in pension liability equal to the difference between amounts recognized as pension expense and the amounts paid by the employer to the pension plan.

GASB 68 requires extensive note disclosure and Required Supplementary Information (RSI), including:

1. Descriptive information about the types of benefits provided.
2. A statement of how contributions to the pension plan are determined.
3. The assumptions and methods used to calculate the pension liability.

Governments with single-employer or agent defined benefit plans must disclose additional information including: (a.) the composition of the employees covered by benefits terms, and (b.) sources of changes in the components of the net pension liability for the current year. Governments with these types of plans must also provide RSI schedules covering the past 10 years regarding

1. Sources of changes in the components of the net pension liability.
2. Ratios that assist in assessing the magnitude of the net pension liability.
3. Comparisons of actual employer contributions to the pension plan with actuarially determined contribution requirements.

Governments with cost-sharing pension plans must present an RSI schedule of net pension liability, information about contractually required contributions, and related ratios.

Certain governments are legally responsible for making contributions to pension plans on behalf of another government. For example a state may be legally obligated to contribute to a pension plan that covers local school districts' teachers. In these **special funding situations**, the nonemployer contributing government must recognize in its financial statements their proportionate share of the other government's net pension liability and pension expense.

**NOW REVIEW MULTIPLE-CHOICE QUESTIONS 1 THROUGH 25**

### G. Fund Financial Statements

In addition to government-wide statements, governmental accounting standards require a number of fund financial statements. Most governments use fund accounting internally and prepare the government-wide statements with worksheet adjustments from this fund accounting base. A fund is defined by the GASB as

A fiscal and accounting entity with a self-balancing set of accounts recording cash and other financial resources, together with all related liabilities and residual equities and balances, and changes therein, which are segregated for the purpose of carrying on specific activities or attaining certain objectives in accordance with special regulations, restrictions, or limitations.

Under GASB standards there are 11 fund types, which are classified into three general categories.

#### **Governmental funds**

- (1) General
- (2) Special revenue
- (3) Debt service
- (4) Capital projects
- (5) Permanent

#### **Proprietary funds**

- (6) Internal service
- (7) Enterprise

#### **Fiduciary funds**

- (8) Agency
- (9) Pension and other employee benefit trust funds
- (10) Investment trust funds
- (11) Private-purpose trust funds

Fund financial statements are presented separately for the governmental, proprietary, and fiduciary fund categories. Each government has only one general fund; each other fund type may have any number of individual funds, although GASB encourages having as few funds as possible. Fixed assets and long-term debt are not reported in the fund financial statements for governmental funds. Fixed assets and long-term debt related to governmental funds only are reported in the government-wide financial statements (statement of net position).

The fund financial statements for the governmental and enterprise fund categories report **major funds**, not all funds. The general fund is always a major fund. Other funds must be considered major when both of the following conditions exist: (1) total assets, liabilities, deferred inflows and outflows, revenues, expenditures/expenses of that individual governmental or enterprise fund constitute 10% of the governmental or enterprise category **and** (2) total assets, liabilities, deferred inflows and outflows, revenues, expenditures/expenses are 5% of the total of the governmental and enterprise category combined. In addition, a government may choose to call any fund major if it feels that reporting that fund would be useful.<sup>1</sup> In governmental and enterprise fund statements, the nonmajor funds are aggregated and reported as a single column. Combining statements for nonmajor funds are shown as “Other supplementary information” later in the financial section of CAFR. Internal service funds are reported in a single column on the proprietary fund statements.

Fiduciary fund financial statements report a separate column for fund type (agency, pension and other employee benefit trust, investment trust, and private purpose). If separate reports are not available for each pension trust fund, then the notes must disclose this information. If separate reports are available, then the notes must disclose how readers can obtain those reports.

A reconciliation between the information presented in the governmental fund financial statements and the governmental activities column of the government-wide financial statements is required either at the bottom of the fund financial statements or in a schedule immediately following the fund financial statements. Explanations should either accompany the reconciliation or be in the notes.

**Governmental funds** focus on the current financial resources raised and expended to carry out general government purposes. Governmental funds include the general, special revenue, debt service, capital projects, and permanent funds. GASB Statement No. 54 provides definitions of the governmental fund types. The **General fund** accounts for and reports all financial resources except those required to be accounted for and reported in another fund. The general fund includes expenditures for functions such as general government, public safety, culture and recreation, public works and engineering, and other activities not set aside in other funds. **Special revenue funds** are used to account for and report specific revenue sources that are restricted or committed to expenditures for specified current purposes other than debt service and capital projects. An example would include a motor fuel tax limited by law to highway and street construction and repair. **Debt service funds** are used to account for and report financial resources that are restricted, committed, or assigned to expenditures for the payment of general long-term debt principal and interest. **Capital projects funds** are used to account for and report financial resources that are restricted, committed, or assigned to expenditures for capital outlays, including the acquisition or construction of capital facilities and other capital assets. Capital projects funds exclude capital-related outflows financed by proprietary funds or for assets that will be held in trust funds. **Permanent funds** are used to account for and report resources that are restricted to the extent that only earnings, and not principal, may be used to support government programs which benefit the government or its citizens. Permanent funds exclude private purpose trust funds which benefit individuals, private organizations, or other governments.

Financial statements required for governmental fund types include (1) **Balance Sheet** and (2) **Statement of Revenues, Expenditures, and Changes in Fund Balances**. Both of these are illustrated in this module. Governmental fund financial statements are prepared on the current financial resources measurement focus and modified accrual basis of accounting (see Section J, “Measurement Focus and Basis of Accounting”). Like the government-wide statement of net position, the balance sheet of a governmental fund would include deferred outflows of resources and deferred inflow of resources. GASB Statement No. 54 established fund balance classifications that are to be used by governmental funds based on the extent to which the government is obligated to observe constraints imposed upon the use of the resources. Fund balance classifications provided by GASB Statement No. 54 are nonspendable, restricted, committed, assigned and unassigned balances. The classifications are based on the relative strength of the constraints that control how specific amounts can be spent. The **nonspendable** fund balance classification includes amounts that cannot be spent because they are either (1) not in spendable form, or (2) they are legally or contractually required to be maintained intact. “Not in spendable form” includes items that are not expected to be converted to cash, such as inventories and prepaid

<sup>1</sup>The determination of whether or not a fund is major or nonmajor can be illustrated by the HUD Programs Fund, shown in the governmental funds statements as a major fund. The first step is to determine whether or not the HUD Programs Fund is 10% of the governmental funds assets ( $\$7,504,765/51,705,690 = 14.5\%$ ), liabilities ( $\$6,428,389/16,812,584 = 38.3\%$ ), revenues ( $\$2,731,473/97,482,467 = 2.80\%$ ), or expenditures ( $\$2,954,389/121,332,470 = 2.44\%$ ). The first (10%) criterion is met for assets and liabilities but not for revenues and expenditures. As a result, the 5% test will be applied for assets and liabilities only. See the statements for governmental and proprietary funds. The assets do not qualify [ $\$7,504,765/(51,705,690 + 165,404,18) = 3.45\%$ ]. However, the liabilities do exceed 5% [ $\$6,428,389/(16,812,584 + 79,834,989) = 6.65\%$ ]. Thus, the HUD Programs Fund must be shown as a major fund.

amounts. It also includes the long-term amount of loans and notes receivable, as well as property acquired for resale. However, if the proceeds from collection of receivables or from the sale of property is restricted, committed, or assigned, the amounts should be included in the appropriate fund balance classification, rather than in the nonspendable fund balance. **Restricted** fund balances include amounts that are restricted to specific purposes and should be reported as restricted when constraints placed upon the resources are either: (1) externally imposed by creditors, contributors, or laws or regulations of other governments or (2) imposed by law through constitutional provisions or enabling legislation. **Committed** fund balances are amounts that can only be used for specific purposes pursuant to constraints imposed by formal action of the government's highest level of decision-making authority. The **assigned** classification of fund balance includes amounts that are constrained by the government's *intent* to be used for specific purposes but are neither restricted nor committed. It also includes any remaining positive amounts that are reported in governmental funds, other than the general fund, that are not classified as nonspendable, restricted, or committed and amounts in the general fund that are intended to be used for a specific purpose. To be classified as assigned "intent" should be expressed by (1) the governing body or (2) a body (i.e., budget or finance committee) or official who has the authority to assign amounts to be used for specific purposes. Finally, the **unassigned** fund balance is the residual classification for the general fund. The unassigned classification represents the fund balance that has not been assigned to other funds and that has not been restricted, committed, or assigned to specific purposes within the general fund. GASB Statement No. 54 indicates that the general fund should be the only fund that reports a positive unassigned fund balance amount. The balance sheet or the notes to the financial statements should disclose the details of the items in each of the five fund balance classifications. GASB Statement No. 54 indicates that *encumbrances* are not a specific purpose and should not be displayed as a separate item on the balance sheet but should be included in the appropriate fund balance classification based on the definition and criteria for fund balance classifications. Significant encumbrances should be disclosed in the notes to the financial statements in conjunction with disclosures of other significant commitments.

Note in the Statement of Revenues, Expenditures, and Changes in Fund Balances that revenues are reported by source, expenditures are reported by character (current, debt service, capital outlay) and then by function (general government, public safety, etc.). The category "other financing sources and uses" includes transfers between funds and proceeds from the issuance of long-term debt and proceeds from the sale of fixed assets. Special and extraordinary items are reported in this statement in the same manner as in the government-wide Statement of Activities, and reconciliation between the beginning and ending fund balance completes the statement. Interest expenditures related to fixed assets are **not** capitalized.

Amounts reported for governmental activities in the statement of net position are different because:

Capital assets used in governmental activities are not financial resources and therefore are not reported in the funds. 161,082,708

Other long-term assets are not available to pay for current-period expenditures and therefore are deferred in the funds. 9,348,876

Internal service funds are used by management to charge the costs of certain activities, such as insurance and telecommunications, to individual funds. The assets and liabilities of the internal service funds are included in governmental activities in the statement of net position. 2,994,691

Long-term liabilities, including bonds payable, are not due and payable in the current period and therefore are not reported in the funds. (84,760,507)

Net position of governmental activities \$123,542,574

SOURCE: GASB 34, pp. 222-3

**Proprietary funds** focus on total economic resources, income determination, and cash flow presentation. Proprietary funds include internal service funds (which are reported as governmental activities in the government-wide financial statements) and enterprise funds (which are considered business-type activities in the government-wide financial statements). **Internal service funds** report any activity that provides goods or services to other funds of the primary government on a cost-reimbursement basis. Examples might include print shops, motor pools, and self-insurance activities. Internal service funds may incidentally provide services to other governments on a cost-reimbursement basis. **Enterprise funds** may be used to provide goods or services to external users for a fee. Enterprise funds must be used if (1) the activity is financed with debt that is secured solely by a pledge of the net revenues from fees and charges of that activity, (2) laws or regulations require that the activity's cost of providing services be recovered with fees and charges, rather than from taxes or similar revenues, or (3) the pricing policies of the activity establish fees and charges designed to cover its costs including capital costs (e.g., depreciation and debt service). Examples of enterprise funds would include water utilities, airports, and swimming pools.

Statements required for proprietary funds include (1) **Statement of Net Position**, (2) **Statement of Revenues, Expenses, and Changes in Fund Net Position**, and (3) **Statement of Cash Flows**. These statements are all included in this module. Note that the Statement of Net Position is prepared in the same "Assets + Deferred Outflows of Resources – Liabilities – Deferred Inflows of Resources = Net Position" format as the Statement of Net Position in the government-wide financial statements. GASB permits the more traditional balance sheet format, "Assets + Deferred Outflows of Resources = Liabilities + Deferred Inflows of Resources + Net Position" for this proprietary funds statement. The net position category has the same breakdown as the government-wide statement of net positions, "net investment in capital assets," "restricted (distinguishing between major categories of restrictions)," and "unrestricted." Note also that the internal service funds are shown separately to the right as a fund type in the proprietary fund financial statements, with all internal service funds grouped together. A classified format, with current and noncurrent assets and liabilities shown separately, is required by GASB for the proprietary fund statement of net position (or balance sheet).

The Statement of Revenues, Expenses, and Changes in Fund Net Position is an all-inclusive operating statement, with a reconciliation of the beginning and ending fund net position as the last item. Major enterprise funds are shown, along with a total of all enterprise fund activity, and the total of internal service funds is shown separately. GASB standards require an operating income figure, with operating revenues and expenses shown separately from nonoperating revenues and expenses. Capital contributions, transfers, extraordinary items, and special items are to be shown after the nonoperating revenues and expenses. GASB requires that depreciation be shown separately as an operating expense and that interest be shown as a nonoperating expense. Interest expense related to fixed assets is capitalized.

The Statement of Cash Flows is prepared in accord with the requirements of GASB Statement No. 9, as modified by GASB Statement No. 34, and contains several major differences from the familiar business cash flow statement required by FASB. First, only the direct method is acceptable, and reconciliation is required. Second, the reconciliation is from operating income to net cash flow from operating activities, not from net income as required by FASB. Third, GASB has four categories instead of the three required by FASB. The four categories of activities used are operating, noncapital financing, capital and related financing, and investing. Fourth, cash receipts from interest are classified as investing, not operating activities. Fifth, cash payments for interest are classified as financing (either noncapital or capital and related), not as operating activities. Finally, purchases of capital assets (resources provided by financing activities) are considered financing, not investing, activities.

SOURCE: Revised from GASB 34, page 227.

**Fiduciary fund** financial statements provide information, based on the economic resources measurement focus and accrual accounting, on resources held and used by governments for the benefit of individuals and entities other than the government. Fiduciary fund statements are the Statement of Fiduciary Net Position and the Statement of Changes in Fiduciary Net Position. Unlike the statements for the governmental and enterprise fund categories, fiduciary fund statements report totals for each of the four fund types. The fiduciary fund types are (1) pension (and other employee benefit) trust funds, (2) investment trust funds, (3) private-purpose trust funds, and (4) agency funds. However, each individual pension or employee benefit trust fund report must be reported in the notes if separate reports have not been issued. If separate reports have been issued, the notes to the financial statement must indicate how the reader might obtain such reports.

**Pension (and other employee benefit) trust funds** account for funds held in trust for the payment of employee retirement and other benefits. Accounting for these plans is covered by GASB Statement Nos. 25, 43, 50, and 57 (as amended by GASB 67). **Investment trust funds** are used to report the external portions of investment pools, when the reporting government is trustee. **Private-purpose trust funds** should be used to report all other trust arrangements where the principal must remain intact and the income generated is used to benefit individuals, private organizations, and other governments. An example would be a fund to report scholarship funds contributed by individuals and businesses, by a public school system. Finally, **agency funds** report resources held by the reporting government in a purely custodial capacity. Agency funds report only assets and liabilities and are not included in the Statement of Changes in Fiduciary Net Position.

SOURCE: GASB 34, pp. 230–231

The statements required for fiduciary funds are the **Statement of Fiduciary Net Position** and **Statement of Changes in Fiduciary Net Position**. Examples of these statements are reflected in this module. The Statement of Fiduciary Net Position is prepared in the form “Assets + Deferred Outflows of Resources – Liabilities – Deferred Inflows of Resources = Net Position.” Columns are included for each fund type. The Statement of Changes in Fiduciary Net Position uses the terms “additions” and “deductions” instead of revenues and expenses, but the additions and deductions are computed on the full accrual basis. This, like all other GASB operating statements, is an “all-inclusive” statement with reconciliation of the beginning and ending net position at the bottom of the statement. Note that agency funds have only assets and liabilities (assets = liabilities) and are not reported in the Statement of Changes in Fiduciary Net Position.

#### H. Notes to the Financial Statements

Note disclosure requirements are found in the GASB Codification Section 2300 and in GASB Statement Nos. 34, 38, 40, 67, and 68. Some of the major disclosures are (1) a summary of accounting policies, (2) a description of the reporting entity, (3) disclosures on cash and investments (including securitization), (4) information relating to fixed assets, long-term debt, pensions, commitments and contingencies, (5) information on exceeding the budget at the legal level of control, (6) disclosures of individual funds with deficit fund balances, and (7) risks related to deposits and investments. Some disclosures brought about by GASB Statement No. 34 include a description of the government-wide financial statements, the policy for capitalizing fixed assets and estimating useful lives, segment information for enterprise funds, and the policy for recording infrastructure, including the use of the modified approach, if applicable.

#### I. Required Supplementary Information (RSI) other than MD&A

GASB requires four types of information that should be included immediately after the notes to the financial statements. These four items, along with MD&A (see Section E) are considered Required Supplementary Information (RSI). RSI is information presented outside the basic financial statements. While RSI is not covered in the audit opinion, omission of RSI, incomplete RSI, or misleading RSI requires a comment by the auditor. However, an auditor may not modify the report on the basic financial statements as a result of problems discovered related to RSI.

The four types of RSI other than MD&A are (1) pension schedules, (2) schedules when the government sponsors a public entity risk pool, (3) budgetary comparison schedules, and (4) certain schedules when using the modified approach for reporting infrastructure. The pension schedules vary depending on the nature of the plan as described previously.

The second type of schedule required when the government is sponsor of a public entity risk pool provides revenue and claims development information.

The third type of information is to provide **budgetary comparison schedules** for the general fund and all major special revenue funds for which an annual budget has been legally adopted by the governmental unit. Governments may elect to report the budgetary comparison information in a budgetary comparison statement as part of the basic financial statements, rather than as RSI. If the government has significant budgetary perspective differences that result in it not being able to present budgetary comparison information for its general fund and major special revenue funds, the government must present a budget comparison schedule based on the structure of its legally adopted budget. Budgetary comparison schedules include the original budget, the final appropriated budget, and the actual revenues and expenditures stated on the budgetary basis. A separate variance column to report the differences between the final budget and actual amounts is encouraged but not required. The format may be that of the original budget document or in the format, terminology, and classifications in the Statement of Revenues, Expenditures, and Changes in Fund Balances. Information must be provided, either in this schedule or in notes to the RSI, that reconciles budgetary information basis to GAAP information. An example of a Budget—Actual Statement is included below.

SOURCE: GASB 34, pages 272-273. Budget to GAAP Reconciliation Omitted.

The fourth type of information is presented only when the government is using the **modified approach for reporting infrastructure**. Governments have the option of not depreciating their infrastructure assets if they adopt the “modified” approach for recording infrastructure. Two requirements must be met to adopt this approach. First, the government must manage the eligible infrastructure assets using an asset management system that has certain characteristics. These characteristics include (1) keeping an up-to-date inventory of infrastructure assets, (2) performing condition assessments of eligible infrastructure assets, summarizing the results using a measurement scale, and (3) estimating the costs each year to preserve the infrastructure assets at the condition level established and disclosed by the government. Second, the government must document that the infrastructure assets have been preserved at the condition level prescribed by the government. Two schedules are required: (1) a schedule reflecting the condition of the government’s infrastructure, and (2) a comparison of the needed and actual expenditures to maintain the government’s infrastructure. Disclosures that should be included in notes to the RSI are (1) the basis of the condition measurement and the measurement scale used to assess and report the condition of the government’s infrastructure assets, (2) the condition level at which the government intends to preserve its eligible infrastructure assets reported using the modified approach, and (3) factors that significantly affect trends in the information reported in the required schedules.

An example is provided to illustrate the difference between the “depreciation approach” and the “modified approach” to record infrastructure. Assume a government had \$1,000,000 in ordinary maintenance expenses, \$2,000,000 in expenditures to extend the life of existing infrastructure, and \$3,000,000 in expenditures to add to or improve existing infrastructure. Depreciation (if recorded) amounted to \$2,500,000. If the “depreciation approach” were used, \$3,500,000 would be charged to expense (\$1,000,000 + \$2,500,000). If the modified approach were used, the amount charged to expense would be \$3,000,000 (\$1,000,000 + \$2,000,000). In both cases, the \$1,000,000 would be charged to expense, and the \$3,000,000 would be capitalized. Under the “modified approach,” the \$2,000,000 in expenditures to extend the life of infrastructure is substituted for depreciation expense.

#### J. Measurement Focus and Basis of Accounting (MFBA)

GASB Standards require two types of measurement focus: *economic resources measurement focus and current financial resources measurement focus* and two types of basis of accounting: *accrual and modified accrual*. The measurement focus and basis of accounting varies depending upon the financial statement being reported. **The economic resources measurement focus and accrual basis of accounting** is a method similar to accounting for business enterprises. The objective is to measure all of the economic resources available to the governmental entity, including fixed assets and subtracting long-term debt. Full accrual accounting is used, where revenues are recognized when earned and expenses are recognized when incurred. Fixed assets are recorded and depreciated. The economic resources measurement focus and accrual basis of accounting is used for the government-wide statements, the proprietary fund statements, and the fiduciary fund statements.

The objective of the **current financial resources measurement focus and modified accrual basis of accounting** is to measure only the current financial resources available to the governmental entity. As a result governmental funds (i.e., general fund) do not account for fixed assets or long-term debt within the fund. Modified accrual accounting is used by governmental funds. Under modified accrual accounting, revenues are recognized when measurable and available to finance expenditures of the current period. Property taxes may be considered “available” when collected within sixty days of the end of the fiscal year. The recognition of expenditures (not expenses) is modified in the following way. First, expenditures may be recorded for current items (salaries, supplies), capital outlays (purchase of a police car, construction expenditures), or debt service (matured interest, matured principal). Second, payment of principal and interest on long-term indebtedness, including bonds, notes, capital leases, compensated absences, claims and judgments, pensions, special termination benefits, and landfill closure and postclosure care are recorded when due, rather than accrued. However, a government may accrue an additional amount if it has provided financial resources to a debt service fund for payment of liabilities that will mature early in the following period (not more than a month). As noted previously, the current financial resources measurement focus and modified accrual basis of accounting are used in the governmental fund financial statements and will be illustrated later.

**NOW REVIEW MULTIPLE-CHOICE QUESTIONS 26 THROUGH 53**

#### K. Accounting by Governments for Certain Events and Transactions

1. **Accounting for nonexchange transactions.** The previous section indicated that, under the accrual basis of accounting, revenues are recognized when earned. Revenues and inflows of resources include **exchange transactions**, in which goods or services of equal or approximately equal values are exchanged, and **nonexchange transactions**. GASB indicates that revenues from exchange transactions are to be recognized in accordance with generally accepted accounting principles as those principles have evolved over the years and provides no special guidance. However, GASB Statement No. 33, *Accounting and Financial Reporting for Nonexchange Transactions*, defines nonexchange transactions as transactions “in which a government gives (or receives) value without directly receiving (or giving) equal value in exchange.” GASB Statement No. 33 is written under the presumption that an entity is following full accrual accounting. When governmental fund financial statements are issued, modified accrual accounting “modifies” the provisions of GASB Statement No. 33 to require that resources must be measurable and available to finance the expenditures of the current period, as described in Section H. above.

GASB Statement No. 33 classifies nonexchange transactions into four categories, and revenue recognition depends upon the category. The categories are: (1) derived tax revenues, (2) imposed nonexchange revenues, (3) government-mandated nonexchange transactions, and (4) voluntary nonexchange transactions. For the government-wide financial statements, revenue from nonexchange transactions is considered to be an increase in unrestricted net position unless the revenue is restricted by the grantor, donor, or legislation. For example, a

hotel-motel tax may have to be used, by legislation, for promotion of tourism. Purpose restrictions do not affect the timing of revenue recognition.

In order for a receivable and revenue to be recognized, four types of **eligibility requirements** must be met. First is the **required characteristics of the recipients**. The recipient of resources must have the characteristics required by the provider. For example, the recipient of certain state funds allocated for road repairs may have to be a county government, a municipality, or a township. Second, **time requirements** must be met, if a provider specifies that resources must be expended in a certain future period. For example, if a state indicates that funds are appropriated for water system improvements for the fiscal year ended June 30, 2012, then neither a receivable nor revenue would be recognized by the local governments receiving the funds until that fiscal year. In the absence of specified time requirements, a receivable and revenue would be recognized when a promise is unconditional. Third, certain grants from one government to another cannot be provided until the receiving government has expended the funds. This is a condition the GASB calls a **reimbursement**. Reimbursement grant revenues are recognized only when expenditures are recognized. Finally, resources pledged that have a **contingency** attached are not to be recognized until that contingency is removed.

**Derived tax revenues** result from taxes assessed by governments on exchange transactions. Examples include sales taxes, income taxes, and motor fuel taxes. Receivables and revenues are to be recognized when the underlying transaction (the sale, the income, etc.) takes place. For example, under accrual accounting, if a state imposed a sales tax of 6%, the state would record a revenue of \$6 when a merchant recorded a sale of \$100. If resources are received before the underlying transaction takes place, then the asset would be offset by revenues received in advance, a liability.

**Imposed nonexchange transactions** are taxes and other assessments by governments that are not derived from underlying transactions. Examples include property taxes, special assessments, and fines and forfeits. Assets from imposed nonexchange transactions should be recognized when an enforceable legal claim exists, or when the resources are received, whichever occurs first. In the case of property taxes, this would normally be specified in the enabling legislation, such as the lien or assessment date. Revenues for property taxes should be recognized, net of estimated refunds and estimated uncollectible taxes, in the period for which the taxes are levied, regardless of when the enforcement date or collection date might be. All other imposed nonexchange transactions should be recognized as revenues at the same time as the assets, or as soon as use is first permitted. On the modified accrual basis, property taxes may not be recognized unless collected within sixty days after the end of a fiscal year.

**Government-mandated nonexchange transactions** exist when the providing government, such as the federal government or a state government, requires the receiving government to expend funds for a specific purpose. For example, a state may require school districts to “mainstream” certain children by including them in regular classes and also to provide additional assistance in the form of extra aides. Funding for this purpose would be considered to be a government-mandated nonexchange transaction. Receiving governments should recognize assets and revenues when all eligibility requirements have been met.

**Voluntary nonexchange transactions** include grants, entitlements, and financial guarantees provided from a government to another entity (usually another government) where the providing government does not impose specific requirements upon the receiving entity. For example, a state provides a grant for new technology for school districts but does not require those school districts to accept the grant or utilize that technology. Even though the use of the grant is restricted, it is a voluntary nonexchange transaction. It also includes voluntary contributions from individuals and other entities to governments. An example of this type of transaction would be the gift of funds from an individual to a school district or a college. Voluntary nonexchange transactions may or may not have purpose restrictions. The recognition of assets and revenues would be when all eligibility requirements have been met, the same as government-mandated nonexchange transactions.

If after a revenue has been recognized by a governmental entity (in a later fiscal year), and those funds must be returned to the provider, then the recipient government must record an expense and liability (or reduction of cash). If there is a difference in the provider government’s and recipient government’s fiscal year, then the provider’s fiscal year would govern for purposes of determining eligibility requirements. If the providing government, a state, has a biennial fiscal year, then half of the grant would be recognized by the recipient government in each of the providing government’s two fiscal years.

A government may voluntarily extend a financial guarantee for the obligations of another entity. GASB Statement No. 70 requires the government to recognize a liability when qualitative factors or historical data indicate that it is more likely than not that the government will be required to make a payment on the guarantee. The statement also requires the government to disclose the potential obligation until the government is released from its obligation.

2. **Accounting for intangible assets.** GASB Statement No. 51, *Accounting and Financial Reporting for Intangible Assets*, allows only **identifiable** intangible assets to be recognized as capital assets in the statement

of net position (at historical cost). Costs related to internally generated intangibles (e.g., proprietary software systems) may begin to be capitalized when

- a. The government's specific **objective** for the project and the proposed **service capacity** has been determined,
- b. The **feasibility** of completing the project has been demonstrated, and
- c. The government's **intention** to complete or to continue the development of the asset has been demonstrated.

Intangible assets should be amortized over their useful lives. An intangible asset that has no legal, contractual, regulatory, technological, or other factors limiting its useful life should be considered to have an indefinite useful life and should not be amortized unless its useful life is later determined to be no longer indefinite.

3. **Sales and pledges of receivables and future revenues.** In some situations a state or local government may decide to sell receivables or future revenues (e.g., future tobacco settlement receipts, or delinquent tax receivables). GASB Statement No. 48, *Sales and Pledges of Receivables and Future Revenues and Intraentity Transfers of Assets and Future Revenues*, provides guidance for accounting for such transactions. Specifically, this statement provides criteria for determining when the assets have been sold and should be removed from the government's financial statements as opposed to treating the transaction as a collateralized loan.

GASB Statement No. 48 establishes that a transaction is a collateralized borrowing unless the government both transfers the receivables or future revenues and has no continued involvement with them. Circumstances that would indicate continued involvement and prevent accounting for the transaction as a sale include

- The government or the buyer can cancel the sale.
- The government can limit the buyer's ability to subsequently sell or pledge the receivables or future revenue.
- The government has access to the receivables, future revenues, or the cash collected from them.
- The government can substitute for or reacquire specific receivables without the buyer's consent.
- The government is actively involved in the future generation of sold revenues (e.g., the revenues are the product of goods or services provided by the government).

Receivables that meet the requirements for sale should be removed from the assets of the selling government's financial statements. The difference between the carrying value of the receivables and the funds received is reported as a gain or loss on accrual-basis financial statements or as revenue in modified-accrual-basis financial statements. In a sale of future revenue, the government reports the proceeds as a deferred inflow and recognizes the revenue over the life of the sales agreement.

If the transaction does not meet the requirements of a sale, it is accounted for as a collateralized loan. The proceeds represent a liability that is repaid as the receivables or revenues are collected.

4. **Accounting for derivative instruments.** GASB Statement No. 53, *Accounting and Financial Reporting for Derivative Instruments*, specifies the appropriate accounting for derivative instruments. State and local governments use derivative instruments to make investments or manage (hedge) specific risks. The rules for accounting for these instruments are similar to those for other entities under SFAS 133. Derivative instruments derive value as a financial instrument from something outside the instrument itself.

Under GASB Statement No. 53, derivative instruments are reported on the statement of net position at their fair value (except for certain Synthetic Guaranteed Investment Contracts). If the derivative is an investment or an ineffective hedge, changes in fair value should be reported as investment revenue in the flow of resources statement. Changes in the values of hedging derivatives are reported as deferred inflows or deferred outflows in the statement of net position. In proprietary or fiduciary fund-based financial statements, the fund that reports or expects to report the hedged item should report the hedging derivative instrument.

A derivative is evaluated for effectiveness as a hedge when it is acquired and reevaluated at the end of each subsequent financial reporting period. Methods used to evaluate the effectiveness include

1. Consistent critical terms method—evaluates the hedge by qualitatively evaluating the terms of the hedgeable item and the potential hedging derivative instrument. If the critical terms between the hedgeable item and the derivative instrument are the same or similar, the instrument is considered to be an effective hedge.
2. Quantitative methods
  - a. Synthetic instrument method—combines the cash flow effects of the hedgeable item with the potential hedging derivative instrument to see if they offset.
  - b. Dollar-offset method—compares changes in the fair value (or expected cash flows) of the hedgeable item with the potential hedging derivative.

- c. Regression analysis method—evaluates effectiveness by examining the statistical relationship between the hedgeable item and the potential hedging derivative instrument.

If in a subsequent period the derivative is determined to be no longer effective, it is terminated as a hedge and the balance in the deferral account should be reported in the flow of resources statement within the investment revenue classification. GASB No. 64 amends GASB No. 53 to clarify whether an effective hedge of a financial instrument can be maintained after the replacement of the swap counterparty or the swap counterparty's credit support provider. GASB No. 64 indicates that a hedging relationship is maintained and hedge accounting should continue if there are no changes in terms or risk of the instrument other than a replacement of the counterparty or the counterparty's credit support provider.

5. **Accounting for pollution remediation obligations.** GASB Statement No. 49, *Accounting and Financial Reporting for Pollution Remediation Obligations*, establishes rules for accounting for estimated obligations for pollution remediation. A government must estimate its expected outlays for pollution remediation if it knows a site is polluted and any of the following recognition triggers occur:

- Pollution poses an imminent danger to the public or environment and the government has little or no discretion to avoid fixing the problem.
- The government has violated a pollution prevention-related permit or license.
- A regulator (e.g., the EPA) has identified the government as responsible or potentially responsible for cleaning up pollution or paying some of the cost of the cleanup.
- The government is named in a lawsuit to compel it to address the pollution.
- The government begins or legally obligates itself to begin cleanup or post-cleanup activities.

Liabilities and expenses are estimated using an “expected cash flows” measurement technique.

6. **Service concession arrangements.** A service concession arrangement is an agreement between a government unit and an operator in which
- a. The government unit conveys to the operator the right and obligation to provide public services through the operation of a facility (capital asset) in exchange for consideration;
  - b. The operator collects and is compensated by fees from third parties;
  - c. The government unit has the ability to modify or approve the services to be provided, to whom the operator is required to provide the services, and the price of the services; and
  - d. The government unit is entitled to significant residual interest in the facility at the end of the arrangement.

Common examples of service concession arrangements include

1. Arrangements in which an operator agrees to design and build or improve a facility and collect fees from third parties (e.g., construct a municipal complex or a tollway).
2. Arrangements in which an operator will pay the government unit for the right to operate a government facility (e.g., a parking structure) and collect fees from third party for its use.

If the facility associated with the arrangement is an existing facility, the government unit should continue to report the facility as a capital asset. If the facility is purchased, constructed or improved by the operator, the government unit should record (a) the new facility (capital asset) at its fair value when it is placed in operation, (b) any related contractual obligations as liabilities, and (c) a corresponding deferred inflow of resources equal to the difference. A contractual obligation is one that is significant and related to the facility (e.g., an obligation

#### EXAMPLE

A state government through its Department of Transportation (DOT) enters into an agreement with the Local Tunnel Authority (LTA), a governmental operator, in which LTA agrees to design, build and operate a tunnel for 40 years. In exchange for building the tunnel, the LTA is entitled to collect and retain tolls generated by the tunnel for the term of the agreement. The cost of the tunnel is \$1 billion. The fair value of the tunnel when it is placed in operation is \$1.5 billion. When the tunnel is placed in operation, the state government would record the asset at its \$1.5 billion fair value, and record \$1.5 billion in deferred (revenue) inflow of resources.

In future years, the state government would apply existing capital asset guidance, including depreciation, if applicable, to the tunnel. If the state elects to use the straight-line method of amortization of revenue, it would recognize \$37,500,000 ( $\$1.5 \text{ billion} \div 40 \text{ years}$ ) in revenue for the next 40 years and reduce the deferred inflow by the same amount.

by the government unit to provide insurance for the facility). These obligations should be measured at their present values.

In the Notes to the financial statements, the government should disclose

1. A general description of the arrangement, including the government's objectives for entering into the arrangement.
  2. Nature of amounts of assets, liabilities, and deferred outflows and inflows of resources related to the agreement.
  3. Nature and extent of rights retained by the government.
  4. The details of any related guarantees and commitments.
7. **Related-party transactions.** State and local governments must disclose certain related-party transactions. In addition, if the substance of a particular transaction is significantly different from its form because of the involvement of related parties, financial statements should recognize the substance of the transaction rather than merely its legal form.
8. **Subsequent events** The requirements regarding the effect of subsequent events on financial statements are similar to those for commercial businesses under GAAP. If the event provides additional evidence about conditions that existed at the date of the statement of net position and affect the estimates in the financial statements, the effect of the event should be recognized in the financial statements. If the event provides evidence about conditions that did not exist at the date of the statement of net position but arose subsequent to that date, the event should be disclosed in the notes to the financial statements.
9. **Going concern considerations.** The guidance regarding going concern for state and local governments is similar to that for commercial business under GAAP. The financial reporting model assumes that the entity will be a going concern for a reasonable period of time (i.e., 12 months from the financial statement date). Indicators that there may be substantial doubt about the entity's ability to continue as a going concern include
- a. Negative trends (e.g., recurring losses).
  - b. Other indicators of financial difficulties (e.g., defaults on loan agreements).
  - c. Internal matters (e.g., work stoppages).
  - d. External matters (e.g., legal proceedings).

If it is determined that there is substantial doubt about a governmental entity's ability to continue as a going concern for a reasonable period of time, the notes to the financial statements should disclose details of the sources of the concerns and the government official's plan for dealing with those concerns.

GASB Statement No. 58, *Accounting and Financial Reporting for Chapter 9 Bankruptcies*, provides accounting and financial reporting guidance when a governmental unit has been granted relief under the provisions of Chapter 9 of the US Bankruptcy Code. The standard provides that assets and liabilities should be remeasured in accordance with the court's Plan of Adjustment. In addition, the statement requires disclosure of the details of the bankruptcy and how users can obtain a copy of the Plan of Adjustment.

10. **Financial Instruments Reporting.** In June 2010 the GASB issued Statement No. 59, *Financial Instruments Omnibus*, which updated and improved existing standards regarding reporting and disclosure requirements of certain financial instruments and external investment pools. The specific issues related to financial instruments addressed by GASB Statement No. 59 include
- a. Amended NCGA Statement 4 to be consistent with GASB Statement No. 53 regarding the guarantees of the indebtedness of others.
  - b. Amended GASB Statements Nos. 25 and 43 to be consistent with the provisions of GASB Statement No. 31. The amendment removed the fair value exemption for unallocated insurance contracts. The effect is to report investments in unallocated insurance contracts as interest-earning investment contracts.
  - c. Clarified GASB Statement No. 31 by indicating the 2a7-like investment pool is an external investment pool that operates in conformity with Security and Exchange (SEC) Rule 2a7 as promulgated under the Investment Company Act of 1940.
  - d. Amended GASB Statement No. 40 to indicate that interest-rate risk information should be disclosed only for debt investment pools that do not meet the requirements to be reported as a 2a7-like pool.
  - e. Amended GASB Statement No. 53 as follows:
    - (1) A penalty payment for nonperformance that is dependent on the failure of the counterparty to comply with the terms of construction or purchase contract does not meet the net settlement characteristic included in the definition of a derivative instrument.

- (2) To be included with the scope of GASB Statement No. 53 a financial guarantee contract must meet the definitions of a derivative instrument and be entered into primarily for the purpose of obtaining income or profit.
  - (3) The scope of GASB Statement No. 53 excludes contracts that are not exchange-traded and have reference rates based on specific volumes of sales or service revenue of one of the parties to the contract.
  - (4) Provides that a hybrid instrument should be reported according to GASB Statement No. 53 if the investor's initial rate of return on the companion instrument has the potential for at least a doubled yield.
11. **Government Combinations.** Accounting for government combinations, including mergers, acquisitions, and transfers of operations is covered by GASB No. 69. To be considered a government combination, an arrangement should result in the continuation of a substantial portion of the services provided by the previously separate entities.
- a. A **merger** is a government combination of legally separate entities in which no significant consideration is exchanged. In a merger, the new or existing entity recognizes the assets, deferred outflows of resources, liabilities, or deferred inflows of resources in accordance with the accounting principles applied in the most recent financial statements of the merged entities. In addition, these items are generally measured at the carrying values of the separate entities. However, the items may be adjusted to bring the accounting principles in alignment. Any capital assets that will be used in operations but will be disposed of should be tested for impairment.
  - b. A **acquisition** is a government combination in which a government acquires another entity, or the operations of another entity, in exchange for significant consideration. In an acquisition, the acquiring entity recognizes the assets, deferred outflows of resources, liabilities, or deferred inflows of resources in accordance with existing authoritative standards for state and local governments, and generally measures the items at acquisition value at the date of the acquisition. However, acquired deferred outflows of resources (or goodwill) arising from prior acquisitions should not be recognized by the acquiring entity. Any capital assets that will be used in operations but will be disposed of should be tested for impairment. In circumstances in which the consideration provided exceeds the net position acquired, the acquiring entity should report the difference as a deferred outflow of resources which is amortized based on a consideration of service lives of the acquired items. In circumstances in which the consideration provided is less than the net position acquired, the acquiring entity should first reduce the value assigned to noncurrent assets other than financial assets. If this reduces the noncurrent assets to zero, any access should be recognized as a special item in the flows statements. Acquisition costs should be recognized expenses/expenditures when they are incurred.
  - c. A **transfer of operations** is a government combination involving the transfer of operations of a government or nongovernmental entity in which no significant consideration is exchanged. In a transfer of operations, the continuing entity recognizes the assets, deferred outflows of resources, liabilities, or deferred inflows of resources in accordance with the accounting principles currently applied. In addition, these items are generally measured at the carrying values at the date of transfer. However, the items may be adjusted to reflect authoritative standards, or bring the accounting principles in alignment with those of the continuing entity. Any capital assets that will be used in operations but will be disposed of should be tested for impairment.
12. **Disposal of Operations.** A disposing government should recognize a gain or loss on disposal of operations. The disposal of operations should be reported as a special item in the statement of revenues, expenditures, and changes in fund balances in the period in which the disposal occurs.

**NOW REVIEW MULTIPLE-CHOICE QUESTIONS 54 THROUGH 68**

**L. Budgetary Accounting for the General and Special Revenue Funds**

The GASB, in one of its basic principles, states

1. An annual budget(s) should be adopted by every governmental unit.
2. The accounting system should provide the basis for appropriate budgetary control.

3. A common terminology and classification should be used consistently throughout the budget, the accounts, and the financial reports of each fund.

In accordance with the principle above, budgets should be prepared for each of the fund types used by governmental units. This directive, by itself, does not differentiate governmental from commercial enterprises. What is different, however, is the inclusion of budgetary accounts in the formal accounting system for the general and major special revenue funds. Inclusion of the budgetary accounts facilitates a budget-actual comparison in Required Supplementary Information (RSI) or as a basic financial statement. The budget-actual comparison is required for the general fund and all major special revenue funds that have a legally adopted annual budget. Budgetary accounts are generally used in those funds for which the budget-actual comparison is made. *As a result, CPA examination questions always assume budgetary accounts for the general fund and sometimes, but not always, assume budgetary accounts for special revenue funds.*

Budgetary accounts (Estimated Revenues, Appropriations, Estimated Other Financing Sources, Estimated Other Financing Uses, and Budgetary Fund Balance) are incorporated into governmental accounting systems to provide legislative control over revenues and other resource inflows and expenditures and other resource outflows. Recording the budget also provides an assessment of management's stewardship by facilitating a comparison of budget vs. actual. The journal entries that follow illustrate the budgetary accounts used by the general and special revenue funds.

Upon adoption of the estimated revenues and appropriations included in the legally adopted budget (at the beginning of the period), the following entry is made and posted to the general ledger:

Estimated Revenues <sup>2</sup> (individual items are posted to subsidiary ledger)	1,000,000 (anticipated resources/revenues)
Appropriations (individual items are posted to subsidiary ledger)	980,000 (anticipated expenditures/liabilities)
Budgetary Fund Balance	20,000 (a surplus is anticipated since estimated revenues are more the appropriations)

Estimated Revenues, Appropriations, and Budgetary Fund Balance are budgetary accounts. This budgetary entry is reversed at year-end during the closing process.

As actual resource inflows and outflows occur during the year, they are recorded in Revenues and Expenditures accounts, and the detail is posted to the revenues and expenditures subsidiary ledgers to facilitate budget vs. actual comparisons. To prevent the overspending of appropriations (which is the legal authority to spend resources) an additional budgetary account is maintained during the year. This budgetary account is called Encumbrances. When goods or services are ordered, encumbrances are recorded so that appropriations are not overspent. The following entry is used to record encumbrances:

Encumbrances (detail posted to subsidiary ledger)	5,000 (cost estimate)
Reserved for Encumbrances	5,000 (cost estimate)

The Reserved for Encumbrances is a fund equity account that is used to segregate the amount of encumbrances outstanding. When the debit in the entry is posted, the amount that can still be obligated or expended for an individual budget line item is reduced. Thereafter, when the goods or services ordered are received, the encumbrance entry is reversed and the actual resource outflow (expenditures) is recorded.

Reserved for Encumbrances	5,000
Encumbrances (detail posted to subsidiary ledger)	5,000
Expenditures (detail posted to subsidiary ledger)	5,200 (actual cost)
Vouchers Payable	5,200 (actual cost)

The encumbrances account does not represent an expenditure; it is a budgetary account which represents the estimated cost of goods or services which have yet to be received. In effect, the recording of encumbrances represents the recording of executory contracts, which is essential to prevent overspending of an appropriation, which is the legal authority to spend resources). As noted above, the account reserved for encumbrances is a fund equity account, not a liability account. If encumbrances are outstanding at the end of a period, the encumbrances

<sup>2</sup>Appropriations, estimated revenues, encumbrances, revenues, expenditures, estimated other financing sources, estimated other financing uses, other financing sources, and other financing uses are "Control" accounts which require detail be posted to a subsidiary ledger.

account is closed to the fund balance, and the reserved for encumbrances account is reported in the fund balance section of the balance sheet based on GASB Statement No. 54 fund balance classifications.

At the end of the year, the following closing entries would be recorded, assuming actual revenues for the year totaled \$1,005,000, actual expenditures for the year were \$950,000, and encumbrances outstanding at year-end were \$10,000:

1.	Budgetary Fund Balance	20,000	
	Appropriations	980,000	
	Estimated Revenues		1,000,000
2.	Revenues	1,005,000	
	Expenditures		950,000
	Encumbrances		10,000
	Fund Balance—Unreserved		45,000

*If Expenditures and Encumbrances had exceeded Revenues, Fund Balance—Unreserved, an equity account, would have been debited in this closing entry.*

It is important to remember that Fund Balance—Unreserved and Reserved for Encumbrances are balance sheet equity accounts.

**M. Expenditure Classification for Governmental Funds**

**Expenditure classification.** The GASB Codification includes guidelines for the classification of governmental fund expenditure data as set forth in GASB Statement No. 1. Both internal and external management control benefit from multiple classification of expenditures. In addition, multiple classifications prove important from an accountability standpoint. This classification system provides assistance in aggregating data and performing data analysis. Internal evaluations, external reporting, and intergovernmental comparisons can be enhanced by this multiple classification system. The following chart describes each expenditure classification with examples.

Classification	Description	Examples
Function (or program)	<ul style="list-style-type: none"> <li>• Provides information on the overall purposes or objectives of expenditures</li> <li>• Represents a major service or area of responsibility</li> </ul>	Highways and streets Health and welfare Education General government Public safety
Organization unit (department)	<ul style="list-style-type: none"> <li>• Grouped according to the government’s organizational structure</li> <li>• The responsibility for a department is fixed</li> </ul>	Police department Fire department Parks and recreational department Personnel department City clerk
Activity	<ul style="list-style-type: none"> <li>• Specific and distinguishable line of work performed by an organizational unit as part of one of its functions or programs</li> <li>• More meaningful if the performance of each activity is fixed</li> </ul>	Police protection function Subactivities: Police administration Crime control and investigation Traffic control Police training Support services
Character	<ul style="list-style-type: none"> <li>• Classifies expenditures by the fiscal period benefited</li> </ul>	Current expenditures Capital outlays Debt service
Object	<ul style="list-style-type: none"> <li>• Classified according to the types of items purchased or services obtained</li> </ul>	Personal services Supplies Rent Utilities Buildings

The Statement of Revenues, Expenditures, and Changes in Fund Balances (earlier in this module) generally reports expenditures by function within character classifications. Budgets often report expenditures by object class at the departmental level.

**N. Accounting for the General Fund**

The general fund is the most significant governmental fund. It accounts for all transactions not accounted for in any other fund. Revenues come from many sources (taxes, licenses and permits, fines and forfeits, charges for services, etc.), and the expenditures cover the major functions of government (public safety, health and welfare, highways and streets, education, etc.). The illustration below presents an overview of the general fund account structure.

**GENERAL FUND ACCOUNT STRUCTURE****Real Accounts**

Current Assets (DR)  
 Current Liabilities (CR)  
 Fund Balance (Fund Equity) (CR) (See note 1 below)  
     Reserved (Encumbrances, Inventories, etc.)  
     Unreserved

**Nominal Accounts**

Revenues (Control Account) (CR) (See note 2 below)  
 Other Financing Sources (Control Account) (CR)  
     (Transfers In)  
     (Bond Issue Proceeds)  
     (Sale of Capital Assets)  
 Expenditures (Control Account) (DR)  
  
 Other Financing Uses (Control Account) (DR)  
     (Transfers Out)

**Budgetary Accounts**

Estimated Revenues (Control Account) (DR)  
 Estimated Other Financing  
     Sources (Control Account) (DR)  
  
 Appropriations (Control Account) (CR)  
 Encumbrances (Control Account) (DR)  
 Estimated Other Financing  
     Uses (Control Account) (CR)  
 Budgetary Fund Balance (DR) (CR)

Note 1: For accounting purposes two fund balance classifications (reserved and unreserved) are used. However, for financial reporting under GASB Statement No. 54, five fund balance classifications (nonspendable, restricted, committed, assigned, and unassigned) are used.

Note 2: Remember that whenever a journal entry is made to a "control account" the detail needs to be posted to the subsidiary ledger.

The following represents an accounting cycle problem for the general fund. Some of these entries have been illustrated previously.

- a. Adoption of a budget where estimated revenues exceed appropriations and estimated other financing uses (planned transfer out to another fund) by \$10,000. (Assume it is the first year of existence for this governmental unit.)

Estimated Revenues (detail posted to subsidiary ledger)	300,000	
Appropriations (detail posted to subsidiary ledger)		240,000
Estimated Other Financing Uses		50,000
Budgetary Fund Balance		10,000

- b. Transfers to a debt service fund (for general long-term debt payments) amount to \$50,000.

Other Financing Uses—Transfers Out	50,000	
Due to Debt Service Fund		50,000

According to the GASB, transfers should be recognized in the accounting period in which the interfund receivable and payable arises. The account "Other Financing Uses—Transfers Out" is a temporary/nominal account that is compared with the budgetary account "Estimated Other Financing Uses." The account "Due to other funds (or Due to X fund)" is a current liability. Note that the debt service fund would record a receivable as follows:

**Debt Service**

Due from General Fund	50,000	
Other Financing Sources—Transfers In		50,000

The account “Due from other funds (or Due from X fund)” is a current asset account. The “Transfers” accounts are closed at the end of the year. It is important to note that the account “Transfers Out” is not an expenditure account, but is an Other Financing Use, and that the account “Transfers In” is not a revenue account, but is an Other Financing Source. (See the combined statement of revenues, expenditures, and changes in fund balance shown previously.) There is a complete discussion of interfund transactions and transfers later in this module (Section V).

- c. The property tax levy is recorded as revenues, under the modified accrual basis, in the year for which the tax levy is enacted by the governmental unit, if collections will be in time to finance expenditures of the current period. The tax bills amount to \$250,000, and \$20,000 is estimated to be uncollectible.

Property Taxes Receivable—Current	250,000	
Allowance for Uncollectible Taxes—Current		20,000
Revenues		230,000

Under the modified accrual basis, revenues should be recorded in the period in which they are both measurable and available. The GASB requires that property taxes be recognized as a revenue if the taxes are

1. Available—collected by year-end or soon enough to pay liabilities of the current period (no more than sixty days after the end of the fiscal year)
2. To finance the budget of the current period

To the extent the modified accrual criteria for recognition are not met, the property tax levy would be recorded with a credit to Deferred Inflow of Resources Property Taxes, a liability, instead of Revenues.

If cash is needed to pay for expenditures before the property tax receivables are collected, it is not uncommon for governmental units to borrow on tax anticipation notes. The property taxes receivable serves as security for this loan and, as taxes are collected, the liability is paid (i.e., Tax Anticipation Notes Payable is debited).

The treatment of the allowance for uncollectible accounts should be noted. Expendable funds account for resource inflows (revenues) and resource outflows (expenditures). Expenses are not recorded. The Allowance for Uncollectible Accounts (contra asset account) represents an estimated reduction in a resource inflow and, accordingly, revenues are recorded net of estimated uncollectible taxes.

- d. Revenues from fines, licenses, and permits amount to \$40,000.

Cash	40,000	
Revenues (detail posted)		40,000

Resource inflows from fines, licenses, permits, etc. are usually not measurable until the cash is collected. Sometimes, it is possible to measure the potential resource inflow; however, because the availability is questionable, revenues are recorded when cash is collected.

- e. The state owes the city \$25,000 for the city’s share of the state sales tax. The amount has not been received at year-end, but it is expected within the first few months of the next fiscal year (in time to pay the liabilities as of the current fiscal year).

State Sales Tax Receivable	25,000	
Revenues (detail posted)		25,000

Sales taxes, income taxes, etc. may be accrued before collection by a governmental unit, if collection is anticipated in time to pay for current year expenditures. Other firm commitments from the state or other governmental units for grants, etc. are also recorded.

- f. Incurred liabilities for salaries, repairs, utilities, rent, and other regularly occurring items for \$200,000.

Expenditures (detail posted)	200,000	
Vouchers Payable		200,000

Note that all resource outflows which are legally authorized appropriations are debited to Expenditures. It makes no difference whether the outflow is for a fire truck or for rent. Remember, expendable funds do not have a capital maintenance objective. Also, note that the encumbrance accounts were not used in this example. There is usually no need to encumber appropriations for items that occur regularly, and which possess a highly predictable amount (e.g., salaries, rent, etc.). It should be pointed out, however, that there is no hard and fast rule for when to use encumbrances, and encumbrance policies do vary tremendously (i.e., from every expenditure being encumbered to virtually no expenditures being encumbered).

- g. Ordered one police car; estimated cost is \$17,000. One month later, ordered second police car; estimated cost is \$16,500.

Encumbrances	17,000	
Reserved for Encumbrances		17,000
Encumbrances	16,500	
Reserved for Encumbrances		16,500

Recording encumbrances prevents overspending line-item appropriations. In the case of the police cars, assume that appropriations were authorized in the amount of \$34,000 for police vehicles. After the first police car was ordered, the unencumbered appropriation for police vehicles was reduced to \$17,000. This placed a dollar limit on what could be spent on the second car.

- h. Police car ordered first was received; actual cost is \$16,800. Note that the encumbrance is reversed in the first journal entry in the amount of \$17,000 which is the estimated cost of the police car. In the second entry the expenditures account is debited for the actual cost of the police car.

Reserved for Encumbrances	17,000	
Encumbrances		17,000
Expenditures	16,800	
Vouchers Payable		16,800

- i. Property tax collections amounted to \$233,000, payments to other funds amounted to \$50,000 (see item b.), and payments of vouchers were \$190,000.

Cash	233,000	
Property Taxes Receivable—Current		233,000
Due to Debt Service Fund	50,000	
Cash		50,000
Vouchers Payable	190,000	
Cash		190,000
Allowance for Uncollectible Taxes—Current	3,000	
Revenues		3,000

The last entry above is made because the Allowance for Uncollectible Taxes—Current was overstated. Note that the estimate was \$20,000 in entry c. above. Tax revenues were estimated to be \$230,000. Since property tax collections exceeded \$230,000 for the current year, an increase in revenues is recorded.

- j. Recorded \$5,000 inventory of materials and supplies, reduced the allowance for uncollectible property taxes to \$10,000, and reclassified uncollected property taxes to delinquent accounts.

Materials and Supplies Inventory <sup>3</sup>	5,000	
Reserved for Inventory of Materials and Supplies		5,000
Allowance for Uncollectible Taxes—Current	7,000	
Revenues		7,000
Property Taxes Receivable—Delinquent	17,000	
Allowance for Uncollectible Taxes—Current	10,000	
Allowance for Uncollectible Taxes—Delinquent		10,000
Property Taxes Receivable—Current		17,000

One of the reasons for recording the inventory of materials and supplies is to inform the preparers of the budget that items purchased during the year and charged to expenditures (item f.) are still unused. The account “Reserved for Inventory of Materials and Supplies” is a reservation of Fund Balance. In this respect, it is similar to “Reserved for Encumbrances.”

The second entry adjusts the estimate of uncollectible property taxes to \$10,000. This is the result of collecting more property taxes than anticipated (see entries made in c. and i. above) and of an estimate that \$7,000 will now be collected.

<sup>3</sup> The illustration covers the “purchases method” for materials and supplies. The “consumption method” is not covered in this illustration. Consult an advanced or governmental textbook for coverage of the “consumption method.”

The third entry reclassifies property taxes receivable from current to delinquent at the end of the year. Generally, interest and penalty charges accrue on the unpaid taxes from the date they become delinquent. If these items have accrued at the end of a fiscal period, they would be recorded in the following way:

Interest and Penalties Receivable on Delinquent Taxes	xx	
Allowance for Uncollectible Interest and Penalties		xx
Revenues		xx

k. Appropriate closing entries are made.

Budgetary Fund Balance	10,000	
Appropriations	240,000	
Estimated Other Financing Uses	50,000	
Estimated Revenues		300,000

*The above entry reverses the entry to record the budget.*

Revenues	305,000	
Expenditures		216,800
Encumbrances		16,500
Other Financing Uses—Transfers Out		50,000
Fund Balance—Unreserved		21,700

*The above entry indicates that the unreserved fund balance increased by \$21,700 since actual revenues exceeded expenditures, encumbrances and other financing uses.*

**Financial statements.** Under the GASB Codification, individual fund statements should not be prepared that simply repeat information found in the basic or combining statements but may be prepared to present individual fund budgetary comparisons (not needed for the general or major special revenue funds), to present prior year comparative data, or to present more detailed information than is found in the basic or combining statements.

The balance sheet below would represent the general fund portion of the governmental funds balance sheet. Note the following points from the balance sheet:

1. The total fund balance (equity) is \$43,200, but only \$21,700 is unreserved. This \$21,700 represents the appropriable component of total fund balance (i.e., the amount that can be used next period to help finance a deficit budget). The \$21,700 represents unreserved net liquid resources.
2. The reason for crediting “Reserved for Inventory of Materials and Supplies” in item j. previously should now be more meaningful. The inventory of materials and supplies is not a liquid resource that can be used to finance future expenditures. Consequently, if this asset is disclosed, it must be disclosed via a fund restriction.
3. The “Reserved for Encumbrances” which is disclosed on the balance sheet relates to the second police car that was ordered but not delivered at year-end. When the car is received in the next period, the following journal entries could be made, assuming the actual cost is \$16,600. It should be noted that the first journal entry reverses the encumbrances which were closed at the end of the prior year. Also note the \$100 difference between the estimated cost (\$16,500) and the actual cost (\$16,600) of the police car is charged to current year expenditures.

Encumbrances—Prior Year	16,500	
Fund Balance—Unreserved		16,500
Reserved for Encumbrances	16,500	
Encumbrances—Prior Year		16,500
Expenditures—Prior Year	16,500	
Expenditure	100	
Vouchers Payable		16,600

The police car would not be recorded in the general fund as a fixed asset; rather it would be displayed as a fixed asset in the government-wide Statement of Net Position.

The following would be the general fund portion of the Budgetary Comparison Schedule:

## Module 21: Governmental (State and Local) Accounting

*City of X*  
**GENERAL FUND**  
**BALANCE SHEET**  
*At June 30, 2013*

<i>Assets</i>	<i>Liabilities and Fund Equity</i>		
Cash	\$33,000	<i>Liabilities:</i>	
Property Taxes Receivable—Delinquent	\$17,000	Accounts Payable	
Less: Allowance for Uncollectible Taxes—Delinquent	10,000	7,000	\$26,800
State Sales Tax Receivable	25,000	<i>Fund Equity: (See note below)</i>	
Inventory of Materials and Supplies	5,000	Reserved for Inventory of Materials and Supplies	
		\$ 5,000	
		Reserved for Encumbrances	
		16,500	
		Unreserved Fund Balance	
		21,700	
		Total Fund Equity	
			\$43,200
Total Assets	\$70,000	Total Liabilities and Fund Equity	
			\$70,000

**NOTE:** For financial reporting purposes, GASB Statement No. 54 would require the reserve for inventory of material and supplies to be reported as nonspendable fund balance, the reserve for encumbrance would be included in the assigned fund balance classification, unless it was restricted or committed, and the unreserved fund balance would most likely be reported as unassigned fund balance.

*City of X*  
**BUDGETARY COMPARISON SCHEDULE**  
**GENERAL FUND**  
*For the Year Ended June 30, 2013*

	<b>Budgeted amounts</b>		<b>Actual amounts (Budgetary basis)</b>	<b>Variances with final budget positive (negative)</b>
	<b>Original</b>	<b>Final</b>		
Budgetary Fund Balance, July 1, 2012	--	--	--	--
Resources (Inflows)	\$300,000	\$300,000	\$305,000	\$ 5,000
Amounts Available for Appropriation	300,000	300,000	305,000	5,000
Charges to Appropriations (Outflows)	240,000	240,000	233,300	6,700
Transfers to Other Funds	50,000	50,000	50,000	--
Total Charges to Appropriations	290,000	290,000	283,300	6,700
Budgetary Fund Balance, June 30, 2013	\$ 10,000	\$ 10,000	\$ 21,700	\$11,700

The Budgetary Comparison Schedule is included in Required Supplementary Information (RSI), presented after the notes to the basic statements. The format may be in accord with the budget or in accord with the Statement of Revenues, Expenditures, and Changes in Fund Balances (earlier in this module). The Budgetary Fund Balance may or may not be the same as the Unreserved Fund Balance reported in the Balance Sheet for the General Fund. (In this example, it is the same.)

One additional point needs to be covered before going to special revenue funds; that is, how to account for the inventory of materials and supplies in the second or any subsequent year. Accordingly, assume that at the end of the second year, \$4,000 of materials and supplies were unused. The adjusting entry would appear as follows:

Reserved for Inventory of Materials and Supplies	1,000	
Materials and Supplies Inventory		1,000

This entry, when posted, will result in a balance of \$4,000 in the inventory and reserve accounts. Note the entry at the end of the first year established a \$5,000 balance in these accounts. Thereafter, the inventory and reserve accounts are adjusted upward or downward to whatever the balance is at the end of the year.<sup>4</sup>

#### O. Accounting for Special Revenue Funds

Special revenue funds account for and report the proceeds of specific revenue sources that are restricted or committed to expenditure for specified purposes other than debt service or capital projects. The specific revenue is then used to finance various authorized expenditures. For example, a city might place its share of the state's gasoline tax revenues into a State Gasoline Tax Fund, which could then be used to maintain streets.

**NOTE:** A governmental unit has some discretion in terms of how many special revenue funds it creates. Sometimes separate funds are required by law or grant requirements. Many federal and state grants are reported in special revenue funds.

The accounting for special revenue funds parallels that of the general fund. One type of transaction that often takes place in a special revenue fund is a “reimbursement” grant from a federal or state government. **GASB Statement No. 33** lists reimbursement grant requirements as one of the conditions that must be satisfied before a revenue can be recognized, either for accrual or modified accrual accounting. With a reimbursement grant, the granting government will not provide resources unless the receiving government provides evidence that an appropriate expenditure has taken place; **GASB Statement No. 33** requires that the expenditure must be recognized prior to the revenue being recognized.

For example, assume a government with a calendar fiscal year receives a grant award on November 1, 2012, in the amount of \$30,000. No entry would be recorded (either a receivable or revenue) until the expenditure takes place.

Assume the expenditure takes place on March 1, 2013. The entries would be

Expenditures	30,000	
Cash		30,000
Grants Receivable	30,000	
Revenues—Grants		30,000

Assume cash is received on April 1, 2013; the entry would be

Cash	30,000	
Grants Receivable		30,000

The budgetary comparison schedule in RSI must include “major” special revenue funds for which annual budgets have been legally adopted.

#### P. Accounting for Capital Projects Funds

Capital projects funds account for and report financial resources that are restricted, committed, or assigned to expenditure for capital outlay, including the acquisition and construction of capital facilities and other capital assets. Capital projects funds exclude capital-related outflows which are financed by proprietary or fiduciary funds. Resources for construction or purchase of capital assets normally come from the issuance of general long-term debt, from government grants (federal, state, and local), and from interfund transfers.

Project budgets for estimated resources and expenditures must be approved before the project can begin. However, unlike the budgets of general and special revenue funds, an annual budget for capital projects funds may not be legally adopted and need not be recorded formally in the accounts.

<sup>4</sup> Again, this entry illustrates the “purchases method” of accounting for inventories. Consult a governmental or advanced textbook for illustration of the “consumption method.”

## Module 21: Governmental (State and Local) Accounting

The following transactions illustrate the entries encountered in a capital projects fund:

- a. City Council approved the construction of a new city hall at an estimated cost of \$10,000,000. General obligation long-term serial bonds were authorized for issuance in the face amount of \$10,000,000. **(No formal entries are required for approval of capital projects.)**
- b. \$10,000,000 in 8% general obligation serial bonds were issued for \$10,100,000. Assume that the premium is transferred to a debt service fund for the eventual payment of the debt. (Premiums and discounts in governmental funds are not amortized in the fund financial statements.)

Cash	10,100,000	
Other Financing Sources—Proceeds of Bonds		10,100,000
Other Financing Uses—Transfers Out	100,000	
Cash		100,000

Note the credit to Proceeds of Bonds. This is an Other Financing Source on the operating statement, whereas the Transfers Out is an Other Financing Use. Both accounts are temporary accounts that are closed to Unreserved Fund Balance at year-end.

The transfer requires an entry in the debt service fund.

### ***Debt Service Fund***

Cash	100,000	
Other Financing Sources—Transfer In		100,000

This entry will be explained in more detail later.

- c. The bond issue proceeds are temporarily invested in a Certificate of Deposit (CD) and earn \$50,000. The earnings are authorized to be sent to the debt service fund for the payment of bonds.

### **Capital Projects Fund**

Investment in CD	10,000,000	
Cash		10,000,000
Cash	50,000	
Revenues—Interest		50,000

### **Debt Service Fund**

Other financing uses—		
Transfers out	50,000	
Cash	50,000	
		<b>Cash</b>
		50,000
		<b>Other financing sources—</b>
		Transfers in
		50,000

- d. The lowest bid, \$9,800,000, is accepted from a general contractor.

Encumbrances	9,800,000	
Reserved for Encumbrances <sup>5</sup>		9,800,000

- e. \$2,000,000 of the temporary investments are liquidated.

Cash	2,000,000	
Investment in CD		2,000,000

<sup>5</sup> As previously noted, Reserved for Encumbrances is a fund equity account used to segregate the portion of fund balance related to outstanding encumbrances.

- f. Progress billings due to the general contractor for work performed amount to \$2,000,000. The contract allows 10% of the billings to be retained until final inspection and approval of the building. The contractor was paid \$1,800,000.

Reserved for Encumbrances	2,000,000	
Encumbrances		2,000,000
Expenditures—Construction	2,000,000	
Contracts Payable		2,000,000
Contracts Payable	2,000,000	
Cash		1,800,000
Contracts Payable—Retained Percentage		200,000

The account “Contracts Payable—Retained Percentage” is a liability account. Note, also, that the fixed asset is not recorded in the capital projects fund because the capital projects fund is a governmental fund and governmental funds are expendable and do not have a capital maintenance objective.

- g. Interest accrued on a CD at the end of the year amounted to \$40,000. This was authorized to be sent to the debt service fund for the payment of debt.

**Capital Projects Fund**

Interest Receivable	40,000	
Revenues—Interest		40,000

**Debt Service Fund**

Other Financing Uses—		Due from Other Funds	40,000
Transfers Out	40,000	Other Financing Sources—	
Due to Other Funds		Transfers In	40,000

The interest is recognized because it is measurable and will soon be available to finance debt service fund expenditures.

- h. Closing entries for the capital projects fund would appear as follows:

(1)	Revenues—Interest	90,000	
	Other Financing Sources—Proceeds of Bonds	10,100,000	
	Fund Balance—Unreserved		10,190,000
(2)	Fund Balance—Unreserved	9,800,000	
	Encumbrances		7,800,000
	Expenditures—Construction		2,000,000
(3)	Fund Balance—Unreserved	190,000	
	Other Financing Uses—Transfers Out		190,000

The GASB requires that the totals for “major” capital projects funds appear in the balance sheet and the Statement of Revenues, Expenditures, and Changes in Fund Balances, for governmental funds. Combining statements are required in the CAFR for nonmajor capital projects funds along with other nonmajor governmental funds.

A “stand-alone” Statement of Revenues, Expenditures, and Changes in Fund Balances is shown below for the capital projects fund example.

*City of X*  
*Capital Projects Fund*  
**STATEMENT OF REVENUES, EXPENDITURES, AND CHANGES**  
**IN FUND BALANCES**  
*Year Ended June 30, 2013*

<b>Revenues:</b>		
Interest on Temporary Investments	\$ 90,000	
<b>Expenditures:</b>		
Construction of City Hall	<u>2,000,000</u>	
Excess of Expenditures over Revenues	(1,910,000)	
<b>Other Financing Sources and Uses:</b>		
Proceeds of General Obligation Bonds	\$10,100,000	
Transfer to Debt Service Fund	<u>(190,000)</u>	<u>9,910,000</u>
Excess of Revenues and Other Financing Sources over Expenditures and Other Financing Uses		8,000,000
Fund Balance—Beginning of Year		<u>—</u>
Fund Balance—End of Year		<u>\$8,000,000</u>

At the beginning of the second year, the following entry would be made to reestablish the Encumbrances balance:

Encumbrances	7,800,000	
Fund Balance—Unreserved		7,800,000

The purpose of this entry is to permit the recording of expenditures in the normal manner (i.e., reverse the encumbrances before recording the expenditures). It should be noted that capital projects funds differ from other governmental fund types because they have a “project focus” rather than a fiscal year focus. However, closing entries are made in capital projects funds in order to facilitate the preparation of financial statements at the end of the fiscal year.

When the city hall project is finished, the capital projects fund should be closed. Assuming there are no cost overruns, the excess cash left in the fund upon project completion must be transferred to some other fund, normally a debt service fund. This entry is described along with other interfund transactions and transfers in Section V.

**Impairment of capital assets.** In accordance with GASB Statement No. 42, *Accounting and Financial Reporting for Impairment of Capital Assets and for Insurance Recoveries*, governments must evaluate prominent events or changes in circumstances affecting capital assets to determine whether impairment of the assets has occurred. Such events include evidence of physical damage, enactment or approval of laws or regulations, changes in environmental factors, technological changes or evidence of considered impaired if (a) the decline in service utility of the asset is large in magnitude, and (b) the event or change in circumstance is outside the normal life cycle of the capital asset (e.g., unexpected).

Impaired capital assets that are no longer used by the government should be reported at the lower of carrying value or fair value. Impairment losses on capital assets that will continue to be used by the government should be measured using the method that best reflects the asset’s diminished service utility. As an example, if the asset is damaged, the loss should be measured at an estimate of the cost to restore the capital asset (the restoration approach). If the asset is affected by changes in environmental factors or obsolescence, the impairment should be measured using an approach that compares the service units provided by the asset before and after the impairment (the service units approach). If the asset is affected by a change in the manner or duration of use, the loss generally should be measured using the service units approach or the depreciated replacement cost approach which quantifies the cost of the service currently provided by the capital asset and converts that cost to historical cost.

Any insurance recovery associated with events or changes in circumstances resulting in impairment of a capital asset should be netted against the impairment loss.

#### **Q. Debt Service Funds**

Debt service funds account for and report financial resources that are restricted, committed, or assigned to expenditure for the payment of general obligation long-term debt principal and related interest. General obligation debt is secured by the full faith and taxing power of the governmental unit. Repayment of debt financed by internal

service and enterprise funds (proprietary fund types) is accounted for in those individual funds. Consequently, debt service funds are normally established as the result of issuing general obligation bonds for capital projects. The bond liability to be extinguished is not recorded in the debt service fund until it matures (is legally due). Outstanding general long-term debt is reported only in the government-wide financial statements (statement of net position).

Assume the City of X authorizes a debt service fund for the general obligation serial bonds issued to finance the city hall project. The debt service fund is also authorized to pay the 8% interest on the \$10,000,000 of debt on December 31 and June 30. The fiscal year-end is June 30. Note that the debt service fund has received resources from the general and capital projects funds. Transactions showing recognition and receipt of these resources were illustrated in the discussions of the general and capital projects funds. They are repeated below as follows:

(1)	Due from General Fund	50,000		(Transaction b. in
	Other Financing Sources—Transfers In		50,000	Section L.)
(2)	Cash	50,000		(Transaction i. in
	Due from General Fund		50,000	Section L.)
(3)	Cash	100,000		(Transaction b. in
	Other Financing Sources—Transfers In		100,000	Section N.)
(4)	Cash	50,000		(Transaction c. in
	Other Financing Sources—Transfers In		50,000	Section N.)
(5)	Due from Capital Projects Fund	40,000		(Transaction g. in
	Other Financing Sources—Transfers In		40,000	Section N.)

Assume the bonds were issued on July 1. In addition, assume that \$250,000 of the bonds mature each six months, starting June 30.

- a. The property tax levy contains \$870,000 portion allocable to the debt service fund. \$20,000 of this amount is estimated to be uncollectible.

Property Taxes Receivable—Current	870,000	
Allowance for Uncollectible Taxes—Current		20,000
Revenues—Property Taxes		850,000

- b. \$840,000 of property taxes are collected during the year. The remainder of the property taxes is reclassified as delinquent.

Cash	840,000	
Property Taxes Receivable—Current		840,000
Property Taxes Receivable—Delinquent	30,000	
Allowance for Uncollectible Taxes—Current	20,000	
Property Taxes Receivable—Current		30,000
Allowance for Uncollectible Taxes—Delinquent		20,000

- c. The semiannual interest is paid on December 31 and June 30. The following entries are made on December 31:

Expenditures—Interest	400,000	
Matured Interest Payable		400,000
Matured Interest Payable	400,000	
Cash		400,000

The following entries are made on June 30:

Expenditures—Interest	400,000	
Matured Interest Payable		400,000
Matured Interest Payable	400,000	
Cash		400,000

Note that if interest were paid on dates other than December 31 and June 30, interest would not be recorded in the debt service fund until it is legally due, but would be accrued at the end of the fiscal year in the government-wide financial statements.

- d. On June 30, the first \$250,000 principal payment became due, and \$200,000 was paid. The following entries would be made in the debt service fund:

Expenditures—Principal	250,000	
Matured Bonds Payable		250,000
Matured Bonds Payable	200,000	
Cash		200,000

If a bank were used as the fiscal agent, cash would first be transferred to a “Cash with Fiscal Agent” account, and payment would then be made from that account.

- e. Appropriate closing entries are made based upon all information presented.

Revenues—Property Taxes	850,000	
Other Financing Sources—Transfers In	240,000	
Expenditures—Interest		800,000
Expenditures—Principal		250,000
Fund Balance—Reserved for Debt Service		40,000

The balance sheet for the debt service fund would appear as follows:

*City of X*  
**DEBT SERVICE FUND**  
**BALANCE SHEET**  
*June 30, 2013*

<i>Assets</i>	<i>Liabilities and Fund Equity</i>	
Cash	\$40,000	<i>Liabilities:</i>
Due from Capital Projects Fund	40,000	Matured Bonds Payable
Property taxes receivable—Delinquent (net of \$20,000 allowance for uncollectible taxes)	<u>10,000</u>	<i>Fund Equity:</i> (See note below)
Total Assets	<u>\$90,000</u>	Fund Balance—Reserved for Debt Service
		Total Liabilities and Fund Equity
		<u>\$90,000</u>

**NOTE:** For financial reporting purposes, GASB Statement No. 54 would require the fund balance—reserved for debt service to be reported as restricted, committed, or assigned.

Under modified accrual accounting, expenditures for principal and interest are generally not accrued but recorded when legally due. However, GASB Statement No. 36, *Recipient Reporting for Certain Shared Nonexchange Revenues—An Amendment of GASB Statement No. 33*, provides that if resources are available at year-end and payment is to be made within one month after year-end, an accrual may be made, if a debt service fund is used.

## R. Permanent Funds

A fifth type of governmental fund, introduced by GASB Statement No. 34, is the **permanent fund** type. Permanent funds account for and report resources that are restricted to the extent that only the earnings and not the principal may be used to support government programs which benefit the government or its citizens. For illustrative purposes all revenue and expenditure transactions below are recorded in the permanent fund. An alternative approach is to record interest from investments as revenue in the permanent fund, then record the transfer of the interest as an other financing use—transfer out to the general (or a special revenue fund). The general fund (or special revenue fund) would record the transfer as an other financing source—transfer in and record the expenditures of the earnings for the specified purpose.

A common example would be a cemetery perpetual care fund. Assume a local citizen was concerned about the deplorable condition of the city cemetery and on January 2, 2012, contributed \$500,000 with the stipulation that the funds be invested and held; the income is to be used for the purpose of maintaining the city cemetery. On January 2, the cash was received and invested.

Cash	500,000	
Revenues—Additions to Permanent Endowments		500,000
Investments	500,000	
Cash		500,000

During 2012, \$30,000 was earned on the investment, and \$25,000 was expended.

Cash (and/or interest receivable)	30,000	
Revenues—Investment Income		30,000
Expenditures	25,000	
Cash (or Vouchers Payable)		25,000

#### S. Accounting for Special Assessments

GASB Statement No. 52, *Land and Other Real Estate Held as Investments by Endowments*, provides that land and other real estate held by an endowment for investment purposes should be reported at fair value at each reporting date. Changes in fair value during the period should be reported as a part of investment income. GASB Statement No. 6, *Accounting and Reporting for Special Assessments*, outlines the accounting and financial reporting for special assessments. Special assessments are levied for projects to be paid primarily by the property owners who benefit from the improvement project (for example, a street lighting or sidewalk project).

Under GASB Statement No. 6, the accounting and reporting for special assessment capital projects depends on the liability of the governmental unit for the special assessment debt. If the governmental unit is not obligated in any way for the debt and merely acting in a collecting capacity, the special assessment activities will be accounted for in an agency fund. However, if the governmental unit is either **primarily** or **potentially liable** for the debt, the accounting and reporting will take place as if it were any other capital improvement and financing transaction. Construction activities will be recorded in a capital projects fund and debt principal and interest activities would be recorded in a debt service fund.

#### T. Accounting for Proprietary Funds

GASB standards provide two types of proprietary funds: Internal Service and Enterprise Funds. **Internal service funds** are established to account for the provision of goods and services by one department of the government to other departments within the government, generally on a cost-reimbursement basis. The extent of the use of internal service fund services are managed through the budgets of the user departments. Internal service funds are normally established for the following types of activities: central garages, motor pools, central printing and duplicating, stores departments, self-insurance, etc. **Enterprise funds**, on the other hand, account for activities for which the government provides goods and services that are (1) rendered primarily to the general public, (2) financed substantially or entirely through user charges, and (3) intended to be self-supporting. Enterprise funds are usually established for public utilities, airports, toll roads and bridges, transit systems, golf courses, solid waste landfills, etc.

Proprietary funds use the accrual basis of accounting and are nonexpendable; capital is to be maintained. Revenues and expenses are recorded generally as they would be in commercial enterprises. Fixed assets are recorded in proprietary funds, and depreciation expense is deducted from revenues. Proprietary funds also report their own long-term liabilities. The GASB has provided a special rule regarding the use of FASB pronouncements in accounting for enterprise funds of state and local governments. That rule has two parts.

1. Enterprise funds should follow FASB pronouncements issued prior to November 30, 1989, unless those FASB pronouncements conflict with GASB pronouncements.
2. Enterprise funds may or may not follow FASB pronouncements issued after November 30, 1989, which do not conflict with GASB pronouncements. The decision regarding whether or not to follow such FASB pronouncements must be applied consistently to all FASB pronouncements, and the choice must be disclosed.

When proprietary funds are initially established, a contribution or advance is usually received from the general fund. A contribution is a transfer and would be recorded by the internal service or enterprise fund as follows:

Cash	xx	
Transfer from the General Fund		xx

The transfer from the general fund would be closed to net position—unrestricted at the end of the fiscal year. The transfer would be reported in the Statement of Revenues, Expenses, and Changes in Net Position. On the other hand, an advance from the general fund is a long-term loan and would be recorded by an internal service or enterprise fund as follows:

Cash	xx	
Advance from General Fund		xx

The term “advance from” is used to indicate that the liability is long term and would be reported on the proprietary fund’s balance sheet as a long-term liability. The advance would be reported as a long-term asset on the general fund’s balance sheet, which requires a reservation of fund balance because it is not available for current operations.

Accounting entries for proprietary funds are similar to those for business enterprises. “Operating Revenues—Charges for Services” is a common operating revenue account for both internal service and enterprise funds. As indicated earlier, revenues and expenses are recognized on the full accrual basis and are classified as operating and nonoperating. Some features that distinguish the accounting for proprietary funds are

1. Long-term debt is recorded directly in internal service and enterprise funds. Revenue bonds are those that are backed only by the revenues of the proprietary fund activity. However, revenue bonds with general obligation backing and general obligation bonds that are to be paid with revenues of the proprietary fund activities are also recorded in the proprietary funds.
2. Interest on long-term debt is accrued as an expense, unlike interest on general long-term debt, which is generally not recorded until it is legally due (see Section Q). Premiums and discounts on debt issuances, as well as debt issue costs, are recorded with the debt and amortized over the life of the bonds.
3. Fixed assets are capitalized and depreciated, using one of the generally accepted methods used by business enterprises. Interest incurred during construction is capitalized.
4. Revenues, expenses, capital contributions, and transfers are closed out to net position at year-end. Three categories of net position exist, as indicated earlier: (a) net investment in capital assets, (b) restricted, and (c) unrestricted. These are the same asset categories as are used in the government-wide Statement of Net Position.
5. Net position—net investment in capital assets, would be the net of fixed assets, less accumulated depreciation, less any long-term debt issued to finance capital assets. Net position—restricted would offset, for example, by any resources held for future debt service in accord with bond indenture requirements.
6. A special problem exists with self-insurance funds, which are often classified as internal service funds.<sup>6</sup> Governments transfer resources from other funds to self-insurance funds, from which claims are paid. To the extent that the transfers do not exceed the actuarially determined liability of the government, they are recorded as expenditures or expenses. Any transfers in addition to the actuarially determined liability are classified as transfers.
7. Another special problem exists with municipal waste landfills, which are often classified as enterprise funds. Many of the solid waste landfills in the US are operated by local governmental units. The problem which arises in accounting for municipal landfills is that most revenue is earned early in the useful life of the landfill, as various persons and organizations pay to dispose of waste; conversely, a significant portion of the costs, termed closure and postclosure care costs as defined by US Government regulations, occur up to twenty to thirty years later. The GASB requires that these future costs be estimated and charged against periodic revenues on a “units of production” basis according to the amount of landfill capacity consumed during each period. If a municipal waste landfill is operated as an enterprise fund, expenses and liabilities are accounted for on a full accrual basis and recorded directly in the enterprise fund. If the municipal waste landfill is operated through a governmental fund, the expenditure and fund liability would be limited to the amount that will be paid with currently available resources, and the remaining liability would be reported in the government-wide statements.

<sup>6</sup>GASB requires that, if self-insurance is to be recorded in a single fund, that fund must be an internal service or the general fund.

CPA exam questions sometimes portray a situation, such as a federal government grant for bus purchases, and ask candidates to provide accounting treatment for when the transaction is recorded in a governmental fund (record a revenue if expended, defer revenue if not), and for when the transaction is recorded in a proprietary fund (record as capital contributions). When uncertain, candidates should generally recall business accounting principles to record the proprietary fund transaction.

#### U. Accounting for Fiduciary Funds

Fiduciary funds (also referred to as “trust and agency” funds) are used to account for assets held by the governmental unit in a trustee capacity or as an agent for individuals, private organizations, and other governmental units. Fiduciary funds include private-purpose trust funds which account for resources received under a trust agreement in which the investment income of an endowment is intended to benefit an external individual, private organization, or government. (Remember that resources held and invested for the benefit of the reporting government are classified as permanent funds, a governmental fund category.) In addition to private-purpose trust funds, the fiduciary fund category includes pension (and other employee benefit) trust funds, investment trust funds, and agency funds.

**Pension (and other employee benefit) trust funds** are maintained when the governmental unit is trustee for the pension (or other employee benefit) plan. In addition, many state governments operate statewide Public Employee Retirement Systems (PERS) for local governments, teachers, university employees, judges, etc. These PERS are normally a part of the state government reporting entity. Full accrual accounting is used for pension trust funds, and investments are reported at fair value. Pension trust funds are required to have two financial statements. The pension trust funds are included in the (1) Statement of Fiduciary Net Position and the (2) Statement of Changes in Fiduciary Net Position. GASB No. 67 provides guidance on the presentation of financial statements of pension trust funds.

Government pension plans do not include the accrued actuarial liability in the statement of fiduciary net position. Rather, the actuarial liability is reported in the schedules and notes. Extensive note disclosures are required, both for the PERS and for the government as employer, whether or not it is trustee of the pension plan. The Notes to the financial statements should disclose:

- (1) Descriptive information about the plan.
- (2) Information about plan investments.
- (3) Information about the terms of receivables and nature of reserves.
- (4) Components of the pension liability.
- (5) Significant assumptions to measure the pension liability.
- (6) The measurement date.

Required Supplementary Information (RSI) includes:

- (1) A ten-year schedule of changes in pension liability.
- (2) A ten-year schedule of the amounts of total pension liability, fiduciary net position, net pension liability, the covered-employee payroll, and selected ratios.
- (3) A ten-year schedule of the actuarial computed required contribution, the required contribution, the actual contribution to the plan, and selected ratios.
- (4) A ten-year schedule of the annual money weighted return on pension plan assets.

The above requirements relate to **defined benefit** pension plans. Under **defined contribution** plans, the government is liable only for the required contributions not made, and disclosure requirements are less extensive.

Employer accounting for defined benefit plans is the same, regardless of whether or not the government is the trustee for the pension plan. Expenditures (or expenses) are charged in the appropriate funds (especially the general, special revenue, and enterprise funds) in an amount equal to the amount provided to the pension plan. The pension trust fund (or statewide PERS) would record those contributions as additions. Other additions for the pension trust fund would include employee contributions, investment income, and gains in the market value of investments. Deductions would include retirement benefit payments, disability payments, refunds to terminated (nonvested) employees, and losses in the market value of investments. However, as indicated previously, the government must include the amount of the actuarial determined net pension liability in its statement of net position.

Statewide PERS may be **agency** defined benefit, **cost-sharing** defined benefit, or defined contribution. **Agency** plans maintain separate balances for each participating government so that it is possible to determine its unfunded actuarial liability (or assets in excess of accrued actuarial benefits). **Cost-sharing** plans normally compute balances on a statewide basis only; it is not the responsibility of each participating government to fund its own liability.

A final use for pension trust funds is IRS Sec. 457 Deferred Compensation Plans (tax-deferred annuities for government employees). In many cases, these plans will not be recorded. However, when the plan meets the

criteria for inclusion in a government financial statement, GASB Statement No. 34 requires that a pension trust fund be used.

The financial reporting framework for **postretirement benefits other than pensions** is covered by GASB Statement No. 45. Employers are required to measure and disclose the amount for annual other post employment benefits (OPEB) cost on the accrual basis. Annual OPEB cost is equal to the employer's annual required contribution to the plan with certain adjustments if the OPEB obligation is under- or overfunded. This is essentially the same as the accounting required by commercial enterprises under SFAS 106 (see Appendix A). GASB Statement No. 45 discussed an alternative measurement method for employers with fewer than 100 total plan members. GASB Statement No. 57, *OPEB Measurements by Agent Employers and Agent Multiple-Employer Plans*, addressed issues related to the use of the alternative measurement method and the frequency and timing of measurements by employers that participate in agent multiple-employer OPEB plans. GASB Statement No. 57 amended GASB Statement No. 45 to permit an agent employer that has an individual-employer OPEB plan with fewer than 100 total plan members to use the alternative measurement method at its option regardless of the number of total plan members in the agent multiple-employer OPEB plan in which it participates. GASB Statement No. 57 also amended the GASB Statement No. 43 requirement that a defined OPEB plan obtain an actuarial valuation. GASB Statement No. 57 indicates that this requirement can be met by reporting aggregated individual-employer OPEB information determined by actuarial valuations or measurements using the alternative measurement method for individual-employer OPEB plans that are eligible. In addition, GASB Statement No. 57 indicated that actuarially determined OPEB measures should be determined at a common date and at a minimum frequency to satisfy the agent multiple-employer OPEB plan's financial reporting requirements.

A government may decide to provide **voluntary termination benefits**, such as early-retirement incentives to its employees. They may also provide **involuntary termination benefits**, such as severance pay. In governmental financial statements prepared on the accrual basis, governments should recognize a liability and expense for voluntary termination benefits when the offer has been accepted by the employees and the amount of liability can be estimated. For involuntary termination benefits, the liability should be recognized when the plan has been approved and communicated to the employees and the amount of the liability can be estimated. GASB Statement No. 47, *Accounting for Termination Benefits*, provides that the liability for termination benefits should be measured at the present value of the expected future benefit payments. In financial statements prepared on the modified accrual basis, the liability and expenditures for termination benefits should be recognized to the extent the liabilities are normally expected to be liquidated with expendable available financial resources.

**Investment trust funds** are required when a government sponsors an external investment pool; for example, when a county sponsors an investment pool for all cities, school districts, and other governments within its borders. The **external portion** of investment pools are to be reported (by the county) in a manner similar to pension trust funds. The Statements of Net Fiduciary Assets and of Changes in Fiduciary Net Position are required. However, Statements of Cash Flows are not required.

**Private-purpose trust funds** represent all other trust arrangements under which principal and income benefit external individuals, private organizations, or other governments. Private-purpose trust funds may be **nonexpendable** or **expendable**. A nonexpendable trust fund is one in which the principal cannot be expended but which provide that income may be expended for some agreed-upon purpose. Sometimes, this is called an endowment.

#### EXAMPLE

Assume a donor gives \$500,000 to a city with instructions that the principal be invested permanently and that the income is to be used to provide scholarships for low-income children to attend a private, not-for-profit day care program. The receipt and investment of the gift would be recorded as

Cash	500,000	
Additions—Nonexpendable Donation		500,000
Investments	500,000	
Cash		500,000
Assume \$30,000 is received in investment income and expended.		
Cash	30,000	
Additions—Investment Income		30,000
Deductions—Awarding of Scholarships	30,000	
Cash		30,000

Expendable private-purpose trust funds are accounted for in the same manner, except that the principal as well as investment income may be expended. For example, a donor may give \$10,000 to a school district with instructions that each year \$2,000 plus investment income be awarded to the top student in the senior class, as a scholarship.

Another use of private-purpose trust funds, in some cases, is for **escheat property**. Escheat property is property taken over by a government, usually state government, when the property is abandoned and the legal owners cannot be found. GASB Statement No. 37 concluded that escheat property generally is recorded in the governmental or proprietary fund to which the property ultimately escheats (e.g., an educational fund). A liability is recorded for estimated amounts to potential claimants. A private-purpose trust fund is used when resources are held for individuals, private organizations, or another government.

**Agency funds** are used to account for activities where the government is acting as an agent for others. Agency funds have only assets and liabilities; no fund equity, revenue, or expenditure (expense) accounts are used. The GASB requires the use of agency funds for special assessments where the government is not obligated in any manner for the special assessment debt.

Another common use of agency funds is to account for property taxes. Property taxes are usually remitted to a county treasurer who places the monies in a county Tax Agency Fund. The taxes are held until such time as they are remitted to each of the other local governments located within the county. Often, a fee is charged, which decreases the amount that is distributed to the other local governments and increases the amount that is distributed to the County General Fund.

**V. Reporting Interfund Activity**

Under GASB Statement No. 34, interfund activity is shown between individual funds in fund financial statements and between business-type and governmental-type activities in the government-wide financial statements. GASB provides for two major types of interfund activity, each with two subtypes.

1. Reciprocal interfund activity
  - a. Interfund loan and advances
  - b. Interfund services provided and used
2. Nonreciprocal interfund activity
  - a. Interfund transfers
  - b. Interfund reimbursements

**Interfund loans and advances** are transactions in which one fund provides resources with a requirement for repayment. Short-term loans are recorded with “Due from” and “Due to” accounts.

**EXAMPLE**

Assume a donor gives \$500,000 to a city with instructions that the principal be invested permanently and that the income is to be used to provide scholarships for low-income children to attend a private, not-for-profit day care program. The receipt and investment of the gift would be recorded as

Assume an enterprise fund made a short-term loan to the general fund. The entry would be

<i>Enterprise Fund</i>		<i>General Fund</i>	
Due from General Fund	100,000	Cash	100,000
Cash	100,000	Due to Enterprise Fund	100,000

Long-term interfund receivables and payables use the terms “Advance to” and “Advance from.” If a governmental fund makes a long-term loan to another fund, it is necessary to reserve fund balance in the amount of the advance, as the resources are not “available” for expenditure in the current period.

**EXAMPLE**

Assume the general fund advances \$50,000 to an internal service fund. The entries would be

<i>General Fund</i>		<i>Internal Service Fund</i>	
Advance to Internal Service Fund	50,000	Cash	50,000
Cash		50,000	Advance from General Fund
			50,000
Fund Balance—Unreserved	50,000		
Fund Balance—Reserved for Long-Term Advances		50,000	

Loans and advances to and from component units are to be separately identified in the government-wide financial statements.

**Interfund services provided and used** represent transactions in which sales and purchases of goods and services between funds are made at prices approximating their external exchange price. Examples would include the sale of water from an enterprise fund to the general fund, the provision of services by an internal service fund to a governmental fund, a payment in lieu of taxes from an enterprise fund to the general fund (where payment is approximately equal to services provided), and the payment of a retirement fund contribution from the general fund to a pension trust fund. Revenues (or additions) are recognized by one fund, and an expenditure or expense is recorded by another fund. As a result, the operating statements will include these revenues and expenditures/expenses.

**EXAMPLE**

Assume an internal services fund charges the general fund for goods or services provided.

<i>Internal Service Fund</i>		<i>General Fund</i>	
Due from General Fund	30,000	Expenditures	30,000
Operating Revenues—Charges for Services		30,000	Due to Internal Service Fund
	30,000		30,000

**Interfund transfers** are nonreciprocal transfers between funds, where payment is not expected. Examples would include an annual subsidy from an enterprise fund to the general fund or an annual transfer from the general fund to a debt service fund. To illustrate the latter in the amount of \$300,000

<i>General Fund</i>		<i>Debt Service Fund</i>	
Other Financing Uses—Transfer to Debt Service Fund	300,000	Cash	300,000
Cash		300,000	Other Financing Sources— Transfer from General Fund
			300,000

Transfers are reported as “Other Financing Sources (Uses)” in the governmental funds statement of revenues, expenditures, and changes in fund balance.

**Interfund reimbursements** are repayments from funds responsible for expenditures or expenses to those funds that initially paid for them.

<b>EXAMPLE</b>			
Assume the general fund paid an enterprise fund for a consultant's fee that was initially paid by the enterprise fund and charged to expense.			
<i>General Fund</i>		<i>Enterprise Fund</i>	
Expenditures	50,000	Cash	50,000
Cash		Consultant Fee Expense	50,000

**W. Accounting for Investments**

GASB's rules for investment accounting are included in GASB Statement No. 31, *Accounting and Financial Reporting for Certain Investments and for External Investment Pools*. GASB Statement No. 31 provides that investments in debt securities and in equity securities with determinable fair values be reported at fair value. Changes in fair value should be reported as a part of operations, using modified accrual or accrual accounting, as appropriate. No distinction is to be made on the face of the financial statements between realized and unrealized gains and losses, although disclosure may be made of realized gains in the notes. Investment income should be reported in the fund for which investments are held, when investments are pooled.

**X. Conversion from Fund Financial Statements to Government-Wide Financial Statements**

Most state and local governments will keep their books on a fund basis in order to facilitate the preparation of fund financial statements and to prepare the budget-actual schedule as a part of RSI. This will mean that governments will record transactions on the modified accrual basis for governmental funds and on the accrual basis for proprietary and fiduciary funds. Many governments will make changes, on a worksheet basis, in order to prepare the government-wide financial statements (Statement of Net Position and Statement of Activities). The following are the worksheet changes that will be necessary to convert from governmental fund statements to the governmental activities portion of the government-wide statements. It should be emphasized that the journal entries illustrated below are made only for worksheet purposes and will not be posted to the funds ledger.

**1. Capitalization of Capital Outlay Expenditure**

Costs incurred for capital assets acquired or constructed by governmental funds are recorded as expenditures. Governmental funds do not record capital assets. Therefore it will be necessary to record capital outlay expenditures as capital assets in the governmental activities column of the government-wide Statement of Net Position. A worksheet adjusting entry needs to be made to reduce capital outlay expenditures to zero and capitalize the costs in appropriate capital asset accounts. These capital assets will increase the net position of the governmental activities. Assuming the amount is \$10,000,000, the entry would be

Fixed Assets (Land, Buildings, Equipment, etc.)	10,000,000	
Expenditures		10,000,000

In addition, depreciation expense will be required to be recorded for the buildings and equipment.

**2. Issuance of general long-term debt**

When general long-term debt is issued, governmental funds credit Proceeds of Debt, which is an Other Financing Source. Also, premiums and discounts are not amortized but simply add to or deduct from the amount of resources available. On a worksheet it will be necessary to eliminate Other Financing Sources—Proceeds of Bonds and record the debt as a liability. Moreover, any premium or discount must be associated with the liability and amortized over the life of the bonds. The worksheet entry to convert the sale of bonds from governmental fund accounting to government-wide statements, assuming a sale of \$5,000,000 bonds at par, would be

Other Financing Sources—Proceeds of Bonds	5,000,000	
Bonds Payable		5,000,000

**3. Debt service payments**

When making principal payments on long-term debt, governmental funds debit Expenditures—bond principal retirement. Those expenditures will need to be eliminated and replaced with a debit to the bond principal when preparing the government-wide statements. Bond principal retirement does not affect the government-wide

Statement of Activities but reduces the bonds payable balance in the Statement of Net Position. In addition, governmental funds do not accrue interest payable but record expenditures on the maturity date. Accrual of interest payable will be required for the government-wide statements, including adjustments for amortization of premiums and discounts. Assuming that a payment of \$100,000 was made for the retirement of bond principal, then the worksheet entry to convert the \$100,000 principal payment from governmental fund accounting to government-wide statements would be

Bonds Payable	100,000	
Expenditures—Bond Principal Retirement		100,000

#### 4. Adjustment of revenue recognition

Governmental funds recognize revenues only when measurable and available to finance expenditures of the current period. In the case of property taxes, revenues cannot be recognized if those revenues will be collected more than sixty days after the end of the fiscal year. When preparing the government-wide financial statements, some adjustments will be required to recognize all revenues, net of uncollectible receivables, in accord with revenue accounting for exchange and nonexchange transactions, as described earlier in this module. Assume a government levied \$10,000,000 in property taxes for the year 2012 with 2% uncollectible. The amount to be recognized on the government-wide statements is \$9,800,000. Assume that during 2012 and the first sixty days of 2013, \$9,600,000 had been and was expected to be collected, limiting the amount reported as revenues in the governmental funds Statement of Revenues, Expenditures, and Changes in Fund Balances to \$9,600,000. The \$200,000 would have been shown as deferred inflow of resources in the Governmental Funds Balance Sheet. The worksheet entry would be

Deferred Inflow—Property Taxes	200,000	
Revenues—Taxes		200,000

#### 5. Accrual of expenses

Under modified accrual accounting, expenditures are recorded for items that are current, capital outlay, and debt service. As indicated earlier, adjustments must be made to convert expenditures for capital outlay and debt service principal payments to the accrual basis. In addition, adjustments must be made to record the noncurrent portion of certain liabilities (claims and judgments, compensated absences, etc.). These worksheet entries would debit expenses and credit liabilities.

#### 6. Other

Some governments use the purchases method to record governmental fund inventories, and these must be changed to the consumption method when using accrual accounting. Other governments do not record and amortize certain prepaid items, such as prepaid insurance and prepaid rent. Adjustments must also be made for these items.

#### 7. Reclassifications

Fund financial statements are presented separately for governmental, proprietary, and fiduciary fund categories. Government-wide financial statements have columns for governmental activities, business-type activities, and component units. In order to make the transition from fund financial statements, the fiduciary funds will be eliminated. Internal service funds, which are proprietary funds, are to be classified as governmental activities in the government-wide statements. Discretely presented component units, which are not presented at all in the fund financial statements, will be added when preparing the government-wide financial statements.

**NOW REVIEW MULTIPLE-CHOICE QUESTIONS 69 THROUGH 134**

### Y. Public College and University Accounting (Governmental)—GASB Statement No. 35

GASB Statement No. 35, *Basic Financial Statements—and Management’s Discussion and Analysis—for Public Colleges and Universities*, established accounting and financial reporting standards for public colleges and universities within the guidelines of GASB Statement No. 34.

GASB Statement No. 35 requires that public colleges and universities follow the standards for special purpose governments outlined in GASB Statement No. 34. This means that public colleges may choose to use the guidance for special purpose governments engaged in (1) only business-type activities, (2) engaged in only governmental activities, or (3) engaged in both governmental and business-type activities.

Public colleges and universities which elect to report as special purpose governments that are engaged in only governmental activities or in governmental and business-type activities are required to follow the reporting model for state and local governments. This model requires (1) a Management's Discussion and Analysis (MD&A), (2) Government-Wide Financial Statements, (3) Fund Financial Statements, (4) Notes to the Financial Statements, and (5) Required Supplementary Information (RSI) other than MD&A.

While a number of community colleges may choose to report in the manner described in the previous paragraph, most public colleges and universities will choose to report as special entities engaged only in **business-type** activities. In this case, proprietary fund statements only are required. These institutions will report (1) an MD&A, (2) a Statement of Net Position, (3) a Statement of Revenues, Expenses, and Changes in Net Position, (4) a Statement of Cash Flows, and (5) Required Supplementary Information (RSI) other than MD&A. Public colleges and universities reporting as business-type activities present financial statements using the **economic resources measurement focus and the accrual basis of accounting**.

The **Statement of Net Position** (as illustrated) may be presented in the format: Assets + Deferred Outflows of Resources – Liabilities – Deferred Inflows of Resources = Net Position. Alternatively, a balance sheet format (Assets + Deferred Outflows of Resources = Liabilities + Deferred Inflows of Resources + Net Position) may be presented. In either case, a classified financial statement must be presented, distinguishing between current and long-term assets and between current and long-term liabilities. As is the case for state and local governments, net position must be segregated into three categories: (1) net investment in capital assets, (2) restricted, and (3) unrestricted. Restricted net position should show major categories of restrictions. It is **not** permissible to show designations of unrestricted net position.

The **Statement of Revenues, Expenses, and Changes in Net Position** is reported in an "all-inclusive" format that reconciles to the ending total net position. GASB requires that revenues be reported by major source and that a distinction be made between operating and nonoperating revenues and expenses. The general format is

Operating Revenues	
– <u>Operating Expenses</u>	
= Operating Income (Loss)	
± <u>Nonoperating Revenues and Expenses</u>	
= Income Before Other Revenues, Expenses Gains, Losses, and Transfers	
± <u>Capital Contributions, Additions to Permanent and Term Endowments, Special and Extraordinary Items, and Transfers</u>	
= Increase (Decrease) in Net Position	
+ <u>Net Position, Beginning of Period</u>	
= Net Position, End of Period	

Group ASB Statement No. 35 requires that state appropriations for operating purposes be reported as nonoperating revenue. State appropriations for capital outlay are shown separately as capital appropriations. Capital grants and gifts, additions to permanent endowments, extraordinary items, and special items are also displayed separately.

The **Statement of Cash Flows** is prepared using the GASB format described earlier in this module. The direct method must be used, along with a reconciliation between net operating income (loss) and net cash provided (used) by operating activities. Four categories are used: (1) operating activities, (2) noncapital financing activities, (3) capital and related financing activities, and (4) investing activities. Note that interest paid is classified as a (capital or noncapital) financing activity and interest received is classified as cash flows from investing activities.

GASB Statement No. 35 requires that cash flows from state appropriations for operations be reported as cash flows from noncapital financing activities. It also requires that cash flows from state appropriations for construction be reported as cash flows from capital and related financing activities.

GASB Statement No. 39, *Determining Whether Certain Organizations Are Component Units—An Amendment of GASB Statement No. 14*, provides guidance relating to whether or not certain legally separate tax-exempt entities are to be reported in the financial statements of governments. These provisions are especially important to public colleges and universities, many of which have legally separate foundations. GASB Statement No. 39 will result in many of these foundations being reported as discretely presented component units in public college and university financial statements. All three of the following criteria must be met before these foundations are included:

1. The economic resources received or held by the separate organization are entirely or almost entirely for the benefit of the primary government, its component units, or its constituents.
2. The primary government or its component units is entitled to, or has the ability to otherwise access a majority of the economic resources received or held by the separate organization.
3. The economic resources received or held by an individual organization that the specific primary government is entitled to, or has the ability to otherwise access are significant to that primary government.

**NOW REVIEW MULTIPLE-CHOICE QUESTIONS 135 THROUGH 138**

## KEY TERMS

**Agency fund.** Accounts for resources held by the reporting government in a purely custodial capacity.

**Agent multiple-employer defined benefit pension plan (agent pension plan).** A multiple-employer defined benefit pension plan in which pension plan assets are pooled for investment purposes but separate accounts are maintained for each individual employer so that each employer's share of the pooled assets is legally available to pay the benefits of only its employees.

**Capital projects fund.** Accounts for financial resources that are restricted, committed, or assigned to expenditures for acquisition or construction of capital assets.

**Closed period.** A specific number of years that is counted from one date and declines to zero with the passage of time.

**Component unit.** A legally separate organization for which the elected officials of a primary government are financially accountable.

**Comprehensive Annual Financial Report (CAFR).** A complete annual report for a state or local government, consisting of an introductory section, a financial section, and a statistical section.

**Cost-sharing multiple-employer defined benefit pension plan (cost-sharing pension plan).** A multiple-employer defined benefit pension plan in which the pension obligations to the employees of more than one employer are pooled and pension plan assets can be used to pay the benefits of the employees of any employer that provides pensions through the pension plan.

**Debt service fund.** Accounts for resources that are restricted, committed, or assigned to expenditures for the payment of general long-term debt principal and interest.

**Defined benefit pensions.** Pensions for which the income or other benefits that the employee will receive at or after separation from employment are defined by the benefit terms. The pensions may be stated as a specified dollar amount or as an amount that is calculated based on one or more factors such as age, years of service, and compensation.

**Enterprise fund.** Accounts for activities that involve providing goods or services to external users for a fee.

**Entry age actuarial cost method.** A method under which the actuarial present value of the projected benefits of each individual included in an actuarial valuation is allocated on a level basis over the earnings or service of the individual between entry age and assumed exit age(s). The portion of this actuarial present value allocated to a valuation year is

called the normal cost. The portion of this actuarial present value not provided for at a valuation date by the actuarial present value of future normal costs is called the actuarial accrued liability.

**Exchange revenues.** Transactions that involve the transfer of goods or services for payment of (approximately) equal value.

**Fiduciary funds.** Account for resources held and used by governments for the benefit of individuals and entities other than the government. Fiduciary funds include agency funds, pension and other employee benefit trust funds, investment trust funds, and private-purpose trust funds.

**General fund.** Accounts for all financial resources except those required to be accounted for in another fund.

**Governmental funds.** Account for the current financial resources raised and expended to carry out general government purposes. Governmental funds include the general fund, special revenue funds, debt service funds, capital projects funds, and permanent funds.

**Infrastructure assets.** Long-lived capital assets that normally are stationary in nature and can normally be preserved for a significant number of years, (e.g., roads, tunnels, bridges, dams, etc.).

**Internal service fund.** Reports activities that provide goods or services to other funds of the primary government on a cost-reimbursement basis.

**Investment trust fund.** Reports the external portions of investment pools, when the reporting government is the trustee.

**Multiple-employer defined benefit pension plan.** A defined benefit pension plan that is used to provide pensions to the employees of more than one employer.

**Net pension liability.** The liability of employers and nonemployer contributing entities to employees for benefits provided through a defined benefit pension plan.

**Nonemployer contributing entities.** Entities that make contributions to a pension plan that is used to provide pensions to the employees of other entities.

**Nonexchange revenues.** Transactions in which a government gives or receives value without providing equal value in return, (e.g., property taxes, income taxes, etc.).

**Pension and other employee benefit trust funds.** Account for funds held in trust for the payment of employee retirement and other benefits.

**Permanent fund.** Accounts for resources that are restricted to the extent that only earnings and not principal may be used to support specified government programs.

**Primary government.** A state government, a general purpose local government, or a special-purpose local government that has a separately elected governing body, is legally separate, and is fiscally independent of other state or local governments.

**Private-purpose trust fund.** Reports all trust arrangements where the principal must remain intact and the income generated is used to benefit individuals, private organizations, and other governments.

**Proprietary funds.** Account for a government's business-type activities. Proprietary funds include internal service funds and enterprise funds.

**Special revenue fund.** Accounts for specific revenues that are restricted or committed to expenditures for specific current purposes other than debt service or capital projects.

## Multiple-Choice Questions (1–138)

### A. *The Government Accounting Standards Board*

- Which of the following pronouncements provides the most authoritative guidance applicable to financial reporting for state and local governments?
  - GASB Interpretations.
  - FASB Accounting Standards Codification.
  - AICPA Industry Audit and Accounting Guide for state and local governments.
  - GASB Technical Bulletins.
- Which of the following is the least authoritative guidance based on the GAAP Hierarchy for state and local governments?
  - AICPA Industry Audit and Accounting Guide for state and local governments.
  - GASB Technical Bulletins.
  - GASB Implementation Guides.
  - AICPA Statements of Position.

### B. *Governmental Accounting Concepts*

- Which of the following is an accurate statement from the GASB Concepts Statements about service efforts and accomplishments reporting?
  - Service efforts and accomplishments reporting is required for large governmental entities.
  - Service efforts and accomplishments reporting is necessary for assessing accountability and making informed decisions.
  - Service efforts and accomplishments reporting is not generally beneficial.
  - Service efforts and accomplishments reporting is more appropriate for business-type activities.
- According to GASB Concepts Statements which of the following is an essential characteristic of an asset?
  - An asset has present service capacity.
  - An asset is tangible.
  - An asset is acquired through purchase.
  - An asset provides future benefits to the citizenry.
- According to GASB Concepts Statements, the elements of resource flows statements include
  - Outflow of resources and inflow of resources.
  - Outflow of resources, inflow of resources and deferred inflow of resources.
  - Outflow of resources, inflow of resources, deferred outflow of resources.
  - Outflow of resources, inflow of resources, deferred outflow of resources, and deferred inflow of resources.

- Which of the following is true about service efforts and accomplishments reporting (SEA reporting) under GASB Concepts Statements?
  - SEA reporting is required for all state and local governments with more than \$100 in total assets.
  - SEA reporting is more appropriate for governmental business-type activities than for government-type activities.
  - The objective of SEA reporting is to provide more complete information about a governmental entity's performance than can be provided in traditional financial statements and schedules.
  - SEA reporting is particularly important to investors and creditors.
- A deferred outflow of resources is most like which of the following financial statement elements?
  - An asset.
  - A liability.
  - Equity.
  - Revenue.

### C. *The Governmental Reporting Model*

- Which of the following statements about the statistical section of the Comprehensive Annual Financial Report (CAFR) of a governmental unit is true?
  - Statistical tables may **not** cover more than two fiscal years.
  - Statistical tables may **not** include nonaccounting information.
  - The statistical section is **not** part of the basic financial statements.
  - The statistical section is an integral part of the basic financial statements.

### D. *The Reporting Entity*

- What is the basic criterion used to determine the reporting entity for a governmental unit?
  - Special financing arrangement.
  - Geographic boundaries.
  - Scope of public services.
  - Financial accountability.
- South City School District has a separately elected governing body that administers the public school system. The district's budget is subject to the approval of the city council. Major debts of the school district are expected to be paid by school taxes. The district's financial activity should be reported in the City's financial statements by
  - Blending only.
  - Discrete presentation.

- c. Inclusion as a footnote only.
- d. Either blending or inclusion as a footnote.

**11.** Marta City's school district is a legally separate entity, but two of its seven board members are also city council members and the district is financially dependent on the city. However, major debts of the school district are expected to be paid by school taxes. The school district should be reported as a

- a. Blended unit.
- b. Discrete presentation.
- c. Note disclosure.
- d. Primary government.

**12.** Which of the following characteristics would require a component unit to be presented on a blended rather than discretely presented basis?

- a. The primary government and the component unit are located at the same physical location.
- b. Substantially all of the debt of the component unit is expected to be repaid by the primary government.
- c. The chairman of the component's governing board is appointed by the governing board of the primary government.
- d. The component unit provides services to the citizens of the primary government.

### ***F. Government-Wide Financial Statements***

**13.** Which of the following describes the required government-wide financial statements?

- a. The statement of net position and the statement of activities.
- b. The statement of net fund balances and statement of changes in fund balances.
- c. The statement of net position, the statement of activities, and the statement of cash flows.
- d. The statement of fund assets and the statement of changes in fund assets.

**14.** Which of the following is an example of a deferred inflow of resources?

- a. Grant expenditures paid in advance of meeting timing requirements.
- b. Cost to acquire rights to future revenues.
- c. Proceeds from the sale of future revenues.
- d. Deferred loss from sale and leaseback of assets.

**15.** Which of the following is an example of a deferred outflow of resources?

- a. Cost to acquire rights to future revenues.
- b. Grant amounts received in advance of meeting timing requirements.
- c. Proceeds from the sale of future revenues.
- d. Deferred gain from a sale and leaseback transaction.

**16.** In the government-wide financial statement, the statement of net position, deferred outflows of resources are presented

- a. As a part of liabilities.
- b. As a part of equity.
- c. In a separate section following assets.
- d. In a separate section following liabilities.

**17.** Hunt Community Development Agency (HCDA), a financially independent authority, provides loans to commercial businesses operating in Hunt County. This year, HCDA made loans totaling \$500,000. How should HCDA classify the disbursements of loans on the cash flow statement?

- a. Operating activities.
- b. Noncapital financing activities.
- c. Capital and related financing activities.
- d. Investing activities.

**18.** The statement of activities of the government-wide financial statements is designed primarily to provide information to assess which of the following?

- a. Operational accountability.
- b. Financial accountability.
- c. Fiscal accountability.
- d. Functional accountability.

**Items 19 and 20** are based on the following:

As of December 31, 2012, Fullerton City compiled the information below for its capital assets, exclusive of infrastructure assets.

Cost of capital assets financed with general obligation debt and tax revenues	\$3,500,000
Accumulated depreciation on the capital assets	750,000
Outstanding debt related to the capital assets	1,250,000

**19.** On the government-wide statement of net position at December 31, 2012, under the governmental activities column, what amount should be reported for capital assets under the asset section?

- a. \$3,500,000
- b. \$1,500,000
- c. \$2,250,000
- d. \$2,750,000

**20.** On the government-wide statement of net position at December 31, 2012, under the governmental activities column, the information related to capital assets should be reported in the net position section at which of the following amounts?

- a. \$3,500,000
- b. \$1,500,000
- c. \$2,250,000
- d. \$2,750,000

**21.** Which of the following statements is correct about the accounting for infrastructure assets using the modified approach?

- I. Depreciation expense on the infrastructure assets should be reported on the government-wide statement of activities, under the governmental activities column.
  - II. Certain information about infrastructure assets reported using the modified approach is required supplementary information in the annual report.
- a. I only.
  - b. II only.
  - c. Both I and II.
  - d. Neither I nor II.

22. Arkansas has a single-employee defined benefit plan covered by GASB 68. What is the amount of liability that should be presented on the state government's statement of net position related to the plan?

- a. The amount expected to be contributed to the plan for the next fiscal year.
- b. The amount due for current pension benefits.
- c. The portion of the actuarial present value of projected benefit payments attributable to past periods of employee service minus the pension plan's fiduciary net position.
- d. The estimated total payments for current employees minus the pension plan's fiduciary net position.

23. In attributing the actuarial present value of projected benefit payments of each employee to periods under GASB 68, the entity should use which of the following methods?

- a. The employee service method.
- b. The entry age actuarial cost method.
- c. The service cost method.
- d. The projected cost method.

24. In accordance with GASB 68, the effects on the net pension liability of differences between expected and actual investment returns for a defined benefit plan is recognized in pension expense over:

- a. A closed period of five years.
- b. A closed period of ten years.
- c. A closed period equal to the average service lives of the employees.
- d. A closed period equal to the average maturity of the investments.

25. If a state government's defined benefit pension plan's net fiduciary position is not expected to be sufficient to make projected benefit payments, the government should use which of the following rates to discount projected future benefit payments?

- a. The rate for 10-year treasury notes.
- b. The rate for 20-year, tax-exempt general obligation municipal bonds with an average rating of AA/Aa or higher.
- c. The government's marginal borrowing rate.
- d. The current average prime bank rate.

### G. Fund Financial Statements

26. Depreciation expense would be reported on which of the following financial statements?

- I. The government-wide statement of activities.
  - II. The statement of revenues, expenses, and changes in fund net position prepared for proprietary funds.
- a. I only.
  - b. II only.
  - c. Both I and II.
  - d. Neither I nor II.

27. In accordance with governmental accounting standards, governments should prepare

- a. Combined financial statements, using the modified accrual basis of accounting and the flow of economic resources.

- b. Combined financial statements, using the accrual basis of accounting and the flow of financial resources.
- c. Government-wide financial statements, using the accrual basis of accounting and the flow of financial resources.
- d. Government-wide financial statements, using the accrual basis of accounting and the flow of economic resources.

28. In accordance with governmental accounting standards, which of the following statements is true?

- I. Infrastructure assets do not need to be reported on the government-wide statement of net position if the government decides to use the modified approach in its accounting for infrastructure.
  - II. Component units are reported on the financial statements for governmental funds.
- a. I only.
  - b. II only.
  - c. Both I and II.
  - d. Neither I nor II.

29. Fund accounting is used by governmental units with resources that must be

- a. Composed of cash or cash equivalents.
- b. Incorporated into combined or combining financial statements.
- c. Segregated for the purpose of carrying on specific activities or attaining certain objectives.
- d. Segregated physically according to various objectives.

30. Dogwood City's water enterprise fund received interest of \$10,000 on long-term investments. How should this amount be reported on the Statement of Cash Flows?

- a. Operating activities.
- b. Noncapital financing activities.
- c. Capital and related financing activities.
- d. Investing activities.

31. The **primary** authoritative body for determining the measurement focus and basis of accounting standards for governmental fund operating statements is the

- a. Governmental Accounting Standards Board (GASB).
- b. National Council on Governmental Accounting (NCGA).
- c. Governmental Accounting and Auditing Committee of the AICPA (GAAC).
- d. Financial Accounting Standards Board (FASB).

32. Which of the following is **not** one of the five fund balance classification provided by GASB Statement 54, *Fund Balance Reporting and Governmental Fund Type Definitions*?

- a. Restricted.
- b. Committed.
- c. Reserved.
- d. Assigned.

33. Which of the following is a characteristic which *differentiates* a Special Revenue Fund from a General Fund?

- a. A special revenue fund is required to be budgeted on the accrual basis.

- b. A special revenue fund is established only if a revenue source is restricted or committed to expenditure for a specified purpose.
- c. A governmental entity can only have one special revenue fund.
- d. A special revenue fund reports by using the total economic resources measurement focus.

34. For which of the following fund balance classifications is the *intent* of the governing board to use funds for a specific purpose a critical factor?

- a. Committed.
- b. Restricted.
- c. Assigned.
- d. Nonspendable.

35. Which event(s) should be included in a statement of cash flows for a governmental entity?

- I. Cash inflow from issuing bonds to finance city hall construction.
  - II. Cash outflow from a city utility representing payments in lieu of property taxes.
- a. I only.
  - b. II only.
  - c. Both I and II.
  - d. Neither I nor II.

36. The following transactions were among those reported by Corfe City's electric utility enterprise fund for 2012:

Capital contributed by subdividers	\$ 900,000
Cash received from customer households	2,700,000
Proceeds from sale of revenue bonds	4,500,000

In the electric utility enterprise fund's statement of cash flows for the year ended December 31, 2012, what amount should be reported as cash flows from capital and related financing activities?

- a. \$4,500,000
- b. \$5,400,000
- c. \$7,200,000
- d. \$8,100,000

37. For which of the following governmental entities that use proprietary fund accounting should a statement of cash flows be presented?

	Tollway authorities	Governmental utilities
a.	No	No
b.	No	Yes
c.	Yes	Yes
d.	Yes	No

38. In accordance with governmental accounting standards, which of the following financial statements should be prepared for proprietary funds?

- a. Statement of revenues, expenditures, and changes in fund balances.
- b. Statement of activities.
- c. Statement of changes in proprietary net position.
- d. Statement of cash flows.

39. In accordance with GASB 34 (as amended), *Basic Financial Statements—and Management's Discussion and Analysis—for State and Local Governments*, which of the following statements is correct about the information reported on the balance sheet prepared for the governmental funds?

- I. The focus is on reporting major funds, with all nonmajor funds aggregated and reported in a single column.
  - II. Fund balances are reported in two amounts—restricted and unrestricted.
- a. I only.
  - b. II only.
  - c. Both I and II.
  - d. Neither I nor II.

40. The financial statements required for a proprietary fund include

- a. The statement of fund balances, the statement of activities, and the statement of cash flows.
- b. The statement of net position, the statement of revenues, expenses and changes in fund net position, and the statement of cash flows.
- c. The balance sheet, the statement of income and expenses, and the statement of cash flows.
- d. The statement of fund balances and the statement of changes in fund balances.

41. In accordance with governmental accounting standards, which of the following statements is correct about the information reported on the statement of net position for the proprietary funds?

- I. Assets and liabilities are classified into current and noncurrent classifications.
  - II. All activities of internal service funds are aggregated and reported in a single column.
- a. I only.
  - b. II only.
  - c. Both I and II.
  - d. Neither I nor II.

42. Which of the following financial statements is prepared using the accrual basis of accounting and the economic resources measurement focus?

- I. The statement of net position for proprietary funds.
  - II. The statement of revenues, expenditures, and changes in fund balances for the governmental funds.
- a. I only.
  - b. II only.
  - c. Both I and II.
  - d. Neither I nor II.

43. In accordance with governmental accounting standards, agency funds are reported on which of the following financial statements?

- I. Statement of fiduciary net position.
  - II. Statement of changes in fiduciary net position.
- a. I only.
  - b. II only.
  - c. Both I and II.
  - d. Neither I nor II.

44. Private-purpose trust funds are reported on which of the following financial statements?

- I. Government-wide statement of net position.
- II. Statement of changes in fiduciary net position.

- a. I only.
- b. II only.
- c. Both I and II.
- d. Neither I nor II.

45. In accordance with governmental accounting standards, which fund type(s) is(are) reported on the statement of cash flows?

- a. Governmental and fiduciary fund types.
- b. Governmental and proprietary fund types.
- c. Fiduciary and proprietary fund types.
- d. Proprietary fund type only.

46. In accordance with governmental accounting standards, which of the following statements is(are) true regarding the statement of cash flows?

- I. The statement of cash flows is a government-wide financial statement.
- II. The statement of cash flows reports cash flows from three activities—operating, investing, and financing.

- a. I only.
- b. II only.
- c. Both I and II.
- d. Neither I nor II.

47. A reconciliation must be shown of the items that cause the difference between (1) the total of the fund balances that appears on the balance sheet for the governmental funds and (2) the total net position that is disclosed for governmental activities on the government-wide statement of net position. Which of the following items would be disclosed in this reconciliation?

- I. Capital assets used in governmental activities.
- II. The assets and liabilities of internal service funds included in governmental activities.

- a. I only.
- b. II only.
- c. Both I and II.
- d. Neither I nor II.

48. In accordance with governmental accounting standards, a reconciliation must be shown of the items that cause the difference between (1) the net change in fund balances for the governmental funds on the statement of revenues, expenditures, and changes in fund balances, and (2) the change in net position of governmental activities on the statement of activities. Which of the following items would be disclosed in this reconciliation?

- I. Revenues and expenses of internal service funds that were reported in proprietary funds.
- II. The amount by which capital outlays exceeded depreciation expense for the period.

- a. I only.
- b. II only.

- c. Both I and II.
- d. Neither I nor II.

49. What measurement focus should be used for the preparation of the following financial statements?

	Statement of changes in fiduciary net position	Government-wide statement of net position
a.	Financial resources	Economic resources
b.	Economic resources	Financial resources
c.	Economic resources	Economic resources
d.	Financial resources	Financial resources

50. Which of the following statements is(are) true?

- I. Pension trust funds are reported on the statement of changes in fiduciary net position.
- II. Retained earnings is reported in the net position section of the statement of net position for proprietary funds.

- a. I only.
- b. II only.
- c. Both I and II.
- d. Neither I nor II.

51. In accordance with governmental accounting standards, which of the following statements is correct concerning the statement of cash flows prepared for proprietary funds?

- a. The statement format is the same as that of a business enterprise's statement of cash flows.
- b. Cash flows from capital financing activities are reported separately from cash flows from noncapital financing activities.
- c. Cash flows from operating activities may not be reported using the direct method.
- d. Cash received from interest revenue and cash paid for interest expense are both reported as operating activities.

### J. Measurement Focus and Basis of Accounting (MFBA)

52. For governmental fund reporting, which item is considered the **primary** measurement focus?

- a. Income determination.
- b. Flows and balances of current financial resources.
- c. Capital maintenance.
- d. Cash flows and balances.

53. Which of the following funds of a governmental unit recognizes revenues in the accounting period in which they become available and measurable?

	General fund	Enterprise fund
a.	Yes	No
b.	No	Yes
c.	Yes	Yes
d.	No	No

### ***K. Accounting by Governments for Certain Events and Transactions***

**54.** Property taxes and fines represent which of the following classes of nonexchange transactions for governmental units?

- Derived tax revenues.
- Imposed nonexchange revenues.
- Government-mandated nonexchange transactions.
- Voluntary nonexchange transactions.

**55.** In accordance with GASB 33, *Accounting and Financial Reporting for Nonexchange Transactions*, which of the following transactions would qualify as a nonexchange transaction in the City of Geneva?

- The water utility (enterprise) fund billed the general fund for water usage.
- Property taxes were levied by the general fund.
- The motor pool (internal service) fund billed other departments for services rendered.
- The general fund sold police cars for their estimated residual value.

**Items 56 and 57** are based on the following:

The general fund of Elizabeth City received a \$100,000 grant from the state to be used for retraining its police force in modern crime-fighting methods. The state recently passed legislation that requires retraining for all police departments in the state. The grant was received in cash on June 15, 2012, and was used for retraining seminars during July 2012. The state mandated that the grant be spent in the fiscal year ending June 30, 2013. Elizabeth's fiscal year ends on June 30. Answer each of the questions below based upon the guidance provided by GASB 33, *Accounting and Financial Reporting for Nonexchange Transactions*.

**56.** What account should be credited in the general fund on the date the grant was received?

- Restricted revenue.
- Deferred inflow of resources.
- Revenue.
- Unreserved fund balance.

**57.** The grant from the state is an example of what type of nonexchange transaction?

- Government-mandated.
- Imposed.
- Voluntary.
- Derived.

**Items 58 and 59** are based on the following:

The merchants of Eldorado City collect a sales tax of 5% on retail sales. The sales taxes are remitted by retailers to the state and distributed by the state to the various governmental units that are within the boundaries of Eldorado City. During the month of June 2012, the state received \$50,000 of sales taxes from merchants in Eldorado. As of June 30, 2012, none of the sales taxes had been remitted to Eldorado or to any of the other governments that were within the boundaries of Eldorado. However, Eldorado estimated that its share of the sales taxes would be received in early July

2012, and would be used to pay for expenditures incurred during the year ended June 30, 2012. Eldorado's fiscal year ends on June 30. Answer both of the questions below using the guidance provided in GASB 33, *Accounting and Financial Reporting for Nonexchange Transactions*.

**58.** From the perspective of Eldorado City, the sales taxes are an example of what type of nonexchange transaction?

- Imposed.
- Voluntary.
- Derived.
- Government-mandated.

**59.** On the statement of revenues, expenditures, and changes in fund balance for the year ended June 30, 2012, how should the general fund of Eldorado report its share of the sales taxes that will be received in July 2012?

- Deferred inflow of resources.
- Restricted revenue.
- Revenue.
- Unreserved fund balance.

**60.** On July 1, 2012, the general fund of Sun City levied property taxes for the fiscal year ending June 30, 2013. According to GASB 33, *Accounting and Financial Reporting for Nonexchange Transactions*, property taxes are an example of what type of nonexchange transaction?

- Voluntary.
- Government-mandated.
- Imposed.
- Derived.

**61.** For the year ended December 31, 2012, the general fund of Karsten City levied property taxes of \$1,000,000. The city estimated that \$10,000 of the levy would not be collectible. By December 31, 2012, the city had collected \$850,000 of property taxes and expected to collect the remainder of the taxes as follows:

- \$100,000 by March 1, 2013
- \$40,000 during the remainder of 2013

In accordance with GASB 33, *Accounting and Reporting for Nonexchange Transactions*, how much property tax revenue should be reported by the general fund on the statement of revenues, expenditures, and changes in fund balances prepared for the year ended December 31, 2012?

- \$850,000
- \$950,000
- \$990,000
- \$1,000,000

**62.** For the year ended December 31, 2012, the general fund of Ward Village reported revenues from the following sources on the statement of revenues, expenditures, and changes in fund balances:

Sales taxes	\$25,000
Property taxes	125,000
Income taxes	15,000
Fines	10,000

In accordance with GASB 33, *Accounting and Reporting for Nonexchange Transactions*, what is the amount of revenues that came from imposed nonexchange transactions?

- a. \$175,000
- b. \$150,000
- c. \$140,000
- d. \$135,000

**63.** In December 2012, the general fund of Millard City received \$25,000 from the state as an advance on the city's portion of sales tax revenues, and it received \$20,000 from property owners for property taxes to be levied in 2013. The advance payment of sales taxes represented the amount that the state collected in 2012 that would have been distributed to Millard in the early part of 2013. Millard used the advance to pay for expenditures incurred by the general fund in 2012. The cash received from property owners for property taxes to be levied in 2013 will be used to pay for expenditures incurred in 2013. In accordance with GASB 33, *Accounting and Reporting for Nonexchange Transactions*, what amount of revenue from these transactions should be reported by Millard's general fund on the statement of revenues, expenditures, and changes in fund balances for the year ended December 31, 2012?

- a. \$25,000
- b. \$20,000
- c. \$0
- d. \$45,000

**64.** In accordance with GASB 33, *Accounting and Reporting for Nonexchange Transactions*, which of the following revenues results from taxes assessed by a government on exchange transactions (a derived tax revenue)?

- a. Property tax revenues.
- b. Fines and forfeits.
- c. Motor fuel taxes.
- d. Unrestricted government grants.

**65.** In accordance with GASB 33, *Accounting and Reporting for Nonexchange Transactions*, which of the following revenues results from taxes and other assessments imposed by governments that are **not** derived from underlying transactions?

- a. Income taxes.
- b. Sales taxes.
- c. Motor fuel taxes.
- d. Fines and forfeits.

**66.** Devon County is developing its own software system to maintain property tax records. Which of the following is **not** required for Devon to begin capitalizing the software costs?

- a. Devon has established the objective for the project and the proposed scope of the software system.
- b. Devon has established the feasibility of creating the software system.
- c. Devon has established an accurate budget for the software system.
- d. Devon has established its intention to complete or continue developing the system.

**67.** The State of Texas is scheduled to receive a substantial amount of revenues as a part of a tobacco settlement. The revenues for the next five years have been sold to a commercial business for \$5,000,000. Assuming that Texas has no involvement with the future revenues, how should it account for this transaction?

- a. Recognize \$5,000,000 of revenue at the date of the transaction.
- b. Recognize \$5,000,000 in liability to the commercial business.
- c. Recognize \$5,000,000 in deferred inflow of resources and recognize the revenue over a five-year period.
- d. Recognize the difference between the cash received and the amount of future revenues sold as an expense.

**68.** A city government has entered into a service concession arrangement with a company that will operate the city's parking meters and retain the parking fees for a period of 30 years in exchange for a payment to the city in the amount of \$3 billion. Which of the following is correct about the accounting for this arrangement?

- a. The city should write off the cost of the parking meters when the arrangement is executed.
- b. The city should recognize revenue in the amount of \$3 billion at the time the agreement is executed.
- c. The city should recognize a deferred inflow of resources in the amount of \$3 billion at the time the agreement is executed.
- d. The city should recognize a receivable from the operator in the amount of \$3 billion at the time the agreement is executed.

## ***L. Budgetary Accounting for the General and Special Revenue Funds***

**Items 69 and 70** are based on the following:

Ridge Township's governing body adopted its general fund budget for the year ended July 31, 2012, comprised of Estimated Revenues of \$100,000 and Appropriations of \$80,000. Ridge formally integrates its budget into the accounting records.

**69.** To record the appropriations of \$80,000, Ridge should

- a. Credit Appropriations Control.
- b. Debit Appropriations Control.
- c. Credit Estimated Expenditures Control.
- d. Debit Estimated Expenditures Control.

**70.** To record the \$20,000 budgeted excess of estimated revenues over appropriations, Ridge should

- a. Credit Estimated Excess Revenues Control.
- b. Debit Estimated Excess Revenues Control.
- c. Credit Budgetary Fund Balance.
- d. Debit Budgetary Fund Balance.

71. For the budgetary year ending December 31, 2012, Maple City's general fund expects the following inflows of resources:

Property Taxes, Licenses, and Fines	\$9,000,000
Proceeds of Debt Issue	5,000,000
Interfund Transfers for Debt Service	1,000,000

In the budgetary entry, what amount should Maple record for estimated revenues?

- \$9,000,000
- \$10,000,000
- \$14,000,000
- \$15,000,000

72. In 2012, New City issued purchase orders and contracts of \$850,000 that were chargeable against 2012 budgeted appropriations of \$1,000,000. The journal entry to record the issuance of the purchase orders and contracts should include a

- Credit to Vouchers Payable of \$1,000,000.
- Credit to Budgetary Fund Balance—Reserved for Encumbrances of \$850,000.
- Debit to Expenditures of \$1,000,000.
- Debit to Appropriations of \$850,000.

73. During its fiscal year ended June 30, 2012, Cliff City issued purchase orders totaling \$5,000,000, which were properly charged to Encumbrances at that time. Cliff received goods and related invoices at the encumbered amounts totaling \$4,500,000 before year-end. The remaining goods of \$500,000 were not received until after year-end. Cliff paid \$4,200,000 of the invoices received during the year. What amount of Cliff's encumbrances were outstanding at June 30, 2012?

- \$0
- \$300,000
- \$500,000
- \$800,000

74. Elm City issued a purchase order for supplies with an estimated cost of \$5,000. When the supplies were received, the accompanying invoice indicated an actual price of \$4,950. What amount should Elm debit (credit) to Budgetary Fund Balance—Reserved for Encumbrances after the supplies and invoice were received?

- \$(50)
- \$50
- \$4,950
- \$5,000

75. A budgetary fund balance reserved for encumbrances in excess of a balance of encumbrances indicates

- An excess of vouchers payable over encumbrances.
- An excess of purchase orders over invoices received.
- An excess of appropriations over encumbrances.
- A recording error.

76. Encumbrances outstanding at year-end in a state's general fund should be reported as a

- Liability in the general fund.
- Fund balance reserve in the general fund.
- Liability in the General Long-Term Debt Account Group.
- Fund balance designation in the general fund.

77. When Rolan County adopted its budget for the year ending June 30, 2012, \$20,000,000 was recorded for Estimated Revenues Control. Actual revenues for the year ended June 30, 2012, amounted to \$17,000,000. In closing the budgetary accounts at June 30, 2012,

- Revenues Control should be debited for \$3,000,000.
- Estimated Revenues Control should be debited for \$3,000,000.
- Revenues Control should be credited for \$20,000,000.
- Estimated Revenues Control should be credited for \$20,000,000.

78. The budget of a governmental unit, for which the appropriations exceed the estimated revenues, was adopted and recorded in the general ledger at the beginning of the year. During the year, expenditures and encumbrances were less than appropriations, whereas revenues equaled estimated revenues. The Budgetary Fund Balance account is

- Credited at the beginning of the year and debited at the end of the year.
- Credited at the beginning of the year and **not** changed at the end of the year.
- Debited at the beginning of the year and credited at the end of the year.
- Debited at the beginning of the year and **not** changed at the end of the year.

79. The following information pertains to Park Township's general fund at December 31, 2012:

Total assets, including \$200,000 of cash	\$1,000,000
Total liabilities	600,000
Fund balance—Reserved for encumbrances	100,000

Appropriations do not lapse at year-end. At December 31, 2012, what amount should Park report as unreserved fund balance in its general fund balance sheet?

- \$200,000
- \$300,000
- \$400,000
- \$500,000

80. The following information pertains to Pine City's general fund for 2012:

Appropriations Control	\$6,500,000
Expenditures Control	5,000,000
Other Financing Sources Control	1,500,000
Other Financing Uses Control	2,000,000
Revenues Control	8,000,000

After Pine's general fund accounts were closed at the end of 2012, the fund balance increased by

- \$3,000,000
- \$2,500,000
- \$1,500,000
- \$1,000,000

**81.** Cedar City issues \$1,000,000, 6% revenue bonds at par on April 1 to build a new water line for the water enterprise fund. Interest is payable every six months. What amount of interest expense should be reported for the year ended December 31?

- a. \$0
- b. \$30,000
- c. \$45,000
- d. \$60,000

**M. Expenditure Classification for Governmental Funds**

**82.** The expenditure element “salaries and wages” is an example of which type of classification?

- a. Object.
- b. Program.
- c. Function.
- d. Activity.

**N. Accounting for the General Fund**

**Items 83 and 84** are based on the following information for Oak City for the calendar year 2012:

Collections during 2012	\$500,000
Expected collections during the first sixty days of 2013	100,000
Expected collections during the balance of 2013	60,000
Expected collections during January 2014	30,000
Estimated to be uncollectible	<u>10,000</u>
Total levy	<u>\$700,000</u>

**83.** What amount should Oak City report for 2012 property tax revenues in the Statement of Revenues, Expenditures, and Changes in Fund Balances prepared for governmental funds?

- a. \$700,000
- b. \$690,000
- c. \$600,000
- d. \$500,000

**84.** What amount should Oak City report for 2012 property tax revenues in the government-wide Statement of Activities?

- a. \$700,000
- b. \$690,000
- c. \$600,000
- d. \$500,000

**85.** Which of the following transactions is an expenditure of a governmental unit’s general fund?

- a. Contribution of enterprise fund capital by the general fund.
- b. Transfer from the general fund to a capital projects fund.
- c. Operating subsidy transfer from the general fund to an enterprise fund.
- d. Routine employer contributions from the general fund to a pension trust fund.

**86.** During the year, a city’s electric utility, which is operated as an enterprise fund, rendered billings for electricity supplied to the general fund. Which of the following accounts should be debited by the general fund?

- a. Appropriations.
- b. Expenditures.
- c. Due to Electric Utility Enterprise Fund.
- d. Transfers.

**87.** Which of the following fund types used by a government **most** likely would have a Fund Balance—Reserved for Inventory of Supplies?

- a. General.
- b. Internal service.
- c. Enterprise.
- d. Debt service.

**88.** The following revenues were among those reported by Ariba Township in 2012:

Net rental revenue (after depreciation) from a parking garage owned by Ariba	\$40,000
Interest earned on investments held for employees’ retirement benefits	100,000
Property taxes	6,000,000

What amount of the foregoing revenues should be accounted for in Ariba’s governmental-type funds?

- a. \$6,140,000
- b. \$6,100,000
- c. \$6,040,000
- d. \$6,000,000

**Items 89 through 91** are based on the following:

The general fund of Cliff Township acquired two police cars at the beginning of January 2012, at a total cost of \$40,000. The cars are expected to last for four years and have a \$10,000 residual value. Straight-line depreciation is used. Cliff adopted the provisions of governmental accounting standards, *Basic Financial Statements—and Management’s Discussion and Analysis—for State and Local Governments*, for its financial statements issued for 2012.

**89.** On the balance sheet for the governmental funds at December 31, 2012, the police cars will be reported under assets in the general fund column at which of the following amounts?

- a. \$40,000
- b. \$32,500
- c. \$0
- d. \$22,500

**90.** On the government-wide statement of net position at December 31, 2012, the police cars will be reported under assets in the governmental activities column at which of the following amounts?

- a. \$40,000
- b. \$32,500
- c. \$0
- d. \$22,500

91. On the statement of revenues, expenditures, and changes in fund balances prepared for the governmental funds for the year ended December 31, 2012, the police cars will be reported as

- a. Expenditures of \$40,000.
- b. Expense of \$7,500.
- c. Expenditures of \$7,500.
- d. Expense of \$40,000.

Items 92 through 95 are based on the following:

During the year ended December 31, 2012, the general fund of the city of Vicksburg has the following selected transactions:

- Acquired police cars for \$75,000 in January 2012. The cars have an estimated five-year useful life and a \$15,000 salvage value. The City uses the straight-line method to depreciate all of its capital assets.
- Transferred \$30,000 to the pension trust fund. The amount represented the employer's contribution.
- Levied property taxes in the amount of \$800,000. Two percent of the levy was not expected to be collected. At December 31, 2012, \$750,000 of the property taxes were collected, but the remainder was not expected to be collected within sixty days after the end of 2012.
- Received \$100,000 of sales tax revenues from the state and was owed another \$25,000 by the state for sales taxes collected in 2012 that will not be remitted to Vicksburg until mid-March 2013. The sales taxes expected to be received in March will be used to pay for expenditures incurred in 2013.

92. On the statement of revenues, expenditures, and changes in fund balances prepared for the governmental funds for the year ended December 31, 2012, what amount should be reported for expenditures in Vicksburg's general fund related to the acquisition of police cars and to the pension transfer?

- a. \$42,000
- b. \$105,000
- c. \$75,000
- d. \$30,000

93. On the statement of revenues, expenditures, and changes in fund balances prepared for the governmental funds for the year ended December 31, 2012, what amount should be reported for revenues in Vicksburg's general fund related to property taxes and sales taxes?

- a. \$884,000
- b. \$909,000
- c. \$850,000
- d. \$875,000

94. On the government-wide statement of activities prepared for the year ended December 31, 2012, what amount should be reported for expenses for governmental activities related to the acquisition of the police cars and to the pension transfer?

- a. \$42,000
- b. \$105,000
- c. \$75,000
- d. \$30,000

95. On the government-wide statement of activities prepared for the year ended December 31, 2012, what amount should be reported for revenues from governmental activities related to the property taxes and the sales taxes?

- a. \$884,000
- b. \$909,000
- c. \$850,000
- d. \$875,000

**O. Accounting for Special Revenue Funds**

96. In November 2011, Maple Township received an unexpected state grant of \$100,000 to finance the purchase of school buses, and an additional grant of \$5,000 was received for bus maintenance and operations. According to the terms of the grant, the State reimbursed Maple Township for \$60,000 for the purchase of school buses and an additional \$5,000 for bus maintenance during the year ended June 30, 2012. The remaining \$40,000 of the capital grant is expected to be spent during the next fiscal year June 30, 2013. Maple's school bus system is appropriately accounted for in a special revenue fund. In connection with the grants for the purchase of school buses and bus maintenance, what amount should be reported as grant revenues for the year ending June 30, 2012, when using modified accrual accounting?

- a. \$5,000
- b. \$60,000
- c. \$65,000
- d. \$100,000

97. Lake County received the following proceeds that are legally restricted to expenditure for specified purposes:

Levies on affected property owners to install sidewalks	\$500,000
Gasoline taxes to finance road repairs	900,000

What amount should be accounted for in Lake's special revenue funds?

- a. \$1,400,000
- b. \$900,000
- c. \$500,000
- d. \$0

98. Should a major special revenue fund with a legally adopted budget maintain its accounts on an accrual basis and integrate budgetary accounts into its accounting system?

	Maintain on accrual basis	Integrate budgetary accounts
a.	Yes	Yes
b.	Yes	No
c.	No	Yes
d.	No	No

**P. Accounting for Capital Projects Funds**

99. In 2012, Menton City received \$5,000,000 of bond proceeds to be used for capital projects. Of this amount, \$1,000,000 was expended in 2012. Expenditures for the \$4,000,000 balance were expected to be incurred in 2013. These bond proceeds should be recorded in capital projects funds for

- a. \$5,000,000 in 2012.
- b. \$5,000,000 in 2013.
- c. \$1,000,000 in 2012 and \$4,000,000 in 2013.
- d. \$1,000,000 in 2012 and in the general fund for \$4,000,000 in 2012.

100. Financing for the renovation of Fir City’s municipal park, begun and completed during 2012, came from the following sources:

Grant from state government	\$400,000
Proceeds from general obligation bond issue	500,000
Transfer from Fir’s general fund	100,000

In its 2012 capital projects fund operating statement, Fir should report these amounts as

	Revenues	Other financing sources
a.	\$1,000,000	\$0
b.	\$900,000	\$100,000
c.	\$400,000	\$600,000
d.	\$0	\$1,000,000

101. An impaired capital asset that is no longer used by a government should be reported in the financial statements at

- a. Historical cost.
- b. Historical cost adjusted for depreciation.
- c. The lower of carrying value or fair value.
- d. Fair value.

102. A government should recognize the impairment of a capital asset when events or circumstances indicate that there is a significant decline in service utility and

- a. The asset is not in service.
- b. The event or circumstance is outside the normal life cycle of the asset.
- c. The asset is not covered by insurance.
- d. The asset is not fully depreciated.

**Q. Debt Service Funds**

103. In which of the following fund types of a city government are revenues and expenditures recognized on the same basis of accounting as the general fund?

- a. Pension trust.
- b. Internal service.
- c. Enterprise.
- d. Debt service.

104. Japes City issued \$1,000,000 general obligation bonds at 101 to build a new city hall. As part of the bond issue, the city also paid a \$500 underwriter fee and \$2,000 in debt issue costs. What amount should Japes City report as other financing sources?

- a. \$1,010,000
- b. \$1,008,000
- c. \$1,007,500
- d. \$1,000,000

105. Dale City is accumulating financial resources that are legally restricted to payments of general long-term debt principal and interest maturing in future years. At December 31, 2012, \$5,000,000 has been accumulated for principal payments and \$300,000 has been accumulated for interest payments. These restricted funds should be accounted for in the

	Debt service fund	General fund
a.	\$0	\$5,300,000
b.	\$300,000	\$5,000,000
c.	\$5,000,000	\$300,000
d.	\$5,300,000	\$0

106. On April 1, 2012, Oak County incurred the following expenditures in issuing long-term bonds:

Issue costs	\$400,000
Debt insurance	90,000

Oak County has established a debt service fund for the payment of interest and principal of its long-term bonds. Assuming Oak County’s fiscal year ends of June 30, what amount of issue costs and debt insurance costs should be reported as an asset on the governmental funds’ balance sheet at June 30, 2012?

- a. \$0
- b. \$90,000
- c. \$400,000
- d. \$490,000

107. Receipts from a special tax levy to retire and pay interest on general obligation bonds should be recorded in which fund?

- a. General.
- b. Capital projects.
- c. Debt service.
- d. Special revenue.

108. Wood City, which is legally obligated to maintain a debt service fund, issued the following general obligation bonds on July 1, 2012:

Term of bonds	10 years
Face amount	\$1,000,000
Issue price	101
Stated interest rate	6%

Interest is payable January 1 and July 1. What amount of bond premium should be amortized in Wood’s debt service fund for the year ended December 31, 2012?

- a. \$1,000
- b. \$500
- c. \$250
- d. \$0

109. The debt service fund of a governmental unit is used to account for the accumulation of resources for, and the payment of, principal and interest in connection with a

	Trust fund	Proprietary fund
a.	No	No
b.	No	Yes
c.	Yes	Yes
d.	Yes	No

110. Tott City’s serial bonds are serviced through a debt service fund with cash provided by the general fund. In a debt service fund’s statements, how are cash receipts and cash payments reported?

	Cash receipts	Cash payments
a.	Revenues	Expenditures
b.	Revenues	Other Financing Use
c.	Other Financing Source	Expenditures
d.	Other Financing Source	Other Financing Use

111. On March 2, 2012, Finch City issued ten-year general obligation bonds at face amount, with interest payable March 1 and September 1. The proceeds were to be used to finance the construction of a civic center over the period April 1, 2012, to March 31, 2013. During the fiscal year ended June 30, 2012, no resources had been provided to the debt service fund for the payment of principal and interest.

On June 30, 2012, Finch’s debt service fund should include interest payable on the general obligation bonds for

- a. 0 months.
- b. Three months.
- c. Four months.
- d. Six months.

**R. Permanent Funds**

112. According to GASB 52, real estate held as an investment by a government endowment should be reported at

- a. Fair value.
- b. Historical cost.
- c. Historical cost less accumulated depreciation.
- d. A nominal value.

**S. Accounting for Special Assessments**

113. Fish Road property owners in Sea County are responsible for special assessment debt that arose from a storm sewer project. If the property owners default, Sea has no obligation regarding debt service, although it does bill property owners for assessments and uses the monies it collects to pay debt holders. What fund type should Sea use to account for these collection and servicing activities?

- a. Agency.
- b. Debt service.
- c. Investment trust funds.
- d. Capital projects.

**T. Accounting for Proprietary Funds**

114. Cy City’s Municipal Solid Waste Landfill Enterprise Fund was established when a new landfill was opened January 3, 2012. The landfill is expected to reach capacity and close December 31, 2028. Cy’s 2012 expenses would include a portion of which of the year 2028 expected disbursements?

- I. Cost of a final cover to be applied to the landfill.
- II. Cost of equipment to be installed to monitor methane gas buildup.
  - a. I only.
  - b. II only.
  - c. Both I and II.
  - d. Neither I nor II.

115. Chase City uses an internal service fund for its central motor pool. The assets and liabilities account balances for this fund that are **not** eliminated normally should be reported in the government-wide statement of net position as

- a. Governmental activities.
- b. Business-type activities.
- c. Fiduciary activities.
- d. Note disclosures only.

116. The billings for transportation services provided to other governmental units are recorded by an internal service fund as

- a. Transportation appropriations.
- b. Operating revenues.
- c. Interfund exchanges.
- d. Intergovernmental transfers.

117. The following information for the year ended June 30, 2012, pertains to a proprietary fund established by Burwood Village in connection with Burwood’s public parking facilities:

Receipts from users of parking facilities	\$400,000
Expenditures	
Parking meters	210,000
Salaries and other cash expenses	90,000
Depreciation of parking meters	70,000

For the year ended June 30, 2012, this proprietary fund should report net income of

- a. \$0
- b. \$30,000
- c. \$100,000
- d. \$240,000

118. A state government had the following activities:

- I. State-operated lottery                     \$10,000,000
- II. State-operated hospital                 3,000,000

Which of the above activities should be accounted for in an enterprise fund?

- a. Neither I nor II.
- b. I only.
- c. II only.
- d. Both I and II.

**119.** For governmental units, depreciation expense on assets acquired with capital grants externally restricted for capital acquisitions should be reported in which type of fund?

	Governmental fund	Proprietary fund
a.	Yes	No
b.	Yes	Yes
c.	No	No
d.	No	Yes

**120.** An enterprise fund would be used when the governing body requires that

- I. Accounting for the financing of an agency’s services to other government departments be on a cost-reimbursement basis.
  - II. User charges cover the costs of general public services.
  - III. Net income information be reported for an activity.
- a. I only.
  - b. I and II.
  - c. I and III.
  - d. II and III.

**121.** The following transactions were among those reported by Cliff County’s water and sewer enterprise fund for 2012:

Proceeds from sale of revenue bonds	\$5,000,000
Cash received from customer households	3,000,000
Capital contributed by subdividers	1,000,000

In the water and sewer enterprise fund’s statement of cash flows for the year ended December 31, 2012, what amount should be reported as cash flows from capital and related financing activities?

- a. \$9,000,000
- b. \$8,000,000
- c. \$6,000,000
- d. \$5,000,000

**122.** The orientation of accounting and reporting for all proprietary funds of governmental units is

- a. Income determination.
- b. Project.
- c. Flow of funds.
- d. Program.

**Items 123 through 124** are based on the following:

Rock County has acquired equipment through a noncancelable lease-purchase agreement dated December 31, 2012. This agreement requires no down payment and the following minimum lease payments:

December 31	Principal	Interest	Total
2013	\$50,000	\$15,000	\$65,000
2014	50,000	10,000	60,000
2015	50,000	5,000	55,000

**123.** What account should be debited for \$150,000 in the general fund at inception of the lease if the equipment is a general fixed asset and Rock does **not** use a capital projects fund?

- a. Other Financing Uses Control.
- b. Equipment.
- c. Expenditures Control.
- d. Memorandum entry only.

**124.** If the equipment is used in enterprise fund operations and the lease payments are to be financed with enterprise fund revenues, what account should be debited for \$150,000 in the enterprise fund at the inception of the lease?

- a. Expenses Control.
- b. Expenditures Control.
- c. Other Financing Sources Control.
- d. Equipment.

**125.** If the equipment is used in internal service fund operations and the lease payments are financed with internal service fund revenues, what account or accounts should be debited in the internal service fund for the December 31, 2012 lease payment of \$65,000?

a.	Expenditures Control	\$65,000
b.	Expenses Control	\$65,000
c.	Capital Lease Payable	\$50,000
	Expenses Control	15,000
d.	Expenditures Control	\$50,000
	Expenses Control	15,000

**126.** Hill City’s water utility fund held the following investments in US Treasury securities at June 30, 2012:

Investment	Date purchased	Maturity date	Carrying amount
Three-month T-bill	5/31/12	7/31/12	\$30,000
Three-year T-note	6/15/12	8/31/12	50,000
Five-year T-note	10/1/08	9/30/13	100,000

In the fund’s balance sheet, what amount of these investments should be reported as cash and cash equivalents at June 30, 2012?

- a. \$0
- b. \$30,000
- c. \$80,000
- d. \$180,000

**U. Accounting for Fiduciary Funds**

**127.** The following fund types used by Green Township had total assets at June 30, 2012, as follows:

Agency funds	\$300,000
Debt service funds	1,000,000

Total fiduciary fund assets amount to

- a. \$0
- b. \$300,000
- c. \$1,000,000
- d. \$1,300,000

**128.** Which of the following is **not** Required Supplementary Information for the financial statements of a defined-benefit pension plan under GASB 67?

- A ten-year schedule of changes in pension liability.
- A ten-year schedule of the amounts of total pension liability, fiduciary net position, net pension liability, the covered-employee payroll, and selected ratios.
- A ten-year schedule of the actuarial computed required contribution, the required contribution, the actual contribution to the plan, and selected ratios.
- A ten-year schedule of interest rates used to discount the projected future benefits for the plan.

**129.** Grove County collects property taxes levied within its boundaries and receives a 1% fee for administering these collections on behalf of the municipalities located in the county. In 2012, Grove collected \$1,000,000 for its municipalities and remitted \$990,000 to them after deducting fees of \$10,000. In the initial recording of the 1% fee, Grove's agency fund should credit

- Net Assets—Agency Fund, \$10,000.
- Fees Earned—Agency Fund, \$10,000.
- Due to Grove County General Fund, \$10,000.
- Revenues Control, \$10,000.

**Items 130 and 131** are based on the following:

Elm City contributes to and administers a single-employer defined benefit pension plan on behalf of its covered employees. The plan is accounted for in a pension trust fund. For the year ended December 31, 2012, employer contributions to the pension trust fund amounted to \$11,000.

**130.** What account should be credited in the pension trust fund to record the 2012 employer contribution of \$11,000?

- Additions.
- Other Financing Sources Control.
- Due from Special Revenue Fund.
- Pension Benefit Obligation.

**131.** To record the 2012 pension contribution of \$11,000, what debit is required in the governmental-type fund used in connection with employer pension contributions?

- Other Financing Uses Control.
- Expenditures Control.
- Expenses Control.
- Due to Pension Trust Fund.

## V. Reporting Interfund Activity

**132.** In accordance with GASB 34 (as amended), *Basic Financial Statements—and Management's Discussion and Analysis—for State and Local Governments*, what types of interfund transactions are included in the amount reported for transfers on the government-wide statement of activities?

- Yearly operating subsidies from the general fund to an enterprise fund.
- Billings from an enterprise fund to an internal service fund for services rendered.
  - I only.
  - II only.
  - Both I and II.
  - Neither I nor II.

**133.** During the year ended December 31, 2012, the town of Jamestown had the following selected transactions:

- The general fund made a \$100,000 advance to an internal service fund. The internal service fund will repay the advance in 2013.
- The water utility enterprise fund billed the general fund \$25,000 for water usage.
- The general fund transferred \$30,000 to a debt service fund to pay interest on general obligation bonds.

On Jamestown's government-wide statement of activities for the year ended December 31, 2012, what amount should be reported for transfers?

- \$125,000
- \$55,000
- \$0
- \$130,000

**134.** During the year ended December 31, 2012, the town of Harrisville had the following selected transactions:

- The general fund made a permanent transfer of \$100,000 to an enterprise fund. The enterprise fund used the amount transferred to acquire capital assets.
- The general fund transferred \$1,000,000 to a capital projects fund for the town's portion of the cost for the renovation of the town hall.
- The general fund was reimbursed \$5,000 by an enterprise fund for expenses paid by the general fund that were properly charged as operating expenses of the enterprise fund.

On Harrisville's government-wide statement of activities for the year ended December 31, 2012, what amount should be reported as transfers?

- \$100,000
- \$1,100,000
- \$1,005,000
- \$105,000

## Y. Public College and University Accounting (Governmental)—GASB Statement No. 35

**135.** In accordance with GASB 35, a public college or university that chooses to report only business-type activities should present only the financial statements required for

- Enterprise funds.
- Government funds.
- Internal service funds.
- Enterprise and internal service funds.

136. In accordance with GASB 35, a public college or university that chooses to report both governmental and business-type activities should report

	<b>Fund financial statements</b>	<b>Government-wide financial statements</b>
a.	No	Yes
b.	Yes	No
c.	Yes	Yes
d.	No	No

137. A public college had tuition and fees of \$20,000,000. Scholarships, for which no services were required, amounted to \$1,000,000. Employee discounts, which were provided in exchange for services, amounted to \$2,000,000. The amount to be reported as net tuition and fees by the public college would be

- a. \$20,000,000
- b. \$19,000,000
- c. \$18,000,000
- d. \$17,000,000

138. Which of the following is true regarding the Statement of Revenues, Expenses, and Changes in Net Position for a public college choosing to report as a special-purpose entity engaged in business-type activities only?

- a. State appropriations should be reported as nonoperating income.
- b. An operating income figure must be displayed.
- c. Both contributions for plant and for endowment purposes must be reported separately after both operating and nonoperating revenues and expenses.
- d. All of the above.

**Multiple-Choice Answers and Explanations**

**Explanations**

- (a)** GASB Statement 55 presents four categories which provide the GAAP Hierarchy for state and local governments. The pronouncements with the highest authoritative status are officially issued accounting principles—GASB Statements and Interpretations.
- (c)** According to the GAAP hierarchy provided in GASB Statement 55, the category with the least authoritative status includes implementation guides (Q & As) published by the GASB staff, as well as practices that are widely recognized and prevalent in state and local government. Answers (a), (b) and (d) are all pronouncements listed in the second highest authoritative category.
- (b)** The requirement is to identify the accurate statement about service efforts and accomplishments reporting. Answer (b) is correct because the GASB Concepts Statements indicate that service efforts and accomplishments reporting is necessary but not required.
- (a)** The requirement is to identify the statement that is true about the essential characteristics of an asset. Answer (a) is correct because according to GASB Concepts Statements,

assets are resources with present service capacity that the government presently controls.

- (a)** The requirement is to identify the elements of resource flows statements. Answer (a) is correct because the elements include outflow of resources and inflow of resources. Answers (b), (c), and (d) are incorrect because deferred outflow of resources and deferred inflow of resources are elements of the statement of net position.
- (c)** The requirement is to identify the true statement about service efforts and accomplishments reporting under GASB Concepts Statements. Answer (c) is correct because GASB Concepts Statements indicate that the objective of SEA reporting is to provide more complete information about a governmental entity’s performance than can be provided in traditional financial statements and schedules. Answer (a) is incorrect because SEA reporting is not required. Answer (b) is incorrect because it is not more appropriate for governmental business-type activities. Answer (d) is incorrect because the traditional financial statements are more important to investors and creditors.

7. (a) The requirement is to identify the element that is most like a deferred outflow of resources. Answer (a) is correct because a deferred outflow of resources is a consumption of net position by the government that is applicable to a future reporting period. It is similar to an asset.
8. (c) GASB 34 (as amended) indicates that the basic financial statements include only the government-wide statements, the fund statements, and the notes to the financial statements.
9. (d) The concept underlying the definition of the financial reporting entity is that elected officials are accountable to their constituents for their actions. Accordingly, the financial reporting entity consists of (1) the primary government, (2) organizations for which the primary government is **financially accountable**, and (3) other organizations for which the nature and significance of their relationship with the primary government is such that exclusion would cause the reporting entity's financial statements to be misleading or incomplete. Thus, the basic criterion used to determine the reporting entity is financial accountability.
10. (b) The requirement is to determine how the school district's financial activity should be reported. The school district is a component unit, which means it is a legally separate organization for which the elected officials of a primary government are financially accountable. Component units can be presented either discretely or blended. If the component unit is so closely tied to the primary government that the activities seem to be indistinguishable, the presentation should be blended. Specifically, the unit is blended if (1) the governing body of the component unit is substantially the same as the primary government, and (a) there is a financial benefit/burden relationship, or (b) there is common management, (2) the services provided are entirely, or almost entirely to the primary government, or (3) the component's debt will be repaid entirely or almost entirely by the primary government. None of these criteria exist in this situation and, therefore, the school district should not be presented on a blended basis. Its financial information should be presented discretely.
11. (b) The requirement is to determine how the school district should be reported. A component unit is a legally separate organization for which the elected officials of a primary government are financially accountable. The school district is a component unit, which can be presented either discretely or blended. The unit is blended if (1) the governing body of the component unit is substantially the same as the primary government, and (a) there is a financial benefit/burden relationship, or (b) there is common management, (2) the services provided are entirely, or almost entirely to the primary government, or (3) the component's debt will be repaid entirely or almost entirely by the primary government. None of these criteria exist in this situation and, therefore, the school district should not be presented on a blended basis. Its financial information should be presented discretely.
12. (b) The requirement is to identify the characteristic that would cause the component unit to be presented on a blended basis. A component unit is a legally separate organization for which the elected officials of a primary government are financially accountable. The unit is blended if (1) the governing body of the component unit is substantially the same as the primary government, and (a) there is a financial benefit/burden relationship, or (b) there is common management, (2) the services provided are entirely, or almost entirely to the primary government, or (3) the component's debt will be repaid entirely or almost entirely by the primary government. Therefore, answer (b) is correct.
13. (a) The requirement is to identify the required government-wide financial statements. Answer (a) is correct because the required financial statements are the statement of net position and the statement of activities.
14. (c) The requirement is to identify the example of a deferred inflow of resources. Answer (c) is correct because the proceeds from the sale of future revenues is an example of a deferred inflow of resources. Answers (a), (b), and (d) are incorrect because they represent deferred outflows of resources.
15. (a) The requirement is to identify the example of a deferred outflow of resources. Answer (a) is correct because the cost to acquire rights to future revenues is an example of a deferred outflow of resources. Answers (b), (c), and (d) are incorrect because they represent deferred inflows of resources.
16. (c) The requirement is to indicate where deferred outflows of resources are presented on government-wide financial statements. Answer (c) is correct because deferred outflows of resources are presented in a separate section following assets. Answers (a), (b), and (d) are incorrect because deferred outflows of resources are presented in a separate section following assets.
17. (a) GASB 9, para 19, indicates that "cash flows from operating activities include transactions of certain loan programs." These include "program loan" programs that are undertaken to fulfill a governmental responsibility, such as the loan program mentioned in this problem.
18. (a) GASB 34 (as amended), states that "The Board concluded that a government's basic financial statements should provide operational accountability information for the government as a whole, including information about the cost of services, operating results, and financial position." Therefore, answer (a) is correct.
19. (d) In accordance with governmental accounting standards, capital assets, exclusive of infrastructure assets, are reported on the government-wide statement of net position at cost less accumulated depreciation. In the case involving Fullerton City, the amount reported under assets is \$2,750,000, computed by subtracting \$750,000 of accumulated depreciation from the \$3,500,000 cost of the capital assets.
20. (b) In the net position section of the government-wide statement of net position, governmental accounting standards require that capital assets be reported as net investment in capital assets which is capital assets net of depreciation and related debt and any related deferred outflows of resources and deferred inflows of resources. In the case of Fullerton City, the amount reported would be \$1,500,000, computed by subtracting \$1,250,000 from \$2,750,000.

- 21. (b)** In accordance with governmental accounting standards, depreciation expense on infrastructure assets is not required if the government chooses the modified approach. Under the modified approach, infrastructure assets are reported on the government-wide statement of net position at their cost without reduction for accumulated depreciation. On the government-wide statement of activities, the cost to extend the life of the infrastructure assets is reported as an expense, and certain information about infrastructure assets is disclosed as required supplementary information.
- 22. (c)** The requirement is to select the item that reflects the amount that should be presented as a liability related to the pension plan. Answer (c) is correct because GASB 68 requires recognition of the net pension liability which is equal to the portion of the actuarial present value of projected benefit payments attributable to past periods of employee service minus the pension plan's fiduciary net position.
- 23. (b)** The requirement is to identify the method required by GASB 68 to attribute the actuarial present value of projected benefit payments of each employee to periods. Answer (b) is correct because GASB 68 requires use of the entry age actuarial cost method.
- 24. (a)** The requirement is to identify the period over which the effects of differences in expected and actual investment returns is recognized. Answer (a) is correct because the effects are recognized over a closed period of five years.
- 25. (b)** The requirement is to identify the rate that should be used to discount projected future payments if the pension plan's net fiduciary position is not expected to be sufficient to make projected benefit payments. Answer (b) is correct because GASB 68 requires the use of the rate for 20-year, tax-exempt general obligation municipal bonds with an average rating of AA/Aa or higher.
- 26. (c)** According to governmental accounting standards, the government-wide statement of activities should be prepared using the accrual basis of accounting and the flow of economic resources measurement focus. As a result, capital assets are reported as assets and depreciated over their useful lives, and depreciation expense should be reported on the statement of activities. The statement of revenues, expenses, and changes in fund net position prepared for the proprietary funds is also prepared using the accrual basis of accounting and the flow of economic resources measurement focus. Therefore, capital assets are depreciated over their useful lives, and depreciation expense is reported on the statement of revenues, expenses, and changes in fund net position.
- 27. (d)** According to governmental accounting standards, governments should prepare government-wide financial statements based upon the accrual basis of accounting and the economic resources measurement focus. In addition to the government-wide financial statements, governments are also required to report financial statements for governmental funds, proprietary funds, and fiduciary funds. The financial statements for governmental funds are based upon the modified accrual basis and the financial resources measurement focus, while the financial statements for proprietary and fiduciary funds are based upon the accrual basis of accounting and the flow of economic resources measurement focus.
- 28. (d)** According to GASB 34 (as amended), infrastructure assets are required to be reported on the government-wide statement of net position. The use of the modified approach for infrastructure assets means that these assets are not depreciated if certain conditions are satisfied. However, infrastructure assets are reported on the statement of net position, even if they are not depreciated. According to GASB 34 (as amended), component units are reported on the entity-wide financial statements. They are not reported on the financial statements of the governmental funds.
- 29. (c)** A fund is defined as a fiscal and accounting entity with a self-balancing set of accounts. These funds record cash and other financial resources, together with all related liabilities and residual equities or balances, and changes therein, **and are segregated for the purpose of carrying on specific activities or attaining certain objectives** in accordance with special regulations, restrictions, or limitations.
- 30. (d)** GASB 9 indicates that cash flows from investing activities includes interest received as returns on investments. The candidate should note that this is different from SFAS 95, which classifies interest on investments as cash flows from operating activities.
- 31. (a)** The Governmental Accounting Standards Board (GASB) has the authority to establish standards of financial reporting for all units of state and local government. Upon its formation in 1984, GASB adopted the past pronouncements of its predecessor organization, the National Council on Governmental Accounting (NCGA), and guidelines in the *AICPA Audits of State and Local Governmental Units*, which the GASB later modified. The FASB sets standards for profit-seeking businesses, and not governmental units.
- 32. (c)** Prior to the issuance of GASB Statement 54, fund balance consisted of reserved and unreserved classifications. GASB Statement 54 establishes five fund balance classifications (nonspendable, restricted, committed, assigned and unassigned) for financial reporting purposes.
- 33. (b)** GASB Statement 54 includes definitions for governmental fund types (general, special revenue, capital projects, debt service and permanent funds). Special revenue funds are used to account for the proceeds of specific revenue sources that are restricted or committed.
- 34. (c)** Under GASB Statement 54, amounts that are constrained by the government's *intent* are classified in an assigned fund balance.
- 35. (b)** The requirement is to determine which event(s) should be included in a statement of cash flows for a government entity. Governmental funds do not have a statement of cash flows because they are accounted for on the modified accrual basis. A statement of cash flows is included for proprietary funds because they are accounted for on the accrual basis. The cash inflow from issuing bonds to finance city hall construction is accounted for in the governmental funds. The cash outflow from a city utility representing payments in lieu of property taxes is accounted for in the proprietary funds.

**36. (b)** Cash flows from sale of revenue bonds and capital contributed by subdividers are classified as cash flows from capital and related financing activities. Both the \$4,500,000 proceeds from sale of revenue bonds and \$900,000 capital contributed by subdividers would be reported as cash flows from capital and related financing activities. Cash flows from customer households are operating cash flows.

**37. (c)** The statement of cash flows is applicable to proprietary funds and governmental entities that use proprietary fund accounting, including public benefit corporations and authorities, governmental utilities, and governmental hospitals. PERS (Public Employee Retirement Systems) and pension trust funds are exempt from this requirement.

**38. (d)** In accordance with governmental accounting standards, there are three financial statements that should be prepared for proprietary funds. The financial statements for proprietary funds include

1. The statement of net position
2. The statement of revenues, expenses, and changes in fund net position
3. The statement of cash flows

**39. (a)** In accordance with GASB 34 (as amended), the focus of fund financial statements is on major and nonmajor funds, not on fund types. On the balance sheet for the governmental funds, the general fund is always reported as a major fund, while other funds are evaluated as major or nonmajor based upon criteria specified in GASB 34 (as amended). A separate column is required for each major fund, while all nonmajor funds are aggregated in a single column. On the balance sheet for the governmental funds, fund balances are reported in two categories—reserved and unreserved. The terms restricted and unrestricted are not used on the balance sheet for the governmental funds.

**40. (b)** The requirement is to identify the required financial statements for a proprietary fund. Answer (b) is correct because the required financial statements are the statement of net position, the statement of revenues, expenses and changes in fund net position, and the statement of cash flows. Answer (a), (c), and (d) are incorrect because they are not correct regarding the required financial statements.

**41. (c)** In accordance with governmental accounting standards, the statement of net position for proprietary funds should (1) report assets and liabilities in current and noncurrent classifications, and (2) report all the activities of internal service funds in a single column.

**42. (a)** According to governmental accounting standards, the financial statements of proprietary funds should be based upon the accrual basis of accounting and the economic resources measurement focus. Therefore, the statement of net position for proprietary funds is prepared on the accrual basis and the economic resources measurement focus. On the other hand, the financial statements prepared for governmental funds should be based upon the modified accrual basis of accounting and the financial resources measurement focus. Therefore, the statement of revenues, expenditures, and changes in fund balances

prepared for governmental funds is not prepared on the accrual basis and the economic resources measurement focus.

**43. (a)** According to governmental accounting standards, two financial statements should be prepared for fiduciary funds—the statement of fiduciary net position and the statement of changes in fiduciary net position. Fiduciary funds include pension trust, investment trust, private-purpose trust, and agency funds. Agency funds should be reported on the statement of fiduciary net position, but not on the statement of changes in fiduciary net position. Since agency funds report only assets and liabilities, they are reported on the statement of fiduciary net position, but they are not reported on the statement of changes in fiduciary net position.

**44. (b)** According to governmental accounting standards, private-purpose trust funds are fiduciary funds that should be reported on two fiduciary fund financial statements: (1) the statement of fiduciary net position and (2) the statement of changes in fiduciary net position. Therefore, private-purpose trust funds are reported on the statement of changes in fiduciary net position. According to governmental accounting standards, the government-wide statement of net position discloses information about governmental activities, business-type activities, and component units. Fiduciary activities are not disclosed on the government-wide financial statements. This means that private-purpose trust funds would not be reported on the statement of net position for governmental and business-type activities.

**45. (d)** According to governmental accounting standards, the statement of cash flows is prepared only for the proprietary funds. The statement of cash flows is not a government-wide financial statement. Therefore, governmental and fiduciary fund types are not reported on the statement of cash flows.

**46. (d)** According to governmental accounting standards, the statement of cash flows is prepared only for the proprietary funds. The statement of cash flows is not a government-wide financial statement. The format of the statement of cash flows consists of four sections. The sections include cash flows from (1) operating activities, (2) noncapital financing activities, (3) capital and related financing activities, and (4) investing activities. This format for the statement of cash flows is different from the format used by business enterprises that discloses operating, investing, and financing activities.

**47. (c)** According to governmental accounting standards, the balance sheet prepared for the governmental funds is based on the modified accrual basis of accounting and financial resources measurement focus. However, the government-wide statement of net position is prepared based on the accrual basis of accounting and the economic resources measurement focus. The differences between these two financial statements result in a difference between the amount reported for net position for governmental activities on the statement of net position and the amount reported for fund balances on the balance sheet for the governmental funds. Governmental accounting standards require that the reasons for this difference be reported in a reconciliation schedule. One of the reasons for the difference is the acquisition of capital assets by governmental funds during the year. These capital assets do not appear under assets

on the balance sheet of the governmental funds because they are recorded as expenditures using the modified accrual basis of accounting and the financial resources measurement focus. Therefore, the acquisition of capital assets has the effect of reducing the fund balances of governmental funds on the balance sheet. However, capital assets are reported as assets on the government-wide statement of net position. Capital assets acquired by governmental funds are reported on this statement as assets under governmental activities. Therefore, total assets related to governmental activities are not affected on the statement of net position when capital assets are acquired. Accordingly, capital assets used in governmental activities are items that are reported in the schedule that reconciles the net position of governmental activities with the fund balances of the governmental funds. The assets and liabilities of internal service funds are additional items that cause a difference between the fund balances of the government funds and the net position of governmental activities. The reason that the assets and liabilities of internal service funds cause a difference is that they are included with governmental activities on the statement of net position, thereby causing net position of governmental activities to increase. However, internal service fund assets and liabilities are not reported in the governmental fund financial statements; rather, they are included in the proprietary fund financial statements. Therefore, the fund balances of the governmental funds do not include these items. Accordingly, the assets and liabilities of internal service funds are reported in the schedule that reconciles the net position of governmental activities with the fund balances of the governmental funds.

**48. (c)** According to governmental accounting standards, the statement of revenues, expenditures, and changes in fund balances prepared for the governmental funds is prepared using the modified accrual basis of accounting and the financial resources measurement focus. However, the government-wide statement of activities is prepared using the accrual basis of accounting and the economic resources measurement focus. The differences between these two financial statements result in a difference between the amount reported for the change in net position for governmental activities on the statement of activities, and the amount reported for the net change in fund balances on the statement of revenues, expenditures, and changes in fund balances for the governmental funds. Governmental accounting standards require that the reasons for this difference be reported in a reconciliation schedule. One of the reasons for the difference is capital assets that were acquired by governmental funds during the year. On the statement of revenues, expenditures, and changes in fund balances, capital assets are reported as expenditures, using the modified accrual basis of accounting and the financial resources measurement focus. However, capital assets acquired by governmental funds are reported as assets and are depreciated on the government-wide statement of activities. Therefore, the difference between capital expenditures and depreciation expense is reported as a reconciling item. On the other hand, the revenues and expenses of internal service funds are additional items that cause a difference between the net change in the fund balances reported on the statement of revenues, expenditures, and changes in fund balances of the governmental funds and the change in the net position of governmental activities reported

on the statement of activities. The reason that the revenues and expenses of internal service funds cause a difference is that they are included with governmental activities on the statement of activities, thereby causing the net change in fund balances of governmental activities to increase. However, internal service fund revenues and expenses are not reported in the governmental fund financial statements; rather, they are included in the proprietary fund financial statements. Therefore, the net change in fund balances of the governmental funds do not include internal service fund revenues and expenses. Accordingly, the revenues and expenses of internal service funds should be reported in the schedule that reconciles the change in net position of governmental activities with the net change in the fund balances of the governmental funds.

**49. (c)** According to governmental accounting standards, the accrual basis of accounting and the economic resources measurement focus are concepts that go together. This means that financial statements prepared using the accrual basis also are based upon the economic resources measurement focus. Both the government-wide statement of net position and the statement of changes in fiduciary net position are prepared using the accrual basis of accounting and the economic resources measurement focus. The only financial statements that use the financial resources measurement focus are those prepared for governmental funds—the balance sheet and the statement of revenues, expenditures, and changes in fund balances.

**50. (a)** According to governmental accounting standards, pension trust funds are fiduciary funds that are reported on the statement of changes in fiduciary net position. On the statement of net position for proprietary funds, net position is disclosed in three classifications: (1) net investment in capital assets, (2) restricted, and (3) unrestricted. Retained earnings is not disclosed on the statement of net position for proprietary funds; the term “net position” is used as the equity account.

**51. (b)** According to governmental accounting standards, the statement of cash flows is prepared for proprietary funds. The statement format is not the same as that for business enterprises. The format for the statement of cash flows for proprietary funds contains four sections: (1) cash flows from operating activities, (2) cash flows from noncapital financing activities, (3) cash flows from capital and related financing activities, and (4) cash flows from investing activities. The cash flows from operating activities must be presented using the direct method. Cash paid for interest is not reported in the operating activities section. It would be disclosed either in the noncapital financing activities’ section or the capital and related financing activities’ section, depending upon where the debt that caused the interest payments was reported. Interest revenue received in cash is not reported in the operating activities’ section. It is reported in the investing activities’ section because this is where the investments were reported that resulted in the interest revenue.

**52. (b)** The governmental fund measurement focus is on determination of current financial position (sources, uses, and balances of financial resources), rather than upon income determination.

**53. (a)** Governmental fund revenues should be recognized in the accounting period in which they become available and

measurable. Governmental funds include the general fund, special revenue funds, capital projects funds, debt service funds, and permanent funds. Proprietary fund revenues should be recognized in the accounting period in which they are earned and become measurable. Proprietary funds include the enterprise and internal service funds. As the question requires the funds in which revenue is recognized in the period it becomes available and measurable, this would include the general fund but not the enterprise fund.

**54. (b)** GASB 33, para 7, indicates that “imposed nonexchange revenues result from assessments by governments on nongovernmental entities, including individuals, other than assessments on nonexchange transactions. Examples include property (ad valorem) taxes; fines and penalties....”

**55. (b)** The levy of property taxes is a nonexchange transaction. GASB 33 defines nonexchange transactions as transactions “in which a government gives (or receives) value without directly receiving (or giving) equal value in exchange.” Exchange transactions are transactions “in which each party receives and gives up essentially equal values.” In the case of a property tax levy, the government is receiving value, the right to receive payments from property owners, without directly giving equal value in return. The government services that are financed from a property tax levy are not provided to individual taxpayers in proportion to the amount of property taxes that are paid. The other answers are incorrect because they are examples of exchange transactions.

**56. (b)** Deferred inflow of resources should be credited upon receipt of the grant. Cash received from government-mandated grants should be reported as a deferred inflow when cash is received prior to meeting the timing eligibility requirement. Note that, if there was no time restriction placed on the government-mandated grant by the state, Elizabeth City would have reported revenue for the year ended June 30, 2012.

**57. (a)** According to the guidance provided in GASB 33, the grant from the state is an example of a government-mandated type of nonexchange transaction. Government-mandated nonexchange transactions exists when the providing government, such as a state government, requires the receiving government to expend the funds for a specific purpose.

**58. (c)** According to the guidance provided by GASB 33, sales tax revenues are an example of a derived tax revenue. Derived tax revenues result from taxes assessed by government on exchange transactions. In the case of sales taxes, exchange transactions between merchants and consumers provide the basis for the collection of the sales tax revenues.

**59. (c)** The general fund of Eldorado should report the sales taxes to be received in July 2012 as revenue for the year ended June 30, 2012. Under the modified accrual measurement focus, the sales taxes should be reported as revenue for the year ended June 30, 2012, because the sales taxes are available to finance expenditures made in the year ended June 30, 2012.

**60. (c)** According to the guidance provided by GASB 33, property tax revenues are an example of an imposed tax revenue. Imposed revenues result from taxes and other assessments imposed by governments that are not derived from underlying transactions.

**61. (b)** In accordance with GASB 33, the modified accrual basis of accounting should be used for recording and reporting property tax revenues for the general fund on the statement of revenues, expenditures, and changes in fund balances. Under the modified accrual basis of accounting, revenues are recognized in the period when they are both measurable and available to pay for expenditures incurred during the current fiscal period. With respect to property tax revenues, “available” means collected during the year and within the first sixty days after the end of the year. For the general fund of Karsten City, the property taxes collected in 2012 of \$850,000 as well as the \$100,000 expected to be collected by March 1 of 2013 would be added to get the property tax revenues recognized in 2012. The sum of \$950,000 of property tax revenues would be reported by the general fund on the statement of revenues, expenditures, and changes in fund balances for the year ended December 31, 2012. The journal entries to record the property tax levy and collections for 2012 appear below.

Property taxes receivable—Current	1,000,000	
Property tax revenues (\$850,000 + 100,000)		950,000
Deferred inflow (report below liabilities on the balance sheet)		40,000
Allowance for estimated uncollectible property taxes—		
Current		10,000
Cash	850,000	
Property taxes receivable—		
Current		850,000

The deferred inflow account of \$40,000 represents the property taxes expected to be collected after March 1, 2013. Because the taxes are expected to be collected after sixty days from the end of 2012, the taxes are not considered available to pay for expenditures incurred in 2012. This is the reason for crediting deferred inflow in 2012.

**62. (d)** In accordance with GASB 33, imposed nonexchange transactions include taxes and other assessments derived from underlying transactions. Examples include property taxes, special assessments, and fines and forfeits. For the general fund of Ward Village, imposed nonexchange transactions would include property tax revenues of \$125,000 and fines of \$10,000. Sales taxes and income taxes would be classified as derived tax revenues.

**63. (a)** In accordance with GASB 33, the modified accrual basis of accounting should be used for recording and reporting revenues reported by the general fund on the Statement of Revenues, Expenditures, and Changes in Fund Balances. The modified accrual basis of accounting for revenues results in revenues being recognized in the period in which they are both measurable and available to pay for expenditures incurred during the current fiscal period. The sales tax advance of \$25,000 should be reported as revenue in 2012 because it was available to pay for expenditures incurred by the general fund in 2012. On the other hand, the cash received from property owners of \$20,000 should not be reported as revenue in 2012 because the money cannot be used to pay for expenditures incurred by the general fund in 2012. The property taxes received in December 2012 should be reported as a deferred

inflow of resources on the December 31, 2012 balance sheet for the general fund. Deferred inflow would appear below the liabilities classification. The entry to record both of the cash receipts in the general fund in December 2012 appears below.

Cash	45,000	
Sales tax revenues		25,000
Deferred inflow		20,000

**64. (c)** According to GASB 33, revenues that result from taxes assessed by government on exchange transactions are classified as derived tax revenues. Examples of derived tax revenue include sales taxes, income taxes, and motor fuel taxes. Property tax revenues and fines and forfeits are examples of revenues that come from imposed nonexchange transactions. Imposed nonexchange transactions are taxes and other assessments imposed by governments that are not derived from underlying transactions. Unrestricted government grants are an example of voluntary nonexchange transactions. This category includes grants and entitlements from one government to another where the providing government does not impose certain requirements on the receiving government.

**65. (d)** According to GASB 33, revenues that result from taxes and other assessments imposed by governments that are not derived from underlying transactions are categorized as imposed nonexchange transactions. Examples include property taxes, special assessments, and fines and forfeits. Income taxes, sales taxes, and motor fuel taxes are examples of derived tax revenues. Derived tax revenues result from taxes assessed by government on exchange transactions.

**66. (c)** The requirement is to identify the item that is not a requirement for a government to start capitalizing software costs. GASB 51 establishes three requirements to begin capitalizing the cost of an internally generated intangible asset: (1) the government must determine the objective and the service capacity of the project, (2) the government must establish the feasibility of the project, and (3) the government must establish its intention to complete or continue the project. There is no specific requirement in GASB 51 to have developed an accurate budget for the project. Therefore, answer (c) is correct.

**67. (c)** The requirement is to identify the item that correctly describes the proper accounting for the transfer of future revenue. Answer (c) is correct because a sale of future revenue should be recorded as deferred inflow of resources and recognized over the life of the agreement.

**68. (c)** The requirement is to identify the proper accounting for the arrangement. Answer (c) is correct because the city should record cash and a deferred inflow of resources in the amount of \$3 billion. Answer (a) is incorrect because the city should retain the asset on its financial statements. Answer (b) is incorrect because the revenue should be recognized over the term of the agreement. Answer (d) is incorrect because the \$3 billion in cash is received at the time of execution of the arrangement.

**69. (a)** To record the budget, Ridge would make the following journal entry:

Estimated Revenues Control	100,000	
Appropriations Control		80,000
Budgetary Fund Balance		20,000

Therefore, the Appropriations account is credited for the anticipated expenditures.

**70. (c)** To record the budget, Ridge would make the following journal entry:

Estimated Revenues Control	100,000	
Appropriations Control		80,000
Budgetary Fund Balance		20,000

Therefore, the Budgetary Fund Balance account is credited for the anticipated surplus of revenues over expenditures.

**71. (a)** Revenues to the general fund are defined as “increases in fund financial resources other than from interfund transfers and debt issue proceeds.” Transfers to a fund and debt issue proceeds received by a fund are classified as other financing sources of the fund. Therefore, in Maple’s budgetary entry, estimated revenues would be debited for the \$9,000,000 expected from property taxes, licenses, and fines. The Estimated Other Financing Sources account would be debited for the \$6,000,000, consisting of the debt issue proceeds and the interfund transfers.

**72. (b)** Assuming that encumbrance accounting is utilized by the city, the journal entry to record the issuance of purchase orders and contracts is a debit to Encumbrances Control and a credit to Budgetary Fund Balance—Reserved for Encumbrances for the amount of the purchase order or estimated cost of the contracts.

**73. (c)** As Cliff approves and issues its purchase orders, the purchase order amount (\$5,000,000) is recorded in the Encumbrances Control account. As the goods are received, the related purchase order amount of these goods (i.e., the amount that was originally recorded, \$4,500,000) is removed from the Encumbrances Control account. Therefore, at year-end, the amount of outstanding encumbrances is \$500,000. Keep in mind that the actual invoice amount is not the amount removed from the Encumbrances Control account. The invoice amount will be vouchered and charged to Expenditures Control.

**74. (d)** When Elm issued its purchase order, the following journal entry would have been made to encumber the amount:

Encumbrances Control	5,000	
Budgetary Fund Balance—		
Reserved for Encumbrances		5,000

When the supplies were received the following journal entries would have been made:

Budgetary Fund Balance—Reserved		
for Encumbrances	5,000	
Encumbrances Control		5,000
Expenditures Control	4,950	
Vouchers Payable		4,950

**75. (d)** When purchase orders for goods or services are approved and issued, the Encumbrances Control account is debited and the Budgetary Fund Balance—Reserved for Encumbrances is credited for the amount of the purchase orders. As goods are received or services are rendered the above encumbrance entry is reversed. Thus, the amount left in each would be zero. Note that the same amount is initially recorded in each of the accounts (i.e., the debit equals the credit). The same amount is also relieved from both accounts. A Budgetary Fund Balance—Reserved for Encumbrances in excess of a balance in the Encumbrances Control account indicates there has been a recording error.

**76. (b)** Encumbrances outstanding at year-end represent the estimated amount of the expenditures that could result if unperformed contracts in process at year-end are computed. Encumbrances outstanding at year-end are not expenditures or liabilities. Where appropriations do not lapse at year-end, encumbrances outstanding at year-end should be reported as reservations of fund balance for the subsequent year expenditures. Where appropriations lapse at year-end, the governmental unit may honor the contracts in progress at year-end or cancel them. If the governmental unit intends to honor them, the encumbrances outstanding at year-end should be disclosed by reservation of fund balance.

**77. (d)** When closing entries are made for a governmental unit, Estimated Revenues Control is credited for the same amount that it was debited for in the beginning of the period budget/entry. Also, Revenues Control is debited in the amount of recorded revenue for the year. In this case, Estimated Revenues Control would be credited for \$20,000,000 and Revenues Control would be debited for \$17,000,000 to close the books. Revenues Control and Estimated Revenues Control are not netted in the closing entry.

**78. (c)** The Budgetary Fund Balance account is debited upon budget adoption when the appropriations exceed the estimated revenues. The following entry is made when the budget is adopted:

Estimated Revenues Control	xx	
Budgetary Fund Balance	xx	
Appropriations Control		xx

At the end of the year, the budgetary accounts must be closed out. The budgetary closing entry is simply a reverse of the adoption entry.

Appropriations Control	xx	
Estimated Revenues Control		xx
Budgetary Fund Balance		xx

The Budgetary Fund Balance is debited at the beginning of the year when appropriations exceed the estimated revenues. An entry must be made to close the Budgetary Fund Balance account at the end of the year. Note that any differences between the budgetary revenues and appropriations and the actual revenues and expenditures and encumbrances do not affect the **Budgetary** Fund Balance account. They would, however, affect the Unreserved Fund Balance account when the operations accounts are closed out.

**79. (b)** The \$100,000 balance in the Fund Balance—Reserved for Encumbrances account indicates that there were open purchase orders at year-end. Since the appropriations do not lapse at year-end, the Fund Balance—Reserved for Encumbrances account will not be closed but will be reported as a separate line item in the fund balance section of the balance sheet. The term “reserve” indicates that the funds are not available for expenditure. Therefore, the \$100,000 cannot be included in the unreserved fund balance amount. Therefore, the amount of the Unreserved Fund Balance in the 2012 balance sheet would be \$300,000 (\$1,000,000 – \$600,000 – \$100,000).

**80. (b)** The closing of the general fund accounts is done by closing the budgetary accounts against each other and the actual revenue, expenditure and other accounts to the Unreserved Fund Balance. This is done most easily by reversing the beginning of the year budget entry in one entry and then using a separate entry to close the actual accounts to fund balance. The following entry would therefore be made to close the actual accounts to obtain the amount of increase in the fund balance:

<b>General Fund</b>		
Other Financing Sources Control	1,500,000	
Revenues Control	8,000,000	
Expenditures Control		5,000,000
Other Financing Uses Control		2,000,000
Fund Balance—Unreserved		2,500,000

The Appropriations account would be closed in the reversal of the budget entry and has no effect on fund balance.

**81. (c)** GASB 34 (as amended), indicates that proprietary funds (including enterprise funds) are to use accrual accounting. Paragraph 93 indicates that FASB pronouncements issued on or before November 30, 1989, are to be followed unless superseded by a GASB pronouncement. Accrual accounting recognizes interest expense over time; in this case, interest expense would be \$1,000,000 × .06 × 9/12 = \$45,000.

**82. (a)** Expenditure classification by object is based upon the type of items purchased or services obtained. Examples of “Current Operations” object of expenditure classifications are personal services, supplies, and other services and charges. Salaries are an example of classification by object. Function or program classifications provide information regarding the overall purpose or objectives of expenditures (i.e., police protection, sanitation, highways and streets, etc.). Activity classification provides data for calculating expenditures per unit of activity (i.e., street resurfacing).

**83. (c)** “When a property tax assessment is made, it is to finance the budget of a particular period, and the revenue produced from any property tax assessment should be recognized in the fiscal period for which it was levied, provided the ‘available’ criteria are met. ‘Available’ means then due, or past due and receivable within the current period, and collected within the current period or expected to be collected soon enough thereafter to pay liabilities of the current period. Such time thereafter shall not exceed

sixty days.” This is how property tax revenues are reported on the Statement of Revenues, Expenditures, and Changes in Fund Balances for governmental funds. Therefore, both the collections during 2012 of \$500,000 and the expected collections during the first sixty days of 2013 of \$100,000 would be reported as property tax revenues for 2012. Remember that the estimated uncollectible amounts are not reported on the operating statement as an offset to revenues, but rather are reported as a contra asset account. The governmental unit, in calculating the amount of the levy, factors in what has historically been uncollectible, so that the revenues in effect have already been adjusted.

**84. (b)** Under GASB Statement 33, imposed nonexchange revenues, including property taxes, should be recorded in the year for which budgeted. In this case, the amount would be \$690,000, the total levy less the estimated uncollectible amount.

**85. (d)** Interfund services provided and used are transactions that would be treated as revenues or expenditures/expenses if they involved organizations external to the government (i.e., **routine employer contributions from a general fund to a pension trust fund**, internal service fund billings to departments, enterprise funds billing for services provided to the general fund). The proper accounting for interfund services provided and used is to treat them as revenues in the fund providing the goods or services and **as expenditures/expenses in the fund receiving the goods or services**, exactly as if the transactions involved parties external to the government. Thus, answer (d) is correct because the general fund should record an expenditure for routine employer contributions to the pension trust fund. Answer (a) is incorrect because the contribution of enterprise fund capital by the general fund should be recorded in the general fund as a transfer. Answers (b) and (c) are incorrect because routine transfers between funds should also be recorded as transfers.

**86. (b)** Interfund services provided and used are treated as revenues or expenditures/expenses if they involved organizations external to the government (i.e., a city’s electric utility providing electricity to the general fund, internal service fund billings to departments, routine employer contributions from a general fund to a pension trust fund). The proper accounting for interfund services provided and used transactions is to treat them as revenues in the fund providing the goods or services and as expenditures/expenses in the fund receiving the goods or services, exactly as if the transactions involved parties external to the government. The general fund should recognize an expenditure for the amount billed by the city’s electric utility.

**87. (a)** The internal service fund and the enterprise fund use the accrual basis of accounting and both report net position, not fund balances. Net position is reported in the following manner: (1) net investment in capital assets, (2) restricted, and (3) unrestricted. The capital projects fund does not keep an inventory of supplies and therefore would not have a Fund Balance—Reserved for Inventory of Supplies. The general fund does maintain an inventory of supplies and would therefore have a Fund Balance—Reserved for Inventory of Supplies.

**88. (d)** The \$6,000,000 in property taxes would be accounted for in Ariba’s general fund, which is a governmental fund. The \$40,000 of net rental revenue (after depreciation) from a parking garage would be accounted for in an enterprise fund, which is a proprietary fund. An enterprise fund provides products or services to the public, such as the use of the parking garage. The \$100,000 interest earned on investments held for employees’ retirement benefits would be included in a trust fund (more than likely a pension trust fund).

**89. (c)** In accordance with GASB 34 (as amended), the balance sheet prepared for the governmental funds should be based on the current financial resources measurement focus and the modified accrual basis of accounting. This means that capital assets, such as police cars, are not reported on the balance sheet for governmental funds. Instead, the police cars are reported as expenditures on the statement of revenues, expenditures, and changes in fund balances for the year ended December 31, 2012.

**90. (b)** In accordance with GASB 34 (as amended), the government-wide statement of net position is prepared using the economic resources measurement focus and the full accrual basis of accounting. In the column for governmental activities, the police cars would be reported at \$32,500. This amount is the original cost of \$40,000 less accumulated depreciation of \$7,500. The use of full accrual accounting means that the police cars are depreciated. The depreciation expense is reported on the government-wide statement of activities. Depreciation expense would be \$7,500, computed by taking \$40,000 less the salvage value of \$10,000, and dividing by the useful life of four years.

**91. (a)** GASB 34 (as amended) requires use of the current financial resources measurement focus and the modified accrual basis of accounting for governmental funds. On the statement of revenues, expenditures, and changes in fund balances prepared for 2012 for the governmental funds, the acquisition of the police cars is reported as expenditures of \$40,000.

**92. (b)** According to GASB 34 (as amended), the statement of revenues, expenditures, and changes in fund balances prepared for governmental funds is based upon the modified accrual basis of accounting and the financial resources measurement focus. On the statement of revenues, expenditures, and changes in fund balances, the acquisition of police cars is reported as expenditures of \$75,000. The \$30,000 payment by the general fund to the pension trust fund is reported as an interfund services provided and used transaction. On the statement of revenues, expenditures, and changes in fund balances, the \$30,000 should be reported as expenditures. Therefore, the acquisition of the police cars and the pension transfer result in \$105,000 of expenditures being reported on the statement of revenues, expenditures, and changes in fund balances for the governmental funds.

**93. (c)** According to GASB 34 (as amended), the statement of revenues, expenditures, and changes in fund balances prepared for governmental funds is based upon the modified accrual basis of accounting and the financial resources measurement focus. On the statement of revenues, expenditures, and

changes in fund balances, the revenue from property taxes should be reported at \$750,000. The levy of \$800,000 less the 2% that was not expected to be collected results in \$784,000, of which \$750,000 was collected in 2012. Because the remaining \$34,000 was not expected to be collected within sixty days of the end of 2012, the \$34,000 is not considered available in 2012, and, therefore, it is not reported as revenue in 2012. At December 31, 2012, the \$34,000 should be reported as a deferred inflow on the balance sheet prepared for the governmental funds. Deferred inflows are reported below liabilities on this balance sheet. On the other hand, sales tax revenues for 2012 would be \$100,000. The amount of sales taxes that are expected to be received in mid-March of 2013 is not considered available in 2012, and should not be included in revenues on the statement of revenues, expenditures, and changes in fund balances prepared for the governmental funds for the year ended December 31, 2012. Therefore, property tax revenues and sales tax revenues for 2012 would be reported at \$850,000.

**94. (a)** According to governmental accounting standards, the government-wide statement of activities should be prepared based upon the accrual basis of accounting and the economic resources measurement focus. The statement of activities reports governmental activities, business-type activities, and component units. For the police cars that were purchased in 2012, this means that depreciation expense of \$12,000 would be reported under governmental activities. The police cars would be reported as assets on the government-wide statement of net position, and the depreciation expense for 2012 would be computed by dividing five years into \$75,000 less the salvage value of \$15,000. The transfer to the pension trust fund would be reported under governmental activities as an expense of \$30,000. The transfer is accounted for as an interfund services provided and used transaction in 2012. This means that the transfer would be reported in expenses under governmental activities for the year ended December 31, 2012. Therefore, \$42,000 of expenses result from the acquisition of the police cars and the pension transfer in 2012. These expenses would be reported on the government-wide statement of activities for 2012.

**95. (b)** According to governmental accounting standards, the government-wide statement of activities should be prepared based upon the accrual basis of accounting and the economic resources measurement focus. The statement of activities reports governmental activities, business-type activities, and component units. For 2012, property tax revenues should be reported at the full amount of the levy of \$800,000 less the 2% that was not expected to be collected. This means that \$784,000 would be reported for property tax revenues in 2012. The \$34,000 of property taxes that were not collected in 2012 are reported as revenues in 2012 because the statement of activities is based upon accrual accounting. For 2012, sales tax revenues should be reported at \$125,000. Sales tax revenues reported for 2012 include the \$100,000 collected during 2012 as well as the \$25,000 that will be collected in mid-March of 2013. The \$25,000 of sales taxes that will be collected in mid-March 2013 are reported as revenues in 2012 on the statement of activities because the sales taxes were collected by the state in 2012. The accrual basis of accounting mandates that the

\$25,000 be reported as revenue under governmental activities in 2012. Therefore, for the year ended December 31, 2012, a total of \$909,000 of revenues are reported for property taxes (\$784,000) and sales taxes (\$125,000) on the government-wide statement of activities.

**96. (c)** According to GASB 33, the grant received by Maple Township is an example of a voluntary nonexchange transaction in which the providing State government imposes purpose restrictions on the grant to Maple Township. Under modified accrual accounting, grant revenue should be recognized when it is both measurable and available. Applying these criteria to the grant, revenues should be recognized in the period that Maple received reimbursement from the state for the purchase of buses (\$60,000) and for bus maintenance (\$5,000). It is at the point of reimbursement that the grant becomes available.

**97. (b)** Special revenue funds are used to account for the proceeds of specific revenue sources (other than expendable trusts or for major capital projects) that are legally restricted to expenditures for specified purposes. Thus, the gasoline taxes to finance road repairs should be accounted for in a special revenue fund. The levies to property owners to install sidewalks would be recorded either in an agency fund (if special assessment debt is not backed by the government) or by a debt service fund (if the debt is backed by the government).

**98. (c)** A major special revenue fund is a governmental fund and therefore uses the modified accrual basis of accounting, not the accrual basis. Budgetary accounts should be used in the general fund and special revenue fund.

**99. (a)** The objective of a capital projects fund is to account for the financial resources to be used for the acquisition or construction of major capital facilities. The inflow of bond proceeds should be accounted for in the year received, regardless of when the bond proceeds are expended. Therefore, the \$5,000,000 of bond proceeds should be recorded in the capital projects fund in 2012, the year received. They should be treated as an "other financing source" in the operating statement of the fund. Note that the servicing of the debt will be accounted for in the debt service fund.

**100. (c)** Grants received by the capital projects fund from another governmental unit are considered revenues of the capital projects fund. Also, taxes or other revenues raised specifically for the capital projects fund are recorded as revenues of the fund. However, proceeds of debt issues should be recorded as proceeds of bonds/long-term debt and should be reported as another financing source in the operating statement. Similarly, resources transferred to the capital projects fund generally from the general or special revenue fund are recorded as transfers in and reported in the other financing sources section of the operating statement. Thus, Fir should report only the \$400,000 from the grant as a revenue. The \$600,000 consisting of the bond issue proceeds and general fund transfer should be reported as other financing sources.

**101. (c)** The requirement is to identify how an impaired capital asset that is no longer used by a government should

be reported in the financial statements. The correct answer is (c). GASB 42 indicates that the asset should be reported at the lower of carrying value or fair value. Answers (a) and (b) are incorrect because they are often elements of the carrying value of the asset. Answer (d) is incorrect because the required valuation is the lower of carrying value or fair value.

**102. (b)** The requirement is to identify when impairment of a capital asset should be recognized. The correct answer is (b). GASB 42 states that impairment of a capital asset should be recognized when an event or change in circumstance causes a decline in service utility of the asset, and (1) the decline is large in magnitude and (2) the event or change in circumstance is outside the normal life cycle of the capital asset.

**103. (d)** Governmental fund revenues and expenditures should be recognized on the modified accrual basis. Governmental funds include the general fund, special revenue funds, capital projects funds, debt service funds, and permanent funds. Proprietary fund revenues and expenses should be recognized on the accrual basis. Proprietary funds include enterprise funds and internal service funds. Fiduciary fund additions and deductions should be recognized on the accrual basis. Pension trust funds should be accounted for on the accrual basis.

**104. (a)** GASB 37, para 16, indicates that proceeds of long-term issues not recorded as fund liabilities should be reported as other financing sources in governmental funds. In addition, general long-term debt issue premiums should also be reported as other financing sources. GASB 34 (as amended) indicates that debt issue costs, including underwriter fees, should be reported as expenditures.

**105. (d)** Debt service funds are to account for the accumulation of resources for and payment of, general long-term debt principal and interest. The general fund does not account for resources restricted for payment of general long-term debt principal and interest.

**106. (a)** According to governmental accounting standards, the balance sheet prepared for governmental funds is prepared using the modified accrual basis of accounting and the flow of financial resources measurement focus. Under the modified accrual basis of accounting and the financial resources measurement focus, the bond issue costs of \$400,000 and the debt insurance costs of \$90,000 should be charged to expenditures in the debt service fund on June 30, 2012. This means that none of the costs will be reported as an asset on the governmental funds' balance sheet prepared at June 30, 2012.

**107. (c)** The requirement is to determine which fund should record receipts from a special tax levy to retire and pay interest on general obligation bonds. The correct answer is (c) because the debt service fund usually handles the repayment of general obligation long-term debt interest. A levy allocable to the debt service fund is recorded in the fund. Answer (a) is incorrect because levies for the purpose of paying interest do not get recorded in the general fund. The general fund records levies that do not have a specific purpose. Answer (b) is incorrect because capital projects funds are for construction or the purchase of fixed assets. Answer (d) is incorrect because special revenue funds are for earmarked revenue that is not to pay interest on general obligation debt.

**108. (d)** The bond premium amount is usually deemed to be another financing source in a governmental fund and is recorded as such when the bonds are sold. The premium is not capitalized and amortized.

**109. (a)** The GASB classifies three types of funds used in governmental accounting: governmental, proprietary, and fiduciary. Debt service funds are used to accumulate resources to pay general long-term debt of governmental funds. The debt service fund is not used in connection with either a trust fund or a proprietary fund.

**110. (c)** Cash received in the debt service fund from the general fund for debt service is recorded as a transfer. Cash payments of principal and interest on the debt are then recorded as expenditures in the debt service fund. The following entries would be made in the debt service fund:

Cash	xx	
Transfers In—General Fund		xx
Expenditures—Principal	xx	
Expenditures—Interest	xx	
Cash (Payable)		xx

**111. (a)** Interest on the general obligation bonds is payable on March 1 and September 1. The debt service fund accounts for the accumulation of cash to pay the interest and principal on general obligation bonds. However, interest on the bonds is not recorded until it is legally payable. On June 30, 2012, no interest is legally payable, so there would be no accrual of interest to be paid as of that date.

**112. (a)** According to GASB 52, land and other real estate held by an endowment as an investment should be reported at fair value at each reporting date. Therefore, answer (a) is correct. Answers (b), (c) and (d) are incorrect because GASB 52 requires the use of fair value.

**113. (a)** The debt service transactions of a special assessment issue for which the government is not obligated in any manner should be reported in an agency fund, rather than a debt service fund. The government's duties are limited to acting as an agent for the assessed property owners and the bondholders.

**114. (c)** Municipal solid waste landfills that use proprietary accounting (i.e., enterprise fund) should recognize as expense (and liability) a portion of the estimated total cost of closure and post closure in each period that the landfill accepts solid waste. Estimated total costs should be assigned to periods based on use rather than on the passage of time, using a formula based on the percentage of capacity used each period. Because Cy City's landfill operates as an enterprise fund, the city's 2012 expenses should include a portion of the year 2028 expected disbursements for both the final cover (I) and cost of equipment to monitor methane gas buildup (II).

**115. (a)** GASB 34 (as amended) clearly states that, in the government-wide statements, governmental activities normally include transactions that are reported in governmental and internal service funds.

**116. (b)** Internal service funds account for activities that produce goods or services to be provided to other departments

or governmental units on a cost reimbursement basis. Internal service funds also use the full accrual method of accounting. When the governmental units are billed, the internal service fund would record the following entry:

Billings to Departments	xx	
Operating Revenues		xx

**117. (d)** A proprietary fund is created to account for goods or services the governmental unit provides to benefit the general public. It uses the accrual basis of accounting and the flow of economic resources measurement focus (i.e., capital maintenance is an objective). Fixed assets and depreciation expense on them are recorded in such funds. Therefore, the \$210,000 expenditure for the parking meters would be capitalized and shown net of accumulated depreciation on Burwood’s June 30, 2012 balance sheet. Burwood’s net income for the year ending June 30, 2012, would be \$240,000 calculated as

Receipts from users	\$400,000
Expenses	
Depreciation—Parking meters	(70,000)
Salaries and other	(90,000)
Net income	<u>\$240,000</u>

**118. (d)** Enterprise funds are used to account for operations that are financed and operated in a manner similar to private business enterprises—where the intent of the government is that costs of providing goods or services to the general public on a continuing basis be financed or recovered primarily through user charges; or where the government has decided that periodic determination of net income is appropriate for accountability purposes. Accordingly, revenues from lotteries need to be matched with related expenses for prizes. Thus, lotteries should be accounted for in a fund type that uses full accrual accounting, most commonly an enterprise fund. In addition, the GASB Codification, Section H05, requires that hospitals be reported as a single enterprise fund when they are included as part of another government’s reporting entity.

**119. (d)** Depreciation of general fixed assets should **not** be recorded in the accounts of governmental funds. Depreciation of fixed assets accounted for in a proprietary fund should be recorded in the accounts of that fund. The determination of recording depreciation expense in a governmental unit’s fund does not change as a result of the funding source used to acquire the asset.

**120. (d)** An enterprise fund is used to account for operations where the intent of the governing body is to finance the cost of the operations through user charges or where the governing body has decided revenue, expenses, and net income information is necessary. A fund that accounts for the financing of an agency’s services to other government departments on a cost-reimbursement basis is an internal service fund.

**121. (c)** Cash flows from sale of revenue bonds and capital contributed by subdividers are classified as cash flows from capital and related financing activities. Both the \$5,000,000 proceeds from sale of revenue bonds and \$1,000,000 capital

contributed by subdividers would be reported as cash flows from capital and related financing activities. Cash flows from customer households are operating cash flows.

**122. (a)** Proprietary funds are used to account for a government’s ongoing organizations and activities that are similar to those often found in the private sector. The generally accepted accounting principles here are those applicable to similar businesses in the private sector; and the measurement focus is on **determination of net income**, financial position, and cash flows.

**123. (c)** As described in the GASB Codification, the aggregate lease liability is recorded as an expenditure and an “Other Financing Source” in the general fund. Therefore, Expenditures Control is debited. Answer (b) is incorrect because capital assets are not reported in the general fund. Answer (d) is incorrect because an entry needs to be recorded and posted on the books when equipment is acquired through noncancelable lease-purchase agreement. A memorandum entry is not sufficient. Answer (a) is incorrect because “Other Financing Uses” account is used for transfers out of a fund.

**124. (d)** The enterprise fund is a proprietary fund and all assets and liabilities of proprietary funds are accounted for and reported in their respective funds. Therefore, transactions for enterprise fund capital leases are accounted for and reported entirely within the enterprise fund. Equipment would be debited for \$150,000 in the enterprise fund.

**125. (c)** All assets and liabilities of proprietary funds are accounted for and reported in their respective funds. The entry to establish the capital lease in the internal service fund would include a debit to Equipment for \$150,000 and a credit to Capital Lease Payable for \$150,000. Using general business accounting, the entry to make the December 31, 2012 payment of \$65,000 would debit Capital Lease Payable for the principal of \$50,000 and Expenses Control for the interest of \$15,000, and credit Cash for \$65,000. The internal service fund is nonexpendable and **expenses (not expenditures)** are recognized on the full accrual basis. Expenses should only be debited for the interest of \$15,000, not for the principal of \$50,000.

**126. (c)** Per the GASB Codification, cash includes both cash and cash equivalents. Cash equivalents are highly liquid investments readily convertible into cash, usually maturing within three months (ninety days) or less from the date the entity **purchased** the security. Maturity is not measured from the original issuance date. Therefore, in this question, the three-month treasury bill would be included in cash and cash equivalents as well as the three-year treasury note. The three-year treasury note was purchased on 6/15/09 and matures 8/31/09. Therefore, it will be held less than ninety days. The correct answer is (c), \$80,000 (\$30,000 + \$50,000).

**127. (b)** Fiduciary funds are used to account for assets held by a governmental unit in a trustee capacity or as an agent for individuals, private organizations, other governmental units, and/or other funds. They include investment trust, private-purpose trust, pension trust, and agency funds. Therefore, the total fiduciary fund assets of Green Township at June 30, 2012, is \$300,000. The debt service fund is a governmental-type fund.

**128. (d)** The requirement is to identify the item that is not Required Supplementary Information under GASB 67. Answer (d) is correct because a ten-year schedule of interest rates used to discount the projected future benefits for the plan is not required. All of the others are Required Supplementary Information.

**129. (c)** Fiduciary funds (i.e., agency funds and trust funds) are used to account for assets held by a governmental unit in a trustee capacity or as an agent for individuals, private organizations, other governmental units, and/or other funds. The entry to record the 1% fee and the disbursement to the municipalities would be as follows:

Due to Various Municipalities	1,000,000	
Due to Grove County		10,000
General Fund Cash		990,000

Note that the general fund would make the following entry:

Due from Agency Fund	xxx	
Revenue from Tax Collec. Serv.		xxx

Agency funds have only assets and liabilities as accounts and do not record revenues, expenditures, or transfers. In addition, agency funds do not have net position.

**130. (a)** The entry to record the 2012 employer contribution in the Pension Trust Fund consists of a debit to Cash (or a “Due From” account) and a credit to Additions—Employer Contributions, both for \$11,000. The GASB Codification classifies this contribution as an interfund services provided and used transaction that would be treated as an addition if it involved organizations external to the governmental unit. Therefore, the GASB states that it should be accounted for as an addition for the pension trust fund. Answer (b) is incorrect because Other Financing Sources include transfers to a fund which are recurring, routine transfers from one fund to another. The employer contribution is not a transfer. Answer (c) is incorrect because “Due From” is a debit account and the question asks for the credit account. Answer (d) is incorrect because Pension Benefit Obligation is the actuarial present value of credited projected benefits. It measures the present value of pension benefits adjusted for the effects of projected salary increases and any step-rate benefits estimated to be payable in the future as a result of employer service to date. The employer contribution is not included in this definition.

**131. (b)** The employer pension contribution is an interfund services provided and used transaction, one that would be treated as an addition, revenue, expense, or expenditure if it involved organizations external to the governmental unit. In this case, the entry for the governmental-type fund would include a debit to Expenditures Control for \$11,000 and a credit to Cash (or a “Due To” account) for \$11,000. Answer (a) is incorrect because Other Financing Uses include transfers out of a fund, which are routine recurring transfers of resources from one fund to another. Consequently, the employer contribution does not fall under the category of an Other Financing Use. Answer (c) is incorrect because governmental funds use modified accrual accounting and

report expenditures, not expenses. Answer (d) is incorrect because Due To Pension Trust Fund could be the credit entry, and not the debit entry asked for in the question.

**132. (a)** On the government-wide statement of activities, transfers are reported between government activities and business-type activities. The business-type activities include the activities of enterprise funds, while the governmental activities include those of governmental funds and internal service funds. Transfers that are made to establish enterprise funds as well as yearly transfers to help subsidize enterprise funds are both reported as transfers, according to the guidance provided GASB 34 (as amended). On the other hand, billings by an enterprise fund to an internal service fund for services rendered are not reported as transfers on the statement of activities. This transition is a quasi-external transaction that should be reported on the statement of activities as an expense of governmental activities and as an operating revenue for business-type activities. The revenues and expenses of internal service funds are reported as governmental activities on the government-wide statement of activities.

**133. (c)** According to governmental accounting standards, the amount reported for transfers on the government-wide statement of activities represents transfers between governmental activities and business-type activities. Examples of transfers would be permanent transfers from governmental activities to business-type activities in order to establish enterprise funds and annual transfers from governmental activities to help subsidize enterprise fund activities. The activities of internal service funds are included with governmental activities, while the activities of enterprise funds are reported under business-type activities. The \$100,000 advance to an internal service fund constitutes a loan, and the general fund asset and internal service fund liability that result would be eliminated in preparing the government-wide statement of net position. Therefore, the advance would not be reported in transfers on the statement of activities. The \$25,000 billing by the enterprise fund to the general fund is recorded as a quasi-external transaction. Under governmental activities, \$25,000 would be included in expenses, while, under business-type activities, the \$25,000 would be reported as revenues. Therefore, the quasi-external transaction would not be reported in transfers. Finally, the \$30,000 transferred by the general fund to a debt service fund is recorded as a transfer in by the debt service fund and as a transfer out by the general fund. However, because both of these funds are reported in governmental activities, the transfer in and transfer out are eliminated in preparing the statement of activities and are not reported in the governmental activities column on the statement of activities. Therefore, the general fund transfer to the debt service fund would not be reported as a transfer on the statement of activities.

**134. (a)** According to governmental accounting standards, transfers are reported on the government-wide statement of activities. For transfers to be reported, they must be between governmental activities and business-type activities. Governmental activities include the activities of internal service funds, while business-type activities include the activities of enterprise funds. Two kinds of transfers that are reported on the statement of activities include (1) permanent

transfers either from governmental activities to business-type activities or from business-type activities to governmental activities and (2) recurring transfers from governmental activities to business-type activities or from business-type activities to governmental activities. Permanent transfers are typically made once, while the recurring transfers are typically made annually. The \$100,000 transfer from the general fund to an enterprise fund would be reported as a transfer on the statement of activities because it is an example of a permanent transfer. The \$1,000,000 transfer from the general fund to a capital project fund is a transfer made within governmental activities and, therefore, would not be disclosed as a transfer on the statement of activities. The \$5,000 reimbursement from the enterprise fund to the general fund is not reported as a transfer on the statement of activities. The effect of this transaction is to increase expenses under business-type activities and to decrease expenses under governmental activities.

**135. (a)** According to GASB 35, public colleges and universities that choose to report only business-type activities should present only the financial statements required for enterprise funds.

**136. (c)** According to GASB 35, public colleges and universities that choose to report both governmental and business-type activities should report both government-wide and fund financial statements.

**137. (b)** Both public and private colleges report tuition and fee income net of the amount provided for scholarships, for which no services are provided. On the other hand, scholarships provided in exchange for services are reported as an expense and are not deducted from revenues. As a result, the net tuition and fees would be the \$20,000,000 less the \$1,000,000 scholarships provided, not in exchange for services, or \$19,000,000.

**138. (d)** GASB Statement 35 provides that public colleges may choose to report as special-purpose entities engaged in business-type activities. GASB Statement 34 requires that special-purpose entities engaged only in business-type activities should prepare the statements required for enterprises funds, including a Statement of Revenues, Expenses, and Changes in Net Position. One requirement for that statement is that an operating income figure must be displayed (answer b). GASB Statement 34 (as amended) also indicates that contributions for plant and endowment purposes are not recorded as revenues but in separate categories; GASB Statement 35 illustrations show those items listed after revenues and expenses (answer c). GASB Statement 35 specifically requires that state appropriations must be reported as nonoperating income (answer a). Since answers (a), (b), and (c) are correct, answer (d) is the choice.

## Module 22: Not-for-Profit Accounting

### Overview

Nonprofit<sup>1</sup> organizations provide socially desirable services without the intention of realizing a profit. Nonprofit organizations are financed by user charges, contributions from donors and/or foundations, investment income, and government grants. The nature and extent of support depends upon the type of nonprofit organization.

Examples of private sector nonprofits would be private colleges (University of Chicago), private sector health care entities operated by religious or other nonprofit organizations, voluntary health and welfare organizations, and various “other” nonprofits, such as performing arts companies.

Examples of government nonprofits would be public colleges (Northern Illinois University), government hospitals, and government museums. Private sector nonprofit organizations have GAAP set primarily by the FASB; governmental nonprofit organizations have GAAP set primarily by the GASB.

In June of 1993, the FASB issued SFAS 116, *Accounting for Contributions Received and Contributions Made*, and SFAS 117, *Financial Statements of Not-for-Profit Organizations*. These standards are applicable to private sector not-for-profit organizations of all types. This module presents GAAP for private sector nonprofits under SFAS 116 and 117 (FASB ASC 958). The AICPA has developed two *Audit Guides* that correspond and add to the new FASB principles: (1) Not-for-Profit Organizations, and (2) Health Care Organizations. The *Not-for-Profit Guide* applies only to private sector not-for-profits. The *Health Care Guide* applies to all health care entities, private for-profit, private not-for-profit, and governmental.

Governmental nonprofits are not permitted to follow SFAS 116 and 117 (FASB ASC 958). (The definition of a government is provided in the introductory section of Module 21.) As applied to colleges, health care entities, and other not-for-profit organizations, that guidance has been outlined through different pronouncements.

First, in November 1999, the GASB issued Statement 35, *Basic Financial Statements—and Management’s Discussion and Analysis—for Public Colleges and Universities*. GASB 35 permits public colleges to report as special-purpose entities engaged in governmental or business-type activities, or both. Most four-year institutions are expected to report as special-purpose entities engaged only in business-type activities. Some community colleges may choose to report as special-purpose entities engaged in governmental activities due to the extent of state and local government tax support. The provisions of GASB 35 are outlined in Module 21.

Second, GASB 34 indicates that hospitals and other health care providers may be considered special-purpose entities that may be engaged in either governmental or business-type activities, or both. Most health care organizations will choose to report as special-purpose entities that are engaged in business-type activities. As a result, proprietary fund statements will be required for those health care entities. The AICPA Audit and Accounting Guide, *Health Care Organizations*, contains guidance for both private sector and governmental health care organizations; both are presented in this module.

Third, other governmental not-for-profit organizations (essentially governmental voluntary health and welfare and “other” not-for-profit organizations) also may be considered special-purpose entities that may be engaged in either governmental or business-type activities, or both. However, GASB 34 specifically permits these organizations that were using the “AICPA Not-for-Profit Model” upon adoption of GASB 34 to report as special-purpose entities engaged in business-type activities. These entities will present proprietary fund statements. The AICPA Audit and Accounting Guide, *Not-for-Profit*

A. FASB and AICPA Standards for Private Sector Nonprofits	984
B. College and University Accounting—Private Sector Institutions	993
C. Health Care Organization Accounting—Private Sector	995
D. Health Care Organization Accounting—Governmental	997
Key Terms	998
Multiple-Choice Questions	999
Multiple-Choice Answers and Explanations	1009

<sup>1</sup>The terms not-for-profit and nonprofit are used interchangeably here and in practice.

*Organizations*, applies only to private sector organizations and these principles are contained in this module; governmental not-for-profits are less significant and are not illustrated in this module.

The first section of this module presents the FASB and AICPA standards for all nongovernmental nonprofits, including private sector colleges, universities, and health care entities. The second section presents standards that apply primarily to private colleges and universities. The third and fourth sections present standards for health care entities; first for private sector health care entities; next for governmental health care entities. Module 21 presents standards for public colleges and universities. Before beginning the reading you should review key terms at the end of the module.

### A. FASB and AICPA Standards for Private Sector Nonprofits

FASB ASC 958 applies to private sector nonprofits subject to FASB guidance; they do not apply to governmental nonprofits subject to GASB guidance.

More recently, FASB issued Statement 124, *Accounting for Certain Investments Held by Not-for-Profit Organizations*. This statement requires fair value accounting for most equity and debt investments by not-for-profit organizations and requires reporting of realized and unrealized gains and losses directly in the Statement of Activities.

Most recently, FASB issued Statement 136, *Transfers of Assets to a Not-for-Profit Organization or Charitable Trust That Raises or Holds Contributions for Others*. This statement provides guidance regarding proper reporting by foundations and similar not-for-profits when funds are raised for others, as described in l.n. and o. below.

The FASB guidance is intended to eliminate the differences in accounting and reporting standards that existed previously between four types of not-for-profit organizations. While some differences exist, for example, in functional categories reported, private sector nonprofit colleges and universities, health care entities, voluntary health and welfare organizations, and “other” organizations follow the basic guidance in the FASB standards; some differences between health care entities and other private sector not-for-profits will be illustrated later. The section lists a number of basic requirements, illustrates financial statements, and presents a few journal entries as required by SFAS 116, 117, 124, and 136 (FASB ASC 958). All illustrations are for a general nongovernmental not-for-profit organization, but remember that the principles apply to all four types (colleges and universities, health care organizations, voluntary health and welfare organizations, and “other” not-for-profit organizations).

#### 1. Important Features of the FASB Guidance

- a. The standards apply to **all** nongovernmental nonprofit organizations, except those that operate for the direct economic benefit of members (such as mutual insurance companies). General FASB standards, unless specifically prohibited by those standards or do not apply because of their nature (capital stock, etc.) or unless modified by these standards, are presumed to apply.
- b. Net assets are divided into three classes: unrestricted, temporarily restricted, and permanently restricted. Fund classifications are not reported, unless the information can be shown as subdivisions of the three major classes. To be restricted, resources must be restricted by donors or grantors; internally designated resources are unrestricted. Only contributed resources may be restricted.
- c. Permanently restricted resources include (1) certain assets, such as artwork, etc. that must be maintained or used in a certain way, (2) endowments, which represent resources that must be invested permanently with income to be used for either restricted or unrestricted purposes, and (3) land, when that land must be held in perpetuity.
- d. Temporarily restricted resources include unexpended resources that are to be used for a particular purpose, at a time in the future, or are to be invested for a period of time (a term endowment). Temporarily restricted resources might also be used for the acquisition or receipt of a gift of plant and would represent the undepreciated amount. As the plant is depreciated, the amount depreciated would be reclassified from temporarily restricted net assets to unrestricted net assets and shown as a deduction from unrestricted revenues, gains, and other support on the statement of activities. Alternatively, plant may be initially recorded as unrestricted.
- e. Unrestricted resources include all other resources including unrestricted contributions, the net amount from providing services, unrestricted income from investments, etc. Resources are presumed to be unrestricted, unless evidence exists that donor-imposed restrictions exist. As mentioned above, undepreciated plant may be included as unrestricted or temporarily restricted.
- f. Statements required are (1) Statement of Financial Position, (2) Statement of Activities, and (3) Statement of Cash Flows. Certain note disclosures are also required and others recommended. In addition, voluntary health and welfare organizations are required to report a Statement of Functional Expenses that show expenses by function and by natural classifications.
- g. The Statement of Financial Position reports assets, liabilities, and net assets. Organization-wide totals must be provided for assets, liabilities and net assets, and net assets must be broken down between unrestricted, temporarily restricted, and permanently restricted.

- h. The Statement of Activities reports revenues, expenses, gains, losses, and reclassifications (between classes of net assets). Organization-wide totals must be provided. Separate revenues, expenses, gains, losses, and reclassifications for each class may or may not be reported, but the changes in net assets for each class must be reported.
- i. Revenues, expenses, gains, and losses are reported on the full accrual basis. A revenue is presumed to be unrestricted unless donor-imposed restrictions apply, either permanent or temporary. A presumption is made, in the absence of contrary information, that a given expense would use restricted resources first, rather than unrestricted resources. Revenues and expenses should be reported at gross amounts; gains and losses are often reported net. Investment gains and losses may be reported net.
- j. Unconditional contributions are to be recorded as assets (contributions receivable) and as revenues (contribution revenue). However, a donor-imposed **condition** causes a not-for-profit organization to not recognize either a receivable or a revenue. A donor-imposed condition specifies a future or uncertain event whose occurrence or failure to occur gives the promisor a right of return of the assets transferred or releases the promisor from its obligation to transfer the assets promised.

#### EXAMPLE

A not-for-profit organization receives a pledge from a donor that she will transfer \$1,000,000 if matching funds can be raised within a year. The \$1,000,000 would not be recognized as a revenue until the possibility of raising the matching funds is reasonably certain.

- k. Multiyear contributions receivable would be recorded at the present value of the future collections. Moneys to be collected in future years would be presumed to be temporarily restricted revenues (based on time restrictions) and then reclassified in the year of receipt. The difference between the previously recorded temporarily restricted revenue at present value amounts and the current value would be recorded as contribution revenue, not interest. **All** contributions are to be recorded at fair market value as of the date of the contribution.
- l. Organizations making the contributions, including businesses and other nonprofits, would recognize contribution expense using the same rules as followed by the receiving organization.
- m. Contributions are to be distinguished from exchange revenues. The *Not-for-Profit Guide* indicates criteria that indicate when an increase in net assets is a contribution and when it is an exchange revenue; the most important rule is that if nothing is given by the not-for-profit organization in exchange in a transaction, that transaction would be considered a contribution. Contributions are recognized as additions to any of the net asset classifications. Exchange revenues (tuition, membership dues, charges for services, etc.) are increases in unrestricted net assets and are recognized in accordance with GAAP as applied to business enterprises.
- n. Accounting standards require that when a not-for-profit organization (such as a foundation) is an **intermediary** or an **agent** for the transfer of assets to another not-for-profit organization, that intermediary or agent would not recognize a contribution. Unless the intermediary or agent not-for-profit organization is granted **variance power** to redirect the resources, or unless it is financially interrelated, the receipt of resources would be offset with the recognition of a liability to the recipient organization. If variance power exists, the recipient organization would recognize contribution revenue.
- o. Accounting standards also require that the recipient organization recognize a revenue when the intermediary or agent recognizes a liability. When the intermediary or agent and the beneficiary are **financially interrelated**, the intermediary or agent would recognize contribution revenue; the beneficiary would recognize its interest in the net assets of the intermediary or agent.
- p. Expenses are to be reported by function either in the statements or in the notes. The FASB does not prescribe functional classifications but does describe functions as program and supporting. Major program classifications should be shown. Supporting activities include management and general, fund raising, and membership development. Other classifications may be included, such as operating income, but are not required, except for health care entities. All expenses are reported as decreases in unrestricted net assets.
- q. Plant is recorded, as mentioned above, either as temporarily restricted or unrestricted, and depreciated. Depreciation is to be charged for exhaustible fixed assets.

- r. An entity may or may not capitalize “collections.” “Collections” are works of art, historical treasures, and similar assets if those assets meet all of the following conditions:
- (1) They are held for public exhibition, education, or research in furtherance of public service rather than financial gain;
  - (2) They are protected, kept encumbered, cared for, and preserved;
  - (3) They are subject to an organizational policy that requires the proceeds from sales of collection items to be used to acquire other items for collections.
- If collections are not capitalized, revenues (contributions) would not be recognized for donated collections. Extensive note disclosure regarding accessions, disposals, etc. are required.
- s. Investments in all debt securities and investments in equity securities that have readily determinable fair values (except equity securities accounted for under the equity method and investments in consolidated subsidiaries) are to be reported at fair value in the Statement of Net Assets. Unlike accounting standards for business enterprises, all unrealized gains and losses are to be reflected in the Statement of Activities along with realized gains and losses, in the appropriate net asset class.
- t. Contributed services, when recognized, are recognized as both revenue and expense. However, contributed services should be recognized only when the services: (1) create or enhance nonfinancial assets, or (2) require specialized skills, are provided by individuals possessing those skills, and would typically be purchased if not provided by donation.

#### EXAMPLE

Jenna Wu, an attorney, provides necessary legal services to a not-for-profit organization gratis. The value of these services may be recognized by the not-for-profit as contributed services because they require specialized skills, are provided by an individual possessing those skills, and would typically be purchased if not provided by Jenna.

- u. All expenses are reported as unrestricted. Expenses using resources that are temporarily restricted, including depreciation of plant, would be matched by a reclassification of resources from temporarily restricted to unrestricted net assets.
- v. The “Reclassification” category of the Statement of Activities is unique. Sometimes “Reclassifications” are called “Net Assets Released from Restrictions.” Reclassifications generally include (1) satisfaction of program restrictions (a purpose restriction by a donor), (2) satisfaction of equipment acquisition restrictions (depreciation of assets classified as temporarily restricted), (3) satisfaction of time restrictions (donor actual or implied restrictions as to when funds be used), and (4) expiration of term endowment.
- w. Cash Flow statements are required for nonprofit organizations. The three FASB categories (operating, investing, and financing) are to be used. As is true for business organizations, either the direct or indirect method may be used. The indirect method, or reconciliation schedule for the direct method, will reconcile the change in **total** net assets to the net cash used by operating activities. Restricted contributions for long-term purposes (endowments, plant, future program purposes, etc.) are reported as financing activities.
- x. Note disclosures are required for all items required for generally accepted accounting principles that are relevant to nonprofit organizations. In addition, specific requirements of SFAS 117 (FASB ASC 958) include (1) policy disclosures related to choices related to restricted contributions received and expended in the same period, and to the recording of plant as temporarily restricted or unrestricted, and (2) more detailed information regarding the nature of temporarily and permanently restricted resources.
- y. The FASB specifically encourages note disclosures on (1) detail of the reclassification, (2) detail of investments and (3) breakdown of expenses by function and natural classifications (except for Voluntary Health and Welfare Organizations, which must include this information in a Statement of Functional Expenses).
- z. The *Not-for-Profit Guide* provides guidance for **split-interest agreements**, such as charitable lead trusts and charitable remainder trusts. Split-interest agreements represent arrangements whereby both a donor (or beneficiary) and a not-for-profit organization receive benefits, often at different times in a multiyear arrangement. Specific rules exist for each type of split-interest agreement. The general rule is that the not-for-profit will record revenues in an amount equal to the present value of anticipated receipts.

**EXAMPLE**

Roger Smith established a charitable lead trust for a donation to the Salvation Army. Roger put \$1,000,000 in the trust to be invested for 10 years. The Salvation Army receives the trust income for the 10-year period. At the end of the 10-year period, the principal of the trust goes to Roger's children.

- aa. FASB requires that fund-raising expenses be reported either on the face of the financial statements or in the notes. AICPA Statement of Position 98-2 indicates that when an activity, such as a mailing, might involve fund-raising and either program or management and general activities, it is presumed to be fund-raising unless three criteria exist. Those criteria are
- (1) **Purpose.** The activity has more than one purpose, as evidenced by whether compensation or fees for performing the activity are based strictly on the amount raised or on the performance of some program and/or management and general activity.
  - (2) **Audience.** If the audience is selected on the basis of its likelihood to contribute to the not-for-profit, this criterion is not met.
  - (3) **Content.** In order for this criterion to be met, the mailing or event must include a call to action other than raising money. For example, a mailing from the American Cancer Society might call for recipients to have regular check-ups, to exercise, to eat the right kinds of food, etc.

Expenses related to soliciting funds other than contributions and membership dues (e.g., promoting sales of goods or services to customers, responding to government or foundation proposals for customer-sponsored contracts for goods and services, etc.) are not presented as fund raising. Instead they are presented as a part of management and general activities.

## 2. Illustrative Financial Statements

The FASB requires three financial statements for nongovernmental, not-for-profit organizations, including (1) Statement of Financial Position, (2) Statement of Activities, and (3) Statement of Cash Flows. Voluntary health and welfare organizations (such as the American Red Cross, a mental health association, or a Big Brothers/Big Sisters organization) are required to prepare a fourth statement, a Statement of Functional Expenses. The first three of these statements are described and illustrated below.

- a. **Statement of Financial Position.** A Balance Sheet or Statement of Financial Position must show total assets, total liabilities, and total net assets. Net assets must be broken down between those that are unrestricted, temporarily restricted, and permanently restricted. Assets and liabilities may be classified or reported in order of liquidity and payment date. Assets restricted for long-term purposes must be reported separately from those that are not. The comparative format illustrated is optional; entities may report only balances for one year. Contributions receivable are to be reported at the present value of future receipts. Investments in securities with determinable fair values are to be reported at fair value. The following reflects one of the permissible formats of FASB ASC 958:

*Not-for-Profit Organization*  
**STATEMENTS OF FINANCIAL POSITION**  
*June 30, 20X1 and 20X0*  
 (in thousands)

	20X1	20X0
<i>Assets</i>		
Cash and cash equivalents	\$ 75	\$ 460
Accounts and interest receivable	2,130	1,670
Inventories and prepaid expenses	610	1,000
Contributions receivable	3,025	2,700
Short-term investments	1,400	1,000
Assets restricted to investment in land, buildings, and equipment	5,210	4,560
Land, buildings, and equipment	61,700	63,590
Long-term investments	218,070	203,500
Total assets	<u>\$292,220</u>	<u>\$278,480</u>

**Liabilities and net assets**

Accounts payable	\$ 2,570	\$ 1,050
Refundable advance		650
Grants payable	875	1,300
Notes payable		1,140
Annuity obligations	1,685	1,700
Long-term debt	<u>5,500</u>	<u>6,500</u>
Total liabilities	<u>10,630</u>	<u>12,340</u>

**Net assets**

Unrestricted	115,228	103,670
Temporarily restricted	24,342	25,470
Permanently restricted	<u>142,020</u>	<u>137,000</u>
Total net assets	<u>281,590</u>	<u>266,140</u>
Total liabilities and net assets	<u>\$292,220</u>	<u>\$278,480</u>

SOURCE: SFAS 117, page 56

**b. Statement of Activities.** Note the following from the example Statement of Activities:

- (1) Contributions, income on long-term investments, and net unrealized and realized gains on long-term investments may increase unrestricted, temporarily restricted, and permanently restricted net assets. All of these revenue sources increase unrestricted net assets unless restricted by donors.
- (2) Fees increase unrestricted net assets. All exchange revenues increase unrestricted net assets. Exchange revenues include admissions charges, fees, and membership dues.
- (3) Net unrealized gains are shown together with realized gains and investments. FASB prohibits displaying net unrealized and realized gains separately.
- (4) All expenses decrease unrestricted net assets. (Losses, such as the actuarial loss, may decrease restricted net assets.)
- (5) At some point net assets are released from restrictions (reclassified) from temporarily restricted to unrestricted net assets. This might be for satisfaction of program restrictions, satisfaction of equipment acquisition restrictions, expiration of time restrictions, or expiration of term endowments. Note that when net assets are released from restrictions, temporarily restricted net assets decrease and unrestricted net assets increase.
- (6) Expenses are broken down between programs (A, B, C) and supporting (management and general, fund-raising). While the FASB does not require these functional breakdowns, the FASB does have two requirements.
  - (a) Expenses must be reported by function in the notes if not in this statement, and
  - (b) Fund-raising expenses must be disclosed in the notes, if not in this statement.

The FASB permits other formats. For example, some entities prepare two statements.

- (a) Statement of Revenues, Expenses, and Changes in Unrestricted Net Assets, and
- (b) Statement of Changes in Net Assets.

Regardless of the format used, the change in net assets must be reported, by net asset class and in total.

**Not-for-Profit Organization**

- c. **Statement of Cash Flows.** In general, the FASB rules for cash flow statements, required for business enterprises, apply to not-for-profit organizations.

**NOTE:** GASB rules, illustrated in Module 21, do not apply. The only major difference is that cash receipts for contributions restricted for long-term purposes are classified as financing activities.

*Not-for-Profit Organization*  
**STATEMENT OF CASH FLOWS**  
*Year Ended June 30, 20X1*  
(in thousands)

*Cash flows from operating activities:*

Cash received from service recipients	\$ 5,220
Cash received from contributors	8,030
Cash collected on contributions receivable	2,615
Interest and dividends received	8,570
Miscellaneous receipts	150
Interest paid	(382)
Cash paid to employees and suppliers	(23,808)
Grants paid	<u>(425)</u>
Net cash used by operating activities	<u>(30)</u>

*Cash flows from investing activities:*

Insurance proceeds from fire loss on building	250
Purchase of equipment	(1,500)
Proceeds from sale of investments	76,100
Purchase of investments	<u>\$(74,900)</u>
Net cash used by investing activities	<u>(50)</u>

*Cash flows from financing activities:*

Proceeds from contributions restricted for:	
Investment in endowment	200
Investment in term endowment	70
Investment in plant	1,210
Investment subject to annuity agreements	<u>200</u>
	<u>1,680</u>

*Other financing activities:*

Interest and dividends restricted for reinvestment	300
--	-----

Payments of annuity obligations	(145)
Payments on notes payable	(1,140)
Payments on long-term debt	<u>(1,000)</u>
	<u>(1,985)</u>

Contributions restricted for long-term investment	(2,740)
Interest and dividends restricted for long-term investment	(300)
Net unrealized and realized gains on long-term investments	<u>(15,800)</u>
Net cash used by operating activities	\$ <u>(30)</u>
<i>Supplemental data for noncash investing and financing activities:</i>	
Gifts of equipment	\$ 140
Gift of paid-up life insurance, cash surrender value	\$ 80

SOURCE: SFAS 117, pages 64-65.

### 3. Illustrative Transactions

#### a. Unrestricted revenues and expenses.

Under FASB guidance, full accrual accounting is used. A look at the Statement of Activities indicates that revenues might include contributions, fees, investment income, and realized and unrealized gains on investments. Expenses must be reported as unrestricted and reported by function, either in the statements or in the notes.

Assume the following unrestricted revenues:

Cash	1,000,000	
Contributions Receivable	200,000	
Accounts Receivable	100,000	
Interest Receivable	50,000	
Contributions—Unrestricted		700,000
Fees—Unrestricted		300,000
Income on Long-Term Investments—Unrestricted		350,000

Income earned from investments can be unrestricted, temporarily restricted, or permanently restricted depending on the wishes of the donor. If the donor does not specify, the investment income is unrestricted, even if the investment principal itself is permanently restricted.

Assume the following expenses, reported by function:

Program A Expense	400,000	
Program B Expense	300,000	
Program C Expense	200,000	
Management and General Expense	100,000	
Fund Raising Expense	200,000	
Cash		900,000
Accounts Payable		300,000

b. Purpose restrictions—temporarily restricted resources

Temporarily restricted resources are generally restricted by purpose, by time, and for the acquisition of plant. Assume that in 20X0 a donor gives \$100,000 in cash for cancer research and that the funds are expended in 20X1. In 20X0, the following entry would be made:

Cash	100,000	
Contributions—Temporarily Restricted		100,000

At the end of 20X0 the \$100,000 would be a part of the net assets of the temporarily restricted net asset class. In 20X1, the following entries would be made, assuming the funds are expended for cancer research.

Program A Expense (Research)	100,000	
Cash		100,000
Reclassifications from Temporarily Restricted Net Assets—		
Satisfaction of Program Restrictions	100,000	
Reclassifications to Unrestricted Net Assets—Satisfaction of		
Program Restrictions		100,000

**NOTE:** The assets are released from restriction by the expense, by conducting the research. Looking at the example statement of activities, the \$100,000 would be included as a part of the \$11,990,000 in program reclassifications.

c. Time restrictions—temporarily restricted resources

If a donor makes a contribution and indicates that the contribution should be used in a future period, that contribution would be recorded as a revenue in the temporarily restricted net asset class and then transferred to the unrestricted net asset class in the time period specified by the donor. In the absence of other information, if a pledge is made, the schedule of anticipated receipts would determine when the net assets are reclassified. Assume a \$100,000 pledge in late 20X0, intended to be used by the nonprofit organization in 20X1; the entry in 20X0 would be

Pledges receivable	100,000	
Contributions—Temporarily Restricted		100,000

At the end of 20X0, the \$100,000 would be reflected in the net assets of the temporarily restricted in class. In 20X1, the following entries would be made:

Cash	100,000	
Pledges receivable		100,000
Reclassifications from Temporarily Restricted Net Assets—		
Satisfaction of Time Restrictions	100,000	
Reclassifications to Unrestricted Net Assets—Satisfaction of		
Time Restrictions		100,000

The \$100,000 above would be a part of the \$1,250,000 in reclassifications for satisfaction of time restrictions in the statement of activities. Note that time, not an expense, determines when the asset is released from restrictions. In the special case of multiyear pledges, the present value of the future payments should be recorded as a revenue in the year of the pledge. In future years, the increase in the present value, due to the passage of time, is to be recorded as contribution revenue, not interest.

Finally, note that a time restriction might be explicit or implicit. An explicit time restriction would occur when a donor states specifically that the funds are for a certain year (this might be printed on pledge cards). An implicit time restriction reflects the provision that cash must be received from a donor during an accounting period, or the pledge will be assumed to carry a time restriction. The idea is that, if a donor wished a nonprofit to spend the money this year, the donor would have contributed the cash.

## d. Plant acquisition restrictions—temporarily restricted resources

Sometimes donors give moneys restricted for the acquisition of plant, often in connection with a fund drive. The resources, whether in the form of pledges, cash, or investments, would be held in the temporarily restricted net asset class until expended. When expended, the nonprofit organization has a choice of two options: (1) reclassify the resources to the unrestricted class and record the entire plant as unrestricted, or (2) record the plant as temporarily restricted and reclassify to unrestricted in accordance with the depreciation schedule. Under the first option, assume that a donor gives \$50,000 to a nonprofit organization in 20X0 for the purchase of equipment. The equipment is purchased in 20X1. The following entry would be made in the temporarily restricted class in 20X0:

Cash	50,000	
Contributions		50,000

In 20X1, the following entries would be made:

Equipment	50,000	
Cash		50,000
Reclassifications from Temporarily Restricted Net Assets—		
Satisfaction of Equipment Acquisition Restrictions	50,000	
Reclassification to Unrestricted Net Assets—Satisfaction of		
Equipment Acquisition Restrictions		50,000

The equipment would then be depreciated as a charge to expense in the unrestricted class as would be normal in business accounting. Remember that depreciation may be allocated to functional categories. Assume a ten-year life and that the equipment was purchased at the beginning of the year and that the equipment was used solely for Program A.

Program A Expense	5,000	
Accumulated Depreciation—Equipment		5,000

The above alternative has normally been used in the CPA Examination. When this is the case, the problem often states that, “the Not-for-Profit Organization implies no restriction on the acquisition of fixed assets.”

The second alternative is to record the equipment as an increase in temporarily restricted net assets and reclassify it over time. The entries are illustrated below. Assume the contribution was received but unexpended in 20X0.

Cash	50,000	
Contributions—Temporarily Restricted		50,000

Assume the equipment was acquired early in 20X1.

Equipment	50,000	
Cash		50,000

Note that the \$50,000 remains in temporarily restricted net assets. At the end of 20X1, the depreciation entry is made, and \$5,000 is reclassified.

Program A Expense	5,000	
Accumulated Depreciation—Equipment		5,000
Reclassification from Temporarily Restricted Net Assets—		
Satisfaction of Equipment Acquisition Restrictions	5,000	
Reclassification to Unrestricted Net Assets—Satisfaction of		
Equipment Acquisition Restrictions		5,000

Using the first alternative, at the end of 20X1, the net asset balance of \$45,000 would be in the unrestricted net asset class; in the second alternative, the \$45,000 net asset balance would be in the temporarily restricted net asset class.

e. Permanently restricted resources

Resources in the permanently restricted class are held permanently. An example would be an endowment, where a donor makes a contribution with the instructions that the amount be permanently invested. The income might be unrestricted or restricted for a particular activity or program. Assume that in 20X1 a donor gave \$100,000 for the purpose of creating an endowment. An entry would be made in the permanently restricted class (this would be part of the \$280,000 shown in the Statement of Activities).

Cash	100,000	
Contributions—Permanently Restricted		100,000

**NOTE:** Revenues can be recorded in any of the three net asset classes but expenses are recorded only in the unrestricted class. Note also that the expiration of restrictions is recorded by reclassifications.

f. Cash receipts resulting from the sale of donated financial assets that upon receipt had no imposed limitations for sale and were converted nearly immediately into cash shall be classified as operating cash flows. However, if the donor restricted the use of the contributed resource to a long-term purpose, the cash receipts should be classified as a financing activity.

**B. College and University Accounting—Private Sector Institutions**

Private colleges and universities are subject to the same guidance as other not-for-profit organizations that are included under the *Not-for-Profit Guide*. However, a few comments that specifically impact colleges and universities are in order.

1. Student tuition and fees are reported net of those scholarships and fellowships that are provided not in return for compensation.

**EXAMPLE**

Assume a university provides a scholarship based on grades, entering ACT or SAT, etc. The scholarship would be recorded as follows:

Cash	8,000	
Revenue Deduction—Student Scholarships	2,000	
Revenue—Student Tuition and Fees		10,000

2. Student graduate assistantships and other amounts given as tuition remissions (for example for full-time employees) that are given in return for services provided to the institution are charged as expenses, to the department and function where the services are provided.

**EXAMPLE**

Assume that an assistantship was given with services provided to the Biology Department. The assistantship would be recorded as follows:

Cash	8,000	
Expense—Instruction (Biology Department)	2,000	
Revenue—Student Tuition and Fees		10,000

3. The AICPA *Not-for-Profit Guide* specifically states that operation and maintenance of physical plant is not to be reported as a functional expense. Those costs, including depreciation, are to be allocated to other functions.
4. The *Not-for-Profit Guide* does not include examples of financial statements for colleges and universities, or other not-for-profit organizations. The illustrative statement of activities for an educational institution is taken from the *Financial Accounting and Reporting Manual for Higher Education* published by the National Association of College and University Business Officers. Many other formats are possible, as long as the changes in net assets are shown separately for unrestricted, temporarily restricted, and permanently restricted net assets.

**NOTE:** All expenses are reported as decreases in unrestricted net assets; losses may be reported as decreases in any of the net asset classes.

**NOW REVIEW MULTIPLE-CHOICE QUESTIONS 1 THROUGH 62****C. Health Care Organization Accounting—Private Sector**

The AICPA has issued an AICPA Audit and Accounting Guide, *Health Care Organizations*. This *Guide* applies both to private sector and governmental health care organizations; separate illustrative statements are presented for each. This section of the module presents private sector health care principles, first by indicating the unique features (beyond part A of this module) that apply and second by presenting illustrative statements. A few of the major features are as follows:

1. Requirements of the *Guide* apply to clinics, medical group practices, individual practice associations, individual practitioners, emergency care facilities, laboratories, surgery centers, other ambulatory care organizations, continuing care retirement communities, health maintenance organizations, home health agencies, hospitals, nursing homes, and rehabilitation centers. Sometimes, a fine line is drawn between those organizations that are considered health care entities and those that are considered voluntary health and welfare organizations, which are not covered by this *Guide*. The distinction is made by the source of revenues, not by the services provided. A nonprofit organization providing health care service in return for payment (an exchange transaction) by the recipient of the service, by a third-party payor, or a government program would be considered a health care organization. A nonprofit organization providing health care service funded primarily by voluntary contributions (from persons or organizations not receiving the service) would be considered a voluntary health and welfare organization.
2. Health care organizations may be not-for-profit, investor owned, or governmental. When possible, accounting and reporting for all types should be similar.
3. Financial statements include a balance sheet, a statement of operations, a statement of changes in net assets, a cash flow statement, and notes to the financial statements.
4. The statement of operations should include a performance indicator, such as operating income, revenues over expenses, etc. The *Guide* specifically indicates that the following must be reported separately from (underneath) that performance indicator (this is a partial list):
  - a. Equity transfers involving other entities that control the reporting entity, are controlled by the reporting entity, or are under the common control of the reporting entity.
  - b. Receipt of restricted contributions.
  - c. Contributions of (and assets released from donor restrictions related to) long-lived assets.
  - d. Unrealized gains and losses on investments not restricted by donors or by law, except for those investments classified as trading securities.
  - e. Investment returns restricted by donors or by law.
  - f. Other items that are required by GAAP to be reported separately (such as extraordinary items, the effect of discontinued operations, accounting changes).
5. Note disclosure must indicate the policies adopted by the entity to determine what is and what is not included in the performance indicator.
6. Patient service revenue is to be reported on the accrual basis net of adjustments for contractual and other adjustments in the operating statement. Provisions recognizing contractual adjustments and other adjustments (for example, hospital employee discounts) are deducted from gross patient revenue to determine **net patient** revenue. Significant revenue under capitation agreements (revenues from third party payors based on number of employees to be covered, etc. instead of services performed) is to be reported separately. Note disclosure should indicate the methods of revenue recognition and description of the types and amounts of contractual adjustments.
7. Patient service revenue does not include charity care. Management's policy for providing charity care and the level of charity care provided should be disclosed in the notes.
8. "Other revenues, gains, and losses" (included in operative revenues) include items such as
  - a. Investment income
  - b. Fees from educational programs
  - c. Proceeds from sale of cafeteria meals
  - d. Proceeds from gift shop, parking lot revenue, etc.

9. As is true for other not-for-profit organizations, contributions restricted to long-term purposes (plant acquisition, endowment, term endowment, etc.) would not be reported in the Statement of Operations (as unrestricted revenue) but would be reported in the Statement of Changes in Net Assets as a revenue increasing temporarily restricted or permanently restricted net assets, as appropriate.
10. Expenses are decreases in unrestricted net assets. Expenses may be reported by either natural (salaries, supplies, etc.) or functional classification. Not-for-profit health care entities must disclose expenses in the notes by function if functional classification is not presented on the operating statement. Functional classifications should be based on full cost allocations. Unlike organizations subject to the *Not-for-Profit Guide*, health care organizations may report depreciation, interest, and bad debt expense along with functional categories.
11. Health care organizations, except for continuing care retirement communities, are to present a classified balance sheet, with current assets and current liabilities shown separately. Continuing care retirement communities may sequence assets in terms of nearness to cash and liabilities in accordance with the maturity date.

Two statements are presented for a private sector not-for-profit hospital, both taken from the *Guide*. The statement of operations is presented with one line shown for “excess of revenues over expenses.” This is the performance indicator. Note the separation of items above and below that line. Also note the presentation separately for depreciation, interest, and provision for bad debts. In addition, note that the net assets released from restrictions includes separate amounts for those net assets released for operations and those released for other items. The statement of changes in net assets presents the other changes required by FASB ASC 958.

*Sample Not-for-Profit Hospital*

#### **D. Health Care Organization Accounting—Governmental**

Governmental health care organizations, as mentioned earlier, are not allowed to use the principles established in SFAS 116 and 117 for not-for-profit organizations. The AICPA *Health Care Guide*, however, attempts to present accounting and reporting principles allowed by the GASB in as close a fashion as possible to private sector health care entities. A few major observations should be noted.

1. Governmental health care organizations are permitted by GASB 34 to report as special-purpose entities engaged in governmental or business-type activities, or both. Most will choose to report as special-purpose entities engaged in business-type activities.
2. Governmental health care organizations reporting as special-purpose entities engaged in business-type activities will prepare the statements required for proprietary funds. These are the (a) Balance Sheets, (b) Statement of Revenues, Expenses, and Changes in Net Assets, and (c) Statement of Cash Flows.
3. GASB principles must be followed in the separate reports of governmental health care organizations. For example, net assets are to be categorized as (a) invested in capital assets, net of related debt; (b) restricted, and (c) unrestricted. The GASB cash flow format should be used. Refer to the proprietary fund example statements in Module 21.
4. To the extent possible, AICPA *Health Care Guide* principles should also be followed. For example, the items listed above in Section C.4. should be reported below the performance indicator, net patient revenue should be calculated in the same manner as described previously in C.6. and should not include charity care cases.

**NOW REVIEW MULTIPLE-CHOICE QUESTIONS 63 THROUGH 83**

**KEY TERMS**

**Contributions (of cash).** A voluntary transfer of resources to a charitable organization motivated by generosity.

**Contributions (of services).** A voluntary providing of personal services to a charitable organization.

**Permanently restricted resources.** Resources such as (1) certain assets, such as artwork, etc. that must be maintained or used in a certain way, (2) endowments that represent funds that must be invested permanently, and (3) land when it must be held in perpetuity.

**Split-interest agreement.** An arrangement whereby both a donor (or beneficiary) and a not-for-profit organization receive benefits (e.g., charitable lead trusts and charitable remainder trusts).

**Temporarily restricted resources.** Resources restricted to be (1) used for a particular purpose, (2) expended at a time in the future, or (3) invested for a period of time.

**Unrestricted resources.** All resources that do not have restrictions by donors or grantors.

## Multiple-Choice Questions (1–83)

### A. FASB and AICPA Standards for Private Sector Nonprofits

1. A statement of functional expenses is required for which one of the following private nonprofit organizations?
  - a. Colleges.
  - b. Hospitals.
  - c. Voluntary health and welfare organizations.
  - d. Performing arts organizations.
2. The statement of financial position (balance sheet) for Founders Library, a private nonprofit organization, should report separate dollar amounts for the library's net assets according to which of the following classifications?
  - a. Unrestricted and permanently restricted.
  - b. Temporarily restricted and permanently restricted.
  - c. Unrestricted and temporarily restricted.
  - d. Unrestricted, temporarily restricted, and permanently restricted.
3. Chicago Museum, a private nonprofit organization, has both regular and term endowments. On the museum's statement of financial position (balance sheet), how should the net assets of each type of endowment be reported?
 

Term endowments	Regular endowments
a. Temporarily restricted	Permanently restricted
b. Permanently restricted	Permanently restricted
c. Unrestricted	Temporarily restricted
d. Temporarily restricted	Temporarily restricted
4. Kerry College, a private not-for-profit college, received \$25,000 from Ms. Mary Smith on April 30, 2012. Ms. Smith stipulated that her contribution be used to support faculty research during the fiscal year beginning on July 1, 2012. On July 15, 2012, administrators of Kerry awarded research grants totaling \$25,000 to several faculty in accordance with the wishes of Ms. Smith. For the year ended June 30, 2012, Kerry College should report the \$25,000 contribution as
  - a. Temporarily restricted revenues on the statement of activities.
  - b. Unrestricted revenue on the statement of activities.
  - c. Temporarily restricted deferred revenue on the statement of activities.
  - d. An increase in fund balance on the statement of financial position.
5. Good Hope, a private not-for-profit voluntary health and welfare organization, received a cash donation of \$500,000 from Mr. Charles Peobody on November 15, 2012. Mr. Peobody directed that his donation be used to acquire equipment for the organization. Good Hope used the donation to acquire equipment costing \$500,000 in January of 2013. For the year ended December 31, 2012, Good Hope should report the \$500,000 contribution on its
  - a. Statement of activities as unrestricted revenue.
  - b. Statement of financial position as temporarily restricted deferred revenue.
  - c. Statement of financial position as unrestricted deferred revenue.
  - d. Statement of activities as temporarily restricted revenue.
6. On the statement of activities for a private not-for-profit performing arts center, expenses should be deducted from
  - I. Unrestricted revenues.
  - II. Temporarily restricted revenues.
  - III. Permanently restricted revenues.
  - a. I, II, and III.
  - b. Both I and II.
  - c. I only.
  - d. II only.
7. Albert University, a private not-for-profit university, had the following cash inflows during the year ended June 30, 2012:
  - I. \$500,000 from students for tuition.
  - II. \$300,000 from a donor who stipulated that the money be invested indefinitely.
  - III. \$100,000 from a donor who stipulated that the money be spent in accordance with the wishes of Albert's governing board.

On Albert University's statement of cash flows for the year ended June 30, 2012, what amount of these cash flows should be reported as operating activities?

  - a. \$900,000
  - b. \$400,000
  - c. \$800,000
  - d. \$600,000
8. Gamma Pi, a private nonprofit fraternal organization, should prepare a statement of financial position and which of the following financial statements?
  - I. Statement of activities.
  - II. Statement of changes in fund balances.
  - III. Statement of cash flows.
  - a. I, II, and III.
  - b. III only.
  - c. II and III.
  - d. I and III.
9. Save the Planet, a private nonprofit research organization, received a \$500,000 contribution from Ms. Susan Clark. Ms. Clark stipulated that her donation be used to purchase new computer equipment for Save the Planet's research staff. The contribution was received in August of 2012, and the computers were acquired in January of 2013. For the year ended December 31, 2012, the \$500,000 contribution should be reported by Save the Planet on its
  - a. Statement of activities as unrestricted revenue.
  - b. Statement of activities as deferred revenue.
  - c. Statement of activities as temporarily restricted revenue.
  - d. Statement of financial position as deferred revenue.
10. United Ways, a private not-for-profit voluntary health and welfare organization, received a contribution of \$10,000 from a donor in 2011. The donor did not specify any use restrictions

on the contribution; however, the donor specified that the donation should not be used until 2012. The governing board of United Ways spent the contribution in 2012 for fund-raising expenses. For the year ended December 31, 2011, United Ways should report the contribution on its

- Statement of financial position as deferred revenue.
- Statement of activities as unrestricted revenue.
- Statement of financial position as an increase in fund balance.
- Statement of activities as temporarily restricted revenue.

**11.** The statement of cash flows for a private not-for-profit hospital should report cash flows according to which of the following classifications?

- Operating activities.
- Investing activities.
- Financing activities.

- I, II, and III.
- II and III.
- I only.
- I and III.

**12.** Pharm, a nongovernmental not-for-profit organization, is preparing its year-end financial statements. Which of the following statements is required?

- Statement of changes in financial position.
- Statement of cash flows.
- Statement of changes in fund balance.
- Statement of revenue, expenses and changes in fund balance.

**13.** Stanton College, a not-for-profit organization, received a building with no donor stipulations as to its use. Stanton does not have an accounting policy implying a time restriction on donated fixed assets. What type of net assets should be increased when the building is received?

- Unrestricted.
- Temporarily restricted.
- Permanently restricted.

- I only.
- II only.
- III only.
- II or III.

**14.** Sea Lion Park, a private not-for-profit zoological society, received contributions restricted for research totaling \$50,000 in 2011. None of the contributions were spent on research in 2011. In 2012, \$35,000 of the contributions were used to support the research activities of the society. The net effect on the statement of activities for the year ended December 31, 2012, for Sea Lion Park would be a

- \$15,000 increase in temporarily restricted net assets.
- \$35,000 decrease in temporarily restricted net assets.
- \$35,000 increase in unrestricted net assets.
- \$35,000 decrease in unrestricted net assets.

**15.** Clara Hospital, a private not-for-profit hospital, earned \$250,000 of gift shop revenues and spent \$50,000 on research

during the year ended December 31, 2012. The \$50,000 spent on research was part of a \$75,000 contribution received during December of 2011 from a donor who stipulated that the donation be used for medical research. Assume none of the gift shop revenues were spent in 2012. For the year ended December 31, 2012, what was the increase in unrestricted net assets from the events occurring during 2012?

- \$300,000
- \$200,000
- \$250,000
- \$275,000

**16.** Which of the following transactions of a private not-for-profit voluntary health and welfare organization would increase temporarily restricted net assets on the statement of activities for the year ended June 30, 2012?

- Received a contribution of \$10,000 from a donor on May 15, 2012, who stipulated that the donation not be spent until August of 2012.
  - Spent \$25,000 for fund-raising on June 20, 2012. The amount expended came from a \$25,000 contribution on March 12, 2012. The donor stipulated that the contribution be used for fund-raising activities.
- Both I and II.
  - Neither I nor II.
  - I only.
  - II only.

**17.** Catherine College, a private not-for-profit college, received the following contributions during 2012:

- \$5,000,000 from alumni for construction of a new wing on the science building to be constructed in 2012.
- \$1,000,000 from a donor who stipulated that the contribution be invested indefinitely and that the earnings be used for scholarships. As of December 31, 2012, earnings from investments amounted to \$50,000.

For the year ended December 31, 2012, what amount of these contributions should be reported as temporarily restricted revenues on the statement of activities?

- \$50,000
- \$5,050,000
- \$5,000,000
- \$6,050,000

**18.** On December 31, 2012, Hope Haven, a private not-for-profit voluntary health and welfare organization, received a pledge from a donor who stipulated that \$1,000 would be given to the organization each year for the next five years, starting on December 31, 2013. Present value factors at 6% for five periods are presented below.

Present value of an ordinary annuity for 5 periods at 6%	4.21236
Present value of an annuity due for 5 periods at 6%	4.46511

For the year ended December 31, 2012, Hope Haven should report, on its statement of activities,

- a. Unrestricted revenues of \$5,000.
- b. Temporarily restricted revenues of \$4,465.
- c. Unrestricted revenues of \$4,465.
- d. Temporarily restricted revenues of \$4,212.

19. For Guiding Light, a nongovernmental nonprofit religious organization, net assets that can be expended in accordance with the wishes of the governing board of the organization should be reported as

- I. Unrestricted.
  - II. Temporarily restricted.
  - III. Permanently restricted.
- a. I only.
  - b. Both I and II.
  - c. I, II, and III.
  - d. Either I or II.

20. The Jackson Foundation, a private not-for-profit organization, had the following cash contributions and expenditures in 2012:

- Unrestricted cash contributions of \$500,000.
- Cash contributions of \$200,000 restricted by the donor to the acquisition of property.
- Cash expenditures of \$200,000 to acquire property with the donation in the above item.

Jackson's statement of cash flows should include which of the following amounts?

	Operating activities	Investing activities	Financing activities
a.	\$700,000	\$(200,000)	\$0
b.	\$500,000	\$0	\$0
c.	\$500,000	\$(200,000)	\$200,000
d.	\$0	\$500,000	\$200,000

21. United Hope, a private not-for-profit voluntary health and welfare organization, received the following contributions in 2012:

- I. \$500 from donors who stipulated that the money not be spent until 2013.
- II. \$1,000 from donors who stipulated that the contributions be used for the acquisition of equipment, none of which was acquired in 2012.

Which of the above events increased temporarily restricted net assets for the year ending December 31, 2012?

- a. I only.
- b. Both I and II.
- c. II only.
- d. Neither I nor II.

22. A statement of financial position (balance sheet), which reports unrestricted, temporarily restricted, and permanently restricted net assets, is required for which one of the following organizations?

- I. A public university.
- II. A private, not-for-profit hospital.

- a. Both I and II.
- b. I only.
- c. Neither I nor II.
- d. II only.

23. A storm broke glass windows in the building of Lea Meditators, a not-for-profit religious organization. A member of Lea's congregation, a professional glazier, replaced the windows at no charge. In Lea's statement of activities, the breakage and replacement of the windows should

- a. Not be reported.
- b. Be reported by note disclosure only.
- c. Be reported as an increase in both expenses and contributions.
- d. Be reported as an increase in both net assets and contributions.

24. Financial statements of not-for-profit organizations focus on

- a. Basic information for the organization as a whole.
- b. Standardization of funds nomenclature.
- c. Inherent differences of not-for-profit organizations that impact reporting presentations.
- d. Distinctions between current fund and noncurrent fund presentations.

25. On December 30, 2012, Leigh Museum, a not-for-profit organization, received a \$7,000,000 donation of Day Co. shares with donor-stipulated requirements as follows:

Shares valued at \$5,000,000 are to be sold, with the proceeds used to erect a public viewing building.

Shares valued at \$2,000,000 are to be retained, with the dividends used to support current operations.

As a consequence of the receipt of the Day shares, how much should Leigh report as temporarily restricted net assets on its 2012 statement of financial position (balance sheet)?

- a. \$0
- b. \$2,000,000
- c. \$5,000,000
- d. \$7,000,000

26. The Jones family lost its home in a fire. On December 25, 2012, a philanthropist sent money to the Amer Benevolent Society, a not-for-profit organization, to purchase furniture for the Jones family. During January 2013, Amer purchased this furniture for the Jones family. How should Amer report the receipt of the money in its 2012 financial statements?

- a. As an unrestricted contribution.
- b. As a temporarily restricted contribution.
- c. As a permanently restricted contribution.
- d. As a liability.

27. If the Pel Museum, a not-for-profit organization, received a contribution of historical artifacts, it need **not** recognize the contribution if the artifacts are to be sold and the proceeds used to

- a. Support general museum activities.
- b. Acquire other items for collections.
- c. Repair existing collections.
- d. Purchase buildings to house collections.

28. A large not-for-profit organization's statement of activities should report the net change for net assets that are

	Unrestricted	Permanently restricted
a.	Yes	Yes
b.	Yes	No
c.	No	No
d.	No	Yes

29. Which of the following classifications is required for reporting of expenses by all not-for-profit organizations?

- Natural classification in the statement of activities or notes to the financial statements.
- Functional classification in the statement of activities or notes to the financial statements.
- Functional classification in the statement of activities and natural classification in a matrix format in a separate statement.
- Functional classification in the statement of activities and natural classification in the notes to the financial statements.

30. Rosary Botanical Gardens, a private not-for-profit organization, established a \$500,000 quasi endowment on September 1, 2012. On the garden's statement of financial position at December 31, 2012, the assets in this quasi endowment should be included in which of the following classifications?

- Temporarily restricted net assets.
- Unrestricted net assets.
- Permanently restricted net assets.
- Either temporarily or permanently restricted net assets, depending on the expected term of the quasi endowment.

31. During 2011, an alumnus of Smith College, a private not-for-profit college, transferred \$100,000 to the college with the stipulation that it be spent for library acquisitions. However, the alumnus specified that none of the cash transferred could be spent until the college had matched the entire amount transferred with donations from other alumni by December 31, 2012. As of December 31, 2011, the college had received matching cash donations of only \$5,000 from other alumni, and the college estimated that it was reasonably possible that it would not reach the goal of \$100,000 by December 31, 2012. If the funds are not matched by December 31, 2012, the cash will be returned to the alumnus. On the college's statement of financial position at December 31, 2011, the cash transfer of \$100,000 would be included in the amount reported for

- Liabilities.
- Unrestricted net assets.
- Temporarily restricted net assets.
- Permanently restricted net assets.

32. During the year ended December 31, 2012, a not-for-profit performing arts entity received the following donor-restricted contribution and investment income:

Cash contribution of \$100,000 to be permanently invested.

Cash dividends and interest of \$6,000 to be used for the acquisition of theater equipment.

As a result of these cash receipts, the statement of cash flows for the year ended December 31, 2012, would report an increase of

- \$106,000 from operating activities.
- \$106,000 from financing activities.
- \$6,000 from operating activities and an increase of \$100,000 from financing activities.
- \$100,000 from operating activities and an increase of \$6,000 from financing activities.

33. Which of the following private, nonprofit entities is required to report expenses both by function and by natural classification?

- Hospitals.
- Colleges and universities.
- Voluntary health and welfare organizations.
- Performing arts organizations.

34. On December 5, 2012, Jones Heating and Air Conditioning Service repaired the heating system in the building occupied by Good Hope, a private not-for-profit voluntary health and welfare organization. An invoice for \$1,500 was received by Good Hope for the repairs on December 15, 2012. On December 30, 2012, Jones notified Good Hope that the invoice was canceled and that the repairs were being donated without charge. For the year ended December 31, 2012, how should Good Hope report these contributed services?

- Only in the notes to the financial statements.
- No disclosure is required either in the financial statements or in the notes.
- As an increase in unrestricted revenues and as an increase in expenses on the statements of activities.
- As an increase in temporarily restricted net assets on the statement of activities.

35. During the year ended December 31, 2012, the James Community Foundation, a private not-for-profit organization, received the following contributed services:

- Anderson & Anderson, attorneys-at-law, contributed their services which involved advice related to the foundation's regular endowments.
- Senior citizens participated in a telethon to raise money for a new music building.

Which of these contributed services should be included in unrestricted revenues, gains, and other support on James Community Foundation's statement of activities for the year ended December 31, 2012?

- Both I and II.
- Neither I nor II.
- II only.
- I only.

36. Child Care Centers, Inc., a not-for-profit organization, receives revenue from various sources during the year to support its day care centers. The following cash amounts were received during 2012:

\$2,000 restricted by the donor to be used for meals for the children.

\$1,500 received for subscriptions to a monthly child-care magazine with a fair market value to subscribers of \$1,000.

\$10,000 to be used only upon completion of a new playroom that was only 50% complete at December 31, 2012.

What amount should Child Care Centers record as contribution revenue in its 2012 Statement of Activities?

- a. \$2,000
- b. \$2,500
- c. \$10,000
- d. \$11,000

37. On December 20, 2012, United Appeal, a private not-for-profit voluntary health and welfare organization, received a donation of computer equipment valued at \$25,000 from a local computer retailer. The equipment is expected to have a useful life of three years. The donor placed no restrictions on how long the computer equipment was to be used, and United has an accounting policy that does not imply a time restriction on gifts of long-lived assets. On United's statement of activities prepared for the year ended December 31, 2012, the donation of computer equipment should be reported

- a. As an increase in temporarily restricted net assets.
- b. Only in the notes to the financial statements.
- c. As an increase in unrestricted net assets.
- d. As either an increase in temporarily restricted net assets or as an increase in unrestricted net assets.

38. On December 30, 2012, the Board of Trustees of Henry Museum, a private not-for-profit organization, designated \$4,000,000 of unrestricted net assets for the construction of an addition to its building. What effect does this designation have on the museum's unrestricted and temporarily restricted net assets which are reported on the statement of financial position (balance sheet) at December 31, 2012?

	<b>Unrestricted net assets</b>	<b>Temporarily restricted net assets</b>
a.	No effect	Increase
b.	Decrease	Increase
c.	Decrease	No effect
d.	No effect	No effect

39. Darlin Hospital, a private not-for-profit hospital, had the following cash receipts for the year ended December 31, 2012:

Patient service revenue	\$300,000
Gift shop revenue	25,000
Interest revenue restricted by donor stipulation for acquisition of equipment	50,000

As a result of these cash receipts, the hospital's statement of cash flows for the year ended December 31, 2012, would report an increase in operating activities of

- a. \$325,000
- b. \$375,000
- c. \$350,000
- d. \$300,000

40. For a private, not-for-profit organization, when is a donor's conditional promise to give considered to be unconditional?

- a. When the condition is partially met.
- b. When the possibility that the condition will not be met is remote.
- c. When the conditional promise is made.
- d. When cash or other assets promised are received.

41. A not-for-profit organization receives \$150 from a donor. The donor receives two tickets to a theater show and an acknowledgment in the theater program. The tickets have a fair market value of \$100. What amount is recorded as contribution revenue?

- a. \$0
- b. \$50
- c. \$100
- d. \$150

42. On November 30, 2011, Justin Barlow, an alumnus of Murry School, a private, not-for-profit high school, contributed \$15,000, with the stipulation that the donation be used for faculty travel expenses during 2012. During 2012, Murry spent all of the donation in accordance with Mr. Barlow's wishes. For the year ended December 31, 2012, what was the effect of the donation on unrestricted and temporarily restricted net assets?

	<b>Unrestricted net assets</b>	<b>Temporarily restricted net assets</b>
a.	Increase	Decrease
b.	No effect	Decrease
c.	Increase	No effect
d.	No effect	No effect

43. A private not-for-profit voluntary health and welfare organization received a cash donation in 2009 that contained a donor-imposed restriction that stipulated that the donation could not be spent until 2011. The voluntary health and welfare organization spent the donation in 2011 on fund-raising activities. On the statement of activities prepared for the year ended December 31, 2011, the expiration of the time restriction would result in reporting a(n)

- a. Increase in temporarily restricted net assets.
- b. Reclassification that decreased temporarily restricted net assets.
- c. Increase in unrestricted net assets.
- d. Expense that decreased temporarily restricted net assets.

44. In the financial statements of not-for-profit organizations, reporting reclassifications are caused by which of the following?

- I. Expiration of donor-imposed conditions.
  - II. Expiration of donor-imposed restrictions.
- a. I only.
  - b. Both I and II.
  - c. II only.
  - d. Neither I nor II.

45. Which of the following transactions would result in an increase in unrestricted net assets for the year ended December 31, 2012?

- I. A private, not-for-profit hospital earned interest on investments that were board-designated.
  - II. A private, not-for-profit voluntary health and welfare organization received unconditional promises to give (pledges) which will not be received until the beginning of 2013. The donors placed no restrictions on their donations.
- a. Both I and II.
  - b. I only.
  - c. II only.
  - d. Neither I nor II.

46. Benevolent Society, a private not-for-profit organization, should recognize contributed services on its statement of activities if which of the following conditions is(are) met?

- I. The contributed services create or enhance nonfinancial assets.
  - II. The contributed services require specialized skills, are provided by individuals possessing those skills, and would typically need to be purchased if not provided by donation.
- a. Both I and II.
  - b. Neither I nor II.
  - c. I only.
  - d. Either I or II.

47. During 2012, Margaret Billingsley, a prominent art collector, donated several items in her collection to the Darrwin Museum, a private, not-for-profit organization. Ms. Billingsley stipulated that her contribution be shown to the public, that it should be preserved, and not be sold. Darrwin's accounting policy is to capitalize all donations of art, historical treasures, and similar items. On the date of donation, what was the effect of Ms. Billingsley's donation on Darrwin's financial statements?

- a. Temporarily restricted net assets increased.
- b. Reclassifications caused a simultaneous increase in permanently restricted net assets and a decrease in temporarily restricted net assets.
- c. There was no effect on any class of Darrwin's net assets.
- d. Permanently restricted net assets increased.

48. Which of the following transactions or events would cause an increase in unrestricted net assets for the year ended December 31, 2012?

- I. A private not-for-profit voluntary health and welfare organization spent a restricted donation that was received in 2011. In accordance with the donor's wishes, the donation was spent on public health education during 2012.
- II. During 2012, a private, not-for-profit college earned dividends and interest on term endowments. Donors

placed no restrictions on the earnings of term endowments. The governing board of the college intends to use this investment income to fund undergraduate scholarships for 2013.

- a. II only.
- b. I only.
- c. Neither I nor II.
- d. Both I and II.

49. Mary Egbart promised Columbus College, a private, not-for-profit college, that she would provide 80% of the funds needed to construct a new performing arts center, if the college could get the remaining 20% of the funds needed from other donors by July 1, 2012. The promise was made in 2011. At December 31, 2011, the governing board of the college had received donations from other donors for approximately 15% of the cost of the new center and believed that the probability of not getting the remaining 5% of the necessary funds was remote. For the year ended December 31, 2011, Ms. Egbart's promise would

- a. Be reported as an increase in permanently restricted net assets on the statement of activities.
- b. Not be reported on the statement of activities.
- c. Be reported as an increase in deferred support on the statement of financial position.
- d. Be reported as an increase in temporarily restricted net assets on the statement of activities.

50. How should a private not-for-profit hospital report its investments in debt securities that are classified as current assets and noncurrent assets on its statement of financial position (balance sheet)?

	Debt securities in current assets	Debt securities in noncurrent assets
a.	Fair value	Amortized cost
b.	Amortized cost	Fair value
c.	Fair value	Fair value
d.	Amortized cost	Amortized cost

51. The governing board of Crestfallen, a private not-for-profit voluntary health and welfare organization, acquired equity securities of BMZ Company at a cost of \$35,000 on May 1, 2012. The governing board used unrestricted net assets to acquire this investment, and it intends to use the income from its investment in BMZ, as well as other investments, to acquire much needed computer equipment for the organization. The investment in the equity securities of BMZ Company, which is listed on a national stock exchange, represents less than a 1% interest in the company. On November 15, 2012, Crestfallen received \$1,000 of dividends from BMZ, and the fair value of the BMZ equity securities was \$42,000 on December 31, 2012. As a result of Crestfallen's investment in BMZ Company, the statement of activities for the year ended December 31, 2012, would report an increase of

- a. \$8,000 in unrestricted net assets.
- b. \$8,000 in temporarily restricted net assets.
- c. \$1,000 in unrestricted net assets.
- d. \$7,000 in unrestricted net assets.

**52.** Jazz Planners, a private not-for-profit performing arts organization, has donor-restricted permanent endowment funds which include investments in equity securities. These equity securities all have readily determinable fair values because they are all traded on national security exchanges. Most of the equity investments represent between 1% and 3% of the common stock of the investee companies; however, a few of Jazz Planners' investments permit the organization significant influence over the operating and financing policies of the investee companies. How should the organization report these equity securities on its statement of financial position (balance sheet)?

Equity securities: 1% to 3% ownership	Equity securities: significant influence
a. Fair value	Fair value
b. Fair value	Use equity method
c. Lower of cost or market	Fair value
d. Fair value	Lower of cost or market

**53.** Rose Smith made a cash donation for a specific purpose in December 2012, to United Ways, a nongovernmental, nonprofit organization that raises contributions for others. Assume United Ways was (1) not granted variance power by Rose Smith over her donation and (2) the beneficiaries of the donation are not financially related to United Ways. How should United Ways account for Rose's cash donation?

- As an increase in contribution revenue.
- As an increase in liabilities.
- As either an increase in contribution revenue or liabilities.
- As neither an increase in contribution revenue nor liabilities.

**54.** World-Wide Helpers Foundation, a nonprofit entity, received a cash donation in 2012 from Herold Smith. World-Wide Helpers Foundation is controlled by World-Wide Helpers, a nonprofit entity that raises resources for others. The resources of World-Wide Helpers Foundation are used for the benefit of World-Wide Helpers. How should World-Wide Helpers Foundation account for the cash donation?

- As an increase in contribution revenues.
- As an increase in liabilities.
- As either an increase in contribution revenue or liabilities.
- As neither an increase in contribution revenue or liabilities.

**55.** A cash donation from a resource provider should be reported as contribution revenue by a recipient organization when which of the following exists?

- The recipient organization and beneficiary are **not** financially interrelated.
- The resource provider does **not** allow the recipient organization to use the donation for beneficiaries other than those specified by the resource provider.
- The resource provider does **not** grant variance power to the recipient organization to redirect the donation to other beneficiaries.
- The resource provider grants variance power to the recipient organization to redirect the donation to other beneficiaries.

**56.** Peter Smith made a cash donation in January 2012, to World-Wide Helpers, a nongovernmental, nonprofit organization that raises contributions for others. Peter specified the beneficiaries for his contribution, but provided variance power to World-Wide Helpers to use the donation for beneficiaries not specified by Peter. How should World-Wide Helpers account for Peter's cash donation?

- As an increase in contribution revenue.
- As an increase in liabilities.
- As either an increase in contribution revenue or liabilities.
- As neither an increase in contribution revenue nor liabilities.

**57.** The Taft family lost its home in a flood in October 2012. In November of 2012, Mary Wilson donated cash to Goodbody Benevolent Society to purchase furniture for the Taft family. In December 2012, Goodbody purchased this furniture for the Taft family. How should Goodbody report the receipt of the cash donation in its 2012 financial statements?

- As an unrestricted contribution.
- As a temporarily restricted contribution.
- As a liability.
- As either a liability or as a temporarily restricted contribution.

**58.** An arrangement where a donor makes an initial gift to a trust or directly to the not-for-profit organization, in which the not-for-profit organization has a beneficial interest but is not the sole beneficiary is known as a

- Donor-imposed condition.
- Donor-imposed restriction.
- Share-the-wealth agreement.
- Split-interest agreement.

**59.** Under which of the following cases should joint costs be allocated between fund-raising and the appropriate program or management and general function?

- An appeal for funds accompanied by a statement of the mission of the not-for-profit entity.
- An appeal for funds accompanied by a brochure explaining why funds are needed and how they will be used.
- An organization seeks the involvement of the public in the attainment of their missions by telling people what they should do about particular issues in addition to fund-raising appeals.
- An appeal for funds and education materials sent to a person based on his/her presumed ability to provide financial support.

**60.** Which of the following are considered to be capital additions in the statement of activity of a not-for-profit organization?

- Nonexpendable gifts, grants, and bequests restricted by donors to endowment funds.
- Legally restricted investment income on investments held in endowment funds that must be added to the principal.

III. Donor-restricted gifts for program or supporting services.

- I, II, and III.
- I and III only.
- I and II only.
- III only.

61. Depending on the extent of discretion that the not-for-profit recipient has over the use or subsequent disposition of the assets, gifts in kind may be treated as

	Agency transactions	Contributions
a.	No	No
b.	No	Yes
c.	Yes	Yes
d.	Yes	No

62. A not-for-profit organization receives an asset for which they have little or no discretion over the use of the asset. The organization should report the asset as a(n)

- Contribution.
- Agency transaction.
- Exchange.
- Conditional transfer.

### C. Health Care Organization Accounting—Private Sector

63. Elizabeth Hospital, a nonprofit hospital affiliated with a religious group, should prepare which of the following financial statements?

	Statement of changes in net assets	Statement of operations
a.	Yes	No
b.	No	Yes
c.	Yes	Yes
d.	No	No

64. Williams Hospital, a nonprofit hospital affiliated with a religious group, reported the following information for the year ended December 31, 2012:

Gross patient service revenue at the hospital's full established rates	\$980,000
Bad debts expense	10,000
Contractual adjustments with third-party payors	100,000
Allowance for discounts to hospital employees	15,000

On the hospital's statement of operations for the year ended December 31, 2012, what amount should be reported as net patient service revenue?

- \$865,000
- \$880,000
- \$855,000
- \$955,000

65. For private sector health care organizations, which of the following is included in patient service revenue?

- Contractual adjustments.
- Charity care.
- Significant revenue under capitation agreements (premium revenue).
- Unrestricted contributions.

66. Which of the following is **not** covered by the AICPA Audit and Accounting Guide, *Health Care Organizations*?

- Nursing homes.
- Home health agencies.
- Hospitals.
- Voluntary health and welfare organizations.

67. Which of the following can be included in the performance indicator on the statement of operations for private sector health care organizations?

- Extraordinary items.
- Premium revenue from capitation agreements.
- Equity transfers.
- Contributions of long-lived assets.

68. If private not-for-profit health care entities do not use this expense classification on the operating statement, they must provide it in the notes.

- Natural.
- Character.
- Functional.
- Object.

69. When functional classifications are used by private sector health care organizations, they should be based on

- Net present value.
- Full cost allocations.
- Percentage allocations.
- Resale value.

70. Which of the following would be acceptable as a performance indicator on a private sector health care entity's statement of operations?

- Increase in unrestricted net assets.
- Net income.
- Increase in net assets.
- Excess of revenues over expenses.

71. How is charity care accounted for on the financial statements of a not-for-profit private sector health care organization?

- As patient service revenue.
- As bad debt expense.
- As a separate component of revenue.
- Not included on the financial statements.

72. How are nonrefundable advance fees representing payments for future services to be accounted for by nonprofit continuing care retirement communities?

- As revenue.
- As a liability.
- As other financing sources.
- In a trust fund.

**73.** Kash Hospital, a private sector, not-for-profit organization, has gross patient service revenues of \$750,000, charity care of \$75,000, amounts disallowed by third-party payors of \$63,000, and donor-unrestricted contributions of \$110,000. What is the amount of net patient service revenue?

- a. \$687,000
- b. \$722,000
- c. \$785,000
- d. \$797,000

**74.** James Hospital, a nonprofit hospital affiliated with a private university, provided \$200,000 of charity care for patients during the year ended December 31, 2012. The hospital should report this charity care

- a. As net patient service revenue of \$200,000 on the statement of operations.
- b. As net patient service revenue of \$200,000 and as an operating expense of \$200,000 on the statement of operations.
- c. As accounts receivable of \$200,000 on the balance sheet at December 31, 2012.
- d. Only in the notes to the financial statements for 2012.

**75.** Michael Hospital, a nonprofit hospital affiliated with a private university, reported the following information for the year ended December 31, 2012:

Cash contributions received from donors for capital additions to be acquired in 2013	\$150,000
Proceeds from sales at hospital gift shop and snack bar	75,000
Dividend revenue not restricted by donors or by law	25,000

Using the information provided, what amount should be reported as “other revenue and gains” on the hospital’s statement of operations for the year ended December 31, 2012?

- a. \$25,000
- b. \$75,000
- c. \$100,000
- d. \$250,000

**76.** Swathmore Hospital, a nonprofit hospital affiliated with Swathmore University, received the following cash contributions from donors during the year ended December 31, 2011:

Contributions restricted by donors for research	\$50,000
Contributions restricted by donors for capital acquisitions	250,000

Neither of the contributions was spent during 2011; however, during 2012, the hospital spent the entire \$50,000 contribution on research and the entire \$250,000 contribution on a capital asset that was placed into service during the year. The hospital has adopted an accounting policy that does not imply a time restriction on gifts of long-lived assets. On the hospital’s statement of operations for the year ended December 31, 2012,

what total amount should be reported for “net assets released from restrictions”?

- a. \$50,000
- b. \$300,000
- c. \$250,000
- d. \$0

**77.** The governing board of Smithson Hospital, a nonprofit hospital affiliated with a religious organization, acquired 100 BMI Company bonds for \$103,000 on June 30, 2012. The bonds pay interest on June 30 and December 30. On December 31, 2012, interest of \$3,000 was received from BMI, and the fair value of the BMI bonds was \$105,000. The governing board acquired the BMI bonds with cash which was unrestricted, and it classified the bonds as trading securities at December 31, 2012, since it intends to sell all of the bonds in January 2013. As a result of the investment in BMI bonds, what amount should be included in revenue, gains, and other support on the statement of operations for the year ended December 31, 2012?

- a. \$0
- b. \$3,000
- c. \$2,000
- d. \$5,000

**78.** On the statement of operations for a nonprofit, nongovernmental hospital, which of the items below is included in the amount reported for “revenue and gains over expenses and losses” (the performance indicator)?

- I. Unrealized loss on other than trading securities. The securities are included in unrestricted net assets.
  - II. Contribution received from a donor that cannot be used until next year.
- a. I only.
  - b. II only.
  - c. Both I and II.
  - d. Neither I nor II.

**79.** Tucker Hospital, a nonprofit hospital affiliated with Tucker University, received a donation of medical supplies during the year ended December 31, 2012. The supplies cost the vendor \$10,000 and had a selling price of \$15,000 on the date they were donated. The vendor did not place any restrictions on how the supplies were to be used. During 2012, all of the donated medical supplies were used. On the hospital’s statement of operations for the year ended December 31, 2012, how should the donation be reported?

- a. The donation should be included in both revenue and operating expenses in the amount of \$10,000.
- b. The donation should be excluded from the statement of operations.
- c. The donation should be included in both revenue and operating expenses in the amount of \$15,000.
- d. The donation should be included in revenue in the amount of \$15,000 and in operating expenses in the amount of \$10,000.

**80.** Wilson Hospital, a nonprofit hospital affiliated with Wilson College, had the following cash receipts for the year ended December 31, 2012:

Collections of health care receivables	\$750,000
Contribution from donor to establish a term endowment	250,000
Tuition from nursing school	50,000
Dividends received from investments in permanent endowment	80,000

The dividends received are restricted by the donor for hospital building improvements. No improvements were made during 2012. On the hospital's statement of cash flows for the year ended December 31, 2012, what amount of these cash receipts would be included in the amount reported for net cash provided (used) by operating activities?

- \$880,000
- \$800,000
- \$1,050,000
- \$750,000

**81.** Which of the following financial statements of a private, nonprofit hospital reports the changes in unrestricted, temporarily restricted, and permanently restricted net assets for a time period?

	Balance sheet	Statement of operations
a.	Yes	Yes
b.	Yes	No
c.	No	Yes
d.	No	No

**82.** Unrealized gains on investments which are permanently restricted as to use by donors are reported by a private, nonprofit hospital on the

- Statement of operations.
- Statement of cash flows.
- Statement of changes in net assets.
- Statement of operations and statement of cash flows.

**83.** The statement of operations for a private, nonprofit hospital should include a performance indicator that indicates the results of operations for a period. Which of the following items would be included in a hospital's performance indicator reported on the statement of operations?

- Proceeds from sales of cafeteria meals and guest trays to employees, medical staff, and visitors.
  - Net assets released from restrictions used for operating expenses.
- I only.
  - Both I and II.
  - II only.
  - Neither I nor II.

**Multiple-Choice Answers and Explanations**

**Answers**

1. c	19. a	37. c	55. d	73. a
2. d	20. c	38. d	56. a	74. d
3. a	21. b	39. a	57. c	75. c
4. a	22. d	40. b	58. d	76. b
5. d	23. c	41. b	59. c	77. d
6. c	24. a	42. b	60. c	78. d
7. d	25. c	43. b	61. c	79. c
8. d	26. d	44. c	62. b	80. b

16. c	34. c	52. b	70. d	
17. b	35. d	53. b	71. d	1st: ___/83 = ___%
18. d	36. b	54. a	72. b	2nd: ___/83 = ___%

**Explanations**

- (c)** According to FASB ASC 958, a statement of functional expenses is required for voluntary health and welfare organizations. Other private nonprofit organizations are encouraged to disclose this information, but they are not required to.
- (d)** According to FASB ASC 958, a statement of financial position for a nongovernmental nonprofit entity, like a library, should report net assets according to whether the net assets are unrestricted, temporarily restricted, or permanently restricted.
- (a)** According to FASB ASC 958, the net assets of term endowments should be reported as temporarily restricted, while the net assets of regular endowments should be reported as permanently restricted. The net assets of term endowments are temporarily restricted because the donor of a term endowment stipulates that the endowment last only a specific number of years. Donors of regular endowments intend that these endowments last indefinitely; hence, the net assets are permanently restricted.
- (a)** According to FASB ASC 958, contributions are reported as revenue in the year received even though there are donor-imposed use or time restrictions on the donation. Since Ms. Smith's donation was use and time restricted, the donation should be reported as a temporarily restricted revenue on the statement of activities for the year ended June 30, 2012.
- (d)** According to FASB ASC 958, contributions are reported as revenue in the year received even though there are donor-imposed use or time restrictions on the contribution. Since Mr. Peobody's contribution was use restricted, the contribution would be reported as temporarily restricted

revenue on the statement of activities for the year ended December 31, 2012.

- (c)** According to FASB ASC 958, all expenses are reported as unrestricted on the statement of activities. This means that expenses are deducted only from unrestricted revenues.
- (d)** In accordance with FASB ASC 958, nongovernmental not-for-profit organizations are required to report a statement of cash flows. On this statement, cash flows are reported using the classifications of operating, investing, and financing activities. Cash flows related to revenues and expenses that are unrestricted should be reported in the operating activities section. The cash inflows from both tuition (\$500,000) and the unrestricted contribution (\$100,000) are both unrestricted and should be reported as operating activities. Restricted contributions for long-term purposes, like the \$300,000 endowment, are reported as financing activities on the statement of cash flows.
- (d)** According to FASB ASC 958, nongovernmental, not-for-profit entities should prepare the following financial statements:
  - Statement of financial position
  - Statement of activities
  - Statement of cash flows

In addition, a voluntary health and welfare organization should also prepare a statement of functional expenses.
- (c)** Donor restricted contributions should be reported as revenue in the period received. Donor restricted contributions which are restricted according to use should be reported as either temporarily restricted revenues or as permanently

restricted revenues, depending on the restriction. In the case of Save the Planet, the restriction is temporary, not permanent. Therefore, Ms. Clark's contribution should be reported as temporarily restricted revenue on the statement of activities for the year ended December 31, 2012.

**10. (d)** Donor restricted contributions are revenues in the year the contribution is made, not in the year the contribution is spent. Contributions that are restricted temporarily should be reported on the statement of activities as temporarily restricted revenues.

**11. (a)** The statement of cash flows for a nongovernmental not-for-profit entity should report its cash flows from operating, investing, and financing activities.

**12. (b)** FASB ASC 958 indicates that "a complete set of financial statements of not-for-profit organization shall include a statement of financial position as of the end of the reporting period, a statement of activities and a statement of cash flows for the reporting period, and accompanying notes to financial statements."

**13. (a)** FASB ASC 958 states

*Gifts of long-lived assets received without stipulations about how long the donated asset must be used shall be reported as restricted support if it is an organization's accounting policy to imply a time restriction that expires over the useful life of the donated assets ... In the absence of that policy and other donor-imposed restrictions on use of the asset, gifts of long-lived assets shall be reported as unrestricted support.*

**14. (b)** For the year ended December 31, 2011, the contributions received for research would be reported on the statement of activities as an increase of \$50,000 in temporarily restricted net assets. Contributions received from outside donors for use in research are reported as temporarily restricted net assets. For the year ended December 31, 2012, a reclassification of net assets would be reported on the statement of activities. A reclassification of \$35,000 would be reported as both a decrease in temporarily restricted net assets and an increase in unrestricted net assets. In addition, research expense of \$35,000 would be reported as a decrease in unrestricted net assets on the statement of activities for the year ended December 31, 2012. Therefore, as a result of the transactions in 2012, there was a decrease of \$35,000 in temporarily restricted net assets and no effect on unrestricted net assets (the \$35,000 reclassification to unrestricted net assets is offset by a \$35,000 increase in research expense).

**15. (c)** Unrestricted net assets increased \$250,000 for the year ended December 31, 2012. The \$50,000 spent on research during 2012 would be reclassified (added) to unrestricted net assets when the money was spent for research. The \$50,000 addition to unrestricted revenues, gains, and other support would be accompanied by a \$50,000 reclassification (deduction) from temporarily restricted revenues. The expenses of \$50,000 for research are deducted from unrestricted revenues, etc., which include the \$50,000 reclassification. Therefore, the net effect on unrestricted net assets of spending \$50,000 on research is zero. The \$250,000 of gift shop revenue is unrestricted revenue because the governing board has control of this revenue.

**16. (c)** Contributions should be reported as revenue in the period of contribution, even though a donor has placed a time or use restriction on the contribution. The \$10,000 and the \$25,000 contributions should be reported as temporarily restricted revenues on the statement of activities for the year ended June 30, 2012. When the \$25,000 is spent on fundraising, a reclassification of \$25,000 should be reported as a deduction from temporarily restricted revenues. This \$25,000 deduction results in a net increase in temporarily restricted net assets of \$10,000 on the statement of activities for the year ended June 30, 2012. The deduction of \$25,000 from temporarily restricted revenues also results in an increase in unrestricted revenues, gains, and other support of \$25,000. Expenses can only be deducted from unrestricted revenues on the statement of activities. Therefore, the fundraising expenses of \$25,000 will be deducted from unrestricted revenues, gains, and other support that includes the \$25,000 reclassification from temporarily restricted revenues. Alternatively, FASB ASC 958 also permits temporarily restricted revenues to be reported as unrestricted revenues in the year the resources are received. This alternative is allowed only for the amount of temporarily restricted revenues that are spent during the year. In the situation presented, \$25,000 would be disclosed as both an unrestricted revenue and expense for 2012. There would be no need for a reclassification; however, the answer would not change because temporarily restricted net assets increase \$10,000 as a result of the contribution that was not spent in 2012.

**17. (b)** Contributions should be reported as revenues in the period received, even though donors have placed time or use restrictions on the contributions. The \$5,000,000 contribution from alumni for a new wing for the science building should be reported as a temporarily restricted revenue on the statement of activities for the year ended December 31, 2012. Also, the \$50,000 of earnings related to the investments should also be reported as temporarily restricted revenues on the statement of activities for the year ended December 31, 2012. The \$1,000,000 contribution from the donor, who stipulated that the contribution be invested indefinitely, should be reported as a permanently restricted revenue on the statement of activities for the year ended December 31, 2012.

**18. (d)** A multiyear pledge should be reported at its present value. If there is a time restriction on the pledge, the pledge should be reported as a temporarily restricted revenue in the year the pledge is given. In Hope Haven's situation, the pledge should be reported as temporarily restricted revenue in 2012. The pledge should be reported at its present value. This amount is calculated by using the present value of an ordinary annuity factor for five periods at 6% ( $\$1,000 \times 4.21236 = \$4,212$  rounded).

**19. (a)** Net assets under the control of the governing board are reported as unrestricted net assets.

**20. (c)** The requirement is to determine how to report three cash flows on the statement of cash flows for a nongovernmental, nonprofit entity, the Jackson Foundation. The \$500,000 cash inflow from unrestricted contributions should be reported as an increase in the operating activities section. The \$200,000 cash inflow restricted for the acquisition of property should be

reported as an increase in the financing activities section, while the use of the \$200,000 to acquire property should be shown as a decrease in the investing activities section.

**21. (b)** Contributions are reported as revenue in the year received, whether the donors place time or use restrictions on the resources. Net assets should be disclosed according to whether they are unrestricted, temporarily restricted, and permanently restricted. Both of the events listed would increase temporarily restricted net assets for the year ending December 31, 2012.

**22. (d)** FASB ASC 958 requires a statement of financial position which reports unrestricted, temporarily restricted, and permanently restricted net assets for nongovernmental, not-for-profit organizations. Therefore, the statement of financial position is required for a private, not-for-profit hospital, but not for a public university, which is supported by government.

**23. (c)** Per FASB ASC 958, contributed services which would be purchased if not donated, and which require performance by a specialist, shall be recorded as an increase in both expenses and contributions. In this case, the requirements of FASB ASC 958 are met since the window needs to be replaced and the work is performed by a professional glazier (specialist).

**24. (a)** FASB ASC 958 establishes standards for general-purpose external financial statements. This statement focuses on the basic information of the organization as a whole so as to enhance the relevance, understandability, and comparability of the financial statements by the external users. Thus, answer (a) is correct since the overall objective is the enhancement of the basic information, while answers (b), (c), and (d) address factors that are taken into consideration to achieve the objective.

**25. (c)** FASB ASC 958 requires classification of an organization's net assets and its revenues, expenses, gains, and losses based on the existence or absence of donor-imposed restrictions. It requires that the amount for **each** of three classes of net assets—permanently restricted, temporarily restricted, and unrestricted—be displayed in a statement of financial position and that the amounts of change in each of those classes of net assets be displayed in a statement of activities.

A temporary restriction is a donor-imposed restriction that permits the donee organization to use up or expend the donated assets as specified; it is satisfied either by the passage of time or by actions of the organizations involved. Accordingly, the \$5,000,000 contribution of Day Co. shares represents temporarily restricted net assets until the shares are sold and the proceeds used to erect a public viewing building. The \$2,000,000 contribution of Day Co. shares represents permanently restricted net assets because the shares are to be retained permanently.

**26. (d)** A liability (not revenue) is recorded when the reporting entity acts as an agent or trustee. A recipient of assets who is an agent or trustee has little or no discretion in determining how the assets transferred will be used. The receipt of cash to purchase furniture specifically for the Jones family would constitute a “transfer” of assets. Upon receipt

of the asset (cash), the Amer Benevolent society must expend (i.e., purchase furniture) the contribution to comply with the restrictions of the donor. Answer (a) is incorrect because the donee restricted the use of the contribution. Answer (c) is incorrect because a permanent restriction stipulates that the resources be maintained permanently (but permits the donee organization to expend part or all of the income or other economic benefits derived from the donated assets).

**27. (b)** Per FASB ASC 958, an entity need not recognize the contributions of works of art and historical artifacts if the collection is held for public exhibition rather than financial profit, cared for and preserved, and, if sold, the proceeds are used to acquire other items for collections.

**28. (a)** A Statement of Activities reports revenues, expenses, gains, losses, and reclassifications. Resources are divided into three classes: unrestricted, temporarily restricted, and permanently restricted. Separate revenues, expenses, gains, losses, and reclassifications for each class may or may not be reported, but the change in net assets for each class **must** be reported.

**29. (b)** The requirement is to determine what classification is required to report expenses of all not-for-profit organizations. All not-for-profit organizations must classify expenses according to their function in either the financial statement or in the notes to the financial statements.

**30. (b)** Quasi endowment funds are established by the governing board of an organization using unrestricted net assets. Therefore, the assets in the quasi endowment would be included in the unrestricted net assets category.

**31. (a)** According to FASB ASC 958, a transfer of assets with a conditional promise to contribute them shall be accounted for as a refundable advance until the conditions have been substantially met. The conditions have been substantially met when the possibility that they will not be met is remote. In this question, the chance that the condition will not be met is reasonably possible, which is a higher level of doubt than remote and thus results in reporting the cash transfer as a liability at December 31, 2011.

**32. (b)** The receipt of cash from a donor to establish a permanent endowment should be reported as a financing activity on the statement of cash flows. This same paragraph also states that receipts from investment income that by donor stipulation are restricted for the purposes of acquiring plant, equipment, and other long-lived assets should also be reported as a financing activity.

**33. (c)** Voluntary health and welfare organizations should provide a statement of functional expenses. This statement reports expenses by both function (program and supporting) and by their natural classification (salaries expense, depreciation expense, etc.).

**34. (c)** Donations of services are recognized on the statement of activities if either of the following two conditions are met: (1) the services create or enhance a nonfinancial asset, or (2) the services require specialized skills, are provided by individuals possessing those skills, and would typically need to be purchased if not provided by donation. The services provided

by Jones Heating and Air Conditioning would clearly meet the second criterion. Good Hope would record the invoice in the following manner:

Supporting Expenses	1,500	
Accounts Payable		1,500

Upon notification that the invoice was canceled, Good Hope would make the following journal entry:

Accounts Payable	1,500	
Unrestricted Revenues		1,500

Therefore, the net effect of the contributed services is an increase in expenses and an increase in unrestricted revenues.

- 35. (d)** Donations of services are recognized on the statement of activities if either of the following conditions are met: (1) the services create or enhance a nonfinancial asset, or (2) the services require specialized skills, are provided by individuals possessing those skills, and would typically need to be purchased if not provided by donation. The services of Anderson and Anderson, attorneys-at-law, clearly meet criterion 2 and should be reported as unrestricted revenues on James' statement of activities. However, the services provided by the senior citizens do not meet either criterion, and should not be reported on the foundation's statement of activities.
- 36. (b)** The requirement is to determine what amount should be reported as contribution revenue in the 2012 statement of activities. The \$2,000 restricted for meals is considered contribution revenue even though it is restricted. The amount received over the fair market value of the subscriptions is considered to be contribution revenue, which is \$500 (\$1,500 – \$1,000). The \$10,000 to be used upon completion of a new playroom is not part of 2012 revenue contribution because a condition, completion of a new playroom, has not been fulfilled. The money is only available upon completion, and the building is not complete in 2012. What is included in contribution revenue is \$2,500 (\$2,000 + \$500).
- 37. (c)** Gifts of long-lived assets should be reported as unrestricted support if the organization has an accounting policy which does not imply a time restriction on such gifts.
- 38. (d)** The designation of unrestricted net assets by the board of Henry Museum for the building addition does not change the classification of the net assets which were designated. The assets designated were unrestricted before the designation, and they remain unrestricted after the designation.
- 39. (a)** Cash flows from operating activities would include both the cash received from patient service revenue of \$300,000 and the cash received from gift shop sales of \$25,000. Cash received from investment income that is restricted by donors for the acquisition of long-lived fixed assets should be reported as financing activities.
- 40. (b)** A conditional promise to give is considered unconditional if the possibility that the condition will not be met is remote.
- 41. (b)** The requirement is to determine how much of the \$150 from a donor in exchange for theater tickets and an

acknowledgment is considered contribution revenue. Contribution revenue is the amount given above the fair market value. The amount given, \$150, is \$50 more than fair market value of the tickets, which is \$100.

- 42. (b)** The use of the cash donation for faculty travel in 2011 is reported as a reclassification on the high school's statement of activities for 2012. Reclassifications are reported on the statement of activities as "net assets released from restrictions." Net assets released from restrictions of \$15,000 are reported as a negative amount for temporarily restricted net assets in 2012, while net assets released from restrictions of \$15,000 are reported as a positive amount for unrestricted net assets for 2012. However, the \$15,000 of travel expense is reported on the statement of activities as an expense for 2012. All expenses are reported on the statement of activities as decreases in unrestricted net assets. This means that the use of the donation for faculty travel had no effect on unrestricted net assets in 2012. Note that, when the donation was received in 2011, temporarily restricted net assets increased by \$15,000 on the statement of activities prepared for 2011.
- 43. (b)** Expiration of donor-imposed restrictions that simultaneously increase one class of net assets and decrease another should be reported as reclassifications on the statement of activities. Reclassifications are reported as "net assets released from restrictions." When the time restriction on the donation expired in 2011, unrestricted net assets increased while temporarily restricted net assets decreased. The spending of the donation on fund-raising should be reported as an expense, which is a deduction from unrestricted net assets. Therefore, the net effect of the reclassification and the use of the donation is zero on unrestricted net assets. However, the reclassification decreased temporarily restricted net assets for 2011.
- 44. (c)** Reclassifications result from expirations of donor-imposed restrictions. The donor-imposed restrictions may be either time or purpose related. When a donor-imposed condition is satisfied, the conditional promise to give assets becomes unconditional, and there is an increase in the appropriate classification of net assets, depending on the restrictions placed upon the assets by the donors. However, this increase is reported as either revenue or support at the time the promise becomes unconditional.
- 45. (b)** Interest earned on board-designated investments is reported as unrestricted revenue. When the governing board of a not-for-profit organization places limitations on assets, they are designating the use of unrestricted net assets. Therefore, income earned on board-designated investments represents an increase in unrestricted net assets. Unconditional promises to give are reported in the period the pledges are made, not in the period of cash collection. However, since the contributions will not be received until 2013, the contributions should be reported as an increase in temporarily restricted net assets on the statement of activities for 2012 because of this time restriction.
- 46. (d)** Contributed services should be recognized if either of the following conditions is met: (1) the services create or enhance nonfinancial assets, or (2) the services require

specialized skills, are provided by individuals possessing those skills, and would typically need to be purchased if not provided by donation.

**47. (d)** Donations of works of art for which the donor stipulated a specified purpose and which are to be preserved and not be sold, represent permanently restricted net assets. Since the museum's policy is to capitalize all donations of art, Ms. Billingsley's donation would be reported as an increase in permanently restricted net assets on the statement of activities.

**48. (a)** The restricted donation of the voluntary health and welfare organization is reported as a reclassification on the statement of activities for 2012. The net effect of the reclassification and the recognition of the expense is zero. The reclassification resulting from the expiration of the donor-imposed restriction increases unrestricted net assets; however, the expense resulting from using the funds for public health education is subtracted from this increase, causing no effect on unrestricted net assets. The interest and dividends earned on the term endowments are unrestricted, and should be reported as an increase in unrestricted revenue for 2012. Since no expenses have been incurred from the use of the investment income for 2012, the net effect is an increase in unrestricted net assets for 2012.

**49. (d)** A conditional promise to give is considered unconditional if the possibility that the condition will not be met is remote. At December 31, 2011, Ms. Egbart's promise would be considered unconditional. This means that the college should report the funds that Ms. Egbart promised as an increase in temporarily restricted net assets on its statement of activities prepared for the year ended December 31, 2011.

**50. (c)** According to FASB ASC 958, all investments in debt securities should be measured at fair value in the statement of financial position.

**51. (a)** Since Crestfallen owns less than 1% of BMZ Company, the equity method cannot be used to account for the investment.

Investments in equity securities with readily determinable market values should be reported at fair value in the statement of financial position. In order to report BMZ's equity securities at their market value of \$42,000, a gain of \$7,000 should be recognized on the statement of activities. This gain represents an increase in unrestricted net assets, since the gain is related to an investment made by the governing board with unrestricted net assets. In addition, the dividends of \$1,000 would also be reported as an increase in unrestricted net assets, since the dividends were earned on unrestricted net assets. Therefore, the investment in BMZ would result in an \$8,000 increase in unrestricted net assets on the statement of activities prepared for the year ended December 31, 2012.

**52. (b)** Jazz Planners' investments that permit it to have significant influence over the operating and financing policies of the investee companies should be reported on the statement of financial position using the equity method. On the other hand, the investments that represent 1% to 3% ownership interests should be reported on the statement of financial position at fair value.

**53. (b)** When a resource provider transfers assets to a non-profit entity and (1) does not grant the recipient organization variance power and (2) the recipient organization and the beneficiaries are not financially interrelated, the recipient entity should record an increase in assets and liabilities as a result of the donation. In the case at hand, United Ways is the recipient entity that should record the cash donation by increasing both assets and liabilities.

**54. (a)** When the recipient organization and the beneficiary are financially interrelated organizations, and the resources held by the recipient organization must be used for the benefit of the beneficiary, the recipient entity should account for the asset transfer as an increase in assets and as an increase in contribution revenue. In the case at hand, World-Wide Helpers Foundation is the recipient entity that should record the asset transfer by increasing cash and increasing contribution revenue.

**55. (d)** A contribution from a resource provider is reported as contribution revenue if (1) the recipient organization is granted variance power by the resource provider or (2) the recipient organization and the beneficiary are financially interrelated organizations. In the case at hand, answer (d) is correct because the resource provider granted variance power to the recipient organization. Answers (b) and (c) are incorrect because the resource provider designates the beneficiaries and does not grant the recipient organization the ability to redirect the donation to other than the specified beneficiaries. For both situations (b) and (c), the recipient organization should record the donation by increasing both assets and liabilities. Answer (a) is incorrect because contribution revenue is reported by a recipient organization if the recipient organization and the beneficiary are financially interrelated. If they are not financially interrelated, the recipient organization should report the donation as an increase in assets and an increase in liabilities.

**56. (a)** When the resource provider provides variance power over transferred assets, the recipient entity should account for the assets donated as an increase in assets and an increase in contribution revenue. Variance power means the ability of the recipient organization to redirect the resources transferred to it by a resource provider. In case at hand, World-Wide Helpers is the recipient entity that should record the cash donation by increasing both assets and contribution revenue.

**57. (c)** A recipient organization that receives a contribution from a resource provider is required to report the contribution as an asset and a liability unless one of two conditions exist (1) the recipient organization is granted variance power to redirect the resources, or (2) the recipient organization and the beneficiary are financially interrelated organizations. Since Mary Wilson did not grant variance power to Goodbody to redirect her donation to other flood victims, and the Taft family and Goodbody are not financially interrelated organizations, the cash donation should be reported as a liability in Goodbody's 2012 financial statements.

**58. (d)** According to the AICPA Audit and Accounting Guide, *Not-for-Profit Organizations*,

*Under a split-interest agreement, a donor makes an initial gift to a trust or directly to the not-for-profit organization, in*

*which the not-for-profit organization has a beneficial interest but is not the sole beneficiary. ... The assets are invested and administered by the organization, a trustee, or a fiscal agent, and distributions are made to a beneficiary or beneficiaries during the term of the agreement. At the end of the agreement's term, the remaining assets covered by the agreement are distributed to or retained by either the not-for-profit organization or another beneficiary or beneficiaries.*

**59. (c)** According to the *Not-for-Profit Guide*, all joint costs of informational materials or activities that include a fund-raising appeal should be reported as fund-raising expense unless an appeal is designed to motivate its audience to action other than providing financial support. Answer (c) is the only alternative that requires both other action and financial support.

**60. (c)** According to the *Not-for-Profit Guide*, capital additions include nonexpendable gifts restricted to endowment, plant, or loan funds and the legally restricted investment income on investments in such funds. Donor-restricted gifts for programs or supporting services are not capital additions.

**61. (c)** According to the *Not-for-Profit Guide*, gifts in kind are noncash assets received by not-for-profit organizations from resource providers. These gifts in kind are reported as agency transactions or as contributions depending on the extent of discretion that the not-for-profit recipient has over the use or subsequent disposition of the assets.

**62. (b)** According to the *Not-for-Profit Guide*, when a not-for-profit organization has little or no discretion over the use of the asset, the transaction is an agency transaction.

**63. (c)** According to the AICPA Audit and Accounting Guide, *Health Care Organizations*, the basic financial statements for a hospital include a balance sheet, a statement of operations, a statement of changes in net assets, and a statement of cash flows. Accordingly, Elizabeth Hospital should prepare both a statement of changes in net assets as well as a statement of operations.

**64. (a)** According to the AICPA Audit and Accounting Guide, *Health Care Organizations*, the provision for contractual adjustments and discounts is recognized on the accrual basis and deducted from gross patient service revenue to determine net patient revenue. Bad debts expense is reported as an operating expense, not as a contra to gross patient service revenue. Accordingly, net patient service revenue for 2012 is \$865,000. This amount is determined by subtracting the contractual adjustments of \$100,000 and the discounts of \$15,000 from gross patient service revenue of \$980,000.

**65. (a)** Patient service revenue is to be reported net of adjustments for contractual and other adjustments in the operating statement. Provisions recognizing contractual adjustments and other adjustments are recorded on an accrual basis and deducted from gross service revenue to determine net service revenue.

**66. (d)** Voluntary health and welfare organizations are categorized as not-for-profit, nonbusiness-oriented organizations that are covered by the AICPA Audit and Accounting Guide, *Not-for-Profit Organizations*. Nursing home, home

health agencies, and hospitals are all considered health care entities and are covered in the AICPA Audit and Accounting Guide, *Health Care Organizations*.

**67. (b)** The AICPA Audit and Accounting Guide, *Health Care Organizations*, lists the items that must be reported separately from the performance indicator. Among these are extraordinary items (and other items required by GAAP to be reported separately), equity transfers, receipt of restricted contributions, contributions of long-lived assets, restricted investment returns, and unrealized gains/losses of unrestricted investments (except trading securities). Premium revenue is included in the performance indicator.

**68. (c)** The AICPA Audit and Accounting Guide, *Health Care Organizations*, states that expenses may be reported on the face of the financial statements using either a natural classification or functional presentation. Not-for-profit organizations that report using a natural classification of expenses are required to disclose expenses by functional classification in the notes.

**69. (b)** Functional classifications should be based on full cost allocations. Health care organizations may report depreciation, interest, and bad debts along with functions.

**70. (d)** The performance indicator should report the results of operations. However, it should not include such items as extraordinary items, unrealized gains and losses on nontrading securities, and contributions of long-lived assets. Increase in unrestricted net assets and increase in net assets include these items and so cannot be performance indicators. Net income is a term associated with for-profit enterprises and so is not used by health care entities.

**71. (d)** According to the AICPA Audit and Accounting Guide, *Health Care Organizations*,

*Charity care represents health care services that are provided but are never expected to result in cash flows. As a result, charity care does not qualify for recognition as receivables or revenue in the financial statements. Distinguishing charity care from bad-debt expense requires the exercise of judgment. Charity care is provided to a patient with demonstrated inability to pay. Each organization establishes its own criteria for charity care consistent with its mission statement and financial ability. Only the portion of a patient's account that meets the organization's charity care criteria is recognized as charity. Although it is not necessary for the entity to make this determination upon admission or registration of an individual, at some point the entity must determine that the individual meets the established criteria for charity care.*

Therefore, charity care is not included on the financial statements.

**72. (b)** According to the AICPA Audit and Accounting Guide, *Health Care Organizations*, "Under provisions of continuing-care contracts entered into by a CCRC and residents, nonrefundable advance fees represent payment for future services and should be accounted for as deferred revenue." Deferred revenue is classified as a liability.

**73. (a)** Patient service revenue is to be reported net of contractual adjustments. Contractual adjustments are the difference between revenue at established rates and the amounts realizable from third-party payors under contractual agreements. Charity care is not part of patient service revenue, and donor contributions are reported separately. Therefore,

Gross patient service revenue	\$750,000
– Contractual adjustments	– 63,000
= Net patient service revenue	<u>\$687,000</u>

**74. (d)** According to the AICPA Audit and Accounting Guide, *Health Care Organizations*, charity care does not qualify for recognition as receivables or revenue in the financial statements. According to the AICPA Audit and Accounting Guide, *Health Care Organizations*, management’s policy for providing charity care, as well as the level of charity care provided, should be disclosed in the financial statements. Such disclosure generally is made in the notes to the financial statement and is measured based on the providers’ rates, costs, units of service, or other statistical measure.

**75. (c)** According to the AICPA Audit and Accounting Guide, *Health Care Organizations*, a hospital’s other revenue, gains, and losses are derived from services other than providing health care services or coverage to patients. Other revenue, gains, and losses typically include interest and dividends that are unrestricted as well as proceeds from sales at gift shops and snack bars. Cash contributions from donors that are restricted to the acquisition of capital assets during 2013 are not reported on the statement of operations for 2012. The capital contribution should be reported on the statement of changes in net assets for the year ended December 31, 2012, as an increase in temporarily restricted net assets. Therefore, the amount that Michael should report as other revenue and gains on its statement of operations for 2012 is \$100,000.

**76. (b)** According to the AICPA Audit and Accounting Guide, *Health Care Organizations*, expirations of donor restrictions on temporarily restricted net assets should be reported on the statement of operations as net assets released from restrictions. On Swathmore’s statement of operations for 2012, the use of the \$50,000 contribution for research in 2012 should be reported as “net assets released from restrictions.” This amount should be included in revenues, gains, and other support on the statement of operations, and it is also included in the “performance indicator” reported on the statement of operations. The use of the \$250,000 contribution to acquire a capital asset placed into service during 2012 is also reported as “net assets released from restrictions” on the 2012 statement of operations. This results because the hospital adopted an accounting policy that did not imply a time restriction on gifts of long-lived assets. However, this amount is reported after the performance indicator on the statement of operations. Accordingly, the total amount reported as net assets released from restrictions on the 2012 statement of operations is \$300,000.

**77. (d)** According to the AICPA Audit and Accounting Guide, *Health Care Organizations*, unrealized gains on trading securities should be included as part of the amount reported for revenue, gains, and other support on the state-

ment of operations. These unrealized gains are included in the performance indicator. Likewise, unrestricted revenues from interest and dividends are included as part of the amount reported for revenue, gains, and other support on the statement of operations. Therefore, Smithson Hospital should report both the \$3,000 of interest revenue and the \$2,000 unrealized holding gain (\$105,000 less \$103,000) in the amount reported for revenue, gains, and other support on its statement of operations for the year ended December 31, 2012.

**78. (d)** According to the AICPA Audit and Accounting Guide, *Health Care Organizations*, unrealized gains and losses from other than trading securities, which are not restricted by donors, are reported after the performance indicator on the statement of operations. Therefore, the unrealized loss in item I is reported on the statement of operations, but it is not included in the amount reported for revenue and gains over expenses and losses, the performance indicator. The donor contribution that cannot be used until next year is not reported on the statement of operations. The contribution represents an increase in temporarily restricted net assets and is reported on the statement of changes in net assets.

**79. (c)** According to the AICPA Audit and Accounting Guide, *Health Care Organizations*, a donation of noncash assets should be reported at fair value and reported as an increase in the appropriate net asset class. If there are no donor-imposed restrictions on the donation, the donation increases unrestricted net assets on the statement of operations. More specifically, the donation is included in the amount reported for revenue, gains, and other support if the donation is used for the operations of the hospital. The use of the donation in the operations of the hospital is reported as part of the operations expenses for the period. The donation of medical supplies to Tucker Hospital should be reported as both a revenue and as an operating expense in the amount of \$15,000 on the statement of operations for the year ended December 31, 2012.

**80. (b)** The cash flows from revenues, gains, and other support, which are reported on the hospital’s statement of operations, would be included in the net cash provided (used) by operating activities on the statement of cash flows. Both net patient service revenue and tuition revenue are included in the amount reported for revenue, gains, and other support on the hospital’s statement of operations. Accordingly, cash received from patient service revenue and from tuition revenue are both included in the amount reported for cash flows from operating activities. The cash received for the term endowment as well as the cash received from dividends would not be included in the amount reported for net cash provided (used) by operating activities. Both of these cash receipts would be reported as increases in cash flows provided by financing activities. According to FASB ASC 958, cash contributions that are donor-restricted for long-term purposes are reported as financing activities on the statement of cash flows. In addition, the AICPA Audit and Accounting Guide, *Health Care Organizations*, states that cash received for long-term purposes, for example, the cash received for the term endowment and the building improvements, is not reported as a current asset. So that the statement of cash flows

will reconcile with the change in cash and cash equivalents reported as current assets on the balance sheet, an amount equal to the cash received for the two financing activities is included in the amount reported for cash flows from investing activities. For Wilson Hospital, this would mean that \$330,000, the sum of the \$250,000 for the term endowment and the \$80,000 of restricted dividends, is reported as a negative amount in the investing activities' section of the statement of cash flows. Note that both of these amounts are reported as investing activities whether the cash was spent this period or in subsequent period(s).

**81. (d)** The statement of changes in net assets reports the changes in the hospital's unrestricted, temporarily restricted, and permanently restricted net assets for a time period. The statement of operations discloses only the changes in unrestricted net assets for a time period, while the balance sheet discloses the amounts of unrestricted, temporarily restricted, and permanently restricted net assets as of a specific date. Therefore, neither the balance sheet nor the statement of operations discloses the changes in unrestricted, temporarily restricted, and permanently restricted net assets for a time period.

**82. (c)** According to the AICPA Audit and Accounting Guide, *Health Care Organizations*, investment returns not

restricted by donors are reported on the statement of operations. The statement of operations explains the change in the hospital's unrestricted net assets for a period. Consequently, investment returns that are permanently restricted would not be reported on the statement of operations. Investment returns that are realized in cash are reported on the statement of cash flows. However, investment returns that are not realized in cash are not reported on the statement of cash flows. Investment returns, whether realized or unrealized, that are restricted by donors are reported on the statement of changes in net assets. Unrealized gains on investments that are permanently restricted represent investment returns which would be reported as an increase in permanently restricted net assets on the statement of changes in net assets.

**83. (b)** The AICPA Audit and Accounting Guide, *Health Care Organizations*, lists proceeds from sales of cafeteria meals and guest trays to employees, medical staff, and visitors as one of the items reported as other revenue on the statement of operations. Other revenue is included in the performance indicator on the statement of operations. Net assets released from restrictions are also reported in the performance indicator if the net assets are used for operating expenses.

# APPENDICES

The following appendices provide you with additional practice for the exam.

<b>Appendix A: Outlines of Accounting Pronouncements</b>	<b>1019</b>
<b>Appendix B: Financial Accounting and Reporting Sample Examination</b>	<b>1137</b>
<b>Appendix C: Sample Financial Accounting and Reporting Testlet Released by AICPA</b>	<b>1171</b>
<b>Appendix D: 2014 Released AICPA Questions for Financial Accounting and Reporting</b>	<b>1179</b>

# Appendix A: Outlines of Accounting Pronouncements

## Study Program for the Accounting Pronouncements

As of July 1, 2009, the FASB Accounting Standards Codification is the only source of US GAAP, other than SEC literature. Older pronouncements, such as the Accounting Research Bulletins, Accounting Principles Board Opinions, and FASB Statements, are no longer considered authoritative. Outlines of the pronouncements that were used in the Codification are included in this edition to assist the CPA candidate in his/her transition to the Codification. The outlines of these previous sources of accounting literature are presented by Accounting Standard Codification (ASC) Topic order (e.g., ASC Topic 205, 210, 505), with cross-references to their location in the new ASC. For standards with the same ASC Topic cross-reference (e.g., both APB 6 and SFAS 129 relate to ASC Topic 505), the earlier issued standard is presented first. For standards relating to multiple ASC Topic areas (e.g., SFAS 6 is related to ASC Topic 210 and ASC Topic 470), the entire standard is presented in both locations. A cross references list by standard type precedes the outlines.

Study through the outlines as you are referred to them in the modules throughout the text. Note that on the CPA exam, it is not necessary to know the Codification Topic numbers or pronouncement numbers; however, being familiar with the numbering system will greatly aid the candidate in the research component of the FAR exam. Also, note that it is not necessary to memorize all the required disclosures. A good approach to take is to take the position of a financial analyst: What data would you want to know? Utilizing this approach will help you remember any exceptions (i.e., items you would not normally think an analyst would be interested in.)

## References to FASB Materials

In studying the outlines, you might notice that parts of some pronouncements have not been outlined. The reason some sections of the pronouncements are excluded from the outlines is that they have never been tested on the exam. Also, outlines for very specialized pronouncements (e.g., SFAS 50, *Financial Reporting in the Record and Music Industry*) are not included in this manual. Several others are outlined more generally. Only those FASB Interpretations and Technical Bulletins having widespread applicability are included in this chapter. They are set apart with solid lines **only** to distinguish them from the SFAS.

## ACCOUNTING RESEARCH BULLETINS

ARB 43—*Chapter 1A Rules Adopted by Membership* (ASC Topics 310, 505, 605, and 850)  
Chapter 1B—*Profits or Losses on Treasury Stock* (ASC Topic 505)  
Chapter 2A—*Comparative Financial Statements* (ASC Topic 205)

- SFAS 167—*Amendments to FASB Interpretation No. 46(R)* (ASC Topic 810)
- SFAS 168—*The FASB Accounting Standards Codification and the Hierarchy of Generally Accepted Accounting Principles—A Replacement of FASB Statement No. 162* (ASC Topic 105)

**GENERAL PRINCIPLES (ASC TOPIC 100)****SFAS 168—The FASB Accounting Standards Codification and the Hierarchy of Generally Accepted Accounting Principles—A Replacement of FASB Statement No. 162 (ASC Topic 105)**

- A. Establishes the Codification as the single source of US GAAP for nongovernmental entities, except for SEC authoritative literature which applies to SEC registrants
- B. Content in SEC Sections of the Codification is provided for convenience and is not the complete SEC literature.

**PRESENTATION (ASC TOPIC 200)****ARB 43—Chapter 2A Comparative Financial Statements (ASC Topics 205)**

Comparative statements enhance the usefulness of financial statements and should be presented.

**SFAS 144 Accounting for the Impairment or Disposal of Long-Lived Assets (ASC Topic 360—Property, Plant, and Equipment; ASC Topic 205—Presentation of Financial Statements; and ASC Topic 225—Income Statement)**

- A. Establishes financial and reporting requirements for the impairment or disposal of long-lived assets. In addition to property, plant, equipment, and intangible assets being amortized, SFAS 144 applies to capital leases of lessees, long-lived assets of lessors subject to operating leases, proved oil and gas properties that are being accounted for using the successful efforts method of accounting, and long-term prepaid assets.
- B. If a long-lived asset (or assets) is part of a group that includes other assets and liabilities not covered by SFAS 144, the statement applies to the group.
- C. Assets to be held and used
  1. Reviewed for impairment when circumstances indicate that the carrying amount of a long-term asset (or group) is not recoverable and exceeds its fair value. The carrying amount of a long-lived asset (asset group) is not recoverable if it exceeds the sum of the undiscounted cash flows expected to result from its use and eventual disposal.
  2. A long-lived asset (asset group) shall be tested for recoverability whenever events or changes in circumstances indicate that its carrying amount may not be recoverable. Examples of such events include
    - a. Significant decrease in market value
    - b. Change in way asset used or physical change in asset
    - c. Legal factors or change in business climate that might affect asset's fair value or adverse action or assessment by regulator
    - d. Asset costs incurred greater than planned
    - e. Current-period operating or cash flow loss combined with historical or projection of such amounts demonstrates continuing losses from the asset
    - f. A current expectation that, more likely than not a long-lived asset will be disposed of significantly before the end of its previously estimated useful life
  3. Impaired if the expected total future cash flows are less than the carrying amount of the asset (asset group)
    - a. Assets should be grouped at lowest level for which there are identifiable cash flows independent of other groupings
    - b. Expected future cash flows are future cash inflows to be generated by the asset (asset group) less the future cash outflows expected to be necessary to obtain those inflows
    - c. Expected future cash flows are **not** discounted and do not consider interest charges
    - d. If the management has alternative courses of action to recover the carrying amount, or if a range of possible cash flows are associated with a particular course of action, a probability-weighted approach may be useful
  4. Written down to fair value and loss recognized upon impairment
    - a. Fair value is "the price that would be received to sell an asset or paid to transfer a liability in an orderly transaction between market participants at the measurement date." (SFAS 157)
    - b. If quoted market price in active market is not available, the estimate of fair value should be based on best information available

5. An impairment loss for an asset group shall reduce only the carrying amounts of the long-lived assets. Impairment of other assets in the group should be accounted for in accordance with other applicable accounting standards
6. If an impairment loss is recognized, the adjusted carrying amount becomes its new cost basis
7. Fair value increases on assets previously written down for impairment losses may not be recognized
8. Disclosures
  - a. Description of impaired asset (asset group) and circumstances which led to impairment
  - b. Amount of impairment and manner in which fair value was determined
  - c. Caption in income statement in which impairment loss is aggregated, if it is not presented separately thereon
  - d. Business segment(s) affected (if applicable)

**D. Long-lived assets to be disposed of other than by sale**

1. Long-lived assets to be abandoned are disposed of when they cease to be used
2. Long-lived assets to be exchanged for similar assets or to be distributed to owners are disposed of when they are exchanged or distributed

**E. Long-lived assets to be disposed of by sale**

1. Long-lived assets to be sold shall be classified as “held-for-sale” in the period in which all of the following criteria are met:
  - a. Management commits to a plan of disposal
  - b. The assets are available for sale
  - c. An active program to locate a buyer has been initiated
  - d. The sale is probable
  - e. The asset is being actively marketed for sale at a fair price
  - f. It is unlikely that the disposal plan will significantly change
2. Reported at lesser of the carrying amount or fair value less cost to sell
  - a. Cost to sell includes broker commissions, legal and title transfer fees, and closing costs prior to legal title transfer
3. In future periods, adjusted carrying amount of asset shall be revised down or up to extent of changes in estimate of fair value less cost to sell, provided that the adjusted carrying amount does not exceed the carrying amount of the asset prior to the adjustment reflecting the decision to dispose of the asset
  - a. Thus, recoveries may be recognized when assets are to be **disposed of** but not on impaired assets that continue to be used

**F. Reporting long-lived assets and disposal groups to be disposed of**

1. Discontinued operations of a component of an entity
  - a. A component of an entity comprises operations and cash flows that can be clearly distinguished, operationally and for financial reporting purposes
  - b. The results of a component of an entity that either has been disposed of or is classified as held for sale shall be reported as discontinued operations if both of the following conditions are met:
    - (1) The operations and cash flows of the component have been (will be) eliminated from ongoing operations
    - (2) The entity will not have any significant continuing involvement in the operations of the component after disposal
  - c. In reporting discontinued operations, the income statement should present the results of discontinued operations separately after income from continuing operations and before extraordinary items as shown below

Income from continuing operations before income taxes	\$xxxxx	
Income taxes	<u>xxx</u>	
Income from continuing operations		\$xxxx
Discontinued operations (Note X)		
Loss from operations of discontinued Component Z (including loss on disposal of \$xxx)		xxxx
Income tax benefit		<u>xxxx</u>
Loss on discontinued operations		<u>xxxx</u>
Net income		<u>\$xxxx</u>

2. A gain or loss recognized for long-term asset (group) classified for sale that is not a component of an entity shall be included in income from continuing operations before income taxes
3. Disclosures
  - a. Description of assets to be disposed of, reasons for disposal, expected disposal date, and carrying amount of those assets
  - b. Gain or loss, if any, resulting from changes in carrying amount due to further changes in market value
  - c. If applicable, amounts of revenue and pretax profit or loss reported in discontinued operations
  - d. If applicable, the segment of the business affected (see outline of SFAS 131)

### ARB 43—Chapter 3A Current Assets and Current Liabilities (ASC Topics 210, 310, 340, 470)

Chapter 3A contains the definitions and examples of current assets and liabilities.

- A. Current assets are** “cash and other assets or resources commonly identified as those which are reasonably expected to be (1) realized in cash, (2) sold, or (3) consumed during the ordinary operating cycle of the business.”
1. Cash available for current operations
  2. Inventories
  3. Trade receivables
  4. Other receivables collectible in one year
  5. Installment, deferred accounts, and notes receivable
  6. Prepaid expenses
- B. Current liabilities are** “obligations whose liquidation is reasonably expected to require the use of existing resources properly classifiable as current assets or the creation of other current liabilities during the ordinary operating cycle of the business.”
1. Trade payables
  2. Collections received in advance of services
  3. Accruals of expenses
  4. Other liabilities coming due in one year
  5. Note that liabilities not using current assets for liquidation are not current liabilities (e.g., bonds being repaid from a sinking fund)
- C. Operating cycle is** “average time intervening between the acquisition of materials or services entering this process and the final cash realization.”

### APB 10 Omnibus Opinion—1966 (ASC Topics 210, 605, 740)

- A. ARB 43, Chapter 3B Working Capital**
1. Offsetting of liabilities and assets in the balance sheet is not acceptable unless a right of offset exists.
  2. Most government securities are not designed to be prepayment of taxes and thus may not be offset against tax liabilities. Only where an explicit prepayment exists may an offset be used.

#### FASB INTERPRETATION NO. 39 OFFSETTING OF AMOUNTS RELATED TO CERTAIN CONTRACTS

A right of setoff exists when all of the following conditions are met: (a) each of the two parties to a contract owes the other determinable amounts, (b) the reporting entity has the right to set off the amount owed with the amount owed by the other entity, (c) the reporting entity intends to set off, and (d) the right of setoff is enforceable at law.

- B. Installment method of accounting**
- Revenues should be recognized at the point of sale unless receivables are in doubt. The installment or cost recovery method may be used.

### SFAS 6 Classification of Short-Term Obligations Expected to Be Refinanced (ASC Topics 210 and 470)

- A. Short-term obligations shall be classified as a current liability unless**
1. Enterprise intends to refinance the obligation on a long-term basis

2. AND the intent is supported by ability to refinance
  - a. Post-balance-sheet issuance of long-term debt or equity securities, or
  - b. Financing agreement that clearly permits refinancing on a long-term basis
    - (1) Does not expire or is not callable for one year
    - (2) No violation of the agreement exists at the balance sheet date or has occurred to date
3. The amount of the short-term obligation excluded from current liability status should not exceed the
  - a. Net proceeds of debt or securities issued
  - b. Net amounts available under refinancing agreements
    - (1) The enterprise must intend to exercise the financing agreement when the short-term obligation becomes due.
4. Refinancing of short-term obligations is a FS **classification** issue, **not a recognition and measurement** issue.

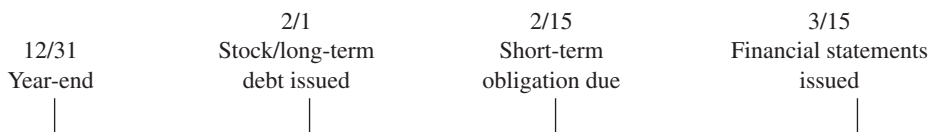

**FASB INTERPRETATION NO. 8 CLASSIFICATION OF A SHORT-TERM OBLIGATION REPAID PRIOR TO BEING REPLACED BY A LONG-TERM SECURITY**

Short-term obligations that are repaid after the balance sheet date but **before** funds are obtained from long-term financing are to be classified as current liabilities at the balance sheet date.

**EXAMPLES**

In situation 1 below, the obligation will be classified as a noncurrent liability at the balance sheet date. Why? Proceeds from refinancing were obtained prior to the due date of the obligation.

**Situation 1: Classify obligation due 2/15 as noncurrent liability at balance sheet date.**

In situation 2 below, the short-term obligation will be classified as a current liability. Why? Proceeds from the issuance of stock or long-term debt were not obtained until after the due date of the short-term obligation. Therefore, current assets must have been used to pay the short-term obligation.

**Situation 2: Classify obligation due 2/1 as current liability at balance sheet date.**

**SFAS 130 Reporting Comprehensive Income (ASC Topic 220—Comprehensive Income)**

- A. Establishes standards for reporting and display of comprehensive income (net income plus **other comprehensive income**) in a full set of general-purpose FS
- B. Items, and changes therein, to be included as part of and separately classified in **other comprehensive income**
  1. Foreign currency items
  2. Unrealized gains (losses) on certain investments in debt and equity securities
  3. The amounts for overfunded or underfunded pension plans
- C. Presentation of comprehensive income
  1. Alternative display options
    - a. At the bottom of IS, continue from net income to arrive at a **comprehensive income** figure (equals net income plus other comprehensive income), or
    - b. In a separate statement that starts with net income.

2. Components of other comprehensive income may be displayed net of related tax effects or before related tax effects with one amount shown for the aggregate income tax effect (with detail shown in notes)
  3. Reclassification (recycling) adjustments
    - a. Made to avoid double counting of items included in other comprehensive income in a prior year or current year that are included in net income (earnings) for the period
    - b. Display separately from the balance of each item adjusted (B.1. and B.2. above) (gross display)
      - (1) For reclassification adjustments related to the minimum pension liability, a single amount shall be displayed (net display)
- D. Separate EPS numbers are not required for other comprehensive income or comprehensive income

### APB 9 Reporting the Results of Operations (ASC Topics 225, 250, 505)

- A. Designates a new format for income statement in which all normal operating items would be presented at the top of the income statement resulting in “net income before extraordinary items.”
1. “Net income before extraordinary items” is followed by extraordinary items resulting in “net income.”
- B. “Prior period adjustments” are excluded from the income statement and constitute adjustments of beginning retained earnings disclosed at the top of the retained earnings statement.
1. Beginning retained earnings are adjusted by “prior period adjustments” resulting in “restated beginning retained earnings.”
  2. “Restated retained earnings” is then adjusted for net income and dividends which results in ending retained earnings.
- C. Prior period adjustments should be disclosed in the period of adjustment.
1. The effect on each prior period presented should be disclosed including restated income taxes.
  2. Disclosure in subsequent periods is not normally required.
  3. Historical summary data should also be restated and disclosed in the period of adjustment.
- D. The APB also reaffirmed earlier positions that the following should not affect determination of net income:
1. Transactions in the company’s own stock
  2. Transfers to or from retained earnings
  3. Quasi reorganization adjustments

### APB 30 Reporting the Results of Operations (ASC Topic 225—Income Statement)

- A. Extraordinary items are both unusual and infrequent.
1. **Unusual nature.** “The underlying event or transaction should possess a high degree of abnormality and be of a type clearly unrelated to, or only incidentally related to, the ordinary and typical activities of the entity, taking into account the environment in which the entity operates.”
    - a. Special characteristics of the entity
      - (1) Type and scope of operations
      - (2) Lines of business
      - (3) Operating policies
  2. **Infrequency of occurrence.** “The underlying event or transaction should be of a type that would not reasonably be expected to recur in the foreseeable future, taking into account the environment in which the entity operates.”
  3. Example of extraordinary presentation

Income before extraordinary items	\$xxx
Extraordinary items (less applicable income taxes of \$.) (Note )	<u>xxx</u>
Net income	<u>\$xxx</u>

4. Examples of gains and losses that are **not** generally extraordinary
  - a. Write-downs or write-offs of receivables, inventories, R&D, etc.
  - b. Translation of foreign exchange including major devaluations
  - c. Disposal of a component of a business
  - d. Sale of productive assets
  - e. Effects of strikes
  - f. Accruals on long-term contracts
5. Extraordinary items should be classified separately if material on an individual basis.
6. Gains or losses that are unusual **or** infrequent but not both should be disclosed separately (but not net of tax) in the income statement or notes.

## **SFAS 95 Statement of Cash Flows (ASC Topic 230—Statement of Cash Flows)**

### **A. Statement of Cash Flows in General**

1. Required for each period results of operation (income statement) are provided
2. Objectives
  - a. Provide information about cash receipts and cash payments
  - b. Provide information about operating, investing, and financing activities
  - c. Helps users to assess
    - (1) Ability to generate future net cash flows
    - (2) Ability to meet obligations and pay dividends
    - (3) Reasons for differences between income and associated cash receipts and payments
    - (4) Both cash and noncash aspects of entity's investing and financing activities
3. Shall report
  - a. Cash effects during a period from
    - (1) Operating activities
    - (2) Investing activities
    - (3) Financing activities
  - b. Noncash financing and investing activities in supplemental schedule

### **B. Gross and Net Cash Flows**

1. Gross amount of cash receipts and payments is relevant.
  - a. For example, must show issuance of bonds and retirement of bonds separately
2. Statement should explain change during the period in **cash and cash equivalents**.
  - a. Cash equivalents
    - (1) Short-term, highly liquid investments that are
      - (a) Readily convertible into known amounts of cash
      - (b) Near maturity (original maturity of three months or less from **date of purchase** by the enterprise) and present negligible risk of changes in value
    - (2) Examples
      - (a) Treasury bills
      - (b) Commercial paper
      - (c) Money market funds

### **C. Classification**

1. Investing activities
  - a. Include
    - (1) Lending money and collecting on those loans
    - (2) Acquiring and selling, or disposing

**Appendix A: Outlines of Accounting Pronouncements**

- (a) Securities that are neither cash equivalents nor held in a trading portfolio
  - (b) Productive assets expected to generate revenue over long periods of time
- (3) Cash inflows
- (a) Receipts from loans by
    - 1] Principal repayments
    - 2] Sale of loans made by the entity
  - (b) Receipts from sale of
    - 1] Securities of other entities carried in held-to-maturity (debt only) or available-for-sale portfolios (debt or equity)
    - 2] Property, plant, and equipment
- (4) Cash outflows
- (a) Loans made or purchased by the entity
  - (b) Payments to acquire assets
    - 1] Securities of other entities carried in held-to-maturity (debt only) or available-for-sale portfolios (debt or equity)
    - 2] Property, plant, and equipment
2. Financing activities
- a. Include
    - (1) Obtaining resources from owners and providing them with a return on, and a return of, their investment
    - (2) Obtaining resources from creditors and repaying the amounts borrowed
  - b. Cash inflows
    - (1) Proceeds from the issuance of
      - (a) Equity securities
      - (b) Bonds
      - (c) Mortgages
      - (d) Notes
      - (e) Other short- or long-term borrowing
  - c. Cash outflows
    - (1) Payments of dividends
    - (2) Outlays to repurchase entity's shares
    - (3) Repayments of amounts borrowed
3. Operating activities
- a. Include
    - (1) All transactions and other events that are not investing and financing
    - (2) Delivering or producing goods for sale and providing services
    - (3) Cash effects of transactions and other events that enter into the determination of income
  - b. Cash inflows
    - (1) Cash receipts from sale of goods or services
    - (2) Interest and dividends received
    - (3) Other operating cash receipts
    - (4) Sales of "trading portfolio" securities
  - c. Cash outflows
    - (1) Payments to employees and other suppliers of goods or services
    - (2) Income taxes paid
    - (3) Interest paid
    - (4) Other operating cash payments
    - (5) Purchases of "trading portfolio" securities

**D. Exchange Rate Effects**

1. Report the reporting currency equivalent of foreign currency cash flows using exchange rates in effect at time of cash flows
  - a. Weighted-average exchange rate may be used, if result substantially same.

**E. Content and Form**

1. Report net cash provided or used by operating, investing, and financing activities
2. At end of statement, reconcile beginning and ending cash and cash equivalents by showing net increase or decrease for period as addition to beginning balance to obtain ending balance
3. Cash flow from operating activities
  - a. Direct presentation (encouraged by FASB)
    - (1) Report major classes of operating receipts and payments (C.3.b.–c. above)
    - (2) Difference between cash receipts and payments—net cash flow from operating activities
    - (3) Supplemental schedule using indirect presentation must be presented when direct method used in body of statement
  - b. Indirect presentation (acceptable format)
    - (1) Shall separately report all major classes of reconciling items
      - (a) Deferrals of past operating cash receipts and cash payments such as depreciation and changes during the period in inventory and unearned revenue
      - (b) Accruals of expected future operating cash receipts and cash payments such as changes during the period in receivables and payables
    - (2) Interest paid (net of amounts capitalized) and income taxes paid must appear in related disclosures
  - c. Does not include cash flows from transactions or events whose effects are included in income, but which are not operating activities; for example,
    - (1) Gain or loss on extinguishment of debt—financing activities
    - (2) Gain or loss on sale of assets or from disposal of discontinued operations—investing activities
4. Inflows and outflows of cash from investing and financing activities
  - a. Noncash aspects should be clearly identified in separate schedule; for example,
    - (1) Conversion of debt to equity
    - (2) Acquisition of assets by assuming liabilities
      - (a) Includes capital lease obligations
    - (3) Exchanges of assets or of liabilities
5. Enterprise shall disclose policy for determining items included in cash equivalent.
  - a. Change in policy is change in accounting principle requiring restatement of comparative FS.

**F. Cash flow per share shall not be reported.****APB 22 Disclosure of Accounting Policies (ASC Topic 235—Notes to Financial Statement)**

- A.** Accounting policies can affect reported results significantly and the usefulness of the financial statements depends on the user's understanding of the accounting policies adopted by the reporting entity. Disclosure of accounting policies are
  1. Essential to users
  2. Integral part of financial statements
  3. Required for one or more financial statements
  4. Required for not-for-profit entities
  5. Not required for unaudited interim statements
    - a. If no change in accounting policy has occurred

- B.** Disclosure should include accounting principles and methods of applying them if material to reported amounts.
1. Generally, disclosure pertinent to principles involving recognition of revenue and expense
  2. Specifically, disclosure pertinent to
    - a. Selection from existing alternatives
    - b. Principles peculiar to a particular industry
    - c. Unusual or innovative applications
  3. Examples
    - a. Consolidation method
    - b. Depreciation method
    - c. Amortization of intangibles
    - d. Inventory pricing
    - e. R&D references amended by SFAS 2
    - f. Translation of foreign currencies
    - g. Long-term contract accounting
    - h. Franchising and leasing activities
  4. Accounting policy disclosure should not duplicate disclosures elsewhere in the statements.
- C.** Particularly useful is a separate **Summary of Significant Accounting Policies** either preceding or as the initial note.

### **SFAS 16 Prior Period Adjustments (ASC Topics 250 and 270)**

- A.** All P&L items are included in the determination of net income except the correction of an error in statements of a prior period.
1. Account for and report as a prior period adjustment to beginning retained earnings
- B.** An exception exists for interim reporting regarding certain adjustments relating to prior interim periods of the current year.
1. These “adjustments” (affecting prior interim periods of the current fiscal year) are settlements or adjustments of
    - a. Litigation or similar claims
    - b. Income taxes
    - c. Renegotiation proceedings
    - d. Utility revenue per the rate-making process
  2. These “adjustments” must also
    - a. Be material to operating income, trends in income, etc.
    - b. All or part of the adjustment is specifically identified with specified prior interim periods of the current fiscal year.
    - c. Not subject to reasonable estimation prior to the current interim period (e.g., new retroactive tax legislation)

### **SFAS 154 Accounting Changes and Error Corrections (ASC Topic 250—Accounting Changes and Error Corrections)**

- A.** Defines an accounting change as (1) change in principle; (2) change in an estimate; or (3) change in reporting entity. The correction of an error is not an accounting change.
- B.** Once an accounting principle is adopted, it must be used consistently for similar events and transactions. An entity may change an accounting principle only if the change is required by a new accounting pronouncement, or if the entity can justify that the alternative method is preferable.
- C.** Change in accounting principle
1. Is given retrospective application of the new accounting principle to all prior periods, unless it is impracticable to do so. This includes
    - a. Cumulative effects of the change are presented in the carrying amounts of assets and liabilities as of the beginning of the first period presented

- b. Offsetting adjustment is made to opening balance of retained earnings for that period
- c. Financial statements of each period are adjusted to reflect period-specific effects of the new accounting principle

Only direct effects of change are recognized (i.e., changes in inventory balances, deferred taxes, impairment adjustments). Indirect effects are reported in period in which the accounting change is made.

- D.** If cumulative effect can be determined, but period-specific effects cannot be determined, cumulative effect is applied to the earliest period to which it can be calculated. Offsetting adjustment is made to retained earnings of that period.
- E.** If it is impracticable to determine the cumulative effect of the change in any prior period, treat prospectively.
- F.** Notes to the financial statements must include
  - 1. The nature and reason for the change with explanation as to why the new method is preferable
  - 2. The method of applying the change
  - 3. A description of the prior period information retrospectively adjusted
  - 4. Effect of change on income from continuing operations, net income, and other affected line items on financial statements, and any per share amounts for current period and all periods adjusted
  - 5. The cumulative effect of the change on retained earnings and other components of equity or net assets as of the earliest period presented
  - 6. If retrospective application is impracticable, the reason and a description of how the change was reported
  - 7. A description of the indirect effects of the change and amounts recognized in the current period and related per share amounts
  - 8. The amounts of indirect effects of the change and per share amounts
- G.** Disclosures for interim periods should disclose the effect of change on income from continuing operations, net income, and related per share amounts for postchange interim periods.
- H.** Once the change in method is disclosed, financial statements in subsequent periods do not need to repeat disclosures.
- I.** Change in accounting estimate
  - 1. Treat on prospective basis in current and future periods
  - 2. If change is effected by change in principle, treat as change in estimate
  - 3. Change in depreciation method is treated as change in estimate
  - 4. If change in estimate is caused by change in principle, must show footnote disclosures required by change in accounting principle
- J.** Change in reporting entities
  - 1. Change is retrospectively applied to the financial statements of all periods presented
  - 2. Previously issued interim statements presented on a retrospective basis
  - 3. Footnote disclosures include the nature and reason for change, net income, other comprehensive income, and any related per share amounts for all periods presented
- K.** Correction of an error
  - 1. Errors are errors in recognition, measurement, presentation, or disclosure (Change from non-GAAP to GAAP is a correction of error)
  - 2. Treat as prior period adjustment by restating financial statements
  - 3. Cumulative effect of error is reflected in carrying value of assets and liabilities at the beginning of the first period presented, with an offsetting adjustment in the opening balance in retained earnings
  - 4. Restate financial statements to reflect period-specific effects of error
  - 5. Footnote disclosures must disclose that previously issued statements were restated, along with description of error.
  - 6. Effects of error and any per share amounts must also be disclosed for each period presented
  - 7. Cumulative effect of the change on retained earnings or other components of equity should be presented for the earliest period presented.
  - 8. Gross effects and net effects from income taxes on net income of prior period must be disclosed. Amount of income tax applicable to each prior period must be disclosed.
  - 9. Once correction of error is disclosed, financial statements of subsequent years do not need to repeat disclosure

**SFAS 89 Financial Reporting and Changing Prices (ASC Topic 255—Changing Prices)**

This statement **encourages** but does not require a business enterprise that prepares its financial statements in US dollars and in accordance with US generally accepted accounting principles to disclose supplementary information on changing prices.

**A. Measurement**

1. Inventory
  - a. Current cost is the current cost of purchasing or manufacturing, whichever is applicable
    - (1) Or recoverable amount if lower
2. Property, plant, and equipment
  - a. Current cost is current cost of acquiring same service potential (or recoverable amount if lower)
    - (1) That is, the same operating costs and output
    - (2) Three valuation methods
      - (a) Current cost of new asset less depreciation
      - (b) Cost of comparable used asset
      - (c) Adjusting new asset cost for differences in
        - 1] Useful life
        - 2] Output capacity
        - 3] Nature of service
        - 4] Operating costs
3. Recoverable amount
  - a. Current worth of net amount of cash expected to be recoverable from the use or sale of an asset
4. Increase or decrease in current cost amount of inventory and PP&E, net of inflation
  - a. Differences between current cost at entry dates and exit dates
    - (1) Entry dates are the later of the beginning of the year or date of acquisition
    - (2) Exit dates are the earlier of date of use, sale, etc., or year-end

**SFAS 128 Earnings Per Share (ASC Topic 260—Earnings per Share)****A. Presentation on Financial Statements**

1. Entities with publicly held common stock and simple capital structures (no potential common shares) need only present basic per share amounts. All other entities must present basic and diluted per share amounts with equal prominence.
2. Must present EPS on face of income statement for
  - a. Income from continuing operations
  - b. Net income
3. May present on face of income statement or in notes
  - a. Discontinued operations
  - b. Extraordinary items
  - c. Cumulative effect of change in accounting principle

**B. Basic EPS—Measures entity performance over a period of time**

1. Computed as net income minus preferred dividends divided by the weighted-average number of common shares outstanding. The claims of senior securities (nonconvertible preferred dividends) should be deducted from income prior to computing EPS to properly determine net income available to **common** shareholders. Therefore, dividends on cumulative preferred are deducted whether or not declared, while dividends on noncumulative preferred are deducted only if declared.

2. EPS figures should be based upon consolidated income figures after consolidating adjustments and eliminations.
3. To compute the weighted-average of common shares outstanding, treasury shares should be excluded as of date of repurchase.
4. EPS data for all periods presented should be retroactively adjusted for all splits and dividends, even those subsequent to the period being presented.
5. For stock issued in purchase combinations, use weighted-average from date of combination. For pooling combination, shares assumed outstanding the entire period regardless of when issued.

**C. For Diluted EPS, these additional procedures apply**

1. The “if-converted” method is used to adjust EPS on outstanding common shares for dilutive convertible securities.
  - a. The convertible securities are considered to have been converted at the beginning of the period (or at issuance if later) increasing the denominator of EPS.
  - b. For convertible bonds, the interest savings net of tax is added to the numerator of EPS.
  - c. For convertible preferred, the preferred dividends deducted in arriving at EPS are not deducted, thereby increasing the numerator. There is no tax effect because dividends are not an expense.
2. The “treasury stock” method is used to adjust EPS on outstanding common shares for dilutive options and warrants (i.e., those for which the exercise price is below the market price).
  - a. The options and warrants are assumed to be exercised at the beginning of the period (or the date the options and warrants were issued if later). The shares assumed issued increase the denominator of EPS.
  - b. The hypothetical proceeds are used to purchase treasury stock at the average price over the year.
  - c. No retroactive adjustment should be made to EPS figures for options and warrants as a result of market price changes.
3. When convertible securities require payment of cash at conversion, they are considered the equivalent of warrants. The “if-converted” method is used for the conversion and the “treasury stock” method is applied to the cash proceeds.
4. Fixed awards and nonvested stock to be issued to an employee under a stock-based compensation arrangement are considered options and are considered to be outstanding as of the grant date even though their exercise may be contingent upon vesting.
5. Contingently issuable shares are shares whose issuance is contingent upon the satisfaction of certain conditions and shall be considered outstanding and included in the diluted EPS computation as follows:
  - a. If all necessary conditions have been satisfied by the end of the period, the shares should be included as of the beginning of the period in which the conditions were satisfied (or as of the date of the contingent stock agreement, if later).
  - b. If all necessary conditions have not been satisfied, the number of contingently issuable shares shall be based on the number of shares (if any) that would be issuable if the end of the reporting period were the end of the contingency period and if the result would be dilutive. These shares shall be included in the diluted EPS denominator as of the beginning of the period (or as of the date of the contingent stock agreement if later).
6. Antidilutive securities shall not be included in diluted EPS computations.

**D. Additional Disclosure Requirements**

1. A reconciliation of the numerators and denominators of the basic and diluted per share computations for income from continuing operations, including the individual income and share amount effects of all securities that affect earnings per share.
2. The effect that has been given to preferred dividends in arriving at income available to common shareholders in computing basic EPS.
3. Securities that are antidilutive for the period(s) presented but could potentially dilute basic EPS in the future.
4. A description of any transaction that occurs after the end of the most recent period but before issuance of the financial statements that would materially change the number of shares outstanding at the end of the period if the transaction had occurred before the end of the period.

**APB 28 Interim Financial Reporting (ASC Topic 270—Interim Reporting)*****PART I Application of GAAP to Interim Periods***

- A.** APB faced basic question about interim periods
  - 1. Are interim periods basic accounting periods?
  - 2. Are interim periods integral parts of the annual period?
- B.** The APB decided interim periods are an integral part of an annual period.
  - 1. Certain GAAP must be modified for interim reporting to better relate the interim period to the annual period.
- C.** Revenue should be recognized on the same basis as for the annual period.
- D.** Costs directly associated with revenue should be reported as in annual periods with the following exceptions:
  - 1. Estimated gross profit rates may be used to estimate inventory. Disclose method used and significant adjustments to reconcile to later physical inventory.
  - 2. When LIFO base period inventories are liquidated during the interim period but are expected to be replaced by the end of the annual period, cost of sales should be priced at replacement costs rather than at base period costs.
  - 3. Declines in inventory market values, unless temporary, should be recognized. Subsequent recovery of market value should be recognized as a cost recovery in the subsequent period.
  - 4. Unanticipated and unplanned standard cost variances should be recognized in the respective interim period.
- E.** The objective of reporting all other costs is to obtain fair measure of operations for the annual period. These expenses include
  - 1. Direct expenditures—salaries
  - 2. Accruals—vacation pay
  - 3. Amortization of deferrals—insurance
- F.** These costs should be applied in interim statements as follows:
  - 1. Charge to income as incurred, or based on time expiration, benefit received, etc. Follow procedures used in annual reports.
  - 2. Items not identified with specific period are charged as incurred.
  - 3. No arbitrary assignment.
  - 4. Gains and losses of any interim period that would not be deferred at year-end cannot be deferred in the interim period.
  - 5. Costs frequently subjected to year-end adjustments should be anticipated in the interim periods.
    - a. Inventory shrinkage
    - b. Allowance for uncollectibles, quantity discounts
    - c. Discretionary year-end bonuses
- G.** Seasonal variations in above items require disclosure and one may add twelve-month reports ending at the interim date for current and preceding years.
- H.** The best estimate of the annual tax rate should be used to provide taxes on a year-to-date basis.
  - 1. The best estimate should take investment credits, capital gains, etc. into account, but not extraordinary items.
  - 2. Tax effects of losses in early portion of the year should not be recognized unless realization in subsequent interim periods is assured beyond a reasonable doubt (e.g., an established pattern of loss in early periods).
    - a. When tax effects of losses in early periods are not recognized, no taxes should be accrued in later periods until loss credit has been used.
- I.** Extraordinary items should be disclosed separately and recognized in the interim period in which they occur.
  - 1. The materiality of extraordinary items should be determined in relation to expected annual income.
  - 2. Effects of disposals of a component of a business are not extraordinary items, but should be disclosed separately.
  - 3. Extraordinary items should **not** be prorated over remainder of the year.
  - 4. Contingencies should be disclosed in the same manner as required in annual reports.

- J.** Each interim report should disclose any change in accounting principle from
1. Comparable period of prior year
  2. Preceding periods of current year
  3. Prior annual report
- K.** Reporting these changes
1. SFAS 154 should be applied.
  2. A change in accounting estimate (including effect on estimated tax rate) should be accounted for in period of change and disclosed in subsequent periods if material.
  3. Changes in principle should be given retrospective application. Financial statements are retrospectively adjusted showing the effects of the change on the carrying amounts of assets and liabilities for the earliest period presented, with an adjustment to beginning retained earnings for that period. Period-specific effects of the change should be shown for all direct effects of the change.

## ***PART II Required Interim Disclosures by Publicly Traded Companies***

- A.** Minimum disclosure includes
1. Sales, provision for taxes, extraordinary items, cumulative effect of principle changes, and net income
  2. BEPS and DEPS
  3. Seasonal revenue, costs, and expenses
  4. Significant changes in estimates of taxes
  5. Disposal of a business component and extraordinary items
  6. Contingent items
  7. Changes in accounting principles and estimates
  8. Significant changes in financial position
  9. Reportable operating segments
    - a. External revenues
    - b. Intersegment revenues
    - c. Segment profit/loss
    - d. Total assets (if material change from last annual report)
    - e. Description of changes from last annual report in method of determining segments or measurement of segment profit/loss
    - f. Reconciliation of total of reportable segments' profit/loss to corresponding enterprise amount
- B.** When **summarized interim data** are reported regularly, the above should be reported for the
1. Current quarter
  2. Current year-to-date or last twelve months with comparable data for the preceding year
- C.** If fourth quarter data are not separately reported, disclose in annual report
1. Disposal of business component
  2. Extraordinary, unusual, and infrequent items
  3. Aggregate year-end adjustments
- D.** The APB encourages interim disclosure of financial position and funds flow data.
1. If not disclosed, significant changes therein should be disclosed.

### **FASB INTERPRETATION NO. 18 ACCOUNTING FOR INCOME TAXES IN INTERIM PERIODS**

Tax on income from continuing operations for an interim period is based on estimated annual effective rate, which reflects anticipated tax planning alternatives. Expense of interim period is (Year-to-date in-come) × (Estimated rate) less (Expense recognized in prior interim periods). Tax effect of special items (below continuing operations) computed as they occur.

**SFAS 131 Disclosures about Segments of an Enterprise and Related Information (ASC Topic 280—Segment Reporting)****A.** Requires disclosures about

1. Operating segments of an enterprise, products and services, geographic areas, major customers
  - a. Disclosures are required for **public** companies in complete annual FS per GAAP and in condensed FS of interim periods including comparative presentations
  - b. Purpose of disclosures is to better assist statement users in appraising past and future performance of the enterprise and assessing prospects for future net cash flows.

**B.** Definitions

1. **Management approach.** Method chosen by the FASB to determine what information should be reported; it is based on the way that management organizes segments internally for making operating decisions and assessing performance.
2. **Operating segment.** Component of an enterprise that may earn revenues and incur expenses, about which separate financial information is available that is evaluated regularly by the chief operating decision maker in deciding how to allocate resources and in assessing performance.
3. **Chief operating decision maker.** Person whose general function (not specific title) is to allocate resources to, and assess the performance of, the segments of an enterprise.
4. **Segment revenue.** Includes revenue from unaffiliated customers and intersegment sales (use company transfer prices to determine intersegment sales).
5. **Segment operating profit (loss).** Segment revenue less all operating expenses, including any allocated revenues or expenses.
6. **Segment assets.** Tangible and intangible assets directly associable or used by the segment, including any allocated portion of assets used jointly by more than one segment

**C.** To determine reportable segments

1. Identify operating segments under management approach
2. Determine if aggregation of operating segments is appropriate.
3. Perform quantitative threshold tests (10% tests).

**D.** Operating segments may be aggregated by management if they have similar economic characteristics and if segments are similar in each of the following areas:

1. Nature of products and services
2. Nature of production processes
3. Type of customer for their products and services
4. Methods used to distribute their products or provide their services
5. Nature of regulatory environment; for example, banking

**E.** Operating segments that meet any of the three quantitative thresholds (10% tests) are immediately deemed reportable segments.

1. Segment revenue is > 10% of combined revenue (revenue includes intersegment revenue).
2. Segment operating profit or loss is > 10% of the greater of, in absolute amount
  - a. Combined operating profit of all operating segments with profit, or
  - b. Combined operating loss of all operating segments with loss
3. Segment assets are > 10% of combined assets of all segments.

**F.** Additional considerations when determining reportable segments

1. Management may combine information about operating segments that do not meet the 10% tests with information on other operating segments that do meet the 10% tests to produce reportable segment only if majority of the aggregation criteria exists.
2. Segment that was reported previously should continue to be reported if judged to be of continuing significance by management even if it does not meet the 10% tests in current period.
3. Combined sales to nonaffiliated customers of segments reporting separately must be at least 75% of total consolidated sales
  - a. If not, additional segments must be identified as reportable segments

4. All other operating segments which are not reportable shall be combined with any other business activities (e.g., corporate headquarters) and disclosed in “all other” category.
  5. Number of reportable segments probably should not exceed ten.
    - a. Combine closely related segments if number of segments becomes impracticable
- G.** Information is to be presented for each reportable segment and in aggregate for remaining segments not reported separately
1. General information, including
    - a. Explanation of factors used to identify the enterprise’s reportable segments
    - b. Types of products and services from which revenue is derived
  2. An enterprise shall report a measure of profit or loss and total assets for each reportable segment. To the extent the following is included in the measure of profit or loss or assets it shall also be disclosed:
    - a. Revenues from external customers
    - b. Revenues from transactions with other operating segments of the same enterprise
    - c. Interest revenue
    - d. Interest expense
    - e. Depreciation, depletion, and amortization expense
    - f. Unusual items not qualifying as extraordinary items
    - g. Equity in net income of investees accounted for by equity method
    - h. Income tax expense or benefit
    - i. Extraordinary items
    - j. Significant noncash items other than depreciation, depletion, and amortization expense
  3. For segment assets
    - a. Total expenditures for additions to long-lived assets
    - b. Amount of investment in equity method investees
  4. Enterprise shall provide an explanation of the measurements of segment profit or loss and assets, including
    - a. Basis of accounting
    - b. Nature of any differences between measurement of profit and loss or assets for the segment and that of the consolidated enterprise
    - c. Nature of any changes from prior periods
    - d. Nature and effect of asymmetrical allocations (e.g., allocating depreciation, but not related assets to segment)
  5. Enterprise will need to provide reconciliations for the segment amounts disclosed to the corresponding enterprise amounts.
  6. Although not as extensive as in the annual report, certain disclosures are required in the interim reports.
- H.** Previously issued segment information must be restated (unless impractical to do so) if any enterprise changes structure of internal organization that causes composition of reportable segments to change
- I.** Information about products and services
1. Enterprise-wide disclosure required even if only one and segment disclosures required.
  2. Revenue from external customers for each product and service shall be reported by the enterprise.
- J.** Information about geographic areas (individual countries)
1. Enterprise-wide disclosure required even if only one and segment disclosures required.
  2. Enterprise shall report revenues from external customers and long-lived assets attributable to its domestic operations and foreign operations.
  3. If enterprise functions in two or more foreign geographic areas, to the extent revenues or assets of an individual foreign geographic area are material, then these amounts should be separately disclosed.
- K.** Major customers
1. Enterprise-wide disclosure required even if segment disclosures are not required
  2. Disclose amount of revenue to each customer accounting for > 10% of revenue
  3. Disclose similarly if > 10% of revenue derived from sales to domestic government agencies or foreign governments
  4. Identify segment making sales

**ASSETS (ASC TOPIC 300)****ARB 43—Chapter 1A Rules<sup>1</sup> Adopted by Membership (ASC Topics 310, 505, 605, and 850)**

Four rules recommended by the Committee on Cooperation with Stock Exchanges in 1934. The last rule is from another 1934 Institute committee.

1. Profit is realized at the point of sale unless collection is not reasonably assured.
2. Capital (paid-in) surplus should not be charged with losses or expenses, except in quasi reorganizations.
3. Receivables from officers, employees, and affiliates must be separately disclosed.
4. Par value of stock issued for assets cannot be used to value the assets if some of the stock is subsequently donated back to the corporation.

**Chapter 3A Current Assets and Current Liabilities (ASC Topics 210, 310, 340, 470)**

Chapter 3A contains the definitions and examples of current assets and liabilities.

- A.** Current assets are “cash and other assets or resources commonly identified as those which are reasonably expected to be (1) realized in cash, (2) sold, or (3) consumed during the ordinary operating cycle of the business.”
  1. Cash available for current operations
  2. Inventories
  3. Trade receivables
  4. Other receivables collectible in one year
  5. Installment, deferred accounts, and notes receivable
  6. Prepaid expenses
- B.** Current liabilities are “obligations whose liquidation is reasonably expected to require the use of existing resources properly classifiable as current assets or the creation of other current liabilities during the ordinary operating cycle of the business.”
  1. Trade payables
  2. Collections received in advance of services
  3. Accruals of expenses
  4. Other liabilities coming due in one year
  5. Note that liabilities not using current assets for liquidation are not current liabilities (e.g., bonds being repaid from a sinking fund)
- C.** Operating cycle is “average time intervening between the acquisition of materials or services entering this process and the final cash realization.”

**APB 12 Omnibus Opinion—1967 (ASC Topics 310, 360, 505, 710, 835)**

- A.** Allowance or contra accounts (allowance for bad debts, accumulated depreciation, etc.) should be deducted from assets or groups of assets with appropriate disclosure.
- B.** Disclosure of depreciable assets should include
  1. Depreciation expense for the period
  2. Balances of major classes of depreciable assets by nature or function
  3. Accumulated depreciation either by major class or in total
  4. Description of method(s) of depreciation by major classes of assets
- C.** Changes in the separate shareholder equity accounts in addition to retained earnings and changes in number of equity securities must be disclosed in the year of change
  1. In separate statements
  2. Or the financial statements
  3. Or the notes

<sup>1</sup>The references in parentheses are from the *FASB Accounting Standards—Current Texts: Volumes 1 and 2*, John Wiley & Sons, Inc. These are included only for facilitating the use of the Current Texts for candidates who have access to them.

**SFAS 15 Accounting by Debtors and Creditors for Troubled Debt Restructurings (ASC Topics 310 and 470)**

(Superseded by SFAS 114 with regard to creditors)

- A.** Troubled debt restructurings occur when a creditor is compelled to grant relief to a debtor due to the debtor's inability to service the debt. This SFAS prescribes accounting for such debt restructurings if
  - 1. By creditor-debtor agreement
  - 2. Imposed by a court
  - 3. Result of repossessions and foreclosures
  - 4. But not changes in lease agreements
    - a. Nor legal actions to collect receivables
    - b. Nor quasi reorganizations
- B.** If a **debtor** transfers assets to settle fully a payable, recognize a gain on restructuring equal to the book value of the payable less FV of assets transferred.
  - 1. Use fair value measurements as outlined by SFAS 157.
  - 2. The difference between set FV and carrying value of the assets transferred is a gain or loss in disposition of assets per APB 30.
- C.** If a **debtor** issues an equity interest to settle fully a payable, account for equity issued at FV.
  - 1. Excess of carrying value of payable over equity FV is a gain on restructuring.
- D.** A **debtor** having the terms of troubled debt modified should account for the restructure prospectively (i.e., no adjustment of the payable).
  - 1. Recompute the new effective rate of interest based on the new terms
    - a. Total cash payments to be paid, less carrying value of payable is the interest
    - b. Amortize the payable by the interest method (APB 21) using the new interest rate
  - 2. Exception is if restructured terms require total cash payments (including interest) which are less than the carrying value of the payable, write down the payable to the total cash to be paid
    - a. Include contingent payments in calculation; this precludes recognizing a gain currently and interest expense later
    - b. Recognize gain on the write-down
    - c. All future cash payments reduce the payable (i.e., no interest expense is recognized)
- E.** If restructured by partial settlement (assets and/or equity issuance) and modified terms
  - 1. First account for asset and/or equity issuance per above
  - 2. Then account for modified terms per above
- F.** Related matters
  - 1. A repossession or foreclosure is accounted for per the above.
  - 2. Contingent payments on restructured debt shall be recognized per SFAS 5 (i.e., its payment is probable and subject to reasonable estimate).
  - 3. Legal fees on debt restructuring involving equity issuance reduce the amounts credited to the equity accounts.
    - a. All other direct costs of debt restructuring reduce gain or are expenses of the period if there is no gain.
- G.** Disclosures by **debtors**
  - 1. Description of major changes in debt of each restructuring
  - 2. Aggregate gain on debt restructuring and related tax effect
  - 3. Aggregate net gain (loss) on asset transfers due to restructuring
  - 4. EPS amount of aggregate gain on restructuring net of tax effect

### **SFAS 91 Accounting for Nonrefundable Fees and Costs Associated with Originating or Acquiring Loans and Initial Direct Costs of Leases (ASC Topic 310—Receivables)**

Establishes the accounting for nonrefundable fees and costs associated with lending, committing to lend, or purchasing a loan or group of loans. Applies to all types of loans.

- A.** Loan origination fees shall be recognized over life of related loan as adjustment of yield.
- B.** Certain direct loan origination costs shall be deferred over the life of the related loan as a reduction of the loan's yield.
- C.** All loan commitment fees shall be deferred except for certain retrospectively determined fees.
  - 1. Those commitment fees meeting specified criteria shall be recognized over the loan commitment period.
  - 2. All other commitment fees shall be recognized as an adjustment of yield over the related loan's life.
  - 3. If commitment expires unexercised, then recognize in income upon expiration of the commitment.
- D.** Loan fees, certain direct loan origination costs, and purchase premiums and discounts on loans shall be recognized as an adjustment of yield generally by the interest method based on contractual terms of the loan.
  - 1. Prepayments by debtors may be anticipated in certain specified circumstances.

### **SFAS 114 Accounting by Creditors for Impairment of a Loan (ASC Topic 310—Receivables)**

- A.** Scope of SFAS 114
  - 1. Applies to all creditors and to all loans except for those specified in A.3 (a.-d.)
  - 2. Applies to all loans (including A.3.a.) that are restructured in a troubled debt restructuring involving a modification of terms
  - 3. Exceptions
    - a. Large groups of smaller-balance homogeneous loans collectively evaluated for impairment
    - b. Loans that are measured at fair value or at the lower of cost or fair value
    - c. Leases
    - d. Debt securities
  - 4. Does not specify how a creditor should identify loans that are to be evaluated for collectibility
- B.** Recognition of Impairment
  - 1. A loan is impaired when it is probable that a creditor will be unable to collect all amounts due according to the contractual terms.
    - a. Probable—future event or events are likely to occur
    - b. All amounts due according to the contractual terms include both interest and principal payments collected as scheduled in loan agreement.
  - 2. If a loan qualifies as exception A.3.a., the creditor may not apply the provisions of SFAS 114 until the debt is restructured.
  - 3. Instances when a loan is not impaired
    - a. Insignificant delays or shortfalls
    - b. A delay in which creditor expects to collect all amounts due including interest accrued for the period of delay
- C.** Measurement of Impairment
  - 1. Creditor measures impairment based on present value of expected future cash flows discounted at the loan's effective interest rate
    - a. Effective interest rate—rate implicit in loan at time of origination
    - b. If effective interest rate varies (based on an independent index or rate)
      - (1) May be calculated based on the index or rate as it changes over life of loan
      - (2) Or may be fixed at rate in effect at date the loan meets impairment criterion
    - c. Expected future cash flows determined as creditor's best estimate based on reasonable and supportable assumptions and projections (including estimated costs to sell)

2. Loans with common risk characteristics may be aggregated and impairment measured using historical statistics and a composite effective interest rate.
3. Alternative measures of impairment
  - a. Loan's observable market price
  - b. Fair value of collateral if loan is collateral dependent
    - (1) Collateral dependent means repayment provided solely by the underlying collateral
    - (2) This method must be used when foreclosure is probable (and loan is collateral dependent)
4. When measure of impaired loan is less than recorded investment in loan
  - a. Create valuation allowance with charge to bad debt expense
  - b. Or adjust existing valuation allowance with charge to bad debt expense
5. Significant changes (increases or decreases) subsequent to initial measure of impairment
  - a. Recalculate impairment
  - b. Adjust valuation allowance
  - c. Net carrying amount of loan may never exceed recorded investment in loan

#### D. Income Recognition

1. The present value of an impaired loan changes over time and also changes because of revised estimates in the amount or timing of cash flows.
2. Recognition and measurement methods to reflect changes in present value are not specified in this statement as amended.

#### E. Disclosures

1. The recorded investment in impaired loans, total allowance for credit losses related to impaired loans, and amount for which no allowance for credit losses
2. The creditor's income recognition method, including cash receipts
3. For each period presented which relates to the impaired loans
  - a. Average recorded investment
  - b. Interest revenue recognized
  - c. If practicable, interest revenue recognized on a cash basis

### **SFAS 115 Accounting for Certain Investments in Debt and Equity Securities (ASC Topic 320—Investments—Debt and Equity Securities)**

- A. Establishes financial accounting and reporting requirements for all investments in debt securities and for small investments in equity securities with readily determinable fair values
  1. "Small" investments are those not accounted for by the equity method or involving consolidated subsidiaries
- B. Segregates debt and equity securities into three categories
  1. Held-to-maturity securities
    - a. Applies only to debt securities
    - b. Requires intent and ability to hold to maturity
      - (1) Will **not** sell in response to changes in
        - (a) Funding terms and sources
        - (b) Interest rates and prepayment risk
        - (c) Foreign currency risk
        - (d) Attractiveness of alternative investments
        - (e) Liquidity needs
      - (2) In rare cases, intent may change due to nonrecurring and unforeseeable circumstances.
        - (a) Continuing deterioration of issuer's credit
        - (b) Elimination of tax-exempt status of interest
        - (c) Business combination or disposition that increases interest rate risk or credit risk

**Appendix A: Outlines of Accounting Pronouncements**

- (d) Regulatory change in permissible investments
- (e) Downsizing to meet industry capital requirements
- (f) Increased risk weight of debt securities held as regulatory risk-based capital
- (3) Considered maturity if
  - (a) Sale occurs so close to maturity that interest rate risk is virtually eliminated
  - (b) Sale occurs after at least 85% of the principal has been collected
- c. Balance sheet
  - (1) Report at amortized cost
  - (2) Classify as current or noncurrent on an individual basis
- d. Income statement
  - (1) Do not report unrealized holding gains and losses
  - (2) Include realized G(L) in earnings
  - (3) Include interest income and premium/discount amortization in earnings
- e. Statement of cash flows
  - (1) Classify cash inflows from sales and outflows from purchases gross (not netted) as investing activities
- 2. Trading securities
  - a. Applies to debt and equity securities held for current resale
  - b. Balance sheet
    - (1) Report at fair value (See SFAS 157 for fair value measurements)
    - (2) Classify as current assets, generally
  - c. Income statement
    - (1) Include unrealized holding G(L) in earnings
    - (2) Exclude previously recognized realized G(L) from earnings
    - (3) Include dividend and interest revenue
  - d. Statement of cash flows
    - (1) Classify purchases and sales as operating activity
- 3. Available-for-sale securities
  - a. Applies to debt and equity securities not categorized as held-to-maturity or trading securities
  - b. Balance sheet
    - (1) Report at fair value (See SFAS 157 for fair value measurements)
    - (2) Classify as current or noncurrent on an individual basis
    - (3) Report net unrealized holding G(L) in other comprehensive income and accumulated other comprehensive income as separate component of stockholders' equity
  - c. Income statement
    - (1) Include realized G(L) in earnings
    - (2) Include dividend and interest revenue and premium/discount amortization in earnings
  - d. Statement of cash flows
    - (1) Classify sales and purchases gross (not netted) as investing activity
- C. Transfers between categories are accounted for at fair value**
  - 1. From trading
    - a. Do not reverse recognized unrealized holding G(L) at date of transfer
  - 2. To trading
    - a. Recognize unrealized holding G(L) immediately

3. To available-for-sale from held-to-maturity
  - a. Report unrealized holding G(L) as other comprehensive income
  - b. Transfers from held-to-maturity should be rare
4. To held-to-maturity from available-for-sale
  - a. Report unrealized holding G(L) as other comprehensive income
  - b. Amortize G(L) over remaining life of security as adjustment to yield

**D. Impairment of Securities**

1. Applies to held-to-maturity and available-for-sale securities
2. If permanent decline
  - a. Write down to fair value
  - b. Include realized loss in earnings
3. No write-up for subsequent recoveries

**E. Disclosures**

1. Only held-to-maturity and available-for-sale securities
2. By major security type
  - a. Aggregate fair value
  - b. Gross unrealized holding gains and losses
  - c. Amortized cost basis
3. By maturity of debt securities
  - a. All enterprises disclose contractual information.
  - b. Financial institutions disclose fair value and amortized cost for four or more groups of maturities
    - (1) Up to one year
    - (2) Over one through five years
    - (3) Over five through ten years
    - (4) Over ten years
  - c. Securities maturing at multiple dates
    - (1) May disclose separately
    - (2) May allocate over groupings
4. Available-for-sale securities
  - a. Proceeds from sales
  - b. Gross realized G(L)
  - c. Cost basis for determining G(L)
  - d. Change in net unrealized holding G(L) reported as comprehensive income in stockholders' equity
5. Trading securities
  - a. Change in net unrealized holding G(L) reported in earnings
6. Transfers
  - a. Gross G(L) on transfer from available-for-sale to trading
  - b. Of held-to-maturity securities
    - (1) Amortized cost
    - (2) Realized or unrealized G(L)
    - (3) Reason for sale

**APB 18 The Equity Method for Investments (ASC Topics 323, 325, 850)**

- A.** The equity method should be used for corporate joint ventures.
- B.** The equity method should be applied to investments where less than 50% ownership is held but the investor **can exercise significant influence over operating and financing policies of the investee.**

## Appendix A: Outlines of Accounting Pronouncements

1. Twenty percent (20%) or more ownership should lead to presumption of substantial influence, unless there is evidence to the contrary.
2. Conversely, less than 20% ownership leads to the presumption of no substantial influence unless there is evidence to the contrary.
3. The 20% test should be based on voting stock outstanding and disregard common stock equivalents.
4. The following procedures should be used in applying the equity method:
  - a. Intercompany profits should be eliminated.
  - b. Difference between cost and book value of net assets acquired should be accounted for per SFAS 141 and 142.
  - c. The investment account and investor's share of investee income should be presented as single amounts in investor statements with the exception of d. below.
  - d. Investor's share of discontinued operations, extraordinary items, cumulative effects of accounting changes, and prior period adjustments of investee should be so presented in statements of investor.
  - e. Investee capital transactions should be accounted for as are subsidiary capital transactions in consolidated statements.
  - f. Gains on sale of investment are the difference between selling price and carrying value of investment.
  - g. When investee and investor fiscal periods do not coincide, use most recent investee statement and have consistent time lag.
  - h. Losses, not temporary in nature, of investment value should be recognized by investor.
  - i. Investor's share of investee loss should not be recorded once investment account is written to zero. Subsequent income should be recognized after losses not recognized are made up.
  - j. Investor's share of investee's earnings should be computed after deducting investee's cumulative preferred dividends whether declared or not.
  - k. If an investor's holding falls below 20%, discontinue applying the equity method but make no retroactive adjustment.
  - l. When an investor's holding increases from a level less than 20% to a level equal to or greater than 20%, the investment account and retained earnings of the investor should be adjusted retroactively to reflect balances as if the equity account had been used. This is accounted for like a prior period adjustment.
5. Statements of investors applying the equity method should disclose
  - a. Investees and percentages held
    - (1) Accounting policies followed
    - (2) Treatment of goodwill, if any
  - b. Aggregate market value of investment (not for subsidiaries)
  - c. When investments are material to investor, summarized information of assets, liabilities, and results of operations of investee may be necessary
  - d. Conversion of securities, exercise of warrants, or issuances of investee's common stock which significantly affects investor's share of investee's income

**FASB INTERPRETATION NO. 35 CRITERIA FOR APPLYING THE EQUITY METHOD OF ACCOUNTING FOR INVESTMENTS IN COMMON STOCK. Interprets APB 18.**

Investors owning between 20 and 50% of an investee may **not** be able to exercise significant influence over the investee's operating and financial policies. The presumption of significant influence stands until overcome by evidence to the contrary, such as (1) opposition by the investee, (2) agreements under which the investor surrenders shareholder rights, (3) majority ownership by a small group of shareholders, (4) inability to obtain desired information from the investee, (5) inability to obtain representation on investee board of directors, etc. Whether contrary evidence is sufficient to negate the presumption of significant influence is a matter of judgment requiring a careful evaluation of all pertinent facts and circumstances, in some cases over an extended period of time. Application of this interpretation resulting in changes to or from the equity method shall be treated per APB 18, paras 19l and 19m.

**FASB INTERPRETATION NO. 1 ACCOUNTING CHANGES RELATED TO THE COST OF INVENTORY**

Changes in the cost composition of inventory is an accounting change and must conform to APB 20, including justification for the change. Preferably should be based on financial reporting objectives rather than tax-related benefits.

## Chapter 4 Inventory Pricing (ASC Topic 330)

Contains 10 statements outlining inventory valuation

1. Inventory consists of tangible personal property
  - a. Held for sale in ordinary course of business
  - b. In process of production for such sale
  - c. To be currently consumed in the production of such goods
2. Major objective of inventory valuation is proper income determination
  - a. Matching of costs and revenues
3. Primary basis is cost. Cost includes all reasonable and necessary costs of preparing inventory for sale. These costs would include expenditures to bring inventory to existing condition and location.
  - a. Direct or variable costing is not acceptable (use absorption costing)
4. Cost may be determined under any flow assumption. Use method which most clearly reflects income.
5. Departure from cost to market required when utility of goods, in their disposal in the ordinary course of business, is not as great as cost.
  - a. Write-down recognized as a loss of the current period
  - b. Use of lower of cost or market method more fairly reflects income of the period than would the cost method
  - c. Results in a more realistic estimate of future cash flows to be realized from the assets
  - d. Supported by doctrine of conservatism
6. Market means current replacement cost subject to
  - a. Market should not exceed net realizable value (sales price less selling and completion costs)
  - b. Market should not be less than net realizable value less normal profit
7. Lower of cost or market may be applied to individual items or the inventory as a whole. Use method that most clearly reflects income.
8. Basis for stating inventories and changes therein should be consistent and disclosed.
9. Inventories may be stated above cost in exceptional cases
  - a. No basis for cost allocation (e.g., meatpacking)
  - b. Disposal assured and price known (e.g., precious metals)
10. Purchase commitment loss should be recognized in the same manner as inventory losses.

## SFAS 151 Inventory Costs (ASC Topic 330—Inventory)

- A.** Requires that abnormal amounts of idle facility expense, freight, handling costs, and wasted material (spoilage) may be treated as current period charges.
- B.** Requires that fixed overhead allocation be based on normal capacity of production facilities.
  1. Normal capacity is a range of production levels.
  2. Normal capacity is production expected to be achieved over a number of periods or seasons under normal circumstances, taking into account loss of capacity due to planned maintenance.
  3. Normal capacity varies on business and industry-specific factors.
- C.** Factors that might cause abnormally low production level include significantly reduced demand, labor and material shortages, unplanned facility or equipment downtime.
- D.** Actual level of production may be used if it approximates normal capacity.
- E.** In periods of abnormally high production, amount of fixed overhead allocated to each unit is decreased so inventories are not measured above cost.
- F.** Items treated as period costs include
  1. Unallocated overhead costs are recognized as expense in period in which they are incurred.
  2. General and administrative expenses (under most circumstances).
  3. Selling expense.
  4. Abnormal freight, handling costs, amount of wasted materials (spoilage).

**SFAS 142 Goodwill and Other Intangible Assets (ASC Topic 350—Intangibles—Goodwill and Other)**

This standard provides guidance on accounting for intangible assets including goodwill.

**A. Initial Recognition and Measurement of Intangible Assets**

1. Intangible assets not acquired in a business combination
  - a. An intangible asset that is acquired either individually or with a group of other assets shall be initially recognized at its fair value
  - b. The cost of assets acquired as a group should be allocated to the individual assets based on their relative fair values and shall not give rise to goodwill
2. Intangible assets (including goodwill) acquired in a business combination shall be recognized in accordance with SFAS 141
3. Costs of internally developing, maintaining, or restoring intangible assets that are not specifically identifiable, that have indeterminate lives, or that are inherent in a continuing business and related to an entity as a whole, shall be recognized as an expense when incurred

**B. Accounting for Intangible Assets**

1. The cost of an intangible asset with a finite useful life is amortized over its estimated useful life
  - a. The useful life of an intangible asset should be estimated by considering factors such as
    - (1) Expected use
    - (2) Expected useful life of assets related to the intangible asset
    - (3) Legal, regulatory, and contractual provisions that may limit or extend the useful life
    - (4) The effects of obsolescence, demand, competition, and other economic factors
    - (5) The level of expenditures expected to be required to maintain the asset
  - b. The method of amortization shall reflect the pattern in which the economic benefits of the intangible assets are consumed; if the pattern cannot be reliably determined, a straight-line amortization method shall be used
  - c. The residual value of the intangible asset will be presumed to be zero unless there is a commitment from a third party to purchase the asset at the end of its useful life, or the residual value can be determined by reference to an exchange transaction in an existing market
  - d. The remaining useful life of the intangible asset should be reevaluated each reporting period—if it is no longer appropriate the carrying amount should be amortized prospectively over the revised remaining useful life
  - e. Intangible assets with finite useful lives should be reviewed for impairment in accordance with SFAS 144
2. An intangible asset that is determined to have an indefinite useful life should not be amortized until its useful life is determined to be no longer indefinite
  - a. An intangible asset that is not subject to amortization should be tested for impairment annually, or more frequently if events or changes in circumstances indicate that the asset might be impaired
  - b. The impairment test involves comparison of the carrying amount of the asset to its fair value
3. Goodwill should not be amortized
  - a. Goodwill should be examined for impairment at the level of reporting referred to as a reporting unit (an operating segment or one level below). See the outline of SFAS 131
  - b. An entity has the option to first qualitatively determine if it is more likely than not (greater than 50%) that the fair value of a reporting unit is less than its carrying value, including goodwill. Circumstances to be examined include, but are not limited to, examinations of macroeconomic conditions, industry and market considerations, cost factors, overall financial performance, entity-specific events, reporting unit events, and share price decreases. If it is found that it is not more likely than not that the fair value of the reporting unit is less than its carrying value, the goodwill impairment tests are deemed unnecessary. The entity can choose to bypass the qualitative assessment and proceed directly to the first step of the goodwill impairment test. The test of impairment is a two-step process as described below.
    - (1) The first step involves a comparison of the fair value of the reporting unit with its carrying amount. If the carrying amount of the unit exceeds its fair value, the second step is performed. In estimating the

- fair value of a reporting unit, a valuation technique based on multiples of earnings or revenue or other performance measure may be used.
- (2) The second step involves a comparison of the implied fair value of goodwill of the reporting unit with the carrying amount of that goodwill
  - (3) The implied fair value of goodwill is determined in the same manner as the amount of goodwill recognized in a business combination—see outline of SFAS 141. That is, all assets in the segment are valued in accordance with SFAS 141 and the excess of the fair value of the reporting unit as a whole over the amounts assigned to its recorded assets and liabilities is the implied goodwill. If the implied value of goodwill is less than the carrying amount, goodwill is written down to its implied value and an impairment loss is recognized.
- c. Goodwill should be tested for impairment on an annual basis and between annual dates if one or more of the following events occur:
- (1) A significant adverse change in legal factors or in the business climate
  - (2) An adverse action or assessment by a regulator
  - (3) Unanticipated competition
  - (4) A loss of key personnel
  - (5) A more-likely-than-not expectation that a reporting unit or a significant portion of a reporting unit will be sold or otherwise disposed of
  - (6) The test for recoverability under SFAS 144 within a reporting unit reveals that a significant group of assets are recorded at amounts above their recoverable values
  - (7) Recognition of a goodwill impairment loss in the financial statements of a subsidiary that is a component of a reporting unit
- d. A reporting unit may be tested at any time during the fiscal year as long as it is tested at the same time each year. Different reporting units may be tested at different times during the year.
- e. Initially goodwill is allocated to reporting units. Then the assets and liabilities of the reporting units are valued individually with goodwill being measured as the difference between the cost assigned to the reporting unit and the fair value of the individual assets and liabilities.

### C. Disclosures

1. In the period of acquisition
  - a. For intangible assets subject to amortization
    - (1) The amount assigned in total and by major intangible asset class
    - (2) Significant residual value, in total and by major intangible asset class
    - (3) The weighted-average amortization period, in total and by major intangible asset class
  - b. For intangible assets not subject to amortization, the amount assigned in total and by major intangible asset class
  - c. The amount of research and development assets acquired and written off and in which financial statement line items the amounts are included
2. Continuing disclosures
  - a. For intangible assets subject to amortization
    - (1) The gross carrying amount and accumulated amortization, in total and by major intangible asset class
    - (2) The aggregate amortization expense for the period
    - (3) The estimated aggregate amortization expense for each of the five succeeding fiscal years
  - b. For intangible assets not subject to amortization, the carrying amount in total and by each major intangible asset class
  - c. The changes in the carrying amount of goodwill during the period including
    - (1) The aggregate amount of goodwill acquired
    - (2) The aggregate amount of impairment losses recognized
    - (3) The amount of goodwill included in the gain or loss on disposal of all or a portion of a reporting unit
  - d. For each other-than-goodwill impairment loss recognized (other than for goodwill)
    - (1) A description of the impaired intangible asset and the facts and circumstances leading to the impairment
    - (2) The amount of the impairment loss and the method of determining fair value

- (3) The caption in the income statement or the statement of activities in which the impairment loss is aggregated
- (4) If applicable, the segment in which the impaired intangible asset is reported under SFAS 131
- e. For each goodwill impairment loss recognized
  - (1) A description of the facts and circumstances leading to the impairment
  - (2) The amount of the impairment loss and the method of determining the fair value of the associated reporting unit
  - (3) If a recognized impairment loss is an estimate that has not yet been finalized, the facts and circumstances and the amount of subsequent adjustments

### **SFAS 66 Accounting for Sales of Real Estate (ASC Topics 360, 605, and 976)**

#### **A. Other than retail land sales**

- 1. Use the full accrual method if the following criteria are satisfied:
  - a. Sale is consummated
  - b. Buyer's initial and continuing investments demonstrate a commitment to pay for the property
  - c. Seller's receivable is not subject to future subordination
  - d. Risks and rewards of ownership have been transferred
- 2. When the criteria are not met and dependent upon the particular circumstance, use one of the following methods:
  - a. Installment method
  - b. Cost recovery method
  - c. Deposit method
  - d. Reduced profit method
  - e. Percentage-of-completion

#### **B. Retail land sales (not outlined due to specialized nature)**

### **SFAS 144 Accounting for the Impairment or Disposal of Long-Lived Assets (ASC Topic 360—Property, Plant, and Equipment; ASC Topic 205—Presentation of Financial Statements; and ASC Topic 225—Income Statement)**

- A.** Establishes financial and reporting requirements for the impairment or disposal of long-lived assets. In addition to property, plant, equipment, and intangible assets being amortized, SFAS 144 applies to capital leases of lessees, long-lived assets of lessors subject to operating leases, proved oil and gas properties that are being accounted for using the successful efforts method of accounting, and long-term prepaid assets.
- B.** If a long-lived asset (or assets) is part of a group that includes other assets and liabilities not covered by SFAS 144, the statement applies to the group.
- C.** Assets to be held and used
  - 1. Reviewed for impairment when circumstances indicate that the carrying amount of a long-term asset (or group) is not recoverable and exceeds its fair value. The carrying amount of a long-lived asset (asset group) is not recoverable if it exceeds the sum of the undiscounted cash flows expected to result from its use and eventual disposal.
  - 2. A long-lived asset (asset group) shall be tested for recoverability whenever events or changes in circumstances indicate that its carrying amount may not be recoverable. Examples of such events include
    - a. Significant decrease in market value
    - b. Change in way asset used or physical change in asset
    - c. Legal factors or change in business climate that might affect asset's fair value or adverse action or assessment by regulator
    - d. Asset costs incurred greater than planned
    - e. Current-period operating or cash flow loss combined with historical or projection of such amounts demonstrates continuing losses from the asset

- f. A current expectation that, more likely than not a long-lived asset will be disposed of significantly before the end of its previously estimated useful life
  3. Impaired if the expected total future cash flows are less than the carrying amount of the asset (asset group)
    - a. Assets should be grouped at lowest level for which there are identifiable cash flows independent of other groupings
    - b. Expected future cash flows are future cash inflows to be generated by the asset (asset group) less the future cash outflows expected to be necessary to obtain those inflows
    - c. Expected future cash flows are **not** discounted and do not consider interest charges
    - d. If the management has alternative courses of action to recover the carrying amount, or if a range of possible cash flows are associated with a particular course of action, a probability-weighted approach may be useful
  4. Written down to fair value and loss recognized upon impairment
    - a. Fair value is “the price that would be received to sell an asset or paid to transfer a liability in an orderly transaction between market participants at the measurement date.” (SFAS 157)
    - b. If quoted market price in active market is not available, the estimate of fair value should be based on best information available
  5. An impairment loss for an asset group shall reduce only the carrying amounts of the long-lived assets. Impairment of other assets in the group should be accounted for in accordance with other applicable accounting standards
  6. If an impairment loss is recognized, the adjusted carrying amount becomes its new cost basis
  7. Fair value increases on assets previously written down for impairment losses may not be recognized
  8. Disclosures
    - a. Description of impaired asset (asset group) and circumstances which led to impairment
    - b. Amount of impairment and manner in which fair value was determined
    - c. Caption in income statement in which impairment loss is aggregated, if it is not presented separately thereon
    - d. Business segment(s) affected (if applicable)
- D. Long-lived assets to be disposed of other than by sale**
1. Long-lived assets to be abandoned are disposed of when they cease to be used
  2. Long-lived assets to be exchanged for similar assets or to be distributed to owners are disposed of when they are exchanged or distributed
- E. Long-lived assets to be disposed of by sale**
1. Long-lived assets to be sold shall be classified as “held-for-sale” in the period in which all of the following criteria are met:
    - a. Management commits to a plan of disposal
    - b. The assets are available for sale
    - c. An active program to locate a buyer has been initiated
    - d. The sale is probable
    - e. The asset is being actively marketed for sale at a fair price
    - f. It is unlikely that the disposal plan will significantly change
  2. Reported at lesser of the carrying amount or fair value less cost to sell
    - a. Cost to sell includes broker commissions, legal and title transfer fees, and closing costs prior to legal title transfer
  3. In future periods, adjusted carrying amount of asset shall be revised down or up to extent of changes in estimate of fair value less cost to sell, provided that the adjusted carrying amount does not exceed the carrying amount of the asset prior to the adjustment reflecting the decision to dispose of the asset
    - a. Thus, recoveries may be recognized when assets are to be **disposed of** but not on impaired assets that continue to be used
- F. Reporting long-lived assets and disposal groups to be disposed of**
1. Discontinued operations of a component of an entity

## Appendix A: Outlines of Accounting Pronouncements

- a. A component of an entity comprises operations and cash flows that can be clearly distinguished, operationally and for financial reporting purposes
- b. The results of a component of an entity that either has been disposed of or is classified as held for sale shall be reported as discontinued operations if both of the following conditions are met:
  - (1) The operations and cash flows of the component have been (will be) eliminated from ongoing operations
  - (2) The entity will not have any significant continuing involvement in the operations of the component after disposal
- c. In reporting discontinued operations, the income statement should present the results of discontinued operations separately after income from continuing operations and before extraordinary items as shown below

Income from continuing operations before income taxes	\$XXXXX	
Income taxes	<u>XXX</u>	
Income from continuing operations		\$XXXX
Discontinued operations (Note X)		
Loss from operations of discontinued Component Z (including loss on disposal of \$xxx)		xxxx
Income tax benefit		xxxx
Loss on discontinued operations		<u>xxxx</u>
Net income		<u>\$XXXX</u>

2. A gain or loss recognized for long-term asset (group) classified for sale that is not a component of an entity shall be included in income from continuing operations before income taxes
3. Disclosures
  - a. Description of assets to be disposed of, reasons for disposal, expected disposal date, and carrying amount of those assets
  - b. Gain or loss, if any, resulting from changes in carrying amount due to further changes in market value
  - c. If applicable, amounts of revenue and pretax profit or loss reported in discontinued operations
  - d. If applicable, the segment of the business affected (see outline of SFAS 131)

### LIABILITIES (ASC TOPIC 400)

#### SFAS 143 Accounting for Asset Retirement Obligations (ASC Topic 410—Asset Retirement and Environmental Obligations)

This standard provides guidance on accounting for obligations associated with the retirement of tangible long-lived assets.

- A. The guidance applies to legal obligations associated with the retirement of long-lived assets that result from the acquisition, construction, development and/or normal operation of a long-lived asset, except for certain obligations of lessees. Examples include
  1. Costs to decommission a nuclear utility plant at the end of its useful life
  2. Costs to dismantle and remove an offshore oil platform at the end of its useful life
- B. Such legal obligation may arise from
  1. Existing or enacted law, statute, ordinance
  2. Written or oral contract
  3. Legal construction of a contract under the doctrine of promissory estoppel (inferred legal obligation)
- C. An asset retirement obligation is recognized at its fair value in the period in which it is incurred providing that a reasonable estimate of fair value can be made
- D. Upon initial recognition of a liability, the entity shall increase the carrying amount of the related long-lived asset by the same amount as that recognized for the liability
- E. The cost shall be subsequently expensed using a systematic and rational method over periods no longer than that for which the related asset is expected to provide benefits
- F. Initial measurement of the liability

1. The best source of fair value of the liability would be provided by market-determined values but they will seldom be available
  2. In the absence of a market, expected present value of future cash flows should be used. In determining the expected present value, the entity should
    - a. Use probability-weighted present values in a range of the expected cash flows
    - b. The amounts should be discounted to present value using a credit-adjusted risk-free rate
- G.** Subsequent to the initial measurement of the liability the obligation should be adjusted for
1. The passage of time, and
  2. Revisions in estimates of timing or amounts of future cash flows
- H.** Adjustments to the liability for revisions in estimates of timing or amounts of cash flows should also be reflected in the carrying value of the related asset
- I.** Disclosures related to asset retirement obligations should include
1. Description of the obligation and related asset
  2. Description of how fair value was determined
  3. The funding policy, if any
  4. A reconciliation of the beginning and ending aggregate carrying value

### **SFAS 146 Liabilities: Exit or Disposal Costs (ASC Topic 420—Exit or Disposal Cost Obligation)**

- A.** A liability for cost associated with an exit or disposal shall be recognized and measured initially at its fair value in the period in which the liability is incurred
1. There is an exception for a liability for one-time termination benefits that involves employees providing future services
  2. When fair value cannot be reasonably estimated, the liability shall be recognized initially in the period in which fair value can be reasonably estimated
- B.** An exit activity includes but is not limited to restructurings which are programs that are planned and controlled by management, and materially changes either
1. The scope of a business undertaken by the company, or
  2. The manner in which that business is conducted
  3. Examples include
    - a. Sale or termination of line of business
    - b. Closure of business activities at a particular location
    - c. Relocation of business activities from one location to another
    - d. Changes in management structure
    - e. Fundamental reorganization of the business
- C.** Exit or disposal activities covered by this statement do not include those that involve an entity acquired in a business combination, nor do they include disposals covered by SFAS 144. It also does not apply to costs associated with the retirement of a long-lived asset covered by SFAS 143. Examples of exit or disposal activities covered by this statement include
1. Termination benefits provided to involuntarily terminated employees (other than ongoing arrangements and deferred compensation agreements)
  2. Costs to terminate a contract that is not a capital lease
  3. Costs to consolidate facilities or relocate employees
- D.** A liability for a cost associated with an exit or disposal activity shall be recognized and measured initially at fair value in the period in which the liability is incurred
1. This typically is measured by determining the present value of the liability by discounting it using the entity's credit-adjusted risk-free interest rate

- E. In the unusual circumstance in which fair value cannot be reasonably estimated, the liability shall be recognized initially in the period in which fair value can be reasonably estimated
- F. Subsequent to initial recognition, the liability is adjusted over time by using the discount rate used to initially determine the liability
- G. Measurement of onetime termination benefits
  - 1. A onetime termination agreement exists when the plan of termination meets the following criteria and has been communicated to the employees:
    - a. Management commits to the plan
    - b. The plan identifies the number of employees to be terminated, their job classifications and locations, and the expected completion date
    - c. The plan establishes the terms of the benefit arrangement
    - d. It is unlikely that significant changes in the plan will be made
  - 2. The liability is recognized and measured at the communication date if
    - a. The employees are not required to perform additional services to receive termination benefits, or
    - b. The employees will not be retained to render services beyond the minimum retention period (not to exceed the legal notification period)
  - 3. If the employees are required to render service until they are terminated in order to receive termination benefits and will render service beyond the minimum retention period
    - a. The liability for termination benefits shall be initially measured at the communication date based on the fair value of the liability as of the termination date, and
    - b. The liability shall be recognized ratably over the future service period
- H. Measurement of contract termination costs
  - 1. Costs to terminate the contract before term end
    - a. Recognized and measured when the contract is terminated
  - 2. Costs that will be incurred for the remaining term without benefit to the entity
    - a. Recognized and measured when the entity ceases to use the rights conveyed by the contract (e.g., when the entity returns the leased assets)
- I. Disclosure
  - 1. A description of the exit or disposal activity
  - 2. For each major type of cost associated with the activity
    - a. The total amount expected to be incurred
    - b. A reconciliation of the beginning and ending liability amounts
  - 3. The line items in the income statements in which the costs are included
  - 4. For each reportable segment, the total amount of costs expected to be incurred in connection with the activity
  - 5. If a liability cannot be reasonably estimated, the reasons therefor

### **SFAS 47 Disclosure of Long-Term Obligations (ASC Topics 440 and 470)**

- A. This statement requires that firm disclose
  - 1. Commitments under unconditional purchase obligations that are associated with suppliers (financing arrangements)
  - 2. Future payments on long-term borrowings
- B. **Unconditional purchase obligations** are obligations to transfer funds in the future for fixed or minimum amounts of goods or services at fixed or minimum prices.
- C. Unconditional purchase obligations that have all the following characteristics must be disclosed; they are not recorded on the balance sheet.
  - 1. Is noncancelable or cancelable only
    - a. Upon occurrence of a remote contingency, or
    - b. With permission of another party, or

- c. If a replacement agreement is signed between same parties, or
  - d. Upon penalty payment such that continuation appears reasonably assured
2. Was negotiated as part of arranging financing for the facilities that will provide the contracted goods
  3. Has a remaining term greater than one year
- D.** Disclosure of those unconditional purchase obligations not recorded on the balance sheet shall include
1. Nature and term of obligation
  2. Amount of fixed and determinable portion of obligation as of most recent BS in aggregate and if determinable for each of next five years
  3. Description of any variable elements of the obligation
  4. Amounts purchased under the obligation(s) for each year an income statement is presented
  5. Encourages disclosing imputed interest to reduce the obligation to present value using
    - a. Effective interest rate, or if unknown
    - b. Purchaser's incremental borrowing rate at date obligation was entered into
- E.** This statement **does not change** the accounting for obligations that are recorded on the balance sheet, nor does it suggest that disclosure is a substitute for accounting recognition. For recorded obligations, the following information should be disclosed for each of the next five years:
1. Aggregate amount of payments for unconditional obligations that meet criteria for balance sheet recognition
  2. Combined aggregate amount of maturities and sinking fund requirements for all long-term borrowings

### **SFAS 5 Accounting for Contingencies (ASC Topic 450—Contingencies)**

- A.** Contingency is “an existing condition, situation, or set of circumstances involving uncertainty as to possible gain (loss) to an enterprise that will ultimately be resolved when one or more future events occur or fail to occur.”
1. Definitions
    - a. Probable—future events are likely to occur
    - b. Reasonably possible—chance of occurrence is more than remote, but less than likely
    - c. Remote—chance of occurrence is slight
  2. Loss contingency examples
    - a. Receivable collection
    - b. Product warranty obligations
    - c. Risk of property losses by fire, explosion, etc.
    - d. Asset expropriation threat
    - e. Pending, threatened, etc., litigation
    - f. Actual or possible claims and assessments
    - g. Catastrophe losses faced by insurance companies
    - h. Guarantees of indebtedness of others
    - i. Banks' obligations under “standby letters of credit”
    - j. Agreements to repurchase receivables, related property, etc. that have been sold
    - k. Asset retirement obligations
- B.** Estimated loss from contingencies shall be accrued and charged to income when
1. It is probable (at balance sheet date) that an asset has been impaired or liability incurred
  2. **And** the amount of loss can be reasonably estimated
    - a. Difference between estimate recorded and actual amount determined in subsequent period is a change in accounting estimate
- C.** Loss contingency disclosures
1. Nature and amount of material items
  2. Nonaccrued loss contingencies for which a reasonable possibility of loss exists
    - a. Disclose nature of contingency
    - b. Estimate possible range of loss

- (1) Or state estimate cannot be made
- 3. If a loss contingency develops after year-end, but before statements are issued, disclosure of the nature of the contingency and amount may be necessary.
  - a. If a year-end contingency results in a loss before issuance of the statements, disclosure (possibly pro forma amounts) may be necessary.
- 4. Disclose nature and amount of the following loss contingencies (even if remote)
  - a. Guarantees of others' debts
  - b. Standby letters of credit by banks
  - c. Agreements to repurchase receivables
- D.** General, unspecified risks are not contingencies.
- E.** Appropriation of RE for contingencies shown within shareholders' equity is not prohibited.
  - 1. Cannot be shown outside shareholders' equity
  - 2. Contingency costs and losses cannot be charged to appropriation.
- F.** Gain contingency accounting
  - 1. Normally not reflected in accounts until realized.
  - 2. Adequate disclosure should be made without misleading implications of likelihood of realization.
- G.** Rationale for accounting for contingencies per SFAS 5
  - 1. Reflects **conservatism**—recognize losses immediately (if probable and reasonably estimable), but recognize gains only when realized.
  - 2. Results in better matching—contingent losses are recognized in time period of origin.

#### **FASB INTERPRETATION NO. 14 REASONABLE ESTIMATION OF THE AMOUNT OF LOSS**

A range of the amount of a loss is sufficient to meet the criteria of SFAS 5 that the amount of loss be "subject to reasonable estimate." When one amount in the range is a better estimate, use it; otherwise, use the minimum of the range and disclose range.

#### **STATEMENTS OF POSITION NO. 96-1 ENVIRONMENTAL REMEDIATION LIABILITIES**

This SOP includes accounting guidance, preceded by a very detailed description of relevant laws, remediation laws, remediation provisions and other pertinent information, useful to auditors as well as clients. Auditing guidance is limited to recitation of SFAS 5 concerns about reasonable estimation of loss accruals.

Accounting guidance includes the following provisions:

- A.** Interprets SFAS 5 in the context of environmental obligations (e.g., threshold for accrual of liability, etc.) and sets "benchmarks" for recognition.
- B.** Benchmarks for accrual and evaluation of estimated liability (stages which are deemed to be important to ascertaining the existence and amount of the liability) are
  - 1. Identification and verification of an entity as a potentially responsible party (PRP), since the proposal stipulated that accrual should be based on premise that expected costs will be borne by only the "participating potentially responsible parties" and that the "recalcitrant, unproven and unidentified" PRP will not contribute to costs of remediation
  - 2. Receipt of unilateral administrative order
  - 3. Participation, as a PRP, in the remedial investigation/feasibility study (RI/FS)
  - 4. Completion of the feasibility study
  - 5. Issuance of the Record of Decision (ROD)
  - 6. Remedial design through operation and maintenance, including postremediation monitoring

- C. The amount of liability is affected by
  1. The entity's allocable share of liability for a specified site; and
  2. Its share of the amounts related to the site that will not be paid by the other PRP or the government
- D. Costs to be included in the accrued liability are
  1. Incremental direct costs of the remediation effort itself; and
    - a. Fees to outside law firms for work related to the remediation effort
    - b. Costs relating to completing the RI/FS
    - c. Fees to outside consulting and engineering firms for site investigations and development of remedial action plans and remedial actions
    - d. Costs of contractors performing remedial actions
    - e. Government oversight costs and past costs
    - f. Cost of machinery and equipment dedicated to the remedial actions that do not have an alternative use
    - g. Assessments by a PRP group covering costs incurred by the group in dealing with a site
    - h. Costs of operation and maintenance of the remedial action, including costs of postremediation monitoring required by the remedial action plan
  2. Costs of compensation and benefits for employees directly involved in the remediation effort
  3. Costs are to be estimated based on existing laws and technologies, and not discounted to present value unless timing of cash payments is fixed or reliably determinable

### **ARB 43— Chapter 3A Current Assets and Current Liabilities (ASC Topics 210, 310, 340, 470)**

Chapter 3A contains the definitions and examples of current assets and liabilities.

- A. **Current assets** are “cash and other assets or resources commonly identified as those which are reasonably expected to be (1) realized in cash, (2) sold, or (3) consumed during the ordinary operating cycle of the business.”
  1. Cash available for current operations
  2. Inventories
  3. Trade receivables
  4. Other receivables collectible in one year
  5. Installment, deferred accounts, and notes receivable
  6. Prepaid expenses
- B. **Current liabilities** are “obligations whose liquidation is reasonably expected to require the use of existing resources properly classifiable as current assets or the creation of other current liabilities during the ordinary operating cycle of the business.”
  1. Trade payables
  2. Collections received in advance of services
  3. Accruals of expenses
  4. Other liabilities coming due in one year
  5. Note that liabilities not using current assets for liquidation are not current liabilities (e.g., bonds being repaid from a sinking fund)
- C. **Operating cycle** is “average time intervening between the acquisition of materials or services entering this process and the final cash realization.”

### **APB 14 Convertible Debt and Debt Issued with Stock Warrants (ASC Topic 470—Debt)**

- A. Convertible debt constitutes securities which are convertible into common stock of the user or affiliate. Terms generally include
  1. Lower interest rate than on ordinary debt
  2. Initial conversion price greater than the common price at time of issuance
  3. A conversion price which does not decrease except to protect against dilution

- B.** While there are arguments to account for the debt and equity characteristics separately, the APB has concluded no proceeds of a convertible issue should be attributed to the conversion factor.
1. Primary **reasons** are
    - a. The inseparability of the debt and conversion features
    - b. The practical difficulties of valuing the conversion feature
- C.** When debt is issued with detachable purchase warrants, the debt and warrants generally trade separately and should be treated separately.
1. The allocation of proceeds should be based on relative market value at date of issuance.
  2. Any resulting debt discount or premium should be accounted for as such.
- D.** Separate valuation of debt and warrants is applicable where the debt may be used as consideration when exercising the warrants. Separate valuation is not acceptable where the debt must be tendered to exercise the warrants (i.e., the warrants are, in essence, nondetachable).

### APB 26 Early Extinguishment of Debt (ASC Topic 470—Debt)

(Amended by SFAS 84 and SFAS 145)

- A.** Definitions
1. **Net carrying amount.** “Amount due at maturity, adjusted for unamortized premium, discount, and cost of issuance.”
  2. **Reacquisition price.** “Amount paid on extinguishment, including a call premium and miscellaneous costs of reacquisition.”
  3. **Refunding.** Replacement of debt with other debt
- B.** Retirement is usually achieved by use of liquid assets.
1. Currently in existence
  2. From sale of equity securities
  3. From sale of debt securities
- C.** A **difference** between **reacquisition price** and **net carrying amount** of the extinguished debt should be recognized in the year of extinguishment as a separate item.
1. Gains and losses should not be amortized to future years.
  2. Gains and losses are ordinary.

### SFAS 6 Classification of Short-Term Obligations Expected to Be Refinanced (ASC Topics 210 and 470)

- A.** Short-term obligations shall be classified as a current liability unless
1. Enterprise intends to refinance the obligation on a long-term basis
  2. AND the intent is supported by ability to refinance
    - a. Post-balance-sheet issuance of long-term debt or equity securities, or
    - b. Financing agreement that clearly permits refinancing on a long-term basis
      - (1) Does not expire or is not callable for one year
      - (2) No violation of the agreement exists at the balance sheet date or has occurred to date
  3. The amount of the short-term obligation excluded from current liability status should not exceed the
    - a. Net proceeds of debt or securities issued
    - b. Net amounts available under refinancing agreements
      - (1) The enterprise must intend to exercise the financing agreement when the short-term obligation becomes due.
  4. Refinancing of short-term obligations is a FS **classification** issue, **not** a **recognition** and **measurement** issue.

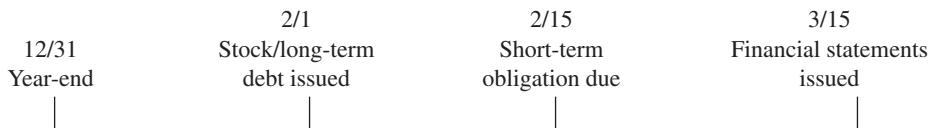

**FASB INTERPRETATION NO. 8 CLASSIFICATION OF A SHORT-TERM OBLIGATION REPAID PRIOR TO BEING REPLACED BY A LONG-TERM SECURITY**

Short-term obligations that are repaid after the balance sheet date but before funds are obtained from long-term financing are to be classified as current liabilities at the balance sheet date.

**EXAMPLES**

In situation 1 below, the obligation will be classified as a noncurrent liability at the balance sheet date. Why? Proceeds from refinancing were obtained prior to the due date of the obligation.

**Situation 1: Classify obligation due 2/15 as noncurrent liability at balance sheet date.**

In situation 2 below, the short-term obligation will be classified as a current liability. Why? Proceeds from the issuance of stock or long-term debt were not obtained until after the due date of the short-term obligation. Therefore, current assets must have been used to pay the short-term obligation.

**Situation 2: Classify obligation due 2/1 as current liability at balance sheet date.**

**SFAS 15 Accounting by Debtors and Creditors for Troubled Debt Restructurings (ASC Topics 310 and 470)**

(Superseded by SFAS 114 with regard to creditors)

- A.** Troubled debt restructurings occur when a creditor is compelled to grant relief to a debtor due to the debtor's inability to service the debt. This SFAS prescribes accounting for such debt restructurings if
1. By creditor-debtor agreement
  2. Imposed by a court
  3. Result of repossessions and foreclosures
  4. But not changes in lease agreements
    - a. Nor legal actions to collect receivables
    - b. Nor quasi reorganizations
- B.** If a **debtor** transfers assets to settle fully a payable, recognize a gain on restructuring equal to the book value of the payable less FV of assets transferred.
1. Use fair value measurements as outlined by SFAS 157.
  2. The difference between set FV and carrying value of the assets transferred is a gain or loss in disposition of assets per APB 30.
- C.** If a **debtor** issues an equity interest to settle fully a payable, account for equity issued at FV.
1. Excess of carrying value of payable over equity FV is a gain on restructuring.
- D.** A **debtor** having the terms of troubled debt modified should account for the restructure prospectively (i.e., no adjustment of the payable).
1. Recompute the new effective rate of interest based on the new terms
    - a. Total cash payments to be paid, less carrying value of payable is the interest
    - b. Amortize the payable by the interest method (APB 21) using the new interest rate

2. Exception is if restructured terms require total cash payments (including interest) which are less than the carrying value of the payable, write down the payable to the total cash to be paid
    - a. Include contingent payments in calculation; this precludes recognizing a gain currently and interest expense later
    - b. Recognize gain on the write-down
    - c. All future cash payments reduce the payable (i.e., no interest expense is recognized)
- E.** If restructured by partial settlement (assets and/or equity issuance) and modified terms
1. First account for asset and/or equity issuance per above
  2. Then account for modified terms per above
- F.** Related matters
1. A repossession or foreclosure is accounted for per the above.
  2. Contingent payments on restructured debt shall be recognized per SFAS 5 (i.e., its payment is probable and subject to reasonable estimate).
  3. Legal fees on debt restructuring involving equity issuance reduce the amounts credited to the equity accounts.
    - a. All other direct costs of debt restructuring reduce gain or are expenses of the period if there is no gain.
- G.** Disclosures by **debtors**
1. Description of major changes in debt of each restructuring
  2. Aggregate gain on debt restructuring and related tax effect
  3. Aggregate net gain (loss) on asset transfers due to restructuring
  4. EPS amount of aggregate gain on restructuring net of tax effect

### **SFAS 78 Classification of Obligations That Are Callable by the Creditor (ASC Topic 470—Debt)**

- A.** Statement specifies that the current liability classification is also intended to include
1. Obligations that, by their terms, are due on demand or will be due on demand within one year (or operating cycle, if longer) from balance sheet date, even though liquidation may not be expected within that period
  2. Long-term obligations that are or will be callable by creditor either because
    - a. Debtor's violation of debt agreement provision at balance sheet date makes obligation callable **or**
    - b. Violation, if not cured within grace period, will make obligation callable
- B.** Callable obligations in A.2. should be classified current unless one of the following conditions is met:
1. Creditor has waived or subsequently lost the right to demand repayment for more than one year (or operating cycle, if longer) from balance sheet date
  2. For long-term obligations containing grace period within which debtor may cure violation, it is probable violation will be cured within that period
    - a. If obligation meets this condition, the circumstances shall be disclosed
- C.** This statement does not modify SFAS 6 or 47

### **SFAS 84 Induced Conversions of Convertible Debt (ASC Topic 470—Debt)**

- A.** Establishes accounting and reporting standards for conversion of convertible debt to equity securities when debtor induces conversion of the debt
1. Applies only to conversions that both
    - a. Occur pursuant to changed conversion privileges exercisable only for limited period of time
    - b. Include issuance of all of the equity securities issuable pursuant to the original conversion privileges for each instrument that is converted
  2. Examples of changed terms to induce conversion
    - a. Reduction of original conversion price
    - b. Issuance of warrants or other securities not included in original conversion terms
    - c. Payment of cash or other consideration to debt holders who convert during the specified time period

- B. Debtor enterprise shall recognize expense equal to excess of fair value of all securities and other consideration transferred in the transaction over fair value of securities issuable pursuant to the original conversion terms.
  - 1. Expense is not an extraordinary item.
  - 2. Fair value of securities/other consideration measured as of inducement date
    - a. Typically date converted by debt holder or binding agreement entered into

### **SFAS 150 Accounting for Certain Financial Instruments with Characteristics of Both Liabilities and Equity (ASC Topic 480—Distinguishing Liabilities from Equity)**

- A. This statement addresses how an issuer classifies and measures certain financial instruments with characteristics of both liabilities and equity. If the financial instrument embodies an obligation to the issuer, then it should be reported as a liability.
- B. Terms: An obligation is a conditional or unconditional duty or responsibility to transfer assets or to issue equity shares. The duty may require a physical settlement (repurchasing its equity shares), a net cash settlement (transferring cash), or a net share settlement (issuing shares to settle).
- C. This pronouncement applies to three classes of financial instruments: mandatorily redeemable preferred stock, obligations to repurchase the issuer's equity shares by transferring assets, and certain obligations to issue a variable number of shares.
  - 1. Mandatorily redeemable preferred stock is classified as a liability unless the redemption only occurs upon liquidation or termination of the entity.
  - 2. If a financial instrument embodies an obligation to repurchase the issuer's equity shares and requires settlement by transferring assets, then the instrument is classified as a liability.
  - 3. If the financial instrument has an obligation that the issuer must settle by issuing a variable number of its equity shares, then it is classified as a liability if the value of the obligation is based on a fixed monetary amount or an amount tied to variations or inverse variations in something other than the issuer's securities.
- D. These items are presented in the liabilities section of the statement of financial position. For EPS purposes, mandatorily redeemable preferred and forward contracts to repurchase equity shares are excluded in the calculation of earnings per share. Dividends and participation rights are deducted in computing income available to common shareholders in calculating EPS.
- E. Disclosure: The following must be disclosed in the notes to financial statements:
  - 1. The amount that would be paid or number of shares that would be issued and their fair value if settlement were to occur at reporting date
  - 2. How changes in fair value of the shares would affect the settlement amounts
  - 3. The maximum number of shares that could be required to be paid for a physical settlement
  - 4. The maximum number of shares that could be required to be issued
  - 5. That a contract does not limit the amount that the issuer could be required to pay or issue shares
  - 6. If the forward contract or option indexed to the issuer's equity shares, the forward price or option strike price, the number of issuer's shares to which the contract is indexed and the settlement date or dates

### **EQUITY (ASC TOPIC 500)**

#### **ARB 43—Chapter 1A Rules<sup>2</sup> Adopted by Membership (ASC Topics 310, 505, 605, and 850)**

Four rules recommended by the Committee on Cooperation with Stock Exchanges in 1934. The last rule is from another 1934 Institute committee.

- 1. Profit is realized at the point of sale unless collection is not reasonably assured.
- 2. Capital (paid-in) surplus should not be charged with losses or expenses, except in quasi reorganizations.
- 3. Receivables from officers, employees, and affiliates must be separately disclosed.
- 4. Par value of stock issued for assets cannot be used to value the assets if some of the stock is subsequently donated back to the corporation.

<sup>2</sup>The references in parentheses are from the *FASB Accounting Standards—Current Texts: Volumes 1 and 2*, John Wiley & Sons, Inc. These are included only for facilitating the use of the Current Texts for candidates who have access to them.

**ARB 43—Chapter 1B Profits or Losses on Treasury Stock (ASC Topic 505)**

Profits on treasury stock are not income and should be reflected in capital surplus.

**ARB 43— Chapter 7B Stock Dividends and Stock Splits (ASC Topic 505—Equity)**

- A. Dividend**—evidence given to shareholders of their share of accumulated earnings that are going to be retained in the business
- B. Split**—stock issued to increase number of outstanding shares to reduce market price and/or to obtain a wider distribution of ownership
- C.** To the recipient, splits and dividends are not income. Dividends and splits take nothing from the property of the corporation and add nothing to the property of the recipient.
  - 1. Upon receipt of stock dividend or split, recipient should reallocate cost of shares previously held to all shares held.
- D.** Issuer of a stock dividend (issuance is small in relation to shares outstanding and consequently has no apparent effect on market price) should capitalize retained earnings equal to the fair market value of shares issued.
  - 1. Unless retained earnings are capitalized, retained earnings thought to be distributed by the recipient will be available for subsequent distribution.
  - 2. Issuances less than 20-25% of previously outstanding shares are dividends. Issuances greater than 20-25% of previously outstanding shares are splits.
  - 3. Where stock dividend is so large it may materially affect price (a split effected in the form of a dividend), no capitalization is necessary other than that required by law.
    - a. Some jurisdictions require that the par value of splits be capitalized (i.e., changes in par value are not permitted).
  - 4. For closely held corporations, there is no need to capitalize retained earnings other than to meet legal requirements.

**APB 6 Status of Accounting Research Bulletins (ASC Topic 505—Equity)**

- A.** ARB 43, Chapter 1B Treasury Stock
  - 1. An excess of purchase price of treasury stock, purchased for retirement or constructive retirement, over par or stated value may be allocated between paid-in capital and retained earnings.
    - a. The charge to paid-in capital is limited to all paid-in capital from treasury stock transactions and retirements of the same issue and a pro rata portion of all other paid-in capital of that issue.
    - b. Also, paid-in capital applicable to fully retired issues may be charged.
  - 2. Alternatively, losses may be charged entirely to retained earnings.
  - 3. All gains on retirement of treasury stock go to paid-in capital.
  - 4. When the decision to retire treasury stock has not been made, the cost of such is a contra shareholders' equity item. Losses may only be charged to paid-in capital from treasury transactions and retirements of the same issue.
  - 5. Some state laws prescribe accounting for treasury stock. The laws are to be followed where they are at variance with this APB. Disclose all statutory requirements concerning treasury stock such as dividend restrictions.
- B.** ARB 43, Chapter 3A Current Assets and Liabilities
  - Unearned interest, finance charges, etc. included in receivables should be deducted from the related receivable.
- C.** ARB 43, Chapter 7B Stock Dividends and Splits
  - States “the shareholder has no income solely as a result of the fact that the corporation has income,” but does not preclude use of the equity method.

**APB 9 Reporting the Results of Operations (ASC Topics 225, 250, 505)**

- A.** Designates a new format for income statement in which all normal operating items would be presented at the top of the income statement resulting in “net income before extraordinary items.”
  - 1. “Net income before extraordinary items” is followed by extraordinary items resulting in “net income.”

- B. “Prior period adjustments” are excluded from the income statement and constitute adjustments of beginning retained earnings disclosed at the top of the retained earnings statement.
  - 1. Beginning retained earnings are adjusted by “prior period adjustments” resulting in “restated beginning retained earnings.”
  - 2. “Restated retained earnings” is then adjusted for net income and dividends which results in ending retained earnings.
- C. Prior period adjustments should be disclosed in the period of adjustment.
  - 1. The effect on each prior period presented should be disclosed including restated income taxes.
  - 2. Disclosure in subsequent periods is not normally required.
  - 3. Historical summary data should also be restated and disclosed in the period of adjustment.
- D. The APB also reaffirmed earlier positions that the following should not affect determination of net income:
  - 1. Transactions in the company’s own stock
  - 2. Transfers to or from retained earnings
  - 3. Quasi reorganization adjustments

### **APB 12 Omnibus Opinion—1967 (ASC Topics 310, 360, 505, 710, and 835)**

- A. Allowance or contra accounts (allowance for bad debts, accumulated depreciation, etc.) should be deducted from assets or groups of assets with appropriate disclosure.
- B. Disclosure of depreciable assets should include
  - 1. Depreciation expense for the period
  - 2. Balances of major classes of depreciable assets by nature or function
  - 3. Accumulated depreciation either by major class or in total
  - 4. Description of method(s) of depreciation by major classes of assets
- C. Changes in the separate shareholder equity accounts in addition to retained earnings and changes in number of equity securities must be disclosed in the year of change
  - 1. In separate statements
  - 2. Or the financial statements
  - 3. Or the notes

### **SFAS 123 (Revised) (C36) Share-Based Payment (ASC Topic 718—Compensation—Stock Compensation and ASC Topic 505—Equity)**

- A. Provides a fair value based method of accounting for stock-based payment plans
  - 1. Supersedes APB 25, amends SFAS 123
  - 2. Applies to all transactions between an entity and its “suppliers” (whether employees or nonemployees) in which the entity acquires goods or services through issuance of equity instruments or incurrence of liabilities based on fair value of the entity’s common stock or other equity instruments
  - 3. Examples include stock purchase plans, stock options, restricted stock, and stock appreciation rights
  - 4. Classifies share-based payment as either equity or liability
- B. Transactions with Nonemployees—Accounted for based on fair value of consideration received or fair value of equity instruments given, whichever is more readily determinable.
- C. Transactions with Employees—Uses fair value based method
- D. Measurement Methods
  - 1. Share-based payments recorded as equity
    - a. Measured at fair value at grant date
    - b. Stock options are measured at fair value which is based on the observable market price of an option with the same or similar terms and conditions, or via use of an option pricing model which considers, as of grant date, exercise price and expected life of the option, current price of underlying stock and its anticipated volatility, expected dividends on the stock, and risk-free interest rate for expected term of the option.

- c. If fair value cannot be determined as of grant date, final measure shall be based on stock price and any other pertinent factors when it becomes reasonably possible to estimate that value. Current intrinsic value shall be used as a measure until a final determination of fair value can be made.
- 2. Share-based payments recorded as liabilities  
Requires the recording of liability based on current stock price at end of each period. Changes in stock price during service period are recognized as compensation cost over service period. A change in stock price subsequent to service period is recognized as compensation cost of that period.
- E. Recognition of Compensation Cost**
  - 1. Total compensation cost is based on the number of instruments that eventually vest
    - a. Vesting is defined as moment when employee's right to receive or retain such instruments or cash is no longer contingent on performance of additional services
    - b. No compensation cost shall be recognized for employees that forfeit eligibility due to failure either to achieve service requirement or performance condition
    - c. Compensation cost shall not be reversed if vested employee's stock option expires unexercised
    - d. Company must estimate forfeitures due to service or performance condition not being met
    - e. Total compensation cost is amortized straight-line over the requisite service period
  - 2. Acceptable accrual methods
    - a. As of grant date, base accruals of compensation cost on best available estimate of the number of options or instruments expected to vest, with estimates for forfeitures
    - b. As of grant date, accrue compensation cost as if all options or instruments that are subject only to a service requirement will vest
- F. Tax consequences of stock-based compensation transactions shall be accounted for pursuant to SFAS 109**
  - 1. Excess tax benefits are recognized as additional paid-in capital
  - 2. Cash retained as a result of excess tax benefits is presented on the statement of cash flows as a cash inflow from financing activities
- G. Disclosures**
  - 1. The method of estimating the fair value of goods or services received or fair value of the equity instruments granted during the period
  - 2. The cash flow effects from share-based payments
  - 3. Vesting requirements, maximum term of options granted, and number of shares authorized for grants of options or other equity instruments
  - 4. The number and weighted-average exercise prices of each group of options
  - 5. The weighted-average grant-date fair value of options granted during the year, classified according to whether exercise price equals, exceeds, or is less than fair value of stock at date of grant
  - 6. A description of methods used and assumptions made in determining fair values of the options
  - 7. Total compensation cost recognized for the year

## **SFAS 129 Disclosure of Information about Capital Structure (ASC Topic 505—Equity)**

- A. Information to Be Disclosed about Securities within the Financial Statements**
  - 1. The rights and privileges of the various securities outstanding; for example
    - a. Dividend and liquidation preferences
    - b. Participation rights
    - c. Call prices and dates
    - d. Conversion/exercise prices/rates and dates
    - e. Sinking fund requirements
    - f. Unusual voting rights
    - g. Significant terms of contracts to issue additional shares
  - 2. The number of shares issued upon conversion, exercise, or satisfaction of required conditions during at least the most recent annual fiscal period and any subsequent interim period presented.

**B. Disclosure of Liquidation Preference of Preferred Stock within the Financial Statements**

1. Relationship between the preference in liquidation and the par/stated value of the shares when preferred stock (or other senior stock) has a preference in involuntary liquidation considerably in excess of the par/stated value of the shares. This disclosure should be made in the equity section of the balance sheet in the aggregate, either parenthetically or “in short.”
2. Aggregate or per share amounts at which preferred stock may be called or is subject to redemption through sinking fund operations or otherwise.
3. Aggregate and per share amount of arrearages in cumulative preferred dividends.

**C. Disclosure of Redeemable Stock within the Financial Statements**

1. The amount of redemption requirements, separately by issue or combined, for all issues of capital stock that are redeemable at fixed or determinable prices on fixed or determinable dates in each of the five years following the date of the latest balance sheet presented.

**REVENUE (ASC TOPIC 600)****ARB 43—Chapter 1A Rules<sup>3</sup> Adopted by Membership (ASC Topics 310, 505, 605, and 850)**

Four rules recommended by the Committee on Cooperation with Stock Exchanges in 1934. The last rule is from another 1934 Institute committee.

1. Profit is realized at the point of sale unless collection is not reasonably assured.
2. Capital (paid-in) surplus should not be charged with losses or expenses, except in quasi reorganizations.
3. Receivables from officers, employees, and affiliates must be separately disclosed.
4. Par value of stock issued for assets cannot be used to value the assets if some of the stock is subsequently donated back to the corporation.

**ARB 45 Long-Term Construction Contracts (ASC Topic 605—Revenue)**

Discusses accounting for multiple-period projects

**A. The percentage-of-completion method recognizes income as work progresses.**

1. Recognized income based upon a percentage of estimated total income
  - a.  $(\text{Incurred costs to date}) / (\text{Total expected costs})$  known as cost-to-cost measure
  - b. Other measure of progress based on work performed (e.g., engineering or architectural estimate)
2. Costs, for percentage-of-completion estimate, might exclude materials and subcontracts, especially in the early stages of a contract.
  - a. Avoids overstating the percentage-of-completion
3. If a loss is estimated on the contract, the **entire loss** should be recognized currently.
4. Contracts should be separated into net assets and net liabilities.
  - a. Current assets include costs and income (loss) in excess of billings.
  - b. Current liabilities include billings in excess of costs and income (loss).
  - c. Contracts should not be offset on the balance sheet.
5. Advantages of percentage-of-completion are periodic recognition of income and reflection of the status of the contract.
  - a. Results in appropriate matching of costs and revenues
  - b. Avoids distortions in income from year to year and thus provides more relevant information to financial statement users
6. The principal disadvantage is the reliance on estimates.
7. The percentage-of-completion method is required when total costs and percent of completion can be reasonably estimated.

<sup>3</sup>The references in parentheses are from the *FASB Accounting Standards—Current Texts: Volumes 1 and 2*, John Wiley & Sons, Inc. These are included only for facilitating the use of the Current Texts for candidates who have access to them.

- B.** The completed-contract method recognizes income when the contract is complete.
1. General and administrative expenses can be allocated to contracts.
    - a. Not necessary if many projects are in process
    - b. No excessive deferring of costs
  2. Provision should be made for **entire amount of any expected loss** prior to job completion.
    - a. That is, losses are recognized immediately in their entirety—conservative treatment
  3. An excess of accumulated costs over related billings is a current asset. An excess of accumulated billings over related costs is a liability (current in most cases).
    - a. Balance sheet accounts are determined as in A.4., except no income is included
    - b. Recognized losses in B.2. reduce accumulated costs.
  4. The advantage of the completed-contract method is that it is based on final results, and its primary disadvantage is that it does not reflect current performance.
    - a. Overall, the completed-contract method represents a conservative approach.

### **APB 10 Omnibus Opinion—1966 (ASC Topics 210, 605, 740)**

- A.** ARB 43, Chapter 3B Working Capital
1. Offsetting of liabilities and assets in the balance sheet is not acceptable unless a right of offset exists.
  2. Most government securities are not designed to be prepayment of taxes and thus may not be offset against tax liabilities. Only where an explicit prepayment exists may an offset be used.

**FASB INTERPRETATION NO. 39 OFFSETTING OF AMOUNTS RELATED  
TO CERTAIN CONTRACTS**

A right of setoff exists when all of the following conditions are met: (a) each of the two parties to a contract owes the other determinable amounts, (b) the reporting entity has the right to set off the amount owed with the amount owed by the other entity, (c) the reporting entity intends to set off, and (d) the right of setoff is enforceable at law.

- B.** Installment method of accounting  
Revenues should be recognized at the point of sale unless receivables are in doubt. The installment or cost recovery method may be used.

### **SFAS 48 Revenue Recognition When Right of Return Exists (ASC Topic 605—Revenue)**

(Also ASC Topics 450 and 460)

- A.** Specifies accounting for sales in which a product may be returned for refund, credit applied to amounts owed, or in exchange for other products.
1. Right is specified by contract or is a matter of existing practice.
  2. Right may be exercised by ultimate customer or party who resells product to others.
  3. Not applicable to service revenue, real estate or lease transactions, or return of defective goods
- B.** Recognize revenue from right of return sales only if all of the following conditions are met:
1. Price is substantially fixed or determinable at date of sale.
  2. Buyer has paid or is unconditionally obligated to pay.
  3. Obligation is not changed by theft, destruction, or damage of product.
  4. Buyer has “economic substance” apart from seller (i.e., sale is not with a party established mainly for purpose of recognizing sales revenue).
  5. Seller has no significant obligation for performance to directly cause resale of product.
  6. Amount of future returns can be reasonably estimated.

- C. If all of the conditions in B. above are met, record sales and cost of sales **and**
  - 1. Reduce sales revenue and cost of sales to reflect estimated returns
  - 2. Accrue expected costs or losses in accordance with SFAS 5
- D. If any condition in B. above is not met, do not recognize sales and cost of sales until either
  - 1. All conditions are subsequently met, or
  - 2. Return privilege has substantially expired
- E. Factors which may impair ability to make a reasonable estimate of returns include
  - 1. Susceptibility of product to significant external factors (e.g., obsolescence or changes in demand)
  - 2. Long period of return privilege
  - 3. Absence of experience with similar products or inability to apply such experience due to changing circumstances (e.g., marketing policies or customer relationships)
  - 4. Absence of large volume of similar transactions

### **SFAS 66 Accounting for Sales of Real Estate (ASC Topics 360, 605, and 976)**

- A. Other than retail land sales
  - 1. Use the full accrual method if the following criteria are satisfied:
    - a. Sale is consummated
    - b. Buyer's initial and continuing investments demonstrate a commitment to pay for the property
    - c. Seller's receivable is not subject to future subordination
    - d. Risks and rewards of ownership have been transferred
  - 2. When the criteria are not met and dependent upon the particular circumstance, use one of the following methods:
    - a. Installment method
    - b. Cost recovery method
    - c. Deposit method
    - d. Reduced profit method
    - e. Percentage-of-completion
- B. Retail land sales (not outlined due to specialized nature)

### **EXPENSES (ASC TOPIC 700)**

#### **APB 12 Omnibus Opinion—1967 (ASC Topics 310, 360, 505, 710, 835)**

- A. Allowance or contra accounts (allowance for bad debts, accumulated depreciation, etc.) should be deducted from assets or groups of assets with appropriate disclosure.
- B. Disclosure of depreciable assets should include
  - 1. Depreciation expense for the period
  - 2. Balances of major classes of depreciable assets by nature or function
  - 3. Accumulated depreciation either by major class or in total
  - 4. Description of method(s) of depreciation by major classes of assets
- C. Changes in the separate shareholder equity accounts in addition to retained earnings and changes in number of equity securities must be disclosed in the year of change
  - 1. In separate statements
  - 2. Or the financial statements
  - 3. Or the notes

### **SFAS 43 Accounting for Compensated Absences (ASC Topics 710—Compensation—General)**

- A. This statement addresses the accounting for future sick pay benefits, holidays, vacation benefits, and other like compensated absences.
- B. Accrual of a liability for future compensated absences is required if all of the conditions listed below exist.
  - 1. Obligation of employer to compensate employees arises from services already performed

2. Obligation arises from vesting or accumulation of rights
  3. Probable payment of compensation
  4. Amount can be reasonably estimated
- C. Above criteria require accrual of a liability for vacation benefits; however, other compensated absences typically may not require accrual of a liability.
1. In spite of the above criteria, accrual of a liability is not required for accumulating nonvesting rights to receive sick pay benefits because amounts are typically not large enough to justify cost.

### **SFAS 112 Employers' Accounting for Postemployment Benefits (ASC Topic 712—Compensation—Nonretirement Postemployment Benefits)**

- A. Statement sets forth accounting standards for employers providing **postemployment** benefits to former/ inactive employees, **after employment but before retirement**.
1. Applies to any postemployment benefits provided to former employers and their beneficiaries and dependents except
    - a. Special or contractual termination benefits addressed by SFAS 88 and 106.
    - b. Postemployment benefits derived from **postretirement** benefit or pension plans.
    - c. Stock compensation plans covered by APB 25.
    - d. Deferred compensation plans for individual employees that are covered by APB 12.
  2. Postemployment benefits may
    - a. Result from death, disability, layoff, etc.
    - b. Be paid in cash or in kind
    - c. Be paid upon assumption of inactive status or over a period of time
- B. Applicable postemployment benefits must be accounted for according to SFAS 43, which states:
1. Liability for future compensated absences must be accrued if
    - a. Obligation relates to services already provided by the employee,
    - b. Rights to compensation vest or accumulate,
    - c. Payment of obligation is probable, **and**
    - d. Amount to be paid is reasonably estimable.
- C. If conditions listed above are not met but the benefits are within scope of SFAS 43, they are accounted for according to SFAS 5, which states
1. Estimated loss contingency accrued if
    - a. It is known before FS are issued that it is probable that asset has been impaired or a liability incurred and that future events will probably confirm the loss, **and**
    - b. Amount of loss is reasonably estimable.
- D. Disclosure required if liability for postemployment benefits not accrued solely because amount not reasonably estimable.

### **SFAS 87 Employers' Accounting for Pensions (ASC Topic 715—Compensation—Retirement Benefits)**

Applies to any arrangement that is similar in substance to pension plan regardless of form or means of financing. Applies to written plan and to plan whose existence may be implied from well-defined, although perhaps unwritten, practice of paying postretirement benefits. Does not apply to plan that provides only life insurance benefits or health insurance benefits, or both, to retirees. Does not apply to postemployment health care benefits.

The following terms are given specific definitions for the purposes of SFAS 87:

**Accumulated benefit obligation**—Actuarial present value of benefits (whether vested or nonvested) attributed by the pension benefit formula to employee service rendered before a specified date and based on employee service and compensation (if applicable) prior to that date. The accumulated benefit obligation differs from the projected benefit

obligation in that it includes no assumption about future compensation levels. For plans with flat-benefit or non-pay-related pension benefit formulas, the accumulated benefit obligation and the projected benefit obligation are the same.

**Actual return on plan assets component (of net periodic pension cost)**—Difference between fair value of plan assets at the end of the period and the fair value at the beginning of the period, adjusted for contributions and payments of benefits during the period.

**Actuarial present value**—Value, as of a specified date, of an amount or series of amounts payable or receivable thereafter, with each amount adjusted to reflect (a) the time value of money (through discounts for interest) and (b) the probability of payment (by means of decrements for events such as death, disability, withdrawal, or retirement) between the specified date and the expected date of payment.

**Amortization**—Usually refers to the process of reducing a recognized liability systematically by recognizing revenues or reducing a recognized asset systematically by recognizing expenses or costs. In pension accounting, amortization is also used to refer to the systematic recognition in net pension cost over several periods of previously **unrecognized** amounts, including unrecognized prior service cost and unrecognized net gain or loss.

**Defined contribution pension plan**—Plan that provides pension benefits in return for services rendered, provides an individual account for each participant, and specifies how contributions to the individual's account are to be determined instead of specifying the amount of benefits the individual is to receive. Under a defined contribution pension plan, the benefits a participant will receive depend solely on the amount contributed to the participant's account, the returns earned on investments of those contributions, and forfeitures of other participants' benefits that may be allocated to such participant's account.

**Gain or loss**—Change in the value of either the projected benefit obligation or the plan assets resulting from experience different from that assumed or from a change in an actuarial assumption. See also **Unrecognized net gain or loss**.

**Gain or loss component (of net periodic pension cost)**—The gain or loss component is the net effect of delayed recognition of gains and losses (the net change in the unrecognized net gain or loss) except that it does not include changes in the projected benefit obligation occurring during the period and deferred for later recognition.

**Interest cost component (of net periodic pension cost)**—Increase in the projected benefit obligation due to passage of time.

**Market-related value of plan assets**—Balance used to calculate the expected return on plan assets. Market-related value can be either fair market value or a calculated value that recognizes changes in fair value in a systematic and rational manner over not more than five years. Different ways of calculating market-related value may be used for different classes of assets, but the manner of determining market-related value shall be applied consistently from year to year for each asset class.

**Net periodic pension cost**—Amount recognized in an employer's financial statements as the cost of a pension plan for a period. Components of net periodic pension cost are service cost, interest cost, actual return on plan assets, gain or loss, amortization of unrecognized prior service cost, and amortization of the unrecognized net obligation or asset existing at the date of initial application of SFAS 87. SFAS 87 uses the term **net periodic pension cost** instead of **net pension expense** because part of the cost recognized in a period may be capitalized along with other costs as part of an asset such as inventory.

**Prior service cost or credit**—Cost of retroactive benefits or credit granted in a plan amendment.

**Projected benefit obligation**—Actuarial present value as of a date of all benefits attributed by the pension benefit formula to employee service rendered prior to that date. The projected benefit obligation is measured using assumptions as to future compensation levels if the pension benefit formula is based on those future compensation levels (pay-related, final-pay, final-average-pay, or career-average-pay plans).

**Service cost component (of net periodic pension cost)**—Actuarial present value of benefits attributed by the pension benefit formula to services rendered by employees during the period. The service cost component is a portion of the projected benefit obligation and is unaffected by the funded status of the plan.

**Unfunded projected benefit obligation**—Excess of the projected obligation over plan assets.

**Unrecognized net gain or loss**—Cumulative net gain (loss) that has not been recognized as a part of net periodic pension cost. See **Gain or loss**.

**Unamortized prior service cost or credit**—Portion of prior service cost or credit that has not been recognized as a part of net periodic pension cost.

**A. Single-Employer Defined Benefit Plans**

1. Pension benefits are part of compensation paid to employees for services
  - a. Amount of benefits to be paid depends on a number of future events specified in the **plan's benefit formula**.
2. Any method of pension accounting that recognizes cost before payment of benefits to retirees must deal with two problems
  - a. Assumptions must be made concerning future events that will determine amount and timing of benefits
  - b. Approach to attributing cost of pension benefits to individual years of service must be selected

**B. Basic Elements of Pension Accounting**

1. Prior service cost
  - a. Except as specified otherwise, prior service cost shall be amortized by assigning an equal amount to each future service period of each employee active at the date of a plan amendment who is expected to receive benefits under plan.
  - b. If all/almost all of plan's participants are inactive, cost of retroactive plan benefits should be amortized over remaining life expectancy of those participants.
  - c. Consistent use of alternative amortization approach that more rapidly reduces unrecognized cost of retroactive amendments is acceptable.
    - (1) Alternative method used should be disclosed.
  - d. When period during which employer expects to realize economic benefits from amendment granting retroactive benefits is shorter than entire remaining service period of active employees, amortization of prior service cost should be accelerated.
  - e. Plan amendment can reduce, rather than increase, the projected benefit obligation.
    - (1) Reduction should be used to reduce any existing unrecognized prior service cost.
    - (2) Excess should be amortized on same basis as cost of benefit increases.
2. Gains and losses
  - a. Gains (losses)
    - (1) Result from changes in amount of either projected benefit obligation or plan assets due to experience different than assumed and changes in assumptions
    - (2) Include both **realized** and **unrealized** amounts
  - b. Asset gains (losses) include both changes reflected in the market-related value of assets and changes not yet reflected in the market-related value.
    - (1) Asset gains (losses) not yet reflected in market-related value are not required to be amortized as B.2.c. below.
  - c. As a minimum, amortization of unrecognized net gain (loss) should be included as a component of net pension cost for a year if, as of the beginning of the year, that unrecognized net gain (loss) > .10 of the larger of the projected benefit obligation or the market-related value of plan assets.
    - (1) Minimum amortization should be the excess divided by the average remaining service period of active employees expected to receive benefits under the plan.
      - (a) Amortization must always reduce beginning-of-the-year balance.
      - (b) Amortization of a net unrecognized gain (loss) results in a decrease (increase) in net periodic pension cost.
    - (2) If all or almost all of plan's participants are inactive, average remaining life expectancy of inactive participants should be used instead of average remaining service.
  - d. Any systematic method of amortization of unrecognized gains (losses) may be used in lieu of the minimum specified above provided that
    - (1) Minimum is used in any period in which minimum amortization is greater (reduces the net balance by more)
    - (2) Method is applied consistently and disclosed

3. Recognition of liabilities and assets
  - a. Liability (asset) is recognized if net periodic pension cost recognized exceeds (is less than) amounts the employer has contributed to the plan and if the projected benefit obligations exceeds (is less than) plan asset.

**C. Attribution**

1. Pension benefits should be attributed to periods of employee service based on plan's benefit formula.
2. When employer has a present commitment to make future amendments, and substance of plan is to provide benefits attributable to prior service that are greater than benefits defined by written terms of the plan.
  - a. The substantive commitment should be basis for accounting, and
  - b. Existence and nature of the commitment to make future amendments should be disclosed
3. Assumptions
  - a. Assumed discount rates reflect rates at which pension benefits could be effectively settled
    - (1) Used in measurements of projected and accumulated benefit obligations and the service and interest cost components of net periodic pension cost
  - b. Assumed compensation levels (when measuring service cost and the projected benefit obligation) should reflect an estimate of the actual future compensation levels of employees involved, including future changes attributed to general price levels, productivity, seniority, promotion, and other factors.
  - c. Accumulated benefit obligation shall be measured based on employees' history of service and compensation without estimate of future compensation levels.
  - d. Automatic benefit increases specified by plan that are expected to occur should be included in measurements of projected and accumulated benefit obligations and the service cost component.
  - e. Retroactive plan amendments should be included in computations of projected and accumulated benefit obligations.
    - (1) Once they have been contractually agreed to
    - (2) Even if some provisions take effect only in future periods

**D. Measurement of Plan Assets**

1. For purposes of determining the funded status of the plan and required disclosures, plan investments, whether equity or debt securities, real estate, or other, should be measured at their fair value as of measurement date.
2. Market-related asset value is used for purposes of determining the expected return on plan assets and accounting for asset gains and losses.

**E. Acceptable Measurement Dates**

1. As of date of financial statements, or
2. If used consistently from year to year, as of a date < 3 months prior to that date.
3. Measurement date is not intended to require that all procedures be performed after that date.
4. Information for items requiring estimates can be prepared as of an earlier date and projected forward to account for subsequent events (e.g., employee service).
5. The "assets and liabilities" reported in interim financial statements should be the same "assets and liabilities" recognized in previous year-end balance sheet.
  - a. Adjusted for subsequent accruals and contributions unless measures of both the obligation and plan assets are available as of a current date or a significant event occurs, such as plan amendment, that would call for such measurements.
6. Measurements of net periodic pension cost for both interim and annual financial statements should be based on assumptions used for previous year-end measurements.
  - a. If more recent measurements are available or a significant event occurs, use these more recent measurements.
7. For fiscal years ending after December 15, 2008, the measurement date is the fiscal year-end of firm.

**F. Disclosures (Amended by SFAS 132[R] and SFAS 158)**

## **SFAS 88 Employers' Accounting for Settlements and Curtailments of Defined Benefit Pension Plans and for Termination Benefits (ASC Topic 715—Retirement Benefits)**

Statement applies to an employer that sponsors a defined benefit pension plan accounted for under the provisions of SFAS 87 if all or part of the plan's pension benefit obligation is settled or the plan is curtailed. It also applies to an employer that offers benefits to employees in connection with their termination of employment.

The following terms are given specific definitions for the purposes of SFAS 88:

**Settlement**—Transaction that (a) is an irrevocable action, (b) relieves the employer (or the plan) of primary responsibility for a pension benefit obligation, and (c) eliminates significant risks related to the obligation and the assets used to effect the settlement.

**Annuity contract**—Irrevocable contract in which an insurance company<sup>4</sup> unconditionally undertakes a legal obligation to provide specified benefits to specific individuals in return for a fixed consideration or premium. It involves the transfer of significant risk from the employer to the insurance company.

**Curtailment**—Event that significantly reduces the expected years of future service of present employees or eliminates for a significant number of employees the accrual of defined benefits for some or all of their future services.

### **A. Relationship of Settlements and Curtailments to Other Events**

1. Settlement and curtailment may occur separately or together.

### **B. Accounting for Settlement of Pension Obligation**

1. For purposes of this statement, when a pension obligation is settled, the maximum gain or loss subject to recognition is the unrecognized gain or loss defined in SFAS 87 plus any remaining unrecognized net asset existing at the date of initial application of SFAS 87.
2. If the purchase of a participating annuity contract constitutes a settlement, the maximum gain (but not the maximum loss) should be reduced by the cost of the participation right before determining the amount to be recognized in earnings.
3. If the cost of all settlements in a year is less than or equal to the sum of the service cost and interest cost components of net periodic pension cost for the plan for the year, gain or loss recognition is permitted but not required for those settlements.

### **C. Accounting for Plan Curtailment**

1. Unrecognized prior service cost is a loss.
2. The projected benefit obligation may be decreased (a gain) or increased (a loss) by a curtailment.

### **D. Termination Benefits**

1. Employer may provide benefits to employees in connection with their termination of employment.
2. Termination benefits may take many forms consisting of
  - a. Lump-sum payments
  - b. Periodic future payments
3. The cost of termination benefits recognized as a liability and a loss shall include the amount of any lump-sum payments and present value of any expected future payments.

## **SFAS 106 Employers' Accounting for Postretirement Benefits other than Pensions (ASC Topic 715—Compensation—Retirement Benefits)**

Standard applies to all forms of postretirement benefits, particularly postretirement health care benefits. Applies to written plan and to a plan whose existence may be implied from well-defined, although perhaps unwritten, practice of paying postretirement benefits (called the substantive plan). Does not apply to pensions.

The following terms are given specific definitions for purposes of SFAS 106:

**Attribution period**—The period of an employee's service to which the expected postretirement benefit obligation for that employee is assigned. The beginning of the attribution period is the employee's date of hire

<sup>4</sup>If the insurance company is controlled by the employer or there is any reasonable doubt that the insurance company will meet its obligation under the contract, the purchase of the contract does not constitute a settlement for purposes of this statement.

unless the plan's benefit formula grants credit only for service from a later date, in which case the beginning of the attribution period is generally the beginning of that credited service period. The end of the attribution period is the full eligibility date.

**Benefit formula**—The basis for determining benefits to which participants may be entitled under a postretirement benefit plan. A plan's benefit formula specifies the years of service to be rendered, age to be attained while in service, or a combination of both that must be met for an employee to be eligible to receive benefits under the plan.

**Full eligibility date**—The date at which an employee has rendered all of the service necessary to have earned the right to receive all of the benefits expected to be received by that employee (including any beneficiaries and dependents expected to receive benefits).

**Health care cost trend rates**—An assumption about the annual rate(s) of change in the cost of health care benefits currently provided by the postretirement benefit plan, due to factors other than changes in the composition of the plan population by age and dependency status, for each year from the measurement date until the end of the period in which benefits are expected to be paid.

**Incurred claims cost (by age)**—The cost of providing the postretirement health care benefits covered by the plan to a plan participant, after adjusting for reimbursements from Medicare and other providers of health care benefits and for deductibles, coinsurance provisions, and other specific claims costs borne by the retiree.

**Net periodic postretirement benefit cost**—The amount recognized in an employer's financial statements as the cost of a postretirement benefit plan for a period. Components of net periodic postretirement benefit cost include service cost, interest cost, actual return on plan assets, gain or loss, amortization of unrecognized prior service cost, and amortization of the unrecognized transition obligation or asset.

**Plan amendment**—A change in the existing terms of a plan. A plan amendment may increase or decrease benefits, including those attributed to years of service already rendered.

**Transition asset**—The unrecognized amount, as of the date this statement is initially applied, of (a) the fair value of plan assets plus any recognized accrued postretirement benefit cost or less any recognized prepaid postretirement benefit cost in excess of (b) the accumulated postretirement benefit obligation.

**Transition obligation**—The unrecognized amount, as of the date this statement is initially applied, of (a) the accumulated postretirement benefit obligation in excess of (b) the fair value of plan assets plus any recognized accrued postretirement benefit cost or less any recognized prepaid postretirement benefit cost.

**Unrecognized transition asset**—The portion of the transition asset that has not been recognized either immediately as the effect of a change in accounting or on a delayed basis as a part of net periodic postretirement benefit cost, as an offset to certain losses, or as a part of accounting for the effects of a settlement or a curtailment.

**Unrecognized transition obligation**—The portion of the transition obligation that has not been recognized either immediately as the effect of a change in accounting or on a delayed basis as a part of net periodic postretirement benefit cost, as an offset to certain gains, or as a part of accounting for the effects of a settlement or a curtailment.

#### A. Single Employer Defined Benefit Plans

1. Postretirement benefits are part of compensation paid to employees for services
  - a. Amount of benefits to be paid depends on future events specified in plan's benefit formula
2. Postretirement benefits formerly were accounted for on a pay-as-you-go (cash) basis. SFAS 106 changes this practice by requiring accrual, during the years that the employee renders necessary service, of **expected** cost of providing those benefits to an employee. Any method of postretirement benefits accounting that recognizes cost before payment of benefits to retirees must deal with two problems.
  - a. Assumptions must be made concerning future events that will determine amount and timing of benefits.
  - b. Approach to attributing cost of postretirement benefits to individual years of service must be selected.

#### B. Basic Elements of Postretirement Benefits Accounting

1. Prior service cost
  - a. Except as specified otherwise, prior service cost shall be amortized by assigning an equal amount to each future service period of each employee active at the date of a plan amendment who was not yet fully eligible for benefits at that date.

## Appendix A: Outlines of Accounting Pronouncements

- b. If all or almost all of a plan's participants are fully eligible for benefits, prior service cost shall be amortized over remaining life expectancy of those participants.
  - c. Consistent use of alternative amortization approach that more rapidly reduces unrecognized cost of retroactive amendments is acceptable.
    - (1) Alternative method used should be disclosed.
  - d. When period during which employer expects to realize economic benefits from amendment granting increased benefits is shorter than entire remaining service period of active employees, amortization of prior service cost shall be accelerated.
  - e. Plan amendment can reduce, rather than increase, accumulated postretirement benefit obligation
    - (1) Reduction should be used to reduce any existing unrecognized prior service cost
    - (2) Then to reduce any remaining unrecognized transition obligation
    - (3) Excess, if any, shall be amortized on same basis as specified for prior service cost
2. Gains and losses
- a. Gains (losses)
    - (1) Result from changes in amount of either accumulated postretirement benefit obligation or plan assets due to experience different than assumed and changes in assumptions
    - (2) Include both **realized** and **unrealized** amounts
  - b. Asset gains (losses) include both (a) changes reflected in market-related value of assets and (b) changes not yet reflected in market-related value.
    - (1) Asset gains (losses) not yet reflected in market-related value are not required to be amortized as c. below.
  - c. As a minimum, amortization of unrecognized net gain (loss) should be included as a component of net postretirement benefit cost for a year if, as of the beginning of the year, that unrecognized net gain (loss) > .10 of the larger of the accumulated postretirement benefit obligation or the market-related value of plan assets.
    - (1) Minimum amortization should be the excess divided by the average remaining service period of active employees expected to receive benefits under the plan
      - (a) Amortization must always reduce beginning of the year balance
      - (b) Amortization of a net unrecognized gain (loss) results in a decrease (increase) in net periodic pension cost
    - (2) If all or almost all of plan's participants are inactive, average remaining life expectancy of inactive participants should be used instead of average remaining service.
  - d. Any systematic method of amortization of unrecognized gains (losses) may be used in lieu of the minimum specified above provided that
    - (1) Minimum is used in any period in which minimum amortization is greater (reduces the net balance by more)
    - (2) Method is applied consistently and disclosed
3. Recognition of liabilities and assets
- a. SFAS 106 requires an employer's obligation for postretirement benefits expected to be provided to an employee be **fully** accrued by the full eligibility date of employee, even if employee is to render additional service beyond that date
  - b. Transition obligations
    - (1) SFAS 106 measures the transition obligation as the unfunded and unrecognized accumulated postretirement benefit obligation for all plan participants. Two options are provided for recognizing that transition obligation.
      - (a) **Immediate** recognition of the transition obligation as the effect of an accounting change (i.e., include all of the obligation as part of the net periodic postretirement benefit cost)

- (b) Recognize the transition obligation in the balance sheet and income statement on a delayed basis over the plan participants' future service periods, with proper disclosure of the remaining unrecognized amount. Note that delayed recognition **cannot** result in less rapid recognition than accounting for the transition obligation on a pay-as-you-go basis.

### C. Attribution

1. The expected postretirement benefit obligation shall be attributed, in equal amounts, to each year of service in the attribution period.
2. However, if a benefit plan contains a benefit formula that attributes a disproportionate share of the expected postretirement benefit obligation to employees' early years of service, the postretirement benefits should be attributed based on the plan's benefit formula.
3. Assumptions
  - a. Assumed discount rates shall reflect time value of money in determining present value of future cash outflows currently expected to be required to satisfy postretirement benefit obligation
    - (1) Used in measurements of expected and accumulated postretirement benefit obligations and service and interest cost components of net periodic postretirement benefit cost
  - b. Assumed compensation levels (when measuring service cost and expected and accumulated postretirement benefit obligations) shall reflect estimate of actual future compensation levels of employees involved, including future changes attributed to general price levels, productivity, seniority, promotion, and other factors.
  - c. Accumulated postretirement benefit obligation shall be measured based on employees' history of service and compensation without estimate of future compensation levels.
  - d. Automatic benefit changes specified by plan that are expected to occur should be included in measurements of projected and accumulated benefit obligations and the service cost component.
  - e. Plan amendments should be included in computations of projected and accumulated benefit obligations.
    - (1) Once they have been contractually agreed to
    - (2) Even if some provisions take effect only in future periods

### D. Measurement of Plan Assets

1. For purposes of required disclosures, plan investments, whether equity or debt securities, real estate, or other, shall be measured at FMV as of measurement date.
2. Market-related asset value is used for purposes of determining the expected return on plan assets and accounting for asset gains and losses.

### E. Acceptable Measurement Dates

1. As of date of financial statements, or
2. If used consistently from year to year, as of a date < 3 months prior to that date
3. Measurement date is not intended to require that all procedures be performed after that date
4. Information for items requiring estimates can be prepared as of an earlier date and projected forward to account for subsequent events (e.g., employee service)
5. Measurements of net periodic postretirement benefit cost for both interim and annual financial statements shall be based on assumptions used for previous year-end measurements
  - a. If more recent measurements are available or a significant event occurs, use more recent measurements

### F. Disclosures (amended by SFAS 132)

## **SFAS 132 (Revised) Employers' Disclosures about Pensions and Other Postretirement Benefits (ASC Topic 715—Compensation—Retirement Benefits)**

### A. Disclosures for defined benefit pensions plans and defined benefit postretirement plans

1. A reconciliation of beginning and ending balances of the benefit obligation with the effects of the following shown separately:
  - a. Service cost
  - b. Interest cost

- c. Contributions by plan participants
  - d. Actuarial gains and losses
  - e. Foreign currency exchange rate changes
  - f. Benefits paid
  - g. Plan amendments
  - h. Business combinations
  - i. Divestitures
  - j. Curtailments
  - k. Settlements
  - l. Special termination benefits
2. A reconciliation of beginning and ending balances of the fair value of plan assets with the effects of the following shown separately:
    - a. Actual return on plan assets
    - b. Foreign currency exchange rate changes
    - c. Contributions by the employer
    - d. Contributions by plan participants
    - e. Benefits paid
    - f. Business combinations
    - g. Divestitures
    - h. Settlements
  3. The funded status of the plans
  4. The amounts recognized and the amounts not recognized in the statement of financial position such as
    - a. Any unamortized prior service cost or credit
    - b. Any unrecognized net gain or loss
    - c. Any unamortized net obligation or net asset existing at the initial date of prior SFAS 87 or 106 that are still unrecognized
    - d. Prepaid assets or accrued liabilities of the net pension or other postretirement benefits
    - e. Any intangible asset
    - f. The amount of other comprehensive income recognized
  5. Information about plan assets including
    - a. For each major category of plan assets, including equity securities, debt securities, real estate, and all other assets, the percentage of the fair value of total plan assets held as of the measurement date
    - b. A description of investment policies and strategies, including target allocation percentages or ranges of percentages for each major category of plan assets, and other factors that are pertinent to understanding the investment policies and strategies, (i.e., investment goals, risk management practices, permitted and prohibited investments)
    - c. A description of the basis used to determine the overall expected long-term rate-of-return-of-assets assumption, the general approach used, the extent to which ROA assumption was based on historical returns, adjustments made to reflect expectations of future returns, and how adjustments were determined.
    - d. Disclosure of additional asset categories and additional information about specific assets is encouraged if the information is useful in understanding risks and long-term rate of return.
  6. For defined benefit pension plans, the accumulated benefit obligation.
  7. The benefits are expected to be paid in each of the next five fiscal years, and in the aggregate for the five fiscal years thereafter.
  8. The employer's best estimate of contributions expected to be paid to the plan during the next fiscal year. The estimated contributions may be presented in the aggregate combining contributions required by funding regulations or laws, discretionary contributions, and noncash contributions.
  9. The recognized amount of the net periodic benefit cost with the components shown separately
  10. The amount caused from a change in the additional minimum pension liability that was included in other comprehensive income
  11. On a weighted-average basis, the rates for
    - a. Assumed discount rate

- b. Rate of compensation increase
  - c. Expected long-term rate of return on plan assets
12. The assumptions used to determine the benefit obligation and the net benefit cost
  13. Trend rates assumed for health care cost for the next year and thereafter
  14. The measurement date(s) used to determine pension and other postretirement benefit measurements for plans that make up the majority of assets and benefit obligations
  15. The effects of a one-percentage-point increase or decrease of the trend rates for health care costs on
    - a. The aggregate of the service and interest cost components
    - b. The accumulated postretirement benefit obligation
  16. If applicable
    - a. The amounts and types of securities of the employer or a related party in plan assets
    - b. The amount of future benefits covered by insurance contracts issued by the employer or a related party
    - c. Any significant transactions between the plan and the employer or a related party
    - d. Any substantive commitment used as the basis for accounting for the benefit obligation
    - e. The cost of special or contractual termination benefits recognized during the period with a description of the event
  17. An explanation of significant changes in the benefit obligation or plan assets that is not apparent in the other disclosures required
- B. Disclosures for employers with more than one plan**
1. Disclosures required in this statement may be disclosed in aggregate for an employer's defined benefit pension plans and in aggregate for an employer's defined benefit postretirement plans but must still present separately prepaid benefit costs and accrued benefit liabilities recognized in the statement of financial position.
  2. An employer may not combine the disclosures of plans outside the US and plans in the US if the benefit obligation of the plans outside the US represent a significant portion of the total benefit obligation and significant differences exist in the assumptions used.
- C. Disclosure requirements for nonpublic entities**
1. Nonpublic entities may choose to disclose the following instead of the disclosures stated in A.:
    - a. Benefit obligation
    - b. Fair value of plan assets
    - c. Funded status of the plan
    - d. Contributions by the employer and the participant
    - e. Amounts recognized in the statement of financial position of
      - (1) Prepaid assets or accrued liabilities
      - (2) Any intangible asset
    - f. Amount of accumulated other comprehensive income recognized and the amount resulting from a change in the minimum pension liability recognized
    - g. Net periodic benefit cost recognized
    - h. Rates for
      - (1) Assumed discount rate
      - (2) Rate of compensation increase
      - (3) Expected long-term rate of return on plan assets
    - i. Trend rates assumed for health care cost for the next year and thereafter
    - j. If applicable
      - (1) Amounts and types of securities of the employer or a related party
      - (2) Future annual benefits covered by insurance contracts issued by the employer or a related party
      - (3) Any significant transactions between the plan and the employer or a related party
    - k. Nature and effect of significant nonroutine events

**D. Disclosures for defined contribution plans**

1. Amount of cost recognized for pension or postretirement benefit plans must be separate from the cost recognized for defined benefit plans
2. Nature and effect of any significant changes that affect comparability must be disclosed

**E. Disclosures for multiemployer plans**

1. Amount of contributions to multiemployer plans
2. Nature and effect of changes which affect comparability
3. If withdrawals made by an employer from a multiemployer plan will result in an obligation for a portion of the unfunded benefit obligation or the unfunded accumulated postretirement benefit obligation, follow the provision of SFAS 5, *Accounting for Contingencies*
4. The significant multiemployer plans in which an employer participates
5. The level of an employer's participation (the contribution to the plan and whether that contribution represents more than 5% of the total contributions)
6. The financial health of the plan, such as funded status, improvement plans, and surcharges
7. The nature of the employer commitments to the plans, such as collective bargaining agreements and minimum contribution requirements
8. For plans in which users are unable to obtain additional information from outside sources:
  - a. A description of the nature of the plan benefits
  - b. A qualitative description of the employer responsibility for plan obligations
  - c. Other quantitative information available, such as total plan assets, actuarial present value of accumulated vested benefits, and total contributions received by the plan

**SFAS 158 Employers' Accounting for Defined Benefit Pension and Other Postretirement Plans (An Amendment of FASB Statements 87, 88, 106, and 132[R]) (ASC Topic 715—Compensation—Retirement Benefits and ASC Topic 958—Not-for-Profit Entities)****A. Recognize funded status of benefit plans**

1. Aggregate status of all overfunded plans and show as noncurrent asset on balance sheet.
2. Aggregate status of all underfunded plans, and show as current liability, noncurrent liability, or both on balance sheet.
3. Recognize as other comprehensive income the gain and loss and the prior service costs or credits that arise during the period but are not a part of pension expense.

**B. Effective for fiscal years ending after December 15, 2008, the measurement date is the employer's fiscal year-end balance sheet date.****C. Disclosures**

1. Funded status of the plans, and the amounts recognized in the balance sheet, showing separately the noncurrent assets, current liabilities, and noncurrent liabilities recognized.
2. Disclose the net gain or loss, net prior service cost or credit recognized in OCI for the period, and any reclassification adjustments of OCI that are recognized in pension cost.
3. The amounts in accumulated OCI that have not yet been recognized as pension costs. Show separately the following items:
  - a. Net gain or loss
  - b. Net prior service cost or credit
  - c. Net transition asset or obligation
4. The amount and timing of any plan assets expected to be returned to the employer during the next 12 month period after the most recent balance sheet date.

**SFAS 123 (Revised) (C36) Share-Based Payment (ASC Topic 718—Compensation—Stock Compensation and ASC Topic 505—Equity)****A. Provides a fair value based method of accounting for stock-based payment plans**

1. Supersedes APB 25, amends SFAS 123

2. Applies to all transactions between an entity and its “suppliers” (whether employees or nonemployees) in which the entity acquires goods or services through issuance of equity instruments or incurrence of liabilities based on fair value of the entity’s common stock or other equity instruments
  3. Examples include stock purchase plans, stock options, restricted stock, and stock appreciation rights
  4. Classifies share-based payment as either equity or liability
- B. Transactions with Nonemployees—**Accounted for based on fair value of consideration received or fair value of equity instruments given, whichever is more readily determinable.
- C. Transactions with Employees—**Uses fair value based method
- D. Measurement Methods**
1. Share-based payments recorded as equity
    - a. Measured at fair value at grant date
    - b. Stock options are measured at fair value which is based on the observable market price of an option with the same or similar terms and conditions, or via use of an option pricing model which considers, as of grant date, exercise price and expected life of the option, current price of underlying stock and its anticipated volatility, expected dividends on the stock, and risk-free interest rate for expected term of the option.
    - c. If fair value cannot be determined as of grant date, final measure shall be based on stock price and any other pertinent factors when it becomes reasonably possible to estimate that value. Current intrinsic value shall be used as a measure until a final determination of fair value can be made.
  2. Share-based payments recorded as liabilities  
Requires the recording of liability based on current stock price at end of each period. Changes in stock price during service period are recognized as compensation cost over service period. A change in stock price subsequent to service period is recognized as compensation cost of that period.
- E. Recognition of Compensation Cost**
1. Total compensation cost is based on the number of instruments that eventually vest
    - a. Vesting is defined as moment when employee’s right to receive or retain such instruments or cash is no longer contingent on performance of additional services
    - b. No compensation cost shall be recognized for employees that forfeit eligibility due to failure either to achieve service requirement or performance condition
    - c. Compensation cost shall not be reversed if vested employee’s stock option expires unexercised
    - d. Company must estimate forfeitures due to service or performance condition not being met
    - e. Total compensation cost is amortized straight-line over the requisite service period
  2. Acceptable accrual methods
    - a. As of grant date, base accruals of compensation cost on best available estimate of the number of options or instruments expected to vest, with estimates for forfeitures
    - b. As of grant date, accrue compensation cost as if all options or instruments that are subject only to a service requirement will vest
- F. Tax consequences of stock-based compensation transactions shall be accounted for pursuant to SFAS 109**
1. Excess tax benefits are recognized as additional paid-in capital
  2. Cash retained as a result of excess tax benefits is presented on the statement of cash flows as a cash inflow from financing activities
- G. Disclosures**
1. The method of estimating the fair value of goods or services received or fair value of the equity instruments granted during the period
  2. The cash flow effects from share-based payments
  3. Vesting requirements, maximum term of options granted, and number of shares authorized for grants of options or other equity instruments
  4. The number and weighted-average exercise prices of each group of options
  5. The weighted-average grant-date fair value of options granted during the year, classified according to whether exercise price equals, exceeds, or is less than fair value of stock at date of grant
  6. A description of methods used and assumptions made in determining fair values of the options
  7. Total compensation cost recognized for the year

### **ARB 43— Chapter 10A Real and Personal Property Taxes (ASC Topic 720—Other Expenses)**

Accounting for personal and real property taxes which vary in time of determination and collection from state to state

- A.** In practice, the dates below have been used to apportion taxes between accounting periods.
  - 1. Assessment date
  - 2. Beginning of fiscal period of taxing authority
  - 3. End of fiscal period of taxing authority
  - 4. Lien date
  - 5. Date of tax levy
  - 6. Date tax is payable
  - 7. Date tax is delinquent
  - 8. Period appearing on tax bill
- B.** The most acceptable basis is a monthly accrual on the taxpayer's books during the fiscal period of the taxing authority.
  - 1. At year-end, the books will show the appropriate prepayment or accrual.
  - 2. An accrued liability, whether known or estimated, should be shown as a current liability.
  - 3. On income statement, property taxes may be charged to operating expense, deducted separately from income, prorated among accounts to which they apply, or combined with other taxes (but not with income taxes).

### **SFAS 2 Accounting for Research and Development Costs (R&D) (ASC Topic 730—Research & Development)**

- A.** Establishes accounting standards for R&D costs with objective of reducing alternative practices. In summary, all R&D costs are expensed except intangible assets purchased from others and tangible assets that have alternative future uses (which are capitalized and depreciated or amortized as R&D expense).
  - 1. SFAS 2 specifies
    - a. R&D activities
    - b. Elements of R&D costs
    - c. Accounting for R&D costs
    - d. Required disclosures for R&D
  - 2. SFAS 2 does not cover
    - a. R&D conducted for others under contract
    - b. Activities unique to extractive industries
- B.** R&D activities
  - 1. Research is "planned search or critical investigation aimed at discovery of new knowledge with the hope that such knowledge will be useful in developing a new product or service or a new process or technique in bringing about a significant improvement to an existing product or process."
  - 2. Development is "the translation of research findings or other knowledge into a plan or design for a new product or process or for a significant improvement to an existing product or process whether intended for sale or use."
  - 3. R&D examples
    - a. Laboratory research to discover new knowledge
      - (1) Seeking applications for new research findings
    - b. Formulation and design of product alternatives
      - (1) Testing for product alternatives
      - (2) Modification of products or processes
    - c. Preproduction prototypes and models
      - (1) Tools, dies, etc. for new technology
      - (2) Pilot plants not capable of commercial production
    - d. Engineering activity until product is ready for manufacture

4. Exclusions from R&D
  - a. Engineering during an early phase of commercial production
  - b. Quality control for commercial production
  - c. Troubleshooting during commercial production breakdowns
  - d. Routine, ongoing efforts to improve products
  - e. Adaptation of existing capability for a specific customer or other requirements
  - f. Seasonal design changes to products
  - g. Routine design of tools, dies, etc.
  - h. Design, construction, startup, etc. of equipment except that used solely for R&D
  - i. Legal work for patents or litigation
  - j. Items a.–h. above are normally expensed but not as R&D; i. is capitalized

**C. Elements of R&D costs**

1. Materials, equipment, and facilities
  - a. If acquired for a specific R&D project and have no alternative use
  - b. If there are alternative uses, costs should be capitalized
    - (1) Charge to R&D as these materials, etc., are used
2. Salaries, wages, and related costs
3. Intangibles purchased from others are treated as materials, etc. in 1. above
  - a. If capitalized, amortization is covered by APB 17
4. R&D services **performed by others**
5. A reasonable allocation of indirect costs
  - a. Exclude general and administrative costs not clearly related to R&D

**D. Accounting for R&D**

1. Expense R&D as incurred

**E. Disclosure required on face of IS or notes**

1. Total R&D expensed per period

**APB 10 Omnibus Opinion—1966 (ASC Topics 210, 605, 740)**

**A. ARB 43, Chapter 3B Working Capital**

1. Offsetting of liabilities and assets in the balance sheet is not acceptable unless a right of offset exists.
2. Most government securities are not designed to be prepayment of taxes and thus may not be offset against tax liabilities. Only where an explicit prepayment exists may an offset be used.

**FASB INTERPRETATION NO. 39 OFFSETTING OF AMOUNTS RELATED TO CERTAIN CONTRACTS**

A right of setoff exists when all of the following conditions are met: (a) each of the two parties to a contract owes the other determinable amounts, (b) the reporting entity has the right to set off the amount owed with the amount owed by the other entity, (c) the reporting entity intends to set off, and (d) the right of setoff is enforceable at law.

**B. Installment method of accounting**

Revenues should be recognized at the point of sale unless receivables are in doubt. The installment or cost recovery method may be used.

**APB 23 Accounting for Income Taxes—Special Areas (ASC Topic 740—Income Taxes)**

(Amended by SFAS 109)

- A.** Undistributed earnings of domestic subsidiaries
  1. Inclusion of undistributed earnings in pretax accounting income of parent (either through consolidation or equity method) results in temporary difference.
    - a. Tax effect may be based on assumptions such as
      - (1) Earnings would be distributed currently as dividends or
      - (2) Earnings would be distributed in form of capital gain.
- B.** Foreign subsidiaries are not required to accrue deferred taxes for undistributed earnings if sufficient evidence exists that subsidiary would reinvest the undistributed earnings indefinitely or remit them tax-free.

**SFAS 109 (I27) Accounting for Income Taxes (ASC Topic 740—Income Taxes)**

- A.** Establishes financial accounting and reporting requirements for income taxes resulting from an entity's activities during the current and preceding years.
  1. Continues BS-oriented asset and liability approach consistent with SFAC 6.
  2. Objectives
    - a. Recognize taxes payable or refundable for current year.
    - b. Recognize deferred tax liabilities and assets for future tax consequences of events previously recognized in financial statements or tax returns.
- B.** Basic principles
  1. Recognize current tax liability or asset for estimated taxes payable or refundable on tax returns for current year
  2. Measure and recognize deferred tax liability or asset using enacted tax rate(s) expected to apply to taxable income in periods in which the deferred tax assets and liabilities are expected to be realized or settled
  3. Adjust measurement of deferred tax assets so as to not recognize tax benefits not expected to be realized
  4. Deferred tax assets and liabilities are **not** discounted to reflect their present value
- C.** Measurement of Deferred Taxes
  1. Temporary differences
    - a. Difference between tax basis of asset or liability and its reported amount for financial accounting which results in taxable or deductible amounts in future years
      - (1) Includes all timing differences
      - (2) Includes tax-book differences in asset's bases
    - b. Future effects
      - (1) **Taxable amounts** are from temporary differences that will result in lower amounts of expense or higher amounts of revenue being reported on the tax return than are reported on the books in the future period.
      - (2) **Deductible amounts** are from temporary differences that will result in higher amounts of expense or lower amounts of revenue being reported on the tax return than are reported on the books in the future period.
  2. Deferred tax liability or asset measured each BS date
    - a. Identify types and amounts of existing temporary differences **and** nature of each type of operating loss and tax credit carryforward and the remaining length of the carryforward period
    - b. Measure total deferred tax liability for taxable temporary differences using the enacted applicable tax rate
    - c. Measure total deferred tax asset for deductible temporary differences and operating loss carryforwards using the enacted applicable tax rate
    - d. Measure deferred tax assets for each type of tax credit carryforward
    - e. Reduce deferred tax assets by a valuation allowance, **if more likely than not** (a likelihood of more than 50%) that some or all of deferred tax asset will not be realized
      - (1) All available evidence (positive and negative) should be considered to determine whether valuation allowance is needed.

**D. Changes in Tax Rates**

1. Change in rates
  - a. Change previously recorded amounts of deferred tax liabilities or assets
  - b. Net adjustments shall be reflected in tax expense on continuing operations in period that includes enactment date.

**E. Business Combinations**

1. Recognize deferred tax asset or liability for differences between assigned values and tax basis of assets and liabilities recognized in a purchase combination

**F. Intraproduct Tax Allocation**

1. Allocate income tax expense or benefit for the period among continuing operations, extraordinary items, other comprehensive income, and items charged or credited to stockholders' equity
  - a. In cases where there is only one item after continuing operations, portion of income tax expense (benefit) remaining after allocation to continuing operations is amount allocated to that item.
  - b. In cases where there are two or more items after continuing operations, portion left after allocation to continuing operations is allocated among other items in proportion to their individual effects on income tax expense (benefit).

**G. Financial Statement Presentation and Disclosure**

1. Balance sheet
  - a. Report deferred tax liabilities and assets as current or noncurrent based on classification of related asset or liability
  - b. Classify deferred tax liabilities or assets not related to an asset or liability (i.e., one related to a carryforward) according to the expected reversal date of the temporary difference
  - c. For a taxpaying component of an enterprise and within a particular tax jurisdiction
    - (1) All current deferred tax liabilities and assets should be offset and reported as a single amount
    - (2) All noncurrent deferred tax liabilities and assets should be offset and reported as a single amount
2. Must disclose the following components of the net deferred tax liability or asset:
  - a. The total of all deferred tax liabilities
  - b. The total of all deferred tax assets
  - c. The total valuation allowance for deferred tax assets
3. Additional disclosures
  - a. Disclose any net change in the total valuation allowance
  - b. Disclose the types of temporary differences, carryforwards, and carrybacks
4. Income statement
  - a. Components of tax expense attributable to continuing operations shall be disclosed in financial statements or notes. For example
    - (1) Current tax expense or benefit
    - (2) Deferred tax expense or benefit (exclusive of other components listed below)
    - (3) Investment tax credits
    - (4) Government grants (to the extent recognized as a reduction of income tax expense)
    - (5) Benefits of operating loss carryforwards
    - (6) Tax expense resulting from allocation of certain tax benefits either directly to contributed capital or to reduce goodwill or other noncurrent intangible assets of an acquired entity
    - (7) Adjustments of a deferred tax liability or asset resulting from enacted changes in tax laws, rates, or status
  - b. Variances between statutory and effective tax rates must be disclosed.
    - (1) Public entities should disclose reconciliation using percentages or dollar amounts.
    - (2) Nonpublic entities must disclose nature of significant reconciling items.

- c. Disclose amounts and expiration dates of operating loss and tax credit carryforwards **and** any portion of the deferred tax asset valuation allowance for which subsequently recognized tax benefits will be allocated to reduce intangible assets or directly reduce accumulated other comprehensive income.

## **BROAD TRANSACTIONS (ASC TOPIC 800)**

### **SFAS 141(R) Business Combinations (ASC Topic 805—Business Combinations)**

#### **A. Scope**

1. Applies to transactions or events that meet the definition of a business combination.
2. Does not apply to joint venture, acquisition of group of assets that are not a business, or combination of entities or businesses under common control.
3. The acquisition method is required for all business combinations.

#### **B. Key terms**

1. Acquiree—business of which the acquirer obtains control.
2. Acquirer—entity that obtains control of acquiree.
3. Acquisition date—date which acquirer obtains control.
4. Business—integrated set of activities and assets that are capable of being conducted and managed for the purpose of providing a return in the form of dividends, lower costs, or other economic benefits directly to investors or other owners, members, or participants.
5. Business combination—transaction or other event in which acquirer obtains control of one or more businesses.
6. Contingent consideration—obligation to transfer additional assets or equity interests to the former owners as part of the exchange for control of the acquiree if certain events or conditions occur.
7. Control is ownership of more than 50% of the voting stock.
8. Equity interest is an ownership interest.
9. Fair value is the price that would be received to sell an asset or paid to transfer a liability in an orderly transaction between market participants at the measurement date.
10. Goodwill—an asset representing the future economic benefit arising from other assets acquired in a business combination that are not individually identified and separately recognized.
11. Intangible asset lacks physical substance. For purposes of SFAS 141(R), intangible assets exclude goodwill.
12. Noncontrolling interest is the equity in a subsidiary not attributable directly or indirectly to a parent.

#### **C. Application of the acquisition method.**

1. Identify the acquirer (the entity that obtains control over the acquiree). Factors to consider
  - a. The relative voting rights in the combined entity after the combination.
  - b. The existence of a large minority voting interest in the combined entity when no other owner or organized group of owners has a significant voting interest.
  - c. The composition of the governing body of the combined entity.
  - d. The composition of the senior management of the combined entity.
  - e. The terms of the exchange of equity securities.
  - f. Examine the facts and circumstances.
2. Determine the acquisition date.
  - a. Usually the date the acquirer legally transfers consideration and acquires the assets and liabilities of the acquiree.
  - b. Usually the closing date.
  - c. Examine facts and circumstances if necessary.
3. Recognize and measure the identifiable assets acquired, the liabilities assumed, and any noncontrolling interest in the acquiree.
  - a. Assets, liabilities, and noncontrolling interest are measured at fair value.
4. Recognize and measure goodwill or gain from a bargain purchase.
  - a. Consideration transferred includes
    - (1) Assets transferred.
    - (2) Liabilities incurred.

- (3) Equity interests issued by acquirer.
- (4) Contingent consideration.

b. Goodwill

- (1) Defined as an asset representing the future economic benefits that arise from other assets acquired in a business combination that are not individually identified and separately recognized.
- (2) Calculated as the aggregate of the fair value of consideration given, plus the fair value of previously held interests, plus the fair value of noncontrolling interests, less the fair value of assets acquired.
- (3) Not considered an intangible asset.
- (4) Test for impairment using rules of SFAS 142.

c. Bargain purchase

- (1) Excess of the fair value of assets acquired over the aggregate of the fair value of consideration transferred, plus the fair value of previously held interests, plus the fair value of the noncontrolling interests.
- (2) Recognized as a gain in the current period.

- 5. Acquisition-related costs are expensed in the period incurred (finder's fees, advisory, legal, accounting, valuation, consulting, general administrative costs, and other professional fees).
- 6. Cost of registering and issuing debt securities are recognized in accordance with GAAP.
  - a. For equity securities, net against the proceeds of the stock and reduce additional paid-in capital.
  - b. Bond issue costs are treated as deferred charge and amortized on a straight-line over life of bond.

**D. Exceptions to Recognition or Measurement Principles.**

1. Provisional Amounts.

- a. Record for items that have incomplete information.
- b. Adjust during the measurement period.
- c. Measurement period ends when acquirer receives information or learns information is not available.
- d. Changes in provisional amounts recognized by retrospectively adjusting provisional amounts and making an adjustment to goodwill.
- e. After measurement period ends, changes are made as error corrections in accordance with SFAS 154.

2. Transferred assets

- a. Measured at fair value.
- b. Gain or loss is reported in earnings of the period.
- c. If acquirer retains control, then measure at carrying value.

3. Contingent consideration

- a. Measure at fair value at acquisition date.
- b. Changes in value are treated as changes in provisional amounts.
- c. After measurement date, changes in value are remeasured to fair value at each reporting date until contingency is resolved, with changes reported in earnings of the period.
- d. Contingent consideration classified as equity is not remeasured.

4. Lease classification.

- a. Leases are classified based on classification at inception of lease.
- b. If lease is modified at acquisition date, classify lease by its new terms.
- c. When acquiree is lessee in an operating lease, if terms are favorable, record an intangible asset apart from goodwill. If unfavorable, record a liability.
- d. If acquiree is lessor in operating lease, measure at fair value, and recognize a separate asset or liability if lease terms are favorable or unfavorable with regard to market terms.

5. Contingencies

- a. Categorize as contractual or noncontractual.
- b. Contractual contingencies recorded at fair value at acquisition date.

**Appendix A: Outlines of Accounting Pronouncements**

- c. Noncontractual contingencies are assessed as to whether it is more likely than not that the contingency gives rise to an asset or liability. If more likely than not, record a liability.
  - d. May derecognize an asset or liability from the contingency only when the contingency is resolved.
- 6. Income taxes measured at acquisition date in accordance with SFAS 109.
  - 7. Employee benefits measured at acquisition date.
  - 8. Indemnification contracts (guarantees against loss). If seller indemnifies acquirer, an indemnification asset is recorded.
  - 9. Reacquired rights recorded as intangible asset and amortized over remaining contract period.
  - 10. Valuation allowances of the acquiree are not recorded.
  - 11. Share-based payments
    - a. If acquirer is required to replace, then the fair value of awards are part of consideration transferred.
    - b. If acquirer voluntarily replaces, then fair value of awards is recognized in compensation cost in accordance with SFAS 123(R).
  - 12. Assets held for sale are recorded at fair value less cost to sell, as provided by SFAS 144.

**E. Disclosures in Notes to Financial Statements**

- 1. Name and description of the acquiree.
- 2. Acquisition date.
- 3. Percentage of voting equity shares acquired.
- 4. Primary reasons for the business combination and how acquirer obtained control of acquiree.
- 5. Qualitative description of the factors that make up the goodwill recognized.
- 6. Acquisition-date fair value of total consideration transferred and the fair value of each major class of consideration including cash, other assets, business or subsidiary of the acquirer, liabilities, contingent consideration, and equity instruments (including the number of instruments issued and method of determining fair value).
- 7. For contingent consideration and indemnification assets, the amount recognized, a description of arrangement, basis for determining amount of payment, and an estimate of the range of outcomes.
- 8. The amounts recognized at the acquisition date for each major class of assets acquired and liabilities assumed.
- 9. For assets and liabilities arising from contingencies, the amounts recognized and the nature of recognized and unrecognized contingencies, together with a range of outcomes for the contingencies.
- 10. The total amount of goodwill expected to be deducted for tax purposes.
- 11. If segment information is reported, the amount of goodwill by reportable segment.
- 12. Transaction that are recognized separately from the business combination.
- 13. The gain recognized from bargain purchase and a reason for the gain.
- 14. The fair value of any noncontrolling interest in the acquiree at acquisition date, and the valuation techniques used to measure fair value of the noncontrolling interest.
- 15. If the business was achieved in stages, the acquisition-date fair value of the equity interest in the acquiree held immediately before the acquisition date, as well as the amount of gain or loss recognized as a result of remeasuring those securities to fair value.
- 16. If the acquirer is a public company, the amount of revenue and earnings of the acquiree since acquisition date that is included in the consolidated income statement. Also, supplemental pro forma information for revenue and earnings as if the combination had occurred at the beginning of the period, and pro forma comparative statements for the prior reporting period as if the combination had occurred in the beginning of the prior period.
- 17. If the acquisition occurs after the reporting date but before the financial statements are issued, the acquirer should make the disclosures of the business combination information listed above.
- 18. Any information that enables users of financial statements to evaluate the financial effects of adjustments recognized in the current reporting period related to business combinations that occurred in the current or previous period.
- 19. If accounting for a business combination is incomplete, the reason why it is incomplete, and the assets, liabilities, equity interests or items that are incomplete, and the nature and amount of any measurement period adjustments recognized during the period.
- 20. Any changes in a contingent consideration asset or liability, differences arising from settlement, and changes in the range of outcomes and reasons for changes.
- 21. A reconciliation of the carrying amount of goodwill at the beginning and end of the period as required by SFAS 142.

**ARB 51 Consolidated Financial Statements (ASC Topic 810—Consolidation)**

- A. Consolidated statements present financial statements of a parent and subsidiaries, as if the group were a single company for the benefit of the parent's stockholders and creditors.
  - 1. Substance (effectively a single entity) takes precedence over **legal form** (legally separate entities).
  - 2. Consolidated financial statements result in **more meaningful presentation of financial position and operating results** than if separate statements were presented for the parent and subsidiary.
- B. The general condition for consolidation is over 50% ownership of subsidiaries.
  - 1. Theoretical condition is **control** of the subsidiaries.
    - a. This is generally implicit in greater than 50% ownership.
  - 2. Subsidiaries that are a temporary investment (in reorganization, in bankruptcy, etc.) should not be consolidated.
  - 3. Large indebtedness to bondholders should not preclude consolidation.

**FASB INTERPRETATION NO. 46 CONSOLIDATION OF VARIABLE INTEREST ENTITIES**

Variable interest entities are entities that must be consolidated because they do not have sufficient funding to finance their future activities without the infusion of additional subordinated investment. Entities are presumed to be variable interest entities subject to consolidation if their equity is less than ten percent of total assets. To avoid consolidation of such entities, definitive evidence must be provided that they can fund their future activities without additional subordinated investment. Entities with equity of ten percent or more of total assets may also be a variable interest entity if it appears that the entity will not be able to fund its activities without obtaining additional subordinated investment. A variable interest entity is consolidated by the primary beneficiary, which is the enterprise that is obligated to fund the majority of the variable interest entity's expected losses if they occur, or will receive the majority of the residual returns if they occur, or both.

- C. A difference in fiscal periods should not preclude consolidation.
  - 1. Differences of three months are acceptable if one discloses material intervening events.
  - 2. Differences in excess of three months should be consolidated on the basis of interim statements of the subsidiary.
- D. Consolidation policy should be disclosed by headings or footnotes.
- E. Intercompany balances and transactions should be eliminated in consolidated statements.
  - 1. Intercompany gains and losses on assets remaining in the group should be eliminated (eliminate entire gross profit or loss even on transactions with minority interest subsidiaries).
- F. Retained earnings of subsidiaries at the acquisition date should not appear in the consolidated statements.
- G. When a parent purchases a subsidiary in several blocks of stock, the subsidiary's retained earnings should be determined by the step method (apply equity method to subsidiary retroactively).
- H. When a subsidiary is purchased in midyear, subsidiary operations may be included in the consolidated income statement for the year and then the operating results prior to acquisition would be deducted.
  - 1. As an alternative for a subsidiary purchased in midyear, postacquisition operations can be included in the consolidated income statement.
  - 2. For midyear disposals, omit operations from the consolidated income statement and include equity in subsidiary's operations up to disposal date as a separate item in the income statement.

**NOTE:** F. through H. pertain only to acquisitions accounted for as purchases per APB 16.

- I. Sometimes combined, as distinguished from consolidated, financial statements are appropriate for commonly owned companies and are prepared when consolidated statements are not appropriate.

**SFAS 94 Consolidation of All Majority-Owned Subsidiaries (ASC Topic 810—Consolidation)**

- A. Precludes use of parent company FS prepared for issuance to stockholders as FS of primary reporting entity
- B. Requires consolidation of all majority-owned (ownerships, directly or indirectly, of more than 50% of outstanding voting shares of another company) subsidiaries
  - 1. Unless control
    - a. Temporary
    - b. Not held by majority owner (e.g., subsidiary)
      - (1) Is in legal reorganization or bankruptcy
      - (2) Operates under foreign exchange restrictions, controls, or other governmentally imposed uncertainties
  - 2. Even if
    - a. Subsidiary's operations nonhomogeneous
    - b. Large minority interest exists
    - c. Subsidiary located in foreign country

**SFAS 160 Noncontrolling Interests in Consolidated Financial Statements—An Amendment of ARB No. 51 (ASC Topic 810—Consolidation)**

- A. Scope—Applies to all entities that prepare consolidated financial statements except for not-for-profit organizations.
- B. Classification of noncontrolling interest on the balance sheet.
  - 1. Noncontrolling interest is classified as equity.
  - 2. Noncontrolling interest is attributed its share of income or loss.
  - 3. The amount of net income attributable to the parent and the noncontrolling interest must be presented on the face of the consolidated income statement.
  - 4. Noncontrolling interest is attributed losses even if it results in a deficit balance.
- C. Income Statement Disclosures
  - 1. Consolidated net income includes net income attributed to the noncontrolling interest.
  - 2. Consolidated comprehensive income includes comprehensive income attributed to the noncontrolling interest.
- D. Changes in Ownership Interests
  - 1. Accounted for as equity transaction.
  - 2. No gain or loss recognized in net income or comprehensive income.
  - 3. The carrying amount of the noncontrolling interest is adjusted to reflect change in ownership in subsidiary.
  - 4. Difference between the fair value of consideration received or paid and amount by which controlling interest is adjusted is recognized in additional paid-in capital of the parent.
- E. Deconsolidation
  - 1. The parent recognizes a gain or loss in net income when subsidiary is deconsolidated.
  - 2. Deconsolidation occurs as of the date parent ceases to have control.
  - 3. Gain or loss on deconsolidation of the subsidiary is measured using the fair value of the noncontrolling equity investment.
  - 4. Gain or loss is calculated as aggregate of (1) fair value of consideration received PLUS (2) fair value of retained noncontrolling investment, PLUS (3) carrying amount of noncontrolling interest in former subsidiary LESS (4) the carrying amount of the former subsidiary's assets and liabilities.
  - 5. If parent deconsolidates by a nonreciprocal transfer to owners (such as spin-off), then APB Opinion 29 applies for nonmonetary transactions.
  - 6. Disclosures for deconsolidation
    - a. Amount of gain or loss.
    - b. Portion of gain or loss related to remeasurement of retained investment in the former subsidiary.
    - c. The caption in the income statement in which gain or loss is recognized.

**F. Disclosures in Consolidated Financial Statements**

A parent with a less than wholly owned subsidiary shall disclose the following:

1. On the face of the financial statements, the amounts of consolidated net income and consolidated comprehensive income attributed to the parent and the noncontrolling interests.
2. In the notes or on the face of the income statement, amounts attributable to the parent for the following:
  - a. Income from continuing operations.
  - b. Discontinued operations.
  - c. Extraordinary items.
3. In either the consolidated statement of changes in equity or the notes to the financial statements, a reconciliation at the beginning and end of the period carrying amount of total equity, equity attributable to the parent, and equity attributable to the noncontrolling interest. The reconciliation must disclose separately
  - a. Net income.
  - b. Transactions with owners, contributions from and distributions to owners.
  - c. Each component of other comprehensive income.
  - d. In the notes to financial statements, a schedule showing effects of changes in parent's ownership interest in subsidiary.

**SFAS 167—Amendments to FASB Interpretation No. 46(R) (ASC Topic 810)**

- A.** Eliminates the quantitative-based risks and rewards calculation for determining if an enterprise has a controlling financial interest in a variable interest entity
- B.** Approach focuses on identifying which entity has the power to direct the activities of a variable interest entity that can significantly impact the entity's performance and
  1. The obligation to absorb the losses of the entity, or
  2. The rights to receive benefits from the entity
- C.** Amends FASB Interpretation 46(R) to require additional disclosures about an enterprise's involvement in variable interest entities

**SFAS 133 Accounting for Derivative Instruments and Hedging Activities (ASC Topic 815—Derivatives and Hedging)**

- A.** Foundation principles for SFAS 133
  1. Financial instruments should be measured at fair value (See SFAS 157 for fair value measurements)
  2. Changes in fair value, or gains and losses, should be reported in comprehensive income or in current earnings
  3. Hedging instrument criteria
    - a. Fair value hedge
      - (1) Recognized asset or liability
      - (2) Unrecognized firm commitment
    - b. Cash flow hedge
      - (1) Recognized asset or liability
      - (2) Forecasted transaction
    - c. Foreign currency hedge
      - (1) Unrecognized firm commitment
      - (2) Available-for-sale security
      - (3) Forecasted transaction
      - (4) Net investment in foreign operations
- B.** Definition of derivative instrument
  1. Contract must contain one or more underlyings and one or more notional amounts

2. Contract requires no initial net investment, or a smaller initial net investment than required for contracts with an expected similar response to market changes
  3. Terms that require or permit net settlement, net settlement by means outside the contract, or delivery of an asset that results in a position no substantially different from net settlement
- C. Embedded derivative instruments**
1. Financial instruments which contain features which separately meet the definition of a derivative instrument
  2. Three criteria used to determine whether the instrument should be separated from the host contract
    - a. The embedded derivative instrument meets the definition of a derivative instrument (e.g., strips)
    - b. The hybrid instrument is not regularly recorded at fair value
    - c. The economic characteristics and risks of the embedded instrument are not clearly and closely related to the economic characteristics of the host contract
  3. An election can be made not to bifurcate the instrument. See outline of SFAS 155.
- D. Hedging instruments criteria**
1. Sufficient documentation must be provided at the beginning of the process
    - a. Identify the objective and strategy of the hedge
    - b. Identify the hedging instrument and the hedged item
    - c. Identify how the effectiveness of the hedge will be assessed on an ongoing basis
  2. The hedge must be highly effective throughout its life
    - a. Measured every three months and whenever earnings or financial statements are reported
- E. Fair value hedges**
1. Specific criteria
    - a. Hedged item must be a specific portion of a recognized asset/liability or an unrecognized firm commitment
    - b. An unrecognized firm commitment must be binding on both parties, specific with respect to all significant terms, and contain a nonperformance clause that makes performance probable.
  2. Gains and losses will be recognized in current earnings
- F. Cash flow hedges**
1. Specific hedges
    - a. The change in cash flows must be the same, or linked, for the hedge's asset/liability and the hedging instrument
    - b. A forecasted transaction's cash flows must be considered probable
    - c. A forecasted series of transactions must share the same risk exposure
  2. Accounting for
    - a. Effective portion reported in other comprehensive income
    - b. Ineffective portion reported in earnings
- G. Foreign currency hedge**
1. Unrecognized firm commitment
    - a. Accounted for as fair value hedge if requirements met
  2. Available-for-sale securities
    - a. Accounted for as fair value hedge if requirements met and
      - (1) Cannot be traded on exchange denominated in investor's functional currency
      - (2) Dividends must be denominated in same foreign currency as expected sale proceeds
  3. Foreign currency denominated forecasted transactions
    - a. Accounted for as cash flow hedges

4. Net investments in foreign operations
  - a. Must meet hedge effectiveness criterion
  - b. Change in fair value recorded in other comprehensive income

**H. Forward exchange contracts**

1. Mark to market using the forward exchange rate at each reporting date
2. Recognize changes in fair value in current earnings

**I. Disclosures**

1. Objectives and strategies for achieving financial instruments
2. Context to understand the instrument
3. Risk management policies
4. A list of hedged instruments
5. Disclosure of fair value of financial instruments required when practicable to estimate fair value

**SFAS 138 Accounting Certain Derivative Instruments and Certain Hedging Activities: (ASC Topic 815—Derivatives and Hedging)**

**A. Amended four specific items in SFAS 133**

1. Normal purchases and sales exception extended
  - a. Applies to contracts that require delivery of nonfinancial assets to be used in the normal operations of an entity
  - b. These contracts need not be accounted for as derivative instruments unless the contracts require net settlements of gains or losses
2. Redefined the interest rate risk
  - a. Permits a benchmark interest rate to be designated as the hedged risk in a hedge of interest rate risk
  - b. This benchmark presents the risk-free rate and is the interest rate on direct Treasury obligations of the US government, or the London Interbank Offered Rate (LIBOR)
  - c. A company's actual interest rate above the benchmark interest rate reflects that company's credit risk which is separate from the risk-free rate of interest
3. Hedging recognized foreign currency denominated assets or liabilities
  - a. Permits a recognized foreign currency denominated asset or liability, for which a foreign currency transaction gain or loss is recognized in earnings under the provisions of SFAS 52, to be the hedged item in a fair value or cash flow hedge.
  - b. The foreign currency denominated asset or liability continues to be remeasured using the spot exchange rates to compute the transaction gain or loss for the period.
  - c. In the case of cash flow hedges, the transaction gain or loss would be offset by an equal amount of reclassified from other comprehensive income. In the case of fair market value hedges, the hedging instrument would be a hedge of both interest rate risk and foreign exchange rate risk. The foreign currency denominated asset or liability would be adjusted for changes in fair value attributable to changes in foreign interest rates before remeasurement at the spot exchange rate. This eliminates the differences on earnings related to the use of different measurement criteria for the hedged item and the hedging instrument
4. Hedging with intercompany derivatives
  - a. Permits derivative instruments entered into with another member of the consolidated group to qualify as hedging instruments in the consolidated financial statements if those internal derivatives are offset by unrelated third-party contracts on a net basis
  - b. Previously, the internal derivative had to be offset on an individual derivative contract basis with a third party

### **SFAS 149 Amendment of Statement 133 on Derivative Instruments and Hedging Activities (ASC Topic 815)**

- A. This statement clarifies under what circumstances a contract with an initial net investment meets the characteristics of a derivatives. It also clarifies when a derivative contains a financing component, and amends the definition of an underlying to conform to language used in FASB Interpretation 45, and amends other existing pronouncements.
- B. This statement amended existing pronouncements to clarify that the use of the term “expected cash flows” does not have the same meaning as the term is defined and used in SFAC 7, *Using Cash Flow Information and Present Value in Accounting Measurements*.

### **SFAS 155 Accounting for Certain Hybrid Financial Instruments (ASC Topic 815—Derivatives and Hedging)**

SFAS 155, issued in February 2006, amends SFAS 133. SFAS 155 changes the accounting for hybrid financial instruments that would normally be required to be bifurcated.

- A. An election can be made **not** to bifurcate the instrument
- B. The election is irrevocable and is made on an instrument-by-instrument basis
- C. Changes in fair value of the hybrid instruments are recognized in earnings each year
- D. Balance sheet disclosure may be presented in one of two ways
  1. As a separate line item for the fair value and non–fair value instruments, **or**
  2. As an aggregate amount of all hybrid instruments with the amount of the hybrid instruments at fair value shown in parentheses
- E. Initial adoption of SFAS 155 requires the difference between the total carrying amount of the components of the bifurcated hybrid instruments and the fair value of the hybrid instruments to be recognized as a cumulative effect adjustment to the beginning balance of retained earnings
- F. Notes to financial statements should indicate the gross gains and losses of the cumulative effect adjustments. Prior periods are not restated
- G. SFAS 155 does not apply to hedging instruments

### **SFAS 161 Disclosures about Derivative Instruments and Hedging Activities—An Amendment of FASB Statement No. 133 (ASC Topic 815—Derivatives and Hedging)**

- A. Additional disclosures required for derivative instruments
  1. How and why an entity uses derivatives
  2. How derivatives and hedges are accounted for
  3. How derivatives and hedges affect the financial position, financial performance, and cash flows
- B. Type of information disclosed
  1. Risk exposure such as interest rate, credit, foreign exchange rate, and price risk
  2. Purpose of instrument, (i.e., risk management or other)
  3. Location and fair value amounts of derivative instruments reported in balance sheet
  4. Location and amounts recognized on the income statement

### **SFAS 157 Fair Value Measurements (ASC Topic 820—Fair Value Measurement and Disclosures)**

- A. Fair value is the price that would be received to sell an asset or paid to transfer a liability in an orderly transaction between market participants at the measurement date (an exit price).
- B. Applying the fair value measurement approach involves
  1. Identify the asset or liability to be measured
  2. Determine the principal or most advantageous market (*highest and best use*)
  3. Determine the valuation premise (*in-use or in-exchange*)
  4. Determine the appropriate valuation technique (*market, income, or cost approach*)
  5. Obtain inputs for valuation (*Level 1, Level 2, or Level 3*)
  6. Calculate the fair value of the asset

- C.** Assumes the asset or liability is sold or transferred in either the principal market or most advantageous market
1. Principal market has greatest volume and level of activity
  2. Most advantageous market minimizes price received for the asset or minimizes amount paid to transfer liability
  3. Market participants have the following characteristics:
    - a. Be independent of the reporting entity (not related parties)
    - b. Knowledgeable
    - c. Able to transact
    - d. Willing to transact (motivated, but not compelled to transact)
  4. Do not adjust prices for costs to sell
  5. If location is attribute of asset or liability, price is adjusted for costs necessary to transport asset or liability to market
- D.** Assumes the highest and best use of the asset
1. Highest and best use maximizes the value of asset or group of assets
  2. Highest and best use must be
    - a. Physically possible
    - b. Legally permissible
    - c. Financially feasible at measurement date
  3. Highest and best use determines the valuation premise used
- E.** Valuation Premise
1. In use:
    - a. Asset provides maximum value by using it with other assets as a group
    - b. Valuation based on price to sell asset assuming it is used with other assets
  2. In-exchange:
    - a. Asset provides maximum value on stand-alone basis
    - b. Valuation based on price to sell the asset stand-alone
- F.** Valuation Techniques
1. Market approach
    - a. Uses prices and relevant information from market transaction for identical or comparable assets or liabilities
  2. Income approach
    - a. Uses present value techniques to discount cash flows or earnings to present value amounts
  3. Cost approach
    - a. Relies on current replacement cost to replace the asset with a comparable asset, adjusted for obsolescence.
- G.** Levels of Input for Valuation
1. Use fair value hierarchy to prioritize inputs to valuation techniques
  2. Fair value hierarchy is Level 1, Level 2, and Level 3
  3. Inputs should be based on lowest level of input (i.e., highest priority is lowest level)
  4. Level 1 inputs—lowest level, highest priority
    - a. Uses quoted prices (unadjusted prices) from active markets
    - b. Examples are quotes from NYSE, quotations from dealer markets
  5. Level 2 inputs
    - a. Inputs that are directly or indirectly observable other than quoted prices of Level 1.
    - b. Examples are quoted prices for similar assets or liabilities, observable inputs such as yield curves, bank prime rates, interest rates, volatilities, loss severities, credit risks, and default rates.
  6. Level 3 inputs

- a. Unobservable inputs
- b. May only be used if observable inputs are not available
- c. May reflect reporting entity's own assumptions about market
- d. Based on best information available

**H. Change in Valuation Premise or Technique**

1. Treat as change in estimate on a prospective basis
2. Requirements of SFAS 154 do not apply

**I. Disclosures**

1. For assets measured at fair value on recurring basis
  - a. Valuation techniques used
  - b. Identify level of hierarchy or measurements used
  - c. The amount of significant transfers between Level 1 and Level 2 and reason for the transfer along with the entity's transfer policy.
  - d. If Level 2 or Level 3 using significant other observable inputs and unobservable inputs respectively, the valuation techniques and the inputs used.
  - e. If Level 3 used, the effect of measurements on earnings for the period, purchases, sales, issuances, and settlements, and any transfers in or out of Level 3 are disclosed
2. For assets and liabilities measured at fair values on a nonrecurring basis (i.e., impaired assets), identify the following:
  - a. The fair value measurements used
  - b. The reasons for the measurements
  - c. The level within the hierarchy
  - d. For Level 2 or Level 3, the inputs and valuation techniques used to measure fair value.
  - e. A description of nonfinancial assets with a current use differing from the highest and best use.

**SFAS 107 Disclosures about Fair Value of Financial Instruments  
(ASC Topic 825—Financial Instruments)**

- A.** Statement requires entities to disclose the fair value of financial instruments, both assets and liabilities whether recognized or not recognized in the statement of financial position, for which it is practicable to estimate fair value.
1. Applies to all entities
  2. Does not change any recognition, measurement, or classification requirements for financial instruments in financial statements
  3. Fair value disclosures of financial instruments previously prescribed by GAAP meet the requirements of this statement.
- B.** Financial instruments include
1. Cash
  2. Evidence of ownership interest in an entity, or
  3. A contract that both
    - a. Imposes contractual obligation on one entity to deliver cash or another financial instrument to second entity or to exchange financial instruments on potentially unfavorable terms with second entity, and
    - b. Conveys contractual right to second entity to receive cash or another financial instrument from first entity or to exchange financial instruments on potentially favorable terms with first entity
- C.** Fair value of a financial instrument is defined by SFAS 157 as “the price that would be received to sell an asset or paid to transfer a liability in an orderly transaction between market participants at the measurement date.”
- D.** Standard lists a number of areas for which the disclosure requirements are not applicable, including pensions and other deferred compensation arrangements and leases.
- E.** Disclosure Requirements
1. When practicable (i.e., without incurring excessive costs), an entity must disclose the fair value of financial instruments in either the body of the financial statements or in the accompanying notes.
    - a. Disclosure must include the method(s) and significant assumptions used in estimating fair value

- (1) Quoted market price is generally the best estimate of fair value.
  - (2) If quoted market price is not available, management must estimate fair value based upon similar financial instruments or valuation techniques.
  - (3) No disclosure is required for trade receivables and payables when carrying amount approximates fair value.
- b. Disclosure must distinguish between financial instruments held or issued for
- (1) Trading purposes
  - (2) Purposes other than trading
2. If estimation of the fair value of financial instruments is not practicable, entity must disclose
- a. Information pertinent to estimating the fair value (i.e., the carrying amount, effective interest rate, and maturity), and
  - b. The reason why estimation of fair value is not practicable.
3. Derivative financial instruments may not be combined, aggregated or netted with nonderivative or other derivative financial instruments.
4. If financial instruments disclosed in more than one area in FS, one note must contain a summary table cross-referencing the location of the other instruments.
5. Disclosure of concentrations of credit risk of all financial instruments
- a. Disclose all significant concentrations of credit risk from **all** financial instruments, whether from an individual counterparty or groups of counterparties.
  - b. Group concentrations exist if a number of counterparties are engaged in similar activities and have similar economic characteristics such that they would be similarly affected by changes in conditions.
  - c. Disclose for each significant concentration
    - (1) Information about the (shared) activity, region, or economic characteristics
    - (2) The amount of accounting loss the entity would incur should any party to the financial instrument fail to perform according to the terms of the contract and the collateral or security, if any, is of no value.
    - (3) The entity's policy of requiring collateral or security, the entity's access to that collateral or security, and the nature and brief description of the collateral or security.

### **SFAS 159 The Fair Value Option for Financial Assets and Financial Liabilities—including an amendment of FASB Statement 115 (ASC Topic 825—Financial Instruments)**

#### **A. Scope**

1. Applies to
  - a. Financial assets and financial liabilities (includes available-for-sale, held-to-maturity, and equity method investments, and liabilities)
  - b. Firm commitments that involve financial instruments
  - c. Written loan commitments
  - d. Nonfinancial insurance contracts that can be settled by paying third party
  - e. Warranties that can be settled by paying third party
  - f. Host financial instruments resulting from separation of embedded nonfinancial derivative instrument from a nonfinancial hybrid instrument
2. Does **not** apply to consolidations, pensions, share-based payments, stock options, OPEB, exit or disposal activities, leases, and financial instruments that are component of equity

#### **B. Definitions**

1. **Fair value**—The price that would be received to sell an asset or paid to transfer a liability in an orderly transaction between market participants at the measurement date
2. **Financial asset**—Cash, evidence of an ownership interest in an entity or a contract that conveys a right to receive cash or another financial instrument or to exchange other financial instruments on potentially favorable items

3. **Financial liability**—A contract that imposes an obligation to deliver cash or another financial instrument to exchange other financial instruments on potentially favorable terms
4. **Firm commitment**—An agreement, usually legally enforceable, that specifies all significant terms, including quantity, fixed price, and timing of transaction. The agreement includes a disincentive for nonperformance that makes performance probable

**C. Fair Value Option (FVO)**

1. Can elect to measure financial asset or financial liability at fair value
2. Must elect to use fair value method on specific items
  - a. Can be elected on instrument-by-instrument basis
    - (1) If multiple advances to one borrower for single contract, fair value options is applied to larger balance and not each individual advance
    - (2) If fair value applied to investment that can use equity method, it must be applied to all interests in same entity (i.e., debt and equity)
    - (3) If applied to insurance contracts, must be applied to all claims and obligations for that contract
  - b. Is irrevocable
  - c. Must apply to entire instrument, not a portion of instrument
3. Report unrealized gains and losses in earnings
4. Classification on statement of cash flows—rules of FAS 95 apply

**D. Election Dates**

1. The date an eligible item is first recognized
2. The date the entity enters into a firm commitment
3. When financial assets cease to qualify for fair value treatment due to specialized accounting rules, can elect to use fair value (i.e. equity method for investments)
4. Percentage of ownership change and can no longer consolidate
5. Modifications of debt

**E. Financial Statement Disclosure Requirements—two methods permissible**

1. Present aggregate fair value and non–fair value amounts in same line, with amounts measured at fair value parenthetically disclosed
2. Present two separate line items for fair value and non–fair value carrying amounts

**F. Disclosures to Notes to Financial Statements—Balance Sheet**

1. Management’s reasons for electing fair value option for each item or group of items
2. If fair value option is elected for some but not all items
  - a. Description of similar items and reason for partial election
  - b. Information to understand how group of similar items relates to individual line items on balance sheet
3. Information to understand how line items relate to major categories of assets and liabilities presented in SFAS 157 fair value disclosure requirements
4. Aggregate carrying amount of items included in each line item in balance sheet that are not eligible for fair value option
5. Difference between aggregate fair value and aggregate unpaid principal balance of
  - a. Loans and long-term receivables using FVO
  - b. Long-term debt instruments using FVO
  - c. Aggregate fair value of loans that are 90 days or more past due
  - d. Aggregate fair value of loans in nonaccrual status if interest is recognized separately from changes in fair value
  - e. Difference between aggregate fair value and aggregate unpaid principal balance for loans 90 days or more past due
6. For investments that would have used equity method, the information required by APB 18 for equity method

**G. Required Disclosures for Income Statement Items**

1. Amounts of gains/losses included in earnings for each line item in balance sheet
2. Description of how interest and dividends are measured and reported on the income statement
3. For loans and receivables held as assets
  - a. Estimated amount of gains/losses in earnings that is attributed to changes in credit risk
  - b. How the gains/losses were determined
4. For liabilities affected by credit risk
  - a. Amount of gains/losses attributable to changes in credit risk
  - b. Qualitative information about reasons for changes
  - c. How gains/losses were determined
5. Methods and significant assumptions to estimate fair value

**H. Transition Requirements**

1. Report as cumulative effect adjustment to opening balance of retained earnings
2. Remove balance sheet effects such as
  - a. Amortized deferred costs, fees, premiums, discounts
  - b. Valuation allowances (such as allowance for loan losses)
  - c. Accrued interest

**SFAS 52 Foreign Currency Translation (ASC Topic 830—Foreign Currency Matters)****A. Primary objectives of foreign currency translation**

1. Should provide information disclosing effects of rate changes on enterprise cash flows and equity
2. Should also provide information in consolidated statements as to financial results and relationships of individual consolidated entities measured in their respective functional currencies in accordance with US GAAP

**B. Functional currency is the currency of the primary economic environment in which a foreign entity operates (i.e., the environment in which the entity generates and spends cash).**

1. A foreign entity's assets, liabilities, revenues, expenses, gains, and losses shall be measured in that entity's functional currency.
2. The functional currency could be the currency of the country in which the entity operates if the entity is a self-contained unit operating in a foreign country.

**EXAMPLE**

An entity (1) whose operations are not integrated with those of the parent, (2) whose buying and selling activities are primarily local, and (3) whose cash flows are primarily in the foreign currency.

3. There may be several functional currencies if there are many self-contained entities operating in different countries.
4. The functional currency might be the US dollar if the foreign entity's operations are considered to be a direct and integral part of the US parent's operations.

**EXAMPLE**

An entity (1) whose operations are integrated with those of the parent, (2) whose buying and selling activities are primarily in the parent's country and/or the parent's currency, and (3) whose cash flows are available for remittance to the parent.

5. Functional currency for a foreign entity, once determined, shall be used consistently unless it is clear that economic facts and circumstances have changed.
  - a. If a change is made, do not restate previously issued financial statements

6. If a foreign entity's bookkeeping is not done in the functional currency, the process of converting from the currency used for the books and records to the functional currency is called remeasurement.
    - a. Remeasurement is intended to produce the same result (e.g., balances for assets, expenses, liabilities, etc.) as if the functional currency had been used for bookkeeping purposes.
    - b. In highly inflationary economies (cumulative inflation over a 3-year period is > 100%), the remeasurement of a foreign entity's financial statements shall be done as if the functional currency were the reporting currency (i.e., the US dollar).
  7. The functional currency (if not the US dollar) is translated to the reporting currency (assumed to be the US dollar) by using appropriate exchange rates (see item C. below).
    - a. If the functional currency is the US dollar, there is no need to translate (if the books and records are maintained in US dollars).
- C.** The translation of foreign currency FS (those incorporated in the FS of a reporting enterprise by consolidation, combination, or the equity method of accounting) should use a current exchange rate if the foreign currency is the functional currency.
1. Assets and liabilities—exchange rate at the balance sheet date is used to translate the functional currency to the reporting currency
  2. Revenues (expenses) and gains (losses)—exchange rates when the transactions were recorded shall be used to translate from the functional currency to the reporting currency
    - a. Weighted-averages for exchange rates may be used for items occurring numerous times during the period.
  3. Translation adjustments will result from the translation process if the functional currency is a foreign currency.
    - a. Translation adjustments are not an element of net income of the reporting entity.
    - b. Effects of current translation adjustments are reported in other comprehensive income for the period with the accumulated amount reported as part of the reporting entity's owners' equity and labeled accumulated other comprehensive income.
    - c. Accumulated translation adjustments remain part of the owners' equity until the reporting entity disposes of the foreign entity.
      - (1) In period of disposal, these adjustments are reported as part of the gain (loss) on sale or liquidation.
- D.** Foreign currency transactions are those which are denominated (fixed) in other than the entity's functional currency.
1. Receivables and/or payables which are fixed in a currency other than the functional currency may result in transaction gains (losses) due to changes in exchange rates after the transaction date.
  2. Transaction gains or losses generally are reported on the income statement in the period during which the exchange rates change.
  3. Deferred taxes may have to be provided for transaction gains or losses that are realized for income tax purposes in a time period different than that for financial reporting.
- E.** A forward exchange contract represents an agreement to exchange different currencies at a specified future rate and at a specified future date. (Accounting and reporting now specified by SFAS 133)
- F.** FS disclosures required
1. Aggregate transaction gain (loss) that is included in the entity's net income
  2. Analysis of changes in accumulated translation adjustments which are reported as part of other comprehensive income
  3. Significant rate changes subsequent to the date of the financial statements including effects on unsettled foreign currency transactions

**FASB INTERPRETATION NO. 37 ACCOUNTING FOR TRANSLATION ADJUSTMENTS  
UPON SALE OF PART OF AN INVESTMENT IN A FOREIGN ENTITY**

If an enterprise sells part of its ownership interest in a foreign entity, a pro rata portion of the accumulated translation adjustment component of equity attributable to that investment shall be recognized in measuring the gain (loss) on the sale.

**SFAS 34 Capitalization of Interest Cost (ASC Topic 835—Interest)**

- A.** Interest costs, when material, incurred in acquiring the following types of assets, shall be capitalized:
1. Assets constructed or produced for a firm's own use
    - a. Including construction by others requiring progress payments
  2. Assets intended for lease or sale that are produced as discrete projects
    - a. For example, ships and real estate developments
  3. But not on
    - a. Routinely produced inventories
    - b. Assets ready for their intended use
    - c. Assets not being used nor being readied for use
    - d. Land, unless it is being developed (e.g., as a plant site, real estate development, etc.)
  4. The objective of interest capitalization is to
    - a. Reflect the acquisition cost of assets
    - b. Match costs to revenues in the period benefited
  5. Capitalized interest shall be treated as any other asset cost for depreciation and other purposes.
  6. Required interest cost disclosures
    - a. Total interest cost incurred
    - b. Interest capitalized, if any
- B.** Amount of interest to be capitalized
1. Conceptually, the interest that would have been avoided if the expenditures had not been made
  2. Based on the average accumulated expenditures on the asset for the period
    - a. Includes payment of cash, transfer of other assets, and incurring interest-bearing liabilities
    - b. Reasonable approximations are permitted
  3. Use the interest rates incurred during period
    - a. First, the rates on specific new borrowings for the asset
    - b. Second, a weighted-average of other borrowings
      - (1) Use judgment to identify borrowings
  4. Interest cost capitalized in any period cannot exceed interest cost incurred in that period.
    - a. On a consolidated basis for consolidated statements
    - b. On an individual company basis for individual company statements
  5. Capitalized interest should be compounded.
- C.** Interest capitalization period
1. Begins when all the following three conditions are present:
    - a. Asset expenditures have been made
    - b. Activities to ready asset for intended use are in progress
      - (1) Includes planning stages
    - c. Interest cost is being incurred
  2. If activities to ready asset for intended use cease, interest capitalization ceases
    - a. Not for brief interruptions that are externally imposed
  3. Capitalization period ends when asset is substantially complete
    - a. For assets completed in parts, interest capitalization on a part of the asset ends when that part is complete
    - b. Capitalize all interest on assets required to be completed in entirety until entire project is finished

4. Interest capitalization continues if capitalized interest raises cost above market values
  - a. Apply impairment accounting per SFAS 144

### APB 12 Omnibus Opinion—1967 (ASC Topics 310, 360, 505, 710, 835)

- A. Allowance or contra accounts (allowance for bad debts, accumulated depreciation, etc.) should be deducted from assets or groups of assets with appropriate disclosure.
- B. Disclosure of depreciable assets should include
  1. Depreciation expense for the period
  2. Balances of major classes of depreciable assets by nature or function
  3. Accumulated depreciation either by major class or in total
  4. Description of method(s) of depreciation by major classes of assets
- C. Changes in the separate shareholder equity accounts in addition to retained earnings and changes in number of equity securities must be disclosed in the year of change
  1. In separate statements
  2. Or the financial statements
  3. Or the notes

### APB 21 Interest on Receivables and Payables (ASC Topic 835—Interest)

Accounting for receivables and payables whose face value does not approximate their present value

- A. Applies to receivables and payables except
  1. Normal course of business receivables and payables maturing in less than one year
  2. Amounts not requiring repayment in the future (will be applied to future purchases or sales)
  3. Security deposits and retainages
  4. Customary transactions of those whose primary business is lending money
  5. Transactions where interest rates are tax affected or legally prescribed (e.g., municipal bonds and tax settlements)
  6. Parent-subsidiary transactions
  7. Estimates of contractual obligations such as warranties
- B. Notes exchanged for cash are recorded at their present value. Present value equals the cash paid/received. If face value of note  $\neq$  cash paid/received, difference is a discount/premium.
  1. If unstated **rights or privileges** are exchanged in issuance of note for cash, adjust cash payment to obtain present value of the note and unstated rights.
- C. Notes exchanged for goods or services in arm's-length transaction are recorded at face amount (presumption that face amount = present value).
  1. Presumption not valid if note is
    - a. Noninterest-bearing
    - b. Stated interest rate is unreasonable
    - c. Face amount of the note differs materially from sales price of goods or services
  2. When presumption not valid, record note at fair value of goods or services
    - a. Compute **implicit** rate (rate that discounts the future value [face of note plus cash interest, if any] to fair value of goods and services) for interest expense/revenue recognition
  3. When no established market price for goods and services exists, record note at its fair market value.
    - a. Compute **implicit** rate (rate that discounts the future value [face of note plus cash interest, if any] to fair [present] value of note) for interest expense/revenue recognition
  4. When no fair market value exists for either the goods and services or the note, record note at approximation of market value.

- a. Use **imputed** rate to compute present value of (and discount on) note.
  - b. Imputed rate should approximate the rate an independent borrower and lender would negotiate in a similar transaction. Consider
    - (1) Credit standing of issuer
    - (2) Restrictive covenants
    - (3) Collateral
    - (4) Payment and other terms
    - (5) Tax consequences to buyer and seller
    - (6) Market rate for sale or assignment
    - (7) Prime rate
    - (8) Published rates of similar bonds
    - (9) Current rates charged for mortgages on similar property
- D.** Discount or premium should be amortized by the interest method (constant rate of interest on the amount outstanding).
1. Other methods (e.g., straight-line) may be used if the results are not materially different from those of the interest method.
- E.** Discount or premium should be netted with the related asset or liability and **not** shown as separate asset or liability.
1. Issue costs should be reported as deferred charges.

### SFAS 13 Accounting for Leases (ASC Topic 840—Leases)

Applies to agreements for use of property, plant, and equipment, but not natural resources and not for licensing agreements such as patents and copyrights.

The major issue in accounting for leases is whether the benefits and risks incident to ownership have been transferred from lessor to lessee. If so, the lessor treats the lease as a sale or financing transaction and the lessee treats it as a purchase. Otherwise, the lease is accounted for as a rental agreement. These different treatments recognize the **substance** of a transaction rather than its **form**; that is, what is legally a lease may be effectively the same as or similar to an installment purchase by the lessee and a sale or financing transaction by the lessor.

The following terms are given specific definitions for the purpose of SFAS 13:

**Bargain purchase option**—A provision allowing the lessee the option of purchasing the leased property for an amount that is sufficiently lower than the expected fair value of the property at the date the option becomes exercisable. Exercise of the option must appear reasonably assured at the inception of the lease.

**Contingent rentals**—Rentals that represent the increases or decreases in lease payments which result from changes in the factors on which the lease payments are based occurring subsequent to the inception of the lease.

**Estimated economic life of lease property**—The estimated remaining time which the property is expected to be economically usable by one or more users, with normal maintenance and repairs, for its intended purpose at the inception of the lease. This estimated time period should not be limited by the lease term.

**Estimated residual value of leased property**—The estimated fair value of the leased property at the end of the lease term.

**Executory costs**—Those costs such as insurance, maintenance, and taxes incurred for leased property, whether paid by the lessor or lessee. Amounts paid by a lessee in consideration for a guarantee from an unrelated third party of the residual value are also executory costs. If executory costs are paid by the lessor, any lessor's profit on those costs is considered the same as executory costs.

**Fair value of leased property**—The price that would be received to sell the property in an orderly transaction between market participants at the measurement date.

When the lessor is a manufacturer or dealer, the fair value of the property at the inception of the lease will ordinarily be its normal selling price net of volume or trade discounts.

When the lessor is not a **manufacturer or dealer**, the fair value of the property at the inception of the lease will ordinarily be its costs net of volume or trade discounts.

**Implicit interest rate**—The discount rate that, when applied to the minimum lease payments, excluding that portion of the payments representing executory costs to be paid by the lessor, together with any profit thereon, and the unguaranteed residual value accruing to the benefit of the lessor, causes the aggregate present value at the beginning of the lease term to be equal to the fair value of the leased property to the lessor at the inception of the lease.

**Inception of the lease**—The date of the written lease agreement or commitment (if earlier) wherein all principal provisions are fixed and no principal provisions remain to be negotiated.

**Incremental borrowing rate**—The rate that, at the inception of the lease, the lessee would have incurred to borrow over a similar term (i.e., a loan term equal to the lease term) the funds necessary to purchase the leased asset.

**Initial direct costs**—(See outline of SFAS 91)

**Lease term**—The fixed, noncancelable term of the lease plus all renewal terms when renewal is reasonably assured.

**NOTE:** The lease term should not extend beyond the date of a bargain purchase option.

**Minimum lease payments**—For the **lessee**: The payments that the lessee is or can be required to make in connection with the leased property. Contingent rental guarantees by the lessee of the lessor's debt, and the lessee's obligation to pay executory costs are excluded from minimum lease payments. If the lease contains a bargain purchase option, only the minimum rental payments over the lease term and the payment called for in the bargain purchase option are included in minimum lease payments. Otherwise, minimum lease payments include the following:

1. The minimum rental payments called for by the lease over the lease term
2. Any guarantee of residual value at the expiration of the lease term made by the lessee (or any party related to the lessee), whether or not the guarantee payment constitutes a purchase of the leased property. When the lessor has the right to require the lessee to purchase the property at termination of the lease for a certain or determinable amount, that amount shall be considered a lessee guarantee. When the lessee agrees to make up any deficiency below a stated amount in the lessor's realization of the residual value, the guarantee to be included in the MLP is the stated amount rather than an estimate of the deficiency to be made up.
3. Any payment that the lessee must or can be required to make upon **failure to renew or extend** the lease at the expiration of the lease term, whether or not the payment would constitute a purchase of the leased property

For the **lessor**: The payments described above plus any guarantee of the residual value or of the rental payments beyond the lease term by a third party unrelated to either the lessee or lessor (provided the third party is financially capable of discharging the guaranteed obligation).

**Unguaranteed residual value**—the estimated residual value of the leased property exclusive of any portion guaranteed by the lessee, by any party related to the lessee, or any party unrelated to the lessee. If the guarantor is related to the lessor, the residual value shall be considered as unguaranteed.

**A.** Classification of leases by lessees. Leases that meet one or more of the following criteria are accounted for as capital leases; all other leases are accounted for as operating leases:

1. Lease transfers ownership (title) to lessee during lease term.
2. Lease contains a bargain purchase option.
3. Lease term is 75% or more of economic useful life of property.
4. Present value of minimum lease payments equals 90% or more of FV of the leased property.
  - a. Present value is computed with lessee's incremental borrowing rate, unless lessor's implicit rate is known and is less than lessee's incremental rate (then use lessor's implicit rate).
  - b. FMV is cash selling price for sales-type lease; lessor's cost for direct financing of lease. (If not recently purchased, estimate FV)

**NOTE:** 3. and 4. do not apply if lease begins in last 25% of asset's life.

**B. Classification of leases by lessors**

1. Sales-type leases provide for a manufacturer or dealer profit (i.e., FV of leased property is greater than lessor cost or carrying value).
  - a. Sales-type leases must meet one of the four criteria for lessee capital leases (A.1. to A.4. above) and **both** of the following two criteria:
    - (1) Collectibility is reasonably predictable, and
    - (2) No important uncertainties regarding costs to be incurred by lessor exist, such as unusual guarantees of performance. Note estimation of executory expense such as insurance, maintenance, etc., is not considered.
2. Direct financing leases must meet same criteria as sales-type leases (just above) but do not include a manufacturer's or dealer's profit.
3. Operating leases are all other leases that have not been classified as sales-type, direct financing, or leveraged.

**C. Lease classification is determined at the inception of the lease.**

1. If changes in the lease are subsequently made which change the classification, the lease generally should be considered a new agreement and reclassified and accounted for as a new lease. Exercise of renewal options, etc., are not changes in the lease. However, if the terms of a capital lease are modified such that it should be reclassified as an operating lease, the lessee should account for it under the sale-leaseback provisions of SFAS 98
2. Changes in estimates (e.g., economic life or residual value) or other circumstances (e.g., default) do not result in a new agreement but accounts should be adjusted and gains or losses recognized.
3. An important goal of SFAS 13 was to achieve **symmetry** in lease accounting (i.e., an operating lease for the lessee will be an operating lease for the lessor) and likewise for capital leases.

**D. Accounting and reporting by lessees**

1. Record capital leases as an asset and liability
  - a. Leased asset shall not be recorded in excess of FV. If the present value of the lease payments is greater than the FV, the leased asset and related liability are recorded at FV and the effective interest rate is thereby increased.
  - b. Recognize interest expense using the effective interest method.
  - c. If there is a transfer of ownership or a bargain purchase option, the asset's depreciation/amortization period is its economic life. Otherwise, depreciate/amortize assets to the expected residual value at the end of the lease term.
2. Rent on operating leases should be expensed on a straight-line basis unless another method is better suited to the particular benefits and costs associated with the lease.
3. Contingent rentals are reported as rent expense in the period incurred.
4. Disclosures by lessees include
  - a. General description of leasing arrangement including
    - (1) Basis of computing contingent payments
    - (2) Existence and terms of renewal or purchase options and escalation clauses
    - (3) Restrictions imposed by the lease agreement such as limitations on dividends and further leasing arrangements
  - b. Capital lease requirements
    - (1) Usual current/noncurrent classifications
    - (2) Depreciation/amortization should be separately disclosed
    - (3) Future minimum lease payments in the aggregate and for each of the five succeeding fiscal years with separate deductions being made to show the amounts representing executory cost and interest
    - (4) Total minimum sublease rentals to be received in the future under noncancelable subleases
    - (5) Total contingent rental actually incurred for each period for which an income statement is presented
  - c. Operating leases which have initial or remaining noncancelable term > 1 year
    - (1) Future minimum lease payments in the aggregate and for each of the five succeeding fiscal years

- (2) Total minimum sublease rentals to be received in the future under noncancelable subleases
- (3) All operating leases—rent expense of each IS period
  - (a) Present separate amounts for minimum rentals, contingent rentals, and sublease rentals
  - (b) Rental payments for leases with a term of a month or less may be excluded

**E. Accounting and reporting by lessors**

1. Sales-type leases

- a. Lease receivable is charged for the gross investment in the lease (the total net minimum lease payments plus the unguaranteed residual value). Sales is credited for the present value of the minimum lease payments.
- b. Cost of sales is the carrying value of the leased asset plus any initial direct costs less the present value of the unguaranteed residual value. Note that in a sales-type lease, initial direct costs are deducted in full in the period when the sale is recorded. Unearned interest income is credited for the difference between the gross investment and the sales price.
- c. Recognize interest revenue using the effective interest method
- d. At the end of the lease term, the balance in the receivable account should equal the amount of residual value guaranteed, if any.
- e. Contingent rental payments are reported as income in the period earned.

2. Direct financing leases

- a. Accounting is similar to sales-type lease except that no manufacturer's or dealer's profit is recognized.
- b. Lease receivable is charged for the gross investment in the lease, the asset account is credited for the net investment in the lease (cost to be acquired for purpose of leasing) and the difference is recorded as unearned income.
- c. Initial direct costs are recorded in a separate account. A new effective interest rate is computed that equates the minimum lease payments and any unguaranteed residual value with the combined outlay for the leased asset and initial direct costs. The initial direct costs and unearned lease revenue are both amortized so as to produce a constant rate of return over the life of the lease.
- d. The remaining requirements are the same as those for the sales-type lease.

3. Operating leases

- a. Leased property is to be included with or near PP&E on the BS, and lessor's normal depreciation policies should be applied.
- b. Rental revenue should be recognized on a straight-line basis unless another method is better suited to the particular benefits and costs associated with the lease.
- c. Initial direct costs should be deferred and allocated over the lease term in proportion to the recognition of rental revenue.

**F. Related-party leases shall be accounted for as unrelated-party leases except when terms have been significantly affected by relationship.**

**G. Sale-leasebacks**

1. Legally two separate transactions

2. Lessee (seller) accounts for the gain (loss) as follows:

- a. Loss (when  $FV < \text{Book value}$ ) on the sale should be recognized immediately.
- b. Gain treatment
  - (1) Seller relinquishes the right to substantially all of the remaining use of the property sold (PV of reasonable rentals  $< 10\%$  of fair value of asset sold)—then separate transactions, and entire gain is recognized.
  - (2) Seller retains more than a minor part, but less than substantially all of the remaining use (PV of reasonable rentals are  $> 10\%$  but  $< 90\%$  of fair value of asset sold)—then gain on sale is recognized to the extent of the excess of gain over the present value of minimum lease payments (operating) or the recorded amount of the leased asset (capital).
  - (3) Seller retains right to substantially all of the remaining use—then entire gain on sale is deferred.

- c. If the gain is deferred and lease is accounted for as
  - (1) Capital lease—defer and amortize gain over lease term using same method and life used for depreciating/amortizing cost of leased asset
    - (a) Deferral and amortization of the gain are required because the sale and leaseback are components of a single transaction and are interdependent.
  - (2) Operating lease—recognize gain on straight-line basis
    - (a) Treat as a reduction of rent expense.
- 3. Lessor records as a purchase of asset to be leased and as a direct financing or operating lease

**FASB TECHNICAL BULLETIN 85-3 ACCOUNTING FOR OPERATING LEASES  
WITH SCHEDULED RENT INCREASES**

SFAS 13 requires lessees or lessors to recognize rent expense or rental income for an operating lease on a straight-line basis. Certain operating lease agreements specify scheduled rent increases over the lease term. The effects of these scheduled rent increases, which are included in minimum lease payments under SFAS 13, should also be recognized by lessors and lessees on a straight-line basis over the lease term.

### SFAS 98 Accounting for Leases (ASC Topic 840—Leases)

**NOTE:** The outline below includes those changes that relate to all leases. The remainder of SFAS 98 deals with real estate leases that are not outlined since they are not expected to be tested on the exam.

- A. Lease term, as redefined, includes
  - 1. All periods covered by bargain renewal options
  - 2. All periods for which failure to renew the lease imposes a penalty
  - 3. All periods during which a loan, directly or indirectly related to the leased property, is outstanding
  - 4. All periods covered by ordinary renewal options preceding the exercisable date of a bargain purchase option
  - 5. All periods representing renewals or extensions of the lease at the lessor's option

### APB 29 Accounting for Nonmonetary Transactions (ASC Topic 845—Nonmonetary Transactions)

- A. Definitions
  - 1. **Monetary assets and liabilities.** “Assets and liabilities whose amounts are fixed in terms of units of currency by contract or otherwise. Examples are cash, short- or long-term accounts and notes receivable in cash, and short- or long-term accounts and notes payable in cash.”
  - 2. **Nonmonetary assets and liabilities.** “Assets and liabilities other than monetary ones. Examples are inventories; investments in common stocks; property, plant, and equipment; and liabilities for rent collected in advance.”
  - 3. **Exchange.** “A reciprocal transfer between an enterprise and another entity that results in the enterprise's acquiring assets or services or satisfying liabilities by surrendering other assets or services or incurring other obligations. A reciprocal transfer of a nonmonetary asset shall be deemed an exchange only if the transferor has no substantial continuing involvement in the transferred asset such that the usual risks and rewards of ownership of the asset are transferred.”
  - 4. **Nonreciprocal transfer.** “Transfer of assets or services in one direction, either from an enterprise to its owners (whether or not in exchange for their ownership interests) or another entity or from owners or another entity to enterprise. An entity's reacquisition of its outstanding stock is an example of a nonreciprocal transfer.”
  - 5. **Productive assets.** “Assets held for or used in the production of goods or services by the enterprise. Productive assets include an investment in another entity if the investment is accounted for by the equity method but exclude an investment not accounted for by that method.”

**B.** APB 29 does **not** apply to

1. Business combinations
2. Transfer of nonmonetary assets between companies under common control
3. Acquisition of nonmonetary assets with capital stock of an enterprise
4. Stock dividends and splits, issued or received
5. A transfer of assets for an equity interest
6. A transfer of a financial asset under SFAS 140

**C.** APB 29 does apply to

1. Nonreciprocal transfers with owners. Examples are distributions to stockholders
  - a. Dividends
  - b. To redeem capital stock
  - c. In liquidation
  - d. To settle rescission of a business combination
2. Nonreciprocal transfer with other than owners. Examples are
  - a. Contribution to charitable institutions
  - b. Contribution of land by governmental unit to a business
3. Nonmonetary exchange

**D.** Nonmonetary transactions should generally be accounted for as are monetary transactions.

1. Cost of a nonmonetary asset is the fair value of the asset surrendered to obtain it.
  - a. The difference between fair value and book value is a gain or loss.
  - b. Fair value of asset received, if clearer than that of asset given, should value transaction.
2. Recorded (book) value shall be used for exchanges in which
  - a. Fair value is not determinable
  - b. Exchange transaction is to facilitate sales to customers
  - c. Exchange transaction lacks commercial substance
3. A nonmonetary transaction has commercial substance if the entity's future cash flows are expected to significantly change as a result of the exchange. Tax cash flows that arise solely because the tax business purpose is based on achieving a specified financial reporting result are not considered in cash flows.

**E.** If a nonmonetary exchange, which is recorded at book value, contains boot received, the portion of the gain recognized should be limited to the ratio  $[\text{Boot} \div (\text{Boot received} + \text{FMV of asset received})]$  times the gain.

1. Firm paying boot should not recognize gain.

**F.** Liquidation distributions to owners should not be accounted for at fair value if a gain results (loss may be recognized).

1. Use historical cost
2. Other nonreciprocal distributions to owners should be accounted for at fair value if fair value
  - a. Is objectively measurable
  - b. Would be clearly realizable if sold

**G.** Fair value should be determined in accordance with SFAS 157, *Fair Value Measurements*

1. If one party could elect to receive cash instead of monetary asset, the amount of cash is evidence of fair value

**H.** Nonmonetary transaction disclosures should include

1. Nature of the transactions
2. Basis of accounting
3. Gains and losses recognized

**FASB INTERPRETATION NO. 30 ACCOUNTING FOR INVOLUNTARY CONVERSIONS  
OF NONMONETARY ASSETS TO MONETARY ASSETS**

When involuntary conversions of nonmonetary assets (e.g., fixed assets) to monetary assets (e.g., insurance proceeds) occur, the difference between the assets' cost and the monetary assets received should be reported as a gain or loss. If an unknown amount of monetary assets are to be received in a later period, gain (loss) is estimated per SFAS 5. Could be extraordinary per APB 30.

**SFAS 153 Exchanges of Nonmonetary Assets—An Amendment of APB Opinion No. 29 (ASC Topic 845—Nonmonetary Transactions)**

- A. Requires that nonmonetary exchanges should be measured based on fair values unless certain conditions are met. It removes the distinction of “similar” and “dissimilar” assets found in APB 29 and outlines exceptions to fair value treatment. The statement also clarifies when APB 29 does not apply. The provisions of the statement are to be applied prospectively.
- B. A nonmonetary exchange is a reciprocal transfer only if the transferor has no substantial continuing involvement in the asset, and the risks and rewards of ownership are transferred.
- C. APB 29, *Accounting for Nonmonetary Exchanges*, does not apply to
  - 1. Business combination accounted for under SFAS 141
  - 2. Transfer of nonmonetary assets between companies under common control
  - 3. Acquisition of nonmonetary assets or services on the issuance of capital stock
  - 4. Stock issued or received in stock dividends and stock splits
  - 5. A transfer of assets in exchange for an equity interest in entity
  - 6. A pooling of assets in a joint undertaking to find, develop, or produce gas or oil
  - 7. Exchange of a part of an operating interest owned for a part of another operating interest owned by another party
  - 8. Transfers of financial assets within the scope of SFAS 140
- D. Measure exchange based on fair value unless
  - 1. Fair value is not determinable
  - 2. It is an exchange transaction to facilitate sales to customers
  - 3. The transaction lacks commercial substance
- E. Commercial Substance
  - 1. A nonmonetary change has commercial substance if the entity's future cash flows are expected to be significantly changed as a result of the exchange of assets.
    - a. Configuration (risk, timing, and amount) of future cash flows differs significantly from that of the asset transferred.
    - b. Entity-specific value of the asset differs from the entity-specific value of asset transferred, and that difference is significant in relation to fair values exchanged. Entity specific value can be computed per SFAC 7 by using expectations about use
  - 2. If transaction has commercial substance, the exchange is measured at fair value.
  - 3. If transaction lacks commercial substance, measure based on recorded amount of nonmonetary asset relinquished.
  - 4. Cash flows from tax effect are not considered in determining if the transaction has commercial substance.

**ARB 43—Chapter 1A Rules<sup>5</sup> Adopted by Membership (ASC Topics 310, 505, 605, and 850)**

Four rules recommended by the Committee on Cooperation with Stock Exchanges in 1934. The last rule is from another 1934 Institute committee.

- 1. Profit is realized at the point of sale unless collection is not reasonably assured.
- 2. Capital (paid-in) surplus should not be charged with losses or expenses, except in quasi reorganizations.
- 3. Receivables from officers, employees, and affiliates must be separately disclosed.
- 4. Par value of stock issued for assets cannot be used to value the assets if some of the stock is subsequently donated back to the corporation.

**APB 18 The Equity Method for Investments (ASC Topics 323, 325, 850)**

- A. The equity method should be used for corporate joint ventures.
- B. The equity method should be applied to investments where less than 50% ownership is held but the investor **can exercise significant influence over operating and financing policies of the investee**.
  1. Twenty percent (20%) or more ownership should lead to presumption of substantial influence, unless there is evidence to the contrary.
  2. Conversely, less than 20% ownership leads to the presumption of no substantial influence unless there is evidence to the contrary.
  3. The 20% test should be based on voting stock outstanding and disregard common stock equivalents.
  4. The following procedures should be used in applying the equity method:
    - a. Intercompany profits should be eliminated.
    - b. Difference between cost and book value of net assets acquired should be accounted for per SFAS 141 and 142.
    - c. The investment account and investor's share of investee income should be presented as single amounts in investor statements with the exception of d. below.
    - d. Investor's share of discontinued operations, extraordinary items, cumulative effects of accounting changes, and prior period adjustments of investee should be so presented in statements of investor.
    - e. Investee capital transactions should be accounted for as are subsidiary capital transactions in consolidated statements.
    - f. Gains on sale of investment are the difference between selling price and carrying value of investment.
    - g. When investee and investor fiscal periods do not coincide, use most recent investee statement and have consistent time lag.
    - h. Losses, not temporary in nature, of investment value should be recognized by investor.
    - i. Investor's share of investee loss should not be recorded once investment account is written to zero. Subsequent income should be recognized after losses not recognized are made up.
    - j. Investor's share of investee's earnings should be computed after deducting investee's cumulative preferred dividends whether declared or not.
    - k. If an investor's holding falls below 20%, discontinue applying the equity method but make no retroactive adjustment.
    - l. When an investor's holding increases from a level less than 20% to a level equal to or greater than 20%, the investment account and retained earnings of the investor should be adjusted retroactively to reflect balances as if the equity account had been used. This is accounted for like a prior period adjustment.
  5. Statements of investors applying the equity method should disclose
    - a. Investees and percentages held
      - (1) Accounting policies followed
      - (2) Treatment of goodwill, if any
    - b. Aggregate market value of investment (not for subsidiaries)
    - c. When investments are material to investor, summarized information of assets, liabilities, and results of operations of investee may be necessary
    - d. Conversion of securities, exercise of warrants, or issuances of investee's common stock which significantly affects investor's share of investee's income

**SFAS 57 Related-Party Disclosures (ASC Topic 850—Related-Party Disclosures)**

- A. Definitions
  1. **Affiliate**—Party is controlled by another enterprise that controls, or is under common control with another enterprise, directly or indirectly
  2. **Control**—Power to direct or cause direction of management through ownerships contract, or other means
  3. **Immediate family**—Family members whom principal owners or management might control/influence or be controlled/influenced by

<sup>5</sup>The references in parentheses are from the *FASB Accounting Standards—Current Texts: Volumes 1 and 2*, John Wiley & Sons, Inc. These are included only for facilitating the use of the Current Texts for candidates who have access to them.

**FASB INTERPRETATION NO. 35 CRITERIA FOR APPLYING THE EQUITY METHOD OF ACCOUNTING FOR INVESTMENTS IN COMMON STOCK. Interprets APB 18.**

Investors owning between 20 and 50% of an investee may **not** be able to exercise significant influence over the investee's operating and financial policies. The presumption of significant influence stands until overcome by evidence to the contrary, such as: (1) opposition by the investee, (2) agreements under which the investor surrenders shareholder rights, (3) majority ownership by a small group of shareholders, (4) inability to obtain desired information from the investee, (5) inability to obtain representation on investee board of directors, etc. Whether contrary evidence is sufficient to negate the presumption of significant influence is a matter of judgment requiring a careful evaluation of all pertinent facts and circumstances, in some cases over an extended period of time. Application of this interpretation resulting in changes to or from the equity method shall be treated per APB 18, paras 19l and 19m.

**FASB INTERPRETATION NO. 1 ACCOUNTING CHANGES RELATED TO THE COST OF INVENTORY**

Changes in the cost composition of inventory is an accounting change and must conform to APB 20, including justification for the change. Preferably should be based on financial reporting objectives rather than tax-related benefits.

4. **Management**—Persons responsible for enterprise objectives who have policy-making and decision-making authority
    - a. For example, board of directors, chief executive and operating officers, and vice-presidents
    - b. Includes persons without formal titles
  5. **Principal owners**—Owners of more than 10% of a firm's voting interests
    - a. Includes known beneficial owners
  6. **Related parties**—Affiliates, equity method investees, employee benefit trusts, principal owners, management or any party that can significantly influence a transaction
- B.** FS shall include disclosures of material transactions between related parties except
1. Compensation agreements, expense allowances, and other similar items in the ordinary course of business
  2. Transactions which are eliminated in the preparation of consolidated/combined FS
- C.** Disclosures of material transactions shall include
1. Nature of relationship(s)
  2. Description of transaction(s), including those assigned zero or nominal amounts
  3. Dollar amounts of transactions for each income statement period and effect of any change in method of establishing terms
  4. Amounts due to/from related parties, including terms and manner of settlement
- D.** Representations concerning related-party transactions shall not imply that terms were equivalent to those resulting in arm's-length bargaining unless such statement can be substantiated.
- E.** When a control relationship exists, disclose such relationship even though no transactions have occurred.

**ARB 43— Chapter 7A Quasi Reorganization (ASC Topic 852)**

Describes what is permitted before and after quasi reorganization.

- A.** Procedure in readjustment
1. A clear report should be made to shareholders to obtain consent for the proposed restatements of assets and shareholders' equity.
  2. Write-down of assets should not go below fair value.
  3. If potential losses exist, provide for maximum probable loss.
  4. When determined, amounts should be written off first to retained earnings and then to capital surplus.
- B.** Procedure after readjustment
1. After readjustment, accounting should be similar to that appropriate for a new company

2. A new, dated retained earnings account should be created
  - a. Dated for ten years to indicate when the reorganization occurred.

### **SFAS 165—Subsequent Events (ASC Topic 855)**

- A. Scope—applies to accounting and disclosure for subsequent events not addressed in other GAAP
- B. Defines subsequent events as transactions that occur after the balance sheet date but before financial statements are issued or available to be issued
  1. Two types of subsequent events
    - a. Recognized subsequent events are conditions that existed as of the balance sheet date
    - b. Unrecognized subsequent events are conditions that did not exist as of the balance sheet date
- C. Effects of recognized subsequent events should be recognized at the balance sheet date (warranty estimates, litigation settlement, and bankruptcy of client with receivables)
- D. Effects of nonrecognized subsequent events should be disclosed in a footnote if the financial statements would be misleading if not disclosed
- E. Entity must disclose the date through which the subsequent events have been evaluated and the date the financial statements were issued or available to be issued

### **SFAS 166—Accounting for Transfers of Financial Assets—An Amendment of FASB Statement No. 140 (ASC Topic 860)**

- A. Modifies SFAS 140 and eliminates the concept of a qualifying special-purpose entity
- B. Limits the portions of financial assets that are eligible for derecognition

### **SFAS 140 Accounting for Transfers and Servicing of Financial Assets and Extinguishment of Liabilities (ASC Topic 860—Transfers and Servicing)**

- A. Provides accounting and reporting standards for transfers and servicing of financial assets and extinguishment of liabilities
- B. Transfer of Assets
  1. Necessary conditions to qualify as a sale
    - a. Transferred assets have been isolated from the transferor or its creditors,
    - b. Transferee has the unconstrained right to pledge or exchange the transferred assets, and
    - c. Transferor does not maintain effective control over the transferred assets through
      - (1) An agreement that obligates the transferor to repurchase or redeem them before their maturity, or
      - (2) The ability to unilaterally cause the holder to return specific assets
      - (3) An agreement that requires the transferor to repurchase the assets at a favorable price
  2. Upon any transfer of assets, the transferor shall
    - a. Initially recognize and measure at fair value the servicing assets and servicing liabilities that require recognition
    - b. Allocate the previous carrying amount between the assets sold and the interests that continue to be held by the transferor based on relative fair values at the date of transfer
    - c. Continue to carry in its balance sheet any interest it continues to hold in the transferred assets
  3. Upon any completion of a transfer of assets which satisfies the conditions of a sale, the transferor shall
    - a. Derecognize all assets sold
    - b. Recognize all assets obtained and liabilities incurred in consideration as sale proceeds
    - c. Initially measure at fair value assets obtained and liabilities incurred in a sale
    - d. Recognize in earnings any gain (loss) on sale
  4. Upon any completion of a transfer of assets which satisfies the conditions of a sale, the transferee shall
    - a. Recognize all assets obtained and liabilities incurred at fair value

5. If transfer of assets does not meet the criteria for a sale, the transfer shall be accounted for as a secured borrowing with pledge of collateral

### C. Servicing Assets and Liabilities

1. Recognize and initially measure at fair value a servicing asset or servicing liability if enter into a servicing contract in any of the following situations:
  - a. Transfer of the servicer's financial assets that meets the requirements for sale accounting
  - b. Transfer of the servicer's financial assets to a qualifying SPE in a guaranteed mortgage securitization in which transferor retains the securities and classifies them as available-for-sale or trading securities
  - c. An acquisition or assumption of an obligation that does not relate to the financial assets of the servicer or its consolidated affiliates
2. If entity transfers financial assets to a qualified SPE in a guaranteed mortgage securitization and transferor retains all securities and classifies them as held-to-maturity securities, may either recognizing the servicing assets or servicing liabilities separately or report them with the asset being serviced
3. Measure servicing assets and servicing liabilities with one of two methods
  - a. Amortization method
    - (1) Initially record at fair value
    - (2) Amortize in proportion to and over the period of estimated net servicing income or net servicing loss
    - (3) Assess for impairment or increased obligation based on fair value.
  - b. Fair value method
    - (1) Initially record at fair value
    - (2) Measure at fair value at each reporting date
    - (3) Report changes in fair value in earnings in the period in which the change occurs
4. Election must be made for each class of servicing assets and servicing liabilities
5. Once an election is made to use the fair value method, election cannot be reversed
6. Report servicing assets and servicing liabilities measured at fair value separately on the balance sheet from amortized assets in one of two ways
  - a. Display separate line items for amounts valued at fair value and amounts measured by amortization method, **or**
  - b. Present aggregate amounts for all servicing assets and liabilities, and disclose parenthetically the amount that is measured in fair value that is included in the aggregate amount

### D. Financial Assets Subject to Prepayment

1. Shall be measured like investments in debt securities classified as available-for-sale or trading

### E. Secured Borrowing and Collateral

1. Pledge
  - a. Debtor grants a security interest in certain assets
  - b. Collateral is transferred to the secured party
2. Accounting for noncash collateral
  - a. Debtor to separate asset on balance sheet into an encumbered asset section if secured party has right to sell or repledge collateral
  - b. Secured party recognizes the proceeds from sale and obligation to return collateral if it sells collateral pledged to it
  - c. Debtor defaults under terms of agreement and is no longer entitled to redeem the pledged asset
    - (1) Derecognize the pledged asset
    - (2) Secured party recognizes collateral as an asset at fair value
    - (3) If collateral already sold, secured party derecognizes its obligation to return collateral.

### F. Extinguishment of Liabilities

1. Debtor shall derecognize a liability when it has been extinguished
  - a. Debtor pays the creditor and is relieved of its obligation for the liability
  - b. Debtor is legally released from being obligor under the liability, either judicially or by the creditor.

**G. Required Disclosures**

1. Collateral
  - a. Policy for requiring collateral or other security due to repurchase agreements or securities lending transactions
  - b. Carrying amount and classification of pledged assets as collateral that are not reclassified and separately reported in the balance sheet
  - c. The fair value of collateral that can be sold or repledged and information about the sources and uses of that collateral
2. Extinguished debt
  - a. General description of transaction
  - b. Amount of debt that was considered extinguished at end of period
3. Description of assets set aside for satisfying scheduled payments of a specific obligation
4. Nonestimable fair value of assets
  - a. Description of the assets or liabilities
  - b. The reasons why it is not practicable to estimate the assets or liabilities
5. For all servicing assets and servicing liabilities
  - a. Management's basis for determining its classes
  - b. Description of risks, the instruments used to mitigate income statement effect of changes in fair value (Quantitative information, including fair value at beginning and end of period is encouraged but not required)
  - c. Amount of contractually specified servicing fees, late fees, and ancillary fees for each period on income statement, with description of where each amount is reported in income statement
6. For servicing assets and servicing liabilities measured at fair value
  - a. For each class, the activity including
    - (1) Beginning and ending balances
    - (2) Additions
    - (3) Disposals
    - (4) Changes in fair value from changes in valuation inputs or assumptions used, other changes in fair value
    - (5) Other changes that affect balance and description of changes
  - b. Description of the valuation techniques used to estimate fair value, with qualitative and quantitative information about assumptions used in the model
7. For servicing assets and servicing liabilities amortized
  - a. For each class, the activity including
    - (1) Beginning and ending balances
    - (2) Additions
    - (3) Disposals
    - (4) Amortization
    - (5) Application of valuation allowance to adjust carrying value
    - (6) Other than temporary impairments
    - (7) Other changes that affect balance and description of changes
  - b. For each class, the fair value at the beginning and end of period if practicable to estimate the value
  - c. Description of the valuation techniques used to estimate fair value, with qualitative and quantitative information about assumptions used in the model
  - d. The risk characteristics of the underlying financial assets used to stratify servicing assets for measuring impairment
  - e. The activity by class in any valuation allowance for impairment of servicing assets, including beginning and ending balances, additions charged, recoveries made, and write-downs charged against the allowance for each period

8. Transfer of securitized financial assets accounted for as a sale
  - a. Accounting policies for measuring the retained interest
  - b. Characteristics of securitizations and the gain (loss) from sale
  - c. Key assumptions used in measuring the fair value of retained interests at time of securitization
  - d. Cash flows between the securitization SPE and the transferor
9. Retained interests in secured financial assets
  - a. Accounting policies for subsequently measuring retained interests
  - b. Key assumptions used in subsequently measuring fair value of retained interests
  - c. Sensitivity analysis or stress test showing hypothetical effect of unfavorable variations on the retained interest's fair value, including limitations of analysis
  - d. Securitized assets
    - (1) Total principal outstanding, portion derecognized, and portion that continues to be recognized
    - (2) Delinquencies at end of period
    - (3) Credit losses, net of recoveries

### **SFAS 156 Accounting for Servicing of Financial Assets (ASC Topic 860—Transfers and Servicing)**

SFAS 156, issued in March 2006, amends SFAS 140. It provides that an election may be made to use the fair value method to value servicing assets and servicing liabilities. Election must be made for each class of servicing assets and servicing liabilities. Once the election is made, it cannot be reversed. SFAS 156 allows balance sheet disclosure to be presented in one of two ways: either displayed as separate line items for amounts valued at fair value and amounts measured by the amortization method, **or** by presenting aggregate amounts for all servicing assets and liabilities with a parenthetical disclosure for the amount that is measured using fair value. Additional footnote disclosures are required for all servicing assets, with separate disclosures for servicing assets measured at fair value and servicing assets measured by the amortization method.

See the outline of SFAS 140, paragraphs B, C, and G.

### **INDUSTRY (ASC TOPIC 900)**

#### **SFAS 7 Accounting and Reporting by Development Stage Companies (ASC Topic 915—Development Stage Entities)**

- A.** A company, division, component, etc., is in the development stage if
  1. Substantially all efforts are devoted toward establishing the business, or
  2. Principal operations are underway but have not produced significant revenues
- B.** Example activities of development stage companies
  1. Financial planning
  2. Raising capital
  3. Exploring or developing natural resources
  4. R&D
  5. Establishing sources of supply
  6. Acquiring property, plant, equipment, etc.
  7. Personnel recruitment and training
  8. Developing markets
  9. Production start-up
- C.** No special accounting standards apply to development stage companies.
  1. Report revenue in the income statement as in normal operations
  2. Expense costs as one would for a company in normal operations
  3. Capitalize costs as one would for a company in normal operations
    - a. Determine cost recoverability within entity for which statements are being prepared

**D.** Development stage company statements include

1. A balance sheet with cumulative net losses termed “deficit accumulated during development stage”
2. An income statement with revenues and expenses for both current period and cumulative expenses and revenues from the inception of the development stage
3. A statement of cash flows for both current period and cumulative amounts from inception
4. Statement of owner’s investment including
  - a. Dates of issuance and number of shares, warrants, etc.
  - b. Dollar amounts must be assigned to each issuance
    - (1) Dollar amounts must be assigned for noncash consideration
  - c. Dollar amounts received for each issuance or basis for valuing noncash consideration
5. Identification of statements as those of a development stage company
6. During the first period of normal operations, notes to statements should disclose that company was, but is no longer, in the development stage

**SFAS 45 Accounting for Franchise Fee Revenue (ASC Topic 952—Franchisors)****A.** Definitions

1. **Franchisee**—Party who has been granted business rights
2. **Franchisor**—Party who grants business rights
3. **Area franchise**—Agreement transferring franchise rights within a geographical area permitting the opening of a number of franchise outlets
4. **Continuing franchise fee**—Consideration for continuing rights granted by the agreement (general or specific) during its life
5. **Franchise agreement**—Essential criteria
  - a. Contractual relation between franchisee and franchisor
  - b. Purpose is distribution of a product, service, or entire business concept
  - c. Resources contributed by both franchisor and franchisee in establishing and maintaining the franchise
  - d. Outline of specific marketing practices to be followed
  - e. Creation of an establishment that will require and support the full-time business activity of the franchisee
  - f. Both franchisee and franchisor have a common public identity
6. **Initial franchise fee**—Consideration for establishing the relationship and providing some initial services
7. **Initial services**—Variety of services and advice (e.g., site selection, financing and engineering services, advertising assistance, training of personnel, manuals for operations, administration and recordkeeping, bookkeeping and advisory services, quality control programs)

**B.** Franchise fee revenue from individual sales shall be recognized when all material services or conditions relating to the sale have been substantially performed or satisfied by the franchisor.

1. Substantial performance means
  - a. Franchisor has no remaining obligation or intent to refund money or forgive unpaid debt
  - b. Substantially all initial services have been performed
  - c. No other material conditions or obligations exist
2. If large initial franchise fee is required and continuing franchise fees are small in relation to future services, then portion of initial franchise fee shall be deferred and amortized over life of franchise.

**C.** Continuing franchise fees shall be reported as revenue as fees are earned and become receivable from the franchise. Related costs shall be expensed as incurred.**D.** Direct franchise costs shall be deferred until related revenue is recognized.

1. These costs should not exceed anticipated revenue less estimated additional related costs.

**E.** Disclosure of all significant commitments and obligations that have not yet been substantially performed are required

1. Notes to the FS should disclose whether the installment or cost recovery method is used.
2. Initial franchise fees shall be segregated from other franchise fee revenue if significant.

**SFAS 116 Accounting for Contributions Received and Contributions Made  
(ASC Topic 958—Not-for-Profit Entities)**

Establishes accounting standards for contributions received or made for all types of entities, not-for-profit, and business enterprises.

**A. Contributions—defined**

Contributions can be defined as an unconditional promise to give cash or other assets to an entity.

A cancellation of a liability is also considered a contribution.

**B. Contributions received (donee accounting)**

1. Shall be capitalized by the donee at FMV of the item and recognized as revenue in period received.
2. Contributions with donor imposed restrictions shall be reported as restricted revenues or gains unless the restrictions are met in the same reporting period.
3. Receipts of unconditional promises to give the payments due in the future shall be reported as restricted support unless the donor intends the funds to be used for current operations.
4. Not-for-profit organizations shall recognize the expiration of donor-imposed restrictions as they expire.

**C. Contributions made (donor accounting) shall be recognized at FMV as expense in period the item is donated**

1. Donation expense should be classified under other expense on the income statement.
2. If difference exists between the FMV and book value of the item, then gain or loss on disposal will be recognized.

**SFAS 117 Financial Statements of Not-for-Profit Organizations  
(ASC Topic 958—Not-for-Profit Entities)**

Establishes the reporting standards for the general-purpose external financial statements of not-for-profit organizations.

**A. A complete set of financial statement for a not-for-profit organization shall include**

1. A statement of financial position
2. A statement of activities
3. A statement of cash flows
4. Accompanying notes

**B. Voluntary health and welfare organizations shall also include a statement of functional expenses****C. The statement of financial position provides relevant information about liquidity, financial flexibility, and the interrelationship of the organization's assets and liabilities**

1. Assets and liabilities should be aggregated in reasonably homogenous groups
2. Cash or other assets received with a donor-imposed restriction that limits their use to long-term purposes should not be classified with cash or other assets that are available for current use
3. Information about liquidity may be provided by one or more of the following
  - a. Sequencing assets according to their nearness of conversion to cash and liabilities according to maturity
  - b. Classifying assets and liabilities as current and noncurrent
  - c. Note disclosure about liquidity and maturity
4. A statement of position shall present
  - a. Permanently restricted net assets
  - b. Temporarily restricted net assets
  - c. Unrestricted net assets

**D. The statement of activities is designed to provide information about**

1. The effects of transactions and other events that change the amount and nature of net assets
2. The relationships of those transactions and other events and circumstances to each other
3. How the organization's resources are used

**E. The statement of activities should show the change in permanently restricted net assets, temporarily restricted net assets, and unrestricted net assets for the period**

1. Generally, revenues and expenses shall be reported at gross amounts
  2. However, gains and losses may be shown at net amounts if they result from peripheral or incidental or from events and circumstances that are beyond the control of management
  3. Expenses should be presented according to their functional classification
- F. The statement of cash flows is designed to provide information about cash receipts and payments of the organization during the period

**SFAS 124 Accounting for Certain Investments Held by Not-for-Profit Organizations  
(ASC Topic 958—Not-for-Profit Entities)**

- A. Requires all equity investments and debt instruments to be valued at their fair values, with the exception of
1. Equity investments accounted for on the equity method.
  2. Equity investments without readily determinable fair values.
- B. Gains and losses on investments shall be reported in the statement of activities as increases or decreases in unrestricted net assets unless their use is temporarily or permanently restricted.
- C. Dividend, interest, and other investment income shall be reported in the period earned as increases in unrestricted net assets unless the use of the assets received is limited by donor-imposed restrictions.
- D. Donor-restricted investment income is reported as an increase in temporarily restricted net assets or permanently restricted net assets, depending on the type of restriction.
- E. Disclosures
1. The composition of investment return
  2. A reconciliation of investment return to amounts reported in the statement of activities
  3. The aggregate carry amount of investments by major types
  4. The basis for determining the carrying values
  5. The methods and assumptions used to determine fair values
  6. The aggregate amount of deficiencies for donor-restricted endowment funds
  7. Significant concentrations of market risk

**SFAS 158 Employers' Accounting for Defined Benefit Pension and Other Postretirement Plans (An Amendment of FASB Statements 87, 88, 106, and 132[R]) (ASC Topic 715—Compensation—Retirement Benefits and ASC Topic 958—Not-for-Profit Entities)**

- A. Recognize funded status of benefit plans
1. Aggregate status of all overfunded plans and show as noncurrent asset on balance sheet
  2. Aggregate status of all underfunded plans, and show as current liability, noncurrent liability, or both on balance sheet.
  3. Recognize as other comprehensive income the gain and loss and the prior service costs or credits that arise during the period but are not a part of pension expense.
- B. Effective for fiscal years ending after December 15, 2008, the measurement date is the employer's fiscal year-end balance sheet date.
- C. Disclosures
1. Funded status of the plans, and the amounts recognized in the balance sheet, showing separately the noncurrent assets, current liabilities, and noncurrent liabilities recognized.
  2. Disclose the net gain or loss, net prior service cost or credit recognized in OCI for the period, and any reclassification adjustments of OCI that are recognized in pension cost.
  3. The amounts in accumulated OCI that have not yet been recognized as pension costs. Show separately the following items:
    - a. Net gain or loss
    - b. Net prior service cost or credit
    - c. Net transition asset or obligation
  4. The amount and timing of any plan assets expected to be returned to the employer during the next 12 month period after the most recent balance sheet date.

**SFAS 164 Not-for-Profit Entities: Mergers and Acquisitions—Including an Amendment of FASB Statement No. 142 (ASC Topic 958)**

The authors believe that this topic is too specialized for the CPA exam.

**SFAS 66 Accounting for Sales of Real Estate (ASC Topics 360, 605, and 976)**

- A.** Other than retail land sales
  - 1. Use the full accrual method if the following criteria are satisfied:
    - a. Sale is consummated
    - b. Buyer's initial and continuing investments demonstrate a commitment to pay for the property
    - c. Seller's receivable is not subject to future subordination
    - d. Risks and rewards of ownership have been transferred
  - 2. When the criteria are not met and dependent upon the particular circumstance, use one of the following methods:
    - a. Installment method
    - b. Cost recovery method
    - c. Deposit method
    - d. Reduced profit method
    - e. Percentage-of-completion
- B.** Retail land sales (not outlined due to specialized nature)

**SFAS 86 Accounting for the Costs of Computer Software to Be Sold, Leased, or Otherwise Marketed (ASC Topic 985—Software)**

- A.** Establishes standards of financial accounting and reporting for the costs of computer software to be sold, leased, or otherwise marketed as a separate product or as part of a product or process, whether internally developed and produced or purchased.
- B.** Research and development costs consist of all costs to establish technological feasibility.
  - 1. Evidence of technological feasibility
    - a. Process of creating the computer software product includes a detailed program design **or**
    - b. Process of creating the computer software product includes a product design and a completed working model.
- C.** Capitalization costs include costs incurred subsequent to establishing technological feasibility.
  - 1. Capitalization shall cease when product is available for general release to customers.
- D.** Amortization of capitalized software costs is performed on a product-by-product basis.
  - 1. Annual amortization is the greater of
    - a. The amount computed using the ratio current gross product revenues to total current and anticipated future gross product revenues **or**
    - b. S-L method using the estimated economic life of the software product
  - 2. Amortization begins when product is available for general release to customers.
  - 3. Unamortized capitalized costs cannot exceed the net realizable value (NRV) of that software product. Any excess shall be written off at the end of the year.
- E.** Inventory costs include costs incurred for duplicating software materials and for physically packaging the product.
  - 1. Costs of maintenance and customer support are charged to expense.
- F.** FS disclosures shall include
  - 1. Unamortized computer software costs
  - 2. Total amount charged to amortization expense and amounts written down to NRV

**MISCELLANEOUS****SFAS 145 Rescission of FASB Statements No. 4, 44, and 64, Amendment of FASB Statement No. 13, and Technical Corrections (Rescinds SFAS 4, 44, and 64 and amends SFAS 13)**

- A. Rescinds SFAS 4, 44, and 64 to no longer allow treatment of extinguishment of debt as an extraordinary item in the statement of income
- B. Amends SFAS 13 to require that when a modification of a capital lease terms gives rise to a new agreement classified as an operating lease, the lessee should account for the new agreement under the sale-leaseback requirements of SFAS 98 (see outline)

**SFAS 147 Acquisitions of Certain Financial Institutions, An Amendment of FASB Statements No. 72 and 144 and FASB Interpretation No. 9**

The authors believe that this topic is too specialized for the CPA exam.

**SFAS 152 Accounting for Real Estate Time Sharing Transactions—An Amendment of FASB Statements No. 66 and 67**

(Amends SFAS 66 and SFAS 67)

Requires real estate time-sharing transactions to be accounted for as nonretail land sales. AICPA SOP 042 provides guidance on accounting for real estate time-sharing transactions. This statement also amends SFAS 67 (*Accounting for Costs and Initial Rental Operations of Real Estate Projects*), so that SFAS 67 does not apply to real estate time-sharing transactions. Restatement of previously issued financial statements is not permitted.

**SFAS 162 The Hierarchy of Generally Accepted Accounting Principles**

- A. Identifies the sources of accounting principles for US GAAP
- B. Descending order of authority for accounting principles is as follows:
  - 1. FASB Statements of Accounting Standards and Interpretations, FASB Staff Positions, AICPA Accounting Research Bulletins, and Accounting Principles Board Opinions not superseded by the FASB.
  - 2. FASB Technical Bulletins, and if cleared by the FASB, the AICPA Industry Audit and Accounting Guides and Statements of Position.
  - 3. AICPA Accounting Standards Executive Committee Practice Bulletins that have been cleared by the FASB, consensus positions of the FASB Emerging Issues Task Force (EITF), and the topics discussed in Appendix D of the EITF Abstracts.
  - 4. Implementation guides (Q&As) published by the FASB staff; AICPA Accounting Interpretations; AICPA Industry Audit and Accounting Guides and Statements of Position not cleared by the FASB; and practices that are widely recognized and prevalent generally or in industry.
- C. If accounting treatment is not specified by a pronouncement in the highest category, then use the next highest level of authority. If accounting treatment is not specified in any other category, then consider the accounting principles for similar transactions or events within the given categories, and use other accounting literature.
- D. Other accounting literature includes FASB Concept Statements, AICPA Issues Papers, International Financial Reporting Standards, pronouncements of other professional associations or regulatory agencies, Technical Information Service Inquiries and Replies included in AICPA Technical Practice Aids, and accounting textbooks, handbooks, and articles.

**SFAS 163 Accounting for Financial Guarantee Insurance Contracts—An Interpretation of FASB Statement No. 60**

The authors believe that this topic is too specialized for the CPA exam.

**Update No. 2013-12—Definition of a Public Business Entity—An Addition to the Master Glossary**

- A. Amends the Master Glossary of the FASB Accounting Standards Codification® to include a single definition of a public business entity.

1. Applied prospectively for future use in U.S. GAAP starting with ASU 2014-01.
- B. Public business entities include:**
  1. Entities required to file with the SEC.
    - a. The consolidated subsidiary of a public company is not considered a business entity for stand-alone financial statements.
  2. A business entity that is required to prepare and make publicly available U.S. GAAP financial statements
- C. Firms within the scope of ASU 2013-12 may be eligible to apply financial accounting and reporting alternatives made available to private companies.**
- D. Excludes not-for-profit entities (NFPs) within the scope of Topic 958 or an employee benefit plan within the scope of Topics 960 through 965 on plan accounting.**

**Update No. 2013-11—Income Taxes (Topic 740): Presentation of an Unrecognized Tax Benefit When a Net Operating Loss Carryforward, a Similar Tax Loss, or a Tax Credit Carryforward Exists (a consensus of the FASB Emerging Issues Task Force)**

- A.** Issued to eliminate diversity in practice with respect to financial statement presentation of unrecognized tax benefits when a net operating loss carryforward, a similar tax loss, or a tax credit carryforward exists.
- B.** An unrecognized tax benefit should be presented as a reduction of the deferred tax asset for a net operating loss carryforward (or similar tax loss) or tax credit carryforward. If these items do not already exist, the unrecognized tax benefit should be presented as a liability (not deferred tax liability unless it is the result of a taxable temporary difference) and not be combined with deferred tax assets.

**Update No. 2013-10—Derivatives and Hedging (Topic 815): Inclusion of the Fed Funds Effective Swap Rate (or Overnight Index Swap Rate) as a Benchmark Interest Rate for Hedge Accounting Purposes (a consensus of the FASB Emerging Issues Task Force)**

- A.** Permits the use of the Fed Funds Effective Swap Rate (OIS) to be used as a U.S. benchmark interest rate for hedge accounting purposes under Topic 815, in addition to UST and LIBOR.
- B.** Removes the restriction on using different benchmark rates for similar hedges.

**Update No. 2013-09—Fair Value Measurement (Topic 820): Deferral of the Effective Date of Certain Disclosures for Nonpublic Employee Benefit Plans in Update No. 2011-04**

- A.** Defers indefinitely the effective date of certain required disclosures of quantitative information about the significant unobservable inputs used in Level 3 fair value measurements for investments held by a nonpublic employee benefit plan in its plan sponsor's own nonpublic entity equity securities.

**Update No. 2013-07—Presentation of Financial Statements (Topic 205): Liquidation Basis of Accounting**

- A.** Requires the use of the liquidation basis of accounting under certain circumstances.
- B. Liquidation Basis of Accounting**
  1. The liquidation basis of accounting is to be used when liquidation is imminent (remote likelihood the entity will return from liquidation and if either of the following exist: (a) an approved liquidation plan with remote likelihood of being blocked or (b) an outside force imposed plan.
  2. Measurement
    - a. Assets are to be presented at the amounts reflecting expected cash proceeds and should include sellable items not previously recognized under US GAAP (e.g. trademarks).
    - b. Liabilities are to be presented using current US GAAP guidance.
    - c. Accrue expected liquidation period costs and income.

3. Disclosure
  - a. The plan for liquidation.
  - b. Measurement methods and assumptions.
  - c. Expected liquidation period costs and income.
  - d. Expected liquidation time frame.

**Update No. 2013-06—Not-for-Profit Entities (Topic 958): Services Received from Personnel of an Affiliate (a consensus of the FASB Emerging Issues Task Force)**

- A. Requires a recipient not-for-profit entity to recognize all services received from personnel of an affiliate that directly benefit the recipient not-for-profit entity.
- B. The services should be measured at the cost recognized by the affiliate for the personnel providing those services.

**Update No 2013-05—Foreign Currency Matters (Topic 830): Parent’s Accounting for the Cumulative Translation Adjustment upon Derecognition of Certain Subsidiaries or Groups of Assets within a Foreign Entity or of an Investment in a Foreign Entity (a consensus of the FASB Emerging Issues Task Force)**

- A. Requires an entity to release related cumulative translation adjustments into net income when the parent no longer has a controlling financial interest in either a subsidiary or a group of assets that is a nonprofit activity or business.
  1. This applies only if the sale or transfer is a complete or substantially complete liquidation.
- B. ASC 830-30-40 is followed for foreign entity equity method investments.
  1. However, for an equity method investment that is not a foreign entity, the cumulative translation adjustment is released into net income only if the partial sale represents a complete or substantially complete liquidation of the foreign entity that contains the equity method investment.
- C. The cumulative translation adjustment should be released into net income if the sale of an investment in a foreign entity results in a loss of controlling financial interest and results in a new acquirer obtaining control of the acquiree in a step acquisition.

**Update No. 2013-04—Liabilities (Topic 405): Obligations Resulting from Joint and Several Liability Arrangements for Which the Total Amount of the Obligation Is Fixed at the Reporting Date (a consensus of the FASB Emerging Issues Task Force)**

- A. Requires an entity to measure fixed joint and several liability arrangement obligations for which the total amount of the obligation is fixed (no measurement uncertainty) at the reporting date.
  1. Initial recognition is the sum of:
    - a. The amount the reporting entity agreed to pay its co-obligors
    - b. Any additional amount the reporting entity expects to pay on behalf of its co-obligors.
      - i. Entries could impact cash (debt arrangement), expenses (legal settlement), receivables (impairment), or equity (entity must be under common control).
- B. Requires the following disclosures:
  1. The nature of the arrangement,
  2. The total outstanding amount under the arrangement,
  3. The carrying amount of an entity’s liability and/or the carrying amount of a receivable,
  4. Recourse provisions, and
  5. The period the liability is initially recognized or significantly changes.

**Update No. 2013-03—Financial Instruments (Topic 825): Clarifying the Scope and Applicability of a Particular Disclosure to Nonpublic Entities**

- A. “The level of the fair value hierarchy within which the fair value measurements are categorized in their entirety (Level 1, 2, or 3)” does not apply to nonpublic entities for items that are not measured at fair value in the statement of financial position but for which fair value is disclosed.”

**Update No. 2013-02—Comprehensive Income (Topic 220): Reporting of Amounts Reclassified Out of Accumulated Other Comprehensive Income**

- A. Requires an entity to provide information about the amounts reclassified out of accumulated other comprehensive income by component.
  - 1. An entity must separately disclose information about the reclassification out of other comprehensive income either on the face of the financial statement containing net income or in a separate disclosure in the notes.
  - 2. For items **not** required to be reclassified in entirety to net income, cross-reference to related disclosures is required.

**Update No. 2013-01—Balance Sheet (Topic 210): Clarifying the Scope of Disclosures about Offsetting Assets and Liabilities**

- A. Clarifies that the scope of ASU 2011-11
  - 1. ASU 2011-11 applies to:
    - a. Derivatives accounted for in accordance with Topic 815,
    - b. Derivatives and hedging, including bifurcated embedded derivatives, repurchase agreements and reverse repurchase agreements, and
    - c. Securities borrowing and securities lending transactions that are either offset in accordance with Section 210-20-45 or Section 815-10-45 or subject to an enforceable master netting arrangement or similar agreement.

**Update No. 2012-05—Statement of Cash Flows (Topic 230): Not-for-Profit Entities: Classification of the Sale Proceeds of Donated Financial Assets in the Statement of Cash Flows (a consensus of the FASB Emerging Issues Task Force)**

- A. Requires an not-for-profit to classify cash receipts from the sale of donated financial assets to be classified as cash inflows from operating activities, unless the donor restricted the use of the contributed resources to long-term purposes, in which case those cash receipts should be classified as cash flows from financing activities. Otherwise, cash receipts from the sale of donated financial assets should be classified as cash flows from investing activities by the not-for-profit.

**Update No. 2012-02—Intangibles—Goodwill and Other (Topic 350): Testing Indefinite-Lived Intangible Assets for Impairment**

- A. Allows an entity to first qualitatively assess impairment before considering the quantitative impairment test.
- B. Qualitative factors include:
  - 1. Cost;
  - 2. Financial performance;
  - 3. Legal, regulatory, contractual, political, or business;
  - 4. Entity-specific events such as changes in management, key personnel, strategy, or customers; contemplation of bankruptcy; or litigation;
  - 5. Industry and market considerations; and
  - 6. Macroeconomic conditions.
- C. No further action is required if the entity, through qualitative assessment, determines indefinite-lived intangible assets are not more likely than not impaired.
- D. An entity must perform the quantitative impairment test (ASC 350-30) if the qualitative assessment results in indefinite-lived intangible assets more likely than not being impaired.

**Update No. 2011-11—Balance Sheet (Topic 210): Disclosures about Offsetting Assets and Liabilities**

- A. Requires additional disclosure for: (1) recognized financial instruments and derivative instruments that are offset in accordance with either Section 210-20-45 or Section 815-10-45 and (2) recognized financial instruments

and derivative instruments that are subject to an enforceable master netting arrangement or similar agreement, irrespective of whether they are offset in accordance with either Section 210-20-45 or Section 815-10-45.

**B.** For instruments and transactions eligible for offset, the following information must be disclosed:

1. The gross amount of recognized assets and liabilities.
2. The amounts offset per ASC 210-20-45 or ASC 815-10-45.
3. The net amounts appearing in the statement of financial position.
4. The amounts subject to master netting arrangements not included in the offset.
5. The net amount considering items 3 and 4.

### **Update No. 2011-09—Compensation—Retirement Benefits—Multiemployer Plans (Subtopic 715-80): Disclosures about an Employer’s Participation in a Multiemployer Plan**

**A.** Requires disclosures for multiemployer plans as follows:

1. The significant multiemployer plans in which an employer participates.
2. The level of an employer’s participation (the contribution to the plan and whether that contribution represents more than 5% of the total contributions).
3. The financial health of the plan such as funded status, improvement plans, and surcharges.
4. The nature of the employer commitments to the plans such as collective bargaining agreements and minimum contribution requirements.
5. For plans in which users are unable to obtain additional information from outside sources:
  - a. A description of the nature of the plan benefits.
  - b. A qualitative description of the employer responsibility for plan obligations.
  - c. Other quantitative information available such as total plan assets, actuarial present value of accumulated vested benefits, and total contributions received by the plan.

### **Update No. 2011-08—Intangibles—Goodwill and Other (Topic 350): Testing Goodwill for Impairment**

**A.** Allows an entity to first qualitatively assess whether it is more likely than not that the fair value of a reporting unit is less than its carrying amount before considering the quantitative impairment test.

1. Qualitative factors include:

- a. Conditions relating to general economic conditions, access of capital, foreign exchange rate fluctuations;
- b. Industry and market considerations such as increased competitive environment or change in the market for an entity’s products or services;
- c. Cost factors such as increases in raw materials or labor;
- d. Overall financial performance such as negative or declining cash flows or revenue;
- e. Other relevant entity-specific events such as changes in management, key personnel, strategy, or customers; contemplation of bankruptcy; or litigation;
- f. Events affecting a reporting unit; and
- g. A sustained decrease in share price.

**B.** An entity is not required to proceed to the first step of the goodwill impairment test if it is not more likely than not that the fair value of the reporting unit is less than its carrying amount, the entity.

**C.** An entity may bypass the qualitative assessment and proceed directly to the first step of the goodwill impairment test.

**D.** This ASU also disallows an entity to carry forward its detailed calculation of the fair value of a reporting unit.

### **Update No. 2011-05—Comprehensive Income (Topic 220): Presentation of Comprehensive Income**

**A.** Eliminates an option for reporting other comprehensive income and its components in the statement of changes in stockholders’ equity and instead requires it to be reported at the bottom of the income statement or in a separate statement directly following the income statement.

**B.** Requires an entity to present on the face of the financial statements, reclassification adjustments from other comprehensive income to net income.

**Update No. 2011-04—Fair Value Measurement (Topic 820): Amendments to Achieve Common Fair Value Measurement and Disclosure Requirements in U.S. GAAP and IFRSs**

- A. This ASU results in common fair value measurement and disclosure by changing the wording used by US GAAP to describe measurement and disclosure. Thus, it impacts several hundred pages of literature. Highlights appear below.
- B. Explains **how** to measure fair value.
  - 1. Does not include additional fair value measurements or establish valuation standards.
- C. Describes the application of highest and best use.
- D. Describes measuring the fair value of an instrument classified in a reporting entity's shareholders' equity.
- E. Provides for increased disclosures relating to fair value including requiring quantitative disclosures for unobservable level 3 inputs.
- F. Changes to principles, measurement of fair value, or disclosures relate to the following:
  - 1. Measuring the fair value of financial instruments within a portfolio.
  - 2. Premiums and discounts in the fair value measurement.
  - 3. Expanded disclosures for:
    - a. The level 3 category including the valuation processes and sensitivity of the measurement.
    - b. Use of a non-financial asset other than its highest and best use.
    - c. For items not measured at fair value, the categorization by level of the fair value hierarchy.

**Update No. 2011-03—Transfers and Servicing (Topic 860): Reconsideration of Effective Control for Repurchase Agreements**

- A. Removes the following as a determining factor of effective control:
  - 1. "The transferor's ability to repurchase or redeem financial assets on substantially the agreed terms, even in the event of default by the transferee."
- B. Eliminates the transferor's requirement to "demonstrate that the transferor possesses adequate collateral to fund substantially all the cost of purchasing replacement financial assets."

**Update No. 2011-02—Receivables (Topic 310): A Creditor's Determination of Whether a Restructuring Is a Troubled Debt Restructuring**

- A. Clarifies both troubled debt restructuring criteria for the creditor with respect to the debtor and clarifies guidance. The existing criteria are:
  - 1. The restructuring constitutes a concession.
  - 2. The debtor is experiencing financial difficulties.
- B. Evidence of a concession includes:
  - 1. A restructuring at a below-market rate as evidenced by the debtor not having access to funds at a market rate with similar risk as the restructured debt.
  - 2. A restructuring at below-market rate even through there is a temporary or permanent increase in the contractual rate.
  - 3. An insignificant delay in payment is usually not considered a concession. However, factors in assessing whether the delay is insignificant must be examined.
- C. Evidence of financial difficulties includes:
  - 1. A probability of the debtor defaulting in the foreseeable future.
    - a. The debtor does not have to be currently defaulting on payments.
- D. The creditor may not use the effective interest test (ASC 470-60-55-10) when evaluating whether a restructuring constitutes a troubled debt restructuring.

**Update No. 2010-29—Business Combinations (Topic 805): Disclosure of Supplementary Pro Forma Information for Business Combinations (a consensus of the FASB Emerging Issues Task Force)**

- A. Requires disclosure of revenue and earnings of the combined entity as of the beginning of the comparable prior annual reporting period only.
- B. Expands supplemental pro forma information to include the following in the pro forma revenue and earnings:
  - 1. A description of the nature of material, non recurring pro forma adjustments directly attributable to the business combination.
  - 2. A description of the amount of material, non recurring pro forma adjustments directly attributable to the business combination.

**Update No. 2010-28—Intangibles—Goodwill and Other (Topic 350): When to Perform Step 2 of the Goodwill Impairment Test for Reporting Units with Zero or Negative Carrying Amounts (a consensus of the FASB Emerging Issues Task Force)**

- A. Requires entities having reporting units with zero or negative carrying amounts to perform step 2 of the goodwill impairment test if it is more likely than not that a goodwill impairment exists.
  - 1. Qualitative factors should be considered when determining if goodwill impairment more likely than not exists. Qualitative factors can include:
    - a. A change in legal factors or the business climate.
    - b. A change in regulator assessment.
    - c. Unexpected competition.
    - d. A loss of key personnel.
    - e. An expectation of disposing of the reporting unit or a significant portion of the reporting unit.
    - f. Impairment of a significant asset group with the reporting unit.
    - g. A goodwill impairment loss related to a subsidiary that is a component of the reporting unit.
  - 2. Goodwill should be tested in between dates if events occur or circumstances change resulting in an assessment that the reporting unit fair value is more likely than not below its carrying value.

**Update No. 2010-17—Revenue Recognition—Milestone Method (Topic 605): Milestone Method of Revenue Recognition—a consensus of the FASB Emerging Issues Task Force**

- A. Describes when the **milestone method** of accounting may be used in accounting for research and development arrangements in which revenue (payments) to the vendor is contingent on achieving one or more substantive milestones related to deliverables or units of accounting.
  - 1. A substantive milestone is an uncertain event that can only be achieved based on the vendor's performance and
    - a. It is commensurate with the vendor's performance or enhancement of value resulting from the vendor's performance.
    - b. It relates solely to past performance.
    - c. It is reasonable relative to all of the deliverables and payment terms.
  - 2. If all of these circumstances are met, the vendor may recognize the contingent revenue in its entirety in the period in which the milestone is achieved.
  - 3. The notes to the financial statements should disclose its accounting policy for the recognition of milestone payments. In addition the following should be disclosed:
    - a. A description of the overall arrangement.
    - b. A description of each milestone and related contingent consideration.
    - c. A determination of whether each milestone is considered substantive.
    - d. The factors considered in determining whether the milestones are substantive.
    - e. The amount of consideration recognized during the period for the milestone or milestones.

**Update No. 2010-13—Compensation—Stock Compensation (Topic 718): Effect of Denominating the Exercise Price of a Share-Based Payment Award in the Currency of the Market in Which the Underlying Equity Security Trades—a consensus of the FASB Emerging Issues Task Force**

- A. Clarifies “that an employee share-based payment award with an exercise price denominated in the currency of a market in which a substantial portion of the entity’s equity securities trades should not be considered to contain a condition that is not a market, performance, or service condition. Therefore, an entity would not classify such an award as a liability if it otherwise qualifies as equity.”

**Update No. 2010-11—Derivatives and Hedging (Topic 815): Scope Exception Related to Embedded Credit Derivatives**

- A. Clarifies a scope exception related to embedded credit derivatives.
- B. The following would **not** be under the scope of ASC 815-10-15-11 and ASC 815-15-25:
  - 1. “The concentration transfer of credit risk that is only in the form of subordination of one financial instrument to another (such as the subordination of one beneficial interest to another tranche of a securitization, thereby redistributing credit risk.”
- C. The following would be within the scope of ASC 815-10-15-11 and ASC 815-15-25:
  - 1. “An embedded derivative feature relating to another type of risk (including another type of credit risk) is present in the securitized financial instruments.
  - 2. The holder of an interest in a tranche of that securitized financial instrument is exposed to the possibility (however remote) of being cash inflows because the possibility of those future payments is not created by subordination.
  - 3. The holder owns an interest in a single-tranche securitization vehicle; therefore, the subordination of one tranche to another is not relevant.”

**Update No. 2010-07—Not-for-Profit Entities (Topic 958): Not-for-Profit Entities: Mergers and Acquisitions**

- A. Establishes guidance for mergers and acquisitions for not-for-profit entities.

**Update No. 2010-06—Fair Value Measurements and Disclosures (Topic 820): Improving Disclosures about Fair Value Measurements**

- A. Requires new disclosures and clarifies other disclosures relating to ASC 820-10.
- B. New disclosures are as follows:
  - 1. Separate disclosure for significant amounts transferred in and out of Level 1 and Level 2 fair value measurements.
    - a. Disclose the reason for the transfer.
  - 2. Disclose separately (not net) purchases, issuances, and settlements for Level 3 fair value measurements using significant unobservable inputs
- C. Disclosure clarifications include:
  - 1. Disclose fair value measurements for each class of assets and liabilities.
  - 2. Disclose recurring and nonrecurring fair value measurement input and valuation techniques.

**Update No. 2010-02—Consolidation (Topic 810): Accounting and Reporting for Decreases in Ownership of a Subsidiary—a Scope Clarification**

- A. Clarifies scope and scope exceptions related to ASC 810-10 and expands disclosures.

- B.** A decrease in ownership scope shall include:
  1. “A subsidiary or group of assets that is a business or nonprofit activity.
  2. A subsidiary that is a business or nonprofit activity that is transferred to an equity method investee or joint venture.
  3. An exchange of a group of assets that constitutes a business or nonprofit activity for a noncontrolling interest in an entity.”
- C.** The following transactions relating to decrease in ownership are not within the scope of ASC 810-10:
  1. Sales of in substance real estate.
  2. Conveyances of oil and gas mineral rights.
- D.** Expanded disclosures include:
  1. The inputs and valuation techniques used to measure the fair value of the retained investment in the former subsidiary or group of assets.
  2. The nature of the continuing involvement after deconsolidation or derecognition.
  3. If a related party was involved with the deconsolidation or derecognition.

### **Update No. 2010-01—Equity (Topic 505): Accounting for Distributions to Shareholders with Components of Stock and Cash—a consensus of the FASB Emerging Issues Task Force**

- A.** Clarifies that the a distribution or issuance to shareholders with both characteristics listed below does not follow stock dividend or stock split treatment:
  1. The shareholder can elect to receive the entire distribution in cash or shares of equivalent value, and
  2. The total amount of cash that all shareholders can elect to receive is limited.
- B.** The above distribution is considered a share issuance to be included in EPS prospectively.
- C.** The ASU also expands the stock dividend terminology to include the following, “A stock dividend takes nothing from the property of the corporation and adds nothing to the interests of stockholders; that is, the corporations property is not diminished and the interests of the stockholders are not increased. The proportional interest of each shareholder remains the same.”

### **Update No. 2009-17—Consolidations (Topic 810): Improvements to Financial Reporting by Enterprises Involved with Variable Interest Entities**

- A.** Provides numerous amendments to archived FASB Interpretation No. 46R which can be found in the text. Some highlights appear below.
- B.** Clarifies the application of Variable Interest Entities (VIEs) for those that lack:
  1. The power to direct the significant activities, or
  2. The obligation to absorb significant expected losses, or
  3. The right to receive the significant expected residual returns.
- C.** Characteristics of an entity with a controlling financial interest in a VIE include:
  1. The power to direct the significant activities of a VIE.
  2. The obligation to absorb significant losses or receive significant benefits of the VIE.
- D.** Kick-out rights are “the ability to remove the reporting entity with the power to direct the significant activities of a VIE.”
- E.** Participating rights are “the ability to block the actions through which a reporting entity exercises the power to direct the significant activities of a VIE.”
- F.** Protective rights are “rights designed to protect the interest of the party holding the rights without giving that party a controlling financial interest in the entity to which they relate.”
- G.** Updates and expands consolidation rules.
- H.** Expands VIE presentation in the statement of financial position.
- I.** Amends primary and nonprimary beneficiary definitions and examples.

**Update No. 2009-16—Transfers and Servicing (Topic 860): Accounting for Transfers of Financial Assets**

- A. Amends the Codification related to the accounting for transfers of financial assets. There are approximately 200 pages of deletions and additions related to this ASU which can be found within the text. A few highlights are provided below.
- B. Changes “special purpose entity” to “securitization entity”
- C. New guidance on determining if an entity has surrendered control over transferred financial assets.
- D. Describes the term “participating interest.”
- E. Elaborates on the transferee’s right to pledge or exchange transferred assets.
- F. Elaborates on “effective control” with respect to the transferred assets.
- G. Amends and expands required disclosures.
- H. Provides numerous implementation guidance examples.
- I. Provides financial statement and note reporting guidance.

**Update No. 2009-14—Software (Topic 985): Certain Revenue Arrangements That Include Software Elements—a consensus of the FASB Emerging Issues Task Force**

- A. Changes the accounting for revenue arrangements that include both tangible and software elements.
  - 1. Software revenue guidance is **not** to be followed if software and non-software components work together for essential functionality.
  - 2. Software revenue guidance is **not** to be followed if hardware components contain software components.
- B. Guidance is provided on how a vendor should allocate consideration received to the software and non-software components and to arrangements with components that are both within and not within the scope of this standard.
- C. Additional disclosures are required.

**Update No. 2009-13—Revenue Recognition (Topic 605): Multiple-Deliverable Revenue Arrangements—a consensus of the FASB Emerging Issues Task Force**

- A. Provides guidance for separating multiple-deliverable arrangements.
- B. Establishes a selling price hierarchy for determining the selling price of a deliverable.
  - 1. The selling price is to be based on vendor-specific objective evidence (VSOE) or third party evidence if VSOE is not available.
  - 2. Selling price is based upon entity specific assumptions, not market assumptions.
- C. Eliminates the residual method of allocation.
- D. Requires consideration to be allocated at arrangement inception.
- E. Expands disclosures for multiple-deliverable arrangements to include:
  - 1. A description.
  - 2. The significant deliverables.
  - 3. The timing of delivery or performance.
  - 4. The significant factors and estimates used for VSOE, third-party evidence or selling price.
  - 5. The timing of revenue recognition.

**Update No. 2009-12—Fair Value Measurements and Disclosures (Topic 820): Investments in Certain Entities That Calculate Net Asset Value per Share (or Its Equivalent)**

- A. Amends, clarifies, and requires additional disclosures for fair value measurements of investments in certain entities that calculate net asset value per share (or its equivalent).
- B. Measurement of the fair value of an investment on the basis of net asset value per share is permitted if the net asset value of the investment (or equivalent) is calculated in a manner consistent with the measurement principles in ASC 946 as of the reporting entity’s measurement date.
  - 1. Judgment as to the level within the fair value hierarchy is required.

- a. The investment is considered a level 2 fair value measurement if the reporting entity can redeem its investment within the investee at net asset value per share.
- b. The investment is considered a level 3 fair value measurement if the reporting entity cannot redeem its investment with the investee at the net asset value per share.
- c. The investment may be a level 2 or level 3 fair value measurement if the reporting entity may, at some time in the future, redeem its investment within the investee at the net asset value per share.

C. The following disclosures are required:

1. The fair value of the investments in major categories including investment strategies.
2. For categories containing investments that can never be redeemed, but result in distributions through liquidations, the estimate of the period of time over which the underlying assets are expected to be liquidated.
3. The major category unfunded investment commitments.
4. The major category redemption terms and conditions.
5. The major category circumstances leading to non-redeemability of an investment.
6. The major category significant sale restrictions.
7. The details regarding sale completion for those investments being sold for an amount differing from the net asset value per share.
8. Plans to sell and actions for sale completion for individual investments within groups of investments.

### **Update No. 2009-05—Fair Value Measurements and Disclosures (Topic 820)—Measuring Liabilities at Fair Value**

- A. Amends and clarifies fair value measurements when a liability is exchanged since it is rare that liabilities are transferred due to contractual or legal restrictions.
- B. When a quoted price in an active market for an identical liability is not available, the following techniques are required to be used:
  1. A valuation technique that uses quoted prices of the identical liability when traded as an asset and quoted prices for similar liabilities.
  2. Another valuation technique such as an income approach or market approach.
- C. When using the quoted price of the liability when traded as an asset, the quoted price shall not be adjusted for effect of a restriction but shall be adjusted for factors specific to the asset but not to the fair value measurement of the liability. Adjustments could occur from using a similar but not identical liability traded as an asset or a different unit of account.

### **Update No. 2009-01—Topic 105—Generally Accepted Accounting Principles—amendments based on—Statement of Financial Accounting Standards No. 168—The *FASB Accounting Standards Codification*<sup>TM</sup> and the Hierarchy of Generally Accepted Accounting Principles**

- A. The FASB Accounting Standards Codification (the Codification) became the single source of US GAAP July 1, 2009. This Accounting Standard Update (ASU) was issued in June 2009 to establish the Codification as the source of authoritative US GAAP to be recognized by the FASB and used by nongovernmental entities for financial statement preparation. It flattens the hierarchy established in SFAS No. 162 to two levels, authoritative and nonauthoritative.
- B. Key terms were established:
  1. Nonpublic entity
  2. Nongovernmental entity
- C. This ASU establishes that all guidance contained in the Codification carries an equal level of authority.
- D. This ASU states that SEC material is for user convenience only and relates only to SEC registrants.
- E. If authoritative GAAP is not directly applicable, an entity should first examine similar transactions for authoritative GAAP before considering non-authoritative GAAP. Non-authoritative GAAP includes:
  1. Industry practices.
  2. FASB Concepts Statements.
  3. AICPA Issues Papers.
  4. IFRS.

5. Professional and regulatory agencies pronouncements.
6. AICPA Technical Practice Aids Technical Service Inquiries and Replies.
7. Textbooks, handbooks, and articles.

- F.** ASUs issued after this ASU are not authoritative themselves. ASUs update the Codification.
- G.** Grandfathered guidance applicability is discussed.
- H.** Application of this ASU shall be accounted for a change in accounting principle or correction of an error, if applicable.

## STATEMENTS OF FINANCIAL ACCOUNTING CONCEPTS (SFAC)

Statements of Financial Accounting Concepts (SFAC) set forth financial accounting and reporting objectives and fundamentals that will be used by the FASB in developing standards. While practitioners may also use SFAC in areas where promulgated GAAP does not exist, it is important to note that the SFAC do not constitute authoritative GAAP. Accordingly, SFAC do not come under Ethics Rule 203.

**SFAC 1 Objectives of Financial Reporting by Business Enterprises—Superseded by SFAC 8**

**SFAC 2 Qualitative Characteristics of Accounting Information—Superseded by SFAC 8**

**SFAC 3 Elements of Financial Statements—Superseded by SFAC 6**

**SFAC 4 Objectives of Financial Reporting of Nonbusiness Organizations**

The authors believe that this concept is not on the CPA Exam.

## SFAC 5 Recognition and Measurement in Financial Statements of Business Enterprises

- A.** Statement addresses principal items that a full set of FS should show and provides fundamental recognition criteria to use in deciding which items to include in FS.
1. Recognition criteria presented are not radical change from current practice
  2. Only applies to business enterprises
- B.** FS
1. A principal means of communicating financial information to those outside an entity
  2. Some useful information is better provided by other means of financial reporting, such as notes to the statements or supplementary information (SFAC 1).
  3. Objectives of financial reporting (which encompasses FS) are detailed in SFAC 1.
  4. Full set of FS should show
    - a. Financial position at end of period
    - b. Earnings for period
    - c. Comprehensive income for period
    - d. Cash flows for period
    - e. Investments by and distributions to owners during period
  5. Are intended as “general-purpose” statements and, therefore, do not necessarily satisfy all users equally well
  6. Simplifications, condensations, and aggregations are necessary and useful, but focusing on one figure (i.e., “the bottom line”) exclusively should be avoided.
  7. FS interrelate and complement each other.
  8. Information detailed in 4. above is provided by the following individual financial statements:
    - a. **Statement of Financial Position**
      - (1) Provides information about entity’s assets, liabilities, and equity and their relationships to each other at a particular point in time
      - (2) Does not purport to show the value of an entity
    - b. **Statement of Earnings and Comprehensive Income**
      - (1) Shows how the equity of an entity increased or decreased from all sources (other than from transactions with owners) during period

- (2) Item “earnings” is similar to present net income term but does not include certain accounting adjustments recognized in current period (i.e., change in accounting principle).
- (3) Earnings is a performance measure concerned primarily with cash-to-cash cycles.
- (4) Comprehensive income includes all recognized changes in equity except those from transactions with owners (SFAC 6).
- (5) The terms “gains” and “losses” are used for those items included in earnings.
- (6) The terms “cumulative accounting adjustments” and “other nonowner changes in equity” are used for those items excluded from earnings but included in comprehensive income.

**c. Statement of Cash Flows**

- (1) Shows entity’s cash flows from operating, investing, and financing activities during a period

**d. Statement of Investments by and Distributions to Owners**

- (1) Shows capital transactions of entity which are increases and decreases in equity from transactions with owners during period
9. FS help users assess entity’s liquidity, financial flexibility, profitability, and risk.
10. Full set of FS based on concept of financial capital maintenance—a return is achieved only after capital has been maintained or recovered.

**C. Recognition criteria**

1. Recognition is presentation of item in both words and numbers that is included in the totals of the financial statements (SFAC 6).
2. Item should meet four fundamental recognition criteria to be recognized

- a. **Definitions**—item is element of FS as defined by SFAC 6
- b. **Measurability**—item has a relevant attribute that is measurable with sufficient reliability

- (1) Five measurement attributes are used in current practice

- (a) Historical cost (historical proceeds)
- (b) Current (replacement) cost
- (c) Current market value
- (d) Net realizable (settlement) value
- (e) Present (discounted) value of future cash flows

- (2) Statement suggests that use of different attributes will continue
- (3) The monetary unit of measurement of nominal units of money is expected to continue to be used

- c. **Relevance**—item has capacity to make a difference in users’ decisions (SFAC 2)

- d. **Reliability**—item is representationally faithful, verifiable, and neutral (SFAC 2)

- (1) Reliability may affect timing of recognition due to excessive uncertainties
- (2) A trade-off may sometimes be needed between relevance and reliability because waiting for complete reliability may make information untimely

**D. Guidance in applying recognition criteria**

1. Need to identify which cash-to-cash cycles are substantially complete
2. Degree of skepticism is needed (SFAC 2)

**3. Revenues and gains**

- a. Generally not recognized until realizable (SFAC 6)

- (1) Realizable means assets received or held are readily convertible to known amounts of cash or claims to cash

- b. Not recognized until earned (APB 4, SFAC 6)

**4. Expenses and losses**

- a. Generally recognized when economic benefits are consumed or assets lose future benefits
- b. Some expenses are recognized when associated revenues are recognized (e.g., cost of goods sold).

- c. Some expenses are recognized when cash is spent or liability incurred (e.g., selling and administrative salaries).
  - d. Some expenses are allocated by systematic and rational procedures to periods benefited (e.g., depreciation and insurance).
- E. Recognition of changes in assets and liabilities**
- 1. Initial recognition generally based on current exchange prices at date of recognition
  - 2. Changes can result from two types of events
    - a. Inflows and outflows
    - b. Changes in amounts which can be a change in utility or substance (e.g., depreciation) or changes in price
  - 3. Current price information may only be used if it is reliable, cost justified, and more relevant than alternative information.

## SFAC 6 Elements of Financial Statements

(Replaces SFAC 3)

- A. Statement contains definitions of FS elements**
- 1. Definitions provide a significant first screen in determining content of FS.
    - a. Possessing characteristics of a definition of an element is necessary but not sufficient condition for including an item in FS
    - b. To qualify for inclusion in FS an item must
      - (1) Meet recognition criteria (e.g., revenue recognition tests)
      - (2) Possess a relevant attribute which can be measured reliably (e.g., historical cost/historical proceeds)
- B. Elements of FS of both business enterprises and not-for-profit organizations**
- 1. **Assets** are probable future economic benefits controlled by a particular entity as a result of past transactions or events.
    - a. Characteristics of assets
      - (1) Probable future benefit by contribution to future net cash inflows
      - (2) Entity can obtain and control access to benefit
      - (3) Transaction or event leading to control has already occurred
    - b. Asset continues as an asset until collected, transferred, used, or destroyed.
    - c. Valuation accounts are part of related asset.
  - 2. **Liabilities** are probable future sacrifices of economic benefits, arising from present obligations of a particular entity that result from past transactions or events.
    - a. Characteristics of liabilities
      - (1) Legal, equitable, or constructive duty to transfer assets in future
      - (2) Little or no discretion to avoid future sacrifice
      - (3) Transaction or event obligating enterprise has already occurred
    - b. Liability remains a liability until settled or discharged.
    - c. Valuation accounts are part of related liability.
  - 3. **Equity** (net assets) is the owner's residual interest in the assets of an entity that remains after deducting liabilities.
    - a. Business enterprises
      - (1) Characteristics of equity
        - (a) The source of distributions by enterprise to its owners
        - (b) No unconditional right to receive future transfer of assets; depends on future profitability
        - (c) Inevitably affected by enterprise's operations and circumstances affecting enterprise

- (2) Transactions or events that change owners' equity include revenues and expenses; gains and losses; investments by owners; distributions to owners; and changes within owners' equity (does not change total amount)
- b. Not-for-profit organizations
- (1) Characteristics of net assets (equity)
    - (a) Absence of ownership interest
    - (b) Operating purposes not centered on profit
    - (c) Significant receipt of contributions, many involving donor-imposed restrictions
  - (2) Classes of net assets
    - (a) **Permanently restricted net assets** is the part of net assets of a not-for-profit organization resulting from
      - 1] Contributions and other inflows of assets whose use by the organization is limited by donor-imposed stipulations that neither expire by passage of time nor can be fulfilled or otherwise removed by actions of the organization
      - 2] Other asset enhancements and diminishments subject to same kinds of stipulations
      - 3] Reclassifications from (or to) other classes of net assets as a consequence of donor-imposed stipulations
    - (b) **Temporarily restricted net assets** is the part of net assets of a not-for-profit organization resulting from
      - 1] Contribution and other inflows of assets whose use by the organization is limited by donor-imposed stipulations that either expire by passage of time or can be fulfilled and removed by actions of the organization pursuant to those stipulations
      - 2] Other asset enhancements and diminishments subject to same kinds of stipulations
      - 3] Reclassifications to (or from) other classes of net assets as a consequence of donor-imposed stipulations, their expiration by passage of time, or their fulfillment and removal by actions of the organization pursuant to those stipulations
    - (c) **Unrestricted net assets** is the part of net assets of a not-for-profit organization that is neither permanently restricted nor temporarily restricted by donor-imposed stipulations. They result from
      - 1] All revenues, expenses, gains, and losses that are not changes in permanently or temporarily restricted net assets and
      - 2] Reclassifications from (or to) other classes of net assets as a consequence of donor-imposed stipulations, their expiration by passage of time, or their fulfillment and removal by actions of the organization pursuant to those stipulations
  - (3) Transactions and events that change net assets include revenues and expenses, gains and losses, and changes within net assets that do not affect assets or liabilities (including reclassifications between classes of net assets).
  - (4) Changes in classes of net assets of not-for-profit organizations may be significant because donor-imposed restrictions may affect the types and levels of services that a not-for-profit organization can provide.
    - (a) Characteristics of change in permanently restricted net assets
      - 1] Most increases in permanently restricted net assets are from accepting contributions of assets that donors stipulate must be maintained in perpetuity. Only assets that are not by their nature used up in carrying out the organization's activities are capable of providing economic benefits indefinitely. Gifts of cash, securities, and nonexhaustible property are examples.
    - (b) Characteristics of change in temporarily restricted net assets
      - 1] Most increases in temporarily restricted net assets are from accepting contributions of assets that donors limit to use after specified future time or for specified purpose. Temporary restrictions pertain to contributions with donor stipulations that expire or can be fulfilled and removed by using assets as specified.

- (c) Characteristics of change in unrestricted net assets
  - 1] Change in unrestricted net assets for a period indicates whether organization has maintained the part of its net assets that is fully available (free of donor-imposed restrictions) to support the organization's services to beneficiaries in the next period.
- 4. **Revenues** are increases in assets or decreases in liabilities during a period from delivering goods, rendering services, or other activities constituting the entity's major or central operations.
  - a. Characteristics of revenues
    - (1) Accomplishments of the earning process
    - (2) Actual or expected cash inflows resulting from central operations
    - (3) Inflows reported gross
- 5. **Expenses** are decreases in assets or increases in liabilities during a period from delivery of goods, rendering of services, or other activities constituting the entity's major or central operations.
  - a. Characteristics of expenses
    - (1) Sacrifices involved in carrying out earnings process
    - (2) Actual or expected cash outflows resulting from central operations
    - (3) Outflows reported gross
- 6. **Gains (losses)** are increases (decreases) in equity from peripheral transactions of entity excluding revenues (expenses) and investment by owners (distribution to owners).
  - a. Characteristics of gains and losses
    - (1) Result from peripheral transactions and circumstances that may be beyond control
    - (2) May be classified according to sources or as operating and nonoperating
    - (3) Change in equity reported net
- 7. **Accrual accounting and related concepts** include
  - a. **Transaction**—external event involving transfer of something of value between two or more entities
  - b. **Event**—a happening of consequence to an entity (internal or external)
  - c. **Circumstances**—a set of conditions developed from events which may occur imperceptibly and create possibly unanticipated situations
  - d. **Accrual accounting**—recording “cash consequence” transactions as they occur rather than with movement of cash; deals with process of cash movement instead of beginning or end of process (per SFAC 1)
    - (1) Based on cash and credit transactions, exchanges, price changes, changes in form of assets and liabilities
  - e. **Accrual**—recognizing revenues and related asset increases and expenses and related liability increases as they occur; expected future cash receipt or payment follows recognition of revenue (expense)
  - f. **Deferral**—recognizing liability for cash receipt with expected future revenue or recognizing asset for cash payment with expected future expense; cash receipt (payment) precedes recognition of revenues (expenses)
  - g. **Allocation**—process of assigning or distributing an amount according to a plan or formula
    - (1) Includes amortization
  - h. **Amortization**—process of systematically reducing an amount by periodic payments or write-downs
  - i. **Realization**—process of converting noncash resources and rights into money; refers to sales of assets for cash or claims to cash
    - (1) Realized—identifies revenues or gains or losses on assets sold
    - (2) Unrealized—identifies revenues or gains or losses on assets unsold
  - j. **Recognition**—process of formally recording an item in financial statements
    - (1) Major differences between accrual and cash basis accounting is timing of recognition of income items
  - k. **Matching**—simultaneous recognition of revenues with expenses which are related directly or jointly to the same transaction or events

## C. Elements of FS exclusive to business enterprises

1. **Investments by owners** are increases in net assets resulting from transfers by other entities of something of value to obtain ownership.
2. **Distributions to owners** are decreases in net assets resulting from transferring assets, rendering services, or incurring liabilities by the enterprise to owners.
3. **Comprehensive income** is the change in equity of an entity during a period from transactions and other events of nonowner sources (i.e., all equity amount changes except investment and distributions).
  - a. Term “comprehensive” income is used instead of net earnings (net income) because the board is reserving “earnings” for a component part of comprehensive income yet to be determined.<sup>6</sup>
  - b. Concept of capital maintenance or recovery of cost is needed in order to separate return **on** capital from return **of** capital.
  - c. Financial capital maintenance concept vs. physical capital maintenance concept
    - (1) Financial capital maintenance—objective is to maintain purchasing power
    - (2) Physical capital maintenance—objective is to maintain operating capacity
  - d. Comprehensive income is return on financial capital.
  - e. Characteristics, sources, and components of comprehensive income include
    - (1) Cash receipts (excluding owner investments) less cash outlays (excluding distributions to owners) over life of enterprise
      - (a) Recognition criteria and choice of attributes to be measured affect timing, not amount.
    - (2) Specific sources of income are
      - (a) Transactions between enterprise and nonowners
      - (b) Enterprise’s productive efforts
      - (c) Price changes, casualties, and other interactions with environment
    - (3) **Earnings process** is the production and distribution of goods or services so firm can pay for goods and services it uses and provide return to owners.
    - (4) Peripheral activities may also provide income.
    - (5) Components of comprehensive income
      - (a) Basic components—revenues, expenses, gains and losses
      - (b) Intermediate components result from combining basic components
    - (6) Display considerations (e.g., items included in operating income) are the subject of another SFAC.

**SFAC 7 Using Cash Flow Information and Present Value in Accounting Measurements**

## A. Statement provides

1. A framework for using future cash flows as the basis for accounting measurements
  - a. At initial recognition
  - b. In **fresh-start measurements**—measurements in period following initial recognition that establish a new carrying amount unrelated to previous amounts and accounting conventions.
  - c. For the **interest method of allocation**—reporting conventions that use present value techniques in the absence of a fresh-start measurement to compute changes in the carrying amount of an asset or liability from one period to the next. Like depreciation and amortization conventions, interest methods are grounded in notion of historical cost.
2. General principles that govern the use of present value
  - a. Especially when uncertainties exist in
    - (1) The amount of future cash flows
    - (2) The timing of future cash flows, or
    - (3) Both (1) and (2)

3. Common understanding of objective of present value in accounting measurements
  4. **Guidance on measurement issues only—recognition issues are not addressed by SFAS 7.**
- B.** Statement does not specify when fresh-start measurements are appropriate
1. FASB expects to decide whether a particular situation requires a fresh-start measurement (or some other accounting response) on a project-by-project basis.
- C.** Objective of present value in an accounting measurement is to capture, to the extent possible, the economic difference between sets of estimated cash flows
1. Without present value, a \$3,000 cash flow due tomorrow and a \$3,000 cash flow due in fifteen years appear the same.
  2. Because present value distinguishes between cash flows that might otherwise appear similar, a measurement based on the present value of estimated future cash flows provides more relevant information than a measurement based on the undiscounted sum of those cash flows.
  3. A present value measurement that fully captures the economic differences between various sets of future cash flows would necessarily include the following elements:
    - a. An estimate of the future cash flow (or in more complex cases, series of future cash flows at different times)
    - b. Expectations about possible variations in the amount or timing of those cash flows
    - c. The time value of money, represented by the risk-free rate of interest
    - d. The price for bearing the uncertainty inherent in the asset or liability
    - e. Other sometimes unidentifiable factors, including liquidity and market imperfections
- D.** To provide relevant information in financial reporting, present value must represent some observable measurement attribute of assets or liabilities.
1. In the absence of observed transaction prices, accounting measurements at initial recognition and fresh-start measurements should attempt to capture the elements that taken together would comprise a market price if one existed, that is, fair value.
    - a. The **fair value** of an asset (or liability) is the amount at which that asset or liability could be bought (or incurred) or sold (or settled) in a current transaction between willing parties.
  2. While the expectations of an entity's management are often useful and informative, the marketplace is the final arbiter of asset and liability values.
  3. The entity must pay the market's price when it acquires an asset or settles a liability in a current transaction, regardless of its intentions or expectations.
  4. For some assets and liabilities, management's estimates may be the only available information.
    - a. In this case, the objective is to estimate the price likely to exist in the marketplace, if there were a marketplace.
- E.** The techniques used to estimate future cash flows and interest rates will vary from one situation to another depending on the circumstances surrounding the asset or liability in question. Certain general principles govern any application of present value techniques in measuring assets or liabilities.
1. To the extent possible, estimated cash flows and interest rates should reflect assumptions about the future events and uncertainties that would be considered in deciding whether to acquire an asset or group of assets in an arm's-length transaction for cash.
  2. Interest rates used to discount cash flows should reflect assumptions that are consistent with those inherent in the estimated cash flows. Otherwise, the effect of some assumptions will be double-counted or ignored. For example, an interest rate of 12% might be applied to contractual cash flows of a loan. That rate reflects expectations about future defaults from loans with particular characteristics. That same 12% rate should not be used to discount expected cash flows because those cash flows already reflect assumptions about future defaults.
  3. Estimated cash flows and interest rates should be free from both bias and factors unrelated to the asset, liability, or group of assets or liabilities in question. For example, deliberately understating estimated net cash flows to enhance the apparent future profitability of an asset introduces bias into the measurement.
  4. Estimated cash flows or interest rates should reflect the range of possible outcomes rather than a single most-likely, minimum, or maximum possible amount.

- F. An accounting measurement that uses present value should reflect the uncertainties inherent in the estimated cash flows. Otherwise items with different risks may appear similar.
- G. Accounting applications of present value have typically used a single set of estimated cash flows and a single interest rate. SFAC 7 introduces the expected cash flow approach.
  - 1. The expected cash flow approach focuses on explicit assumptions about the range of possible estimated cash flows and their respective possibilities.
  - 2. The traditional approach treats those uncertainties implicitly in the selection of an interest rate.
  - 3. By incorporating a range of possible outcomes, the expected cash flow approach accommodates the use of present value techniques when the timing of cash flows is uncertain.
- H. The measurement of liabilities involves different problems from the measurement of assets.
  - 1. The most relevant measurement of an entity's liabilities at initial recognition and fresh-start measurements should always reflect the credit standing of the entity.
- I. Interest method of allocation
  - 1. Present value techniques are also used in periodic reporting conventions known collectively as **interest methods of allocation**.
  - 2. Financial statements usually attempt to represent the changes in assets and liabilities from one period to the next. By using current information and assumptions, fresh-start measurements capture all the factors that create change, including
    - a. Physical consumption of assets (or reduction of liabilities)
    - b. Changes in estimates, and
    - c. Holding gains and losses that result from price changes
  - 3. Accounting allocations are planned approaches designed to represent only consumption or reduction.
  - 4. Changes in estimates may receive some recognition, but the effects of a change often have been spread over future periods.
  - 5. Holding gains and losses are generally excluded from allocation systems.
  - 6. In principle, the purpose of all accounting allocations is to report changes in the value, utility, or substance of assets and liabilities over time.
  - 7. Accounting allocations attempt to relate the change in an asset or liability to some observable real-world phenomenon.
    - a. An interest method of allocation relates changes in the reported amount with changes in present value of a set of future cash flows.
  - 8. Allocation methods are only representations (not measurements) of an asset or liability.
  - 9. While an interest method could be applied to any asset or liability, it is generally considered more relevant than other methods when applied to assets and liabilities that exhibit one or more of the following characteristics:
    - a. The transaction giving rise to the asset or liability is commonly viewed as a borrowing or lending
    - b. Period-to-period allocation of similar assets or liabilities employs an interest method
    - c. A particular set of estimated future cash flows is closely associated with the asset or liability
    - d. The measurement at initial recognition was based on present value
  - 10. Like all allocation systems, the manner in which an interest method of allocation is applied can greatly affect the pattern of income or expense. In particular, the interest method requires a careful description of the following:
    - a. The cash flows to be used (promised cash flows, expected cash flows, or some other estimate)
    - b. The convention that governs the choice of an interest rate (effective rate or some other rate)
    - c. How the rate is applied (constant effective rate or a series of annual rates)
    - d. How changes in the amount or timing of estimated cash flows are reported
  - 11. In most situations, the interest is based on contractual cash flows and assumes a constant effective interest rate over the life of those cash flows.
    - a. That is, the method uses promised cash flows (rather than expected cash flows) and bases the interest rate on the single rate that equates the present value of the promised cash flows with the initial price of the asset or liability.

12. In reality, actual cash flows often occur sooner or later in greater or lesser amounts than expected. Changes from the original estimate of cash flows, in either timing or amount, can be accommodated in the interest amortization scheme or included in a fresh-start measurement of the asset or liability.
  - a. Presently, the FASB doesn't address the conditions that might govern the choice between those two approaches.
13. If a change occurs in the amount or timing of estimated cash flows and the item is not remeasured, the interest amortization scheme must be altered to incorporate the new estimate of cash flows.
  - a. The following techniques have been used to address the changes in estimated cash flows:
    - (1) A prospective approach computes a new effective interest rate based on the carrying amount and remaining cash flows.
    - (2) A catch-up approach adjusts the carrying amount to the present value of the revised estimated cash flows, discounted at the original effective interest rate.
    - (3) A retrospective approach computes a new effective interest rate based on the original carrying amount, actual cash flows to date, and remaining estimated cash flows. The new effective interest rate is then used to adjust the carrying amount to the present value of the revised estimated cash flows, discounted at the new effective interest rate.
  - b. The FASB considers the catch-up approach to be preferable to other techniques for reporting changes in estimated cash flows because
    - (1) It is consistent with the present value relationships portrayed by the interest method, and
    - (2) It can be implemented at a reasonable cost

Under the catch-up approach, the recorded amount of an asset or liability (assuming estimated cash flows do not change) is the present value of the estimated future cash flows discounted at the original effective interest rate. If a change in estimate is effected through the catch-up approach, the measurement basis after the change will be the same as the measurement basis for the same asset or liability before the change in estimate (estimated cash flows discounted at the original effective rate).
  - c. The prospective approach obscures the impact of changes in estimated cash flows and, as a result, produces information that is both less useful and less relevant. The interest rate that is derived under the prospective approach is unrelated to the rate at initial recognition or to current market rates for similar assets and liabilities. The amount that remains on the balance sheet can be described as "the unamortized amount," but no more.
  - d. In some pronouncements, the retrospective approach has been used. Some consider it the most precise and complete of the three techniques listed above. However, the retrospective approach requires that entities retain a detailed record of all past cash flows. The costs of maintaining these detailed records usually outweigh any advantage provided by this approach.

## SFAC 8 Conceptual Framework for Financial Reporting

Overview: Statements of Financial Accounting Concepts

### A. Joint project between FASB and IASB

Divided into chapters. New chapters added as project is completed

Not part of the Accounting Standards Codification

### B. Financial accounting concepts are fundamentals on which standards of financial accounting and reporting are based. Defines financial accounting concepts broader than financial statements and other data.

## Chapter 1—The Objective of General-Purpose Financial Reporting

### A. Objective of general-purpose financial reporting is to provide information useful to existing and potential investors, lenders, and other creditors.

1. Primary users are investors, lenders, and other creditors.
2. Primary users rely on financial reports.

3. Provides information for primary users to assess prospects for future net cash flows.
  4. Managements, regulators, and other members of the public may use financial information, but are not considered primary users.
- B. Information needed about**
1. Resources of the entity.
  2. Claims against the entity.
  3. Changes in economic resources and claims.
  4. How efficiently and effectively the entity's management and governing board have discharged their responsibilities to use those resources.
  5. Information is not designed to show value of an entity, but provide information for users to estimate the value of the reporting entity.
- C. Financial reporting based on estimates, judgments, and models.**
- D. Financial reporting includes**
1. Resources and claims against resources.
  2. Changes in economic resources and claims.
  3. Changes in resources and claims not resulting from financial performance.
  4. Financial performance reflected by accrual accounting.
  5. Financial performance reflected by past cash flows.

### ***Chapter 3—Qualitative Characteristics of Useful Financial Information***

- A. The Hierarchy of Accounting Qualities**
1. Decision usefulness.
  2. Cost-benefit constraint.
  3. Materiality threshold (relates to relevance).
- B. Fundamental Qualitative Characteristics**
1. Relevance
    - a. Capable of making a difference in user's decision.
    - b. Must have predictive value, confirmatory value or both.
    - c. Has predictive value if it can be used as an input to predict future outcomes.
    - d. Has confirmative value if it provides feedback about previous evaluations.
  2. Faithful Representation
    - a. Must faithfully represent phenomena that it purports to represent
    - b. Must be complete, neutral, and free from error
    - c. Complete all information necessary for a user to understand the phenomena depicted
    - d. Neutral without bias toward a particular user
    - e. Not accurate in all respects, but free from material error
- C. Enhancing Qualitative Characteristics**
1. Comparability enables user to identify and understand similarities and differences.
  2. Verifiability occurs when different sources reach consensus or agreement on an amount of representation of an item.
  3. Timeliness requires that information is available to a decision maker when it is useful to make the decision.
  4. Understandability involves classifying, characterizing, and presenting information clearly and concisely.

# Appendix B: Financial Accounting and Reporting Sample Examination

## Testlet 1

Items 1 and 2 are based on the following:

The town of Silverton applies the provisions of GASB 34, *Basic Financial Statements—and Management’s Discussion and Analysis—for State and Local Governments*, for its financial statements. As of December 31, 2010, Silverton compiled the information below for its capital assets, exclusive of infrastructure assets.

Cost of capital assets financed with general obligation debt and tax revenues	\$5,000,000
Accumulated depreciation on the capital assets	1,000,000
Outstanding debt related to the capital assets	2,000,000

1. On the government-wide statement of net assets at December 31, 2010, under the governmental activities column, what amount should be reported for capital assets?

- a. \$5,000,000
- b. \$4,000,000
- c. \$3,000,000
- d. \$2,000,000

2. On the government-wide statement of net assets at December 31, 2010, under the governmental activities column, the information related to capital assets should be reported in the net assets section at which of the following amounts?

- a. \$5,000,000
- b. \$4,000,000
- c. \$3,000,000
- d. \$2,000,000

3. Tree City reported a \$1,500 net increase in fund balance for governmental funds. During the year, Tree purchased general capital assets of \$9,000 and recorded depreciation expense of \$3,000. What amount should Tree report as the change in net assets for governmental activities?

- a. \$(4,500)
- b. \$1,500
- c. \$7,500
- d. \$10,500

4. A not-for-profit voluntary health and welfare organization received a \$500,000 permanent endowment. The donor stipulated that the income must be used for a mental health program. The endowment fund reported \$60,000 net decrease in market value and \$30,000 investment income. The organization spent \$45,000 on the mental health program during the year. What amount of change in temporarily restricted net assets should the organization report?

- a. \$75,000 decrease.
- b. \$15,000 decrease.

- c. \$0
- d. \$425,000 increase.

5. Oz, a nongovernmental not-for-profit organization, received \$50,000 from Ame Company to sponsor a play given by Oz at the local theater. Oz gave Ame 25 tickets, which generally cost \$100 each. Ame received no other benefits. What amount of ticket sales revenue should Oz record?

- a. \$0
- b. \$2,500
- c. \$47,500
- d. \$50,000

6. Under Statement of Financial Accounting Concepts 8, the ability through consensus among measurers to ensure that information represents what it purports to represent is an example of the enhancing qualitative characteristic of

- a. Relevance.
- b. Verifiability.
- c. Comparability.
- d. Confirmatory value.

7. When a company changes the expected service life of an asset because additional information has been obtained, which of the following should be reported?

	Pro forma effects of retroactive application	Retrospective application
a.	Yes	Yes
b.	No	Yes
c.	Yes	No
d.	No	No

8. Gilbert Corporation issued a 40% stock split-up of its common stock that had a par value of \$10 before and after the split-up. At what amount should retained earnings be capitalized for the additional shares issued?

- a. There should be no capitalization of retained earnings.
- b. Par value.
- c. Market value on the declaration date.
- d. Market value on the payment date.

9. A nonmonetary asset was received by Company Y in a nonreciprocal transfer from Company Z that has commercial substance. The asset should be recorded by Y at

- a. Z’s recorded amount.
- b. Z’s recorded amount or the fair value of the asset received, whichever is higher.
- c. Z’s recorded amount or the fair value of the asset received, whichever is lower.
- d. The fair value of the asset received.

10. A development stage enterprise
- Does **not** issue an income statement.
  - Issues an income statement that only shows cumulative amounts from the enterprise's inception.
  - Issues an income statement that is the same as an established operating enterprise, but does **not** show cumulative amounts from the enterprise's inception as additional information.
  - Issues an income statement that is the same as an established operating enterprise, and shows cumulative amounts from the enterprise's inception as additional information.

11. During a period of inflation, an account balance remains constant. With respect to this account, a purchasing power gain will be recognized if the account is a

- Monetary liability.
- Monetary asset.
- Nonmonetary liability.
- Nonmonetary asset.

12. The summary of significant accounting policies should disclose the

- Pro forma effect of retroactive application of an accounting change.
- Basis of profit recognition on long-term construction contracts.
- Adequacy of pension plan assets in relation to vested benefits.
- Future minimum lease payments in the aggregate and for each of the five succeeding fiscal years.

13. The following items relate to the preparation of a statement of cash flows:

	2010	2009		2010
Cash	\$150,000	\$100,000	Net sales	\$3,200,000
AR—net	420,000	290,000	CGS	(2,500,000)
Merchandise inventory	330,000	210,000	Expenses	<u>(500,000)</u>
AP	265,000	220,000	Net income	\$ <u>200,000</u>

All accounts payable relate to trade merchandise. Accounts payable are recorded net and always are paid to take all of the discount allowed. The direct approach is used for operating activities. Under operating activities, cash payments during 2010 to suppliers amounted to

- \$2,575,000
- \$2,500,000
- \$2,455,000
- \$2,335,000

14. Boa Constructors, Inc. had an operating loss carryforward of \$100,000 that arose from ordinary operations in 2010. There is no evidence that indicates the need for a valuation allowance. The income tax rate is 40%. For the year ended December 31, 2010, the tax benefit should be reported in the income statement as

- A \$40,000 reduction in income tax expense from continuing operations.

- An extraordinary item of \$40,000.
- An operating gain of \$40,000.
- An extraordinary item of \$100,000.

Items 15 through 17 are based on the following information:

The December 31, 2010 balance sheet of Ratio, Inc. is presented below. These are the only accounts in Ratio's balance sheet. Amounts indicated by a question mark (?) can be calculated from the additional information given.

<i>Assets</i>	
Cash	\$ 25,000
Accounts receivable (trade)	?
Inventory	?
Property, plant and equipment (net)	<u>294,000</u>
	<u>\$432,000</u>

<i>Liabilities and stockholders' equity</i>	
Accounts payable (trade)	?
Income taxes payable (current)	25,000
Long-term debt	100,000
Common stock	300,000
Retained earnings	<u>?</u>
	<u>?</u>

<i>Additional information</i>	
Current ratio (at year-end)	1.5 to 1
Total liabilities divided by total stockholders' equity	.8
Inventory turnover based on sales and ending inventory	15 times
Inventory turnover based on cost of goods sold and ending inventory	10.5 times
Gross margin for 2010	\$315,000

15. What was Ratio's December 31, 2010 balance in the inventory account?

- \$21,000
- \$30,000
- \$70,000
- \$135,000

16. What was Ratio's December 31, 2010 balance in trade accounts payable?

- \$67,000
- \$92,000
- \$182,000
- \$207,000

17. What was Ratio's December 31, 2010 balance in retained earnings?

- \$60,000 deficit.
- \$60,000
- \$132,000 deficit.
- \$132,000

18. Companies A and B have been operating separately for five years. Each company has a minimal amount of liabilities and a simple capital structure consisting solely of voting common stock. Company A, in exchange for 40% of its voting stock, acquires 80% of the common stock of Company B. This was a "tax free" stock for stock (type B) exchange for

tax purposes. Company B identifiable assets have a total net fair market value of \$800,000 and a total net book value of \$580,000. The fair market value of the A stock used in the exchange was \$700,000. The fair value of the shares of stock of B owned by the noncontrolling interest was \$100,000 at the date of acquisition. The goodwill on this acquisition would be

- a. Zero.
- b. \$60,000
- c. \$120,000
- d. \$236,000

19. Empire Corporation owns an office building and leases the offices under a variety of rental agreements involving rent paid monthly in advance and rent paid annually in advance. Not all tenants make timely payments of their rent. Empire's balance sheets contained the following information:

	2010	2009
Rentals receivable	\$3,100	\$2,400
Unearned rentals	6,000	8,000

During 2010, Empire received \$20,000 cash from tenants. How much rental revenue should Empire record for 2010?

- a. \$17,300
- b. \$18,700
- c. \$21,300
- d. \$22,700

20. Moore Company carries product A in inventory on December 31, 2010, at its unit cost of \$7.50. Because of a sharp decline in demand for the product, the selling price was reduced to \$8.00 per unit. Moore's normal profit margin on product A is \$1.60, disposal costs are \$1.00 per unit, and the replacement cost is \$5.30. Under the rule of cost or market, whichever is lower, Moore's December 31, 2010, inventory of product A should be valued at a unit cost of

- a. \$5.30
- b. \$5.40
- c. \$7.00
- d. \$7.50

21. On January 1, 2010, Richmond, Inc. signed a fixed-price contract to have Builder Associates construct a major plant facility at a cost of \$4,000,000. It was estimated that it would take three years to complete the project. Also on January 1, 2010, to finance the construction cost, Richmond borrowed \$4,000,000 payable in 10 annual installments of \$400,000 plus interest at the rate of 11%. During 2010 Richmond made deposit and progress payments totaling \$1,500,000 under the contract; the average amount of accumulated expenditures was \$650,000 for the year. The excess borrowed funds were invested in short-term securities, from which Richmond realized investment income of \$250,000. What amount should Richmond report as capitalized interest at December 31, 2010?

- a. \$71,500
- b. \$165,000
- c. \$190,000
- d. \$440,000

22. On May 1, 2010, Lane Corp. bought a parcel of land for \$100,000. Seven months later, Lane sold this land to a triple-A rated company for \$150,000, under the following terms: 25% at closing, and a first mortgage note (at the market rate of interest) for the balance. The first payment on the note, plus accrued interest, is due December 1, 2011. Lane reported this sale on the installment basis in its 2010 tax return. In its 2010 income statement, how much gain should Lane report from the sale of this land?

- a. \$0
- b. \$12,500
- c. \$37,500
- d. \$50,000

23. On January 1, 2010, Derby Company lent \$20,000 cash to Elliott Company. The promissory note made by Elliott did not bear interest and was due on December 31, 2011. No other rights or privileges were exchanged. The prevailing interest for a loan of this type was 12%. The present value of \$1 for two periods at 12% is 0.797. Derby should recognize interest income in 2010 of

- a. \$0
- b. \$1,913
- c. \$2,030
- d. \$2,400

24. Platt Co. has been forced into bankruptcy and liquidated. Unsecured claims will be paid at the rate of \$.50 on the dollar. Maga Co. holds a noninterest-bearing note receivable from Platt in the amount of \$50,000, collateralized by machinery with a liquidation value of \$10,000. The total amount to be realized by Maga on this note receivable is

- a. \$35,000
- b. \$30,000
- c. \$25,000
- d. \$10,000

25. Included in W. Cody's assets at December 31, 2010, are the following:

- 2,000 shares of Dart Corporation common stock purchased in 2008 for \$100,000. The market value of the stock was \$80 per share at December 31, 2010.
- A \$500,000 whole life insurance policy having a cash value of \$72,000 at December 31, 2010, subject to a \$30,000 loan payable to the insurance company.

In Cody's December 31, 2010 personal statement of financial condition, the above assets should be reported at

- a. \$232,000
- b. \$202,000
- c. \$172,000
- d. \$142,000

26. Footnotes to the financial statements are beneficial in meeting the disclosure requirements of financial reporting. The footnotes should not be used to

- a. Describe significant accounting policies.
- b. Describe depreciation methods employed by the company.

- c. Describe the principles and methods peculiar to the industry in which the company operates, when these principles and methods are predominantly followed in that industry.
  - d. Correct an improper presentation in the financial statements.
- 27.** The statement of cash flows classifies cash receipts and cash payments as arising from operating, investing, and financing activities. All of the following should be classified as investing activities except
- a. Cash outflows to purchase manufacturing equipment.
  - b. Cash inflows from the sale of bonds of other entities.
  - c. Cash outflows to lenders for interest.
  - d. Cash inflows from the sale of a manufacturing plant.
- 28.** Initial direct costs incurred by the lessor under a sales-type lease should be
- a. Deferred and allocated over the economic life of the leased property.
  - b. Expensed in the period incurred.
  - c. Deferred and allocated over the term of the lease in proportion to the recognition of rental income.
  - d. Added to the gross investment in the lease and amortized over the term of the lease as a yield adjustment.
- 29.** Under IFRS which of the following is the definition of a “provision”?
- a. A liability that is uncertain in timing or amount.
  - b. A liability that has definitely been incurred.
  - c. An asset that is uncertain as to its fair value.
  - d. An asset that is certain as to value.
- 30.** Larson prepares its financial statements in accordance with IFRS. Larson has several cash advances and loans from bank overdrafts. How should these items be reported on the statement of cash flows?
- a. Operating activities.
  - b. Investing activities.
  - c. Financing activities.
  - d. Other significant noncash activities.

**Hints for Testlet 1**

1. Capital assets are presented net of accumulated depreciation.
2. In the net assets section capital assets are presented net of related debt.
3. Net assets is increased by increase in fund balance and increase in capital assets.
4. Endowment is a permanently restricted amount.
5. Ticket revenue is at fair value.
6. Not a fundamental qualitative characteristic.
7. This is a change in an accounting estimate.
8. This constitutes a large stock dividend. It is not a stock split because par value has not changed.
9. No tricks here.
10. Must follow GAAP.
11. Monetary items are fixed in amount.
12. Entity should disclose the accounting principles followed and methods of applying those principles.
13. Cash payments to suppliers is determined by adjusting **CGS** for changes in **inventory** and **AP**.
14. The operating loss reduces income from operations.
15. Calculate inventory algebraically—Sales = (10.5)  
(INV) + \$315,000 = (15)(INV).
16. First calculate total current assets, then use current ratio.
17. Liabilities/SE = 0.8/1.0.
18. Measurement of GW.
19. Review Cash to Accrual, Module 9, Section A.4.
20. Floor is NRV less normal profit.
21. Capitalized interest is avoidable interest.
22. Installment method can only be used under GAAP where collection is not reasonably assured.
23. \$20,000 is both the PV and FV of this note.
24. Only \$40,000 of the note is unsecured.
25. Present estimated current values of assets and current amounts of liabilities.
26. Footnotes provide additional information.
27. Investing activities relate to investments in property, plant, and equipment and securities.
28. Initial direct costs are part of cost of sales.
29. Provisions are liabilities.
30. These are not classified as financing activities.

## Answers to Testlet 1

1. b	6. b	11. a	16. a	21. a	26. d
2. d	7. d	12. b	17. a	22. d	27. c
3. c	8. b	13. a	18. a	23. a	28. b
4. c	9. d	14. a	19. d	24. b	29. a
5. b	10. d	15. c	20. b	25. b	30. a

## Explanations to Testlet 1

- (b)** The assets under the governmental activities column would include the capital assets of \$5,000,000 less the accumulated depreciation of \$1,000,000.
- (d)** The amount of net assets is equal to assets minus liabilities. Therefore, the amount would be equal to \$2,000,000 (\$5,000,000 total assets – \$1,000,000 accumulated depreciation – \$2,000,000 liabilities).
- (c)** The changes in net assets is equal to \$7,500 (\$9,000 expenditures for capital assets – \$1,500 increase in fund balances). The depreciation expense would not be included in the funds statement.
- (c)** The endowment would be a permanently restricted asset. The income would be initially recorded as temporarily restricted funds and the expenditures would be recorded as decreases in unrestricted assets. At the end of the period, the temporarily restricted income would be reclassified as unrestricted, resulting in \$0 change in temporarily restricted assets. Note that if the entity had not spent all of the endowment income in this year there would have been a change in temporarily restricted assets.
- (b)** The ticket sales revenue should be equal to the fair market value of the tickets.
- (b)** Verifiability is an enhancing qualitative characteristic.
- (d)** A change in the expected service life of an asset because of new information is reported prospectively. Prior periods are not restated.
- (b)** In a large stock dividend, retained earnings should be charged for the par value of the additional shares issued.
- (d)** If the nonmonetary exchange has commercial substance, the asset received is recorded at its fair value.
- (d)** A development stage enterprise issues an income statement that is the same as an established operating enterprise and shows cumulative amounts from the enterprise's inception as additional information.
- (a)** In a period of inflation, a gain will be recognized on a monetary liability. The liability will be paid with dollars with less purchasing power.
- (b)** The summary of significant accounting policies should disclose the basis of profit recognition on long-term construction contracts.
- (a)** The cash payments to suppliers is equal to \$2,575,000 (\$2,500,000 CGS + \$220,000 beg. AP – \$265,000 end. AP – \$210,000 beg. Inv. + \$330,000 end. Inv.).
- (a)** The tax benefit is \$40,000 (\$100,000 × 40%).
- (c)** Inventory is equal to \$70,000. To calculate this amount, inventory turnover based on cost of goods sold (10.5) is deducted from inventory turnover based on sales (15), which results in 4.5. Then, divide this amount into gross margin to get \$70,000 (\$315,000 ÷ 4.5).
- (a)** To calculate this amount, first calculate current assets by deducting the amount of property, plant, and equipment from total assets. Current assets is equal to \$138,000 (\$432,000 – \$294,000). If the current ratio is equal to 1.5 to 1, then current liabilities are equal to \$92,000 (\$138,000 ÷ 1.5). Finally, accounts payable is equal to \$67,000 (\$93,000 CL – \$25,000 income taxes payable).
- (a)** Retained earnings is equal to \$60,000 deficit (\$432,000 total assets – \$67,000 AP – \$25,000 income taxes payable – \$100,000 long-term debt – \$300,000 common stock).
- (a)** Goodwill is calculated as the consideration given of \$700,000 plus the fair value of the noncontrolling interest of \$100,000 less the fair value of the net identifiable assets of the acquiree of \$800,000, which equals zero.
- (d)** Rent earned is equal to \$22,700 (\$20,000 cash received – \$2,400 beg. rent receivable + \$3,100 end. rent receivable + \$8,000 beg. unearned rent – \$6,000 end. unearned rent).
- (b)** The lower of cost or market value is the floor of \$5.40 (\$8.00 sales price – \$1.00 disposal costs – \$1.60 normal profit).
- (a)** Capitalized interest is equal to \$71,500 (\$650,000 average amount of accumulated expenditures × 11% interest rate).

- 22. (d)** The total gain on the sales is \$50,000 ( $\$150,000 - \$100,000$ ). Under GAAP the total gain is recognized unless there is too much uncertainty about the amount to be collected.
- 23. (a)** Since there were no other aspects to the transaction, no interest is implicit, and none should be imputed.
- 24. (b)** The amount realized is equal to \$10,000 (collateral value) + 50% of the remaining \$40,000, or \$30,000.
- 25. (b)** The assets should be reported at their fair market values of \$202,000 [ $(2,000 \times \$80) + (\$72,000 - \$30,000)$ ]. Note that the insurance policy value is shown net of the loan.
- 26. (d)** Footnotes should not correct errors in the financial statements.
- 27. (c)** Cash outflows to lenders for interest are classified as financing activities.
- 28. (b)** Initial direct costs incurred by a lessor should be expensed as incurred.
- 29. (a)** A “provision” is defined under IFRS as a liability that is uncertain in timing or amount.
- 30. (a)** IFRS requires cash advances and loans from bank overdrafts to be classified as operating activities.

## Testlet 2

1. For which of the following governmental entities that use proprietary fund accounting should a statement of cash flows be presented?

	Swimming pool	Government utilities
a.	No	No
b.	No	Yes
c.	Yes	Yes
d.	Yes	No

2. The Williamsburg Zoo, a private not-for-profit organization, established a \$1,000,000 quasi endowment on July 1, 2010. On the zoo's financial statement of financial position at December 31, 2010, the assets in this quasi endowment should be included in which of the following classifications?

- Temporarily restricted net assets.
- Unrestricted net assets.
- Permanently restricted net assets.
- Either temporarily or permanently restricted net assets, depending on the expected term of the endowment.

3. Chase City imposes a 2% tax on hotel charges. Revenues from this tax will be used to promote tourism in the city. Chase should record this tax as what type of nonexchange transaction?

- Derived tax revenue.
- Imposed nonexchange revenue.
- Government-mandated transaction.
- Voluntary nonexchange transaction.

4. Pica, a nongovernmental not-for-profit organization, received unconditional promises of \$100,000 expected to be collected within one year. Pica received \$10,000, prior to year-end. Pica anticipates collecting 90% of the contributions and has a June 30 fiscal year-end. What amount should Pica record as contribution revenue as of June 30?

- \$10,000
- \$80,000
- \$90,000
- \$100,000

5. Why is a reclassification adjustment used when reporting other comprehensive income?

- Adjustment made to reclassify an item of comprehensive income as another item of comprehensive income.
- Adjustment made to avoid double counting of items.
- Adjustment made to make net income equal to comprehensive income.
- Adjustment made to adjust for the income tax effect of reporting comprehensive income.

6. In a statement of cash flows, interest payments to lenders and other creditors should be classified as cash outflows for

- Operating activities.
- Borrowing activities.

- Lending activities.
- Financing activities.

7. When treasury stock is purchased for cash at more than its par value, what is the effect on total stockholders' equity under each of the following methods?

	Cost method	Par value method
a.	Increase	Increase
b.	Decrease	Decrease
c.	No effect	Decrease
d.	No effect	No effect

8. When the allowance method of recognizing bad debt expense is used, the allowance for doubtful accounts would decrease when a(n)

- Specified account receivable is collected.
- Account previously written off is collected.
- Account previously written off becomes collectible.
- Specific uncollectible account is written off.

9. In computing basic earnings per share, a company would include which of the following?

- Dividends on nonconvertible cumulative preferred stock.
- Dividends on common stock.
- Interest on convertible bonds.
- Number of shares of nonconvertible cumulative preferred stock.

10. On January 2, 2008, a company established a sinking fund in connection with an issue of bonds due in 2015. At December 31, 2010, the independent trustee held cash in the sinking fund account representing the annual deposits to the fund and the interest earned on those deposits. How should the sinking fund be reported in the company's classified balance sheet at December 31, 2010?

- The entire balance in the sinking fund account should appear as a noncurrent asset.
- The entire balance in the sinking fund account should appear as a current asset.
- The cash in the sinking fund should appear as a current asset.
- The accumulated deposits only should appear as a noncurrent asset.

11. For interim financial reporting, an inventory loss from a market decline in the second quarter that is **not** expected to be restored in the fiscal year should be recognized as a loss

- In the fourth quarter.
- Proportionately in each of the second, third, and fourth quarters.
- Proportionately in each of the first, second, third, and fourth quarters.
- In the second quarter.

12. A review of the December 31, 2010 financial statements of Rhur Corporation revealed that under the caption “extraordinary losses,” Rhur reported a total of \$260,000. Further analysis revealed that the \$260,000 in losses was comprised of the following items:

- Rhur recorded a loss of \$50,000 incurred in the abandonment of equipment formerly used in the business.
- In an unusual and infrequent occurrence, a loss of \$75,000 was sustained as a result of hurricane damage to a warehouse.
- During 2010, several factories were shut down during a major strike by employees. Shutdown expenses totaled \$120,000.
- Uncollectible accounts receivable of \$15,000 were written off as uncollectible.

Ignoring income taxes, what amount of loss should Rhur report as extraordinary on its 2010 statement of income?

- a. \$50,000
- b. \$75,000
- c. \$135,000
- d. \$260,000

13. On December 30, 2009, Future, Incorporated paid \$2,000,000 for land. At December 31, 2010, the current value of the land was \$2,200,000. In January 2011, the land was sold for \$2,250,000. Ignoring income taxes, by what amount should stockholders’ equity be increased for 2010 and 2011 as a result of the above facts in current value financial statements?

	2010	2011
a.	\$0	\$50,000
b.	\$0	\$250,000
c.	\$200,000	\$0
d.	\$200,000	\$50,000

14. Kenny Company, a publicly traded company, adopted a defined benefit pension plan on January 1, 2009. The following data are available at December 31, 2010:

Pension expense 2010	\$103,000
Pension funding 2010	90,000
Fair value of plan assets 12/31/10	225,000
Accumulated pension obligation 12/31/10	208,000
Projected benefit obligation 12/31/10	290,000

At December 31, 2009, Kenny reported prepaid pension cost of \$11,000. Kenny’s pension liability to be reported in the December 31, 2010 balance sheet is

- a. \$0
- b. \$2,000
- c. \$13,000
- d. \$65,000

15. On May 1, 2010, the board of directors of Edgewood, Inc. approved a plan to sell its electronic component. The plan met the criteria to classify the component as “held for sale.” During 2010 the component had a loss from operations of \$500,000. In addition, the carrying value of the component’s assets is estimated to be \$700,000 greater than their fair value less costs

to sell. Edgewood’s effective tax rate for 2010 is 40%. For the year ended December 31, 2010, Edgewood should report a total loss (net of taxes) from discontinued operations of

- a. \$240,000
- b. \$400,000
- c. \$480,000
- d. \$720,000

16. Tapscott, Inc., is indebted to Bush Finance Company under a \$600,000, 10%, five-year note dated January 1, 2008. Interest, payable annually on December 31, was paid on the December 31, 2008 and 2009 due dates. However, during 2010 Tapscott experienced severe financial difficulties and is likely to default on the note and interest unless some concessions are made. On December 31, 2010, Tapscott and Bush signed an agreement restructuring the debt as follows:

- Interest for 2010 was reduced to \$30,000 payable March 31, 2011.
- Interest payments each year were reduced to \$40,000 per year for 2011 and 2012.
- The principal amount was reduced to \$400,000.

What is the amount of gain that Tapscott should report on the debt restructure in its income statement for the year ended December 31, 2010?

- a. \$120,000
- b. \$150,000
- c. \$200,000
- d. \$230,000

17. Included in Kerr Corporation’s liability account balances at December 31, 2010, were the following:

14% note payable issued October 1, 2010, maturing September 30, 2011	\$250,000
16% note payable issued April 1, 2008, payable in 6 equal annual installments of \$100,000 beginning April 1, 2009	400,000

Kerr’s December 31, 2010 financial statements were issued on March 31, 2011. On January 15, 2011, the entire \$400,000 balance of the 16% note was refinanced by issuance of a long-term obligation payable in a lump sum. In addition, on March 10, 2011, Kerr consummated a noncancelable agreement with the lender to refinance the 14%, \$250,000 note on a long-term basis, on readily determinable terms that have not yet been implemented. Both parties are financially capable of honoring the agreement, and there have been no violations of the agreement’s provisions. On the December 31, 2010 balance sheet, the amount of the notes payable that Kerr should classify as short-term obligations is

- a. \$0
- b. \$100,000
- c. \$250,000
- d. \$350,000

18. On July 1, 2010, Diamond, Inc. paid \$1,000,000 for 100,000 shares (40%) of the outstanding common stock of Ashley Corporation. At that date the net assets of Ashley totaled \$2,500,000 and the fair values of all of Ashley’s

identifiable assets and liabilities were equal to their book values. Ashley reported net income of \$500,000 for the year ended December 31, 2010, of which \$300,000 was for the six months ended December 31, 2010. Ashley paid cash dividends of \$250,000 on September 30, 2010. Diamond does not elect the fair value option for reporting its investment in Ashley. In its income statement for the year ended December 31, 2010, what amount of income should Diamond report from its investments in Ashley?

- \$80,000
- \$100,000
- \$120,000
- \$200,000

**19.** West Company determined that it has an obligation relating to employees' rights to receive compensation for future absences attributable to employees' services already rendered. The obligation relates to rights that vest, and payment of the compensation is probable. The amounts of West's obligations as of December 31, 2010, are reasonably estimated as follows:

Vacation pay	\$110,000
Sick pay	80,000

In its December 31, 2010 balance sheet, what amount should West report as its liability for compensated absences?

- \$0
- \$80,000
- \$110,000
- \$190,000

**20.** The balance in Ashwood Company's accounts payable account at December 31, 2010, was \$900,000 before any necessary year-end adjustment relating to the following:

- Goods were in transit from a vendor to Ashwood on December 31, 2010. The invoice cost was \$50,000, and the goods were shipped FOB shipping point on December 29, 2010. The goods were received on January 4, 2011.
- Goods shipped FOB shipping point on December 20, 2010, from a vendor to Ashwood were lost in transit. The invoice cost was \$25,000. On January 5, 2011, Ashwood filed a \$25,000 claim against the common carrier.
- Goods shipped FOB destination on December 21, 2010, from a vendor to Ashwood were received on January 6, 2011. The invoice cost was \$15,000.

What amount should Ashwood report as accounts payable on its December 31, 2010 balance sheet?

- \$925,000
- \$940,000
- \$950,000
- \$975,000

**21.** At December 31, 2010, Arno Beauticians had 1,000 gift certificates outstanding that had been sold to customers during 2010 for \$75 each. Arno operates on a gross margin of 60%. How much revenue pertaining to the 1,000 outstanding gift certificates should be deferred at December 31, 2010?

- \$0
- \$30,000
- \$45,000
- \$75,000

**22.** On January 1, 2007, Green Company purchased a machine for \$800,000 and established an annual depreciation charge of \$100,000 over an eight-year life. During 2010, after issuance of the 2009 financial statements, Green applied the recoverability test to the machine and concluded that: (1) the machine suffered permanent impairment of its operational value, and (2) \$200,000 is a reasonable estimate of the amount expected to be recovered through use of the machine for the period January 1, 2010, to December 31, 2014. The fair value of the machine is \$160,000. In Green's December 31, 2010 balance sheet, the machine should be reported at a carrying amount of

- \$0
- \$100,000
- \$160,000
- \$400,000

**23.** On December 1, 2010, Poplar, Inc. purchased for cash at \$18 per share all 200,000 shares of the outstanding common stock of Spruce Co. At December 1, 2010, Spruce's balance sheet showed a carrying amount of net assets of \$3,200,000. The carrying amounts are equal to the fair values of all the identifiable assets except property, plant, and equipment. However, the fair value of Spruce's property, plant and equipment exceeded its carrying amount by \$150,000. In its December 1, 2010 consolidated balance sheet, what amount should Poplar report as goodwill?

- \$550,000
- \$400,000
- \$250,000
- \$0

**24.** Cicci and Arias are partners who share profits and losses in the ratio of 7:3, respectively. On October 5, 2010, their respective capital accounts were as follows:

Cicci	\$35,000
Arias	<u>30,000</u>
Total	<u>\$65,000</u>

On that date they agreed to admit Soto as a partner with a one-third interest in the capital and profits and losses, upon his investment of \$25,000. The new partnership will begin with a total capital of \$90,000. Immediately after Soto's admission, what are the capital balances of Cicci, Arias, and Soto, respectively?

- \$30,000; \$30,000; \$30,000
- \$31,500; \$28,500; \$30,000
- \$31,667; \$28,333; \$30,000
- \$35,000; \$30,000; \$25,000

**25.** A not-for-profit organization receives \$1,000 from a donor. The donor receives two tickets to dinner with a fair market value of \$150. What amount should be recorded as contribution revenue?

- a. \$0
  - b. \$150
  - c. \$850
  - d. \$1,000
- 26.** The impairment rules for long-lived assets apply to all of the following **except**:
- a. Buildings currently used in the business.
  - b. Financial instruments.
  - c. Land.
  - d. Minicomputers used to run a production process.
- 27.** A change from the sum-of-the-years' digits depreciation method to the straight-line depreciation method is accounted for as a(n)
- a. Accounting estimate change.
  - b. Accounting principle change.
  - c. Error correction.
  - d. Prior period adjustment.
- 28.** On December 1, Charles Company's board of directors declared a cash dividend of \$1.00 per share on the 50,000 shares of common stock outstanding. The company also has 5,000 shares of treasury stock. Shareholders of record on December 15 are eligible for the dividend, which is to be paid on January 1. On December 1, the company should
- a. Make no accounting entry.
  - b. Debit retained earnings for \$45,000.
  - c. Debit retained earnings for \$55,000.
  - d. Debit retained earnings for \$50,000.
- 29.** Which of the following is not true about the presentation of financial statements under IFRS?
- a. A separate statement of comprehensive income and statement of changes in equity is required.
  - b. The LIFO cost flow assumption is not allowed for inventories.
  - c. Presentation of extraordinary items is required.
  - d. Impairment losses may be reversed in future periods.
- 30.** Milan Corporation prepares its financial statements in accordance with IFRS. Milan acquires 80% of the stock of Petri Corporation in a transaction that qualifies as a business acquisition. At what amount should Milan record the noncontrolling interest in Petri in its consolidated financial statements?
- I. The fair value of the shares of stock not held by the acquirer.
  - II. The proportionate share of the fair value of net identifiable assets of the acquiree.
  - III. The proportionate share of the book value of net identifiable assets of the acquiree
  - IV. The fair value of the shares of stock held by the noncontrolling interest plus the proportionate share of goodwill.
- a. I or II.
  - b. I, II, or III.
  - c. I or III.
  - d. I, II, or IV.

**Hints for Testlet 2**

1. Required for proprietary funds and governmental entities that use proprietary fund accounting.
2. Voluntarily established endowments are still part of unrestricted net assets.
3. Taxes on exchanges are derived tax revenue.
4. Contribution revenue is reported on accrual basis.
5. Reverse amounts that have been recognized.
6. Operating activities section of SCF parallels IS.
7. Cost—subtract from stockholders' equity; par value—subtract from shares issued.
8. Allowance increases when account previously written off becomes collectible.
9. Want to find income available to common stockholders.
10. These funds have been segregated for the company's long-term needs.
11. Defer if temporary.
12. A strike is not considered extraordinary.
13. Current cost accounting discards historical cost.
14. Pension liability = FV plan assets – PBO.
15. Loss on sale is estimated.
16. Gain = Prerestructure carrying amount (including unpaid interest) – Future cash flows.
17. Account for as short-term obligations expected to be refinanced.
18. The investment was held only for the last six months of the year. Equity method was used to account for the investment.
19. Recall the four conditions for accrual.
20. Under the terms “FOB shipping point,” title is transferred when goods are delivered to the common carrier.
21. Review Module 12.
22. Depreciate over remaining useful life.
23. Purchase price minus fair market value of identifiable assets.  $\$3,600,000 - \$3,350,000 = \$250,000$ .
24. Allocate bonus according to P & L ratio.
25. Contribution is amount above fair market value.
26. ASC Topic 360 on impairment applies to fixed assets.
27. Change in method and change in estimate may be related.
28. What entry is required on the day of declaration?
29. No trick here.
30. A choice from two methods is allowed.

## Answers to Testlet 2

1. c	6. a	11. d	16. b	21. d	26. b
2. b	7. b	12. b	17. a	22. c	27. a
3. a	8. d	13. d	18. c	23. c	28. d
4. c	9. a	14. d	19. d	24. b	29. c
5. b	10. a	15. d	20. d	25. c	30. a

## Explanations to Testlet 2

- (c) A statement of cash flows is required for proprietary funds, and proprietary funds include internal service funds and enterprise funds. Examples of enterprise funds include utilities, airports, and swimming pools.
- (b) Quasi endowments are established voluntarily by the organization and may be rescinded at any time. Therefore, they are classified as part of unrestricted net assets.
- (a) This is an example of derived tax revenue.
- (c) The contributions revenue is \$90,000 ( $\$100,000 \times 90\%$ ), the amount expected to be collected.
- (b) Reclassification adjustments are necessary to keep from double counting gains and losses that have been recognized in ordinary income during the period.
- (a) Interest payments are classified as cash flows for operating activities.
- (b) No matter what method is used, stockholders' equity is decreased as a result of the purchase of treasury stock.
- (d) The only item that would decrease the allowance for doubtful accounts is the write-off of an uncollectible account.
- (a) Basic earnings per share is calculated by dividing the number of shares of common stock outstanding by net income reduced by the amount of dividends to nonconvertible cumulative preferred stock.
- (a) The amount should be reported as a noncurrent asset because it is committed to pay a noncurrent liability.
- (d) A loss that is not expected to be recovered should be recognized in the quarter that it is incurred.
- (b) Extraordinary items are unusual and infrequent in occurrence.
- (d) On current value financial statements the increase in the value of \$200,000 is reported in 2010 and the \$50,000 additional gain on sale is recognized in 2011.
- (d) The required minimum liability is \$65,000 ( $\$290,000$  projected benefit obligation –  $\$225,000$  fair value of plan assets).
- (d) The amount that should be presented as the total loss from discontinued operations is \$720,000 [ $\$1,200,000 - (\$1,200,000 \times 40\%)$ ]. Both the operating loss and the estimated loss on sale of assets is included, net of taxes.
- (b) The amount of the gain is \$150,000. The amount owed at the date of restructuring is \$660,000 ( $\$600,000$  principle +  $\$60,000$  in accrued interest). The total future payments equal \$510,000 ( $\$400,000 + \$30,000 + \$40,000 + \$40,000$ ). The difference is equal to \$150,000 ( $\$660,000 - \$510,000$ ).
- (a) Since the items were refinanced prior to issuance of the financial statements, both liabilities may be classified as noncurrent.
- (c) Diamond should report \$120,000 ( $\$300,000 \times 40\%$ ) in income from the investment. This investment should be accounted for using the equity method and Diamond should recognize its share of income earned.
- (d) West should accrue the entire amount of the compensation for future absences earned by the employees.
- (d) The amount of accounts payable that should be presented is \$975,000 ( $\$900,000 + \$50,000 + \$25,000$ ). Where title had passed prior to year-end, the liability and asset should be included on Ashwood's financial statements.
- (d) The certificates should be reported as a liability of \$75,000 ( $1,000 \times \$75$ ), the face value of the certificates.
- (c) The machine should be written down to \$200,000 in 2009 and depreciated over a 5-year period. Therefore, the carrying value of the machine at December 31, 2010 should be \$160,000 [ $\$200,000 - (\$200,000 \div 5)$ ].
- (c) Goodwill should be recorded at \$250,000 [ $(\$18 \times 200,000) - \$3,200,000 - \$150,000$ ].
- (b) The capital balances should be \$31,500; \$28,500; \$30,000. Since Soto is getting a 1/3 interest in the capital of the partnership, he should have 1/3 of the capital. The total capital after Soto's investment is \$90,000 ( $\$65,000 + \$25,000$ ) and, therefore, Soto's capital becomes \$30,000 which is \$5,000 more than his investment. This \$5,000 should be

distributed to the other two partners based on their profit and loss ratio. Cicci's capital would be reduced by \$3,500 ( $\$5,000 \times 7/11$ ), and Arias' capital would be reduced by \$1,500 ( $\$5,000 \times 3/11$ ).

**25. (c)** The contribution is the excess of the donation over the fair market value of the goods or services received by the donor, or \$850 ( $\$1,000 - \$150$ ).

**26. (b)** The standard does not apply to financial instruments.

**27. (a)** A change in estimate effected by a change in principle is accounted for as a change in estimate.

**28. (d)** Retained earnings is debited for the dividends on stock outstanding at the declaration date.

**29. (c)** IFRS does not allow the presentation of extraordinary items.

**30. (a)** IFRS allows noncontrolling interest to be valued either at fair value or the proportionate share of the value of the identifiable assets and liabilities of the acquiree.

**Testlet 3**

1. Wildlife Fund, a private not-for-profit organization, received contributions restricted for research totaling \$1,000,000 in 2009. None of the contributions were spent in 2009. In 2010, \$650,000 of the contributions were used to support the research activities of the organization. The net effect on the statement of activities for the year ended December 31, 2010, would be a
  - a. \$350,000 increase in temporarily restricted net assets.
  - b. \$650,000 decrease in temporarily restricted net assets.
  - c. \$650,000 increase in unrestricted net assets.
  - d. \$650,000 decrease in unrestricted net assets.
2. The statement of activities of the government-wide financial statements is designed primarily to provide information to assess which of the following?
  - a. Operational accountability.
  - b. Financial accountability.
  - c. Fiscal accountability.
  - d. Functional accountability.
3. According to GASB 34, *Basic Financial Statements—and Management’s Discussion and Analysis—for State and Local Governments*, certain budgetary schedules are required supplementary information. What is the minimum budgetary information required to be reported in those schedules?
  - a. A schedule of unfavorable variances at the functional level.
  - b. A schedule showing the final appropriations budget and actual expenditures on a budgetary basis.
  - c. A schedule showing the original budget, the final appropriations budget, and actual inflows, outflows, and balances on a budgetary basis.
  - d. A schedule showing the proposed budget, the approved budget, the final amended budget, actual inflows and outflows on a budgetary basis, and variances between budget and actual.
4. Nox City reported a \$25,000 net increase in the fund balances for total governmental funds. Nox also reported an increase in net assets for the following funds:

Motor pool internal service fund	\$ 9,000
Water enterprise fund	12,000
Employee pension fund	7,000

The motor pool internal service fund provides service to the general fund departments. What amount should Nox report as the change in net assets for governmental activities?

- a. \$25,000
  - b. \$34,000
  - c. \$41,000
  - d. \$46,000
5. Forkin Manor, a nongovernmental not-for-profit organization, is interested in having its financial statements reformatted using terminology that is more readily associated with for-profit entities. The director believes that the term

“operating profit” and the practice of segregating recurring and nonrecurring items more accurately depict the organization’s activities. Under what condition will Forkin be allowed to use “operating profit” and to segregate its recurring items from its nonrecurring items in its statement of activities?

- a. The organization reports the change in unrestricted net assets for the period.
  - b. A parenthetical disclosure in the notes implies that the not-for-profit organization is seeking for-profit entity status.
  - c. Forkin receives special authorization from the Internal Revenue Service that this wording is appropriate.
  - d. At a minimum, the organizations reports the change in permanently restricted net assets for the period.
6. If inventory levels are stable or increasing, an argument that is not in favor of the LIFO method as compared to FIFO is
    - a. Income taxes tend to be reduced in periods of rising prices.
    - b. Cost of goods sold tends to be stated at approximately current cost in the income statement.
    - c. Cost assignments typically parallel the physical flow of the goods.
    - d. Income tends to be smoothed as prices change over time.
  7. If financial assets are exchanged for cash or other consideration, but the transfer does not meet the criteria for a sale, the transferor should account for the transaction as a

	<b>Secured borrowing</b>	<b>Pledge of collateral</b>
a.	No	Yes
b.	Yes	Yes
c.	Yes	No
d.	No	No

8. In accounting for a long-term construction contract using the percentage-of-completion method, the amount of income recognized in any year would be added to
  - a. Deferred revenues.
  - b. Progress billings on contracts.
  - c. Construction in progress.
  - d. Property, plant, and equipment.

9. In calculating the carrying amount of a loan, the lender deducts from the principal

	<b>Direct loan origination costs incurred by the lender</b>	<b>Loan origination fees charged to the borrower</b>
a.	Yes	Yes
b.	Yes	No
c.	No	Yes
d.	No	No

**10.** How is compensation expense measured by public entities for share-based payments classified as equity-based payments?

- Use the normal hourly rate of the employees.
- Measure the intrinsic value of options difference between market price and exercise price at measurement date.
- Measure the fair value of options using an option-pricing model.
- Measure the difference between the market price and the fair value of the options.

**11.** A gain on the sale of a marketable equity security from the available-for-sale portfolio should be presented in a statement of cash flows in which the operating section is prepared using the direct method as a(n)

- Inflow of cash under investing activities only.
- Deduction from net income under operating activities and as an inflow of cash under investing activities.
- Inflow of cash under operating activities only.
- Deduction from net income only.

**12.** Lee Corporation's checkbook balance on December 31, 2010, was \$4,000. In addition, Lee held the following items in its safe on December 31:

Check payable to Lee Corporation, dated January 2, 2011, not included in December 31 checkbook balance	\$1,000
Check payable to Lee Corporation, deposited December 20, and included in December 31 checkbook balance, but returned by bank on December 30, stamped "NSF." The check was redeposited January 2, 2011, and cleared January 7	200
Postage stamps received from mail order customers	75
Check drawn on Lee Corporation's account, payable to a vendor, dated and recorded December 31, but not mailed until January 15, 2011	500

The proper amount to be shown as Cash on Lee's balance sheet at December 31, 2010, is

- \$3,800
- \$4,000
- \$4,300
- \$4,875

**13.** The books of Curtis Company for the year ended December 31, 2010, showed income of \$360,000 before provision for income tax. In computing the taxable income for federal income tax purposes, the following differences were taken into account:

Depreciation deducted for tax purposes in excess of depreciation recorded on the books	\$16,000
Royalty income reported for tax purposes in excess of royalty income recognized on the books	12,000

Assuming a corporate income tax rate of 40%, what should Curtis record as its current federal income tax liability at December 31, 2010?

- \$137,600
- \$142,400
- \$144,000
- \$145,600

**14.** Walker, Inc., a US corporation, ordered a machine from Nippon Corporation of Japan on July 15, 2010, for 1,000,000 yen when the spot rate for yen was 95 yen to the US dollar. Nippon shipped the machine on September 1, 2010, and billed Walker for 1,000,000 yen. The spot rate was 97 yen to the US dollar on this date. Walker bought 1,000,000 yen and paid the invoice on October 25, 2010, when the spot rate was 100 to the US dollar. In Walker's income statement for the year ended December 31, 2010, how much should be reported as foreign exchange gain?

- \$0
- \$217.04
- \$526.32
- \$743.36

**15.** On July 1, 2010, Jasmine Corporation borrowed \$30,000 from the bank on a 5-year note. On July 5, Jasmine used the money as a down payment to buy equipment costing \$50,000. On the statement of cash flows for the year ending December 31, 2010, how should Jasmine disclose the July transactions?

- Operating activities \$20,000 decrease; investing activities \$50,000 increase.
- Investing activities \$50,000 decrease; financing activities \$50,000 increase.
- Investing activities, \$30,000 increase; financing activities \$50,000 increase.
- Investing activities \$50,000 decrease; financing activities \$30,000 increase.

**16.** Howard Co. incurred research and development costs in 2010 as follows:

Materials used in research and development projects	\$ 400,000
Equipment acquired that will have alternate future uses in future research and development projects	2,000,000
Depreciation for 2010 on above equipment	500,000
Personnel costs of persons involved in research and development projects	1,000,000
Consulting fees paid to outsiders for research and development projects	100,000
Indirect costs reasonably allocable to research and development projects	<u>200,000</u>
	<u>\$4,200,000</u>

The amount of research and development costs charged to Howard's 2010 income statement should be

- \$1,500,000
- \$1,700,000

- c. \$2,200,000
- d. \$3,500,000

17. Kay Company, a lessor of office machines, purchased a new machine for \$600,000 on January 1, 2010, which was leased the same day to Lee. The machine will be depreciated \$55,000 per year. The lease is for a four-year period expiring January 1, 2014, and provides for annual rental payments of \$100,000 beginning January 1, 2010. Additionally, Lee paid \$64,000 to Kay as a lease bonus. In its 2010 income statement, what amount of revenue and expense should Kay report on this leased asset?

	Revenue	Expense
a.	\$100,000	\$0
b.	\$116,000	\$0
c.	\$116,000	\$55,000
d.	\$164,000	\$55,000

18. In January 2010 Bell Company exchanged an old machine, with a book value of \$39,000 and a fair value of \$35,000, and paid \$10,000 cash for a similar used machine having a list price of \$50,000. The transaction has commercial substance. At what amount should the machine acquired in the exchange be recorded on the books of Bell?

- a. \$45,000
- b. \$46,000
- c. \$49,000
- d. \$50,000

19. During the course of your audit of the financial statements of H Co., a new client, for the year ended December 31, 2010, you discover the following:

- Inventory at January 1, 2010, had been overstated by \$3,000.
- Inventory at December 31, 2010, was understated by \$5,000.
- An insurance policy covering three years had been purchased on January 2, 2009, for \$1,500. The entire amount was charged as an expense in 2009.

During 2010 the company received a \$1,000 cash advance from a customer for merchandise to be manufactured and shipped during 2011. The \$1,000 had been credited to sales revenues. The company's gross profit on sales is 50%. Net income reported on the 2010 income statement (before reflecting any adjustments for the above items) is \$20,000.

The proper net income for 2010 is

- a. \$26,500
- b. \$23,500
- c. \$16,500
- d. \$20,500

20. The following information is available for Cooke Company for 2010:

Net sales	\$1,800,000
Freight-in	45,000
Purchase discounts	25,000
Ending inventory	120,000

The gross margin is 40% of net sales. What is an estimate of cost of goods available for sale?

- a. \$840,000
- b. \$960,000
- c. \$1,200,000
- d. \$1,220,000

21. Warrants exercisable at \$20 each to obtain 10,000 shares of common stock were outstanding during a period when the average market price of the common stock was \$25. Application of the treasury stock method for the assumed exercise of these warrants in computing diluted earnings per share will increase the weighted-average number of outstanding common stock shares by

- a. 8,000
- b. 8,333
- c. 2,000
- d. 1,667

22. Greg Corp. reported revenue of \$1,250,000 in its accrual-basis income statement for the year ended June 30, 2010. Additional information was as follows:

Accounts receivable June 30, 2009	\$400,000
Accounts receivable June 30, 2010	530,000
Uncollectible accounts written off during the fiscal year	15,000

Under the cash basis, Greg should report revenue of

- a. \$835,000
- b. \$850,000
- c. \$1,105,000
- d. \$1,135,000

23. On January 1, 2010, Mann Company's allowance for doubtful accounts had a credit balance of \$30,000. During 2010 Mann charged \$64,000 to doubtful accounts expense, wrote off \$46,000 of uncollectible accounts receivable, and unexpectedly recovered \$12,000 of bad debts written off in the prior year. The allowance for doubtful accounts balance at December 31, 2010, would be

- a. \$48,000
- b. \$60,000
- c. \$64,000
- d. \$94,000

24. Greene Company bought a patent from White Company on January 1, 2010, for \$102,000. An independent research consultant retained by Greene estimated that the remaining useful life of the patent was four years. Its remaining legal life was six years. Its unamortized cost on White's books at January 1, 2010, was \$30,000. How much should be amortized by Greene for the year ended December 31, 2010?

- a. \$5,000
- b. \$7,500
- c. \$17,000
- d. \$25,500

**25.** On January 1, 2010, Harry Corporation sold equipment costing \$2,000,000 with accumulated depreciation of \$500,000 to Anna Corporation, its wholly owned subsidiary, for \$1,800,000. Harry was depreciating the equipment on the straight-line method over twenty years with no salvage value, which Anna continued. In consolidation at December 31, 2010, the cost and accumulated depreciation, respectively, should be

- \$1,500,000 and \$100,000
- \$1,800,000 and \$100,000
- \$2,000,000 and \$100,000
- \$2,000,000 and \$600,000

**26.** Which of the following is true about accounting for leases under IFRS?

- All leases are treated as capital leases.
- All leases are treated as operating leases.
- When land and building are leased, elements of the lease are considered separately in accounting for the lease.
- Operating leases are never recorded on the balance sheet.

**27.** According to ASC Topic 250, *Accounting Changes and Error Corrections*, a change in the liability for warranty costs requires

- Presenting prior period financial statements as previously reported.
- Presenting the effect of pro forma data on income and earnings per share for all prior periods presented.
- Restating the financial statements of all prior periods presented.
- Reporting current and future financial statements on the new basis.

**28.** Rouge Corporation prepares consolidated financial statements in accordance with International Financial Reporting Standards. Rouge has four subsidiaries, and it is considering excluding one of the subsidiaries from consolidation. Which of the following conditions are required for Rouge to exclude the subsidiary from consolidation?

- The other owners of the subsidiary do not object to nonconsolidation.
  - The parent makes an election to not consolidate.
  - The subsidiary does not have any publicly traded debt or equity instruments.
  - The parent must own 100% of the subsidiary.
- I and II.
  - I, II, and III.
  - I and III.
  - II, and IV.

**Items 29 and 30** are based on the following information:

Patterson Company has the following information on one of its vehicles purchased on January 1, 2008:

Vehicle cost	\$50,000
Useful life, years, estimated	5
Useful life, miles, estimated	100,000
Salvage value, estimated	\$10,000
Actual miles driven, 2008	30,000
2009	20,000
2010	15,000

No estimates were changed during the life of the asset.

**29.** The 2010 depreciation expense for the vehicle using the sum-of-the-years' digits (SYD) method was

- \$6,000
- \$8,000
- \$10,000
- \$13,333

**30.** The fiscal 2009 year-end accumulated depreciation balance, using the double-declining balance method was

- \$12,000
- \$16,000
- \$25,600
- \$32,000

**Hints for Testlet 3**

1. Spending of funds results in decrease in restricted assets.
2. Statement of activities focuses on operations.
3. Original budget, final budget, and actual inflows, outflows, and balances.
4. Water enterprise and pension fund are excluded.
5. Unrestricted net assets must be shown.
6. Most recent purchases go to CGS first, reducing income and matching current costs to revenues.
7. What is debt?
8. Recall the account to be debited.
9. How is lender's investment affected by these?
10. Recognize compensation for stock options.
11. The direct method is **not** based on net income, which includes gains and losses.
12. Postdated check should be excluded.
13. Deduct excess tax depreciation from book income.
14. Walker was billed at \$.4875, but only had to pay \$.4855.
15. Borrowing from the bank increases cash from financing activities by \$30,000; purchasing equipment decreases cash by the amount of the purchase \$50,000.
16. Only intangibles or fixed assets purchased from others having alternative future uses may be deferred.
17. The bonus is amortized over the lease term.
18. Losses are **always** recognized when FV is determinable.
19. The portion of the cash advance representing income = **unearned** revenues.
20. Freight-in and discounts are already included in cost of sales and ending inventory.
21. Calculate number of shares that could be reacquired with proceeds.
22. The entry to write off bad debts debits the allowance account (not expense).
23. A recovery is charged back to the allowance account.
24. Review Module 11, Sec. J.
25. Intercompany transactions must be eliminated.
26. IFRS allows operating leases to be capitalized.
27. Warranty liabilities are estimated liabilities.
28. In addition to the parent preparing financial statements in accordance with IFRS, there are two other requirements.
29. Ratio is three-fifteenths.
30. DDB rate is equal to 40%.

### Answers to Testlet 3

1. b	6. c	11. a	16. c	21. a	26. c
2. a	7. b	12. c	17. c	22. c	27. d
3. c	8. c	13. b	18. a	23. b	28. c
4. b	9. c	14. b	19. a	24. d	29. b
5. a	10. c	15. d	20. c	25. d	30. d

### Explanations to Testlet 3

- (b) The expenditure results in \$650,000 being released from the temporarily restricted assets category.
- (a) The statement of activities is designed to provide information to assess operational accountability.
- (c) The minimum disclosure is the original budget, the final budget, and actual inflows, outflows and balances on a budgetary basis.
- (b) The change in net assets for governmental activities would include the increase in the fund balances of governmental funds (\$25,000) and the motor pool internal service fund. The amount for the water enterprise fund would be presented in business-type activities and the employee pension fund change would be presented in the fiduciary fund statement.
- (a) This is allowed as long as the changes in net assets for each class are reported.
- (c) FIFO cost assignment typically parallels the flow of goods, not LIFO.
- (b) If the exchange of an asset does not meet the criteria for a sale, the transaction should be treated as a secured borrowing with pledged collateral.
- (c) The amount of revenue recognized is added to construction in progress.
- (c) In calculating the carrying amount of a loan, the lender deducts from the principle the loan origination fees charged to the borrower but not direct loan origination costs incurred by the lender.
- (c) Compensation expense is measured at fair value, generally with the use of an option pricing model.
- (a) The gain is included in the proceeds from the sale of the security in the investing activities section only. Since the operating section under the direct method does not start with net income, the gain would not be presented in the operating section.
- (c) Cash is equal to \$4,300 (\$4,000 in the account – \$200 NSF check + \$500 postdated check).
- (b) The current tax liability is equal to \$142,400  $[(\$360,000 - \$16,000 + \$14,000) \times 40\%]$ .
- (b) The gain is the difference between the exchange rate when the machine title passed (shipping date) and the exchange rate when the liability is paid. Therefore the gain is equal to \$309.28  $[(1,000,000 \text{ yen} \div 97 \text{ per dollar}) - (1,000,000 \text{ yen} \div 100 \text{ per dollar})]$ .
- (d) The transactions would be shown as investing activities (\$50,000 decrease for the machine purchase) and financing activities (\$30,000 for the loan from the bank).
- (c) The total research and development costs would equal \$2,200,000 (\$400,000 materials + \$500,000 depreciation + \$1,000,000 personnel costs + \$100,000 consulting fees + \$200,000 indirect costs).
- (c) Revenue is equal to \$116,000  $[\$100,000 + (\$64,000 \div 4 \text{ years})]$ , and expense is equal to \$55,000 depreciation.
- (a) The machine should be recorded at the fair value of the consideration given or \$45,000 (\$35,000 + \$10,000). The list price does not usually reflect the fair value of an item.
- (a) The proper amount of income is equal to \$26,500  $(\$20,000 + \$3,000 \text{ overstatement of beginning inventory} + \$5,000 \text{ understatement of ending inventory} - \$500 \text{ insurance expense} - \$1,000 \text{ overstatement of revenue})$ .
- (c) Cost of goods available for sale is equal to cost of goods sold plus ending inventory. Cost of goods sold would be estimated to be \$1,080,000  $(\$1,800,000 \times 60\%)$ . Therefore, an estimate of cost of goods available for sale would be \$1,200,000  $(\$1,080,000 \text{ cost of goods sold} + \$120,000 \text{ ending inventory})$ .
- (a) The treasury stock method results in 8,000 additional shares  $[(10,000 \times \$20) \div \$25]$ .
- (c) The cash basis revenue is equal to \$1,105,000  $(\$1,250,000 + \$400,000 - \$530,000 - \$15,000)$ .
- (b) The amount of the allowance for uncollectible accounts is \$60,000  $(\$30,000 + \$64,000 - \$46,000 + \$12,000)$ .
- (d) The amortization expense is equal to \$25,500  $(\$102,000 \div 4 \text{ years})$ .
- (d) The cost and accumulated depreciation is equal to \$2,000,000 and \$600,000, respectively. On the consolidated financial statements the asset would have Harry's cost and accumulated depreciation.

- 26. (c)** IFRS provides that when land and a building are leased, they should be considered separately in accounting for the lease.
- 27. (d)** A change in warranty liability is accounted for on a prospective basis.
- 28. (c)** IFRS states that a parent may exclude a subsidiary only if three conditions are met: (1) it is wholly or partially owned and its other owners do not object to nonconsolidation;
- (2) it does not have any debt or equity instruments publicly traded; and (3) its parent prepares consolidated financial statements that comply with IFRS.
- 29. (b)** The depreciation expense under the sum-of-the-years' digits method is \$8,000  $[(\$50,000 - \$10,000) \times 3/15]$ .
- 30. (d)** The accumulated depreciation balance using the double-declining balance method is equal to \$32,000  $[(\$50,000 \times 40\%) + (\$30,000 \times 40\%)]$ .

## Testlet 4

### Task-Based Simulation 1

<b>Property, Plant, and Equipment</b>	<b>Authoritative Literature</b>		<b>Help</b>

At December 31, 2009, Cord Company's plant asset and accumulated depreciation accounts had balances as follows:

Category	Plant assets	Accumulated depreciation
Land	\$ 175,000	\$ --
Building	1,500,000	328,900
Automobiles and trucks	172,000	100,325

#### *Depreciation methods and useful lives*

Buildings—150% declining balance; twenty-five years.

Automobiles and trucks—150% declining balance; five years, all acquired after 2003.

Depreciation is computed to the nearest month.

The salvage values of the depreciable assets are immaterial.

#### *Transactions during 2010 and other information*

On January 6, 2010, a plant facility consisting of land and building was acquired from King Corp. in exchange for 25,000 shares of Cord's common stock. On this date, Cord's stock has a market price of \$50 a share. Current assessed values of land and building for property tax purposes are \$187,500 and \$562,500, respectively.

- On August 30, 2010, Cord purchased a new automobile for \$12,500.
- On September 30, 2010, a truck with a cost of \$24,000 and a carrying amount of \$9,100 on date of sale was sold for \$11,500. Depreciation for the nine months ended September 30, 2010, was \$2,650.
- On November 4, 2010, Cord purchased for \$350,000 a tract of land as a potential future building site.

Complete the following spreadsheet analyzing the changes in each of the plant asset accounts during 2010. Show supporting calculations in the space provided below the table.

<b>Financial Statement Amounts</b>	<b>Authoritative Literature</b>	<b>Help</b>

Moxley Co. is a publicly held company whose shares are traded in the over-the-counter market. The stockholders' equity accounts at December 31, 2009, had the following balances:

Preferred stock, \$100 par value, 6% cumulative; 5,000 shares authorized; 2,000 issued and outstanding	\$ 200,000
Common stock, \$1 par value, 150,000 shares authorized; 100,000 issued and outstanding	100,000
Additional paid-in capital	800,000
Retained earnings	<u>1,586,000</u>
Total stockholders' equity	<u>\$2,686,000</u>

Transactions during 2010 and other information relating to the stockholders' equity accounts were as follows:

- February 1, 2010—Issued 13,000 shares of common stock to Ram Co. in exchange for land. On the date issued, the stock had a market price of \$11 per share. The land had a carrying value on Ram's books for \$135,000, and an assessed value for property taxes of \$90,000.
- March 1, 2010—Purchased 5,000 shares of its own commons stock to be held as treasury stock for \$14 per share. Moxley uses the cost method to account for treasury stock. Transactions in treasury stock are legal in Moxley's state of incorporation.
- May 10, 2010—Declared a property dividend of marketable securities held by Moxley to common shareholders. The securities had a carrying value of \$600,000; fair value on relevant dates were

Date of declaration (May 10, 2010)	\$720,000
Date of record (May 25, 2010)	758,000
Date of distribution (June 1, 2010)	736,000

- October 1, 2010—Reissued 2,000 shares of treasury stock for \$16 per share.
- November 4, 2010—Declared a cash dividend of \$1.50 per share to all common shareholders of record November 15, 2010.
- December 20, 2010—Declared the required annual cash dividend on preferred stock for 2010. The dividend was paid on January 5, 2011.
- January 16, 2011—Before closing the accounting records for 2010, Moxley became aware that no amortization had been recorded for 2009 for a patent purchased on July 1, 2009. Amortization expense was properly recorded in 2010. The patent was properly capitalized at \$320,000 and had an estimated useful life of eight year when purchased. Moxley's income tax rate is 30%. The appropriate correcting entry was recorded on the same day.
- Adjusted net income for 2010 was \$838,000.

Items 1 through 4 represent amounts to be reported on Moxley's 2010 statement of retained earnings. Calculate the amounts requested.

1. Prior period adjustment.
2. Preferred dividends.
3. Common dividends—cash.
4. Common dividends—property.

**Task-Based Simulation 4**

Terminology	Authoritative Literature	Help

Riley Corp. has entered into several derivative contracts in order to manage its risk exposure. Select the **best** answer for each item from the terms listed in A-L. No term should be used more than once.

### Answer List

- A. A hedge of the exposure to changes in the fair value of a recognized asset or liability or an unrecognized firm commitment.
- B. A hedge of the exposure to variability in the cash flows of a forecasted transaction or a recognized asset or liability.
- C. A hedge of the foreign currency exposure of an unrecognized firm commitment, an available-for-sale security, a forecasted transaction, or a net investment in a foreign operation.
- D. Financial instruments that contain features which, if they stood alone, would meet the definition of a derivative instrument.
- E. Two or more separate derivatives traded as a set.
- F. Commonly a specified price or rate such as a stock price, interest rate, currency rate, commodity price, or a related index.
- G. A legally enforceable, binding agreement with an unrelated party, specifying all significant terms and including a disincentive for nonperformance sufficient to make performance likely.
- H. The referenced associated asset or liability, commonly a number of units.
- I. The difference between an option's price and its intrinsic value.
- J. A transaction expected to occur for which there is no firm commitment, which gives the entity no present rights or obligations.
- K. With regard to put options, it is the larger of zero or the spread between the exercise price and the stock price.
- L. Agreement between two parties to buy and sell a specific quantity of a commodity, foreign currency, or financial instrument at an agreed-upon price, with delivery and/or settlement at a designated future date.

<b>Financial Statement Amounts</b>		
	<b>Authoritative Literature</b>	<b>Help</b>

**Situation**

On January 2, 2011, Purl Co. purchased 90% of Strand Co.’s outstanding common stock at a purchase price that was in excess of Strand’s stockholders’ equity. On that date, the fair value of Strand’s assets and liabilities equaled their carrying amounts. Purl has accounted for the purchase as a business acquisition. Transactions during 2011 were as follows:

- On February 15, 2011, Purl sold equipment to Strand at a price higher than the equipment’s carrying amount. The equipment has a remaining life of three years and was depreciated using the straight-line method by both companies.
- During 2011, Purl sold merchandise to Strand under the same terms it offered to third parties. At December 31, 2011, one-third of this merchandise remained in Strand’s inventory.
- On November 15, 2011, both Purl and Strand paid cash dividends to their respective stockholders.
- On December 31, 2011, Purl recorded its equity in Strand’s earnings.

**Items 1 through 10** relate to accounts that may or may not be included in Purl and Strand’s consolidated financial statements. The list below refers to the possible ways those accounts may be reported in Purl’s consolidated financial statements for the year ended December 31, 2011. An answer may be selected once, more than once, or not at all.

**Responses to be selected**

- A.** Sum of the amounts on Purl and Strand’s separate unconsolidated financial statements
- B.** Less than the sum of the amounts on Purl and Strand’s separate unconsolidated financial statements, but not the same as the amount on either separate unconsolidated financial statement
- C.** Same as the amount for Purl only
- D.** Same as the amount for Strand only
- E.** Eliminated entirely in consolidation
- F.** Shown in the consolidated financial statements but not in the separate unconsolidated financial statements

### Solution to Task-Based Simulation 3

Financial Statement Amounts	Authoritative Literature	Help

1. **(\$14,000)** Prior period adjustment is the term generally applied to corrections of errors of prior periods. In this problem no amortization had been recorded in a prior year—an error. Since this is not a self-correcting error, it still existed in 2010. The calculation is cost (\$320,000) , useful life (eight years) for 1/2 year (purchased July 1). Prior period adjustments are disclosed net of tax (30%).  $\$320,000/8 \times 1/2 \times (1 - .3) = \$14,000$ . An adjustment is made to the opening balance of retained earnings in 2010. In addition, the financial statements of the prior period are restated to reflect the correct amounts of assets and liabilities at the beginning of the first period presented. Financial statements for each prior period are adjusted to reflect the correction of the period-specific effects of the error.
2. **(\$12,000)** Preferred dividends are 6% and cumulative. They were declared during 2010 and paid in 2011. The declaration is sufficient to record and recognize the dividends legally; they do not have to be paid in the current year to be recognized during that time period. These dividends will be used in the numerator in question 10 when calculating the 2010 EPS. Since these dividends are cumulative, they would be used in the calculation of EPS even if they had not been declared. The amount of preferred dividends is derived by multiplying the par value of the stock by its rate.  $6\% \times \$200,000 \text{ par} = \$12,000 \text{ dividends}$ .
3. **(\$165,000)** Common dividends—cash is calculated by the formula: Common shares outstanding  $\times$  Dividend per share. In this problem the number of shares outstanding is affected by the beginning shares (100,000), shares issued (13,000), and treasury shares purchased and sold (5,000 purchased, 2,000 sold) prior to the dividend date of November 4.  $100,000 + 13,000 - 5,000 + 2,000 = 110,000 \text{ shares outstanding} \times \text{dividend rate } \$1.50 = \$165,000$ .
4. **(\$720,000)** Common dividends—property differ from cash dividends because the property may be carried in the accounts at an amount which does not equal its fair value (cash is always at its fair value). Management intends to distribute the property at its fair value, therefore it is necessary to bring the property to fair value on the date management is legally forced to distribute it (the declaration date). Value fluctuations beyond that date are irrelevant.

### Solution to Task-Based Simulation 4

Stockholders' Equity	Authoritative Literature	Help

1. **(113,000)** The number of shares issued differs from the number of shares outstanding. Shares issued include those outstanding as well as those held in the treasury. Shares outstanding are equal to 110,000 plus 3,000 treasury shares = 113,000 shares.
2. **(\$113,000)** Amount of common stock issued (113,000 shares) multiplied by the par value of each share, \$1.
3. **(\$934,000)** The additional paid-in capital, including treasury stock transactions, is derived by adding the beginning balance (\$800,000) to the excess (\$10) of issue price (\$11) over par value (\$1) for the shares issued (13,000) to acquire land on February 1, 2010. In addition, the sale of the treasury stock (2,000 shares) at an amount (\$16) greater than cost (\$14) gives rise to a nonoperating gain that cannot be included in net income since it was both not related to operations and is a transaction in the company's own stock.  $\$800,000 + (13,000 \times \$10) + (2,000 \times \$16 - \$14) = \$934,000$ .
4. **(\$42,000)** Treasury stock—Since the Moxley Co. follows the cost method of accounting for treasury stock, this answer is derived by multiplying the shares of treasury stock (3,000) by their cost (\$14).  $3,000 \times \$14 = \$42,000$ .
5. **(\$24.86)** Book value per share is a concept that relates common stockholders' equity to shares of common stock. The "per share" referred to is always the **common** shares unless the problem states some other type of shares. In this case it is to be calculated before the prior period adjustment. It is necessary to subtract preferred stock's total liquidating value ( $\$100 \times 2,000 \text{ sh} = \$200,000$ ) from total stockholders' equity (\$2,686,000) to obtain common stockholders' equity. In this problem no liquidating value is given, so par value is used. The resulting amount ( $\$2,686,000 - \$200,000 = \$2,486,000$ ) is divided by the common shares outstanding (100,000) to obtain book value per share (\$24.86).  $(\$2,686,000 - \$200,000) , 100,000 = \$24.86$ .

6. (\$826,000) The formula for calculating earnings per share is  $(NI - \text{Preferred dividends}) / \text{Wtd-avg. shares outstanding}$ . The numerator is income available to common stockholders. The problem states that adjusted net income for 2010 was \$838,000. The word “adjusted” tells the candidate that net income includes all information concerning transactions in the problem and need not be changed in any way. Preferred dividends were 12,000.  $\$838,000 - \$12,000 = \$826,000$ .

### Explanation of solutions

- (L) Agreement for purchase and sale of a specified quantity of a commodity, foreign currency, or financial instrument at an agreed-upon price, with future delivery and/or settlement at a designated future date.
- (J) A transaction expected to occur for which there is no firm commitment, which gives the entity no present rights or obligations.
- (G) A legally enforceable, binding agreement with an unrelated party, specifying all significant terms and including a disincentive for nonperformance sufficient to make performance likely.
- (D) Financial instruments that contain features which, if they stood alone, would meet the definition of a derivative instrument.
- (K) With regard to put options, it is the larger of zero or the spread between the exercise price and the stock price.
- (F) Commonly a specified price or rate such as a stock price, interest rate, currency rate, commodity price, or a related index.
- (H) The referenced associated asset or liability, commonly a number of units.
- (B) A hedge of the exposure to variability in the cash flows of a forecasted transaction or a recognized asset or liability.
- (A) A hedge of the exposure to changes in the fair value of a recognized asset or liability or an unrecognized firm commitment.
- (C) A hedge of the foreign currency exposure of an unrecognized firm commitment, an available-for-sale security, a forecasted transaction, or a net investment in a foreign operation.

***Explanation of solutions***

- (A) The total of cash on each entity's books equals the total for the consolidated entity.
- (B) The amount shown for equipment on the consolidated balance sheet is less than the sum of the amounts on Purl's and Strand's unconsolidated balance sheets because on an upstream intercompany transaction the parent's share (90%) of the gain would be eliminated. The equipment now on the parent's books would be reduced on the worksheet by subtracting 90% of the gain not realized through depreciation from equipment.
- (E) The investment in subsidiary would be eliminated in the process of consolidation in the same entry in which the subsidiary's equity accounts are eliminated.
- (F) Noncontrolling interest is presented only in the consolidated balance sheet.
- (C) Only Purl's common stock would be included in the consolidated balance sheet. All of Strand's common stock would be eliminated. Ten percent would be included in noncontrolling interest.
- (C) Beginning retained earnings would be the same as Purl's. Under the purchase method none of the acquiree's (Strand's) retained earnings is carried forward in recording the business combination.
- (C) Dividends paid would include only the parent's. The dividends of the subsidiary are all eliminated in consolidation.
- (B) Cost of goods would be less than the sum of that of Purl and Strand because intercompany profit would be eliminated from cost of goods sold. The amount eliminated would be 100% of the intercompany profit on two-thirds of the downstream sale from Purl to Strand.
- (A) No information is given to indicate that there is any intercompany interest-bearing debt. Thus, the amount included for interest expense in the consolidated financial statements would be the sum of the two entities.
- (B) Depreciation expense would be less on the consolidated financial statement than the sum of depreciation in each firm's unconsolidated financial statements because the part relating to the intercompany profit on equipment sold upstream would be eliminated in consolidation.

ASC	835	20	15	5
-----	-----	----	----	---

## Appendix C: Sample Financial Accounting and Reporting Testlet Released by AICPA

1. For \$50 a month, Rawl Co. visits its customers' premises and performs insect control services. If customers experience problems between regularly scheduled visits, Rawl makes service calls at no additional charge. Instead of paying monthly, customers may pay an annual fee of \$540 in advance. For a customer who pays the annual fee in advance, Rawl should recognize the related revenue

- a. Evenly over the contract year as the services are performed.
- b. At the end of the contract year after all of the services have been performed.
- c. When the cash is collected.
- d. At the end of the fiscal year.

2. Simm Co. has determined its December 31 inventory on a FIFO basis to be \$400,000. Information pertaining to that inventory follows:

Estimated selling price	\$403,000
Estimated cost of disposal	20,000
Normal profit margin	60,000
Current replacement cost	360,000

Simm records losses that result from applying the lower of cost or market rule. At December 31, what should be the amount of Simm's inventory?

- a. \$400,000
- b. \$388,000
- c. \$360,000
- d. \$328,000

3. A bond issued on June 1, 2011, has interest payment dates of April 1 and October 1. Bond interest expense for the year ended December 31, 2011, is for a period of

- a. Three months.
- b. Four months.
- c. Six months.
- d. Seven months.

1. (a) Revenue is generally recognized when **realized or realizable and earned**. Revenues are considered earned when the entity has substantially accomplished what it must do to be entitled to the benefits represented by the revenues. Therefore, service revenue generally is earned as the work is performed, and it should be recognized evenly over the contract year as the monthly services are performed. Answer (c) is incorrect because accrual basis accounting is preferable; SFAC 6 explains that cash method provides little information about the results of operations. Answer (d) is incorrect because revenue should be recognized when earned. Answer (b) is incorrect because the completed-contract method should only be used when reasonable estimates of contract costs, revenues, and the extent of progress toward completion cannot be reasonably estimated.

2. (c) The lower of cost or market (LCM) is used for financial reporting of inventories. The market value of inventory is defined as the replacement cost (RC), as long as it is less than the ceiling (net realizable value, or NRV) and more than the floor (NRV less a normal profit, or NRV - NP). In this case, the amounts are

Ceiling: NRV = \$408,000 est. sell. price	
- \$20,000 dep. cost =	<u>\$388,000</u>
Replacement cost	<u>\$360,000</u>
Floor: NRV - NP = \$388,000 - \$60,000 =	<u>\$328,000</u>

The designated market value is the replacement cost of \$360,000 because it falls between the floor and the ceiling. Once market value is designated, LCM can be determined by simply picking the lower of cost (\$400,000) or market (\$360,000). Thus, the inventory should be reported at market.

3. (d) Under the accrual basis of accounting, expenses should be recognized when incurred, regardless of when cash is paid. Therefore, expense from the bond issue date (6/1/11) through year-end (12/31/11) should be recognized in 2012.

The seven months (6/1/11 - 12/31/11) of interest expense would be the net effect of entries prepared on the issuance date, the October 1 interest date, and December 31 (adjusting entry).

4. Governmental financial reporting should provide information to assist users in which situation(s)?

- I. Making social and political decisions.
  - II. Assessing whether current-year citizens received services but shifted part of the payment burden to future-year citizens.
- a. I only.
  - b. II only.
  - c. Both I and II.
  - d. Neither I nor II.

5. During the year, Jones Foundation received the following support:

- A cash contribution of \$875,000 to be used at the board of directors' discretion;
- A promise to contribute \$500,000 in the following year from a supporter who has made similar contributions in prior periods;
- Contributed legal services with a value of \$100,000, which Jones would have otherwise purchased.

At what amounts would Jones classify and record these transactions?

	<b>Unrestricted revenue</b>	<b>Temporarily restricted revenue</b>
a.	\$875,000	\$500,000
b.	\$975,000	\$500,000
c.	\$975,000	\$0
d.	\$1,375,000	\$0

4. (c) Financial reporting by state and local governments is used in making economic, social, and political decisions and in assessing accountability. Additionally, current year citizens need information concerning when costs of current services are actually paid for. Thus, both items I and II are provided to the users of governmental reporting.

5. (b) Restricted revenues are recorded only when a restriction has been placed by the donor. One type of restricted revenue is a pledge that has not been received during the year. This is considered a time restriction; accordingly, the \$500,000 would be considered a temporarily restricted revenue based on a time restriction. The \$875,000 and the \$100,000 would be considered unrestricted revenues. The \$100,000 is considered contributed services and carries no restriction. Contributed services are recognized when the services received (1) create or enhance nonfinancial assets or (2) require specialized skills, are provided by individuals possessing those skills, and would typically need to be purchased if not provided by donation. The \$100,000 contribution meets the second criterion.

**NOTE:** This simulation has been modified to reflect the effects of SFAS 154 and adapted to a task-based simulation format.

## Task-Based Simulation 2

Cumulative Effect		
	Authoritative Literature	Help

### Situation

On January 1, 2008, Charleston Company purchased machinery at a cost of \$150,000. The machinery was depreciated under the double-declining balance method, assuming a ten-year life and no salvage value. The company took full-year depreciation in the year of acquisition. During 2011, management decided to change depreciation methods to the straight-line method for financial reporting purposes, but it continued to use the accelerated method for tax purposes. Charleston has a 40% effective income tax rate.

Using the spreadsheet below, calculate the amount of the depreciation expense for Charleston for each year. You may record your entries as numbers or as formulas that produce the correct number. Be sure that the value of the change appears in the shaded cell at the bottom of the spreadsheet.

**NOTE:** To use a formula in the spreadsheet, it must be preceded by an equal sign (e.g., = B1 + B2).

A	B	C	D
		Depreciation expense	
<b>Double-declining balance method</b>			
	2008		
	2009		
	2010		
<b>Straight-line method</b>			
	2011		
<b>Accumulated depreciation 12/31/2011</b>			

### Solution to Task-Based Simulation 2

Cumulative Effect		
	Authoritative Literature	Help

A	B	C	D
		Depreciation expense	
<b>Double-declining balance method</b>			
	2008	\$30,000	
	2009	\$24,000	
	2010	\$19,200	
<b>Straight-line method</b>			
	2011	\$10,971	
<b>Accumulated depreciation 12/31/2011</b>			\$84,171

There is no cumulative effect of change in method on the income statement for a change in depreciation method. The change is treated as a change in estimate effected by a change in accounting method. A change in estimate is accounted for in the period of the change and future periods.

The machinery was depreciated using the double-declining balance method assuming a ten-year life and no salvage. Assume the machinery was acquired on January 1, 2008, and the change in depreciation method to straight-line was made in 2011. To account for the change on a prospective basis, it is necessary to calculate the book value of the machinery as of December 31, 2011, at the end of Year 3.

Double-declining balance method

Year 1 (2008)	\$30,000
Year 2 (2009)	24,000
Year 3 (2010)	<u>19,200</u>
Total depreciation 12/31/10	<u>\$73,200</u>

To calculate book value at 12/31/10

Historical cost	\$150,000
Less: Accum. depr.	<u>(73,200)</u>
Book value	\$76,800

To calculate depreciation expense for 2011, straight-line depreciation is calculated using the book value at the beginning of the year in which the change is made and the remaining useful life of the asset.

$$(\$76,800 - \$0 \text{ salvage}) \div 7 \text{ years remaining life} = \$10,971$$

### Task-Based Simulation 3

<b>Journal Entries</b>		
	<b>Authoritative Literature</b>	<b>Help</b>

#### *Situation*

On January 1, 2008, Charleston Company purchased machinery at a cost of \$150,000. The machinery was depreciated under the double-declining balance method, assuming a ten-year life and no salvage value. The company took full-year depreciation in the year of acquisition. During 2011, management decided to change depreciation methods to the straight-line method for financial reporting purposes, but it continued to use the accelerated method for tax purposes. Charleston has a 40% effective income tax rate.

Use the form below to complete the journal entries required to record Charleston's accounting change in 2011 from the double-declining balance method to the straight-line method. Enter the appropriate account title in column A by clicking the shaded box and then selecting the desired account title from the list provided. Account titles may be used once, more than once, or not at all.

Use columns B and C to record the dollar value corresponding to each journal entry. Be sure your entries appear in the appropriate shaded spaces. Some of the shaded spaces may not be used.

#### Column A

Accounts payable	Deferred income taxes
Accounts receivable	Depreciation expense
Accumulated depreciation	Income tax expense
Cash	Prior period adjustment
Cumulative effect of change in accounting	Retained earnings
Retained earnings	

A	B	C
	Debit	Credit

### Solution to Task-Based Simulation 3

<b>Journal Entries</b>	<b>Authoritative Literature</b>	<b>Help</b>

There is no journal entry for a cumulative effect of change in accounting principle for a change in depreciation method. Since the accounting change is accounted for on a prospective basis, depreciation expense is calculated and recorded for the current year. The depreciation expense entry for Year 4 (2011) is

Depreciation expense	10,971	
Accumulated depreciation		10,971

### Task-Based Simulation 4

<b>Financial Statement</b>	<b>Authoritative Literature</b>	<b>Help</b>

#### *Situation*

On January 1, 2008, Charleston Company purchased machinery at a cost of \$150,000. The machinery was depreciated under the double-declining balance method, assuming a ten-year life and no salvage value. The company took full-year depreciation in the year of acquisition. During 2011, management decided to change depreciation methods to the straight-line method for financial reporting purposes, but it continued to use the accelerated method for tax purposes. Charleston has a 40% effective income tax rate. The accurate depreciation amounts for this situation are illustrated below.

A	B	C	D
		Depreciation expense	
<b>Double-declining balance method</b>			
	2008	\$30,000	
	2009	\$24,000	
	2010	\$19,200	
<b>Straight-line method</b>			
	2011	\$10,971	
<b>Accumulated depreciation 12/31/2011</b>			\$84,171

The depreciation expense entry for Year 4 (2011) is

Depreciation expense	10,971	
Accumulated depreciation		10,971

Complete the following excerpts from Charleston’s balance sheet at December 31, 2011, and income statement for the year ending December 31, 2011. Insert the appropriate values in the shaded cells in column D below. Indicate in column F whether the net cumulative effect is income or expense by clicking the shaded box in column F and then selecting either “Income” or “Expense.”

**NOTE:** To use a formula in the spreadsheet, it must be preceded by an equal sign (e.g., = B1 + B2).

## Appendix D: 2014 Released AICPA Questions for Financial Accounting and Reporting

- Materiality and relevance are both defined by
    - What influences or makes a difference to a decision marker.
    - Quantitative criteria set by the Financial Accounting Standards Board.
    - The consistency in the application of methods over time.
    - The perceived benefits to be denied that exceed the perceived costs associated with it.
  - According to the FASB conceptual framework, for financial reporting to be useful, it must
    - Be in accordance with generally accepted accounting principles.
    - Provide information useful for making business and investment decisions.
    - Be understandable to those who have a limited knowledge of business activities.
    - Directly measure the value of the entity being reported on.
  - For a company to obtain a retail business license in a particular state, the company is required to pay the state the equivalent of three months of sales taxes on its projected retail sales. This amount is fully refundable after five years, provided the company has filed all required sales tax returns and paid all sales taxes due. Initially the company should report the payment related to this licensing requirement as
    - An expense.
    - A current asset.
    - A noncurrent liability.
    - A noncurrent asset.
  - Which of the following assets or transactions is an element of comprehensive income?
    - Investments by owners.
    - Sales revenue.
    - Distributions to owners.
    - Deferred revenue.
  - Gold Co. purchased equipment from Marshall Co. on July 1. Gold paid Marshall \$10,000 cash and signed a \$100,000 noninterest-bearing note payable, due in three years. Gold recorded a \$24,868 discount on notes payable related to this transaction. What is the acquired cost of the equipment on July 1?
    - \$75,132
    - \$85,132
    - \$100,000
    - \$110,000
- (a)** The requirement is to determine what defines materiality and relevance. Answer (a) is correct. Relevant information is capable of making a difference in a user's decision. Materiality is entity specific and related to relevance—if omitting it or misstating it could influence a user's decision. Therefore, materiality and relevance are defined by what influences or makes a difference to a decision maker.
  - (b)** The requirement is to determine what makes financial reporting useful. Answer (b) is correct. Financial reporting is useful if it provides information to potential and existing investors, lenders, and other creditors in making business and investment decisions.
  - (d)** The requirement is to classify a prepayment of sales tax that is refundable after five years. Answer (d) is correct. To be classified as current, an item must be expected to be realized in cash or sold or consumed during the normal operating cycle of a business or one year, whichever is longer. The refundable sales tax will not be returned until after year 5. Therefore, it is not a current asset. However it would be classified as non-current asset. Answer (a) is incorrect because the sales tax payment is refundable so it is not an expense. Answer (b) is incorrect because the monies will not be returned for 5 years. Therefore, it does not meet the definition of a current asset. Answer (c) is incorrect because the monies are returnable to the company. Therefore, an asset, not a liability.
  - (b)** The requirement is to determine which item is a component of comprehensive income. Answer (b) is correct. Comprehensive income is the sum of net earnings/loss and other comprehensive income. Therefore, the only item that meets that definition is sales revenue. Answers (a), (c), and (d) impact the balance sheet, not comprehensive income.
  - (b)** The requirement is to determine the acquisition cost of equipment. Answer (b) is correct. Facts state that \$10,000 cash was paid and a long-term noninterest bearing note (\$100,000 with a \$24,868 discount) was given. If a note (receivable or payable) has a life longer than one year, it should be recorded at its present value. Therefore, the acquisition cost of the equipment would be equal to  $\$85,132 = \$10,000 + \$75,132 (\$100,000 - \$24,868)$ .

6. A company acquired an aircraft for \$120 million, with the cost consisting of the airframe, \$60 million; the engine, \$40 million; and other components, \$20 million. The company applies the cost model and uses the straight-line method of depreciation. The aircraft has a total estimated useful life of 20 years and no residual value. The estimated useful lives of the components are as follows:

Airframe	20 years
Engine	16 years
Other components	4 years

Under IFRS, what amount should the company record as annual depreciation expense?

- \$3 million.
- \$6 million.
- \$6.5 million.
- \$10.5 million.

7. At the beginning of the fiscal year, End Corp. purchased 25% of Turf Co. for \$550,000. At the end of the fiscal year, Turf reported net income of \$65,000 and declared and paid cash dividends of \$30,000. End uses the equity method of accounting. At year end, what amount should End report in its balance sheet for the investment in Turf?

- \$550,000
- \$558,750
- \$566,250
- \$573,750

8. On January 2 of the current year, Otto Co. purchased 40% of Penn Co.'s outstanding common stock. The carrying amount of Penn's depreciable assets was \$1,000,000 on January 2. Penn's depreciable assets had an original useful life of 10 years, and a remaining useful life of five years. Otto recognized \$8,000 amortization for the current year ending December 31 related to its investment in Penn due to the excess of fair value over book value on these assets. What was the fair value of Penn's depreciable assets on January 2 of the current year?

- \$100,000
- \$900,000
- \$1,000,000
- \$1,100,000

9. Under IFRS, which of the following items is considered investment property?

- Land held for use in the production or supply of goods or services.
- A building held for use for administrative purpose.
- Land held for sale in the ordinary course of business.
- Part of a building held to earn rentals.

6. (d) The requirement is to determine the IFRS annual depreciation of an aircraft with different components. Answer (d) is correct. Under IFRS, if major components have significantly different patterns of consumption or economic benefits, the entity must allocate the cost to the major components and depreciate them separately. Thus, depreciation should be:

Item	Cost	Life	Depreciation (cost/life)
Airframe	\$60 million	20	\$3 million
Engine	\$40 million	16	\$2.5 million
Other	\$20 million	4	<u>\$5 million</u>
Total depreciation			<u>\$10.5 million</u>

7. (b) The requirement is to determine the ending balance sheet amount for an equity method investment. Answer (b) is correct. Under the equity method, the investment is adjusted for the company's share of revenue and dividends. Revenue increases the investment account and dividends decrease the investment account. Initial investment = \$550,000. Revenue equals \$16,250 ( $\$65,000 \times 25\%$ ). Dividends equal \$7,500 ( $\$30,000 \times 25\%$ ). Ending investment =  $\$550,000 + \$16,250 - \$7,500 = \$558,750$ .

8. (d) The requirement is to determine the fair value of the acquired depreciable assets. Answer (d) is correct. Because Otto purchased 40% of Penn's common stock, Otto would recognize differences between the historical cost and fair value of the assets. The assets have a remaining useful life of 5 years. Otto would amortize the differential over that period. The current year amortization is \$8,000 implying that the total difference related to Otto was \$40,000 ( $\$8,000 \times 5$  years). \$40,000 represents 40% of the differential, implying the total differential is \$100,000 ( $\$40,000 / 0.40$ ). The fair value of the assets is \$1,100,000 ( $\$1,000,000 + \$100,000$ ).

9. (d) The requirement is to determine which item is considered investment property. Answer (d) is correct. Under IFRS, investment property is defined as property held to earn rentals, for capital appreciation, or both. To qualify, it must not be used in the production or supply of goods or services or for administrative purposes, nor can it be held for sale in the ordinary course of business. Answers (a), (b), and (c) violate the requirements for investment property status.

**10.** In year 3, a company incurred \$500,000 of legal costs defending several patents. Included in that amount was \$400,000 of legal costs associated with successful outcomes and \$100,000 of legal costs associated with unsuccessful outcomes. What amount of legal costs, if any, should the company expense for year 3?

- a. \$500,000
- b. \$400,000
- c. \$100,000
- d. \$0

**11.** Which of the following statements is correct regarding deferred revenues recorded by a company that provides services to customers?

- a. Deferred revenue is a liability until the service had been performed.
- b. Deferred revenues represent revenues earned but **not** yet received in cash.
- c. Deferred revenues result from services that have been performed but have **not** been billed.
- d. A deferred revenue on the books of one company is an accrued expense on the books of another company.

**12.** A deferred tax liability may result from which of the following items?

- a. Penalties paid for legal violations.
- b. Life insurance proceeds received on the death of key employees.
- c. Depreciation of tangible assets.
- d. Interest on municipal bonds.

**13.** When there is a change in the reporting entity, how should the change be reported in the financial statements?

- a. Prospectively, including note disclosures.
- b. Retrospectively, including note disclosures, and application to all prior period financial statements presented.
- c. Currently, including note disclosures.
- d. Note disclosures only.

**14.** Under IFRS, each of the following is a disclosure requirement related to the correction of a material prior-period error, **except**

- a. A description of the internal controls put in place to prevent the occurrence of the error in the future periods.
- b. The impact of the correction on basic and diluted earnings per share for each period presented.
- c. The nature of the error.
- d. The amount of the correction at the beginning of the earliest period presented.

**10. (c)** The requirement is to determine the amount of patent legal defense expense. Answer (c) is correct. Only legal costs associated with successful outcomes may be capitalized. Therefore, of the \$500,000 in legal costs, \$400,000 may be capitalized and \$100,000 must be expensed.

**11. (a)** The requirement is to identify the correct statement related to service company deferred revenue. Answer (a) is correct. Deferred revenues represent cash received for services not yet performed. Thus, the cash receipts are considered a liability (deferred revenue) until earned. Answer (b) is incorrect because the cash has been received and the revenues have not been earned. Answer (c) is incorrect because services have not been performed yet. Answer (d) is incorrect because the other company would initially record a prepaid asset, not an expense.

**12. (c)** The requirement is to determine which item could lead to a deferred tax liability. Answer (c) is correct. Deferred tax liabilities arise when **temporary** differences between book income and taxable income occur and when there is a greater deduction on taxable income than book income (in the future, that will reverse thus leading to a deferred tax liability). Permanent differences do not lead to deferred taxes since permanent differences will never reverse. Depreciation of tangible assets is the only temporary difference. Answers (a), (b), and (c) are incorrect because penalties, life insurance proceeds on key employees, and municipal bond interest are permanent differences that do not lead to deferred taxes.

**13. (b)** The requirement is to determine how to account for a change in reporting entity. Answer (b) is correct. Changes in reporting entities are required to be accounting for retrospectively similar to changes in accounting principle.

**14. (a)** The requirement is to identify which item is not an IFRS related material prior period error correction disclosure. Answer (a) is correct. Under IFRS, material prior period error correction disclosures are similar to US GAAP: disclosure that the previously issued financial statements were restated, a description of the error, a line item effect of the error and any per share amounts, the gross and net effects from applicable income taxes, the effects on retained earnings or other components of equity or net assets as of the earliest period presented. Internal control changes are not required to be disclosed.

**15.** West, Inc. acquired 60% of East Co.'s outstanding common stock. West paid \$800,000 to acquire the stock. West plans to relocate East's company headquarters, which is expected to cost between \$100,000 and \$300,000. The present value of the probability-adjusted relocation cost is \$240,000. What is West's acquisition cost?

- a. 800,000
- b. \$900,000
- c. \$1,040,000
- d. \$1,100,000

**16.** Green Co. was preparing its year-end financial statements. Green had a pending lawsuit against a competitor for \$5,000,000 in damages. Green's attorneys indicate that obtaining a favorable judgment was probable and the amount of damages is reasonably estimated. Green incurred \$100,000 in legal fees. The income tax rate was 30%. What amount, if any, should Green recognize as a contingency gain in its financial statements?

- a. \$0
- b. \$3,430,000
- c. \$3,500,000
- d. \$4,900,000

**17.** Which of the following items would be classified as a research and development cost?

- a. Periodic design changes to an existing product.
- b. Engineering follow-up in an early phase of commercial production.
- c. Testing in search of product or process alternatives.
- d. Legal work in connection with a patent application.

**18.** A company that issues quarterly financial statements incurs an extraordinary loss in one of the first three quarters. In which of the following ways would the company report the extraordinary loss?

- a. Only in the annual report.
- b. Entirely in the quarter that the loss occurs.
- c. Prorated over the remaining quarters of the current year.
- d. Disclosed only by a note in the quarter that the loss occurs.

**15. (a)** The requirement is to determine the acquisition cost of East Co. Answer (a) is correct. Acquisition costs include the assets transferred, liabilities incurred, and equity interests issued by the acquirer. Moving the acquiree's headquarters is not an acquisition related liability; it occurs after the acquisition. Therefore, the \$800,000 payment for acquisition is the only item that qualifies as an acquisition cost.

**16. (a)** The requirement is to determine the amount of contingency gain to recognize in the financial statements. Answer (a) is correct. Contingency gains should only be disclosed if the disclosure is not misleading (indicating future realization). Contingency gains should not be accrued unless realized.

**17. (c)** The requirement is to determine which items should be classified as research and development costs. Answer (c) is correct. According to ASC 730-10-55-2, the following activities typically would not be considered research and development:

- a. Engineering follow-through in an early phase of commercial production
- b. Quality control during commercial production including routine testing of products
- c. Trouble-shooting in connection with break-downs during commercial production
- d. Routine, ongoing efforts to refine, enrich, or otherwise improve upon the qualities of an existing product
- e. Adaptation of an existing capability to a particular requirement or customer's need as part of a continuing commercial activity
- f. Seasonal or other periodic design changes to existing products
- g. Routine design of tools, jigs, molds, and dies
- h. Activity, including design and construction engineering, related to the construction, relocation, rearrangement, or start-up of facilities or equipment other than the following:
- i. Legal work in connection with patent applications or litigation, and the sale or licensing of patents.

**18. (b)** The requirement is to determine how a quarterly extraordinary loss can be reported. Answer (b) is correct. Extraordinary losses must be reported, in entirety, in the quarter the loss occurred.

**19.** Spring Corp. entered into a five-year lease agreement with Fall Corp. Spring, the lessee, paid an additional \$5,000 nonrefundable lease bonus to Fall upon signing the operating lease agreement. When would Fall recognize in income the nonrefundable lease bonus paid by Spring?

- When received.
- Over the life of the lease.
- At the expiration of the lease.
- At the inception of the lease.

**20.** Which of the following is the measurement focus and basis of accounting for the government-wide financial statements?

	Measurement focus	Basis of accounting
a.	Economic resources	Accrual
b.	Economic resources	Modified accrual
c.	Current financial resources	Accrual
d.	Current financial resources	Modified accrual

**21.** The measurement focus of governmental fund accounting is on which of the following?

- Current financial resources.
- Economic resources.
- Cash.
- Working capital.

**22.** The city accountant for a newly established municipality is setting up the new fund structure for the city's accounting system. How many funds should the accountant establish for the city?

- Two, a general fund and a special revenue fund as required by GAAP.
- Two, a special revenue fund and a general fund as required by the city manager.
- The minimum number of funds consistent with the needs of the city accountant.
- The minimum number of funds consistent with legal requirements and sound financial administration.

**23.** What is the primary purpose of the statement of activities of a nongovernmental not-for-profit organization?

- To report the change in net assets for the period.
- To report the liquidity of the entity as of a specific date.
- To report assets, liabilities, and net assets as of a specific date.
- To report the cash flow position of the entity for the period.

**24.** Which of the following would a nongovernmental not-for-profit educational institution report as program services?

- Publicity costs.
- Teacher salaries.
- Management salaries.
- Fundraising expenses.

**19. (b)** The requirement is to determine when the lessor should recognize a nonrefundable lease bonus in income. Answer (b) is correct. Lease bonus' are treated as unearned rent by the lessor and amortized to rental revenue on a straight-line basis over the lease term.

**20. (a)** The requirement is to identify the measurement focus and basis of accounting for government-wide financial statements. Answer (a) is correct because the measurement focus and basis of accounting for government-wide financial statements is the economic resources focus and modified accrual basis of accounting. Answers (b), (c), and (d) are incorrect because the measurement focus and basis of accounting for government-wide financial statements is the economic resources focus and modified accrual basis of accounting.

**21. (a)** The requirement is to identify the measurement focus of governmental fund accounting. Answer (a) is correct because the measurement focus is current financial resources. Answer (b) is incorrect because this is the measurement focus of government-wide financial statements. Answers (c) and (d) are incorrect because the focus of governmental fund accounting is current financial resources.

**22. (d)** The requirement is to identify the minimum number of funds that should be established. Answer (d) is correct because the minimum number of funds should be the number that is consistent with legal requirements and sound financial administration. Answers (a), (b), and (c) are incorrect because the minimum number of funds should be the number that is consistent with legal requirements and sound financial administration.

**23. (a)** The requirement is to identify the purpose of the statement of activities. Answer (a) is correct because the purpose of the statement of activities is to report the change in net assets for the period. Answer (b) is incorrect because this is a purpose of the statement of financial position. Answer (c) is incorrect because this is a purpose of the statement of financial position. Answer (d) is incorrect because this is a purpose of the statement of cash flows.

**24. (b)** The requirement is to identify the item that would be presented as program services. Answer (b) is correct because teacher salaries are program expenses. Answers (a), (c), and (d) are incorrect because they are supporting expenses.

25. How should a nongovernmental not-for-profit organization report investments in its financial statements?

- Historical cost with **no** gains or losses reported.
- Par value with gains and losses reported in the statement of activities.
- Fair value with gains and losses reported in the statement of activities.
- Amortized value with gains and losses reported in the statement of comprehensive income.

26. Accumulated other comprehensive income is reported in which of the following financial statements?

- The income statement.
- The statement of comprehensive income.
- The statement of cash flows.
- The statement of financial position.

27. Bard Co. owned several subsidiaries at December 31. The following table shows each subsidiary's total liabilities, excluding intercompany transactions, and percentage of stock owned by Bard:

Subsidiary	Total liabilities	% owned
Brock Co.	\$4,000,000	70
Harlson Co.	2,000,000	48
Porter Co.	7,000,000	80
Nortin Co.	5,000,000	100

What amount should Bard include as liabilities in its consolidated balance sheet at December 31?

- \$5,000,000
- \$12,000,000
- \$16,000,000
- \$18,000,000

28. A company reported the following information for year 1:

Net income	\$34,000
Owner contribution	9,000
Deferred gain on an effective cash-flow hedge	8,000
Foreign currency translation gain	2,000
Prior service cost not recognized in net periodic pension cost	5,000

What is the amount of other comprehensive income for year 1?

- \$5,000
- \$14,000
- \$15,000
- \$43,000

25. (c) The requirement is to identify how investments should be reported. Answer (c) is correct because investments should be presented at fair value. Answers (a), (b), and (d) are incorrect because investments should be presented at fair value.

26. (d) The requirement is to identify which statement accumulated other comprehensive income is reported. Answer (d) is correct because accumulated other comprehensive income is a permanent account and is reported in the statement of financial position. Answers (a) and (b) are incorrect because the current year change/s in accumulated other comprehensive income, not the account itself, may be reported at the bottom of the income statement or in the statement of comprehensive income. Answer (c) is incorrect because accumulated other comprehensive income is not reported on the cash flow statement.

27. (c) The requirement is to calculate the total amount of liabilities to be reported by Bard. Answer (c) is correct because Bard would consolidate 100% of the liabilities for which controlling interest exists (absent additional information, ownership of more than 50% of the outstanding voting stock). Therefore, Bard would consolidate Brock Co., Porter Co., and Norton, Co. ( $\$4,000,000 + \$7,000,000 + \$5,000,000 = \$16,000,000$ ). Answer (a) is incorrect because it assumes that only 100% ownership would be consolidated. Answer (b) is incorrect because it assumes that only 80% ownership or greater would be consolidated. Answer (d) is incorrect because it assumes that all subsidiaries would be consolidated.

28. (a) The requirement is to calculate the amount of other comprehensive income. Answer (a) is correct. Other comprehensive income may be comprised of items such as unrealized gains/losses, foreign currency translation gains/losses, pension plan funding status changes, and reclassification adjustments. Only effective cash-flow hedges are reported in other comprehensive income. Therefore, other comprehensive income would be calculated as follows: Deferred gain on effective cash-flow hedge + foreign currency translation gain – prior service cost not previously recognized =  $\$8,000 + \$2,000 - \$5,000 = \$5,000$ .

**29.** Bear Co. prepares its statement of cash flows using the indirect method. Bear sold equipment with a carrying value of \$500,000 for cash of \$400,000. How should Bear report the transaction in the operating and investing activities sections of its statement of cash flows?

	<b>Operating activities</b>	<b>Investing activities</b>
a.	\$100,000 addition to net income	\$400,000 cash inflow
b.	\$100,000 subtraction from net income	\$400,000 cash inflow
c.	\$100,000 addition to net income	\$500,000 cash inflow
d.	\$100,000 subtraction from net income	\$500,000 cash inflow

**30.** At December 31, year 1, Gasp Co.'s allowance for uncollectible accounts had a credit balance of \$30,000. During year 2, Gasp wrote off uncollectible accounts of \$45,000. At December 31, year 2, an aging of the accounts receivable indicated that \$50,000 of the December 31, year 2, receivables may be uncollectible. What amount of allowance for uncollectible accounts should Gasp report in its December 31, year 2, balance sheet?

- a. \$20,000
- b. \$25,000
- c. \$35,000
- d. \$50,000

**31.** An entity purchased new machinery from a supplier before the entity's year end. The entity paid freight charges for the purchased machinery. The entity took out a loan from a bank to finance the purchase. Under IFRS, what is the proper accounting treatment for the freight and interest costs related to the machinery purchase?

- a. The freight and interest costs should be immediately expensed.
- b. The freight and interest costs should be capitalized as part of property, plant and equipment.
- c. The interest cost should be capitalized as part of property, plant and equipment, and the freight cost should be immediately expensed.
- d. The freight cost should be capitalized as part of property, plant and equipment, and the interest cost should be immediately expensed.

**29. (a)** The requirement is determine the cash flow reporting of a sale of equipment. Answer (a) is correct. Operating activities using the indirect method requires adjustments for non-cash items such as depreciation and gains/losses. Investment activity cash flows result from transactions related to non-current assets. The best approach to determine the cash flow effects is to prepare a journal entry related to the sale:

Cash	\$400,000
Loss	\$100,000
Net equipment (cost less accumulated depreciation)	\$500,000

Since the loss is a non-cash item, it would be added to net income in the operating section of the cash flow statement. The \$400,000 cash receipt would appear as a cash inflow in the investing activity section of the cash flow statement. Answer (b) is incorrect because it subtracts the loss from net income rather than adding it. Answer (c) is incorrect because it includes the carrying value of the equipment in investing activities rather than the cash amount. Answer (d) is incorrect because it subtracts the loss from net income instead of adding it and includes the carrying value of the equipment in investing activities instead of the cash amount.

**30. (d)** The requirement is to determine the amount of allowance for uncollectible accounts to be reported on the balance sheet. Answer (d) is correct. Under the aging method, the result of the aging is the ending balance in the allowance account. Therefore, \$50,000 is the correct amount.

**31. (d)** The requirement is to account for freight and interest costs under IFRS. Answer (d) is correct. Under IFRS, capitalized costs include the net purchase price, expenditures to bring the asset to its required location and condition, delivery and handling, site preparation, installation, assembly costs, and professional fees. Interest may be capitalized if the asset is self-constructed. In this case, the asset was purchased. Therefore, the freight should be capitalized and the interest immediately expensed. Answer (a) is incorrect because freight may be capitalized. Answer (b) is incorrect because interest should be immediately expensed. Answer (c) is incorrect because interest costs should be immediately expensed and freight costs should be capitalized.

32. On October 1, year 1, Gold Co. borrowed \$900,000 to be repaid in three equal, annual installments. The note payable bears interest at 5% annually. Gold paid the first installment of \$300,000 plus interest on September 30, year 2. What amount should Gold report as a current liability on December 31, year 2?

- a. \$330,000
- b. \$307,500
- c. \$303,750
- d. \$300,000

33. A company finances the purchase of equipment with a \$500,000 five-year note payable. The note has an interest rate of 12% and a monthly payment of \$11,122. After two payments have been made, what amount should the company report as the note payable balance in its December 31 balance sheet?

- a. \$477,756
- b. \$487,695
- c. \$487,756
- d. \$490,061

34. Young Co. issues \$800,000 of 10% bonds dated January 1, year 1. Interest is payable semiannually on June 30 and December 31. The bonds mature in five years. The current market for similar bonds is 8%. The entire issue is sold on the date of issue. The following values are given:

	Present value of ordinary annuity	Present value of \$1
N=10; i=0.04	8.11090	0.67556
N=10; i=0.05	7.72173	0.61391

What amount of proceeds on the sale of bonds should Young report?

- a. \$799,997
- b. \$815,564
- c. \$849,317
- d. \$864,884

35. If a premium on a bonds payable transaction is **not** amortized, what are the effects on interest expense and total stockholders' equity?

	Interest expense	Total Stockholders' equity
a.	Overstated	Overstated
b.	Understated	Overstated
c.	Overstated	Understated
d.	Understated	Understated

32. (b) The requirement is to calculate the December 31, year 2 current liability portion of a long-term note that is payable in three equal installments. Answer (b) is correct. The current liability would consist of the \$300,000 installment plus accrued interest from October 1, year 2 to December 31, year 2. Accrued interest =  $(\$600,000 \times 5\%) / 4 = \$7,500$ . The current liability equals  $\$300,000 + \$7,500 = \$307,500$ . Answer (a) is incorrect because it accrues an entire year of interest rather than 3 months of interest. Answer (c) is incorrect because it accrues 45 days of interest rather than 3 months of interest. Answer (d) is incorrect because it does not include any accrued interest.

33. (b) The requirement is to calculate the carrying value of a long-term note payable at December 31 after two monthly payments have been made. Answer (b) is correct.

Date/ month	Interest* (CVx1%)	Payment (given)	Reduction in principle	Carrying value (CV)
0				\$500,000
1	\$5,000	\$11,122	\$6,122	493,878
2	4,939	11,122	6,183	487,695

\*The interest is 12% per year, but 1% per month.

34. (d) The requirement is to calculate the proceeds from the sale of the bonds. Answer (d) is correct. The proceeds are comprised of two components: (1) the present value of the face amount of the bonds discounted at the semi-annual market rate of interest over the total periods plus (2) the present value of the semi-annual interest stream discounted at the semi-annual market rate of interest over the total periods. Note that the semi-annual interest rate is used for discounting because interest is paid twice a year. When compounding occurs twice a year, the years are doubled and the interest rate is cut in half (e.g. 5 year 8% market rate bond is discounted at 4% over 10 periods).

(1) Present value of face:  $\$800,000 \times 0.67556 = \$540,448$

(2) Present value of semi-annual interest:  $\$800,000 \times 5\%$   
 $= \$40,000 \times 8.1109 = \$324,436$

Total proceeds:  $\$540,448 + \$324,436 = \$864,884$ .

35. (c) The requirement is to determine the effects on interest expense and stockholders' equity if a bond premium is not amortized. Answer (c) is correct. Amortization of a premium reduces interest expense. Therefore, if a premium is **not** amortized, interest expense is overstated and stockholders' equity is understated because too much interest is closed to retained earnings. Answer (a) is incorrect because stockholders' equity would be understated. Answer (b) is incorrect because interest expense would be overstated and stockholders' equity would be understated. Answer (d) is incorrect because interest expense would be overstated.

**36.** At the beginning of year 1, a company hired an executive whose contract included the promise of payment of \$100,000 in each of years 6, 7, and 8, if the executive is employed at the end of year 5. How should the compensation expense associated with this contract be recorded?

- a. \$37,500 in each of years 1 through 8.
- b. \$60,000 in each of years 1 through 5.
- c. \$100,000 in each of years 6 through 8.
- d. \$300,000 when the contract is signed.

**37.** A company has an underfunded defined benefit pension plan. During the current year, the company uses the years-of-service method to amortize its prior service cost. What effect will the amortization of prior service cost have on the company's current-year financial statements?

- a. Total liabilities will be decreased.
- b. Net income will be increased.
- c. Current period expenses will be decreased.
- d. Other comprehensive income will be increased.

**38.** Althouse Co. discovered that equipment purchased on January 2 for \$150,000 was incorrectly expensed at the time. The equipment should have been depreciated over five years with no salvage value. What amount, if any, should be adjusted to Althouse's depreciation expense at January 2, the beginning of the third year, when the error was discovered?

- a. \$0
- b. \$30,000
- c. \$60,000
- d. \$150,000

**39.** During year 3, Gilman Co. purchased 5,000 shares of the 500,000 outstanding shares of Meteor Corp.'s common stock for \$35,000. During year 3, Gilman received \$1,800 of dividends from its investment in Meteor's stock. The fair value of Gilman's investment on December 31, year 3, is \$32,000. Gilman has elected the fair value option for this investment. What amount of income or loss that is attributable to the Meteor stock investment should be reflected in Gilman's earnings for year 3?

- a. Income of \$4,800.
- b. Income of \$1,800.
- c. Loss of \$1,200.
- d. Loss of \$3,000.

**36. (b)** The requirement is to determine how to account for deferred compensation. Answer (b) is correct. Deferred compensation is to be recognized over the employment period from the date the agreement is assigned to the full eligibility date. Therefore, of the total \$300,000 ( $\$100,000 \times 3$ ) deferred compensation, \$60,000 ( $\$300,000/5$  years) should be recognized each year in years 1 through 5. Answer (a) is incorrect because it amortizes the amount over all years. Answer (c) is incorrect because it expenses the amounts each year they are received. Answer (d) is incorrect because it expenses all of the deferred compensation immediately.

**37. (d)** The requirement is to determine what impact amortization of prior service cost will have on financial statements including an underfunded defined benefit plan. Answer (d) is correct. Amortization of prior service cost increases pension expense and increases other comprehensive income. Answer (a) is incorrect because the pension obligation is impacted by prior-service cost when the prior service cost is determined, not when it is amortized. Answer (b) is incorrect because amortization of prior service cost increases pension expense, thereby reducing net income, not increasing net income. Answer (c) is incorrect because amortization of prior service cost increases pension expense, thereby increasing expenses, not decreasing them.

**38. (a)** The requirement is to determine the adjustment to **beginning** depreciation expense when an error of non-depreciation is discovered. Answer (a) is correct. When an error is discovered, two entries need to be made; one to capitalize the expensed equipment and one to adjust accumulated depreciation. Neither impacts the **beginning** of the year depreciation expense. The **end** of the year depreciation expense will include depreciation for the equipment.

**39. (c)** The requirement is to determine the income or loss from an investment where the fair value option has been elected. Answer (c) is correct. 5,000 shares represents a 10% ownership in Meteor. Gilman chose to use the fair value option meaning unrealized gains and losses will flow through the income statement rather than other comprehensive income. The cost of the investment (\$35,000) is to be compared to the value of the current value of the investment (\$32,000) for a \$3,000 loss. However, dividends, flowing through earnings, of \$1,800 were received. The investment resulted in a net loss of \$1,200 ( $\$3,000$  loss less  $\$1,800$  income).

**40.** Potter Co. has the following contingencies, all resulting from lawsuits in progress during the current year:

Probable loss contingency	\$1,500,000
Reasonably possible loss contingency	500,000
Probable gain contingency	700,000
Reasonably possible gain contingency	300,000

Potter's accountant believes the financial statements will be misleading if the probable loss contingency is not disclosed. How much should be disclosed, and how much should be accrued in Potter's financial statements for the current year?

	Disclosed	Accrued
a.	\$500,000 loss \$1,000,000 gain	\$1,500,000 loss \$700,000 gain
b.	\$2,000,000 loss \$1,000,000 gain	\$1,500,000 loss
c.	\$1,000,000 gain	\$1,500,000 loss \$500,000 loss
d.	\$500,000 loss \$300,000 gain	\$1,500,000 loss

**41.** How should gains or losses from fair value hedges be recognized?

- As an extraordinary item in the period of fair value change because of the unusual and infrequent nature of derivative contracts.
- The gain or loss, along with the offsetting loss or gain attributable to the hedged risk, should be recognized currently in earnings in the same accounting period.
- As a component of other comprehensive income in the period of fair value change and subsequently in earnings in the period net settlement occurs.
- No gain or loss recognition in the period of fair value change, but subsequent recognition of gain or loss in earnings in the period net settlement occurs.

**42.** A company's foreign subsidiary operation maintains its financial statements in the local currency. The foreign operation's capital accounts would be translated to the functional currency of the reporting entity using which of the following rates?

- Historical exchange rate.
- Functional exchange rate.
- Weighted-average exchange rate.
- Current exchange rate at the balance sheet date.

**40. (b)** The requirement is to determine financial statement disclosures and accruals related to gain and loss contingencies. Answer (b) is correct. Probable and estimable loss contingencies should be accrued. Possible loss contingencies should be disclosed only. According to the FASB Accounting Standards Codification, "Adequate disclosure shall be made of a contingency that might result in a gain, but care shall be exercised to avoid misleading implications as to the likelihood of realization." Gain contingencies shall not be accrued.

**41. (b)** The requirement is to determine the recognition for gains and losses from fair value hedges. Answer (b) is correct. Gains and losses on the hedged asset/liability and the hedging instrument will be recognized in current earnings.

**42. (a)** The requirement is to determine which rate is used to translate a foreign operations' capital to the reporting entity's functional currency. Answer (a) is correct. When translating local foreign currency financial statements into a functional currency, the current rate is used for assets and liabilities, the weighted-average rate is used for revenues/expenses and the historical exchange rate is used to translate equity/capital accounts.

**43.** A lease is classified as a capital lease because it contains a bargain purchase option. Over what period of time should the lessee amortize the leased property?

- The term of the lease.
- The economic life of the asset.
- The lease term or the economic life of the asset, whichever is shorter.
- The economic life of the asset, **not** to exceed 40 years.

**44.** A transaction was reported as a nonmonetary exchange of assets. Under which of the following circumstances should the exchange be measured based on the reported amount of the nonmonetary asset surrendered?

- When the entity's future cash flows are expected to change as a result of the exchange.
- When the timing of future cash flows of the asset received differs significantly from the configuration of the future cash flows of the asset transferred.
- When the transaction lacks commercial substance.
- When the transaction has commercial substance.

**45.** A corporation is in the final stages of developing a computer software program that will be sold to the general public. The company's costs related to the software are as follows:

Development of a working model of the software	\$4 million
Customer support and training	2 million
Product master production	1 million

The costs associated with the product master production were incurred after the establishment of technological feasibility. What amount, if any, should the corporation expense against earnings?

- \$6 million.
- \$5 million.
- \$4 million.
- \$0

**46.** Which of the following information is needed to prepare the budgetary comparison schedules for a local government?

- Original budget.
- Explanation of variances.
- Description of the local government's budgeting process.
- Computation of variances from budget to actual.

**43. (b)** The requirement is to determine what period to amortize leased property over when the capital lease arises from a bargain purchase option. Answer (b) is correct. When a lease is classified as a capital lease due to a transfer of title or bargain purchase option, the leased asset is amortized over the economic life of the asset. When a lease is classified as a capital lease due to the leased asset lease term exceeding 75% of the economic life of the asset or the present value of the minimum lease payments exceeding 90% of the fair value of the leased asset, the leased asset is amortized over the lease term.

**44. (c)** The requirement is to determine when a nonmonetary exchange would be reported at the amount of the nonmonetary asset surrendered. Answer (c) is correct. Usually, in nonmonetary exchanges, the fair value of the asset exchanged is used to record the transaction. However, three conditions give rise to using the recorded amount (book value) of the asset exchanged. Those three conditions are: 1. The fair value is not determinable, 2. The exchange is to facilitate sales to customers, and 3. The transaction lacks commercial substance.

**45. (a)** The requirement is to determine which software costs should be expensed immediately rather than capitalized. Answer (a) is correct. If software is developed for sale, costs incurred to internally create software should be expensed as research and development until technological feasibility is established at which point, all costs should be capitalized. The product master production occurred after technological feasibility and thus should be capitalized. The other expenditures, development and customer support, occurred before technological feasibility and should be expensed (\$6 million = \$4 million + \$2 million).

**46. (a)** The requirement is to identify the information needed to prepare budgetary comparison schedules. Answer (a) is correct because the budgetary comparison schedules compare the original budget and final budget to the actual amounts. Answer (b) is incorrect because an explanation of variances is not required. Answer (c) is incorrect because a description of the budgeting process is not required. Answer (d) is incorrect because there is no need for a complex computation of variances.

**47.** Which of the following should be included in the introductory section of a local government's comprehensive annual financial report?

- a. Auditor's report.
- b. Management letter.
- c. Engagement letter.
- d. Letter of transmittal.

**48.** A city council designates funds in the enterprise fund for future equipment replacement. The enterprise fund should report this as:

- a. A restricted component of net position.
- b. A net investment in capital assets.
- c. A designated component of net position.
- d. An unrestricted component of net position.

**49.** Pahn, a nongovernmental not-for-profit organization, received an unconditional pledge of \$50,000. The donor stipulated that the pledge must be used in the next fiscal year. Pahn received and spent the \$50,000 in the next year. For the current fiscal year, what element of Pahn's statement of financial position will increase as a result of the unconditional pledge?

- a. Cash and cash equivalents.
- b. Pledge receivables.
- c. Unrestricted support.
- d. Deferred contributions.

**50.** A \$100,000 gift was received by Group Home Projects, a nongovernmental not-for-profit organization. Group's board of directors stipulated that this gift must be invested for a period of four years, with the income to be used for general operations. How should the gift be reported in Group Home's statement of activities?

- a. Unrestricted contribution.
- b. Restricted contribution.
- c. Unrestricted contribution of \$25,000 and restricted contribution of \$75,000.
- d. Deferred revenue.

**47. (d)** The requirement is to identify a component of the introductory section of a comprehensive annual financial report. Answer (d) is correct because the introductory section includes a letter of transmittal, organization chart, and list of principal officers. Answers (a), (b), and (c) are incorrect because they are not part of the introductory section of a comprehensive annual financial report.

**48. (d)** The requirement is to identify how a council designated fund should be reported. Answer (d) is correct because the fund should be presented as an unrestricted component of net position. To be presented as restricted the fund must be externally restricted by creditors, or restricted by law.

**49. (b)** The requirement is identify the element of statement of financial position that will increase. Answer (b) is correct because pledge receivables will increase. Answer (a) is incorrect because cash and cash equivalents does not increase until the cash is received. Answers (c) and (d) are incorrect because pledge receivables will increase.

**50. (a)** The requirement is to identify how the gift should be reported. Answer (a) is correct because the gift should be reported as an unrestricted contribution. Answers (b) and (c) are incorrect because gifts are not reported as restricted unless they are restricted by donors. Answer (d) is incorrect because such gifts are presented as unrestricted contributions.

Scroll down to complete all parts of this task.

A public manufacturing company, Blue Chemical, is engaged in various research and development (R&D) projects throughout year 2 for its new development plastics, as well as some various projects performed on behalf of clients. Your task is to categorize the cost based on the related document for the proper accounting treatment.

The following documents are found under the Resource tab. For each change listed below, review the relevant invoice or document and any additional notes. Then choose the appropriate accounting treatment and enter it in shaded space in the table. Choose only one accounting treatment per document. An accounting treatment may be used once, more than once, or not at all.

**Interoffice Memorandum 1**

**To:** Accounting

**From:** Human Resources

**Subject:** Scientist Salaries

Timesheets show that scientists spent 2,800 hours in year 2 on projects in direct relation to research. The total expense of pay related to the scientists was \$840,000.

**Interoffice Memorandum 2**

**To:** Accounting

**From:** Human Resources

**Subject:** Executive Salaries

Both the CFO and CEO spent some time during year 2 working on the research projects. They do not have timesheets. Their total pay for the year was \$950,000 and \$1,200,000 respectively.

Capitalize and amortize as operating expense.
Capitalize and include amortization in R&D expense.
Capitalize and include depreciation in R&D expense.
Expense immediately as operating expense.
Expense immediately as R&D expense.
Record as prepaid expense.

### Solution to Task-Based Simulation 1

	A	B
1	<b>Document</b>	<b>Accounting treatment</b>
2	Interoffice memorandum #1	Expense immediately as R&D expense.
3	Interoffice memorandum #2	Expense immediately as operating expense.
4	Lab Services, Inc. invoice #100	Expense immediately as operating expense.
5	Lab Services, Inc. invoice #150	Expense immediately as R&D expense.
6	Green Tree Consulting invoice #3399	Expense immediately as R&D expense.
7	Chemical Machines Co. invoice #A25	Capitalize and include depreciation in R&D expense.
8	Green Tree Consulting invoice #3600	Expense immediately as operating expense.
9	Research Construction Ltd. Invoice #96C	Expense immediately as R&D expense.

### Explanations

Interoffice Memorandum 1—expense immediately as R&D expense. According to the FASB, research is: “a planned search or critical investigation aimed at discovery of new knowledge with the hope that such knowledge will be useful in developing a new product or service (referred to as product) or a new process or technique (referred to as process) or in bringing about a significant improvement to an existing product or process.” Scientists working on projects directly relating to research should be expensed immediately as R&D expense.

Interoffice Memorandum 2—expense immediately as operating expense. Although salaries of personnel directly attributable to R&D should be expensed as R&D, the amount of time the CFO and CEO spent on R&D is not determinable. Therefore, their salaries should be treated as operating expenses and expensed immediately.

Lab Services, Invoice #100—expense immediately as operating expense. Trials related to the company's own R&D efforts would be treated as R&D. However, the trials in this invoice are related to another firm's R&D efforts and therefore the invoice would be expensed immediately as an operating expense.

Lab Services, Invoice #150—expense immediately as R&D expense. Prototype testing for the company's own R&D project is considered R&D to be expensed immediately.

Green Tree Consulting Invoice #3399—expense immediately as R&D expense. Engineering costs related to advancing the design of the product are considered R&D and should be expensed immediately as R&D expense.

Chemical Machines Co Invoice #A25—capitalize and include depreciation as R&D expense. Equipment with other future alternative uses shall be capitalized and the depreciation expensed as R&D. Equipment without alternative future uses must be expensed as R&D. In this case, chemical mixing machines seem to be interchangeable for projects and therefore, have future alternative uses. The machines should be capitalized and the depreciation should be expensed as R&D expense.

Green Tree Consulting Invoice #3600—expense immediately as operating expense. Market research and market testing are not within the scope of R&D. Therefore, these costs should be expensed immediately as operating expenses.

Research Construction Ltd Invoice #96C—expense immediately as R&D expense. The lab has no alternative future use and thus, should be expensed immediately as R&D expense.

<b>Cash Reconciliation</b>		
	<b>Authoritative Literature</b>	<b>Help</b>

Scroll down to complete all parts of this task.

The following information was obtained from the records of Bunder Co. as of December 31, year 1:

- A customer's check for \$5,300 was returned by the bank because of insufficient funds (NSF). Included with the return check was bank advice #A1 for a related service charge of \$25.
- Check #10276 for \$9,218 payable to Blaze Co., a vendor, was recorded as \$9,812.
- Customer checks totaling \$126,200 received by Bunder on December 30 and 31 for \$50,480 and \$75,720, respectively, were not credited on the company's bank statement. The customer checks received on December 31, were not yet recorded by Bunder.
- The following checks were recorded by Bunder but as of December 31, did not clear the bank

Date	Check #	Amount
12/30	10302	\$13,476
12/30	10304	12,342
12/30	10305	<u>5,849</u>
		\$31,667

All of the above checks were mailed on December 31, year 1 except for check#10302 which was voided on January 5, year 2.

- Two bank advices, bank advice #A2 for the collection of a customer's note receivable for \$4,350 and bank advice #A3 for the related collection fee of \$50 were not recorded by Bunder.

Complete the cash reconciliation below to arrive at Bunder's correct cash balance as of December 31, year 1.

Using the list of items below chose the appropriate title for a reconciling item and fill in the Description column in the shaded cell below. Enter as a positive value the amount associated with each reconciling item. A reconciling item may be used once, more than once, or not at all. All rows may not be required to complete each section of the cash reconciliation.

### *Explanations*

#### **Book balance additions:**

Ck #10276 – Ck #10276 was originally recorded by Bunder in the amount of \$9,812 rather than the correct amount of \$9,218. The difference of \$594 (\$9,812-\$9,218) needs to be added back to Bunder's books.

Customer checks 12/31 – This check was not recorded by Bunder and must be added to Bunder's book balance.

Ck#10302 – This check was voided and therefore \$13,476 needs to be added back to Bunder's book balance since Bunder originally reduced its balance by that amount.

Bank advice #A2 – \$4,350 was collected on behalf of Bunder by the bank. This amount needs to be added to Bunder's book balance.

#### **Book balance deductions:**

Customer NSF Check of \$5300 must be deducted from Bunder's book balance. Bunder had already included it, but the money was not received.

Bank advice #A1 – A \$25 service charge for the NSF check reduces Bunder’s book balance.

Bank advice #A3 – The bank charged Bunder \$50 for collecting monies on Bunder’s behalf. Bunder must reduce its book balance for this fee.

**Bank statement additions:**

Customer checks 12/30 – \$50,480 were recorded by Bunder but have not cleared the bank. This amount needs to be added to the bank balance.

Customer checks 12/31 – \$75,720 were recorded by Bunder but have not cleared the bank. This amount needs to be added to the bank balance.

**Bank statement deductions:**

Ck # 10304 – a check in the amount of \$12,342 was mailed by Bunder before year-end but has not cleared the bank. It needs to be deducted from the bank balance.

Ck # 10305 – a check in the amount of \$5,849 was mailed by Bunder before year-end but has not cleared the bank. It needs to be deducted from the bank balance.

Note: Ck #10302 would normally be deducted from the bank balance but the additional information states that Bunder voided the check, requiring a correction to the book balance rather than the bank balance.

JS is a new accountant at Petty Enterprises and is preparing the year 2 comparative financial statements. JS determined that basic and diluted earnings per share are the same amount for year 2 but not year 1. Which section of the authoritative guidance best describes the periods for which both basic and diluted earnings per share must be presented?

Enter your in the answer fields below. Unless specifically requested, your response should not cite implementation guidance. Guidance on correctly structuring your response appears above and below the answer fields.

Type the paragraph here. Correctly formatted FASB ASC paragraphs are 1, 2, or 3 digits followed in some cases by an upper case letter. Note: Correct paragraph responses appear in bold font in FASB ASC and do not include subparagraphs denoted by a lower case letter.
