# Adapting to the Needs of Today's Students

## **Fundamental Accounting Principles, 22e**

Enhancements in technology have changed how we live and learn. Working with learning resources across devices, whether smartphones, tablets, or laptop computers, empowers students to drive their own learning by putting increasingly intelligent technology into their hands.

Whether the goal is to become an accountant, a businessperson, or simply an informed consumer of accounting information, *Fundamental Accounting Principles (FAP)* has helped generations of students succeed. Its leading-edge accounting content, paired with state-of-the-art technology, supports student learning and elevates understanding of key accounting principles.

*FAP* excels at **engaging students** with content that will help them see the relevance of accounting. Its chapter-opening vignettes showcase dynamic, successful entrepreneurial individuals and companies and **highlight the usefulness of accounting to business owners**. This edition's featured companies—**Apple, Google, and Samsung**—capture student interest with their products, and their annual reports serve as a pathway for learning financial statements. New in this edition, Need-to-Know illustrations in each chapter demonstrate how to apply key accounting procedures. They are supported by guided video presentations.

*FAP* also delivers innovative technology to help student performance. **Connect Plus Accounting** provides students with a media-rich eBook version of the textbook and offers instant grading and feedback for assignments that are completed online. Our system for completing exercise and problem material takes accounting content to the next level, delivering assessment material in a **more intuitive, less restrictive** format that adapts to the needs of today's students.

This technology features:

- a **general journal interface** that looks and feels more like that found in practice.
- an **auto-calculation** feature that allows students to focus on concepts rather than rote tasks.
- a **smart (auto-fill) drop-down design**.

The end result is content that better prepares students for the real world.

*Connect Plus Accounting* also includes digitally based, interactive, adaptive learning tools that provide an opportunity

to engage students more effectively by offering varied instructional methods and more personalized learning paths that build on different learning styles, interests, and abilities.

The revolutionary technology of the LearnSmart Advantage Series—consisting of **LearnSmart™, SmartBook™, and SmartBook Achieve™**—is available only from McGraw-Hill Education. All three products are based on an intelligent learning system that uses a series of adaptive questions to pinpoint each student's knowledge gaps and then provides an optimal learning path. Students spend less time in areas they already know and more time in areas they don't. The result: Students study more efficiently, learn faster, and retain more knowledge. Valuable reports provide insights into how students are progressing through textbook content and information useful for shaping in-class time or assessment.

**Interactive Presentations** teach each chapter's core learning objectives in a rich, multimedia format, bringing the content to life. Your students will come to class prepared when you assign Interactive Presentations. Students can also review the Interactive Presentations as they study. Further, **Guided Examples** provide students with narrated, animated, step-by-step walk-throughs of algorithmic versions of assigned exercises. Students appreciate the Guided Examples, which help them learn accounting and complete assignments outside of class.

A **General Ledger (GL) application**, new to 22e, offers students the ability to see how transactions post from the general journal all the way through the financial statements. It uses the intuitive, less restrictive format as that used for other homework, and it adds critical thinking components to each GL question, to ensure understanding of the entire process.

The first and only analytics tool of its kind, **Connect Insight™** is a series of visual data displays—each framed by an intuitive question—to provide at-a-glance information about how your class is doing. Connect Insight provides a quick analysis on five key dimensions, available at a moment's notice from a tablet device: *How are my students doing? How is my section doing? How is this student doing? How are my assignments going?* and *How is this assignment going?*

"I believe that *FAP* is the best intro accounting text on the market—clear, concise, complete. . . . Additionally, it is clear that the authors stay in touch with the 'times'."

— JAMES L. LOCK, Northern Virginia Community College

# About the Authors

**JOHN J. WILD** is a distinguished professor of accounting at the University of Wisconsin at Madison. He previously held appointments at Michigan State University and the University of Manchester in England. He received his BBA, MS, and PhD from the University of Wisconsin.

Professor Wild teaches accounting courses at both the undergraduate and graduate levels. He has received numerous teaching honors, including the Mabel W. Chipman Excellence-in-Teaching Award, the departmental Excellence-in-Teaching Award, and the Teaching Excellence Award from the 2003 and 2005 business graduates at the University of Wisconsin. He also received the Beta Alpha Psi and Roland F. Salmonson Excellence-in-Teaching Award from Michigan State University. Professor Wild has received several research honors and is a past KPMG Peat Marwick National Fellow and is a recipient of fellowships from the American Accounting Association and the Ernst and Young Foundation.

**KEN W. SHAW** is an associate professor of accounting and the Deloitte Professor of Accounting at the University of Missouri. He previously was on the faculty at the University of Maryland at College Park. He has also taught in international programs at the University of Bergamo (Italy) and the University of Alicante (Spain). He received an accounting degree from Bradley University and an MBA and PhD from the University of Wisconsin. He is a Certified

Public Accountant with work experience in public accounting.

Professor Shaw teaches accounting at the undergraduate and graduate levels. He has received numerous School of Accountancy, College of Business and university-level teaching awards. He was voted the “Most Influential Professor” by three School of Accountancy graduating classes, and is a two-time recipient of the O’Brien Excellence in Teaching Award. He is the advisor to his school’s chapter of the Association of Certified Fraud Examiners.

**BARBARA CHIAPPETTA** received her BBA in Accountancy and MS in Education from Hofstra University and is a tenured full professor at Nassau Community College. For the past two decades, she has been an active executive board member of the Teachers of Accounting at Two-Year Colleges (TACTYC), serving 10 years as vice president and as president from 1993 through 1999. As an active

member of the American Accounting Association, she has served on the Northeast Regional Steering Committee, chaired the Curriculum Revision Committee of the Two-Year Section, and participated in numerous national committees. Professor Chiappetta has been inducted into the American Accounting Association Hall of Fame for the

Professor Wild is an active member of the American Accounting Association and its sections. He has served on several committees of these organizations, including the Outstanding Accounting Educator Award, Wildman Award, National Program Advisory, Publications, and Research Committees. Professor Wild is author of *Financial Accounting*, *Managerial Accounting*, and *College Accounting*, each published by McGraw-Hill Education. His research articles on accounting and analysis appear in *The Accounting Review*; *Journal of Accounting Research*; *Journal of Accounting and Economics*; *Contemporary Accounting Research*; *Journal of Accounting, Auditing and Finance*; *Journal of Accounting and Public Policy*; and other journals. He is past associate editor of *Contemporary Accounting Research* and has served on several editorial boards including *The Accounting Review*.

In his leisure time, Professor Wild enjoys hiking, sports, travel, people, and spending time with family and friends.

Professor Shaw is an active member of the American Accounting Association and its sections. He has served on many committees of these organizations and presented his research papers at national and regional meetings. Professor Shaw’s research appears in the *Journal of Accounting Research*; *The Accounting Review*; *Contemporary Accounting Research*; *Journal of Financial and Quantitative Analysis*; *Journal of the American Taxation Association*; *Strategic Management Journal*; *Journal of Accounting, Auditing, and Finance*; *Journal of Financial Research*; and other journals. He has served on the editorial boards of *Issues in Accounting Education*; *Journal of Business Research*; and *Research in Accounting Regulation*. Professor Shaw is co-author of *Financial and Managerial Accounting*, *Managerial Accounting*, and *College Accounting*, all published by McGraw-Hill Education.

In his leisure time, Professor Shaw enjoys tennis, cycling, music, and coaching his children’s sports teams.

Northeast Region. She had also received the Nassau Community College dean of instruction’s Faculty Distinguished Achievement Award. Professor Chiappetta was honored with the State University of New York Chancellor’s Award for Teaching Excellence in 1997. As a confirmed believer in the benefits of the active learning pedagogy, Professor Chiappetta has authored *Student Learning Tools*, an active learning workbook for a first-year accounting course, published by McGraw-Hill Education.

In her leisure time, Professor Chiappetta enjoys tennis and participates on a U.S.T.A. team. She also enjoys the challenge of bridge. Her husband, Robert, is an entrepreneur in the leisure sport industry. She has two sons—Michael, a lawyer, specializing in intellectual property law in New York, and David, a composer, pursuing a career in music for film in Los Angeles.

Dear Colleagues and Friends,

As we roll out the new edition of *Fundamental Accounting Principles*, we thank each of you who provided suggestions to improve the textbook and its teaching resources. This new edition reflects the advice and wisdom of many dedicated reviewers, symposium and workshop participants, students, and instructors. Throughout the revision process, we steered this textbook and its teaching tools in the manner you directed. As you'll find, the new edition offers a rich set of features—especially digital features—to improve student learning and assist instructor teaching and grading. We believe you and your students will like what you find in this new edition.

Many talented educators and professionals have worked hard to create the materials for this product, and for their efforts, we're grateful. **We extend a special thank-you to our contributing and technology supplement authors**, who have worked so diligently to support this product:

**Contributing Author:** Kathleen O'Donnell, *Onondaga Community College*

**Accuracy Checkers:** Dave Krug, *Johnson County Community College*; Mark McCarthy, *East Carolina University*; Helen Roybark, *Radford University*; Barbara Schnathorst; and Beth Woods

**LearnSmart Author:** April Mohr, *Jefferson Community and Technical College, SW*

**Interactive Presentations:** Jeannie Folk, *College of DuPage*

**PowerPoint Presentations:** Beth Kane, *Northwestern University*

**Instructor Resource Manual:** Patricia Walczak, *Lansing Community College*

**Test Bank Contributors:** Anna Boulware, *St. Charles Community College*, and Brenda J. McVey, *University of Mississippi*

**Digital Contributor, Connect Content, General Ledger Problems, and Exercise PowerPoints:** Kathleen O'Donnell, *Onondaga Community College*

In addition to the invaluable help from the colleagues listed above, we thank the entire *FAP 22e* team at McGraw-Hill Education: Tim Vertovec, Steve Schuetz, Michelle Nolte, Lindsey Schauer, Lori Koettters, Ann Torbert, Brad Parkins, Patricia Plumb, Xin Lin, Kevin Moran, Debra Kubiak, Carol Bielski, Keri Johnson, DeAnna Dausener, Sarah Evertson, Ben Pearsall, Brian Nacik, Ron Nelms, and Daryl Horrocks. We could not have published this new edition without your efforts.

*John J. Wild Ken W. Shaw Barbara Chiappetta*

## McGraw-Hill **CONNECT PLUS ACCOUNTING**

McGraw-Hill *Connect Plus Accounting* is a digital teaching and learning environment that gives students the means to better connect with their coursework, with their instructors, and with the important concepts they will need to know for success now and in the future. With *Connect Plus Accounting*, instructors can easily deliver assignments, quizzes, and tests online. Students can review course material and practice important skills.

McGraw-Hill *Connect Plus Accounting* provides all of the following learning and teaching resources:

- SmartBook, powered by LearnSmart
- SmartBook Achieve
- Auto-graded online homework
- General ledger problems
- Auto-graded Excel simulations
- Interactive Presentations
- Guided Examples

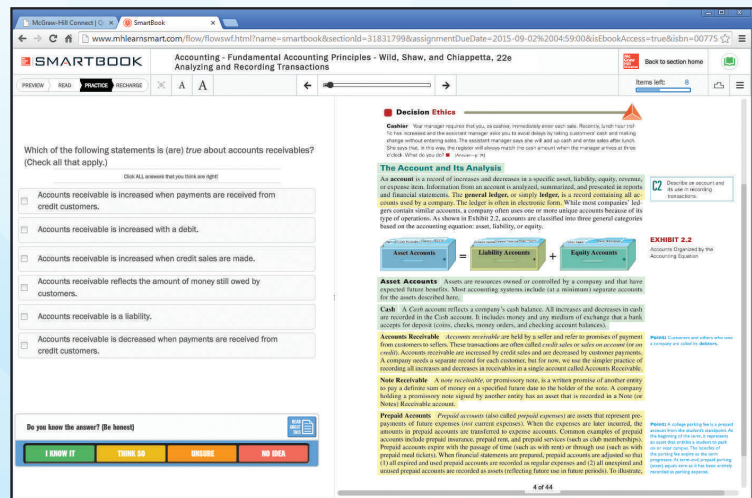

In short, *Connect Plus Accounting* offers students powerful tools and features that optimize their time and energy, enabling them to focus on learning.

## SmartBook, Powered by LearnSmart

**SMARTBOOK** LearnSmart™ is the market-leading adaptive study resource that is proven to strengthen memory recall, increase class retention, and boost grades. LearnSmart allows students to study more efficiently because they are made aware of what they know and don't know.

SmartBook™, which is powered by LearnSmart, is the first and only adaptive reading experience designed to change the way students read and learn. It creates a personalized reading experience by highlighting the most impactful concepts a student needs to learn at that moment in time. As a student engages with SmartBook, the reading experience continuously adapts by highlighting content based on what the student knows and doesn't know. This ensures that the focus is on the content he or she needs to learn, while simultaneously promoting long-term retention of material.

Use SmartBook's real-time reports to quickly identify the concepts that require more attention from individual students—or the entire class. The end result? Students are more engaged with course content, can better prioritize their time, and come to class ready to participate.

## SmartBook Achieve

SmartBook Achieve™—a revolutionary study and learning experience—pinpoints an individual student's knowledge gaps and provides targeted, interactive learning help at the moment of need. The rich, dynamic learning resources delivered in that moment of need help students learn the material, retain more knowledge, and earn better grades. The program's continuously adaptive learning path ensures that every minute a student spends with Achieve is returned as the most value-added minute possible.

# Tailored to You.

## Online Assignments

*Connect Plus Accounting* helps students learn more efficiently by providing feedback and practice material when they need it, where they need it. *Connect Plus* grades homework automatically and gives immediate feedback on any questions students may have missed. Our assignable, gradable end-of-chapter content includes a general journal application that looks and feels more like what you would find in a general ledger software package. Also, select questions have been redesigned to test students' knowledge more fully. They now include tables for students to work through rather than requiring that all calculations be done off-line. McGraw-Hill's redesigned student interface provides a real-world feel to interactive assignments and end-of-chapter assessment content. This robust accounting software allows for flexibility in learning styles and provides opportunities for courses to be delivered in traditional, online, and blended settings.

## General Ledger Problems

New General Ledger problems for select questions enable students to see how transactions post from the general journal all the way through the financial statements. It provides a much-improved experience for students working with accounting cycle questions. Students' work in the general journal is automatically posted to the ledger, navigation is much simpler, scrolling is no longer an issue, and students can easily link back to their original entries simply by clicking the ledger if edits are needed. Many questions now have critical thinking components added, to maximize students' foundational knowledge of accounting concepts and principles.

**Balance Sheet Assignment**

Question #1 (of 12) | save & exit | submit assignment

1. **10.00 points**

On October 1, Keisha King organized Real Answers, a new consulting firm. On October 3, the owner contributed \$84,000 cash. On October 31, the company's records show the following items and amounts:

Cash	\$ 11,360	Cash withdrawals by owner	\$ 2,000
Accounts receivable	14,000	Consulting fees earned	14,000
Office supplies	3,250	Rent expense	3,550
Land	48,000	Salaries expense	7,000
Office equipment	18,000	Telephone expense	750
Accounts payable	8,500	Miscellaneous expenses	580
Owner investments	84,000		

Using the above information prepare an October 31 balance sheet for Real Answers:

REAL ANSWERS Balance Sheet As of October 31					
Assets			Liabilities		
Cash	\$ 11,360		Accounts payable	\$ 8,500	
Accounts receivable	14,000		Accounts receivable		
Office supplies	3,250				
Land	48,000				
Office equipment	18,000				

Adjusted General Ledger Account

Cash				Accounts receivable - Art			
Date	Debit	Credit	Balance	Date	Debit	Credit	Balance
Jun 30			25,000				0
Jul 03		125	24,875	Jul 19	1,200		1,200
Jul 08	1,700		26,575				
Jul 12	882		27,457				
Jul 16		5,940	21,517				

Accounts receivable - Creek				Merchandise inventory			
Date	Debit	Credit	Balance	Date	Debit	Credit	Balance
			0	Jun 30			5,000
Jul 02	900		900	Jul 01	6,000		11,000
		900	0	Jul 02		500	10,500
				Jul 03	125		10,625
				Jul 08		1,300	9,325
				Jul 09	2,200		11,525
				Jul 11		200	11,325
				Jul 16		60	11,265
				Jul 19		800	10,465

**Receive Investment by Owner**

- Identify** The owner invests \$15,000 cash in the business.
- Analyze** This module illustrates how double-entry accounting is used in analyzing and processing business transactions. We analyze a set of transactions following four steps: identifying, analyzing, recording, and posting. In this first transaction, the owner of the business invests \$15,000 of cash to start operations.
- Record** This information is entered into the journal.
- Post** Notice how this transaction affects the Cash and Owner, Capital accounts.

## Interactive Presentations

Interactive Presentations provide engaging narratives of all chapter learning objectives in an assignable interactive online format. They follow the structure of the text and are organized to match the specific learning objectives within each chapter. While the Interactive Presentations are not meant to replace the textbook, they provide additional explanation and enhancement of material from the text chapter, allowing students to learn, study, and practice at their own pace, with instant feedback.

**Excel Simulation Exercise**

1. **10.00 points**

- Prepare a post-closing trial balance.
- Prepare a schedule of cost of goods manufactured and cost of goods sold.
- Compute underapplied or overapplied overhead and close it to the appropriate accounts.

Account Title	Adjusted Trial Balance	Closing Entry Information	Post-Closing Trial Balance
	Debit	Credit	Debit
Cash	8,000		8,000
Accounts receivable	15,000		15,000
Equipment	45,000		45,000
Accumulated depreciation - Equipment		18,000	
Prepaid insurance	12,000		12,000
Accounts payable		9,000	
Salaries payable		4,000	
Unearned fees		1,000	
Owner, Capital		81,000	
E. Salinas, Withdrawals	8,000		8,000
Retained Earnings		95,000	95,000
Depreciation expense - Equipment	8,000		
Salaries expense	20,000		
Rent expense	12,000		
Miscellaneous expenses	8,000		
Phone expense	20,000		
Owner's salary	20,000		
Total	148,000	148,000	148,000

The adjusted trial balance for Salinas Marketing Co. follows. Complete the four rightmost columns of the table by first entering information for the four closing entries (level 1 through 4) and second by comparing the post-closing trial balance.

No.	Account Title	Adjusted Trial Balance		Closing Entry Information		Post-Closing Trial Balance	
		Debit	Credit	Debit	Credit	Debit	Credit
101	Cash	8,000					
102	Accounts receivable	15,000					
103	Equipment	45,000					
104	Accumulated depreciation - Equipment		18,000				
105	Prepaid insurance	12,000					
106	Accounts payable		9,000				
107	Salaries payable		4,000				
108	Unearned fees		1,000				
109	Owner, Capital		81,000				
110	E. Salinas, Withdrawals	8,000		8,000			
111	Retained Earnings		95,000		95,000		
112	Depreciation expense - Equipment	8,000			8,000		
113	Salaries expense	20,000			20,000		
114	Rent expense	12,000			12,000		
115	Miscellaneous expenses	8,000			8,000		
116	Phone expense	20,000			20,000		
117	Owner's salary	20,000			20,000		
Total		148,000	148,000	39,000	39,000	109,000	109,000

The post-closing trial balance includes all balances that will appear on the balance sheet.

## Excel Simulations

Simulated Excel questions, assignable within *Connect Plus Accounting*, allow students to practice their Excel skills—such as basic formulas and formatting—within the context of accounting. These questions feature animated, narrated Help and Show Me tutorials (when enabled), as well as automatic feedback and grading for both students and professors.

## McGraw-Hill **CONNECT PLUS ACCOUNTING** Features

### Simple Assignment Management and Smart Grading

With *Connect Plus Accounting*, creating assignments is easier than ever, enabling instructors to spend more time teaching and less time managing. Simple assignment management and smart grading allow you to:

- Create and deliver assignments easily with selectable end-of-chapter questions and Test Bank items.
- Have assignments scored automatically, giving students immediate feedback on their work and side-by-side comparisons with correct answers.
- Access and review each response, manually change grades, or leave comments for students to review.
- Reinforce classroom concepts with practice assignments and instant quizzes and exams.

### Powerful Instructor and Student Reports

*Connect Plus Accounting* keeps instructors informed about how each student, section, and class is performing, allowing for more productive use of lecture and office hours. The progress-tracking function enables you to:

- View scored work immediately and track individual or group performance with assignment and grade reports.
- Access an instant view of student or class performance relative to learning objectives.
- Collect data and generate reports required by many accreditation organizations, such as AACSB and AICPA.

### Connect Insight

The first and only analytics tool of its kind, *Connect Insight™* is a series of visual data displays—each framed by an intuitive question—to provide at-a-glance information about how your class is doing.

*Connect Insight* provides a quick analysis on five key insights, available at a moment's notice from your tablet device:

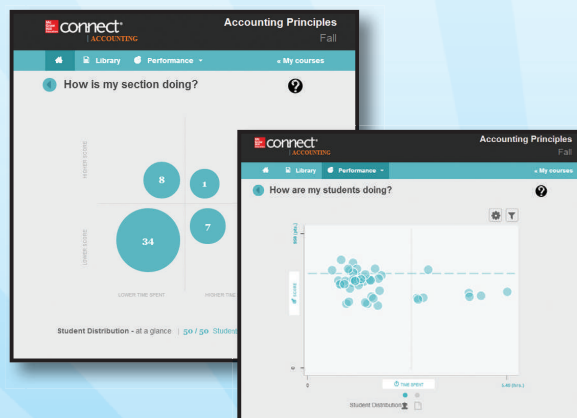

- How are my students doing?
- How are my assignments going?
- How is my section doing?
- How is this assignment going?
- How is this student doing?

### Instructor Library

The *Connect Plus Accounting* Instructor Library is a repository for additional resources to improve student engagement in and out of class. You can select and use any asset that enhances your lecture. The *Connect Plus Accounting* Instructor Library includes:

- Presentation slides.
- Animated PowerPoint exhibits and exercises.
- Solutions Manual.
- Test Bank.
- Instructor's Resource Manual.

The *Connect Plus Accounting* Instructor Library also allows you to upload your own files.

For more information about *Connect Plus Accounting*, go to [www.connect.mheducation.com](http://www.connect.mheducation.com), or contact your local McGraw-Hill Higher Education representative.

# Tailored to You.

## Other Technology Offered by McGraw-Hill

### Tegrity Campus: Lectures 24/7

Tegrity Campus is a service that makes class time available 24/7 by automatically capturing every lecture. With a simple one-click start-and-stop process, you capture all computer screens and corresponding audio in a format that is easily searchable, frame by frame. Students can replay any part of any recorded class with easy-to-use browser-based viewing on a PC, Mac, or mobile device.

Help turn your students' study time into learning moments immediately supported by your lecture. With Tegrity Campus, you also increase intent listening and class participation by easing students' concerns about note-taking.

To learn more about Tegrity, watch a two-minute Flash demo at <http://tegritycampus.mhhe.com>.

### McGraw-Hill Campus™

McGraw-Hill Campus™ is a new one-stop teaching and learning experience available to users of any learning management system. This institutional service allows faculty and students to enjoy single sign-on (SSO) access to all McGraw-Hill Higher Education materials, including the award-

winning McGraw-Hill *Connect Plus* platform, from directly within the institution's website. To learn more about McGraw-Hill Campus, visit <http://mhcampus.mhhe.com>.

### Custom Publishing through Create™

McGraw-Hill Create™ is a self-service website that allows instructors to create custom course materials by drawing upon McGraw-Hill's comprehensive, cross-disciplinary content. Instructors can add their own content quickly and easily and tap into other rights-secured, third-party sources as well, then arrange the content in a way that makes the most sense for their course.

Through Create, you can:

- Combine material from different sources and even upload your own content.
- Personalize your product with the course name and information.
- Choose the best format for your students—color print, black-and-white print, or eBook.
- Edit and update your course materials as often as you'd like.

Begin creating now at [www.mcgrawhillcreate.com](http://www.mcgrawhillcreate.com).

### ALEKS: A Superior, Student-Friendly Accounting Experience

**Artificial intelligence:** Fills knowledge gaps.

**Cycle of learning and assessment:** Increases learning momentum and engages students.

**Customizable curriculum:** Aligns with your course syllabi and textbooks.

**Dynamic, automated reports:** Monitors detailed student and class progress.

To learn more, visit [www.aleks.com/highered/business](http://www.aleks.com/highered/business).

### CourseSmart

Learn Smart. Choose Smart.

CourseSmart is a way for faculty to find and review eTextbooks. It's also a great option for students who are interested in accessing their course materials digitally and saving money.

CourseSmart offers thousands of the most commonly adopted textbooks across hundreds of courses from a wide variety of higher education publishers. With the CourseSmart eTextbook, students can save up to 45 percent off the cost of a print book, reduce their impact on the environment, and access powerful web tools for learning. CourseSmart is an online eTextbook, which means users access and view their textbook online when connected to the Internet. Students can also print sections of the book for maximum portability. CourseSmart eTextbooks are available in one standard online reader with full text search, notes and highlighting, and e-mail tools for sharing notes between classmates. For more information on CourseSmart, go to [www.coursesmart.com](http://www.coursesmart.com).

#### McGraw-Hill Customer Experience Group Contact Information

At McGraw-Hill, we understand that getting the most from new technology can be challenging. That's why our services don't stop after you purchase our products. You can contact our Product Specialists 24 hours a day to get product training online. Or you can search the knowledge bank of Frequently Asked Questions on our support website. For customer support, call 800-331-5094 or visit [www.mhhe.com/support](http://www.mhhe.com/support).

# Innovative Textbook Features . . .

## Using Accounting for Decisions

Whether we prepare, analyze, or apply accounting information, one skill remains essential: decision making. To help develop good decision-making habits and to illustrate the relevance of accounting, we use a pedagogical framework we call the Decision Center. This framework encompasses a variety of approaches and subject areas, giving students insight into every aspect of business decision making; see the four nearby examples for the different types of decision boxes, including those that relate to fraud. Answers to Decision Maker and Ethics boxes are at the end of each chapter.

**Decision Analysis**
■ ■ ■ **Current Ratio**

**A1** Compute the current ratio and describe what it reveals about a company's financial condition.

An important use of financial statements is to help assess a company's ability to pay its debts in the near future. Such analysis affects decisions by suppliers when allowing a company to buy on credit. It also affects decisions by creditors when lending money to a company, including loan terms such as interest rate, due date, and collateral requirements. It can also affect a manager's decisions about using cash to pay debts when they come due. The **current ratio** is one measure of a company's ability to pay its short-term obligations. It is defined in Exhibit 4.10 as current assets divided by current liabilities.

**EXHIBIT 4.10**  
Current Ratio

$$\text{Current ratio} = \frac{\text{Current assets}}{\text{Current liabilities}}$$

■ **Decision Insight**

**Women Entrepreneurs** **SPANX** has given more than \$20 million to charity. The Center for Women's Business Research reports that women-owned businesses, such as SPANX (owner Sara Blakely in photo), are growing and that they:

- Total approximately 11 million and employ nearly 20 million workers.
- Generate \$2.5 trillion in annual sales and tend to embrace technology.
- Are philanthropic—70% of owners volunteer at least once per month.
- Are more likely funded by individual investors (73%) than venture firms (15%). ■

Paul Morigi/Getty Images for FORTUNE

■ **Decision Ethics**

**Payables Manager** As a new accounts payable manager, you are being trained by the outgoing manager. She explains that the system prepares checks for amounts net of favorable cash discounts, and the checks are dated the last day of the discount period. She also tells you that checks are not mailed until five days later, adding that "the company gets free use of cash for an extra five days, and our department looks better. When a supplier complains, we blame the computer system and the mailroom." Do you continue this payment policy? ■ [Answers follow the chapter's Summary.]

■ **Decision Maker**

**Supplier** A retailer requests to purchase supplies on credit from your company. You have no prior experience with this retailer. The retailer's current ratio is 2.1, its acid-test ratio is 0.5, and inventory makes up most of its current assets. Do you extend credit? ■ [Answers follow the chapter's Summary.]

"Authors do a good job of relating material to real-life situations and putting students in the decision-maker role."

—Morgan Rockett, Moberly Area Community College

## Chapter Preview

Each chapter opens with a visual chapter preview. Students can begin their reading with a clear understanding of what they will learn and when, allowing them to stay more focused and organized along the way. Learning objective numbers highlight the location of related content.

**Chapter Preview**

<p style="text-align: center; margin: 0;"><b>MERCHANDISING ACTIVITIES</b></p> <p><b>C1</b> Reporting income and inventory</p> <p><b>C2</b> Operating cycles and inventory system</p>	<p style="text-align: center; margin: 0;"><b>MERCHANDISING PURCHASES</b></p> <p><b>P1</b> Accounting for: Purchase discounts</p> <p>Purchase returns and allowances</p> <p>Transportation costs</p>	<p style="text-align: center; margin: 0;"><b>MERCHANDISING SALES</b></p> <p><b>P2</b> Accounting for: Sales of merchandise</p> <p>Sales discounts</p> <p>Sales returns and allowances</p>	<p style="text-align: center; margin: 0;"><b>MERCHANDISE REPORTING AND ANALYSIS</b></p> <p><b>P3</b> Adjusting and closing for merchandisers</p> <p><b>P4</b> Multiple-step and single-step income statements</p> <p><b>A1</b> Acid-test analysis</p> <p><b>A2</b> Gross margin analysis</p>

--	---	---

## CAP Model

The Conceptual/Analytical/Procedural (CAP) Model allows courses to be specially designed to meet the teaching needs of a diverse faculty. This model identifies learning objectives, textual materials, assignments, and test items by C, A, or P, allowing different instructors to teach from the same materials, yet easily customize their courses toward a conceptual, analytical, or procedural approach (or a combination thereof) based on personal preferences.

# Bring Accounting to Life

**NEED-TO-KNOW 1-5** Prepare the (a) income statement, (b) statement of owner's equity, and (c) balance sheet, for **Apple** using the following condensed data from its fiscal year ended September 28, 2013. (All \$ are in millions.)

Financial Statements

Accounts payable	\$ 22,367	Investments and other assets	\$163,042
Other liabilities	61,084	Land and equipment	16,597
Cost of sales and other expenses	119,724	Selling and other expenses	14,149
Cash	14,259	Accounts receivable	13,102
Owner, Capital, Sep. 29, 2012	118,210	Net income	37,037
Withdrawals in fiscal year 2013	31,698	Owner, Capital, Sep. 28, 2013	123,549
Revenues	170,910		

**Solution**

APPLE	
Income Statement	
For Fiscal Year Ended September 28, 2013	
Revenues	\$170,910
Expenses	
Cost of sales and other expenses	119,724
Selling and other expenses	15,149

## Need-to-Know Illustrations

New in this edition are several Need-to-Know illustrations located at key junctures in each chapter. These illustrations pose questions about the material just presented—content that students “need to know” to successfully learn accounting. Accompanying solutions walk students through key procedures and analysis necessary to be successful with homework and test materials. Need-to-Know illustrations are supplemented with narrated, animated, step-by-step walk-through videos led by an instructor and available via *Connect Plus*.

## Global View

The Global View section explains international accounting practices relating to the material covered in that chapter. The aim of this section is to describe accounting practices and to identify the similarities and differences in international accounting practices versus those in the United States. As we move toward global convergence in accounting practices, and as we witness the likely convergence of U.S. GAAP to IFRS, the importance of student familiarity with international accounting grows. This innovative section helps us begin down that path. This section is purposefully located at the end of each chapter so that each instructor can decide what emphasis, if at all, is to be assigned to it.

### GLOBAL VIEW

This section discusses similarities and differences between U.S. GAAP and IFRS regarding the recognition, measurement, and disposition of receivables.

**Recognition of Receivables** Both U.S. GAAP and IFRS have similar asset criteria that apply to recognition of receivables. Further, receivables that arise from revenue-generating activities are subject to broadly similar criteria for U.S. GAAP and IFRS. Specifically, both refer to the realization principle and an earnings process. The realization principle under U.S. GAAP implies an *arm's-length transaction* occurs, whereas under IFRS this notion is applied in terms of reliable measurement and likelihood of economic benefits. Regarding U.S. GAAP's reference to an earnings process, IFRS instead refers to risk transfer and ownership reward. While these criteria are broadly similar, differences do exist, and they arise mainly from industry-specific guidance under U.S. GAAP, which is very limited under IFRS.

**Valuation of Receivables** Both U.S. GAAP and IFRS require that receivables be reported net of estimated uncollectibles. Further, both systems require that the expense for estimated uncollectibles be recorded in the same period when any revenues from those receivables are recorded. This means that for accounts receivable, both U.S. GAAP and IFRS require the allowance method for uncollectibles (unless uncollectibles are immaterial). The allowance method using percent of sales, percent of receivables, and aging was explained in this chapter. **Nokia** reports the following for its allowance for uncollectibles:

**NOKIA**

Management specifically analyzes accounts receivables and historical bad debt, customer concentrations, customer creditworthiness, current economic trends and changes in our customer payment terms when evaluating the adequacy of the allowance.

**Sustainability and Accounting** The founders of **Proof Eyewear**, as introduced in this chapter's opening feature, assert that “sustainability is a key test in every product decision . . . it has to have an aspect of sustainability to it or we just won't develop it.” This level of commitment to sustainability is impressive. The founders also impose a “three-pillar foundation” in everything they do, which is graphically portrayed below. Some of their recent activities include: (1) planting a tree for each pair of sunglasses sold on Earth Day, (2) financing a portion of sight-saving surgeries for each pair of frames purchased, (3) using only wood from sustainably managed forests and rejecting endangered wood, and (4) contributing to reforestation efforts.

## Sustainability and Accounting

New in this edition are brief sections that highlight the importance of sustainability within the broader context of global accounting (and accountability). Companies increasingly address sustainability in their public reporting and consider the sustainability accounting standards (from the Sustainability Accounting Standards Board) and the expectations of our global society. These boxes, located near the end of the Global View section, cover different aspects of sustainability, often within the context of the chapter's featured entrepreneurial company.

“High-quality book that provides coverage of essential content to aid student learning in a manner that students understand.”

—Steve Ludwig, Northwest Missouri State University

# Outstanding Assignment Material . . .

Once a student has finished reading the chapter, how well he or she retains the material can depend greatly on the questions, exercises, and problems that reinforce it. This book leads the way in comprehensive, accurate assignments.

**Comprehensive Need-to-Know Problems** present both a problem and a complete solution, allowing students to review the entire problem-solving process and achieve success.

**Chapter Summaries** provide students with a review organized by learning objectives. Chapter Summaries are a component of the CAP model (see page x), which recaps each conceptual, analytical, and procedural objective.

Water Sports Company (WSC) patented and successfully test-marketed a new product. To expand its ability to produce and market the new product, WSC needs to raise \$800,000 of financing. On January 1, 2015, the company obtained the money in two ways:

**NEED-TO-KNOW**  
COMPREHENSIVE

- WSC signed a \$400,000, 10% installment note to be repaid with five equal annual installments to be made on December 31 of 2015 through 2019.
- WSC issued five-year bonds with a par value of \$400,000. The bonds have a 12% annual contract rate and pay interest on June 30 and December 31. The bonds' annual market rate is 10% as of January 1, 2015.

**Required**

- For the installment note, (a) compute the size of each annual payment, (b) prepare an amortization table such as Exhibit 14.14, and (c) prepare the journal entry for the first payment.
- For the bonds, (a) compute their issue price; (b) prepare the January 1, 2015, journal entry to record their issuance; (c) prepare an amortization table using the straight-line method; (d) prepare the June 30, 2015, journal entry to record the first interest payment; and (e) prepare a journal entry to record retiring the bonds at a \$416,000 call price on January 1, 2017.

**3P** Redo parts 2(c), 2(d), and 2(e) assuming the bonds are amortized using the effective interest method.

**PLANNING THE SOLUTION**

- For the installment note, divide the borrowed amount by the annuity factor (from Table B.3) using the 10% rate and five payments to compute the amount of each payment. Prepare a table similar to Exhibit 14.14 and use the numbers in the table's first line for the journal entry.
- Compute the bonds' issue price by using the market rate to find the present value of their cash flows (use tables found in Appendix B). Then use this result to record the bonds' issuance. Next, prepare an amortization table like Exhibit 14.11 (and Exhibit 14B.2) and use it to get the numbers needed for the journal entry. Also use the table to find the carrying value as of the date of the bonds' retirement that you need for the journal entry.

**SOLUTION**

**Part 1: Installment Note**

- Annual payment = Note balance/PV Annuity factor = \$400,000/3.7908 = \$105,519 (The present value annuity factor is for five payments and a rate of 10%.)
- An amortization table for the long-term note payable follows.

Key Terms		
Account	Debit	Posting
Account balance	Debit ratio	Posting reference (PR) column
Balance column account	Double-entry accounting	Source documents
Chart of accounts	General journal	T-account
Compound journal entry	General ledger	Trial balance
Credit	Journal	Unearned revenue
Creditors	Journalizing	

**Key Terms** are bolded in the text and repeated at the end of the chapter. A complete glossary of key terms is available online through *Connect Plus Accounting*.

Multiple Choice Quiz		Answers at end of chapter	
1. G. Venda, owner of Venda Services, withdrew \$25,000 from the business during the current year. The entry to close the withdrawals account at the end of the year is:		a. G. Venda, Withdrawals	25,000
		G. Venda, Capital	25,000
		b. Income Summary	25,000
		G. Venda, Capital	25,000
		c. G. Venda, Withdrawals	
		Cash	

**Multiple Choice Quiz** questions quickly test chapter knowledge before a student moves on to complete Quick Studies, Exercises, and Problems.

**connect** Choose from the following list of terms/phrases to best complete the statements below.

a. Fiscal year	d. Accounting period	g. Natural business year
b. Timeliness	e. Annual financial statements	h. Time period assumption
c. Calendar year	f. Interim financial statements	i. Quarterly statements

- \_\_\_\_\_ presumes that an organization's activities can be divided into specific time periods.
- Financial reports covering a one-year period are known as \_\_\_\_\_.
- A \_\_\_\_\_ consists of any 12 consecutive months.
- A \_\_\_\_\_ consists of 12 consecutive months ending on December 31.
- The value of information is often linked to its \_\_\_\_\_.

**QUICK STUDY**  
OS 3-1  
Periodic reporting  
C1

**Quick Study** assignments are short exercises that often focus on one learning objective. Most are included in *Connect Plus Accounting*. There are at least 10–15 Quick Study assignments per chapter.

**Exercises** are one of this book's many strengths and a competitive advantage. There are at least 10–15 per chapter, and most are included in *Connect Plus Accounting*.

**connect** These 16 accounts are from the Adjusted Trial Balance columns of a company's 10-column work sheet. In the blank space beside each account, write the letter of the appropriate financial statement column (A, B, C, or D) to which a normal account balance is extended.

<b>A.</b> Debit column for the Income Statement columns.	<b>9.</b> Accounts Receivable
<b>B.</b> Credit column for the Income Statement columns.	<b>10.</b> Accumulated Depreciation
<b>C.</b> Debit column for the Balance Sheet and Statement of Owner's Equity columns.	<b>11.</b> Office Supplies
<b>D.</b> Credit column for the Balance Sheet and Statement of Owner's Equity columns.	<b>12.</b> Insurance Expense

_____ 1. Interest Revenue	_____ 9. Accounts Receivable
_____ 2. Machinery	_____ 10. Accumulated Depreciation
_____ 3. Owner, Withdrawals	_____ 11. Office Supplies
_____ 4. Depreciation Expense	_____ 12. Insurance Expense
_____ 5. Accounts Payable	_____ 13. Interest Receivable
_____ 6. Service Fees Revenue	_____ 14. Cash
_____ 7. Owner, Capital	_____ 15. Rent Expense
_____ 8. Interest Expense	_____ 16. Wages Payable

**EXERCISES**  
Exercise 4-1  
Extending adjusted account balances on a work sheet  
P1

**PROBLEM SET A** Karla Tanner opens a work sheet in its first month of operation.

**Problem 2-1A** Preparing and posting journal entries; preparing a trial balance  
C3 C4 A1 P1 P2

April 1 Tanner invests \$25,000 in the business. The company purchases office equipment valued at \$15,000 for office space. (Hint: Debit Prepaid Rent and Office Equipment and credit Cash.)

**PROBLEM SET B** Preparing and posting journal entries; preparing a trial balance  
C3 C4 A1 P1 P2

**Problem Sets A & B** are proven problems that can be assigned as homework or for in-class projects. All problems are coded according to the CAP model (see page x), and Set A is included in *Connect Plus Accounting*.

# Helps Students Master Key Concepts

**Beyond the Numbers** exercises ask students to use accounting figures and understand their meaning. Students also learn how accounting applies to a variety of business situations. These creative and fun exercises are all new or updated and are divided into sections:

- Reporting in Action
- Comparative Analysis
- Ethics Challenge
- Communicating in Practice
- Taking It to the Net
- Teamwork in Action
- Hitting the Road
- Entrepreneurial Decision
- Global Decision

**Beyond the Numbers**

**REPORTING IN ACTION**  
C1 C2 A1 A2

**APPLE**

**BTN 3-1** Refer to Apple's financial statements in Appendix A to answer the following.

1. Identify and write down the revenue recognition principle as explained in the chapter.
2. Review Apple's footnotes (in Appendix A and/or from its 10-K on its website) to discover how it applies the revenue recognition principle and when it recognizes revenue. Report what you discover.
3. What is Apple's profit margin for fiscal years ended September 28, 2013, and September 29, 2012.

**Fast Forward**

4. Access Apple's annual report (10-K) for fiscal years ending after September 28, 2013, at its website ([Apple.com](http://Apple.com)) or the SEC's EDGAR database ([www.SEC.gov](http://www.SEC.gov)). Assess and compare the September 28, 2013, fiscal year profit margin to any subsequent year's profit margin that you compute.

**SERIAL PROBLEM**  
Business Solutions  
P2 P3

*(This serial problem began in Chapter 1 and continues through most of the book. If previous chapter segments were not completed, the serial problem can begin at this point. It is helpful, but not necessary, to use the Working Papers that accompany the book.)*

**SP 4** The December 31, 2015, adjusted trial balance of Business Solutions (reflecting its transactions from October through December of 2015) follows.

No.	Account Title	Debit	Credit
101	Cash	\$ 48,372	
106	Accounts receivable	5,668	
126	Computer supplies	580	
128	Prepaid insurance	1,665	
131	Prepaid rent	825	
143	Office equipment	6,000	
164	Accumulated depreciation—Office equipment		\$ 400
167	Computer equipment	20,000	
168	Accumulated depreciation—Computer equipment		1,250
201	Accounts payable		1,100

**Serial Problems** use a continuous running case study to illustrate chapter concepts in a familiar context. The Serial Problem can be followed continuously from the first chapter or picked up at any later point in the book; enough information is provided to ensure students can get right to work.

"I have used many editions of this text and have been very happy with the text and all of the supplementary materials. The textbook is kept current, and is straightforward, and very usable by students. The online resources get better with each edition."

—Susan Cordes, Johnson County Community College

**General Ledger Problems** New General Ledger problems enable students to see how transactions post. Students can track an amount in any financial statement all the way back to the original journal entry. Critical thinking components then challenge students to analyze the business activities in the problem.

Using transactions from the following assignments, prepare journal entries for each transaction and identify the financial statement impact of each entry. The financial statements are automatically generated based on the journal entries recorded.

**GL 2-1** Transactions from the FastForward illustration in this chapter

**GL 2-2** Based on Exercise 2-9

**GL 2-3** Based on Exercise 2-12

**GL 2-4** Based on Problem 2-1A

Using transactions from the following assignments, record journal entries, create financial statements, and assess the impact of each transaction on financial statements.

**GENERAL LEDGER PROBLEM**

Available only in **Connect Plus**

**The End of the Chapter Is Only the Beginning** Our valuable and proven assignments aren't just confined to the book. From problems that require technological solutions to materials found exclusively online, this book's end-of-chapter material is fully integrated with its technology package.

- Quick Studies, Exercises, and Problems available in *Connect* are marked with an icon.
- Assignments that focus on global accounting practices and companies are often identified with an icon.
- Assignments that involve decision analysis are identified with an icon.

# Content Revisions Enhance Learning

This edition's revisions are driven by feedback from instructors and students.

- Many new, revised, and updated assignments throughout, including serial problem and entrepreneurial assignments.
- New Need-to-Know illustrations added to each chapter, at key junctures to reinforce key topics.
- New Sustainability section for each chapter, with examples linked to the company featured in the chapter opener.
- New annual reports and comparison assignments: **Apple**, **Google**, and **Samsung**.
- New streamlined opening layout for each chapter.
- Revised art program, visual infographics, and text layout.
- Updated ratio/tool analysis, using data from well-known firms.
- New General Ledger questions added to most chapters.
- New material on International Financial Reporting Standards (IFRS).
- New and revised entrepreneurial examples and elements.
- New technology content integrated and referenced in the book.
- Revised terminology from *goods in process* to *work in process*.
- Changed the title of *Manufacturing Statement* to *Schedule of Cost of Goods Manufactured* due to its use in practice.

## Chapter 1

**Apple** NEW opener.  
Added titles to revenue and expense entries in columnar layout of transaction analysis.  
Streamlined section on Dodd-Frank.  
Bulleted presentation of accounting principles and fraud triangle.  
Deleted world map of IFRS coverage.  
Updated salary information.  
New discussion of FASB and IASB convergence.  
Updated return on assets for Dell.

## Chapter 2

**Akola Project** NEW opener.  
New layout showing financial statements drawn from trial balance.  
New preliminary coverage of classified and unclassified balance sheets.  
Changed selected numbers for FastForward.  
Revised Piaggio's (IFRS) balance sheet.  
Updated debt ratio section using Skechers.

## Chapter 3

**International Princess Project** NEW opener.  
Enhanced the innovative three-step process for adjusting accounts.  
Changed selected numbers for FastForward.  
Updated profit margin section using Limited Brands.

## Chapter 4

**The Naked Hippie** NEW opener.  
New multicolor-coded five-step layout for work sheet preparation and use.  
Updated current ratio section using Limited Brands.

## Chapter 5

**Sseko Designs** NEW opener.  
Enhanced exhibit on transportation costs and FOB terms.  
New T-accounts to highlight inventory flow.  
Enhanced two-step process for recording merchandise sales.  
Updated gross margin and quick ratios section using JCPenney.

## Chapter 6

**Proof Eyewear** NEW opener.  
Streamlined inventory presentation.  
Added several new T-accounts to facilitate learning of inventory flow.  
New explanatory notes added to exhibits as learning aids.  
Updated inventory ratios section using Toys "R" Us.  
Simplified presentation and exhibits for periodic inventory methods.

## Chapter 7

**Oimei Company** NEW opener.  
Streamlined several sections.  
Updated segment analysis using Callaway Golf.

## Chapter 8

**Dandelion Chocolate** NEW opener.  
New learning notes added to bank reconciliation.  
New chart for timing differences for bank reconciliation.  
Updated receivables analysis using Hasbro and Mattel.

## Chapter 9

**Skai Blue Media** NEW opener.  
Enhanced three-step process for estimating allowance for uncollectibles.  
New T-accounts to enhance learning of receivables.  
Enhanced infographic on methods to estimate bad debts.

New notes on pros/cons of allowance vs. direct write-off.  
Updated receivables analysis using Dell and HP.

## Chapter 10

**New Glarus Brewing Co.** NEW opener.  
Rearranged presentation of plant assets.  
New learning notes on book value and depreciation.  
Updated asset turnover analysis using Boston Beer and Molson Coors.  
New goodwill example using Facebook's purchase of WhatsApp.

## Chapter 11

**Uncharted Play** NEW opener.  
Updated payroll rates to 2014.  
New explanation of *Additional Medicare Tax*.  
Updated FUTA rate.  
Clarified bonus explanation and computations.  
Enhanced payroll reports and exhibits.

## Chapter 12

**EcoScraps** NEW opener.  
New LLC example using STARZ.  
New T-accounts to enhance learning of partnership capital.

## Chapter 13

**Alibaba Group** NEW opener.  
New dividend taxation information.  
New learning notes for computations.  
Updated PE and dividend yield ratios for Amazon and Altria.

## Chapter 14

**Stone + Cloth** NEW opener.  
New learning notes for bond interest computations.  
New color highlighting for learning amortization.

New T-accounts for bond amortization.  
Updated debt-to-equity analysis using Amazon.

## Chapter 15

**BANGS** NEW opener.  
New three-step process for fair value adjustment.  
New learning note for investee vs. investor securities.  
New Google example for comprehensive income.  
Updated return analysis using Gap.

## Chapter 16

**LSTN** NEW opener.  
New infographics for operating, investing, and financing activities.  
New linkage of cash flow classifications to balance sheet.  
Simplified discussion of noncash investing and financing.  
New, simplified preparation steps for statement of cash flows.  
New, overall summary T-account for preparing statement of cash flows.  
New reconstruction entries to help determine cash.  
Updated cash flow analysis using Nike.  
3 new Quick Studies and 3 revised Exercises.

## Chapter 17

**Motley Fool** REVISED opener.  
New companies—Apple, Google, and Samsung—throughout the text and exhibits.  
New boxed discussion of the role of financial statement analysis to fight and prevent fraud.  
Enhanced horizontal and vertical ratio analysis using new companies and industry data.  
New analysis for segment data.

## Chapter 18

### SunSaluter NEW opener.

Revised discussions of the purpose of managerial accounting and cost classifications and their uses. Reduced number of cost classifications from five to three. Revised exhibit and example of direct vs. indirect costs. Added new exhibit comparing the balance sheet and income statement for different types of companies. Reduced level of detail in exhibit on income statement reporting. Revised discussion of the flow of manufacturing costs. New four-step process to illustrate the schedule of cost of goods manufactured (COGM). Added T-accounts to show the flow of costs for the COGM. Added a third column to the schedule of COGM, for enhanced presentation. Simplified exhibit on cost flows across the financial statements. New discussion of corporate social responsibility. Added 6 Quick Studies and 4 Exercises.

## Chapter 19

### Middleton Made Knives NEW opener.

New discussion of differences between job order and process operations. Moved discussion of job order costing for services to later in chapter. Revised/simplified discussions of cost flows and job cost sheets. Simplified journal entries for labor costs. New exhibits to show postings of product cost journal entries to general ledger accounts and to job cost sheets. Revised exhibits on materials and labor cost flows. Revised text and new exhibit on four-step process to record overhead. Revised discussion of applying overhead and recording actual overhead. Added new discussion and presentation of journal entries for indirect materials and indirect labor. Added new exhibit showing calculations for overhead applied to individual jobs. Added new exhibit on the flow of costs to general ledger accounts, the manufacturing statement, and the financial statements. Added new schedule of cost of goods manufactured exhibit. Added 2 Quick Studies and 2 Exercises.

## Chapter 20

### Kar's Nuts NEW opener.

*Major change:* Revised the overview exhibit of process operations and expanded the illustration to show *two departments*.

*Major change:* Combined coverage of direct labor and overhead into *conversion costs*.

Revised exhibits/examples to show fewer processes and simpler, more engaging products (tennis balls and trail mix). Added discussion, with journal entries, of transfers of costs across departments. Added discussion of multiple work in process (WIP) inventory accounts. Revised discussion of job order vs. process costing. Revised discussion, with new exhibit, on computation of equivalent units. Added conversion costs per unit to equivalent units discussion. Added a section differentiating the weighted-average and FIFO methods. New exhibit showing units transferred out and units remaining in ending work in process inventory. Added formula for computing equivalent units under the weighted-average method. Moved discussion of journal entries to later in the chapter. Revised the process costing summary report to focus on direct materials and conversion costs. Revised journal entries to show two WIP Inventory accounts and to eliminate the Factory Payroll account. Added discussion of Volkswagen's use of robotics in process operations. Revised and added Comprehensive Need-to-Knows to reflect changes in chapter (including *two processes*). New exhibits showing transfer of units and costs across departments, using T-accounts. In the FIFO method appendix:

- Added discussion of differences between FIFO and weighted-average approaches to computing equivalent units.
- Added exhibits on computing equivalent units and cost per equivalent unit under FIFO.
- Revised discussion of applying four-step process using FIFO.

Added 16 Quick Studies and 7 Exercises.

## Chapter 21

### Fast Yeti Custom Tees NEW opener.

Revised discussion of fixed and variable costs. Revised discussion of *relevant range*. Reorganized discussion of the high-low method as a three-step process. Enhanced exhibit on high-low method. Revised discussion of how changes in estimates affect break-even points. Revised *target income* discussion to focus on pretax income. Simplified exhibit on using the contribution margin income statement to compute sales needed for target income.

Revised discussion of sensitivity analyses, with examples of buying a new machine or increasing advertising. Added exhibit on using the contribution margin income statement in sensitivity analysis. Eliminated the *weighted-average contribution margin* method of computing multiproduct break-even. Added two exhibits on calculations of *operating leverage*. Added appendix on variable costing. Added 5 Quick Studies and 6 Exercises.

## Chapter 22

### Solben NEW opener.

*Major change:* Uses a *manufacturing company* as the example within the chapter. Budgeting for a *merchandising company* now appears in the chapter-end appendix. Shortened/tightened section on budget process and administration. Added section on the benefits of budgeting. New section on the master budget differences between manufacturers and merchandisers. Revised exhibit on the sequence of preparing the master budget for a *manufacturer*. Reformatted sales budget exhibit. Streamlined and reformatted several exhibits in Excel format. Rewrote sections on preparing the direct materials, direct labor, and factory overhead budgets. Clarified explanation of capital expenditures budget. Slightly expanded section on preparation of the cash budget. Added section on using the master budget. In appendix, added new exhibit on the master budget sequence for a merchandiser. Added 5 Quick Studies and 6 Exercises.

## Chapter 23

### Niner Bikes NEW opener.

Revised discussions of fixed and flexible budget performance reports. Revised several flexible budget exhibits. Revised discussion of setting standard costs. Revised discussion of computing and analyzing cost variances. Revised exhibits on computing direct materials and direct labor variances. Revised sections on analyzing materials, labor, and overhead variances. Simplified discussion of setting overhead standards. Revised discussion of computing the predetermined overhead rate.

Revised exhibits on overhead variances and overhead variance report. Revised discussion of sales variances in Decision Analysis. Added learning objective for overhead spending and efficiency variances (in appendix). In the appendix, added discussion, with an exhibit, on the standard costing income statement. Added 7 Exercises.

## Chapter 24

### United by Blue UPDATED opener.

Added discussion of advantages and disadvantages of decentralization. Reorganized discussion of cost, profit, and investment centers into a bulleted list, with examples using Kraft Foods Group. Revised discussion and exhibit of responsibility accounting for cost centers. Streamlined and clarified discussion and exhibits in the allocation of indirect expenses example. Added discussion of the usefulness of departmental income statements in decision making. Revised discussion of the use of return on investment and residual income in decision making. Revised example of profit margin and investment turnover calculations, using Walt Disney Company. Added 3 Quick Studies, 5 Exercises, and 1 Problem.

## Chapter 25

### Adafruit Industries NEW opener.

Revised separate discussions of the accounting rate of return, net present value, and internal rate of return. Updated graphic showing cost of capital estimates by industry. Revised discussion of profitability index, with new exhibit. Expanded discussion and exhibits for short-term decisions, including additional business, make or buy, scrap or rework, sell or process further, sales mix, and segment elimination. Added 11 Quick Studies and 8 Exercises.

## Appendix C

Revised discussion of advantages and disadvantages of activity-based costing. Moved some end-of-chapter items out of the print book, to shorten. (All end-of-chapter assignments appear in the eBook.)

# Instructor Resources

Connect is your all-in-one location for a variety of instructor resources. You can create custom presentations from your own materials and access all of the following. Here's what you'll find there:

- **Instructor's Resource Manual**

*Written by Barbara Chiappetta, Nassau Community College, and Patricia Walczak, Lansing Community College.*

This manual contains (for each chapter) a Lecture Outline, a chart linking all assignment materials to learning objectives, and additional visuals with transparency masters.

- **Solutions Manual**

*Written by John J. Wild, University of Wisconsin–Madison, and Ken W. Shaw, University of Missouri–Columbia.*

- **Test Bank, Computerized Test Bank**

*Revised by Anna Boulware, St. Charles Community College, and Brenda J. McVey, University of Mississippi.*

- **PowerPoint® Presentations**

*Prepared by Beth Kane, Northwestern University.*

Presentations allow for revision of lecture slide, and include a viewer,

allowing screens to be shown with or without the software.

- **Exercise PowerPoints**

*Prepared by Kathleen O'Donnell, Onandaga Community College.*

Exercise PowerPoints are animated walk-throughs of end-of-chapter exercises that you can edit and customize for your classroom use. These presentations are a powerful tool for the smart classroom, allowing you to spend more time teaching and less time writing on the board.

# Student Supplements

## Excel Working Papers CD

ISBN: 9780077632762  
MHID: 0077632761

*Written by John J. Wild.*

Working Papers (for Chapters 1-25) delivered in Excel spreadsheets. These Excel Working Papers are available on CD-ROM and can be bundled with the printed Working Papers; see your representative for information.

## Working Papers

Vol. 1, Chapters 1-12  
ISBN: 9780077632861  
MHID: 0077632869

Vol. 2, Chapters 12-25  
ISBN: 9780077632847  
MHID: 0077632842

*Principles of Financial Accounting  
Chapters 1-17*

ISBN: 9780077632854  
MHID: 0077632850

*Written by John J. Wild.*

## Connect Plus Accounting with LearnSmart Two- Semester Access Code Card

ISBN: 9780077632731  
MHID: 0077632737

"I am always impressed with the simplicity, accuracy, and elegance of the writing of the ... *Fundamental Accounting Principles* text. I can always count on the text to be properly updated and the overall attention to detail is appreciated as well. Thank you"

— Patricia Feller, Nashville State Community College

# Meeting Accreditation Needs

## Assurance of Learning Ready

Many educational institutions today are focused on the notion of assurance of learning, an important element of some accreditation standards. *Fundamental Accounting Principles* is designed specifically to support your assurance of learning initiatives with a simple, yet powerful solution. Each test bank question for *Fundamental Accounting Principles* maps to a specific chapter learning objective listed in the text. You can use our test bank software, EZ Test Online, or *Connect Plus Accounting* to easily query for learning objectives that directly relate to the learning objectives for your course. You can then use the EZ Test reporting features to aggregate student results in similar fashion, making the collection and presentation of assurance of learning data simple and easy.

"FAP.. is an old friend, dependable and true over time, with enough pizzazz and modernity to keep the relationship interesting and ongoing. The authors and publisher are dedicated to producing quality instructional materials in a variety of formats to meet the educational requirements and learning styles of a diverse audience. Hooray for them!"

— Beverly R. Beatty, Anne Arundel Community College

## AACSB Statement

The McGraw-Hill Companies is a proud corporate member of AACSB International. Understanding the importance and value of AACSB accreditation, *Fundamental Accounting Principles* recognizes the curricula guidelines detailed in the AACSB standards for business accreditation by connecting selected questions in the test bank to the six general knowledge and skill guidelines in the AACSB standards. The statements contained in *Fundamental Accounting Principles* are provided only as a guide for the users of this textbook. The AACSB leaves content coverage and assessment within the purview of individual schools, the mission of the school, and the faculty. While *Fundamental Accounting Principles* and the teaching package make no claim of any specific AACSB qualification or evaluation, we have within *Fundamental Accounting Principles* labeled select questions according to the six general knowledge and skills areas.

# Acknowledgments

John J. Wild, Ken W. Shaw, Barbara Chiappetta, and McGraw-Hill Education recognize the following instructors for their valuable feedback and involvement in the development of *Fundamental Accounting Principles, 22e*. We are thankful for their suggestions, counsel, and encouragement.

**Khaled Abdou**, Penn State University–Berks  
**Anne Marie Anderson**, Raritan Valley Community College  
**Elaine Anes**, Heald College–Fresno  
**Jerome Apple**, University of Akron  
**Jack Aschkenazi**, American Intercontinental University  
**Sidney Askew**, Borough of Manhattan Community College  
**Lawrence Awopetu**, University of Arkansas–Pine Bluff

Preface iii

## 1 Accounting in Business 2

### Importance of Accounting 4

*Users of Accounting Information 4*  
*Opportunities in Accounting 6*

### Fundamentals of Accounting 7

*Ethics—A Key Concept 7*  
*Fraud Triangle 8*  
*Generally Accepted Accounting Principles 8*  
*International Standards 9*  
*Conceptual Framework and Convergence 9*  
*Sarbanes-Oxley (SOX) 12*  
*Dodd-Frank 13*

### Transaction Analysis and the Accounting Equation 14

*Accounting Equation 14*  
*Transaction Analysis 15*  
*Summary of Transactions 19*

### Financial Statements 20

*Income Statement 20*  
*Statement of Owner's Equity 20*  
*Balance Sheet 22*  
*Statement of Cash Flows 22*

### Global View 23

Decision Analysis—Return on Assets 24

Appendix 1A Return and Risk Analysis 28

Appendix 1B Business Activities and the Accounting Equation 28

## 2 Analyzing and Recording Transactions 52

### Analyzing and Reporting Accounts 54

*Source Documents 54*  
*The Account and Its Analysis 55*

### Analyzing and Processing Transactions 58

*Ledger and Chart of Accounts 58*  
*Debits and Credits 59*  
*Double-Entry Accounting 59*  
*Journalizing and Posting Transactions 61*  
*Analyzing Transactions—An Illustration 64*  
*Accounting Equation Analysis 68*

## Trial Balance 70

*Preparing a Trial Balance 70*  
*Using a Trial Balance to Prepare Financial Statements 72*

### Global View 74

Decision Analysis—Debt Ratio 75

## 3 Adjusting Accounts and Preparing Financial Statements 98

### Timing and Reporting 100

*The Accounting Period 100*  
*Accrual Basis versus Cash Basis 100*  
*Recognizing Revenues and Expenses 101*

### Adjusting Accounts 102

*Framework for Adjustments 102*  
*Prepaid (Deferred) Expenses 103*  
*Unearned (Deferred) Revenues 107*  
*Accrued Expenses 109*  
*Accrued Revenues 111*  
*Links to Financial Statements 113*  
*Adjusted Trial Balance 114*

### Preparing Financial Statements 114

Global View 116

Decision Analysis—Profit Margin 117

- A2** Financial analysis

*Chapter Preview is organized by key topics and includes learning objectives  
Learning Objectives are classified as conceptual, analytical, or procedural*

## Learning Objectives

### CONCEPTUAL

- C1** Explain the purpose and importance of accounting.
- C2** Identify users and uses of, and opportunities in, accounting.
- C3** Explain why ethics are crucial to accounting.
- C4** Explain generally accepted accounting principles and define and apply several accounting principles.
- C5** *Appendix 1B*—Identify and describe the three major activities of organizations.

### ANALYTICAL

- A1** Define and interpret the accounting equation and each of its components.
- A2** Compute and interpret return on assets.
- A3** *Appendix 1A*—Explain the relation between return and risk.

### PROCEDURAL

- P1** Analyze business transactions using the accounting equation.
- P2** Identify and prepare basic financial statements and explain how they interrelate.

## Big Apple

A **Decision Feature** launches each chapter showing the relevance of accounting for a real entrepreneur. An **Entrepreneurial Decision** assignment returns to this feature with a mini-case

CUPERTINO, CA—"When I designed the Apple stuff," says Steve Wozniak (a.k.a. the *Wizard of Woz*), "I never thought in my life I would have enough money to fly to Hawaii or make a down payment on a house." But some dreams do come true. Woz, along with Steve Jobs and Ron Wayne, founded Apple on April 1, 1976. Today, **Apple (Apple.com)** boasts a value of over \$500 billion and revenues of over \$170 billion. Along the way, the young entrepreneurs faced many challenges, including accounting issues such as how to properly read and interpret accounting data. The first challenge was how to finance the new company, which they did by selling some of their prized possessions, such as Woz's Hewlett-Packard scientific calculator and Jobs's Volkswagen van. The \$1,300 they raised helped them purchase the electronic equipment Woz used to build the first Apple computer.

In setting up their company, the two young entrepreneurs also had to decide what type of entity to form—a partnership or a corporation. They decided on a partnership, and Ron Wayne "sat down at a typewriter and typed our partnership contract right out of his head," recalls Woz. "He did an etching of Newton under the apple tree for the cover of our Apple I manual [and] he wrote the manual." The original partnership agreement included Wayne as a third partner with 10% ownership. However, a few days later, Wayne had a change of heart when he considered the unlimited liability of a partnership.

He pulled out, leaving Woz and Jobs holding 50 percent each. Within nine months, Woz and Jobs identified some advantages to the corporate form of business organization, and they converted Apple to a corporation on January 3, 1977.

As their company grew, Woz and Jobs had to learn more accounting, along with details of preparing and interpreting financial statements. Important questions involving transaction analysis and financial reporting arose, and the owners took care to do things right. "Everything we did," asserts Woz, "we were setting the tone for the world." Still, there were some doubters, including Woz's father who worried about his cash controls. "A person like him shouldn't have that much money," said his father after finding \$250,000 of uncashed checks lying around in Woz's Porsche.

Woz and Jobs tightened the accounting system and focused it on providing information for Apple's business decisions. Today, Woz believes that Apple is integral to the language of technology, just as accounting is the language of business. In retrospect, Woz says, "Every dream I have ever had in life has come true ten times over." He adds: "In the end, I hope there's a little note somewhere that says I designed a good computer."

doors are unlocked"*

—Steve Wozniak

## IMPORTANCE OF ACCOUNTING

### C1

Explain the purpose and importance of accounting.

Why is accounting so popular on campus? Why are there so many openings for accounting jobs? Why is accounting so important to companies? Why do politicians and business leaders focus on accounting regulations? The answer is that we live in an information age, where that information, and its reliability, impacts us all.

**Accounting** is an information and measurement system that identifies, records, and communicates relevant, reliable, and comparable information about an organization's business activities. *Identifying* business activities requires that we select relevant transactions and events. Examples are the sale of iPhones by **Apple** and the receipt of ticket money by **TicketMaster**. *Recording* business activities requires that we keep a chronological log of transactions and events measured in dollars. *Communicating* business activities requires that we prepare accounting reports such as financial statements, which we analyze and interpret. (The financial statements and notes of Apple are shown in Appendix A near the end of this book. This appendix also shows the financial statements of **Google** and **Samsung**.) Exhibit 1.1 summarizes accounting activities.

Real company names are printed in bold magenta

### EXHIBIT 1.1

Accounting Activities

Accounting is part of our everyday lives. Our most common contact with accounting is through credit approvals, checking accounts, tax forms, and payroll. These experiences tend to focus on the recordkeeping parts of accounting. **Recordkeeping**, or **bookkeeping**, is the recording of transactions and events, either manually or electronically. This is just one part of accounting. Accounting also identifies and communicates information on transactions and events, and it includes the crucial processes of analysis and interpretation.

Technology is a key part of modern business and plays a major role in accounting. Technology reduces the time, effort, and cost of recordkeeping while improving clerical accuracy. Some small organizations continue to perform various accounting tasks manually, but even they are impacted by technology. As technology makes more information available, the demand for accounting increases and so too the skills for applying that information. Consulting, planning, and other financial services are now closely linked to accounting. These services require sorting through data, interpreting their meaning, identifying key factors, and analyzing their implications.

## Users of Accounting Information

Accounting is called the *language of business* because all organizations set up an accounting information system to communicate data to help people make better decisions. Exhibit 1.2 shows that accounting serves many users (this is a partial listing) who can be divided into two groups: external users and internal users.

**External Information Users** External users of accounting information are *not* directly involved in running the organization. They include shareholders (investors), lenders, directors, customers, suppliers, regulators, lawyers, brokers, and the press. External users have limited access to an organization's information. Yet their business decisions depend on information that is reliable, relevant, and comparable. **Financial accounting** is the area of accounting aimed at serving external users by providing them with *general-purpose financial statements*. The term

**Point:** Technology is only as useful as the accounting data available, and users' decisions are only as good as their understanding of accounting. The best software and recordkeeping cannot make up for lack of accounting knowledge.

### C2

Identify users and uses of, and opportunities in, accounting.

### External users

- Lenders
- Shareholders
- Governments
- Consumer groups
- External auditors
- Customers

### Internal users

- Officers
- Managers
- Internal auditors
- Sales staff
- Budget officers
- Controllers

**EXHIBIT 1.2**  
Users of Accounting Information

Infographics reinforce key concepts through visual learning

*general-purpose* refers to the broad range of purposes for which external users rely on these statements. Following is a partial list of external users and some decisions they make with accounting information.

- *Lenders* (creditors) loan money or other resources to an organization. Banks, savings and loans, co-ops, and mortgage and finance companies are lenders. Lenders look for information to help them assess whether an organization is likely to repay its loans with interest.
- *Shareholders* (*investors*) are the owners of a corporation. They use accounting reports in deciding whether to buy, hold, or sell stock.
- *Directors* are typically elected to a *board of directors* to oversee their interests in an organization. Since directors are responsible to shareholders, their information needs are similar.
- *External* (independent) *auditors* examine financial statements to verify that they are prepared according to generally accepted accounting principles.
- *Nonexecutive employees* and *labor unions* use financial statements to judge the fairness of wages, assess job prospects, and bargain for better wages.
- *Regulators* often have legal authority over certain activities of organizations. For example, the Internal Revenue Service (IRS) and other tax authorities require organizations to file accounting reports in computing taxes. Other regulators include utility boards that use accounting information to set utility rates and securities regulators that require reports for companies that sell their stock to the public.
- *Voters, legislators, and government officials* use accounting information to monitor and evaluate government receipts and expenses.
- *Contributors* to nonprofit organizations use accounting information to evaluate the use and impact of their donations.
- *Suppliers* use accounting information to judge the soundness of a customer before making sales on credit.
- *Customers* use financial reports to assess the staying power of potential suppliers.

**Internal Information Users** **Internal users** of accounting information are those directly involved in managing and operating an organization such as the chief executive officer (CEO), chief financial officer (CFO), chief audit executive (CAE), treasurer, and other executive and managerial-level employees. They use the information to help improve the efficiency and effectiveness of an organization. **Managerial accounting** is the area of accounting that serves the decision-making needs of internal users. Internal reports are not subject to the same rules as external reports and instead are designed with the special needs of internal users in mind. Following is a partial list of internal users and some decisions they make with accounting information.

- *Research and development managers* need information about projected costs and revenues of any proposed changes in products and services.
- *Purchasing managers* need to know what, when, and how much to purchase.

- *Human resource managers* need information about employees’ payroll, benefits, performance, and compensation.
- *Production managers* depend on information to monitor costs and ensure quality.
- *Distribution managers* need reports for timely, accurate, and efficient delivery of products and services.
- *Marketing managers* use reports about sales and costs to target consumers, set prices, and monitor consumer needs, tastes, and price concerns.
- *Service managers* require information on the costs and benefits of looking after products and services.

### Opportunities in Accounting

Accounting information is in all aspects of our lives. When we earn money, pay taxes, invest savings, budget earnings, and plan for the future, we use accounting. Accounting has four broad areas of opportunities: financial, managerial, taxation, and accounting-related. Exhibit 1.3 lists selected opportunities in each area.

**EXHIBIT 1.3**

Accounting Opportunities

Exhibit 1.4 shows that the majority of opportunities are in *private accounting*, which are employees working for businesses. *Public accounting* offers the next largest number of opportunities, which involve services such as auditing and tax advice. Still other opportunities exist in government and not-for-profit agencies, including business regulation and investigation of law violations.

**EXHIBIT 1.4**

Accounting Jobs by Area

**Point:** The largest accounting firms are Ernst & Young, KPMG, PricewaterhouseCoopers, and Deloitte.

*Margin notes further enhance textual material*

**Point:** Census Bureau (2011) reports that for workers 25 and over, higher education yields higher average pay:

Advanced degree	\$81,568
Bachelor's degree	57,326
High school degree	36,876
No high school degree	26,124

Accounting specialists are highly regarded and their professional standing is often denoted by a certificate. Certified public accountants (CPAs) must meet education and experience requirements, pass an examination, and exhibit ethical character. Many accounting specialists hold certificates in addition to or instead of the CPA.

Two of the most common are the certificate in management accounting (CMA) and the certified internal auditor (CIA). Employers also look for specialists with designations such as certified bookkeeper (CB), certified payroll professional (CPP), personal financial specialist (PFS), certified fraud examiner (CFE), and certified forensic accountant (CrFA).

Demand for accounting specialists is strong. Exhibit 1.5 reports average annual salaries for several accounting positions. Salary variation depends on location, company size, professional designation, experience, and other factors. For example, salaries for chief financial officers (CFOs) range from under \$100,000 to more than \$1 million per year. Likewise, salaries for bookkeepers range from under \$30,000 to more than \$80,000.

Field	Title (experience)	2014 Salary	2019 Estimate*
<b>Public Accounting</b>	Partner . . . . .	\$239,000	\$264,000
	Manager (6–8 years) . . . . .	107,500	118,500
	Senior (3–5 years) . . . . .	84,000	92,500
	Junior (0–2 years) . . . . .	59,500	65,500
<b>Private Accounting</b>	CFO . . . . .	282,000	311,500

**FUNDAMENTALS OF ACCOUNTING**

Accounting is guided by principles, standards, concepts, and assumptions. This section describes several of these key fundamentals of accounting.

**Ethics—A Key Concept**

The goal of accounting is to provide useful information for decisions. For information to be useful, it must be trusted. This demands ethics in accounting. **Ethics** are beliefs that distinguish right from wrong. They are accepted standards of good and bad behavior.

Identifying the ethical path is sometimes difficult. The preferred path is a course of action that avoids casting doubt on one's decisions. For example, accounting users are less likely to trust an auditor's report if the auditor's pay depends on the client's success. To avoid such concerns, ethics rules are often set. For example, auditors are banned from direct investment in their client and cannot accept pay that depends on figures in the client's reports. Exhibit 1.6 gives a three-step process for making ethical decisions.

**C3**

Explain why ethics are crucial to accounting.

**Point: Sarbanes-Oxley Act** requires each issuer of securities to disclose whether it has adopted a code of ethics for its senior officers and the contents of that code.

**1. Identify ethical concerns**

Use personal ethics to recognize an ethical concern.

**2. Analyze options**

Consider all good and bad consequences.

**3. Make ethical decision**

Choose best option after weighing all consequences.

**EXHIBIT 1.6**

Guidelines for Ethical Decision Making

**Point:** The American Institute of Certified Public Accountants' Code of Professional Conduct is available at [www.AICPA.org](http://www.AICPA.org).

Accountants face many ethical choices as they prepare financial reports. These choices can affect the price a buyer pays and the wages paid to workers. They can even affect the success of products and services. Misleading information can lead to a wrongful closing of a division that harms workers, customers, and suppliers. There is an old saying: *Good ethics are good business.*

## Fraud Triangle

The fraud triangle is a model created by a criminologist that asserts the following *three* factors must exist for a person to commit fraud: opportunity, pressure, and rationalization.

- **Opportunity.** A person must envision a way to commit fraud with a low perceived risk of getting caught. Employers can directly reduce this risk. An example of some control on opportunity is a pre-employment background check.
- **Pressure,** or incentive. A person must have some pressure to commit fraud. Examples are unpaid bills and addictions.
- **Rationalization,** or attitude. A person who rationalizes fails to see the criminal nature of the fraud or justifies the action.

It is important to recognize that all three factors of the fraud triangle must usually exist for fraud to occur. The absence of one or more factors suggests fraud is unlikely. The key to dealing with fraud is to focus on prevention. It is less expensive and more effective to prevent fraud from happening than it is to try to detect the crime. By the time the fraud is discovered, the money is gone and chances are slim that it will be recovered. Additionally, it is costly and time-consuming to investigate a fraud.

Both internal and external users rely on internal controls to reduce the likelihood of fraud. *Internal controls* are procedures set up to protect company property and equipment, ensure reliable accounting reports, promote efficiency, and encourage adherence to company policies. Examples are good records, physical controls (locks, passwords, guards), and independent reviews.

## Decision Insight

**Decision Insight boxes** highlight relevant items from practice

**Cooking the Books** Our economic and social welfare depends on reliable accounting. Some individuals forgot that and are now paying their dues. They include Tsuyoshi Kikukawa of **Olympus**, guilty of hiding \$1.7 billion in losses; Bernard Madoff of **Madoff Investment Securities**, convicted of falsifying securities records; Bernard Ebbers of **WorldCom**, convicted of an \$11 billion accounting scandal; Andrew Fastow of **Enron**, guilty of hiding debt and inflating income; and Ramalinga Raju of **Satyam Computers**, accused of overstating assets by \$1.5 billion. ■

Comstock/Stockbyte/Getty Images

## C4

Explain generally accepted accounting principles and define and apply several accounting principles.

**Point:** State ethics codes require CPAs who audit financial statements to disclose areas where those statements fail to comply with GAAP. If CPAs fail to report noncompliance, they can lose their licenses and be subject to criminal and civil actions and fines.

## Generally Accepted Accounting Principles

Financial accounting is governed by concepts and rules known as **generally accepted accounting principles (GAAP)**. We must understand these principles to best use accounting data. GAAP aims to make information *relevant*, *reliable*, and *comparable*. Relevant information affects decisions of users. Reliable information is trusted by users. Comparable information is helpful in contrasting organizations.

In the United States, the **Securities and Exchange Commission (SEC)**, a government agency, has the legal authority to set GAAP. The SEC also oversees proper use of GAAP by companies that raise money from the public through issuances of their stock and debt. Those companies that issue their stock on U.S. exchanges include both *U.S. SEC registrants* (companies incorporated in the United States) and *non-U.S. SEC registrants* (companies incorporated under non-U.S. laws). The SEC has largely delegated the task of setting U.S. GAAP to the **Financial Accounting Standards Board (FASB)**, which is a private-sector group that sets both broad and specific principles.

## International Standards

In today's global economy, there is increased demand by external users for comparability in accounting reports. This demand often arises when companies wish to raise money from lenders and investors in different countries. To that end, the **International Accounting Standards Board (IASB)**, an independent group (consisting of individuals from many countries), issues **International Financial Reporting Standards (IFRS)** that identify preferred accounting practices.

If standards are harmonized, one company can potentially use a single set of financial statements in all financial markets. Differences between U.S. GAAP and IFRS are decreasing as the FASB and IASB pursue a *convergence* process aimed to achieve a single set of accounting standards for global use. More than 115 countries now require or permit companies to prepare financial reports following IFRS. Further, non-U.S. SEC registrants can use IFRS in financial reports filed with the SEC (with no reconciliation to U.S. GAAP). This means there are *two* sets of accepted accounting principles in the United States: (1) U.S. GAAP for U.S. SEC registrants and (2) either IFRS or U.S. GAAP for non-U.S. SEC registrants.

The SEC is encouraging the FASB to change U.S. GAAP over a period of several years by endorsing, and thereby incorporating, individual IFRS standards into U.S. GAAP. This *endorsement process* would still allow the FASB to modify IFRS when necessary. The SEC would:

- Maintain its statutory oversight of the FASB, including authority to prescribe accounting principles and standards for U.S. issuers.
- Contribute to oversight and governance of the IASB through its involvement on the IFRS Foundation Monitoring Board.

The FASB would continue, but its role would be to provide input and support to the IASB in crafting high-quality, global standards. The FASB is to develop a transition plan to effect these changes over the next five years or so. For updates on this roadmap, we can check with the AICPA ([IFRS.com](http://IFRS.com)), FASB ([FASB.org](http://FASB.org)), and IASB ([ifrs.org](http://ifrs.org)).

## IFRS

Like the FASB, the IASB uses a conceptual framework to aid in revising or drafting new standards. However, unlike the FASB, the IASB's conceptual framework is used as a reference when specific guidance is lacking. The IASB also requires that transactions be accounted for according to their substance (not only their legal form), and that financial statements give a fair presentation, whereas the FASB narrows that scope to fair presentation *in accordance with U.S. GAAP*. ■

## Conceptual Framework and Convergence

The FASB and IASB are attempting to converge and enhance the **conceptual framework** that guides standard setting. The FASB framework consists broadly of the following:

- **Objectives**—to provide information useful to investors, creditors, and others.
- **Qualitative Characteristics**—to require information that is *relevant*, *reliable*, and *comparable*.
- **Elements**—to define items that financial statements can contain.
- **Recognition and Measurement**—to set criteria that an item must meet for it to be recognized as an element; and how to measure that element.

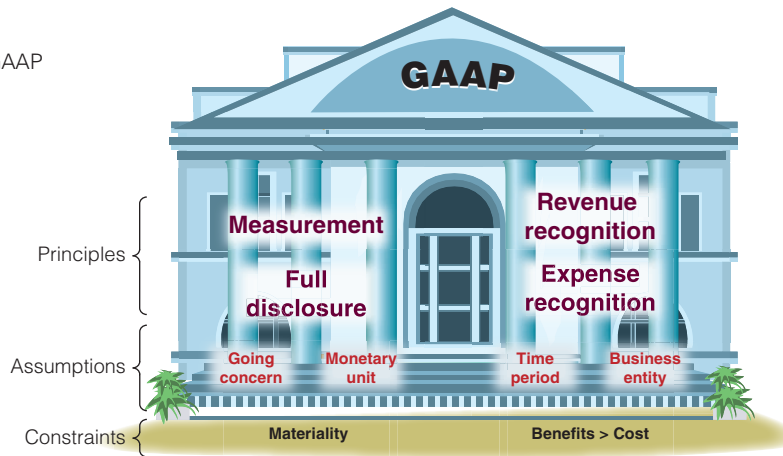

For updates on this joint FASB and IASB conceptual framework convergence we can check the [FASB.org](http://FASB.org) or [ifrs.org](http://ifrs.org) websites. We must remember that U.S. GAAP and IFRS are two similar, but not identical, systems. However, their similarities greatly outweigh any differences. The remainder of this section describes key principles and assumptions of accounting.

**Principles and Assumptions of Accounting** Accounting principles (and assumptions) are of two types. *General principles* are the basic assumptions, concepts, and guidelines for preparing financial statements. *Specific principles* are detailed rules used in reporting business transactions and events. General principles stem from long-used accounting practices. Specific principles arise more often from the rulings of authoritative groups.

### EXHIBIT 1.7

Building Blocks for GAAP

We need to understand both general and specific principles to effectively use accounting information. Several general principles are described in this section that are relied on in later chapters. General principles (in purple font with white shading) and assumptions (in red font with white shading) are portrayed as building blocks of GAAP in Exhibit 1.7. The specific principles are described as we encounter them in the book.

**Accounting Principles** General principles consist of at least four basic principles, four assumptions, and two constraints.

**Point:** The cost principle is also called the *historical cost principle*.

**Example:** A lawn service bills a customer \$1,000 on June 1 for two months of mowing (June and July). The customer pays the bill on July 1. When is revenue recorded? *Answer:* Revenue is recorded over time as it is earned; if monthly reports are prepared, then record \$500 revenue for June and \$500 for July.

**Example:** Credit cards are used to pay \$400 in gas for a lawnmowing business during June and July. The cards are paid off in August. When is expense recorded? *Answer:* Expense is recorded when the revenue it helped generate is recorded. Assuming revenue is earned over time and monthly reports are prepared, then record \$200 expense in June and \$200 in July.

- **Measurement** The **measurement principle**, also called the **cost principle**, usually prescribes that accounting information is based on actual cost (with a potential for subsequent adjustments to market). Cost is measured on a cash or equal-to-cash basis. This means if cash is given for a service, its cost is measured as the amount of cash paid. If something besides cash is exchanged (such as a car traded for a truck), cost is measured as the cash value of what is given up or received. The cost principle emphasizes reliability and verifiability, and information based on cost is considered objective. *Objectivity* means that information is supported by independent, unbiased evidence; it demands more than a person's opinion. To illustrate, suppose a company pays \$5,000 for equipment. The cost principle requires that this purchase be recorded at \$5,000. It makes no difference if the owner thinks this equipment is worth \$7,000. Later in the book we introduce *fair value* measures.
- **Revenue recognition** Revenue (sales) is the amount received from selling products and services. The **revenue recognition principle** provides guidance on when a company must recognize revenue. To *recognize* means to record it. If revenue is recognized too early, a company would look more profitable than it is. If revenue is recognized too late, a company would look less profitable than it is. Three concepts are important to revenue recognition. (1) *Revenue is recognized when earned*. The earnings process is normally complete when services are performed or a seller transfers ownership of products to the buyer. (2) *Proceeds from selling products and services need not be in cash*. A common noncash proceed received by a seller is a customer's promise to pay at a future date, called *credit sales*. (3) *Revenue is measured by the cash received plus the cash value of any other items received*.
- **Expense recognition** The **expense recognition principle**, also called the **matching principle**, prescribes that a company record the expenses it incurred to generate the revenue reported. The principles of matching and revenue recognition are key to modern accounting.
- **Full disclosure** The **full disclosure principle** prescribes that a company report the details behind financial statements that would impact users' decisions. Those disclosures are often in footnotes to the statements.

**Decision Insight**

Revenues for the **New York Giants**, **Green Bay Packers**, and other professional football teams include ticket sales, television and cable broadcasts, radio rights, concessions, and advertising. Revenues from ticket sales are earned when the NFL team plays each game. Advance ticket sales are not revenues; instead, they represent a liability until the NFL team plays the game for which the ticket was sold. At that point, the liability is removed and revenues are reported. ■

Scott Boehm/Getty Images

**Accounting Assumptions** There are four accounting assumptions: the going-concern assumption, the monetary unit assumption, the time period assumption, and the business entity assumption.

- **Going concern** The **going-concern assumption** means that accounting information reflects a presumption that the business will continue operating instead of being closed or sold. This implies, for example, that property is reported at cost instead of, say, liquidation values that assume closure.
  - **Monetary unit** The **monetary unit assumption** means that we can express transactions and events in monetary, or money, units. Money is the common denominator in business. Examples of monetary units are the dollar in the United States, Canada, Australia, and Singapore; and the peso in Mexico, the Philippines, and Chile. The monetary unit a company uses in its accounting reports usually depends on the country where it operates, but many companies today are expressing reports in more than one monetary unit.
  - **Time period** The **time period assumption** presumes that the life of a company can be divided into time periods, such as months and years, and that useful reports can be prepared for those periods.
  - **Business entity** The **business entity assumption** means that a business is accounted for separately from other business entities, including its owner. The reason for this assumption is that separate information about each business is necessary for good decisions. A business entity can take one of three legal forms: *proprietorship*, *partnership*, or *corporation*.
1. A **sole proprietorship**, or simply **proprietorship**, is a business owned by one person. The business is a separate entity for accounting purposes. However, the business is *not* a separate legal entity from its owner. This means, for example, that a court can order an owner to sell personal belongings to pay a proprietorship’s debt. This *unlimited liability* of a proprietorship is a disadvantage. However, an advantage is that a proprietorship’s income is not subject to a business income tax but is instead reported and taxed on the owner’s personal income tax return. Proprietorship attributes are summarized in Exhibit 1.8, including those for partnerships and corporations.

**Point:** For currency conversion: [xe.com](http://xe.com)

**Point:** Abuse of the entity assumption was a main culprit in **Enron’s** collapse.

Attribute Present	Proprietorship	Partnership	Corporation
One owner allowed . . . . .	yes	no	yes
Business taxed . . . . .	no	no	yes
Limited liability . . . . .	no*	no*	yes
Business entity . . . . .	yes	yes	yes
Legal entity . . . . .	no	no	yes
Unlimited life . . . . .	no	no	yes

\* Proprietorships and partnerships that are set up as LLCs provide limited liability.

**EXHIBIT 1.8**

Attributes of Businesses

2. A **partnership** is a business owned by two or more people, called *partners*, which are jointly liable for tax and other obligations. Like a proprietorship, no special legal requirements must be met in starting a partnership. The only requirement is an agreement between partners to run a business together. The agreement can be either oral or written and

**Point:** Proprietorships and partnerships are usually managed by their owners. In a corporation, the owners (shareholders) elect a board of directors who appoint managers to run the business.

usually indicates how income and losses are to be shared. A partnership, like a proprietorship, is *not* legally separate from its owners. This means that each partner's share of profits is reported and taxed on that partner's tax return. It also means *unlimited liability* for its partners. However, at least three types of partnerships limit liability. A *limited partnership (LP)* includes a general partner(s) with unlimited liability and a limited partner(s) with liability restricted to the amount invested. A *limited liability partnership (LLP)* restricts partners' liabilities to their own acts and the acts of individuals under their control. This protects an innocent partner from the negligence of another partner, yet all partners remain responsible for partnership debts. A *limited liability company (LLC)* offers the limited liability of a corporation and the tax treatment of a partnership (and proprietorship). **Most proprietorships and partnerships are now organized as LLCs.**

3. A **corporation**, also called a *C corporation*, is a business legally separate from its owner or owners, meaning it is responsible for its own acts and its own debts. Separate legal status means that a corporation can conduct business with the rights, duties, and responsibilities of a person. A corporation acts through its managers, who are its legal agents. Separate legal status also means that its owners, who are called **shareholders** (or **stockholders**), are not personally liable for corporate acts and debts. This limited liability is its main advantage. A main disadvantage is what's called *double taxation*—meaning that (1) the corporation income is taxed and (2) any distribution of income to its owners through dividends is taxed as part of the owners' personal income, usually at the individual's income tax rate. (For "qualified" dividends, the tax rate is 0%, 15%, or 20%, depending on the individual's tax bracket.) An *S corporation*, a corporation with special attributes, does not owe corporate income tax. Owners of S corporations report their share of corporate income with their personal income. Ownership of all corporations is divided into units called **shares** or **stock**. When a corporation issues only one class of stock, we call it **common stock** (or *capital stock*).

**Decision Ethics** boxes are role-playing exercises that stress ethics in accounting.

## Decision Ethics

**Entrepreneur** You and a friend develop a new design for in-line skates that improves speed by 25% to 30%. You plan to form a business to manufacture and market those skates. You and your friend want to minimize taxes, but your prime concern is potential lawsuits from individuals who might be injured on these skates. What form of organization do you set up? ■ [Answers follow the chapter's Summary.]

**Accounting Constraints** There are two basic constraints on financial reporting.

- **Materiality** The **materiality constraint** prescribes that only information that would influence the decisions of a reasonable person need be disclosed. This constraint looks at both the importance and relative size of an amount.
- **Benefit exceeds cost** The **cost-benefit constraint** prescribes that only information with benefits of disclosure greater than the costs of providing it need be disclosed.

*Conservatism* and *industry practices* are also sometimes referred to as accounting constraints.

## Sarbanes-Oxley (SOX)

Congress passed the **Sarbanes-Oxley Act**, also called *SOX*, to help curb financial abuses at companies that issue their stock to the public. SOX requires that these public companies apply both accounting oversight and stringent internal controls. The desired results include more transparency, accountability, and truthfulness in reporting transactions.

Compliance with SOX requires documentation and verification of internal controls and increased emphasis on internal control effectiveness. Failure to comply can yield financial penalties, stock market delisting, and criminal prosecution of executives. Management must issue a report stating that internal controls are effective. CEOs and CFOs who knowingly sign off on bogus accounting reports risk millions of dollars in fines and years in prison. **Auditors** also must verify the effectiveness of internal controls.

**Point:** An **audit** examines whether financial statements are prepared using GAAP. It does *not* attest to absolute accuracy of the statements.

**Point:** *BusinessWeek* reports that external audit costs run about \$35,000 for start-ups, up from \$15,000 pre-SOX.

A listing of some of the more publicized accounting scandals in recent years follows.

Company	Alleged Accounting Abuses
Enron	Inflated income, hid debt, and bribed officials
WorldCom	Understated expenses to inflate income and hid debt
Fannie Mae	Inflated income
Adelphia Communications	Understated expenses to inflate income and hid debt
AOL Time Warner	Inflated revenues and income
Xerox	Inflated income
Bristol-Myers Squibb	Inflated revenues and income
Nortel Networks	Understated expenses to inflate income
Global Crossing	Inflated revenues and income
Tyco	Hid debt and CEO evaded taxes
Halliburton	Inflated revenues and income
Qwest Communications	Inflated revenues and income

To reduce the risk of accounting fraud, companies set up *governance systems*. A company's governance system includes its owners, managers, employees, board of directors, and other important stakeholders, who work together to reduce the risk of accounting fraud and increase confidence in accounting reports.

The impact of SOX regulations for accounting and business is discussed throughout this book. Ethics and investor confidence are key to company success. Lack of confidence in accounting numbers impacts company value as evidenced by huge stock price declines for **Enron**, **WorldCom**, **Tyco**, and **ImClone** after accounting misconduct was uncovered.

## Dodd-Frank

Congress passed the **Dodd-Frank Wall Street Reform and Consumer Protection Act**, or *Dodd-Frank*, to (1) promote accountability and transparency in the financial system, (2) put an end to the notion of “too big to fail,” (3) protect the taxpayer by ending bailouts, and (4) protect consumers from abusive financial services. It includes provisions whose impacts are unknown until regulators set detailed rules. However, a few proposals are notable, such as the following:

- *Exemption* Exemption from Section 404(b) of SOX for smaller public entities from the requirement to obtain an external audit on effectiveness of internal control over financial reporting.
- *Independence* Independence for all members of the compensation committee (including additional disclosures); in the event of an accounting restatement, an entity must set policies mandating recovery (“clawback”) of excess incentive compensation.
- *Whistleblower* Requires the SEC, when sanctions exceed \$1 million, to pay whistleblowers between 10% and 30% of the sanction.

**Part 1:** Identify each of the following terms/phrases as either an accounting (a) principle, (b) assumption, or (c) constraint.

- |                        |                            |                            |

**TRANSACTION ANALYSIS AND THE ACCOUNTING EQUATION**

**A1** Define and interpret the accounting equation and each of its components.

To understand accounting information, we need to know how an accounting system captures relevant data about transactions, and then classifies, records, and reports data.

**Accounting Equation**

The accounting system reflects two basic aspects of a company: what it owns and what it owes. *Assets* are resources a company owns or controls. Examples are cash, supplies, equipment, and land, where each carries expected benefits. The claims on a company’s assets—what it owes—are separated into owner and nonowner claims. *Liabilities* are what a company owes its nonowners (creditors) in future payments, products, or services. *Equity* (also called owner’s equity or capital) refers to the claims of its owner(s). Together, liabilities and equity are the source of funds to acquire assets. The relation of assets, liabilities, and equity is reflected in the following **accounting equation**:

**Assets = Liabilities + Equity**

Liabilities are usually shown before equity in this equation because creditors’ claims must be paid before the claims of owners. (The terms in this equation can be rearranged; for example, Assets – Liabilities = Equity.) The accounting equation applies to all transactions and events, to all companies and forms of organization, and to all points in time. For example, **Apple’s** assets equal \$207,000, its liabilities equal \$83,451, and its equity equals \$123,549 (\$ in millions). Let’s now look at the accounting equation in more detail.

**Assets** **Assets** are resources a company owns or controls. These resources are expected to yield future benefits. Examples are web servers for an online services company, musical instruments for a rock band, and land for a vegetable grower. The term *receivable* is used to refer to an asset that promises a future inflow of resources. A company that provides a service or product on credit is said to have an account receivable from that customer.

**Liabilities** **Liabilities** are creditors’ claims on assets. These claims reflect company obligations to provide assets, products, or services to others. The term *payable* refers to a liability that promises a future outflow of resources. Examples are wages payable to workers, accounts payable to suppliers, notes payable to banks, and taxes payable to the government.

**Equity** **Equity** is the owner’s claim on assets, and is equal to assets minus liabilities. This is the reason equity is also called *net assets* or *residual equity*.

Equity increases from owner investments and revenues. It decreases from owner withdrawals and expenses. Equity consists of four elements.

- **Owner, Capital** **Owner investments** are inflows of resources such as cash and other net assets that an owner puts into the company; they are included under the generic title **Owner, Capital**.

**Point:** The phrases “on credit” and “on account” imply that cash payment will occur at a future date.

- *Owner, Withdrawals* **Owner withdrawals** are outflows of resources such as cash and other assets that an owner takes from the company for personal use; they are included under the generic title **Owner, Withdrawals**.
- *Revenues* **Revenues** increase equity (via net income) from sales of products and services to customers. Examples are sales of products, consulting services provided, facilities rented to others, and commissions from services.
- *Expenses* **Expenses** decrease equity (via net income) from costs of providing products and services to customers. Examples are costs of employee time, use of supplies, advertising, utilities, and insurance fees.

Key terms are printed in bold and defined again in the glossary

This breakdown of equity yields the following **expanded accounting equation**:

$$\text{Assets} = \text{Liabilities} + \overbrace{\text{Owner, Capital} - \text{Owner, Withdrawals} + \text{Revenues} - \text{Expenses}}^{\text{Equity}}$$

**Net income** occurs when revenues exceed expenses. Net income increases equity. A **net loss** occurs when expenses exceed revenues, which decreases equity.

### Decision Insight

**Big Data** Most organizations offer access to large accounting databases—see **Apple Inc. (Apple.com)** as an example. The SEC keeps an online database called **EDGAR (www.sec.gov/edgar.shtml)**, which has accounting information for thousands of companies that issue stock to the public. The annual report filing for most publicly traded U.S. companies is known as Form 10-K, and the quarterly filing is Form 10-Q. Information services such as **Finance.Google.com** and **Finance.Yahoo.com** offer online data and analysis. ■

## Transaction Analysis

Business activities can be described in terms of transactions and events. **External transactions** are exchanges of value between two entities, which yield changes in the accounting equation. An example is the sale of the *AppleCare Protection Plan* by **Apple**. **Internal transactions** are exchanges within an entity, which may or may not affect the accounting equation. An example is Twitter's use of its supplies, which are reported as expenses when used. **Events** refer to happenings that affect

**P1** Analyze business transactions using the accounting equation.

the accounting equation *and* are reliably measured. They include business events such as changes in the market value of certain assets and liabilities and natural events such as floods and fires that destroy assets and create losses. They do not include, for example, the signing of service or product contracts, which by themselves do not impact the accounting equation.

This section uses the accounting equation to analyze 11 selected transactions and events of FastForward, a start-up consulting (service) business, in its first month of operations. Remember that each transaction and event leaves the equation in balance and that assets *always* equal the sum of liabilities and equity.

**Point:** There are 3 basic types of company operations: (1) **Services**—providing customer services for profit, (2) **Merchandisers**—buying products and reselling them for profit, and (3) **Manufacturers**—creating products and selling them for profit.

**Transaction 1: Investment by Owner** On December 1, Chas Taylor forms a consulting business, named FastForward and set up as a proprietorship, that focuses on assessing the performance of footwear and accessories. Taylor owns and manages the business. The marketing plan for the business is to focus primarily on publishing online reviews and consulting with clubs, athletes, and others who place orders for footwear and accessories with manufacturers. Taylor personally invests \$30,000 cash in the new company and deposits the cash in a bank account opened under the name of FastForward. After this transaction, the cash (an asset) and the owner’s equity each equal \$30,000. The source of increase in equity is the owner’s investment, which is included in the column titled C. Taylor, Capital. (Owner investments are always included under the title ‘Owner name,’ *Capital*.) The effect of this transaction on FastForward is reflected in the accounting equation as follows (we label the equity entries):

	Assets		=	Liabilities	+	Equity
(1)	Cash		=			C. Taylor, Capital
	<b>+\$30,000</b>		=			<b>+\$30,000</b> Owner investment

**Transaction 2: Purchase Supplies for Cash** FastForward uses \$2,500 of its cash to buy supplies of brand name footwear for performance testing over the next few months. This transaction is an exchange of cash, an asset, for another kind of asset, supplies. It merely changes the form of assets from cash to supplies. The decrease in cash is exactly equal to the increase in supplies. The supplies of footwear are assets because of the expected future benefits from the test results of their performance. This transaction is reflected in the accounting equation as follows:

	Assets			=	Liabilities	+	Equity
	Cash	+	Supplies	=			C. Taylor, Capital
Old Bal.	\$30,000			=			\$30,000
(2)	<b>-2,500</b>	<b>+</b>	<b>\$2,500</b>				
New Bal.	\$27,500	<b>+</b>	<b>\$ 2,500</b>	=			\$30,000
	\$30,000						\$30,000

**Transaction 3: Purchase Equipment for Cash** FastForward spends \$26,000 to acquire equipment for testing footwear. Like transaction 2, transaction 3 is an exchange of one asset, cash, for another asset, equipment. The equipment is an asset because of its expected future benefits from testing footwear. This purchase changes the makeup of assets but does not change the asset total. The accounting equation remains in balance.

	Assets				=	Liabilities	+	Equity
	Cash	+	Supplies	+	Equipment	=		C. Taylor, Capital
Old Bal.	\$27,500	+	\$2,500			=		\$30,000
(3)	<b>-26,000</b>			<b>+</b>	<b>\$26,000</b>			
New Bal.	\$ 1,500	+	\$2,500	+	\$ 26,000	=		\$30,000
	\$30,000							\$30,000

**Transaction 4: Purchase Supplies on Credit** Taylor decides more supplies of footwear and accessories are needed. These additional supplies total \$7,100, but as we see from the accounting equation in transaction 3, FastForward has only \$1,500 in cash. Taylor arranges to purchase them on credit from CalTech Supply Company. Thus, FastForward acquires supplies in exchange for a promise to pay for them later. This purchase increases assets by \$7,100 in supplies, and liabilities (called *accounts payable* to CalTech Supply) increase by the same amount. The effects of this purchase follow:

	Assets			=	Liabilities	+	Equity		
	Cash	+	Supplies	+	Equipment	=	Accounts Payable	+	C. Taylor, Capital
Old Bal.	\$1,500	+	\$2,500	+	\$26,000	=		+	\$30,000
(4)		+	<b>7,100</b>			=	<b>+ \$7,100</b>		
New Bal.	\$1,500	+	\$9,600	+	\$26,000	=	\$ 7,100	+	\$30,000
	\$37,100						\$37,100		

**Example:** If FastForward pays \$500 cash in transaction 4, how does this partial payment affect the liability to CalTech? What would be FastForward's cash balance? Answers: The liability to CalTech would be reduced to \$6,600 and the cash balance would be reduced to \$1,000.

**Transaction 5: Provide Services for Cash** FastForward plans to earn revenues by selling online ad space to manufacturers and by consulting with clients about test results on footwear and accessories. It earns net income only if its revenues are greater than its expenses incurred in earning them. In one of its first jobs, FastForward provides consulting services to a power-walking club and immediately collects \$4,200 cash. The accounting equation reflects this increase in cash of \$4,200 and in equity of \$4,200. This increase in equity is identified in the far right column under Revenues because the cash received is earned by providing consulting services.

**Point:** Revenue recognition principle requires that revenue is recognized when work is performed.

	Assets			=	Liabilities	+	Equity				
	Cash	+	Supplies	+	Equipment	=	Accounts Payable	+	C. Taylor, Capital	+	Revenues
Old Bal.	\$1,500	+	\$9,600	+	\$26,000	=	\$7,100	+	\$30,000		
(5)	<b>+ 4,200</b>					=				+	<b>\$4,200 Consulting</b>
New Bal.	\$5,700	+	\$9,600	+	\$26,000	=	\$7,100	+	\$30,000	+	\$ 4,200
	\$41,300						\$41,300				

**Transactions 6 and 7: Payment of Expenses in Cash** FastForward pays \$1,000 rent to the landlord of the building where its facilities are located. Paying this amount allows FastForward to occupy the space for the month of December. The rental payment is reflected in the following accounting equation as transaction 6. FastForward also pays the biweekly \$700 salary of the company's only employee. This is reflected in the accounting equation as transaction 7. Both transactions 6 and 7 are December expenses for FastForward. The costs of both rent and salary are expenses, as opposed to assets, because their benefits are used in December (they have no future benefits after December). These transactions also use up an asset (cash) in carrying out FastForward's operations. The accounting equation shows that both transactions reduce cash and equity. The far right column identifies these decreases as Expenses.

**Point:** Expense recognition principle requires that expenses are recognized when the revenue they help generate is recorded. Expenses are outflows of net assets, which decrease equity.

By definition, increases in expenses yield decreases in equity.

	Assets			=	Liabilities	+	Equity						
	Cash	+	Supplies	+	Equipment	=	Accounts Payable	+	C. Taylor, Capital	+	Revenues	-	Expenses
Old Bal.	\$5,700	+	\$9,600	+	\$26,000	=	\$7,100	+	\$30,000	+	\$4,200		
(6)	<b>- 1,000</b>					=						-	<b>\$1,000 Rent</b>
Bal.	4,700	+	9,600	+	26,000	=	7,100	+	30,000	+	4,200	-	1,000
(7)	<b>- 700</b>					=						-	<b>700 Salaries</b>
New Bal.	\$4,000	+	\$9,600	+	\$26,000	=	\$7,100	+	\$30,000	+	\$4,200	-	\$ 1,700
	\$39,600						\$39,600						

**Point:** Transaction 8, like 5, records revenue when work is performed, not necessarily when cash is received.

**Transaction 8: Provide Services and Facilities for Credit** FastForward provides consulting services of \$1,600 and rents its test facilities for \$300 to a podiatric services center. The rental involves allowing members to try recommended footwear and accessories at FastForward's testing area. The center is billed for the \$1,900 total. This transaction results in a new asset, called *accounts receivable*, from this client. It also yields an increase in equity from the two revenue components reflected in the Revenues column of the accounting equation:

	Assets				=	Liabilities	+	Equity							
	Cash	+	Accounts Receivable	+	Supplies	+	Equipment	=	Accounts Payable	+	C. Taylor, Capital	+	Revenues	-	Expenses
Old Bal.	\$4,000	+		+	\$9,600	+	\$26,000	=	\$7,100	+	\$30,000	+	\$4,200	-	\$1,700
(8)		+	\$1,900									+	\$1,600 Consulting		
												+	\$300 Rental		
New Bal.	\$4,000	+	\$1,900	+	\$9,600	+	\$26,000	=	\$7,100	+	\$30,000	+	\$6,100	-	\$1,700
	\$41,500									\$41,500					

**Point:** Transaction 9 involved no added client work, so no added revenue was recorded.

**Transaction 9: Receipt of Cash from Accounts Receivable** The client in transaction 8 (the podiatric center) pays \$1,900 to FastForward 10 days after it is billed for consulting services. This transaction 9 does not change the total amount of assets and does not affect liabilities or equity. It converts the receivable (an asset) to cash (another asset). It does not create new revenue. Revenue was recognized when FastForward rendered the services in transaction 8, not when the cash is now collected. This emphasis on the earnings process instead of cash flows is a goal of the revenue recognition principle and yields useful information to users. The new balances follow:

	Assets				=	Liabilities	+	Equity							
	Cash	+	Accounts Receivable	+	Supplies	+	Equipment	=	Accounts Payable	+	C. Taylor, Capital	+	Revenues	-	Expenses
Old Bal.	\$4,000	+	\$1,900	+	\$9,600	+	\$26,000	=	\$7,100	+	\$30,000	+	\$6,100	-	\$1,700
(9)	\$1,900	-	\$1,900												
New Bal.	\$5,900	+	\$0	+	\$9,600	+	\$26,000	=	\$7,100	+	\$30,000	+	\$6,100	-	\$1,700
	\$41,500									\$41,500					

**Point:** Receipt of cash is not always a revenue.

**Transaction 10: Payment of Accounts Payable** FastForward pays CalTech Supply \$900 cash as partial payment for its earlier \$7,100 purchase of supplies (transaction 4), leaving \$6,200 unpaid. The accounting equation shows that this transaction decreases FastForward's cash by \$900 and decreases its liability to CalTech Supply by \$900. Equity does not change. This event does not create an expense even though cash flows out of FastForward (instead the expense is recorded when FastForward derives the benefits from these supplies).

	Assets				=	Liabilities	+	Equity							
	Cash	+	Accounts Receivable	+	Supplies	+	Equipment	=	Accounts Payable	+	C. Taylor, Capital	+	Revenues	-	Expenses
Old Bal.	\$5,900	+	\$0	+	\$9,600	+	\$26,000	=	\$7,100	+	\$30,000	+	\$6,100	-	\$1,700
(10)	\$900	-							\$900	-					
New Bal.	\$5,000	+	\$0	+	\$9,600	+	\$26,000	=	\$6,200	+	\$30,000	+	\$6,100	-	\$1,700
	\$40,600									\$40,600					

**Transaction 11: Withdrawal of Cash by Owner** The owner of FastForward withdraws \$200 cash for personal use. Withdrawals (decreases in equity) are not reported as expenses because they are not part of the company's earnings process. Since withdrawals are not company expenses, they are not used in computing net income.

By definition, increases in withdrawals yield decreases in equity.

	Assets				=	Liabilities		+	Equity		
	Cash	+ Accounts Receivable	+ Supplies	+ Equipment	=	Accounts Payable	+ C. Taylor, Capital	-	C. Taylor, Withdrawals	+ Revenues	- Expenses
Old Bal.	\$5,000	+ \$ 0	+ \$9,600	+ \$26,000	=	\$6,200	+ \$30,000			+ \$6,100	- \$1,700
(11)	- 200								- \$200		
New Bal.	\$4,800	+ \$ 0	+ \$9,600	+ \$26,000	=	\$6,200	+ \$30,000		- \$200	+ \$6,100	- \$1,700
	\$40,400								\$40,400		

## Summary of Transactions

We summarize in Exhibit 1.9 the effects of these 11 transactions of FastForward using the accounting equation. First, we see that the accounting equation remains in balance after each transaction. Second, transactions can be analyzed by their effects on components of the accounting equation. For example, in transactions 2, 3, and 9, one asset increased while another asset decreased by equal amounts.

**Point:** Knowing how financial statements are prepared improves our analysis of them.

### EXHIBIT 1.9

Summary of Transactions Using the Accounting Equation

	Assets				=	Liabilities		+	Equity		
	Cash	+ Accounts Receivable	+ Supplies	+ Equipment	=	Accounts Payable	+ C. Taylor, Capital	-	C. Taylor, Withdrawals	+ Revenues	- Expenses
(1)	\$30,000				=		\$30,000				
(2)	- 2,500		+ 2,500		=						
Bal.	27,500		2,500		=		30,000				
(3)	- 26,000			+ 26,000	=						
Bal.	1,500		2,500	26,000	=		30,000				
(4)			+ 7,100		=	+ 7,100					
Bal.	1,500		9,600	26,000	=	7,100	30,000				
(5)	+ 4,200				=					+ 4,200	
Bal.	5,700		9,600	26,000	=	7,100	30,000			4,200	
(6)	- 1,000				=						- 1,000
Bal.	4,700		9,600	26,000	=	7,100	30,000			4,200	1,000
(7)	- 700				=						- 700
Bal.	4,000		9,600	26,000	=	7,100	30,000			4,200	1,700
(8)		+ 1,900			=					+ 1,600	
Bal.	4,000	1,900	9,600	26,000	=	7,100	30,000			6,100	1,700
(9)	+ 1,900	- 1,900			=						
Bal.	5,900	0	9,600	26,000	=	7,100	30,000			6,100	1,700
(10)	- 900				=	- 900					
Bal.	5,000	0	9,600	26,000	=	6,200	30,000			6,100	1,700
(11)	- 200				=				- 200		
Bal.	\$ 4,800	+ \$ 0	+ \$ 9,600	+ \$ 26,000	=	\$ 6,200	+ \$ 30,000		- \$ 200	+ \$ 6,100	- \$ 1,700

Assume Tata Company began operations on January 1 and completed the following transactions during its first month of operations. Arrange the following asset, liability, and equity titles in a table like Exhibit 1.9: Cash; Accounts Receivable; Equipment; Accounts Payable; J. Tata, Capital; J. Tata, Withdrawals; Revenues; and Expenses.

- Jan. 1 Jamsetji Tata invested \$4,000 cash in the Tata Company.  
 5 The company purchased \$2,000 of equipment on credit.  
 14 The company provided \$540 of services for a client on credit.  
 21 The company paid \$250 cash for an employee's salary.

Bal.	4,000		2,000	=	2,000	4,000				
Jan. 14		<u>+ \$540</u>		=				<u>+ \$540</u>		
Bal.	4,000	540	2,000	=	2,000	4,000		540		
Jan. 21	<u>- 250</u>			=						
Bal.	3,750	540	2,000	=	2,000	4,000		540	- 250	
	\$6,290				\$6,290					

## FINANCIAL STATEMENTS

**P2** Identify and prepare basic financial statements and explain how they interrelate.

This section introduces us to how financial statements are prepared from the analysis of business transactions. The four financial statements and their purposes are:

1. **Income statement**—describes a company’s revenues and expenses along with the resulting net income or loss over a period of time due to earnings activities.
2. **Statement of owner’s equity**—explains changes in equity from net income (or loss) and from any owner investments and withdrawals over a period of time.
3. **Balance sheet**—describes a company’s financial position (types and amounts of assets, liabilities, and equity) at a point in time.
4. **Statement of cash flows**—identifies cash inflows (receipts) and cash outflows (payments) over a period of time.

We prepare these financial statements, in this order, using the 11 selected transactions of FastForward. (These statements are technically called *unadjusted*—we explain this in Chapters 2 and 3.) The graphic to the side shows that financial statements reflect different parts of the expanded accounting equation.

### Income Statement

FastForward’s income statement for December is shown at the top of Exhibit 1.10. Information about revenues and expenses is conveniently taken from the Equity columns of Exhibit 1.9. Revenues are reported first on the income statement. They include consulting revenues of \$5,800 from transactions 5 and 8 and rental revenue of \$300 from transaction 8. Expenses are reported after revenues. (For convenience in this chapter, we list larger amounts first, but we can sort expenses in different ways.) Rent and salary expenses are from transactions 6 and 7. Expenses reflect the costs to generate the revenues reported. Net income (or loss) is reported at the bottom of the statement and is the amount earned in December. Owner’s investments and withdrawals are *not* part of income.

**Point:** Total revenues  
- Total expenses  
= Net income (or loss)

**Point:** Net income is sometimes called *earnings* or *profit*.

### Statement of Owner’s Equity

The statement of owner’s equity reports information about how equity changes over the reporting period. This statement shows beginning capital, events that increase it (owner investments and net income), and events that decrease it (withdrawals and net loss). Ending capital is computed in this statement and is carried over and reported on the balance sheet. FastForward’s statement of owner’s equity is the second report in Exhibit 1.10. The beginning capital balance is measured as of the start of business on December 1. It is zero because FastForward did not exist before then. An existing business reports a beginning balance equal to that as of the end of the prior reporting period (such as from November 30). FastForward’s statement of owner’s equity shows that Taylor’s initial investment created \$30,000 of equity. It also shows the \$4,400 of net income earned during the period. This links the income statement to the statement of owner’s equity (see line ①). The statement also reports Taylor’s \$200 cash withdrawal and FastForward’s end-of-period capital balance.

**Point:** The statement of owner’s equity is also called the *statement of changes in owner’s equity*. Note: Beg. Capital + Net Income - Withdrawals = Ending Capital

**EXHIBIT 1.10**

Financial Statements and Their Links

FASTFORWARD Income Statement For Month Ended December 31, 2015		
Revenues		
Consulting revenue (\$4,200 + \$1,600) . . . . .	\$ 5,800	
Rental revenue . . . . .	<u>300</u>	
Total revenues . . . . .		\$ 6,100
Expenses		
Rent expense . . . . .	1,000	
Salaries expense . . . . .	<u>700</u>	
Total expenses . . . . .		<u>1,700</u>
Net income . . . . .		<u><u>\$ 4,400</u></u>

FASTFORWARD Statement of Owner's Equity For Month Ended December 31, 2015		
C. Taylor, Capital, December 1, 2015 . . . . .		\$ 0
Plus: Investments by owner . . . . .	\$30,000	
Net income . . . . .	<u>4,400</u>	<u>34,400</u>
		34,400
Less: Withdrawals by owner . . . . .		<u>200</u>
C. Taylor, Capital, December 31, 2015 . . . . .		<u><u>\$34,200</u></u>

FASTFORWARD Balance Sheet December 31, 2015			
<b>Assets</b>		<b>Liabilities</b>	
Cash . . . . .	\$ 4,800	Accounts payable . . . . .	\$ 6,200
Supplies . . . . .	9,600	Total liabilities . . . . .	<u>6,200</u>
Equipment . . . . .	26,000		
		<b>Equity</b>	
		C. Taylor, Capital . . . . .	<u>34,200</u>
Total assets . . . . .	<u><u>\$ 40,400</u></u>	Total liabilities and equity . . . . .	<u><u>\$ 40,400</u></u>

FASTFORWARD Statement of Cash Flows For Month Ended December 31, 2015		
Cash flows from operating activities		
Cash received from clients (\$4,200 + \$1,900) . . . . .	\$ 6,100	
Cash paid for supplies (\$2,500 + \$900) . . . . .	(3,400)	
Cash paid for rent . . . . .	(1,000)	
Cash paid to employee . . . . .	<u>(700)</u>	
Net cash provided by operating activities . . . . .		\$ 1,000
Cash flows from investing activities		
Purchase of equipment . . . . .	<u>(26,000)</u>	
Net cash used by investing activities . . . . .		(26,000)
Cash flows from financing activities		
Investments by owner . . . . .	30,000	
Withdrawals by owner . . . . .	<u>(200)</u>	
Net cash provided by financing activities . . . . .		<u>29,800</u>
Net increase in cash . . . . .		\$ 4,800
Cash balance, December 1, 2015 . . . . .		<u>0</u>
Cash balance, December 31, 2015 . . . . .		<u><u>\$ 4,800</u></u>

**Point:** A statement's heading identifies the company, the statement title, and the date or time period.

**Point:** Arrow lines show how the statements are linked.

① Net income is used to compute equity. ② Owner capital is used to prepare the balance sheet. ③ Cash from the balance sheet is used to reconcile the statement of cash flows.

**Point:** The income statement, the statement of owner's equity, and the statement of cash flows are prepared for a period of time. The balance sheet is prepared as of a point in time.

**Point:** A single ruled line denotes an addition or subtraction. Final totals are double underlined. Negative amounts are often in parentheses.

③

②

①

### Balance Sheet

FastForward’s balance sheet is the third report in Exhibit 1.10. This statement refers to FastForward’s financial condition at the close of business on December 31. The left side of the balance sheet lists FastForward’s assets: cash, supplies, and equipment. The upper right side of the balance sheet shows that FastForward owes \$6,200 to creditors. Any other liabilities (such as a bank loan) would be listed here. The equity (capital) balance is \$34,200. Line ② shows the link between the ending balance of the statement of owner’s equity and the equity balance on the balance sheet. (This presentation of the balance sheet is called the *account form*: assets on the left and liabilities and equity on the right. Another presentation is the *report form*: assets on top, followed by liabilities and then equity at the bottom. Either presentation is acceptable.) As always, we see the accounting equation applies: Assets of \$40,400 = Liabilities of \$6,200 + Equity of \$34,200.

### Statement of Cash Flows

FastForward’s statement of cash flows is the final report in Exhibit 1.10. The first section reports cash flows from *operating activities*. It shows the \$6,100 cash received from clients and the \$5,100 cash paid for supplies, rent, and employee salaries. Outflows are in parentheses to denote subtraction. Net cash provided by operating activities for December is \$1,000. If cash paid exceeded the \$5,100 cash received, we would call it “cash used by operating activities.” The second section reports *investing activities*, which involve buying and selling assets such as land and equipment that are held for *long-term use* (typically more than one year). The only investing activity is the \$26,000 purchase of equipment. The third section shows cash flows from *financing activities*, which include the *long-term* borrowing and repaying of cash from lenders and the cash investments from, and withdrawals by, the owner. FastForward reports \$30,000 from the owner’s initial investment and the \$200 cash withdrawal. The net cash effect of all financing transactions is a \$29,800 cash inflow. The final part of the statement shows FastForward increased its cash balance by \$4,800 in December. Since it started with no cash, the ending balance is also \$4,800—see line ③. We see that cash flow numbers are different from income statement (*accrual*) numbers, which is common.

**Point:** Statement of cash flows has three main sections: operating, investing, and financing.

**Point:** Payment for supplies is an operating activity because supplies are expected to be used up in short-term operations (typically less than one year).

**Point:** Investing activities refer to long-term asset investments by the company, *not* to owner investments.

### NEED-TO-KNOW 1-5

#### Financial Statements

P2

Prepare the (a) income statement, (b) statement of owner’s equity, and (c) balance sheet, for **Apple** using the following condensed data from its fiscal year ended September 28, 2013. (All \$s are in millions.)

Accounts payable . . . . .	\$ 22,367	Investments and other assets . . . . .	\$163,042
Other liabilities . . . . .	61,084	Land and equipment . . . . .	16,597
Cost of sales and other expenses . . . . .	119,724	Selling and other expenses . . . . .	14,149
Cash . . . . .	14,259	Accounts receivable . . . . .	13,102
Owner, Capital, Sep. 29, 2012 . . . . .	118,210	Net income . . . . .	37,037

## GLOBAL VIEW

Accounting according to U.S. GAAP is similar, but not identical, to IFRS. Throughout the book we use this last section to identify major similarities and differences between IFRS and U.S. GAAP for the materials in each chapter.

**Basic Principles** Both U.S. GAAP and IFRS include broad and similar guidance for accounting. However, neither system specifies particular account names nor the detail required. (A typical *chart of accounts* is shown near the end of this book.) IFRS does require certain minimum line items be reported in the balance sheet along with other minimum disclosures that U.S. GAAP does not. On the other hand, U.S. GAAP requires disclosures for the current and prior two years for the income statement, statement of cash flows, and statement of owner's equity, while IFRS requires disclosures for the current and prior year. Still, the basic principles behind these two systems are similar.\*

**Transaction Analysis** Both U.S. GAAP and IFRS apply transaction analysis identically as shown in this chapter. Although some variations exist in revenue and expense recognition and other principles, all of the transactions in this chapter are accounted for identically under these two systems. It is often said that U.S. GAAP is more *rules-based* whereas IFRS is more *principles-based*. The main difference on the rules versus principles focus is with the approach in deciding how to account for certain transactions. Under U.S. GAAP, the approach is more focused on strictly following the accounting rules; under IFRS, the approach is more focused on a review of the situation and how accounting can best reflect it. This difference typically impacts advanced topics beyond the introductory course.

**Financial Statements** Both U.S. GAAP and IFRS prepare the same four basic financial statements. To illustrate, a condensed version of **Samsung's** income statement follows (numbers here are in thousands of U.S. dollars). Similar condensed versions can be prepared for the other three statements (see Appendix A).

**Samsung**

\*The FASB and the IASB completed a joint project in 2014 to clarify the principles for recognizing revenue and to develop a common revenue standard for U.S. GAAP and IFRS. The FASB amended the FASB Accounting Standards Codification® and created a new Topic 606, *Revenue from Contracts with Customers*, and the IASB issued IFRS 15, *Revenue from Contracts with Customers*. The core principle is that “an entity should recognize revenue to depict the transfer of promised goods or services to customers in an amount that reflects the consideration to which the entity expects to be entitled in exchange for those goods or services.” All discussions and presentations in this book are consistent with this new standard.

SAMSUNG	
Income Statement (in \$ thousands)	
For Year Ended December 31, 2013	
Revenues	\$216,708,677
Cost of sales	130,480,725
Cost of selling, wages, depreciation, and other expenses, net	49,874,044
Tax expense	7,476,087
Net income (profit)	<u>\$ 28,877,821</u>

**Status of IFRS** Accounting impacts companies across the world, which requires us to take a global view. IFRS is now adopted or accepted in over 115 countries, including over 30 member-states of the EU. The FASB and IASB continue to work on the convergence of IFRS and U.S. GAAP.

**Sustainability and Accounting** The Sustainability Accounting Standards Board (SASB) is a nonprofit entity engaged in creating and disseminating sustainability accounting standards for use by companies. Sustainability refers to *environmental, social, and governance (ESG)* dimensions of a company. An example of a company’s social dimension is donations to hospitals, colleges, community programs, and law enforcement. It can also include programs to reduce pollution, increase product safety, improve worker conditions, and support continuing education. Other programs include discounts to students and senior citizens, and sponsoring events such as Special Olympics and summer reading programs.

Sustainability accounting standards are intended to complement financial accounting standards. The SASB has a *Conceptual Framework* to guide the development of sustainability standards. It has also developed a set of *principles*, which serve as a set of minimum criteria. In the case of **Apple**, it asserts that “we’re still the only company in our industry whose data centers are powered by 100 percent renewable energy and whose entire product line not only meets but far exceeds strict ENERGY STAR guidelines. And . . . even though we’re manufacturing and shipping more products, our carbon emissions per product are dropping.”

**Decision Insight**

**Sustainability Returns** Virtue is not always its own reward. Compare the S&P 500 with the Domini Social Index (DSEFX), which covers 400 companies that have especially good records for sustainability. We see that returns for companies with sustainable behavior are roughly on par with, or better than, those of the S&P 500 for the recent five-year period. Varying, but similar, results are evident over several recent time periods. ■

*Decision Analysis (a section at the end of each chapter) introduces and explains ratios for decision making using real company data. Instructors can skip this section and cover all ratios in Chapter 17*

**Decision Analysis** ■ ■ ■ **Return on Assets**

**A2**  
Compute and interpret return on assets.

A *Decision Analysis* section at the end of each chapter is devoted to financial statement analysis. We organize financial statement analysis into four areas: (1) liquidity and efficiency, (2) solvency, (3) profitability, and (4) market prospects—Chapter 17 has a ratio listing with definitions and groupings by area. When analyzing ratios, we need benchmarks to identify good, bad, or average levels. Common benchmarks include the company’s prior levels and those of its competitors.

This chapter presents a profitability measure: return on assets. Return on assets is useful in evaluating management, analyzing and forecasting profits, and planning activities. **Dell** has its marketing department compute return on assets for *every* order. **Return on assets (ROA)**, also called *return on investment (ROI)*, is defined in Exhibit 1.11.

**EXHIBIT 1.11**

Return on Assets

$$\text{Return on assets} = \frac{\text{Net income}}{\text{Average total assets}}$$

Net income is from the annual income statement, and average total assets is computed by adding the beginning and ending amounts for that same period and dividing by 2. To illustrate, **Dell** reports net income of \$2,372 million for fiscal year 2013. At the beginning of fiscal 2013, its total assets are \$44,533 million and at the end of fiscal 2013, they total \$47,540 million. Dell's return on assets for fiscal 2013 is:

$$\text{Return on assets} = \frac{\$2,372 \text{ million}}{(\$47,540 \text{ million} + \$44,533 \text{ million})/2} = 5.2\%$$

Is a 5.2% return on assets good or bad for Dell? To help answer this question, we compare (benchmark) Dell's return with its prior performance, the returns of competitors (such as **Hewlett-Packard**, **IBM**, and **Lenovo**), and the returns from alternative investments. Dell's return for each of the prior five years is in the second column of Exhibit 1.12, which ranges from 4.8% to 9.2%.

Fiscal Year	Return on Assets	
	Dell	Industry
2013 .....	5.2%	4.9%
2012 .....	8.4	6.9
2011 .....	7.3	6.5
2010 .....	4.8	4.7
2009 .....	9.2	7.2

### EXHIBIT 1.12

Dell and Industry Returns

Dell shows a fairly stable pattern of good returns that reflect its productive use of assets. There is a decline in its 2013 return reflecting a more competitive environment. We compare Dell's return to the normal return for similar manufacturers of computers (third column). Industry averages are available from services such as **Dun & Bradstreet's Industry Norms and Key Ratios** and **The Risk Management Association Annual Statement Studies**. When compared to the industry, Dell performs slightly above average.

*Each Decision Analysis section ends with a role-playing scenario to show the usefulness of ratios*

## Decision Maker

**Business Owner** You own a small winter ski resort that earns a 21% return on its assets. An opportunity to purchase a winter ski equipment manufacturer is offered to you. This manufacturer earns a 19% return on its assets. The industry return for this manufacturer is 14%. Do you purchase this manufacturer? ■ [Answers follow the chapter's Summary.]

*The Comprehensive Need-to-Know is a review of key chapter content. The Planning the Solution offers strategies in solving the problem*

After several months of planning, Jasmine Worthy started a haircutting business called Expressions. The following events occurred during its first month of business.

- On August 1, Worthy invested \$3,000 cash and \$15,000 of equipment in Expressions.
- On August 2, Expressions paid \$600 cash for furniture for the shop.
- On August 3, Expressions paid \$500 cash to rent space in a strip mall for August.
- On August 4, it purchased \$1,200 of equipment on credit for the shop (using a long-term note payable).
- On August 5, Expressions opened for business. Cash received from haircutting services in the first week and a half of business (ended August 15) was \$825.
- On August 15, it provided \$100 of haircutting services on account.
- On August 17, it received a \$100 check for services previously rendered on account.
- On August 17, it paid \$125 cash to an assistant for hours worked during the grand opening.
- Cash received from services provided during the second half of August was \$930.
- On August 31, it paid a \$400 installment toward principal on the note payable entered into on August 4.
- On August 31, Worthy made a \$900 cash withdrawal from the company for personal use.

**NEED-TO-KNOW**  
**COMPREHENSIVE**

**Required**

1. Arrange the following asset, liability, and equity titles in a table similar to the one in Exhibit 1.9: Cash; Accounts Receivable; Furniture; Store Equipment; Note Payable; J. Worthy, Capital; J. Worthy, Withdrawals; Revenues; and Expenses. Show the effects of each transaction using the accounting equation.
2. Prepare an income statement for August.
3. Prepare a statement of owner's equity for August.
4. Prepare a balance sheet as of August 31.
5. Prepare a statement of cash flows for August.
6. Determine the return on assets ratio for August.

**PLANNING THE SOLUTION**

- Set up a table like Exhibit 1.9 with the appropriate columns for accounts.
- Analyze each transaction and show its effects as increases or decreases in the appropriate columns. Be sure the accounting equation remains in balance after each transaction.
- Prepare the income statement, and identify revenues and expenses. List those items on the statement, compute the difference, and label the result as *net income* or *net loss*.
- Use information in the Equity columns to prepare the statement of owner's equity.
- Use information in the last row of the transactions table to prepare the balance sheet.
- Prepare the statement of cash flows; include all events listed in the Cash column of the transactions table. Classify each cash flow as operating, investing, or financing.
- Calculate return on assets by dividing net income by average assets.

**SOLUTION**

1.

Assets					=	Liabilities		+	Equity

Net increase in cash .....		\$2,330
Cash balance, August 1 .....		<u>0</u>
Cash balance, August 31 .....		<u>\$2,330</u>

$$6. \text{ Return on assets} = \frac{\text{Net income}}{\text{Average assets}} = \frac{\$1,230}{(\$18,000^* + \$19,130)/2} = \frac{\$1,230}{\$18,565} = \underline{\underline{6.63\%}}$$

\*Uses the initial \$18,000 investment as the beginning balance for the *start-up period only*.

## APPENDIX

# 1A

## Return and Risk Analysis

### A3

Explain the relation between return and risk.

This appendix explains return and risk analysis and its role in business and accounting.

Net income is often linked to **return**. Return on assets (ROA) is stated in ratio form as income divided by assets invested. For example, banks report return from a savings account in the form of an interest return such as 4%. If we invest in a savings account or in U.S. Treasury bills, we expect a return of around 2% to 7%. We could also invest in a company's stock, or even start our own business. How do we decide among these investment options? The answer depends on our trade-off between return and risk.

**Risk** is the uncertainty about the return we will earn. All business investments involve risk, but some investments involve more risk than others. The lower the risk of an investment, the lower is our expected return. The reason that savings accounts pay such a low return is the low risk of not being repaid with interest (the government guarantees most savings accounts from default). If we buy a share of eBay or any other company, we might obtain a large return. However, we have no guarantee of any return; there is even the risk of loss.

### EXHIBIT 1A.1

Average Returns for Bonds with Different Risks

The bar graph in Exhibit 1A.1 shows recent returns for 10-year bonds with different risks. *Bonds* are written promises by organizations to repay amounts loaned with interest. U.S. Treasury bonds provide a low expected return, but they also offer low risk since they are backed by the U.S. government. High-risk corporate bonds offer a much larger potential return but with much higher risk.

The trade-off between return and risk is a normal part of business. Higher risk implies higher, but riskier, expected returns. To help us make better decisions, we use accounting information to assess both return and risk.

## APPENDIX

# 1B

## Business Activities and the Accounting Equation

### C5

Identify and describe the three major activities of organizations.

This appendix explains how the accounting equation is derived from business activities.

There are three major types of business activities: financing, investing, and operating. Each of these requires planning. *Planning* involves defining an organization's ideas, goals, and actions. Most public corporations use the *Management Discussion and Analysis* section in their annual reports to communicate plans. However, planning is not cast in stone. This adds *risk* to both setting plans and analyzing them.

**Financing** *Financing activities* provide the means organizations use to pay for resources such as land, buildings, and equipment to carry out plans. Organizations are careful in acquiring and managing financing activities because they can determine success or failure. The two sources of financing are owner and nonowner. *Owner financing* refers to resources contributed by the owner along with any income the owner leaves in the organization. *Nonowner* (or *creditor*) *financing* refers to resources contributed by creditors (lenders). *Financial management* is the task of planning how to obtain these resources and to set the right mix between owner and creditor financing.

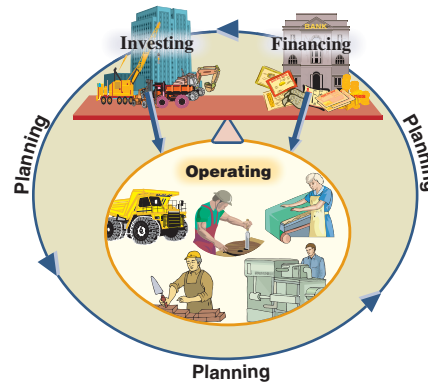

**Point:** Management must understand accounting data to set financial goals, make financing and investing decisions, and evaluate operating performance.

**Investing** *Investing activities* are the acquiring and disposing of resources (assets) that an organization uses to acquire and sell its products or services. Assets are funded by an organization's financing. Organizations differ on the amount and makeup of assets. Some require land and factories to operate. Others need only an office. Determining the amount and type of assets for operations is called *asset management*. Invested amounts are referred to as *assets*. Financing is made up of creditor and owner financing, which hold claims on assets. Creditors' claims are called *liabilities*, and the owner's claim is called *equity*. This basic equality is called the *accounting equation* and can be written as:  $\text{Assets} = \text{Liabilities} + \text{Equity}$ .

**Point:** Investing (assets) and financing (liabilities plus equity) totals are always equal.

**Operating** *Operating activities* involve using resources to research, develop, purchase, produce, distribute, and market products and services. Sales and revenues are the inflow of assets from selling products and services. Costs and expenses are the outflow of assets to support operating activities. *Strategic management* is the process of determining the right mix of operating activities for the type of organization, its plans, and its market.

Exhibit 1B.1 summarizes business activities. Planning is part of each activity and gives them meaning and focus. Investing (assets) and financing (liabilities and equity) are set opposite each other to stress their balance. Operating activities are below investing and financing activities to show that operating activities are the result of investing and financing.

### EXHIBIT 1B.1

Activities of Organizations

## Summary

A Summary organized by learning objectives concludes each chapter

### C1 Explain the purpose and importance of accounting.

Accounting is an information and measurement system that aims to identify, record, and communicate relevant, reliable, and comparable information about business activities. It helps assess opportunities, products, investments, and social and community responsibilities.

### C2 Identify users and uses of, and opportunities in, accounting.

Users of accounting are both internal and external. Some users and uses of accounting include (a) managers in controlling, monitoring, and planning; (b) lenders for measuring the risk and return of loans; (c) shareholders for assessing the return and risk of stock; (d) directors for overseeing management; and (e) employees for judging employment opportunities. Opportunities in accounting include financial, managerial, and tax accounting. They also include accounting-related fields such as lending, consulting, managing, and planning.

**C3 Explain why ethics are crucial to accounting.** The goal of accounting is to provide useful information for decision making. For information to be useful, it must be trusted. This demands ethical behavior in accounting.

### C4 Explain generally accepted accounting principles and define and apply several accounting principles.

Generally accepted accounting principles are a common set of standards applied by accountants. Accounting principles aid in producing relevant, reliable, and comparable information. Four principles underlying financial statements were introduced: cost, revenue recognition, matching, and full disclosure. Financial statements also reflect four assumptions:

going-concern, monetary unit, time period, and business entity.

**C5<sup>B</sup> Identify and describe the three major activities of organizations.** Organizations carry out three major activities: financing, investing, and operating. Financing is the means used to pay for resources such as land, buildings, and machines. Investing refers to the buying and selling of resources used in acquiring and selling products and services. Operating activities are those necessary for carrying out the organization's plans.

**A1 Define and interpret the accounting equation and each of its components.** The accounting equation is:  $\text{Assets} = \text{Liabilities} + \text{Equity}$ . Assets are resources owned by a company. Liabilities are creditors' claims on assets. Equity is the owner's claim on assets (*the residual*). The expanded accounting equation is:  $\text{Assets} = \text{Liabilities} + [\text{Owner Capital} - \text{Owner Withdrawals} + \text{Revenues} - \text{Expenses}]$ .

**A2 Compute and interpret return on assets.** Return on assets is computed as net income divided by average assets. For example, if we have an average balance of \$100 in a savings account and it earns \$5 interest for the year, the return on assets is  $\$5/\$100$ , or 5%.

**A3<sup>A</sup> Explain the relation between return and risk.** *Return* refers to income, and *risk* is the uncertainty about the return we hope to make. All investments involve risk. The lower the risk of an investment, the lower is its expected return. Higher risk implies higher, but riskier, expected return.

**P1 Analyze business transactions using the accounting equation.** A *transaction* is an exchange of economic consideration between two parties. Examples include exchanges of products, services, money, and rights to collect money. Transactions always have at least two effects on one or more components of the accounting equation. This equation is always in balance.

**P2 Identify and prepare basic financial statements and explain how they interrelate.** Four financial statements report on an organization's activities: balance sheet, income statement, statement of owner's equity, and statement of cash flows.

## Guidance Answers to Decision Maker and Decision Ethics

**Entrepreneur** You should probably form the business as a corporation if potential lawsuits are of prime concern. The corporate form of organization protects your personal property from lawsuits directed at the business and places only the corporation's resources at risk. A downside of the corporate form is double taxation: The corporation must pay taxes on its income, and you normally must pay taxes on any money distributed to you from the business (even though the corporation already paid taxes on this money). You should also examine the ethical and socially responsible aspects of starting a business in which you anticipate injuries to others. Formation as an LLC or S corp. should also be explored.

**Business Owner** The 19% return on assets for the manufacturer exceeds the 14% industry return (and many others). This is a positive factor for a potential purchase. Also, the purchase of this manufacturer is an opportunity to spread your risk over two businesses as opposed to one. Still, you should hesitate to purchase a business whose return of 19% is lower than your current resort's return of 21%. You are probably better off directing efforts to increase investment in your resort, assuming you can continue to earn a 21% return.

*A list of key terms concludes each chapter (a complete glossary is also available)*

## Key Terms

Accounting	Financial Accounting Standards Board (FASB)	Owner withdrawals
Accounting equation	Full disclosure principle	Partnership
Assets	Generally accepted accounting principles (GAAP)	Proprietorship
Audit	Going-concern assumption	Recordkeeping
Auditors	Income statement	Return
Balance sheet	Internal transactions	Return on assets (ROA)
Bookkeeping	Internal users	Revenue recognition principle
Business entity assumption	International Accounting Standards Board (IASB)	Revenues
Common stock	International Financial Reporting Standards (IFRS)	Risk
Conceptual framework	Liabilities	Sarbanes-Oxley Act (SOX)
Corporation	Managerial accounting	Securities and Exchange Commission (SEC)
Cost-benefit constraint	Matching principle	Shareholders
Cost principle	Materiality constraint	Shares
Dodd-Frank Wall Street Reform and Consumer Protection Act	Measurement principle	Sole proprietorship
Equity	Monetary unit assumption	Statement of cash flows
Ethics	Net income	Statement of owner's equity
Events	Net loss	Stock
Expanded accounting equation	Owner, Capital	Stockholders
Expense recognition principle	Owner, Withdrawals	Sustainability Accounting Standards Board (SASB)
Expenses	Owner investments	Time period assumption
External transactions		
External users		
Financial accounting		

## Multiple Choice Quiz

## Answers at end of chapter

- A building is offered for sale at \$500,000 but is currently assessed at \$400,000. The purchaser of the building believes the building is worth \$475,000, but ultimately purchases the building for \$450,000. The purchaser records the building at:
  - \$50,000
  - \$400,000
  - \$450,000
  - \$475,000
  - \$500,000
- On December 30, 2014, **KPMG** signs a \$150,000 contract to provide accounting services to one of its clients in 2015. KPMG has a December 31 year-end. Which accounting principle or assumption requires KPMG to record the accounting services revenue from this client in 2015 and not 2014?
  - Business entity assumption
  - Revenue recognition principle
  - Monetary unit assumption
  - Cost principle
  - Going-concern assumption
- If the assets of a company increase by \$100,000 during the year and its liabilities increase by \$35,000 during the same year, then the change in equity of the company during the year must have been:
  - An increase of \$135,000.
  - A decrease of \$135,000.
  - A decrease of \$65,000.
  - An increase of \$65,000.
  - An increase of \$100,000.
- Brunswick** borrows \$50,000 cash from Third National Bank. How does this transaction affect the accounting equation for Brunswick?
  - Assets increase by \$50,000; liabilities increase by \$50,000; no effect on equity.
  - Assets increase by \$50,000; no effect on liabilities; equity increases by \$50,000.
  - Assets increase by \$50,000; liabilities decrease by \$50,000; no effect on equity.
  - No effect on assets; liabilities increase by \$50,000; equity increases by \$50,000.
  - No effect on assets; liabilities increase by \$50,000; equity decreases by \$50,000.
- Geek Squad** performs services for a customer and bills the customer for \$500. How would Geek Squad record this transaction?
  - Accounts receivable increase by \$500; revenues increase by \$500.
  - Cash increases by \$500; revenues increase by \$500.
  - Accounts receivable increase by \$500; revenues decrease by \$500.
  - Accounts receivable increase by \$500; accounts payable increase by \$500.
  - Accounts payable increase by \$500; revenues increase by \$500.

 *Icon denotes assignments that involve decision making.*

## Discussion Questions

- What is the purpose of accounting in society?
- Technology is increasingly used to process accounting data. Why then must we study and understand accounting?
-  Identify four kinds of external users and describe how they use accounting information.
-  What are at least three questions business owners and managers might be able to answer by looking at accounting information?
- Identify three actual businesses that offer services and three actual businesses that offer products.
-  Describe the internal role of accounting for organizations.
- Identify three types of services typically offered by accounting professionals.
-  What type of accounting information might be useful to the marketing managers of a business?
- Why is accounting described as a service activity?
- What are some accounting-related professions?
- How do ethics rules affect auditors' choice of clients?
- What work do tax accounting professionals perform in addition to preparing tax returns?
- What does the concept of *objectivity* imply for information reported in financial statements? Why?
- A business reports its own office stationery on the balance sheet at its \$400 cost, although it cannot be sold for more than \$10 as scrap paper. Which accounting principle and/or assumption justifies this treatment?
- Why is the revenue recognition principle needed? What does it demand?
- Describe the three basic forms of business organization and their key attributes.
- Define (a) *assets*, (b) *liabilities*, (c) *equity*, and (d) *net assets*.
- What events or transactions change equity?
- Identify the two main categories of accounting principles.
- What do accountants mean by the term *revenue*?
- Define *net income* and explain its computation.

22. Identify the four basic financial statements of a business.
23.  What information is reported in an income statement?
24. Give two examples of expenses a business might incur.
25. What is the purpose of the statement of owner's equity?
26.  What information is reported in a balance sheet?
27. The statement of cash flows reports on what major activities?
28.  Define and explain return on assets.
- 29<sup>A</sup>  Define return and risk. Discuss the trade-off between them.
- 30<sup>B</sup> Describe the three major business activities in organizations.
- 31<sup>B</sup> Explain why investing (assets) and financing (liabilities and equity) totals are always equal.
32. Refer to the financial statements of **Apple** in Appendix A near the end of the book. To **APPLE** what level of significance are dollar amounts rounded? What time period does its income statement cover?
33. Identify the dollar amounts of **Google's** **GOOGLE** 2013 assets, liabilities, and equity as reported in its statements in Appendix A near the end of the book.
34. Refer to **Samsung's** 2013 balance sheet in Appendix A near the end of **Samsung** the book. Confirm that its total assets equal its total liabilities plus total equity.
35.  Access the SEC EDGAR database ([www.SEC.gov](http://www.SEC.gov)) and retrieve **Apple's** 2013 10-K **APPLE** (filed October 29, 2013). Identify its auditor. What responsibility does its independent auditor claim regarding Apple's financial statements?

**Quick Study exercises** offer a brief test of key elements

**Connect** reproduces assignments online, in static or algorithmic mode, which allows instructors to monitor, promote, and assess student learning. It can be used for practice, homework, or exams

## QUICK STUDY

### QS 1-1

Understanding accounting

**C1**

Choose from the following list of terms/phrases to best complete the following statements.

- |                       |                         |                                       |                                |
|-----------------------|-------------------------|---------------------------------------|--------------------------------|
| <b>a.</b> Accounting  | <b>c.</b> Recording     | <b>e.</b> Recordkeeping (bookkeeping) | <b>g.</b> Language of business |
| <b>b.</b> Identifying | <b>d.</b> Communicating | <b>f.</b> Technology                  | <b>h.</b> Governmental         |
- \_\_\_\_\_ reduces the time, effort, and cost of recordkeeping while improving clerical accuracy.
  - \_\_\_\_\_ business activities requires that we keep a chronological log of transactions and events measured in dollars.
  - \_\_\_\_\_ is the recording of transactions and events, either manually or electronically.

### QS 1-2

Identifying accounting users

**C2**

Identify the following users as either external users (E) or internal users (I).

- |                                |                                   |                                |
|--------------------------------|-----------------------------------|--------------------------------|
| _____ <b>a.</b> Customers      | _____ <b>e.</b> Managers          | _____ <b>i.</b> Controllers    |
| _____ <b>b.</b> Suppliers      | _____ <b>f.</b> District attorney | _____ <b>j.</b> FBI and IRS    |
| _____ <b>c.</b> Brokers        | _____ <b>g.</b> Shareholders      | _____ <b>k.</b> Consumer group |
| _____ <b>d.</b> Business press | _____ <b>h.</b> Lenders           | _____ <b>l.</b> Sales clerks   |

### QS 1-3

Identifying ethical concerns

**C3**

- Accounting professionals must sometimes choose between two or more acceptable methods of accounting for business transactions and events. Explain why these situations can involve difficult matters of ethical concern.
- An important responsibility of many accounting professionals is to design and implement internal control procedures for organizations. Explain the purpose of internal control procedures. Provide two examples of internal controls applied by companies.

### QS 1-4

Identifying principles, assumptions and constraints **C4**

Identify each of the following terms/phrases as either an accounting: (a) principle, (b) assumption, or (c) constraint.

- |                             |                                      |
|-----------------------------|--------------------------------------|
| _____ <b>1.</b> Materiality | _____ <b>3.</b> Benefit exceeds cost |
| _____ <b>2.</b> Time period | _____ <b>4.</b> Revenue recognition  |

Complete the following table with either a yes or no regarding the attributes of a proprietorship, partnership and corporation.

Attribute Present	Proprietorship	Partnership	Corporation
1. Business taxed. . . . .	_____	_____	_____
2. Business entity. . . . .	_____	_____	_____
3. Legal entity . . . . .	_____	_____	_____

**QS 1-5**  
Identifying attributes of businesses  
**C4**

Identify which accounting principle or assumption best describes each of the following practices:

- a. In December 2014, Chavez Landscaping received a customer’s order and cash prepayment to install sod at a new house that would not be ready for installation until March 2015. Chavez should record the revenue from the customer order in March 2015, not in December 2014.
- b. If \$51,000 cash is paid to buy land, the land is reported on the buyer’s balance sheet at \$51,000.
- c. Jo Keene owns both Sailing Passions and Dockside Supplies. In preparing financial statements for Dockside Supplies, Keene makes sure that the expense transactions of Sailing Passions are kept separate from Dockside’s transactions and financial statements.

**QS 1-6**  
Identifying accounting principles **C4**  
 This icon highlights assignments that enhance decision-making skills

- a. Total assets of Charter Company equal \$700,000 and its equity is \$420,000. What is the amount of its liabilities?
- b. Total assets of Martin Marine equal \$500,000 and its liabilities and equity amounts are equal to each other. What is the amount of its liabilities? What is the amount of its equity?

**QS 1-7**  
Applying the accounting equation **A1** 

- 1. Use the accounting equation to compute the missing financial statement amounts (a), (b), and (c).

	A	B	C	D
1	<b>Company</b>	<b>Assets</b>	=	<b>Liabilities</b> + <b>Equity</b>
2	1	\$ 75,000		\$ (a) \$ 40,000
3	2	(b)		25,000 70,000
4	3	85,000		20,000 (c)
5				

**QS 1-8**  
Applying the accounting equation  
**A1**

- 2. Use the expanded accounting equation to compute the missing financial statement amounts (a) and (b).

	A	B	C	D	E	F	G
1				<b>Owner, Capital</b>	<b>Owner, Withdrawals</b>		
2	<b>Company</b>	<b>Assets</b>	<b>Liabilities</b>			<b>Revenues</b>	<b>Expenses</b>
3	1	\$ 40,000	\$ 16,000	\$ 20,000	\$ 0	(a)	\$ 8,000
4	2	\$ 80,000	\$ 32,000	\$ 44,000	(b)	\$ 24,000	\$ 18,000
5							

Use **Samsung’s** December 31, 2013, financial statements, in Appendix A near the end of the book, to answer the following:

- a. Identify the amounts (in millions of Korean won) of its 2013 (1) assets, (2) liabilities, and (3) equity.
- b. Using amounts from part a, verify that Assets = Liabilities + Equity.

**QS 1-9**  
Identifying and computing assets, liabilities, and equity **A1** 

**Samsung**

**QS 1-10**

Identifying effects of transactions using accounting equation—Revenues and Expenses

P1

Create a table like the one in Exhibit 1.9, using the following headings for columns: Cash; Accounts Receivable; Accounts Payable; Owner, Capital; Owner, Withdrawals; Revenues; and Expenses. Then use additions and subtractions to show the effects of each transaction on individual items of the accounting equation (identify each revenue and expense type, such as commissions revenue or rent expense).

- a. The company completed consulting work for a client and immediately collected \$5,500 cash earned.
- b. The company completed commission work for a client and sent a bill for \$4,000 to be received within 30 days.
- c. The company paid an assistant \$1,400 cash as wages for the period.
- d. The company collected \$1,000 cash as a partial payment for the amount owed by the client in transaction b.
- e. The company paid \$700 cash for this period’s cleaning services.

**QS 1-11**

Identifying effects of transactions using accounting equation—Assets and Liabilities

P1

Create a table like the one in Exhibit 1.9, using the following headings for columns: Cash; Supplies; Equipment; Land; Accounts Payable; Notes Payable; A. Carr, Capital; A. Carr, Withdrawals; Revenues; and Expenses. Then use additions and subtractions to show the effects of each transaction on individual items of the accounting equation.

- a. The owner (Alex Carr) invested \$15,000 cash in the company.
- b. The company purchased supplies for \$500 cash.
- c. The company purchased \$10,000 in equipment on credit (record liability as Note Payable).
- d. The company purchased \$200 of additional supplies on credit.
- e. The company purchased land for \$9,000 cash.

**QS 1-12**

Identifying items with financial statements

P2

Indicate in which financial statement each item would most likely appear: income statement (I), balance sheet (B), statement of owner’s equity (E), or statement of cash flows (CF).

- |   |   |
|---|---|
| _____ a. Assets                         | _____ f. Liabilities                        |
| _____ b. Cash from operating activities | _____ g. Net decrease (or increase) in cash |
| _____ c. Withdrawals                    | _____ h. Revenues                           |
| _____ d. Equipment                      | _____ i. Total liabilities and equity       |
| _____ e. Expenses                       |   |

**QS 1-13**

Identifying income and equity accounts P2

Classify each of the following items as revenues (R), expenses (EX), or withdrawals (W).

- |                                  |                           |
|----------------------------------|---------------------------|
| _____ 1. Cost of sales (expense) | _____ 3. Wages expense    |
| _____ 2. Service revenue         | _____ 4. Owner withdrawal |

**QS 1-14**

Identifying assets, liabilities, and equity P2

Classify each of the following items as assets (A), liabilities (L), or equity (EQ).

- |                         |                           |                              |
|-------------------------|---------------------------|------------------------------|
| _____ 1. Land           | _____ 3. Equipment        | _____ 5. Accounts receivable |
| _____ 2. Owner, Capital | _____ 4. Accounts payable |                              |

**QS 1-15**

Computing and interpreting return on assets A2 

In a recent year’s financial statements, **Home Depot** reported the following results. Compute and interpret Home Depot’s return on assets (assume competitors average an 8.0% return on assets).

Sales .....	\$67,997 million
Net income .....	3,338 million
Average total assets .....	40,501 million

**QS 1-16**

International accounting standards C4

Answer each of the following questions related to international accounting standards.

- a. The International Accounting Standards Board (IASB) issues preferred accounting practices that are referred to as what?
- b. The FASB and IASB are working on a convergence process for what purpose?

*This icon highlights assignments that focus on IFRS-related content*

Match each of the numbered descriptions with the term or phrase it best reflects. Indicate your answer by writing the letter for the term or phrase in the blank provided.

- A.** SASB      **C.** Social dimension      **E.** Conceptual framework      **G.** Sustainability standards  
**B.** Principles      **D.** Sustainability      **F.** Environmental dimension      **H.** Domini Social Index

- \_\_\_\_\_ 1. Refers to the environmental, social, and governance dimensions of an entity.  
 \_\_\_\_\_ 2. A structure to help guide development of sustainability standards.  
 \_\_\_\_\_ 3. An entity that creates and publishes sustainability accounting standards.  
 \_\_\_\_\_ 4. Facet of an entity involved with donations to hospitals, colleges, and community programs.

**QS 1-17**

Sustainability accounting

**C4**

Accounting is an information and measurement system that identifies, records, and communicates relevant, reliable, and comparable information about an organization's business activities. Classify the following activities as part of the identifying (I), recording (R), or communicating (C) aspects of accounting.

- \_\_\_\_\_ 1. Analyzing and interpreting reports.      \_\_\_\_\_ 5. Preparing financial statements.  
 \_\_\_\_\_ 2. Presenting financial information.      \_\_\_\_\_ 6. Seeing revenues generated from a service.  
 \_\_\_\_\_ 3. Keeping a log of service costs.      \_\_\_\_\_ 7. Observing employee tasks behind a product.  
 \_\_\_\_\_ 4. Measuring the costs of a product.      \_\_\_\_\_ 8. Registering cash sales of products sold.

**EXERCISES****Exercise 1-1**

Classifying activities reflected in the accounting system

**C1**

Part A. Identify the following questions as most likely to be asked by an internal (I) or an external (E) user of accounting information.

- \_\_\_\_\_ 1. What are reasonable payroll benefits and wages?  
 \_\_\_\_\_ 2. Should we make a five-year loan to that business?  
 \_\_\_\_\_ 3. What are the costs of our product's ingredients?  
 \_\_\_\_\_ 4. Do income levels justify the current stock price?  
 \_\_\_\_\_ 5. Should we spend additional money for redesign of our product?  
 \_\_\_\_\_ 6. Which firm reports the highest sales and income?  
 \_\_\_\_\_ 7. What are the costs of our service to customers?

**Exercise 1-2**

Identifying accounting users and uses

**C2**

Part B. Identify the following users of accounting information as either an internal (I) or an external (E) user.

- \_\_\_\_\_ 1. Research and development director      \_\_\_\_\_ 5. Distribution managers  
 \_\_\_\_\_ 2. Human resources director      \_\_\_\_\_ 6. Creditors  
 \_\_\_\_\_ 3. Nonexecutive employee      \_\_\_\_\_ 7. Production supervisors  
 \_\_\_\_\_ 4. Shareholders      \_\_\_\_\_ 8. Purchasing manager

Many accounting professionals work in one of the following three areas:

- A.** Financial accounting      **B.** Managerial accounting      **C.** Tax accounting

Identify the area of accounting that is most involved in each of the following responsibilities:

- \_\_\_\_\_ 1. Internal auditing      \_\_\_\_\_ 5. Investigating violations of tax laws  
 \_\_\_\_\_ 2. External auditing      \_\_\_\_\_ 6. Planning transactions to minimize taxes  
 \_\_\_\_\_ 3. Cost accounting      \_\_\_\_\_ 7. Preparing external financial statements  
 \_\_\_\_\_ 4. Budgeting      \_\_\_\_\_ 8. Reviewing reports for SEC compliance

**Exercise 1-3**

Describing accounting responsibilities

**C2**

Match each of the numbered descriptions with the term or phrase it best reflects. Indicate your answer by writing the letter for the term or phrase in the blank provided.

- A.** Audit      **C.** Ethics      **E.** SEC      **G.** Net income  
**B.** GAAP      **D.** Tax accounting      **F.** Public accountants      **H.** IASB

- \_\_\_\_\_ 1. An examination of an organization's accounting system and records that adds credibility to financial statements.  
 \_\_\_\_\_ 2. Amount a business earns in excess of all expenses and costs associated with its sales and revenues.  
 \_\_\_\_\_ 3. An accounting area that includes planning future transactions to minimize taxes paid.  
 \_\_\_\_\_ 4. Accounting professionals who provide services to many clients.  
 \_\_\_\_\_ 5. Principles that determine whether an action is right or wrong.

**Exercise 1-4**

Learning the language of business

**C1 C2 C3**

**Exercise 1-5**

Identifying ethical concerns

Assume the following role and describe a situation in which ethical considerations play an important part in guiding your decisions and actions:

- a. You are an accounting professional with audit clients that are competitors in business.
- b. You are an accounting professional preparing tax returns for clients.
- c. You are a manager with responsibility for several employees.
- d. You are a student in an introductory accounting course.

**Exercise 1-6**

Distinguishing business organizations

The following describe several different business organizations. Determine whether the description refers to a sole proprietorship (SP), partnership (P), or corporation (C).

- \_\_\_\_\_ a. Micah Douglas and Nathan Logan own Financial Services, a financial services provider. Neither Douglas nor Logan has personal responsibility for the debts of Financial Services.
- \_\_\_\_\_ b. Riley and Kay own Speedy Packages, a courier service. Both are personally liable for the debts of the business.
- \_\_\_\_\_ c. IBC Services does not have separate legal existence apart from the one person who owns it.
- \_\_\_\_\_ d. Trent Company is owned by Trent Malone, who is personally liable for the company's debts.
- \_\_\_\_\_ e. Ownership of Zander Company is divided into 1,000 shares of stock.
- \_\_\_\_\_ f. Physio Products does not pay income taxes and has one owner.
- \_\_\_\_\_ g. AJ Company pays its own income taxes and has two owners.

**Exercise 1-7**

Identifying accounting principles and assumptions

Match each of the numbered descriptions with the principle or assumption it best reflects. Enter the letter for the appropriate principle or assumption in the blank space next to each description.

- |   |  |
|---|--|
| <b>A.</b> General accounting principle  | <b>E.</b> Specific accounting principle            |
| <b>B.</b> Cost principle                | <b>F.</b> Matching (expense recognition) principle |
| <b>C.</b> Business entity assumption    | <b>G.</b> Going-concern assumption                 |
| <b>D.</b> Revenue recognition principle | <b>H.</b> Full disclosure principle                |
- \_\_\_\_\_ 1. A company reports details behind financial statements that would impact users' decisions.
  - \_\_\_\_\_ 2. Financial statements reflect the assumption that the business continues operating.
  - \_\_\_\_\_ 3. A company records the expenses incurred to generate the revenues reported.
  - \_\_\_\_\_ 4. Derived from long-used and generally accepted accounting practices.
  - \_\_\_\_\_ 5. Every business is accounted for separately from its owner or owners.
  - \_\_\_\_\_ 6. Revenue is recorded only when the earnings process is complete.
  - \_\_\_\_\_ 7. Usually created by a pronouncement from an authoritative body.
  - \_\_\_\_\_ 8. Information is based on actual costs incurred in transactions.

**Exercise 1-8**

Using the accounting equation

Determine the missing amount from each of the separate situations *a*, *b*, and *c* below.

	A	=	B	+	C
1	<b>Assets</b>		<b>Liabilities</b>		<b>Equity</b>
2	(a) \$ ?		\$ 20,000		\$ 45,000
3	(b) 100,000		34,000		?
4	(c) 154,000		?		40,000
5					

**Exercise 1-9**

Using the accounting equation

Answer the following questions. (*Hint:* Use the accounting equation.)

- a. At the beginning of the year, Addison Company's assets are \$300,000 and its equity is \$100,000. During the year, assets increase \$80,000 and liabilities increase \$50,000. What is the equity at the end of the year?
- b. Office Store has assets equal to \$123,000 and liabilities equal to \$47,000 at year-end. What is the total equity for Office Store at year-end?
- c. At the beginning of the year, Quaker Company's liabilities equal \$70,000. During the year, assets increase by \$60,000, and at year-end assets equal \$190,000. Liabilities decrease \$5,000 during the year. What are the beginning and ending amounts of equity?

**Check** (c) Beg. equity, \$60,000

Zen began a new consulting firm on January 5. The accounting equation showed the following balances after each of the company's first five transactions. Analyze the accounting equation for each transaction and describe each of the five transactions with their amounts.

Trans- action	Assets					=	Liabilities		+	Equity			
	Cash	+	Accounts Receiv- able	+	Office Sup- plies		+	Office Furni- ture		=	Accounts Payable	+	Zen, Capital
a.	\$40,000	+	\$ 0	+	\$ 0	+	\$ 0	=	\$ 0	+	\$40,000	+	\$ 0
b.	38,000	+	0	+	3,000	+	0	=	1,000	+	40,000	+	0
c.	30,000	+	0	+	3,000	+	8,000	=	1,000	+	40,000	+	0
d.	30,000	+	6,000	+	3,000	+	8,000	=	1,000	+	40,000	+	6,000
e.	31,000	+	6,000	+	3,000	+	8,000	=	1,000	+	40,000	+	7,000

The following table shows the effects of five transactions (*a* through *e*) on the assets, liabilities, and equity of Mulan's Boutique. Write short descriptions of the probable nature of each transaction.

	Assets					=	Liabilities		+	Equity			
	Cash	+	Accounts Receivable	+	Office Supplies		+	Land		=	Accounts Payable	+	Mulan, Capital
	\$ 21,000	+	\$ 0	+	\$3,000	+	\$19,000	=	\$ 0	+	\$43,000	+	\$ 0
a.	- 4,000						4,000						
b.					+ 1,000				+ 1,000				
c.			+ 1,900										+ 1,900
d.	- 1,000								- 1,000				
e.	+ 1,900		- 1,900										
	<u>\$ 17,900</u>	+	<u>\$ 0</u>	+	<u>\$4,000</u>	+	<u>\$23,000</u>	=	<u>\$ 0</u>	+	<u>\$43,000</u>	+	<u>\$ 1,900</u>

Provide an example of a transaction that creates the described effects for the separate cases *a* through *g*.

- Decreases an asset and decreases equity.
- Increases an asset and increases a liability.
- Decreases a liability and increases a liability.
- Decreases an asset and decreases a liability.
- Increases an asset and decreases an asset.
- Increases a liability and decreases equity.
- Increases an asset and increases equity.

Ming Chen began a professional practice on June 1 and plans to prepare financial statements at the end of each month. During June, Ming Chen (the owner) completed these transactions:

- Owner invested \$60,000 cash in the company along with equipment that had a \$15,000 market value.
- The company paid \$1,500 cash for rent of office space for the month.
- The company purchased \$10,000 of additional equipment on credit (payment due within 30 days).
- The company completed work for a client and immediately collected the \$2,500 cash earned.
- The company completed work for a client and sent a bill for \$8,000 to be received within 30 days.
- The company purchased additional equipment for \$6,000 cash.
- The company paid an assistant \$3,000 cash as wages for the month.
- The company collected \$5,000 cash as a partial payment for the amount owed by the client in transaction *e*.
- The company paid \$10,000 cash to settle the liability created in transaction *c*.
- Owner withdrew \$1,000 cash from the company for personal use.

### Required

Create a table like the one in Exhibit 1.9, using the following headings for columns: Cash; Accounts Receivable; Equipment; Accounts Payable; M. Chen, Capital; M. Chen, Withdrawals; Revenues; and Expenses. Then use additions and subtractions to show the effects of the transactions on individual items of the accounting equation. Show new balances after each transaction.

### Exercise 1-10

Analysis using the accounting equation

### Exercise 1-11

Identifying effects of transactions on the accounting equation

### Exercise 1-12

Identifying effects of transactions on the accounting equation

### Exercise 1-13

Identifying effects of transactions using the accounting equation

**Check** Net income, \$6,000

**Exercise 1-14**

Analysis of return on assets **A2** 

Swiss Group reports net income of \$40,000 for 2015. At the beginning of 2015, Swiss Group had \$200,000 in assets. By the end of 2015, assets had grown to \$300,000. What is Swiss Group's 2015 return on assets? How would you assess its performance if competitors average a 10% return on assets?

**Exercise 1-15**

Preparing an income statement **P2**

On October 1, Ebony Ernst organized Ernst Consulting; on October 3, the owner contributed \$84,000 in assets to launch the business. On October 31, the company's records show the following items and amounts. Use this information to prepare an October income statement for the business.

Cash .....	\$11,360	Cash withdrawals by owner .....	\$ 2,000
Accounts receivable .....	14,000	Consulting fees earned .....	14,000
Office supplies .....	3,250	Rent expense .....	3,550
Land .....	46,000	Salaries expense .....	7,000
Office equipment .....	18,000	Telephone expense .....	760
Accounts payable .....	8,500	Miscellaneous expenses .....	580
Owner investments .....	84,000		

**Check** Net income, \$2,110

**Exercise 1-16**

Preparing a statement of owner's equity **P2**

Use the information in Exercise 1-15 to prepare an October statement of owner's equity for Ernst Consulting.

**Exercise 1-17**

Preparing a balance sheet **P2**

Use the information in Exercise 1-15 (if completed, you can also use your solution to Exercise 1-16) to prepare an October 31 balance sheet for Ernst Consulting.

**Exercise 1-18**

Preparing a statement of cash flows **P2** 

Use the information in Exercise 1-15 to prepare an October 31 statement of cash flows for Ernst Consulting. Also assume the following:

- The owner's initial investment consists of \$38,000 cash and \$46,000 in land.
- The company's \$18,000 equipment purchase is paid in cash.
- The accounts payable balance of \$8,500 consists of the \$3,250 office supplies purchase and \$5,250 in employee salaries yet to be paid.
- The company's rent, telephone, and miscellaneous expenses are paid in cash.
- No cash has been collected on the \$14,000 consulting fees earned.

**Check** Net increase in cash, \$11,360

**Exercise 1-19**

Identifying sections of the statement of cash flows **P2**

Indicate the section where each of the following would appear on the statement of cash flows.

- |  |   |
|--|---|
| <b>O.</b> Cash flows from operating activity |   |
| <b>I.</b> Cash flows from investing activity |   |
| <b>F.</b> Cash flows from financing activity |   |
| _____ 1. Cash purchase of equipment          | _____ 5. Cash paid on account payable to supplier |
| _____ 2. Cash withdrawal by owner            | _____ 6. Cash received from clients               |
| _____ 3. Cash paid for advertising           | _____ 7. Cash investment by owner                 |
| _____ 4. Cash paid for wages                 | _____ 8. Cash paid for rent                       |

**Exercise 1-20**

Preparing an income statement for a global company **P2** 

**BMW Group**, one of Europe's largest manufacturers, reports the following income statement accounts for the year ended December 31, 2013 (euros in millions).

Revenues .....	€68,821
Cost of sales .....	54,276
Sales and administrative costs .....	6,177
Other expenses .....	3,487

Use this information to prepare BMW's income statement for the year ended December 31, 2013.

Match each transaction or event to one of the following activities of an organization: financing activities (F), investing activities (I), or operating activities (O).

- a. \_\_\_\_\_ An owner contributes resources to the business.
- b. \_\_\_\_\_ The organization borrows money from a bank.
- c. \_\_\_\_\_ An organization advertises a new product.
- d. \_\_\_\_\_ An organization sells some of its land.
- e. \_\_\_\_\_ An organization purchases equipment.

**Exercise 1-21<sup>B</sup>**  
Identifying business activities  
C5

*Problem Set B located at the end of Problem Set A is provided for each problem to reinforce the learning process*

Identify how each of the following separate transactions affects financial statements. For the balance sheet, identify how each transaction affects total assets, total liabilities, and total equity. For the income statement, identify how each transaction affects net income. For the statement of cash flows, identify how each transaction affects cash flows from operating activities, cash flows from financing activities, and cash flows from investing activities. For increases, place a “+” in the column or columns. For decreases, place a “-” in the column or columns. If both an increase and a decrease occur, place a “+/-” in the column or columns. The first transaction is completed as an example.

**PROBLEM SET A**

**Problem 1-1A**  
Identifying effects of transactions on financial statements

A1 P1

	Transaction	Balance Sheet			Income Statement	Statement of Cash Flows		
		Total Assets	Total Liab.	Total Equity	Net Income	Operating Activities	Financing Activities	Investing Activities
1	Owner invests cash in business	+		+			+	
2	Receives cash for services provided							
3	Pays cash for employee wages							
4	Incurs legal costs on credit							
5	Borrows cash by signing long-term note payable							
6	Buys office equipment for cash							
7	Buys land by signing note payable							
8	Provides services on credit							
9	Owner withdraws cash							
10	Collects cash on receivable from (8)							

The following financial statement information is from five separate companies:

	Company A	Company B	Company C	Company D	Company E
December 31, 2014					
Assets . . . . .	\$55,000	\$34,000	\$24,000	\$60,000	\$119,000
Liabilities . . . . .	24,500	21,500	9,000	40,000	?
December 31, 2015					
Assets . . . . .	58,000	40,000	?	85,000	113,000
Liabilities . . . . .	?	26,500	29,000	24,000	70,000
During year 2015					
Owner investments . . . . .	6,000	1,400	9,750	?	6,500
Net income (loss) . . . . .	8,500	?	8,000	14,000	20,000
Owner cash withdrawals . . . . .	3,500	2,000	5,875	0	11,000

**Problem 1-2A**  
Computing missing information using accounting knowledge

A1 P1

**Required**

1. Answer the following questions about Company A:
  - a. What is the amount of equity on December 31, 2014?
  - b. What is the amount of equity on December 31, 2015?
  - c. What is the amount of liabilities on December 31, 2015?
2. Answer the following questions about Company B:
  - a. What is the amount of equity on December 31, 2014?
  - b. What is the amount of equity on December 31, 2015?
  - c. What is net income for year 2015?
3. Calculate the amount of assets for Company C on December 31, 2015.
4. Calculate the amount of owner investments for Company D during year 2015.
5. Calculate the amount of liabilities for Company E on December 31, 2014.

**Check** (1b) \$41,500

(2c) \$1,600

(3) \$55,875

**Problem 1-3A**

Preparing a balance sheet

P2

The following is selected financial information for Armani Company as of December 31, 2015: liabilities, \$44,000; equity, \$46,000; assets, \$90,000.

**Required**

Prepare the balance sheet for Armani Company as of December 31, 2015.

**Problem 1-4A**

Preparing an income statement

P2

The following is selected financial information for Edison Energy Company for the year ended December 31, 2015: revenues, \$55,000; expenses, \$40,000; net income, \$15,000.

**Required**

Prepare the 2015 calendar-year income statement for Edison Energy Company.

**Problem 1-5A**

Preparing a statement of owner's equity

P2

Following is selected financial information for Kojo Company for the year ended December 31, 2015.

K. Kojo, Capital, Dec. 31, 2015 . . . . .	\$14,000	K. Kojo, Withdrawals . . . . .	\$1,000
Net income . . . . .	8,000	K. Kojo, Capital, Dec. 31, 2014 . . . . .	7,000

**Required**

Prepare the 2015 statement of owner's equity for Kojo Company.

**Problem 1-6A**

Preparing a statement of cash flows

P2

Following is selected financial information of Kia Company for the year ended December 31, 2015.

Cash used by investing activities . . . . .	\$(2,000)
Net increase in cash . . . . .	1,200
Cash used by financing activities . . . . .	(2,800)
Cash from operating activities . . . . .	6,000
Cash, December 31, 2014 . . . . .	2,300

**Required**

Prepare the 2015 statement of cash flows for Kia Company.

**Check** Cash balance, Dec. 31, 2015, \$3,500

**Problem 1-7A**

Analyzing transactions and preparing financial statements

C4 P1 P2

Gabi Gram started The Gram Co., a new business that began operations on May 1. The Gram Co. completed the following transactions during its first month of operations.

- May 1 G. Gram invested \$40,000 cash in the company.
- 1 The company rented a furnished office and paid \$2,200 cash for May's rent.
  - 3 The company purchased \$1,890 of office equipment on credit.
  - 5 The company paid \$750 cash for this month's cleaning services.
  - 8 The company provided consulting services for a client and immediately collected \$5,400 cash.
  - 12 The company provided \$2,500 of consulting services for a client on credit.
  - 15 The company paid \$750 cash for an assistant's salary for the first half of this month.
  - 20 The company received \$2,500 cash payment for the services provided on May 12.
  - 22 The company provided \$3,200 of consulting services on credit.
  - 25 The company received \$3,200 cash payment for the services provided on May 22.

- 26 The company paid \$1,890 cash for the office equipment purchased on May 3.
- 27 The company purchased \$80 of advertising in this month's (May) local paper on credit; cash payment is due June 1.
- 28 The company paid \$750 cash for an assistant's salary for the second half of this month.
- 30 The company paid \$300 cash for this month's telephone bill.
- 30 The company paid \$280 cash for this month's utilities.
- 31 G. Gram withdrew \$1,400 cash from the company for personal use.

**Required**

1. Arrange the following asset, liability, and equity titles in a table like Exhibit 1.9: Cash; Accounts Receivable; Office Equipment; Accounts Payable; G. Gram, Capital; G. Gram, Withdrawals; Revenues; and Expenses.
2. Show effects of the transactions on the accounts of the accounting equation by recording increases and decreases in the appropriate columns. Do not determine new account balances after each transaction. Determine the final total for each account and verify that the equation is in balance.
3. Prepare an income statement for May, a statement of owner's equity for May, a May 31 balance sheet, and a statement of cash flows for May.

**Check** (2) Ending balances: Cash, \$42,780; Expenses, \$5,110

(3) Net income, \$5,990; Total assets, \$44,670

Lita Lopez started Biz Consulting, a new business, and completed the following transactions during its first year of operations.

- a. Lita Lopez invests \$70,000 cash and office equipment valued at \$10,000 in the company.
- b. The company purchased a \$150,000 building to use as an office. Biz Consulting paid \$20,000 in cash and signed a note payable promising to pay the \$130,000 balance over the next 10 years.
- c. The company purchased office equipment for \$15,000 cash.
- d. The company purchased \$1,200 of office supplies and \$1,700 of office equipment on credit.
- e. The company paid a local newspaper \$500 cash for printing an announcement of the office's opening.
- f. The company completed a financial plan for a client and billed that client \$2,800 for the service.
- g. The company designed a financial plan for another client and immediately collected a \$4,000 cash fee.
- h. Lita Lopez withdrew \$3,275 cash from the company for personal use.
- i. The company received \$1,800 cash as partial payment from the client described in transaction *f*.
- j. The company made a partial payment of \$700 cash on the equipment purchased in transaction *d*.
- k. The company paid \$1,800 cash for the office secretary's wages for this period.

**Required**

1. Create a table like the one in Exhibit 1.9, using the following headings for the columns: Cash; Accounts Receivable; Office Supplies; Office Equipment; Building; Accounts Payable; Notes Payable; L. Lopez, Capital; L. Lopez, Withdrawals; Revenues; and Expenses.
2. Use additions and subtractions within the table created in part 1 to show the dollar effects of each transaction on individual items of the accounting equation. Show new balances after each transaction.
3. Once you have completed the table, determine the company's net income.

**Problem 1-8A**

Analyzing effects of transactions

C4 P1 P2 A1

**Check** (2) Ending balances: Cash, \$34,525; Expenses, \$2,300; Notes Payable, \$130,000

(3) Net income, \$4,500

Sanyu Sony started a new business and completed these transactions during December.

- Dec. 1 Sanyu Sony transferred \$65,000 cash from a personal savings account to a checking account in the name of Sony Electric.
- 2 The company rented office space and paid \$1,000 cash for the December rent.
- 3 The company purchased \$13,000 of electrical equipment by paying \$4,800 cash and agreeing to pay the \$8,200 balance in 30 days.
- 5 The company purchased office supplies by paying \$800 cash.
- 6 The company completed electrical work and immediately collected \$1,200 cash for these services.
- 8 The company purchased \$2,530 of office equipment on credit.
- 15 The company completed electrical work on credit in the amount of \$5,000.
- 18 The company purchased \$350 of office supplies on credit.
- 20 The company paid \$2,530 cash for the office equipment purchased on December 8.
- 24 The company billed a client \$900 for electrical work completed; the balance is due in 30 days.
- 28 The company received \$5,000 cash for the work completed on December 15.
- 29 The company paid the assistant's salary of \$1,400 cash for this month.
- 30 The company paid \$540 cash for this month's utility bill.
- 31 Sanyu Sony withdrew \$950 cash from the company for personal use.

**Problem 1-9A**

Analyzing transactions and preparing financial statements

C4 P1 P2 

**Required**

1. Arrange the following asset, liability, and equity titles in a table like Exhibit 1.9: Cash; Accounts Receivable; Office Supplies; Office Equipment; Electrical Equipment; Accounts Payable; S. Sony, Capital; S. Sony, Withdrawals; Revenues; and Expenses.
2. Use additions and subtractions to show the effects of each transaction on the accounts in the accounting equation. Show new balances after each transaction.
3. Use the increases and decreases in the columns of the table from part 2 to prepare an income statement, a statement of owner's equity, and a statement of cash flows—each of these for the current month. Also prepare a balance sheet as of the end of the month.

**Check** (2) Ending balances: Cash, \$59,180, Accounts Payable, \$8,550

(3) Net income, \$4,160; Total assets, \$76,760

**Analysis Component**

4. Assume that the owner investment transaction on December 1 was \$49,000 cash instead of \$65,000 and that Sony Electric obtained another \$16,000 in cash by borrowing it from a bank. Explain the effect of this change on total assets, total liabilities, and total equity.

**Problem 1-10A**

Determining expenses, liabilities, equity, and return on assets

A1 A2 

**Check** (3) \$410,000  
(4) \$250,000

Kyzeria manufactures, markets, and sells cellular telephones. The average total assets for Kyzeria is \$250,000. In its most recent year, Kyzeria reported net income of \$65,000 on revenues of \$475,000.

**Required**

1. What is Kyzeria's return on assets?
2. Does return on assets seem satisfactory for Kyzeria given that its competitors average a 12% return on assets?
3. What are total expenses for Kyzeria in its most recent year?
4. What is the average total amount of liabilities plus equity for Kyzeria?

**Problem 1-11A**

Computing and interpreting return on assets

A2 

**Check** (1a) 11.3%; (1b) 9.2%

**Coca-Cola** and **PepsiCo** both produce and market beverages that are direct competitors. Key financial figures (in \$ millions) for these businesses for a recent year follow.

Key Figures (\$ millions)	Coca-Cola	PepsiCo
Sales . . . . .	\$46,542	\$66,504
Net income . . . . .	8,634	6,462
Average assets . . . . .	76,448	70,518

**Required**

1. Compute return on assets for (a) Coca-Cola and (b) PepsiCo.
2. Which company is more successful in its total amount of sales to consumers?
3. Which company is more successful in returning net income from its assets invested?

**Analysis Component**

4. Write a one-paragraph memorandum explaining which company you would invest your money in and why. (Limit your explanation to the information provided.)

**Problem 1-12A<sup>A</sup>**

Identifying risk and return

A3 

All business decisions involve aspects of risk and return.

**Required**

Identify both the risk and the return in each of the following activities:

1. Investing \$2,000 in a 5% savings account.
2. Placing a \$2,500 bet on your favorite sports team.
3. Investing \$10,000 in Yahoo! stock.
4. Taking out a \$7,500 college loan toward earning an accounting degree.

A start-up company often engages in the following transactions in its first year of operations. Classify those transactions in one of the three major categories of an organization’s business activities.

- |  |   |                     |
|--|---|---------------------|
| <b>F. Financing</b>                        | <b>I. Investing</b>                         | <b>O. Operating</b> |
| _____ 1. Owner investing land in business. | _____ 5. Purchasing equipment.              |                     |
| _____ 2. Purchasing a building.            | _____ 6. Selling and distributing products. |                     |
| _____ 3. Purchasing land.                  | _____ 7. Paying for advertising.            |                     |
| _____ 4. Borrowing cash from a bank.       | _____ 8. Paying employee wages.             |                     |

**Problem 1-13A<sup>B</sup>**  
Describing organizational activities  
C5

An organization undertakes various activities in pursuit of business success. Identify an organization’s three major business activities, and describe each activity.

**Problem 1-14A<sup>B</sup>**  
Describing organizational activities  
C5

Identify how each of the following separate transactions affects financial statements. For the balance sheet, identify how each transaction affects total assets, total liabilities, and total equity. For the income statement, identify how each transaction affects net income. For the statement of cash flows, identify how each transaction affects cash flows from operating activities, cash flows from financing activities, and cash flows from investing activities. For increases, place a “+” in the column or columns. For decreases, place a “-” in the column or columns. If both an increase and a decrease occur, place “+/-” in the column or columns. The first transaction is completed as an example.

**PROBLEM SET B**

**Problem 1-1B**  
Identifying effects of transactions on financial statements

A1 P1 

	Transaction	Balance Sheet			Income Statement	Statement of Cash Flows		
		Total Assets	Total Liab.	Total Equity	Net Income	Operating Activities	Financing Activities	Investing Activities
1	Owner invests cash in business	+		+			+	
2	Buys building by signing note payable							
3	Buys store equipment for cash

**Problem 1-6B**

Preparing a statement of cash flows

P2

Selected financial information of Banji Company for the year ended December 31, 2015, follows.

Cash from investing activities . . . . .	\$1,600
Net increase in cash . . . . .	400
Cash from financing activities . . . . .	1,800
Cash used by operating activities . . . . .	(3,000)
Cash, December 31, 2014 . . . . .	1,300

**Required**

Prepare the 2015 statement of cash flows for Banji Company.

Nina Niko launched a new business, Niko's Maintenance Co., that began operations on June 1. The following transactions were completed by the company during that first month.

- June 1 Nina Niko invested \$130,000 cash in the company.  
 2 The company rented a furnished office and paid \$6,000 cash for June's rent.  
 4 The company purchased \$2,400 of equipment on credit.  
 6 The company paid \$1,150 cash for this month's advertising of the opening of the business.  
 8 The company completed maintenance services for a customer and immediately collected \$850 cash.  
 14 The company completed \$7,500 of maintenance services for City Center on credit.  
 16 The company paid \$800 cash for an assistant's salary for the first half of the month.  
 20 The company received \$7,500 cash payment for services completed for City Center on June 14.  
 21 The company completed \$7,900 of maintenance services for Paula's Beauty Shop on credit.  
 24 The company completed \$675 of maintenance services for Build-It Coop on credit.  
 25 The company received \$7,900 cash payment from Paula's Beauty Shop for the work completed on June 21.  
 26 The company made payment of \$2,400 cash for equipment purchased on June 4.  
 28 The company paid \$800 cash for an assistant's salary for the second half of this month.  
 29 Nina Niko withdrew \$4,000 cash from the company for personal use.  
 30 The company paid \$150 cash for this month's telephone bill.  
 30 The company paid \$890 cash for this month's utilities.

### Required

1. Arrange the following asset, liability, and equity titles in a table like Exhibit 1.9: Cash; Accounts Receivable; Equipment; Accounts Payable; N. Niko, Capital; N. Niko, Withdrawals; Revenues; and Expenses.
2. Show the effects of the transactions on the accounts of the accounting equation by recording increases and decreases in the appropriate columns. Do not determine new account balances after each transaction. Determine the final total for each account and verify that the equation is in balance.
3. Prepare a June income statement, a June statement of owner's equity, a June 30 balance sheet, and a June statement of cash flows.

### Problem 1-7B

**Check** (2) Ending balances: Cash, \$130,060; Expenses, \$9,790  
 (3) Net income, \$7,135; Total assets, \$133,135

Neva Nadal started a new business, Nadal Computing, and completed the following transactions during its first year of operations.

- a. Neva Nadal invests \$90,000 cash and office equipment valued at \$10,000 in the company.
- b. The company purchased a \$150,000 building to use as an office. It paid \$40,000 in cash and signed a note payable promising to pay the \$110,000 balance over the next 10 years.
- c. The company purchased office equipment for \$25,000 cash.
- d. The company purchased \$1,200 of office supplies and \$1,700 of office equipment on credit.
- e. The company paid a local newspaper \$750 cash for printing an announcement of the office's opening.
- f. The company completed a financial plan for a client and billed that client \$2,800 for the service.
- g. The company designed a financial plan for another client and immediately collected a \$4,000 cash fee.
- h. Neva Nadal withdrew \$11,500 cash from the company for personal use.
- i. The company received \$1,800 cash from the client described in transaction *f*.
- j. The company made a payment of \$700 cash on the equipment purchased in transaction *d*.
- k. The company paid \$2,500 cash for the office secretary's wages.

### Required

1. Create a table like the one in Exhibit 1.9, using the following headings for the columns: Cash; Accounts Receivable; Office Supplies; Office Equipment; Building; Accounts Payable; Notes Payable; N. Nadal, Capital; N. Nadal, Withdrawals; Revenues; and Expenses.
2. Use additions and subtractions within the table created in part 1 to show the dollar effects of each transaction on individual items of the accounting equation. Show new balances after each transaction.
3. Once you have completed the table, determine the company's net income.

### Problem 1-8B

Analyzing effects of transactions

C4 P1 P2 A1

**Check** (2) Ending balances: Cash, \$15,350; Expenses, \$3,250; Notes Payable, \$110,000  
 (3) Net income, \$3,550

**Problem 1-9B**

Analyzing transactions and preparing financial statements

C4 P1 P2 

Rivera Roofing Company, owned by Reyna Rivera, began operations in July and completed these transactions during that first month of operations.

- July 1 Reyna Rivera invested \$80,000 cash in the company.  
 2 The company rented office space and paid \$700 cash for the July rent.  
 3 The company purchased roofing equipment for \$5,000 by paying \$1,000 cash and agreeing to pay the \$4,000 balance in 30 days.  
 6 The company purchased office supplies for \$600 cash.  
 8 The company completed work for a customer and immediately collected \$7,600 cash for the work.  
 10 The company purchased \$2,300 of office equipment on credit.  
 15 The company completed work for a customer on credit in the amount of \$8,200.  
 17 The company purchased \$3,100 of office supplies on credit.  
 23 The company paid \$2,300 cash for the office equipment purchased on July 10.  
 25 The company billed a customer \$5,000 for work completed; the balance is due in 30 days.  
 28 The company received \$8,200 cash for the work completed on July 15.  
 30 The company paid an assistant's salary of \$1,560 cash for this month.  
 31 The company paid \$295 cash for this month's utility bill.  
 31 Reyna Rivera withdrew \$1,800 cash from the company for personal use.

**Required**

1. Arrange the following asset, liability, and equity titles in a table like Exhibit 1.9: Cash; Accounts Receivable; Office Supplies; Office Equipment; Roofing Equipment; Accounts Payable; R. Rivera, Capital; R. Rivera, Withdrawals; Revenues; and Expenses.
2. Use additions and subtractions to show the effects of each transaction on the accounts in the accounting equation. Show new balances after each transaction.
3. Use the increases and decreases in the columns of the table from part 2 to prepare an income statement, a statement of owner's equity, and a statement of cash flows—each of these for the current month. Also prepare a balance sheet as of the end of the month.

**Analysis Component**

4. Assume that the \$5,000 purchase of roofing equipment on July 3 was financed from an owner investment of another \$5,000 cash in the business (instead of the purchase conditions described in the transaction). Explain the effect of this change on total assets, total liabilities, and total equity.

**Problem 1-10B**

Determining expenses, liabilities, equity, and return on assets

A1 A2 

Ski-Doo Company manufactures, markets, and sells snowmobile and snowmobile equipment and accessories. The average total assets for Ski-Doo is \$3,000,000. In its most recent year, Ski-Doo reported net income of \$201,000 on revenues of \$1,400,000.

**Required**

1. What is Ski-Doo Company's return on assets?
2. Does return on assets seem satisfactory for Ski-Doo given that its competitors average a 9.5% return on assets?
3. What are the total expenses for Ski-Doo Company in its most recent year?
4. What is the average total amount of liabilities plus equity for Ski-Doo Company?

**Check** (3) \$1,199,000  
 (4) \$3,000,000

**Problem 1-11B**

Computing and interpreting return on assets

A2 

**AT&T** and **Verizon** produce and market telecommunications products and are competitors. Key financial figures (in \$ millions) for these businesses for a recent year follow.

Key Figures (\$ millions)	AT&T	Verizon
Sales .....	\$126,723	\$110,875
Net income .....	4,184	10,198
Average assets .....	269,868	225,233

**Required**

1. Compute return on assets for (a) AT&T and (b) Verizon.
2. Which company is more successful in the total amount of sales to consumers?
3. Which company is more successful in returning net income from its assets invested?

**Check** (1a) 1.6%; (1b) 4.5%**Analysis Component**

4. Write a one-paragraph memorandum explaining which company you would invest your money in and why. (Limit your explanation to the information provided.)

All business decisions involve aspects of risk and return.

**Required**

Identify both the risk and the return in each of the following activities:

1. Stashing \$500 cash under your mattress.
2. Placing a \$250 bet on a horse running in the Kentucky Derby.
3. Investing \$20,000 in Nike stock.
4. Investing \$35,000 in U.S. Savings Bonds.

**Problem 1-12B<sup>A</sup>**

Identifying risk and return

A start-up company often engages in the following activities during its first year of operations. Classify each of the following activities into one of the three major activities of an organization.

- | F. Financing                        | I. Investing | O. Operating                                |
|-------------------------------------|--------------|---|
| _____ 1. Providing client services. |              | _____ 5. Supervising workers.               |
| _____ 2. Obtaining a bank loan.     |              | _____ 6. Owner investing money in business. |
| _____ 3. Purchasing machinery.      |              | _____ 7. Renting office space.              |
| _____ 4. Research for its products. |              | _____ 8. Paying utilities expenses.         |

**Problem 1-13B<sup>B</sup>**

Describing organizational activities

C5

Identify in outline format the three major business activities of an organization. For each of these activities, identify at least two specific transactions or events normally undertaken by the business's owners or its managers.

**Problem 1-14B<sup>B</sup>**

Describing organizational activities C5

*This serial problem starts here and continues throughout most chapters of the book. It is most readily solved if you use the Working Papers that accompany this book (but working papers are not required)*

**SP 1** On October 1, 2015, Santana Rey launched a computer services company, **Business Solutions**, that is organized as a proprietorship and provides consulting services, computer system installations, and custom program development. Rey adopts the calendar year for reporting purposes and expects to prepare the company's first set of financial statements on December 31, 2015.

**SERIAL PROBLEM**

Business Solutions

C4 P1

**Required**

Create a table like the one in Exhibit 1.9 using the following headings for columns: Cash; Accounts Receivable; Computer Supplies; Computer System; Office Equipment; Accounts Payable; S. Rey, Capital; S. Rey, Withdrawals; Revenues; and Expenses. Then use additions and subtractions within the table created to show the dollar effects for each of the following October transactions for Business Solutions on the individual items of the accounting equation. Show new balances after each transaction.

- Oct. 1 S. Rey invested \$45,000 cash, a \$20,000 computer system, and \$8,000 of office equipment in the company.
- 3 The company purchased \$1,420 of computer supplies on credit from Harris Office Products.
- 6 The company billed Easy Leasing \$4,800 for services performed in installing a new web server.
- 8 The company paid \$1,420 cash for the computer supplies purchased from Harris Office Products on October 3.

- 10 The company hired Lyn Addie as a part-time assistant for \$125 per day, as needed.
- 12 The company billed Easy Leasing another \$1,400 for services performed.
- 15 The company received \$4,800 cash from Easy Leasing as partial payment toward its account.
- 17 The company paid \$805 cash to repair computer equipment damaged when moving it.
- 20 The company paid \$1,728 cash for advertisements published in the local newspaper.
- 22 The company received \$1,400 cash from Easy Leasing toward its account.
- 28 The company billed IFM Company \$5,208 for services performed.
- 31 The company paid \$875 cash for Lyn Addie’s wages for seven days of work this month.
- 31 S. Rey withdrew \$3,600 cash from the company for personal use.

**Check** Ending balances:  
Cash, \$42,772; Revenues,  
\$11,408; Expenses, \$3,408

**GL GENERAL LEDGER PROBLEM**

Available only in Connect Plus

Accounting professionals apply many technology tools to aid them in their everyday tasks and decision making. The **General Ledger** tool in *Connect* automates several of the procedural steps in the accounting cycle so that the accounting professional can focus on the impacts of each transaction on the full set of financial statements. Chapter 2 is the first chapter to exploit this tool in helping students see the advantages of technology and, in particular, the power of the General Ledger tool in accounting practice, including financial analysis and “what if” scenarios.

*Beyond the Numbers (BTN) is a special problem section aimed to refine communication, conceptual, analysis, and research skills. It includes many activities helpful in developing an active learning environment*

**Beyond the Numbers**

**REPORTING IN ACTION**

A1 A2 A3

**APPLE**

**BTN 1-1** Key financial figures for **Apple’s** fiscal year ended September 28, 2013, follow.

Key Figure	In Millions
Liabilities + Equity . . . . .	\$207,000
Net income . . . . .	37,037
Revenues . . . . .	170,910

**Required**

1. What is the total amount of assets invested in Apple?
2. What is Apple’s return on assets for fiscal year 2013? Its assets at September 29, 2012, equal \$176,064 (in millions).
3. How much are total expenses for Apple for the year ended September 28, 2013?
4. Does Apple’s return on assets for fiscal 2013 seem satisfactory if competitors average a 10% return?

**Fast Forward**

5. Access Apple’s financial statements (Form 10-K) for years ending after September 28, 2013, from its website ([Apple.com](http://Apple.com)) or from the SEC website ([www.SEC.gov](http://www.SEC.gov)) and compute its return on assets for those years. Compare the September 28, 2013, year-end return on assets to any subsequent years’ returns you are able to compute, and interpret the results.

**Check** (2) 19.3%

**COMPARATIVE ANALYSIS**

A1 A2 A3

**APPLE  
GOOGLE**

**BTN 1-2** Key comparative figures (\$ millions) for both **Apple** and **Google** follow.

Key Figure	Apple	Google
Liabilities + Equity . . . . .	\$207,000	\$110,920
Net income . . . . .	37,037	12,920
Revenues and sales . . . . .	170,910	59,825

**Required**

1. What is the total amount of assets invested in (a) Apple and (b) Google?
2. What is the return on assets for (a) Apple and (b) Google? Apple's beginning-year assets equal \$176,064 (in millions) and Google's beginning-year assets equal \$93,798 (in millions). **Check** (2b) 12.6%
3. How much are expenses for (a) Apple and (b) Google?
4. Is return on assets satisfactory for (a) Apple and (b) Google? (Assume competitors average a 10% return.)
5. What can you conclude about Apple and Google from these computations?

**BTN 1-3** Craig Thorne works in a public accounting firm and hopes to eventually be a partner. The management of Allnet Company invites Thorne to prepare a bid to audit Allnet's financial statements. In discussing the audit fee, Allnet's management suggests a fee range in which the amount depends on the reported profit of Allnet. The higher its profit, the higher will be the audit fee paid to Thorne's firm.

**ETHICS CHALLENGE**C3 C4 **Required**

1. Identify the parties potentially affected by this audit and the fee plan proposed.
2. What are the ethical factors in this situation? Explain.
3. Would you recommend that Thorne accept this audit fee arrangement? Why or why not?
4. Describe some ethical considerations guiding your recommendation.

**BTN 1-4** Refer to this chapter's opening feature about **Apple**. Assume that the owners, sometime during their first five years of business, desire to expand their computer product services to meet people's demands regarding technical support. They eventually decide to meet with their banker to discuss a loan to allow Apple to expand and offer computing services.

**COMMUNICATING IN PRACTICE**A1 C2  **Required**

1. Prepare a half-page report outlining the information you would request from the owners if you were the loan officer.
2. Indicate whether the information you request and your loan decision are affected by the form of business organization for Apple.

**APPLE**

**BTN 1-5** Visit the EDGAR database at [www.SEC.gov](http://www.SEC.gov). Access the Form 10-K report of **Rocky Mountain Chocolate Factory** (ticker RMCF) filed on May 29, 2013, covering its 2013 fiscal year.

**TAKING IT TO THE NET**

A2

**Required**

1. Item 6 of the 10-K report provides comparative financial highlights of RMCF for the years 2009–2013. How would you describe the revenue trend for RMCF over this five-year period?
2. Has RMCF been profitable (see net income) over this five-year period? Support your answer.

**BTN 1-6** Teamwork is important in today's business world. Successful teams schedule convenient meetings, maintain regular communications, and cooperate with and support their members. This assignment aims to establish support/learning teams, initiate discussions, and set meeting times.

**TEAMWORK IN ACTION**

C1

**Required**

1. Form teams and open a team discussion to determine a regular time and place for your team to meet between each scheduled class meeting. Notify your instructor via a memorandum or e-mail message as to when and where your team will hold regularly scheduled meetings.
2. Develop a list of telephone numbers and/or e-mail addresses of your teammates.

**ENTREPRENEURIAL DECISION**

A1 P1  

**APPLE**

**Check** (2) 10.7%

**BTN 1-7** Refer to this chapter’s opening feature about **Apple**. Assume that the owners decide to open a new company with an innovative mobile app devoted to microblogging for accountants and those learning accounting. This new company will be called **AccountApp**.

**Required**

1. AccountApp obtains a \$500,000 loan and the two owners contribute \$250,000 in total from their own savings in exchange for common stock in the new company.
  - a. What is the new company’s total amount of liabilities plus equity?
  - b. What is the new company’s total amount of assets?
2. If the new company earns \$80,250 in net income in the first year of operation, compute its return on assets (assume average assets equal \$750,000). Assess its performance if competitors average a 10% return.

**HITTING THE ROAD**

C2  

**BTN 1-8** You are to interview a local business owner. (This can be a friend or relative.) Opening lines of communication with members of the business community can provide personal benefits of business networking. If you do not know the owner, you should call ahead to introduce yourself and explain your position as a student and your assignment requirements. You should request a 30-minute appointment for a face-to-face or phone interview to discuss the form of organization and operations of the business. Be prepared to make a good impression.

**Required**

1. Identify and describe the main operating activities and the form of organization for this business.
2. Determine and explain why the owner(s) chose this particular form of organization.
3. Identify any special advantages and/or disadvantages the owner(s) experiences in operating with this form of business organization.

**GLOBAL DECISION**

A1 A2 A3  

**Samsung  
APPLE  
GOOGLE**

**BTN 1-9** **Samsung (Samsung.com)** is a leading global manufacturer, and it competes to varying degrees with both **Apple** and **Google**. Key financial figures for Samsung follow.

Key Figure*	Korean Won in Millions
Average assets . . . . .	₩168,435,917
Net income . . . . .	₩ 23,845,285
Revenue . . . . .	₩201,103,613
Return on assets . . . . .	14.2%

\* Figures prepared in accordance with International Financial Reporting Standards as adopted by the Republic of Korea.

**Required**

1. Identify any concerns you have in comparing Samsung’s income and revenue figures to those of Apple and Google (in BTN 1-2) for purposes of making business decisions.
2. Identify any concerns you have in comparing Samsung’s return on assets ratio to those of Apple and Google (computed for BTN 1-2) for purposes of making business decisions.

**ANSWERS TO MULTIPLE CHOICE QUIZ**

1. c; \$450,000 is the actual cost incurred.
2. b; revenue is recorded when earned.
3. d;

Assets	=	Liabilities	+	Equity
+\$100,000	=	+\$35,000	+	?

$$\text{Change in equity} = \$100,000 - \$35,000 = \underline{\underline{\$65,000}}$$

4. a

5. a

# 2 chapter

# Analyzing and Recording Transactions

## Chapter Preview

### ANALYZING AND RECORDING PROCESS

- C1** Source documents
- C2** The account and its analysis
  - Types of accounts
  - Unclassified vs Classified

### ANALYZING AND PROCESSING TRANSACTIONS

- C3** General ledger
- C4** Double-entry accounting
- P1** Journalizing and posting
- A1** Processing transactions—An illustration

### TRIAL BALANCE AND THE FINANCIAL STATEMENTS

- P2** Trial balance preparation and use
- P3** Financial statement preparation
- A2** Analysis of financing sources

## Learning Objectives

### CONCEPTUAL

- C1** Explain the steps in processing transactions and the role of source documents.
- C2** Describe an account and its use in recording transactions.
- C3** Describe a ledger and a chart of accounts.

- C4** Define *debits* and *credits* and explain double-entry accounting.

### ANALYTICAL

- A1** Analyze the impact of transactions on accounts and financial statements.
- A2** Compute the debt ratio and describe its use in analyzing financial condition.

### PROCEDURAL

- P1** Record transactions in a journal and post entries to a ledger.
- P2** Prepare and explain the use of a trial balance.
- P3** Prepare financial statements from business transactions.

## Work of Art

DALLAS—Brittany Merrill Underwood had no idea that her summer teaching job in Uganda during her second year in college would change her life forever. Brittany was deeply moved by a Ugandan woman who struggled to care for 24 children who slept on her floor. After graduating college, Brittany launched **Akola Project** ([AkolaProject.org](http://AkolaProject.org)), which is a handmade jewelry and accessories business focused on empowering Ugandan women to support their families and communities through economic means.

“Akola is unique . . . because we are a social business,” explains Brittany. “This means that 100% of the net revenue from all of our products goes directly back into development projects benefiting the women who make them.” Brittany’s website explains that she runs “a no handout policy,” and instead, “provides vocational skills and [then] monthly income” to the hundreds of women teaming with her jewelry company. Her site says that she has “helped elevate lives of 1,400 women and children out of extreme poverty . . . [by] equipping women to become entrepreneurs.”

Akola trains women in rural villages to fashion quality jewelry and handbags and facilitates savings associations to encourage the women to invest their monthly revenues in small local business initiatives and to reliably account for expenses and revenues. “We partner with women in rural villages who have never had access to training or educational opportunities and spend

five years training them to become artisans to unlock their potential,” explains Brittany. The products are now sold in over 250 boutiques, national department stores, and online.

Brittany applies that same commitment to succeed to her business, where she relies on recordkeeping processes, transaction analysis, inventory accounting, and financial reporting. She hopes that reliable accounting for all activities will help sustain her business and the business of her artisans. Brittany insists that accounting is crucial to track and account for all revenues and expenses, including what is invested in her business and non-profit. She maintains that effective accounting helps keep the dream alive for both her and her artisans.

“In addition to creating a thriving social business for women,” insists Brittany. “We have built an orphanage home to house over 200 street children, drilled 23 clean water wells in displaced communities, and provided educational programs for women.” The artisans, however, are the real winners. “By employing women and giving them a reliable income, we could care for thousands of children.”

Still, Brittany says that if she had to do it over, she would have “gone to business school!” She adds that the greatest obstacle to launching Akola was “not having a business background.”

## ANALYZING AND REPORTING ACCOUNTS

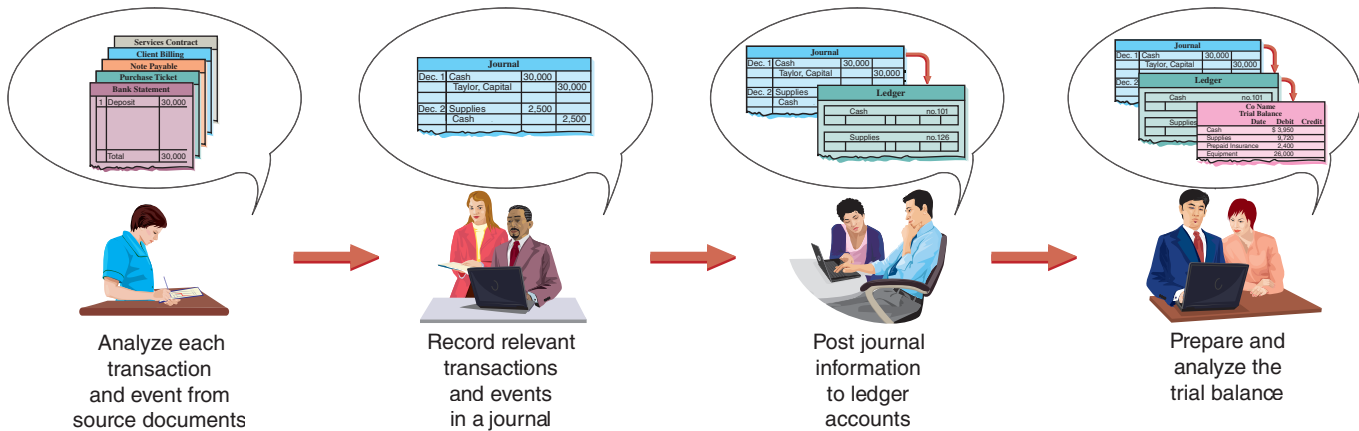

### C1

Explain the steps in processing transactions and the role of source documents.

The accounting process identifies business transactions and events, analyzes and records their effects, and summarizes and presents information in reports and financial statements. These reports and statements are used for making investing, lending, and other business decisions. The steps in the accounting process that focus on *analyzing and recording* transactions and events are shown in Exhibit 2.1.

#### EXHIBIT 2.1

The Analyzing and Recording Process

Business transactions and events are the starting points. Relying on source documents, the transactions and events are analyzed using the accounting equation to understand how they affect company performance and financial position. These effects are recorded in accounting records, informally referred to as the *accounting books*, or simply the *books*. Additional steps such as posting and then preparing a trial balance help summarize and classify the effects of transactions and events. Ultimately, the accounting process provides information in useful reports or financial statements to decision makers.

### Source Documents

**Source documents** identify and describe transactions and events entering the accounting process. They are the sources of accounting information and can be in either hard copy or electronic form. Examples are sales tickets, checks, purchase orders, bills from suppliers, employee earnings records, and bank statements. To illustrate, when an item is purchased on credit, the seller usually prepares at least two copies of a sales invoice. One copy is given to the buyer. Another copy, often sent electronically, results in an entry in the seller's information system to record the sale. Sellers use invoices for recording sales and for control; buyers use them for recording purchases and for monitoring purchasing activity. Many cash registers record information for each sale on a tape or electronic file locked inside the register. This record can be used as a source document for recording sales in the accounting records. Source documents, especially if obtained from outside the organization, provide objective and reliable evidence about transactions and events and their amounts.

**Point:** To ensure that all sales are rung up on the register, most sellers require customers to have their receipts to exchange or return purchased items.

### Decision Ethics

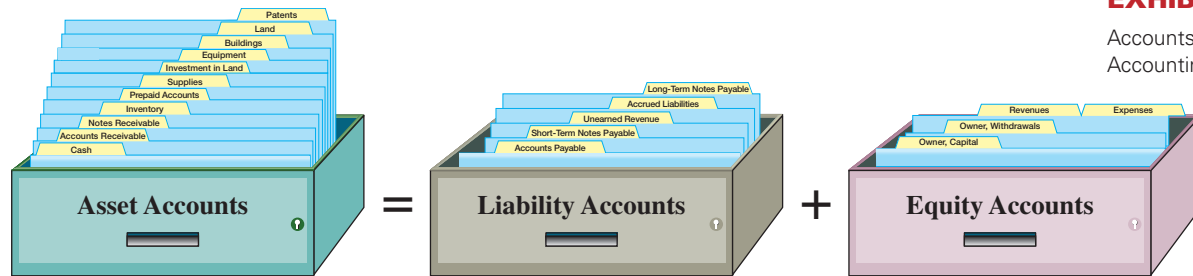

**Cashier** Your manager requires that you, as cashier, immediately enter each sale. Recently, lunch hour traffic has increased and the assistant manager asks you to avoid delays by taking customers' cash and making change without entering sales. The assistant manager says she will add up cash and enter sales after lunch. She says that, in this way, the register will always match the cash amount when the manager arrives at three o'clock. What do you do? ■ [Answers follow the chapter's Summary.]

## The Account and Its Analysis

An **account** is a record of increases and decreases in a specific asset, liability, equity, revenue, or expense item. Information from an account is analyzed, summarized, and presented in reports and financial statements. The **general ledger**, or simply **ledger**, is a record containing all accounts used by a company. The ledger is often in electronic form. While most companies' ledgers contain similar accounts, a company often uses one or more unique accounts because of its type of operations. An *unclassified balance sheet* broadly groups accounts into assets, liabilities, and equity. Exhibit 2.2 shows typical asset, liability, and equity accounts.

### C2

Describe an account and its use in recording transactions.

### EXHIBIT 2.2

Accounts Organized by the Accounting Equation

**Asset Accounts** Assets are resources owned or controlled by a company, and those resources have expected future benefits. Most accounting systems include (at a minimum) separate accounts for the assets described here.

**Cash** A *Cash* account reflects a company's cash balance. All increases and decreases in cash are recorded in the Cash account. It includes money and any medium of exchange that a bank accepts for deposit (coins, checks, money orders, and checking account balances).

**Accounts Receivable** *Accounts receivable* are held by a seller and refer to promises of payment from customers to sellers. These transactions are often called *credit sales* or *sales on account* (or *on credit*). Accounts receivable are increased by credit sales and billings to customers, but are decreased by customer payments. A company needs a separate record for each customer, but for now, we use the simpler practice of recording all increases and decreases in receivables in a single account called Accounts Receivable.

**Note Receivable** A *note receivable*, or promissory note, is a written promise of another entity to pay a definite sum of money on a specified future date to the holder of the note. A company holding a promissory note signed by another entity has an asset that is recorded in a Note (or Notes) Receivable account.

**Prepaid Accounts** *Prepaid accounts* (also called *prepaid expenses*) are assets that represent prepayments of future expenses (expenses expected to be incurred in one or more future accounting periods). When the expenses are later incurred, the amounts in prepaid accounts are transferred to expense accounts. Common examples of prepaid accounts include prepaid insurance, prepaid rent, and prepaid services (such as club memberships). Prepaid accounts expire with the passage of time (such as with rent) or through use (such as with prepaid meal tickets). When financial statements are prepared, prepaid accounts are adjusted so that (1) all expired and used prepaid accounts are recorded as expenses and (2) all unexpired and unused prepaid accounts are recorded as assets (reflecting future use in future periods). To illustrate, when an insurance fee, called a *premium*, is paid in advance, the cost is typically recorded in the asset account titled Prepaid Insurance. Over time, the expiring portion of the insurance cost is removed from this asset account and reported in expenses on the income statement. Any unexpired portion remains in Prepaid Insurance and is reported on the balance sheet as an asset.

**Supplies Accounts** *Supplies* are assets until they are used. When they are used up, their costs are reported as expenses. The costs of unused supplies are recorded in a Supplies asset account.

**Point:** Customers and others who owe a company are called its **debtors**.

**Point:** A college parking fee is a prepaid account from the student's standpoint. At the beginning of the term, it represents an asset that entitles a student to park on or near campus. The benefits of the parking fee expire as the term progresses. At term-end, prepaid parking (asset) equals zero as it has been entirely recorded as parking expense.

**Point:** Prepaid accounts that apply to current and future periods are assets. These assets are adjusted at the end of each period to reflect only those amounts that have not yet expired, and to record as expenses those amounts that have expired.

Supplies are often grouped by purpose—for example, office supplies and store supplies. *Office supplies* include stationery, paper, toner, and pens. *Store supplies* include packaging materials, plastic and paper bags, gift boxes and cartons, and cleaning materials. The costs of these unused supplies can be recorded in an Office Supplies or a Store Supplies asset account. When supplies are used, their costs are transferred from the asset accounts to expense accounts.

**Equipment Accounts** *Equipment* is an asset. When equipment is used and gets worn down, its cost is gradually reported as an expense (called depreciation). Equipment is often grouped by its purpose—for example, office equipment and store equipment. *Office equipment* includes computers, printers, desks, chairs, and shelves. Costs incurred for these items are recorded in an Office Equipment asset account. The *Store Equipment* account includes the costs of assets used in a store, such as counters, showcases, ladders, hoists, and cash registers.

**Buildings Accounts** *Buildings* such as stores, offices, warehouses, and factories are assets because they provide expected future benefits to those who control or own them. Their costs are recorded in a Buildings asset account. When several buildings are owned, separate accounts are sometimes kept for each of them.

**Land** The cost of *land* owned by a business is recorded in a Land account. The cost of buildings located on the land is separately recorded in one or more building accounts.

**Point:** Some assets are described as *intangible* because they do not have physical existence or their benefits are highly uncertain. A recent balance sheet for **Coca-Cola Company** shows nearly \$1 billion in intangible assets.

### Decision Insight

**Women Entrepreneurs** **SPANX** has given more than \$20 million to charity. The Center for Women's Business Research reports that women-owned businesses, such as SPANX (owner Sara Blakely in photo), are growing and that they:

- Total approximately 11 million and employ nearly 20 million workers.
- Generate \$2.5 trillion in annual sales and tend to embrace technology.
- Are philanthropic—70% of owners volunteer at least once per month.
- Are more likely funded by individual investors (73%) than venture firms (15%). ■

Paul Morigi/Getty Images for FORTUNE

**Liability Accounts** Liabilities are claims (by creditors) against assets, which means they are obligations to transfer assets or provide products or services to others. **Creditors** are individuals and organizations that have rights to receive payments from a company. If a company fails to pay its obligations, the law gives creditors a right to force the sale of that company's assets to obtain the money to meet creditors' claims. When assets are sold under these conditions, creditors are paid first, but only up to the amount of their claims. Any remaining money, the residual, goes to the owners of the company. Creditors often use a balance sheet to help decide whether to loan money to a company. A loan is less risky if the borrower's liabilities are small in comparison to assets because this means there are more resources than claims on resources. Common liability accounts are described here.

**Accounts Payable** *Accounts payable* refer to oral or implied promises to pay later, which usually arise from purchases of merchandise. Payables can also arise from purchases of supplies, equipment, and services. Accounting systems keep separate records about each creditor. We describe these individual records in Chapter 5.

**Note Payable** A *note payable* refers to a formal promise, usually denoted by the signing of a promissory note, to pay a future amount. It is recorded in either a short-term Note Payable account or a long-term Note Payable account, depending on when it must be repaid. We explain details of short- and long-term classification in the next two chapters.

**Unearned Revenue Accounts** **Unearned revenue** refers to a liability that is settled in the future when a company delivers its products or services. When customers pay in advance for products or services (before revenue is earned), the revenue recognition principle requires that the seller consider this receipt as unearned revenue. Examples of unearned revenue include magazine subscriptions collected in advance by a publisher, rent collected in advance by a landlord, and season ticket sales by sports teams. The seller would record these in liability

**Point:** Accounts payable are also called *trade payables*.

**Point:** Two words that almost always identify liability accounts: "Payable" meaning liabilities that must be paid, and "Unearned" meaning liabilities that must be fulfilled.

accounts such as Unearned Subscriptions, Unearned Rent, and Unearned Ticket Revenue. When products and services are later delivered, the earned portion of the unearned revenue is transferred to revenue accounts such as Subscription Fees Revenue, Rent Revenue, and Ticket Revenue.<sup>1</sup>

**Accrued Liabilities** *Accrued liabilities* are amounts owed that are not yet paid. Examples are wages payable, taxes payable, and interest payable. These are often recorded in separate liability accounts by the same title. If they are not large in amount, one or more ledger accounts can be added and reported as a single amount on the balance sheet. (Financial statements often have amounts reported that are a summation of several ledger accounts.)

**Point:** If a subscription is canceled, the publisher is expected to refund the unused portion to the subscriber.

## Decision Insight

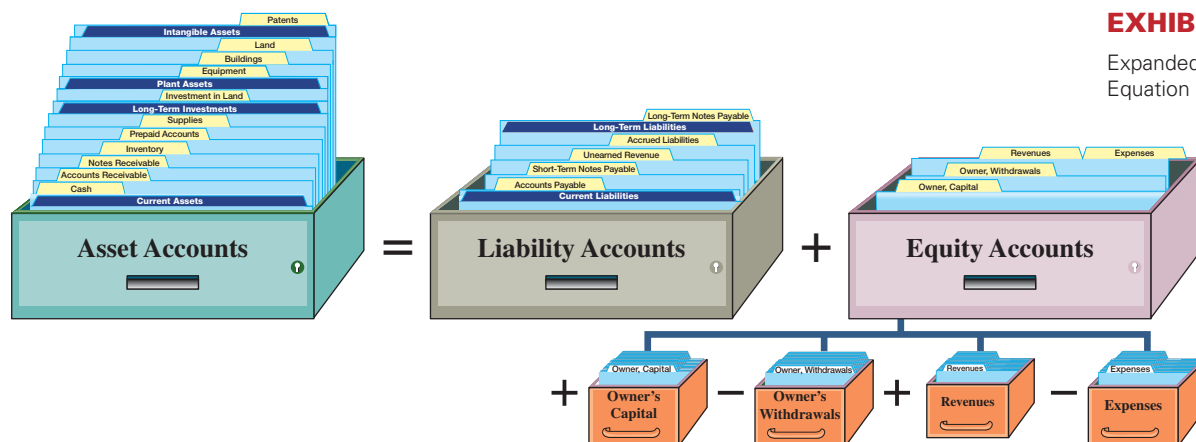

**Revenue Spread** The **Seattle Seahawks** have *Unearned Revenues* of over \$100 million in advance ticket sales. When the team plays its home games, it settles this liability to its ticket holders and then transfers the amount earned to *Ticket Revenues*. Other teams have similar unearned revenues. ■

Jeff Gross/Getty Images

**Equity Accounts** The owner's claim on a company's assets is called *equity* or *owner's equity*. Equity is the owner's *residual interest* in the assets of a business after deducting liabilities. Equity is impacted by four types of accounts as follows: **Equity = Owner's capital – Owner's withdrawals + Revenues – Expenses**. We show this visually in Exhibit 2.3 by expanding the accounting equation. We also organize assets and liabilities into subgroups that have similar attributes. An important subgroup for both assets and liabilities is the *current* items. Current items are usually those expected to come due (either collected or owed) within the next year. The next two chapters explain this in detail. At this point, know that a *classified balance sheet* reports current assets before noncurrent assets and current liabilities before noncurrent liabilities.

**Point:** Equity is also called *net assets*.

**Owner Investments** When an owner invests in a company, it increases both assets and equity. The increase to equity is recorded in an account titled Owner, Capital (where the owner's name is inserted in place of "Owner"). The account titled *C. Taylor, Capital* is used for FastForward. Any further owner investments are recorded in this account.

**Owner Withdrawals** When an owner withdraws assets for personal use it decreases both company assets and total equity. The decrease to equity is recorded in an account titled Owner, Withdrawals. The account titled *C. Taylor, Withdrawals* is used for FastForward. Withdrawals

**Point:** The Owner's Withdrawals account is a *contra equity* account because it reduces the normal balance of equity.

<sup>1</sup>In practice, account titles vary. As one example, Subscription Fees Revenue is sometimes called Subscription Fees, Subscription Fees Earned, or Earned Subscription Fees. As another example, Rent Revenue is sometimes called Rent Earned, Rental Revenue, or Earned Rent Revenue. We must use good judgment when reading financial statements because titles can differ even within the same industry. For example, product sales are called *net sales* at **Apple**, *revenues* at **Google**, and *revenue* at **Samsung**. Generally, the term *revenues* or *fees* is more commonly used with service businesses, and *net sales* or *sales* with product businesses.

**Point:** The withdrawal of assets by the owners of a corporation is called a *dividend*.

are not expenses of the business; they are simply the opposite of owner investments. (Owners of proprietorships cannot receive company salaries because they are not legally separate from their companies; and they cannot enter into company contracts with themselves.)

**Revenue Accounts** The inflow of net assets from providing products and services to customers increases equity through increases in revenue accounts. Examples of revenue accounts are Sales, Commissions Earned, Professional Fees Earned, Rent Revenue, and Interest Revenue. *Revenues always increase equity.*

**Expense Accounts** The outflow of net assets in helping generate revenues decreases equity through increases in expense accounts. Examples of expense accounts are Advertising Expense, Store Supplies Expense, Office Salaries Expense, Office Supplies Expense, Rent Expense, Utilities Expense, and Insurance Expense. *Expenses always decrease equity.* The variety of revenues and expenses can be seen by looking at the *chart of accounts* that follows the index at the back of this book. (Different companies sometimes use different account titles than those in this book's chart of accounts. For example, some might use Interest Revenue instead of Interest Earned, or Rental Expense instead of Rent Expense. It is important only that an account title describe the item it represents.)

### Decision Insight

**Sporting Accounts** The **Miami Heat**, **San Antonio Spurs**, **Indiana Pacers**, **Los Angeles Lakers**, and other NBA teams have the following major revenue and expense accounts:

#### Revenues

Basketball ticket sales  
TV & radio broadcast fees  
Advertising revenues  
Basketball playoff receipts

#### Expenses

Team salaries  
Game costs  
NBA franchise costs  
Promotional costs ■

## ANALYZING AND PROCESSING TRANSACTIONS

This section explains several tools and processes that comprise an accounting system. These include a ledger, T-account, debits and credits, double-entry accounting, journalizing, and posting.

### Ledger and Chart of Accounts

The collection of all accounts and their balances for an information system is called a *ledger* (or *general ledger*). If accounts are in files on a hard drive, the sum of those files is the ledger. If the accounts are pages in a file, that file is the ledger. A company's size and diversity of operations affect the number of accounts needed. A small company can get by with as few as 20 or 30 accounts; a large company can require several thousand. The **chart of accounts** is a list of all

C3

Describe a ledger and a chart of accounts.

ledger accounts and includes an identification number assigned to each account. A small business might use the following numbering system for its accounts:

Chart of Accounts	
101–199	Asset accounts
201–299	Liability accounts
301–399	Equity accounts
401–499	Revenue accounts
501–699	Expense accounts

These numbers provide a three-digit code that is useful in recordkeeping. In this case, the first digit assigned to asset accounts is a 1, the first digit assigned to liability accounts is a 2, and so on. The second and third digits relate to the accounts' subcategories. Exhibit 2.4 shows a partial chart of accounts for FastForward, the focus company of Chapter 1. (Please review the more complete chart of accounts that follows the index at the back of this book.)

Chart of Accounts					
Acct. No.	Account Name	Acct. No.	Account Name	Acct. No.	Account Name
101	Cash	236	Unearned consulting revenue	622	Salaries expense
106	Accounts receivable			637	Insurance expense
126	Supplies	301	C. Taylor, Capital	640	Rent expense
128	Prepaid insurance	302	C. Taylor, Withdrawals	652	Supplies expense
167	Equipment	403	Consulting revenue	690	Utilities expense
201	Accounts payable	406	Rental revenue		

### EXHIBIT 2.4

Partial Chart of Accounts for FastForward

## Debits and Credits

A **T-account** represents a ledger account and is a tool used to understand the effects of one or more transactions. Its name comes from its shape like the letter **T**. The layout of a T-account, shown in Exhibit 2.5, is (1) the account title on top; (2) a left, or debit, side; and (3) a right, or credit, side.

The left side of an account is called the **debit** side, often abbreviated *Dr.* The right side is called the **credit** side, abbreviated *Cr.*<sup>2</sup> To enter amounts on the left side of an account is to *debit* the account. To enter amounts on the right side is to *credit* the account. Do not make the error of thinking that the terms *debit* and *credit* mean increase or decrease. Whether a debit or a credit is an increase or decrease depends on the account. For an account where a debit is an increase, the credit is a decrease; for an account where a debit is a decrease, the credit is an increase. The difference between total debits and total credits for an account, including any beginning balance, is the **account balance**. When the sum of debits exceeds the sum of credits, the account has a *debit balance*. It has a *credit balance* when the sum of credits exceeds the sum of debits. When the sum of debits equals the sum of credits, the account has a *zero balance*.

Account Title	
(Left side) <b>Debit</b>	(Right side) <b>Credit</b>

### C4

Define *debits* and *credits* and explain double-entry accounting.

### EXHIBIT 2.5

The T-Account

**Point:** Think of *debit* and *credit* as accounting directions for left and right.

## Double-Entry Accounting

**Double-entry accounting** demands the accounting equation remain in balance and thus requires that for each transaction:

- At least two accounts are involved, with at least one debit and one credit.
- The total amount debited must equal the total amount credited.

<sup>2</sup> These abbreviations are remnants of 18th-century English recordkeeping practices where the terms *debtor* and *creditor* were used instead of *debit* and *credit*. The abbreviations use the first and last letters of these terms, just as we still do for Saint (St.) and Doctor (Dr.).

This means the sum of the debits for all entries must equal the sum of the credits for all entries, and the sum of debit account balances in the ledger must equal the sum of credit account balances.

The system for recording debits and credits follows from the usual accounting equation—see Exhibit 2.6. Two points are important here. First, like any simple mathematical relation, net increases or decreases on one side have equal net effects on the other side. For example, a net increase in assets must be accompanied by an identical net increase on the liabilities and equity side. Recall that some transactions affect only one side of the equation, meaning that two or more accounts on one side are affected, but their net effect on this one side is zero. Second, the left side is the *normal balance* side for assets, and the right side is the *normal balance* side for liabilities and equity. This matches their layout in the accounting equation where assets are on the left side of this equation, and liabilities and equity are on the right.

**Point:** Assets are on the left-hand side of the equation and thus increase on the left. Liabilities and Equity are on the right-hand side of the equation and thus increase on the right.

**EXHIBIT 2.6**

Debits and Credits in the Accounting Equation

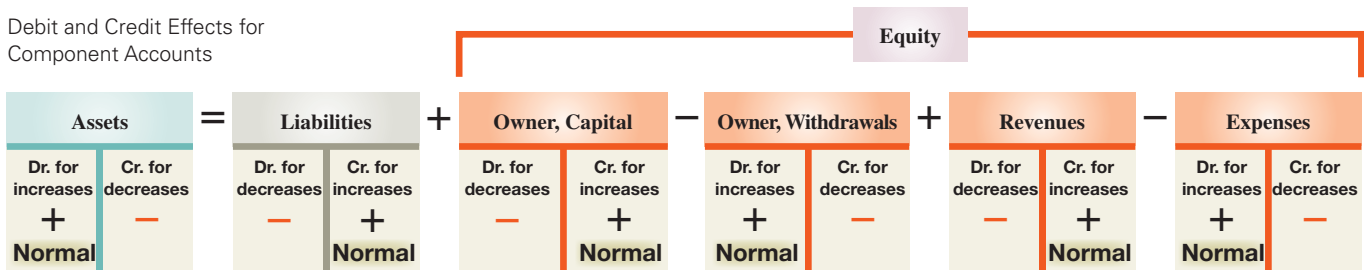

**Point:** Equity increases from owner investments and revenues; it decreases from owner withdrawals and expenses.

Recall that equity increases from revenues and owner investments and it decreases from expenses and owner withdrawals. These important equity relations are conveyed by expanding the accounting equation to include debits and credits in double-entry form as shown in Exhibit 2.7.

**EXHIBIT 2.7**

Debit and Credit Effects for Component Accounts

**Point:** Debits and credits do not mean favorable or unfavorable. A debit to an asset increases it, as does a debit to an expense. A credit to a liability increases it, as does a credit to a revenue.

Increases (credits) to owner’s capital and revenues *increase* equity; increases (debits) to withdrawals and expenses *decrease* equity. The normal balance of each account (asset, liability, capital, withdrawals, revenue, or expense) refers to the left or right (debit or credit) side where *increases* are recorded. Understanding these diagrams and rules is required to prepare, analyze, and interpret financial statements.

The T-account for FastForward’s Cash account, reflecting its first 11 transactions (from Exhibit 1.9), is shown in Exhibit 2.8. The total increases (debits) in its Cash account are \$36,100, and the total decreases (credits) are \$31,300. Total debits exceed total credits by \$4,800; thus, Cash has an ending debit balance of \$4,800. (We illustrate use of T-accounts later in this chapter.)

**EXHIBIT 2.8**

Computing the Balance for a T-Account

Cash			
Receive investment by owner	30,000	Purchase of supplies	2,500
Consulting services revenue earned	4,200	Purchase of equipment	26,000
Collection of account receivable	1,900	Payment of rent	1,000
		Payment of salary	700
		Payment of account payable	900
		Withdrawal by owner	200
Balance	<b>4,800</b>		

**Point:** The ending balance is on the side with the larger dollar amount. Also, a plus (+) and minus (-) are not used in a T-account.

Identify the normal balance (debit [Dr] or credit [Cr]) for each of the following accounts.

- |                         |                            |                            |
|-------------------------|----------------------------|----------------------------|
| 1. ___ Prepaid Rent     | 5. ___ Accounts Receivable | 9. ___ Land                |
| 2. ___ Owner, Capital   | 6. ___ Equipment           | 10. ___ Prepaid Insurance  |
| 3. ___ Note Receivable  | 7. ___ Interest Payable    | 11. ___ Owner, Withdrawals |
| 4. ___ Accounts Payable | 8. ___ Unearned Revenue    |                            |

## Journalizing and Posting Transactions

Processing transactions is a crucial part of accounting. The four usual steps of this process are depicted in Exhibit 2.9. Steps 1 and 2—involving transaction analysis and the accounting equation—were introduced in prior sections. This section extends that discussion and focuses on steps 3 and 4 of the accounting process. Step 3 is to record each transaction chronologically in a journal. A **journal** gives a complete record of each transaction in one place. It also shows debits and credits for each transaction. The process of recording transactions in a journal is called **journalizing**. Step 4 is to transfer (or *post*) entries from the journal to the ledger. The process of transferring journal entry information to the ledger is called **posting**.

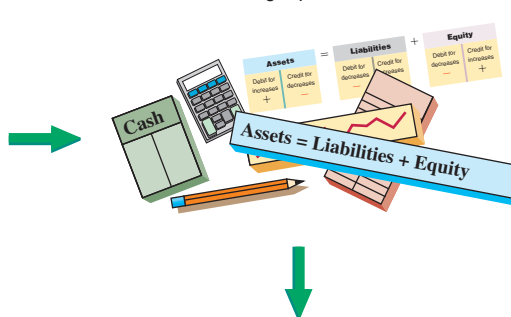

## P1

Record transactions in a journal and post entries to a ledger.

**Step 1:** Identify transactions and source documents.

**Step 2:** Analyze transactions using the accounting equation.

**Step 3:** Record journal entry.

General Journal			
Dec. 1	Cash	30,000	
	Taylor, Capital		30,000
Dec. 2	Supplies	2,500	
	Cash		2,500

**Step 4:** Post entry to ledger.

### EXHIBIT 2.9

Steps in Processing Transactions

**Journalizing Transactions** The process of journalizing transactions requires an understanding of a journal. While companies can use various journals, every company uses a **general journal**. It can be used to record any transaction and includes the following information about each transaction: (a) date of transaction, (b) titles of affected accounts, (c) dollar amount of each debit and credit, and (d) explanation of the transaction. Exhibit 2.10 shows how the first two transactions of FastForward are recorded in a general journal. This process is similar for manual and computerized systems. Computerized journals are often designed to look like a manual journal page, and also include error-checking routines that ensure debits equal credits for each entry. Shortcuts allow recordkeepers to select account names and numbers from pull-down menus.

**EXHIBIT 2.10**

Partial General Journal for FastForward

Date	Account Titles and Explanation	PR	Debit	Credit
2015 (a) Dec. 1	(b) Cash		30,000	
	C. Taylor, Capital			(c) 30,000
	<i>Receive investment by owner. (d)</i>			
Dec. 2	Supplies		2,500	
	Cash			2,500
	<i>Purchase supplies for cash.</i>			

To record entries in a general journal, apply these steps; refer to the entries in Exhibit 2.10 when reviewing these steps.

- a. Date the transaction: Enter the year at the top of the first column and the month and day on the first line of each journal entry.
- b. Enter titles of accounts debited and then enter amounts in the Debit column on the same line. Account titles are taken from the chart of accounts and are aligned with the left margin of the Account Titles and Explanation column.
- c. Enter titles of accounts credited and then enter amounts in the Credit column on the same line. Account titles are from the chart of accounts and are indented from the left margin of the Account Titles and Explanation column to distinguish them from debited accounts.
- d. Enter a brief explanation of the transaction on the line below the entry (it often references a source document). This explanation is indented about half as far as the credited account titles to avoid confusing it with accounts, and it is italicized.

**Point:** There are no exact rules for writing journal entry explanations. An explanation should be short yet describe why an entry is made.

A blank line is left between each journal entry for clarity. When a transaction is first recorded, the **posting reference (PR) column** is left blank (in a manual system). Later, when posting entries to the ledger, the identification numbers of the individual ledger accounts are entered in the PR column.

**IFRS**

IFRS requires that companies report the following four basic financial statements with explanatory notes:

- Balance sheet
- Statement of changes in equity (or statement of recognized revenue and expense)
- Income statement
- Statement of cash flows

IFRS does not prescribe specific formats, and comparative information is required for the preceding period only. ■

**Balance Column Account** T-accounts are simple and direct means to show how the accounting process works. However, actual accounting systems need more structure and therefore use **balance column accounts**, such as that in Exhibit 2.11.

**EXHIBIT 2.11**

Cash Account in Balance Column Format

General Ledger					
Cash					
Account No. 101					
Date	Explanation	PR	Debit	Credit	Balance
2015					
Dec. 1		G1	30,000		30,000
Dec. 2		G1		2,500	27,500
Dec. 3		G1		26,000	1,500
Dec. 10		G1	4,200		5,700

The balance column account format is similar to a T-account in having columns for debits and credits. It is different in including transaction date and explanation columns. It also has a column with the balance of the account after each entry is recorded. To illustrate, FastForward's Cash account in Exhibit 2.11 is debited on December 1 for the \$30,000 owner investment, yielding a \$30,000 debit balance. The account is credited on December 2 for \$2,500, yielding a \$27,500 debit balance. On December 3, it is credited again, this time for \$26,000, and its debit balance is reduced to \$1,500. The Cash account is debited for \$4,200 on December 10, and its debit balance increases to \$5,700; and so on.

The heading of the Balance column does not show whether it is a debit or credit balance. Instead, an account is assumed to have a *normal balance*. Unusual events can sometimes temporarily give an account an abnormal balance. An *abnormal balance* refers to a balance on the side where decreases are recorded. For example, a customer might mistakenly overpay a bill. This gives that customer's account receivable an abnormal (credit) balance. An abnormal balance is often identified by circling it, setting it in brackets, or by entering it in red or some other unusual color. A zero balance for an account is usually shown by writing zeros or a dash in the Balance column to avoid confusion between a zero balance and one omitted in error.

**Posting Journal Entries** Step 4 of processing transactions is to post journal entries to ledger accounts (see Exhibit 2.9). To ensure that the ledger is up to date, entries are posted as soon as possible. This might be daily, weekly, or when time permits. All entries must be posted to the ledger before financial statements are prepared to ensure that account balances are up to date. When entries are posted to the ledger, the debits in journal entries are transferred into ledger accounts as debits, and credits are transferred into ledger accounts as credits. Exhibit 2.12 shows the *four steps to post a journal entry*. First, identify the ledger account that is debited in the entry; then, in the ledger, enter the entry date, the journal and page in its PR column, the debit amount, and the new balance of the ledger account. (The letter *G* shows it came from the

**Point:** Explanations are typically included in ledger accounts only for unusual transactions or events.

**Point:** Computerized systems often provide a code beside a balance such as *dr.* or *cr.* to identify its balance. Posting is automatic and immediate with accounting software.

**Point:** A journal is often referred to as the *book of original entry*. The ledger is referred to as the *book of final entry* because financial statements are prepared from it.

**EXHIBIT 2.12**  
Posting an Entry to the Ledger

The screenshot displays two windows: 'General Journal Entry' and 'General Ledger'. The 'General Journal Entry' window shows an entry for Dec 1, 2015, with a debit to Cash (Account 101) for \$30,000 and a credit to C. Taylor, Capital (Account 301) for \$30,000. The 'General Ledger' window shows the corresponding ledger entries for Cash (Account no. 101) and C. Taylor, Capital (Account no. 301). Red arrows and numbered circles (1-4) indicate the steps for posting the journal entry to the ledger.

Date	Account Titles and Explanation	PR	Debit	Credit
2015				
Dec. 1	Cash	101	30,000	
	C. Taylor, Capital	301		30,000
	Receive investment by owner.			

Cash		Account no. 101			
Date	Explanation	PR	Debit	Credit	Balance
2015					
Dec. 1		G1	30,000		30,000

C. Taylor, Capital		Account no. 301			
Date	Explanation	PR	Debit	Credit	Balance
2015					
Dec. 1		G1		30,000	30,000

- Key:
- ① Identify debit account in Ledger: enter date, journal page, amount, and balance.
  - ② Enter the debit account number from the Ledger in the PR column of the journal.
  - ③ Identify credit account in Ledger: enter date, journal page, amount, and balance.
  - ④ Enter the credit account number from the Ledger in the PR column of the journal.

**Point:** The fundamental concepts of a manual (pencil-and-paper) system are identical to those of a computerized information system.

General Journal.) Second, enter the ledger account number in the PR column of the journal. Steps 3 and 4 repeat the first two steps for credit entries and amounts. The posting process creates a link between the ledger and the journal entry. This link is a useful cross-reference for tracing an amount from one record to another.

### Analyzing Transactions—An Illustration

We return to the activities of FastForward to show how double-entry accounting is useful in analyzing and processing transactions. Analysis of each transaction follows the four steps of Exhibit 2.9.

**A1**  
Analyze the impact of transactions on accounts and financial statements.

**Point:** In the Comprehensive Need-To-Know at the chapter end we show how to use “balance column accounts” for the ledger.

- Step 1** Identify the transaction and any source documents.
- Step 2** Analyze the transaction using the accounting equation.
- Step 3** Record the transaction in journal entry form applying double-entry accounting.
- Step 4** Post the entry (for simplicity, we use T-accounts to represent ledger accounts).

Study each transaction thoroughly before proceeding to the next. The first 11 transactions are from Chapter 1, and we analyze five additional December transactions of FastForward (numbered 12 through 16) that were omitted earlier.

#### 1. Receive Investment by Owner

**1 IDENTIFY** FastForward receives \$30,000 cash from Chas Taylor as an owner contribution.

**2 ANALYZE**

Assets		=	Liabilities	+	Equity
Cash		=			C. Taylor, Capital
+30,000		=	0		+30,000

**3 RECORD**

Date	Account Titles and Explanation	PR	Debit	Credit
(1)	Cash	101	30,000	
	C. Taylor, Capital	301		30,000

**4 POST**

Cash		101
(1)	30,000	
C. Taylor, Capital		301
	(1)	30,000

#### 2. Purchase Supplies for Cash

**1 IDENTIFY** FastForward pays \$2,500 cash for supplies.

**2 ANALYZE**

Assets		=	Liabilities	+	Equity
Cash	Supplies	=			
-2,500	+2,500	=	0	+	0

Changes the composition of assets but not the total.

**3 RECORD**

Date	Account Titles and Explanation	PR	Debit	Credit
(2)	Supplies	126	2,500	
	Cash	101		2,500

**4 POST**

Supplies		126
(2)	2,500	
Cash		101
(1)	30,000	(2)
		2,500

#### 3. Purchase Equipment for Cash

**1 IDENTIFY** FastForward pays \$26,000 cash for equipment.

**2 ANALYZE**

Assets		=	Liabilities	+	Equity
Cash	Equipment	=			
-26,000	+26,000	=	0	+	0

Changes the composition of assets but not the total.

**3 RECORD**

Date	Account Titles and Explanation	PR	Debit	Credit
(3)	Equipment	167	26,000	
	Cash	101		26,000

**4 POST**

Equipment		167
(3)	26,000	
Cash		101
(1)	30,000	(2)
		2,500
		(3)
		26,000

### 4. Purchase Supplies on Credit

**1 IDENTIFY** FastForward purchases \$7,100 of supplies on credit from a supplier.

**2 ANALYZE**

Assets	=	Liabilities	+	Equity
<b>Supplies</b>		<b>Accounts Payable</b>		
+7,100	=	+7,100	+	0

**3 RECORD**

Date	Account Titles and Explanation	PR	Debit	Credit
(4)	Supplies	126	7,100	
	Accounts Payable	201		7,100

**4 POST**

<b>Supplies</b>		<b>126</b>
(2)	2,500	
(4)	<b>7,100</b>	
<b>Accounts Payable</b>		<b>201</b>
	(4)	<b>7,100</b>

### 5. Provide Services for Cash

**1 IDENTIFY** FastForward provides consulting services and immediately collects \$4,200 cash.

**2 ANALYZE**

Assets	=	Liabilities	+	Equity
<b>Cash</b>				<b>Consulting Revenue</b>
+4,200	=	0	+	+4,200

**3 RECORD**

Date	Account Titles and Explanation	PR	Debit	Credit
(5)	Cash	101	4,200	
	Consulting Revenue	403		4,200

**4 POST**

<b>Cash</b>		<b>101</b>
(1)	30,000	
(5)	<b>4,200</b>	
(2)	2,500	
(3)	26,000	
<b>Consulting Revenue</b>		<b>403</b>
	(5)	<b>4,200</b>

### 6. Payment of Expense in Cash

**1 IDENTIFY** FastForward pays \$1,000 cash for December rent.

**2 ANALYZE**

Assets	=	Liabilities	+	Equity
<b>Cash</b>				<b>Rent Expense</b>
-1,000	=	0	+	-1,000

**3 RECORD**

Date	Account Titles and Explanation	PR	Debit	Credit
(6)	Rent Expense	640	1,000	
	Cash	101		1,000

**4 POST**

<b>Cash</b>		<b>101</b>
(1)	30,000	(2) 2,500
(5)	4,200	(3) 26,000
	(6)	<b>1,000</b>

### 7. Payment of Expense in Cash

**1 IDENTIFY** FastForward pays \$700 cash for employee salary.

**2 ANALYZE**

Assets	=	Liabilities	+	Equity
<b>Cash</b>				<b>Salaries Expense</b>
-700	=	0	+	-700

**3 RECORD**

Date	Account Titles and Explanation	PR	Debit	Credit
(7)	Salaries Expense	622	700	
	Cash	101		700

**4 POST**

<b>Salaries Expense</b>		<b>622</b>
(7)	<b>700</b>	
<b>Cash</b>		<b>101</b>
(1)	30,000	(2) 2,500
(5)	4,200	(3) 26,000
	(6)	1,000
	(7)	<b>700</b>

**Point:** *Salary* usually refers to compensation for an employee who receives a fixed amount for a given time period, whereas *wages* usually refers to compensation based on time worked.

**Point:** The revenue recognition principle requires revenue to be recognized when earned, which is when the company provides products and services to a customer. This is not necessarily the same time that the customer pays. A customer can pay before or after products or services are provided.

**Point:** Transaction 8 is a compound journal entry, which affects three or more accounts.

### 8. Provide Consulting and Rental Services on Credit

**1 IDENTIFY** FastForward provides consulting services of \$1,600 and rents its test facilities for \$300. The customer is billed \$1,900 for these services.

**2 ANALYZE**

Assets		=	Liabilities	+	Equity
<b>Accounts Receivable</b>					<b>Consulting Revenue</b>

		(11)	200	
		(13)	2,400	
		(14)	120	
		(15)	305	
		(16)	700	

**Point:** We could merge transactions 15 and 16 into one compound entry.

**Accounting Equation Analysis**

**Point:** Technology does not provide the judgment required to analyze most business transactions. Analysis requires the expertise of skilled and ethical professionals.

Exhibit 2.13 shows the ledger accounts (in T-account form) of FastForward after all 16 transactions are recorded and posted and the balances computed. The accounts are grouped into three major columns corresponding to the accounting equation: assets, liabilities, and equity. Note several important points. First, as with each transaction, the totals for the three columns must obey the accounting equation. Specifically, assets equal \$42,395 (\$4,275 + \$0 + \$9,720 + \$2,400 + \$26,000); liabilities equal \$9,200 (\$6,200 + \$3,000); and equity equals \$33,195 (\$30,000 - \$200 + \$5,800 + \$300 - \$1,400 - \$1,000 - \$305). These numbers prove the accounting equation: Assets of \$42,395 = Liabilities of \$9,200 + Equity of \$33,195. Second, the capital, withdrawals, revenue, and expense accounts reflect the transactions that change equity. These account categories underlie the statement of owner's equity. Third, the revenue and expense account balances will be summarized and reported in the income statement. Fourth, increases and decreases in the Cash account make up the elements reported in the statement of cash flows.

Debit and Credit Rules		
Accounts	Increase (normal bal.)	Decrease
Asset . . . . .	Debit	Credit
Liability . . . . .	Credit	Debit
Capital . . . . .	Credit	Debit

Assume Tata Company began operations on January 1 and completed the following transactions during its first month of operations. For each transaction, (a) analyze the transaction using the accounting equation, (b) record the transaction in journal entry form, and (c) post the entry using T-accounts to represent ledger accounts. Tata Company has the following (partial) chart of accounts—account numbers in parentheses: Cash (101); Accounts Receivable (106); Equipment (167); Accounts Payable (201); J. Tata, Capital (301); J. Tata, Withdrawals (302); Services Revenue (403); and Wages Expense (601).

Jan. 1 Jamsetji Tata invested \$4,000 cash in the Tata Company.

5 Tata Company purchased \$2,000 of equipment on credit.

14 Tata Company provided \$540 of services for a client on credit.

**TRIAL BALANCE**

**P2**

Prepare and explain the use of a trial balance.

Double-entry accounting requires the sum of debit account balances to equal the sum of credit account balances. A trial balance is used to confirm this. A **trial balance** is a list of accounts and their balances at a point in time. Account balances are reported in their appropriate debit or credit columns of a trial balance. A trial balance can be used to confirm this and to follow up on any abnormal or unusual balances. Exhibit 2.14 shows the trial balance for FastForward after its 16 entries have been posted to the ledger. (This is an *unadjusted* trial balance—Chapter 3 explains the necessary adjustments.)

**Preparing a Trial Balance**

Preparing a trial balance involves three steps:

1. List each account title and its amount (from ledger) in the trial balance. If an account has a zero balance, list it with a zero in its normal balance column (or omit it entirely).
2. Compute the total of debit balances and the total of credit balances.
3. Verify (*prove*) total debit balances equal total credit balances.

**Point:** A trial balance is not a financial statement but a mechanism for checking equality of debits and credits in the ledger. Financial statements do not have debit and credit columns.

The **total of debit balances equals the total of credit balances for the trial balance** in Exhibit 2.14. Equality of these two totals does not guarantee that no errors were made. For example, the column totals still will be equal when a debit or credit of a correct amount is made to

FASTFORWARD Trial Balance December 31, 2015

Utilities expense	305	
<b>Totals</b>	<b>\$ 45,300</b>	<b>\$ 45,300</b>

**EXHIBIT 2.14**

Trial Balance (Unadjusted)

**Point:** The ordering of accounts in a trial balance follows their identification number from the chart of accounts, which is in the following order: asset, liability, equity, revenue, and expense accounts.

a wrong account. Another error that does not cause unequal column totals occurs when equal debits and credits of an incorrect amount are entered.

**Searching for and Correcting Errors** If the trial balance does not balance (when its columns are not equal), the error (or errors) must be found and corrected. An efficient way to search for an error is to check the journalizing, posting, and trial balance preparation in *reverse order*. Step 1 is to verify that the trial balance columns are correctly added. If step 1 fails to find the error, Step 2 is to verify that account balances are accurately entered from the ledger. Step 3 is to see whether a debit (or credit) balance is mistakenly listed in the trial balance as a credit (or debit). A clue to this error is when the difference between total debits and total credits equals twice the amount of the incorrect account balance. If the error is still undiscovered, Step 4 is to recompute each account balance in the ledger. Step 5 is to verify that each journal entry is properly posted. Step 6 is to verify that the original journal entry has equal debits and credits. At this point, the errors should be uncovered.<sup>3</sup>

If an error in a journal entry is discovered before the error is posted, it can be corrected in a manual system by drawing a line through the incorrect information. The correct information is written above it to create a record of change for the auditor. Many computerized systems do not allow journal entries to be changed or deleted as part of a good system of internal controls. One approach is to “reverse” the original entry and then input the correct entry.

If an error in a journal entry is not discovered until after it is posted, we do not strike through both erroneous entries in the journal and ledger. Instead, we correct this error by creating a

**Example:** If a credit to Unearned Revenue was incorrectly posted from the journal as a credit to the Revenue ledger account, would the ledger still balance? Would the financial statements be correct? **Answers:** The ledger would balance, but liabilities would be understated, equity would be overstated, and income would be overstated (all because of overstated revenues).

**Point:** The IRS requires companies to keep records that can be audited.

<sup>3</sup> *Transposition* occurs when two digits are switched, or transposed, within a number. If transposition is the only error, it yields a difference between the two trial balance totals that is evenly divisible by 9. For example, assume that a \$691 debit in an entry is incorrectly posted to the ledger as \$619. Total credits in the trial balance are then larger than total debits by \$72 (\$691 – \$619). The \$72 error is *evenly* divisible by 9 ( $72/9 = 8$ ). The first digit of the quotient (in our example it is 8) equals the difference between the digits of the two transposed numbers (the 9 and the 1). The number of digits in the quotient also tells the location of the transposition, starting from the right. The quotient in our example had only one digit (8), so it tells us the transposition is in the first digit. Consider another example where a transposition error involves posting \$961 instead of the correct \$691. The difference in these numbers is \$270, and its quotient is 30 ( $270/9$ ). The quotient has two digits, so it tells us to check the second digit from the right for a transposition of two numbers that have a difference of 3.

*correcting entry* that removes the amount from the wrong account and records it to the correct account. As an example, suppose a \$100 purchase of supplies is journalized with an incorrect debit to Equipment, and then this incorrect entry is posted to the ledger. The Supplies ledger account balance is understated by \$100, and the Equipment ledger account balance is overstated by \$100. The correcting entry is: debit Supplies and credit Equipment (both for \$100).

## Using a Trial Balance to Prepare Financial Statements

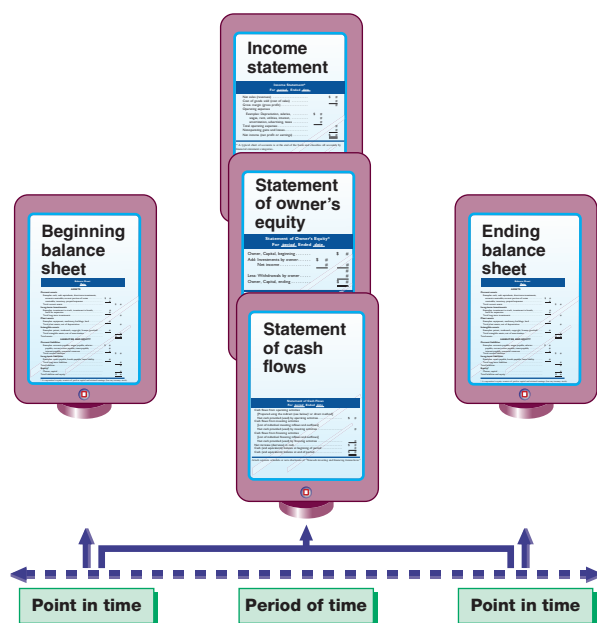

This section shows how to prepare *financial statements* from the trial balance in Exhibit 2.14 and from information on the December transactions of FastForward. These statements differ from those in Chapter 1 because of several additional transactions. These statements are also more precisely called *unadjusted statements* because we need to make some further accounting adjustments (described in Chapter 3).

### P3

Prepare financial statements from business transactions.

### EXHIBIT 2.15

Links between Financial Statements across Time

**Point:** A statement's heading lists the 3 W's: **Who**—name of organization, **What**—name of statement, **When**—statement's point in time or period of time.

**Point:** An income statement is also called an *earnings statement*, a *statement of operations*, or a *P&L (profit and loss) statement*. A balance sheet is also called a *statement of financial position*.

**Point:** While revenues increase equity, and expenses decrease equity, the amounts are not reported in detail in the statement of owner's equity. Instead, their effects are reflected through *net income*.

December 31 are known as *calendar-year* companies. **Google** is a calendar-year company. Many companies choose a fiscal year ending on a date other than December 31. **Apple** is a *noncalendar-year* company as reflected in the headings of its September 28, 2013, year-end financial statements in Appendix A near the end of the book.

**Income Statement** An income statement reports the revenues earned less the expenses incurred by a business over a period of time. FastForward's income statement for December is shown at the top of Exhibit 2.16. Information about revenues and expenses is conveniently taken from the trial balance in Exhibit 2.14. Net income of \$3,395 is reported at the bottom of the statement. Owner investments and withdrawals are *not* part of income.

**Statement of Owner's Equity** The statement of owner's equity reports information about how equity changes over the reporting period. FastForward's statement of owner's equity is the second report in Exhibit 2.16. It shows the \$30,000 owner investment, the \$3,395 of net income, the \$200 withdrawal, and the \$33,195 end-of-period (capital) balance. (The beginning balance in the statement of owner's equity is rarely zero; an exception is for the first period of operations. The beginning capital balance in January 2016 is \$33,195, which is December 2015's ending balance.)

**Balance Sheet** The balance sheet reports the financial position of a company at a point in time, usually at the end of a month, quarter, or year. FastForward's balance sheet is the third report in Exhibit 2.16. This statement refers to financial condition at the close of business on

How financial statements are linked in time is illustrated in Exhibit 2.15. A balance sheet reports on an organization's financial position at a *point in time*. The income statement, statement of owner's equity, and statement of cash flows report on financial performance over a *period of time*. The three statements in the middle column of Exhibit 2.15 link balance sheets from the beginning to the end of a reporting period. They explain how financial position changes from one point to another.

Preparers and users (including regulatory agencies) determine the length of the reporting period. A one-year, or annual, reporting period is common, as are semiannual, quarterly, and monthly periods. The one-year reporting period is known as the *accounting*, or *fiscal*, *year*. Businesses whose accounting year begins on January 1 and ends on

**EXHIBIT 2.16**

		C. Taylor, Capital	<u>33,195</u>
Total assets	<u>\$42,395</u>	Total liabilities and equity	<u>\$ 42,395</u>

**Point:** Arrow lines show how the statements are linked.

**Point:** To foot a column of numbers is to add them.

December 31. The left side of the balance sheet lists its assets: cash, supplies, prepaid insurance, and equipment. The upper right side of the balance sheet shows that it owes \$6,200 to creditors and \$3,000 in services to customers who paid in advance. The equity section shows an ending balance of \$33,195. Note the link between the ending balance of the statement of owner's equity and the capital balance. (Recall that this presentation of the balance sheet is called the *account form*: assets on the left and liabilities and equity on the right. Another presentation is the *report form*: assets on top, followed by liabilities and then equity. Either presentation is acceptable.)

**Decision Maker**

**Point:** Knowing how financial statements are prepared improves our analysis of them.

**Entrepreneur** You open a wholesale business selling entertainment equipment to retail outlets. You find that most of your customers demand to buy on credit. How can you use the balance sheets of these customers to decide which ones to extend credit to? ■ [Answers follow the chapter's Summary.]

**Presentation Issues** Dollar signs are not used in journals and ledgers. They do appear in financial statements and other reports such as trial balances. The usual practice is to put dollar signs beside only the first and last numbers in a column. **Apple's** financial statements in Appendix A show this. When amounts are entered in a journal, ledger, or trial balance, commas are optional to indicate thousands, millions, and so forth. However, commas are always used in financial statements. Companies also commonly round amounts in reports to the nearest dollar, or even to a higher level. Apple is typical of many companies in that it rounds its financial statement amounts to the nearest million (or thousand). This decision is based on the perceived impact of rounding for users' business decisions.

**Point:** The terms "Debit" and "Credit" do not appear on financial statements.

**NEED-TO-KNOW** 2-4

Preparing Trial Balance  
P2

Prepare a trial balance for **Apple** using the following condensed data from its fiscal year ended September 29, 2012.

Owner, Capital . . . . .	\$ 79,263	Owner, Withdrawals . . . . .	\$ 3,285
Accounts payable . . . . .	21,175	Investments and other assets . . . . .	138,936
Other liabilities . . . . .	37,178	Land and equipment . . . . .	15,452
Cost of sales (and other expenses) . . . . .	101,876	Selling and other expense . . . . .	12,899
Cash . . . . .	10,746	Accounts receivable . . . . .	10,930
Revenues . . . . .	156,508		

**Solution**

APPLE Trial Balance September 29, 2012		
	Debit	Credit
Cash . . . . .	\$ 10,746	
Accounts receivable . . . . .	10,930	
Land and equipment . . . . .	15,452	
Investments and other assets . . . . .	138,936	
Accounts payable . . . . .		\$ 21,175
Other liabilities . . . . .		37,178
Owner, Capital . . . . .		79,263
Owner, Withdrawals . . . . .	3,285	
Revenues . . . . .		156,508
Cost of sales and other expenses . . . . .	101,876	
Selling and other expense . . . . .	12,899	
Totals . . . . .	<u>\$294,124</u>	<u>\$294,124</u>

**QC3**

**GLOBAL VIEW**

Financial accounting according to U.S. GAAP is similar, but not identical, to IFRS. This section discusses differences in analyzing and recording transactions, and with the preparation of financial statements.

**Analyzing and Recording Transactions** Both U.S. GAAP and IFRS include broad and similar guidance for financial accounting. As the FASB and IASB work toward a common conceptual framework over the next few years, even those differences will fade. Further, both U.S. GAAP and IFRS apply transaction analysis and recording as shown in this chapter—using the same debit and credit system and accrual accounting. Although some variations exist in revenue and expense recognition and other accounting principles, all of the transactions in this chapter are accounted for identically under these two systems.

**Financial Statements** Both U.S. GAAP and IFRS prepare the same four basic financial statements. A few differences within each statement do exist and we will discuss those throughout the book.

For example, both U.S. GAAP and IFRS require balance sheets to separate current items from noncurrent items. However, while U.S. GAAP balance sheets report current items first, IFRS balance sheets normally (but are not required to) present noncurrent items first, and equity before liabilities. To illustrate, a condensed version of **Piaggio**'s balance sheet follows (numbers using Euros in thousands).

## PIAGGIO

PIAGGIO Balance Sheet (in thousands of Euros) December 31, 2012			
Assets		Equity and Liabilities	
Noncurrent assets	€1,052,797	Total equity	€ 439,873
Current assets	427,428	Noncurrent liabilities	453,272
		Current liabilities	587,080
Total assets	<u>€1,480,225</u>	Total equity and liabilities	<u>€1,480,225</u>

**Accounting Controls and Assurance** Accounting systems depend on control procedures that assure the proper principles were applied in processing accounting information. The passage of SOX legislation strengthened U.S. control procedures in recent years. However, global standards for control are diverse and so are enforcement activities. Consequently, while global accounting standards are converging, their application in different countries can yield different outcomes depending on the quality of their auditing standards and enforcement.

### Decision Insight

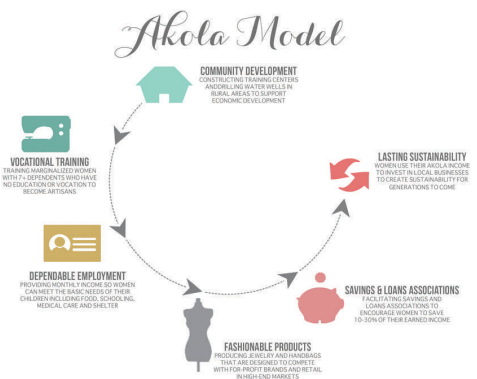

**Accounting Control** Recording valid transactions, and not recording fraudulent transactions, enhances the quality of financial statements. The graph here shows the percentage of employees in information technology that report observing specific types of misconduct [Source: KPMG 2009]. ■

**Sustainability and Accounting Akola Project**, as introduced in this chapter's opening feature, emphasizes the building of an infrastructure within the poorest communities for purposes of sustainability. That social aim is the overriding theme for all of its business activities. This theme is communicated to its customers in a desire to enhance sales and to better the lives of artisans working for Akola. This is a win-win scenario according to its entrepreneurial owner, Brittany Merrill Underwood. Importantly, accounting is used both to track the costs for the artisans and to record revenues from product sales, which are then shared 100% with artisans. Brittany's site includes the model shown here and explains that her "sustainable model transforms the . . . livelihoods of our artisans-in-training, their families, and communities through empowering vocational training and income-generating opportunities."

### Debt Ratio Decision Analysis

An important business objective is gathering information to help assess a company's risk of failing to pay its debts. Companies finance their assets with either liabilities or equity. A company that finances a relatively large portion of its assets with liabilities is said to have a high degree of *financial leverage*. Higher financial leverage involves greater risk because liabilities must be repaid and often require regular interest payments (equity financing does not). The risk that a company might not be able to meet such required

## A2

Compute the debt ratio and describe its use in analyzing financial condition.

payments is higher if it has more liabilities (is more highly leveraged). One way to assess the risk associated with a company's use of liabilities is to compute the **debt ratio** as in Exhibit 2.17.

### EXHIBIT 2.17

Debt Ratio

$$\text{Debt ratio} = \frac{\text{Total liabilities}}{\text{Total assets}}$$

**Point:** Compare the equity amount to the liability amount to assess the extent of owner versus nonowner financing.

To see how to apply the debt ratio, let's look at **Skechers's** liabilities and assets. The company designs, markets, and sells footwear for men, women, and children under the Skechers brand. Exhibit 2.18 computes and reports its debt ratio at the end of each year from 2009 to 2013.

### EXHIBIT 2.18

Computation and Analysis of Debt Ratio

\$ in millions	2013	2012	2011	2010	2009
Total liabilities .....	\$ 429	\$ 421	\$ 389	\$ 359	\$246
Total assets .....	\$1,409	\$1,340	\$1,282	\$1,305	\$996
<b>Debt ratio</b> .....	<b>0.30</b>	<b>0.31</b>	<b>0.30</b>	<b>0.28</b>	<b>0.25</b>
Industry debt ratio .....	0.47	0.46	0.47	0.49	0.51

Skechers's debt ratio ranges from a low of 0.25 to a high of 0.31—also, see graph in margin. Its ratio is lower, compared with the industry ratio. This analysis implies a lower risk from its financial leverage. Is financial leverage good or bad for Skechers? To answer that question we need to compare the company's return on the borrowed money to the rate it is paying creditors. If the company's return is higher, it is successfully borrowing money to make more money. A company's success with making money from borrowed money can quickly turn unprofitable if its own return drops below the rate it is paying creditors.

### Decision Maker

**Investor** You consider buying stock in **Converse**. As part of your analysis, you compute its debt ratio for 2013, 2014, and 2015 as: 0.35, 0.74, and 0.94, respectively. Based on the debt ratio, is Converse a low-risk investment? Has the risk of buying Converse stock changed over this period? (The industry debt ratio averages 0.40.) ■

[Answers follow the chapter's Summary.]

## NEED-TO-KNOW

### COMPREHENSIVE

(This problem extends the Comprehensive Need-To-Know of Chapter 1.) After several months of planning, Jasmine Worthy started a haircutting business called Expressions. The following events occurred during its first month.

- On August 1, Worthy invested \$3,000 cash and \$15,000 of equipment in Expressions.
- On August 2, Expressions paid \$600 cash for furniture for the shop.
- On August 3, Expressions paid \$500 cash to rent space in a strip mall for August.
- On August 4, it purchased \$1,200 of equipment on credit for the shop (using a long-term note payable).
- On August 5, Expressions opened for business. Cash received from haircutting services in the first week and a half of business (ended August 15) was \$825.
- On August 15, it provided \$100 of haircutting services on account.
- On August 17, it received a \$100 check for services previously rendered on account.
- On August 17, it paid \$125 to an assistant for hours worked during the grand opening.
- Cash received from services provided during the second half of August was \$930.
- On August 31, it paid a \$400 installment toward principal on the note payable entered into on August 4.
- On August 31, Worthy withdrew \$900 cash from the company for personal use.

### Required

- Open the following ledger accounts in balance column format (account numbers are in parentheses): Cash (101); Accounts Receivable (102); Furniture (161); Store Equipment (165); Note Payable (240); J. Worthy, Capital (301); J. Worthy, Withdrawals (302); Haircutting Services Revenue (403); Wages Expense (623); and Rent Expense (640). Prepare general journal entries for the transactions.

2. Post the journal entries from (1) to the ledger accounts.
3. Prepare a trial balance as of August 31.
4. Prepare an income statement for August.
5. Prepare a statement of owner's equity for August.
6. Prepare a balance sheet as of August 31.
7. Determine the debt ratio as of August 31.

### Extended Analysis

8. In the coming months, Expressions will experience a greater variety of business transactions. Identify which accounts are debited and which are credited for the following transactions. (*Hint: We must use some accounts not opened in part 1.*)
  - a. Purchase supplies with cash.
  - b. Pay cash for future insurance coverage.
  - c. Receive cash for services to be provided in the future.
  - d. Purchase supplies on account.

## PLANNING THE SOLUTION

- Analyze each transaction and use the debit and credit rules to prepare a journal entry for each.
- Post each debit and each credit from journal entries to their ledger accounts and cross-reference each amount in the posting reference (PR) columns of the journal and ledger.
- Calculate each account balance and list the accounts with their balances on a trial balance.
- Verify that total debits in the trial balance equal total credits.
- To prepare the income statement, identify revenues and expenses. List those items on the statement, compute the difference, and label the result as *net income* or *net loss*.
- Use information in the ledger to prepare the statement of owner's equity.
- Use information in the ledger to prepare the balance sheet.
- Calculate the debt ratio by dividing total liabilities by total assets.
- Analyze the future transactions to identify the accounts affected and apply debit and credit rules.

## SOLUTION

1. General journal entries:

General Journal					
Date	Account Titles and Explanation	PR	Debit	Credit	
Aug. 1	Cash .....	101	3,000		
	Store Equipment .....	165	15,000		
	J. Worthy, Capital .....	301		18,000	
	<i>Owner's investment.</i>				
2	Furniture .....	161	600		
	Cash .....	101		600	
	<i>Purchased furniture for cash.</i>				
3	Rent Expense .....	640	500		
	Cash .....	101		500	
	<i>Paid rent for August.</i>				
4	Store Equipment .....	165	1,200		
	Note Payable .....	240		1,200	
	<i>Purchased additional equipment on credit.</i>				
15	Cash .....	101	825		
	Haircutting Services Revenue .....	403		825	
	<i>Cash receipts from first half of August.</i>				

[continued on next page]

[continued from previous page]

15	Accounts Receivable .....	102	100	
	Haircutting Services Revenue .....	403		100
	<i>To record revenue for services provided on account.</i>			
17	Cash .....	101	100	
	Accounts Receivable .....	102		100
	<i>To record cash received as payment on account.</i>			
17	Wages Expense .....	623	125	
	Cash .....	101		125
	<i>Paid wages to assistant.</i>			
31	Cash .....	101	930	
	Haircutting Services Revenue .....	403		930
	<i>Cash receipts from second half of August.</i>			
31	Note Payable .....	240	400	
	Cash .....	101		400
	<i>Paid an installment on the note payable.</i>			
31	J. Worthy, Withdrawals .....	302	900	
	Cash .....	101		900
	<i>Cash withdrawal by owner.</i>			

2. Post journal entries from part 1 to the ledger accounts:

General Ledger									
<b>Cash</b>		<b>Account No. 101</b>			<b>Note Payable</b>		<b>Account No. 240</b>		
Date	PR	Debit	Credit	Balance	Date	PR	Debit	Credit	Balance
Aug. 1	GI	3,000		3,000	Aug. 4	GI		1,200	1,200
2	GI		600	2,400	31	GI	400		800
3	GI		500	1,900	<b>J. Worthy, Capital</b> <span style="float: right;"><b>Account No. 301</b></span>				
15	GI	825		2,725	<b>Date</b>	<b>PR</b>	<b>Debit</b>	<b>Credit</b>	<b>Balance</b>
17	GI	100		2,825	Aug. 1	GI		18,000	18,000
17	GI		125	2,700	<b>J. Worthy, Withdrawals</b> <span style="float: right;"><b>Account No. 302</b></span>				
31	GI	930		3,630	<b>Date</b>	<b>PR</b>	<b>Debit</b>	<b>Credit</b>	<b>Balance</b>
31	GI		400	3,230	Aug. 31	GI	900		900
31	GI		900	2,330	<b>Haircutting Services Revenue</b> <span style="float: right;"><b>Account No. 403</b></span>				
<b>Accounts Receivable</b>		<b>Account No. 102</b>							
Date	PR	Debit	Credit	Balance					
Aug. 15	GI	100		100					
17	GI		100	0					
<b>Furniture</b>		<b>Account No. 161</b>							
Date	PR	Debit	Credit	Balance					
Aug. 2	GI	600		600					
<b>Store Equipment</b>		<b>Account No. 165</b>							
Date	PR	Debit	Credit	Balance					
Aug. 1	GI	15,000		15,000					
4	GI	1,200		16,200					
<b>Wages Expense</b>		<b>Account No. 623</b>							
Date	PR	Debit	Credit	Balance					
Aug. 17	GI	125		125					
<b>Rent Expense</b>		<b>Account No. 640</b>							
Date	PR	Debit	Credit	Balance					
Aug. 3	GI	500		500					

3. Prepare a trial balance from the ledger:

EXPRESSIONS Trial Balance August 31		
	Debit	Credit
Cash .....	\$ 2,330	
Accounts receivable .....	0	
Furniture .....	600	
Store equipment .....	16,200	
Note payable .....		\$ 800
J. Worthy, Capital .....		18,000
J. Worthy, Withdrawals .....	900	
Haircutting services revenue .....		1,855
Wages expense .....	125	
Rent expense .....	500	
Totals .....	<u>\$20,655</u>	<u>\$20,655</u>

4.

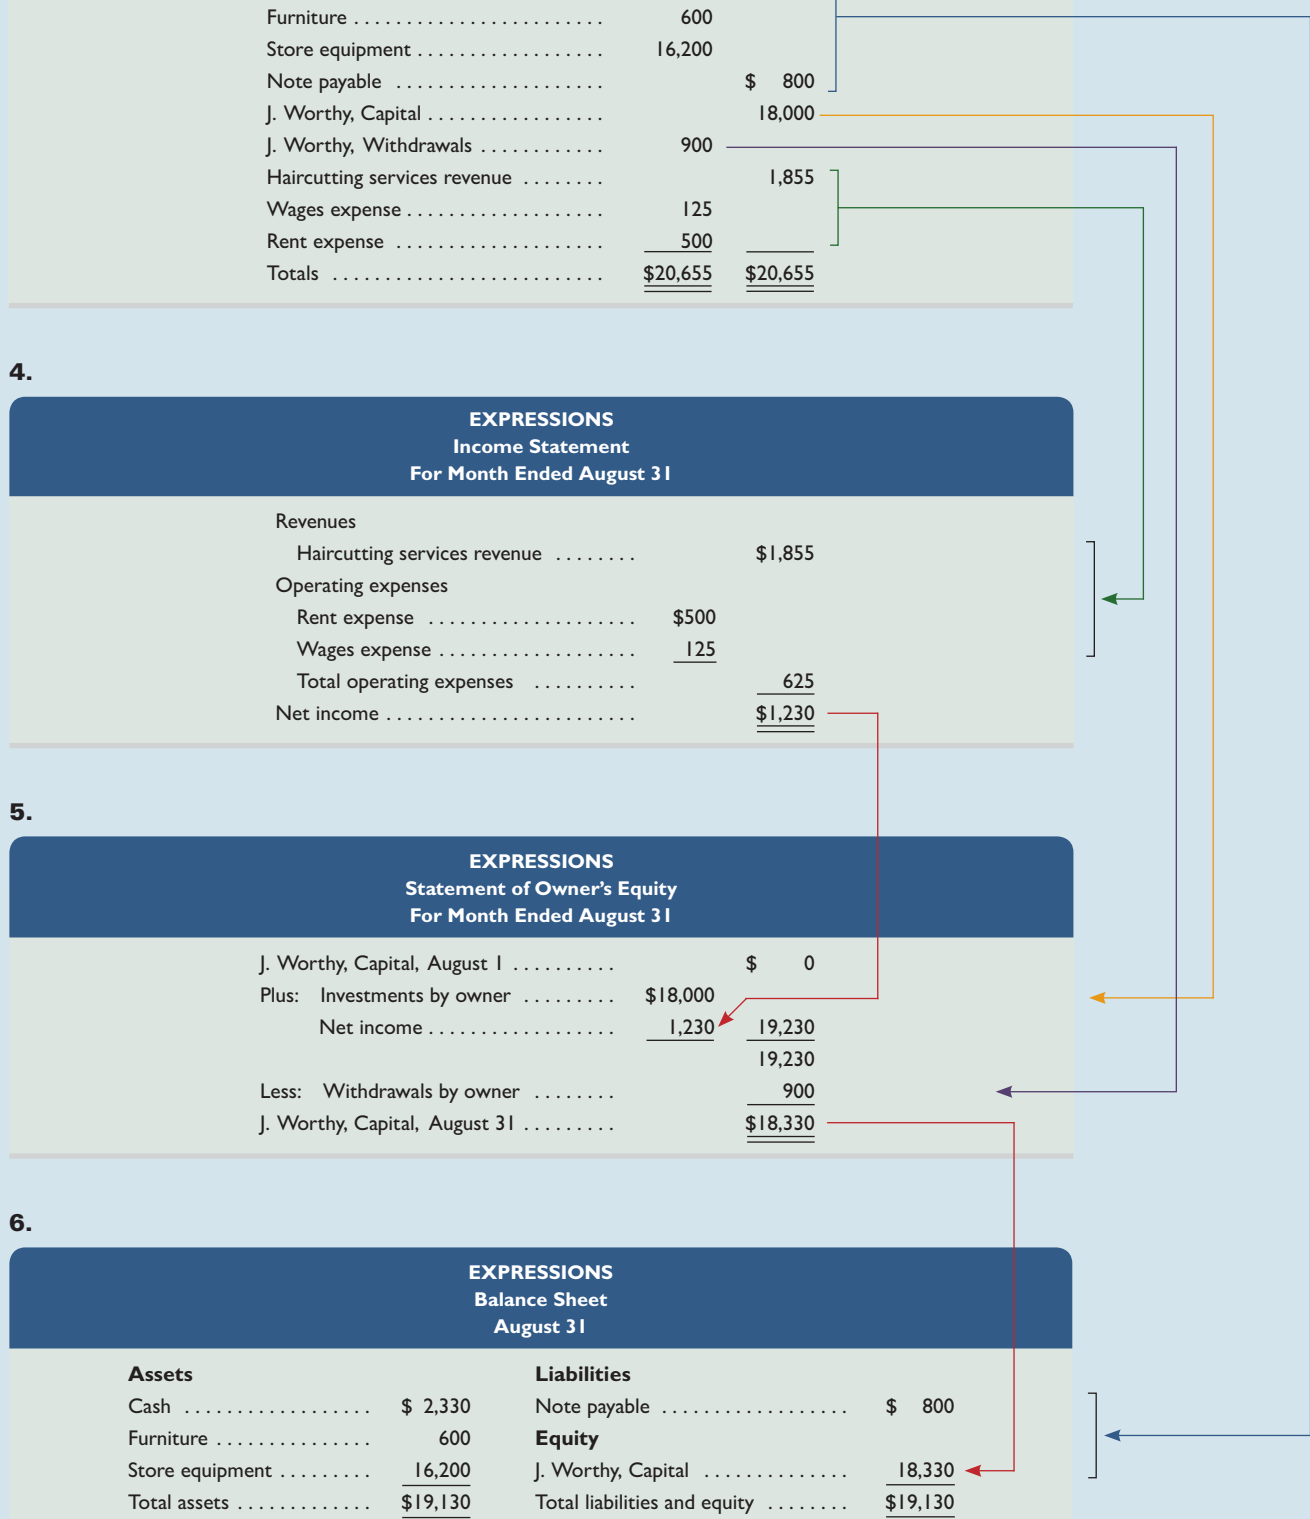

EXPRESSIONS Income Statement For Month Ended August 31		
Revenues		
Haircutting services revenue .....		\$1,855
Operating expenses		
Rent expense .....	\$500	
Wages expense .....	<u>125</u>	
Total operating expenses .....		<u>625</u>
Net income .....		<u>\$1,230</u>

5.

EXPRESSIONS Statement of Owner's Equity For Month Ended August 31		
J. Worthy, Capital, August 1 .....		\$ 0
Plus: Investments by owner .....	\$18,000	
Net income .....	<u>1,230</u>	<u>19,230</u>
		19,230
Less: Withdrawals by owner .....		<u>900</u>
J. Worthy, Capital, August 31 .....		<u>\$18,330</u>

6.

EXPRESSIONS Balance Sheet August 31			
Assets		Liabilities	
Cash .....	\$ 2,330	Note payable .....	\$ 800
Furniture .....	600	<b>Equity</b>	
Store equipment .....	<u>16,200</u>	J. Worthy, Capital .....	<u>18,330</u>
Total assets .....	<u>\$19,130</u>	Total liabilities and equity .....	<u>\$19,130</u>

$$7. \text{ Debt ratio} = \frac{\text{Total liabilities}}{\text{Total assets}} = \frac{\$800}{\$19,130} = \underline{\underline{4.18\%}}$$

8a. Supplies debited  
Cash credited

8b. Prepaid Insurance debited  
Cash credited

8c. Cash debited

Unearned Services Revenue credited

8d. Supplies debited

Accounts Payable credited

## Summary

**C1 Explain the steps in processing transactions and the role of source documents.** The accounting process identifies business transactions and events, analyzes and records their effects, and summarizes and prepares information useful in making decisions. Transactions and events are the starting points in the accounting process. Source documents identify and describe transactions and events. Examples are sales tickets, checks, purchase orders, bills, and bank statements. Source documents provide objective and reliable evidence, making information more useful. The effects of transactions and events are recorded in journals. Posting along with a trial balance helps summarize and classify these effects.

**C2 Describe an account and its use in recording transactions.** An account is a detailed record of increases and decreases in a specific asset, liability, equity, revenue, or expense. Information from accounts is analyzed, summarized, and presented in reports and financial statements for decision makers.

**C3 Describe a ledger and a chart of accounts.** The ledger (or general ledger) is a record containing all accounts used by a company and their balances. It is referred to as the *books*. The chart of accounts is a list of all accounts and usually includes an identification number assigned to each account.

**C4 Define debits and credits and explain double-entry accounting.** *Debit* refers to left, and *credit* refers to right. Debits increase assets, expenses, and withdrawals while credits decrease them. Credits increase liabilities, owner capital, and revenues; debits decrease them. Double-entry accounting means each transaction affects at least two accounts and has at least one debit and one credit. The system for recording debits and credits follows from the accounting equation. The left side of an account is the normal balance for assets, withdrawals, and

expenses, and the right side is the normal balance for liabilities, capital, and revenues.

**A1 Analyze the impact of transactions on accounts and financial statements.** We analyze transactions using concepts of double-entry accounting. This analysis is performed by determining a transaction's effects on accounts. These effects are recorded in journals and posted to ledgers.

**A2 Compute the debt ratio and describe its use in analyzing financial condition.** A company's debt ratio is computed as total liabilities divided by total assets. It reveals how much of the assets are financed by creditor (nonowner) financing. The higher this ratio, the more risk a company faces because liabilities must be repaid at specific dates.

**P1 Record transactions in a journal and post entries to a ledger.** Transactions are recorded in a journal. Each entry in a journal is posted to the accounts in the ledger. This provides information that is used to produce financial statements. Balance column accounts are widely used and include columns for debits, credits, and the account balance.

**P2 Prepare and explain the use of a trial balance.** A trial balance is a list of accounts from the ledger showing their debit or credit balances in separate columns. The trial balance is a summary of the ledger's contents and is useful in preparing financial statements and in revealing recordkeeping errors.

**P3 Prepare financial statements from business transactions.** The balance sheet, the statement of owner's equity, the income statement, and the statement of cash flows use data from the trial balance (and other financial statements) for their preparation.

### Guidance Answers to Decision Maker and Decision Ethics

**Cashier** The advantages to the process proposed by the assistant manager include improved customer service, fewer delays, and less work for you. However, you should have serious concerns about internal control and the potential for fraud. In particular, the assistant manager could steal cash and simply enter fewer sales to match the remaining cash. You should reject her suggestion without the manager's approval. Moreover, you should have an ethical concern about the assistant manager's suggestion to ignore store policy.

**Entrepreneur** We can use the accounting equation (Assets = Liabilities + Equity) to help us identify risky customers to whom

we would likely not want to extend credit. A balance sheet provides amounts for each of these key components. The lower a customer's equity is relative to liabilities, the less likely you would extend credit. A low equity means the business has little value that does not already have creditor claims to it.

**Investor** The debt ratio suggests the stock of Converse is of higher risk than normal and that this risk is rising. The average industry ratio of 0.40 further supports this conclusion. The 2015 debt ratio for Converse is twice the industry norm. Also, a debt ratio approaching 1.0 indicates little to no equity.

## Key Terms

<b>Account</b>	<b>Debit</b>	<b>Posting</b>
<b>Account balance</b>	<b>Debt ratio</b>	<b>Posting reference (PR) column</b>
<b>Balance column account</b>	<b>Double-entry accounting</b>	<b>Source documents</b>
<b>Chart of accounts</b>	<b>General journal</b>	<b>T-account</b>
<b>Compound journal entry</b>	<b>General ledger</b>	<b>Trial balance</b>
<b>Credit</b>	<b>Journal</b>	<b>Unearned revenue</b>
<b>Creditors</b>	<b>Journalizing</b>	

## Multiple Choice Quiz

Answers at end of chapter

- Amalia Company received its utility bill for the current period of \$700 and immediately paid it. Its journal entry to record this transaction includes a
  - Credit to Utility Expense for \$700.
  - Debit to Utility Expense for \$700.
  - Debit to Accounts Payable for \$700.
  - Debit to Cash for \$700.
  - Credit to capital for \$700.
- On May 1, Mattingly Lawn Service collected \$2,500 cash from a customer in advance of five months of lawn service. Mattingly's journal entry to record this transaction includes a
  - Credit to Unearned Lawn Service Fees for \$2,500.
  - Debit to Lawn Service Fees Earned for \$2,500.
  - Credit to Cash for \$2,500.
  - Debit to Unearned Lawn Service Fees for \$2,500.
  - Credit to capital for \$2,500.
- Liang Shue contributed \$250,000 cash and land worth \$500,000 to open his new business, Shue Consulting. Which of the following journal entries does Shue Consulting make to record this transaction?
 

a. Cash Assets . . . . .	750,000	
L. Shue, Capital . . . . .		750,000
b. L. Shue, Capital . . . . .	750,000	
Assets . . . . .		750,000
- |                               |         |         |
|-------------------------------|---------|---------|
| c. Cash . . . . .             | 250,000 |         |
| Land . . . . .                | 500,000 |         |
| L. Shue, Capital . . . . .    |         | 750,000 |
| d. L. Shue, Capital . . . . . | 750,000 |         |
| Cash . . . . .                |         | 250,000 |
| Land . . . . .                |         | 500,000 |
- A trial balance prepared at year-end shows total credits exceed total debits by \$765. This discrepancy could have been caused by
  - An error in the general journal where a \$765 increase in Accounts Payable was recorded as a \$765 decrease in Accounts Payable.
  - The ledger balance for Accounts Payable of \$7,650 being entered in the trial balance as \$765.
  - A general journal error where a \$765 increase in Accounts Receivable was recorded as a \$765 increase in Cash.
  - The ledger balance of \$850 in Accounts Receivable was entered in the trial balance as \$85.
  - An error in recording a \$765 increase in Cash as a credit.
- Bonaventure Company has total assets of \$1,000,000, liabilities of \$400,000, and equity of \$600,000. What is its debt ratio (rounded to a whole percent)?
 

a. 250%	c. 67%	e. 40%
b. 167%	d. 150%	

 Icon denotes assignments that involve decision making.

## Discussion Questions

- Provide the names of two (a) asset accounts, (b) liability accounts, and (c) equity accounts.
- What is the difference between a note payable and an account payable?
-  Discuss the steps in processing business transactions.
- What kinds of transactions can be recorded in a general journal?
- Are debits or credits typically listed first in general journal entries? Are the debits or the credits indented?
- Should a transaction be recorded first in a journal or the ledger? Why?
- If assets are valuable resources and asset accounts have debit balances, why do expense accounts also have debit balances?
-  Why does the recordkeeper prepare a trial balance?
- If an incorrect amount is journalized and posted to the accounts, how should the error be corrected?
- Identify the four financial statements of a business.
-  What information is reported in a balance sheet?
-  What information is reported in an income statement?
-  Why does the user of an income statement need to know the time period that it covers?

14. Define (a) *assets*, (b) *liabilities*, (c) *equity*, and (d) *net assets*.
15. Which financial statement is sometimes called the *statement of financial position*?
16.  Review the **Apple** balance sheet in Appendix A. Identify three accounts on its balance sheet that carry debit balances and three accounts on its balance sheet that carry credit balances. **APPLE**
17. Review the **Google** balance sheet in Appendix A. Identify an asset with the word *receivable* in its account title and a liability with the word *payable* in its account title. **GOOGLE**
18. Review the **Samsung** balance sheet in Appendix A. Identify three current liabilities and three noncurrent liabilities in its balance sheet. **Samsung**

### QUICK STUDY

Identify the items from the following list that are likely to serve as source documents.

#### QS 2-1

Identifying source documents **C1**

- |                  |                            |                      |
|------------------|----------------------------|----------------------|
| a. Sales ticket  | d. Telephone bill          | g. Income statement  |
| b. Trial balance | e. Invoice from supplier   | h. Bank statement    |
| c. Balance sheet | f. Company revenue account | i. Prepaid insurance |

#### QS 2-2

Identifying financial statement accounts **C2**

Classify each of the following accounts as an asset (A), liability (L), or equity (EQ) account.

- |                    |                      |                          |
|--------------------|----------------------|--------------------------|
| a. Cash            | d. Prepaid Insurance | g. Accounts Payable      |
| b. Prepaid Rent    | e. Office Equipment  | h. Unearned Rent Revenue |
| c. Office Supplies | f. Owner, Capital    | i. Owner, Withdrawals    |

#### QS 2-3

Reading a chart of accounts **C3**

A chart of accounts is a list of all ledger accounts and an identification number for each. One example of a chart of accounts is near the end of the book on pages CA and CA-1. Using that chart, identify the following accounts as either an asset (A), liability (L), equity (EQ), revenue (R), or expense (E) account, along with its identification number.

- |                        |                 |                      |
|------------------------|-----------------|----------------------|
| a. Advertising Expense | d. Patents      | g. Notes Payable     |
| b. Rent Revenue        | e. Rent Payable | h. Owner, Capital    |
| c. Rent Receivable     | f. Furniture    | i. Utilities Expense |

#### QS 2-4

Identifying normal balance **C4**

Identify the normal balance (debit or credit) for each of the following accounts.

- |                           |                        |                   |
|---------------------------|------------------------|-------------------|
| a. Fees Earned (Revenues) | d. Wages Expense       | g. Wages Payable  |
| b. Office Supplies        | e. Accounts Receivable | h. Building       |
| c. Owner, Withdrawals     | f. Prepaid Rent        | i. Owner, Capital |

#### QS 2-5

Linking debit or credit with normal balance **C4**

Indicate whether a debit or credit *decreases* the normal balance of each of the following accounts.

- |                        |                      |                       |
|------------------------|----------------------|-----------------------|
| a. Interest Payable    | e. Owner, Capital    | i. Owner, Withdrawals |
| b. Service Revenue     | f. Prepaid Insurance | j. Unearned Revenue   |
| c. Salaries Expense    | g. Buildings         | k. Accounts Payable   |
| d. Accounts Receivable | h. Interest Revenue  | l. Land               |

#### QS 2-6

Analyzing transactions and preparing journal entries **P1**

For each transaction, (1) analyze the transaction using the accounting equation, (2) record the transaction in journal entry form, and (3) post the entry using T-accounts to represent ledger accounts. Use the following (partial) chart of accounts—account numbers in parentheses: Cash (101); Accounts Receivable (106); Office Supplies (124); Trucks (153); Equipment (167); Accounts Payable (201); Unearned Landscaping Revenue (236); D. Tyler, Capital (301); D. Tyler, Withdrawals (302); Landscaping Revenue (403); Wages Expense (601), and Landscaping Expense (696).

- On May 15, DeShawn Tyler opens a landscaping company called Elegant Lawns by investing \$7,000 in cash along with equipment having a \$3,000 value.
- On May 21, Elegant Lawns purchases office supplies on credit for \$500.
- On May 25, Elegant Lawns receives \$4,000 cash for performing landscaping services.
- On May 30, Elegant Lawns receives \$1,000 cash in advance of providing landscaping services to a customer.

Identify whether a debit or credit yields the indicated change for each of the following accounts.

- |  |   |
|--|---|
| <b>a.</b> To increase Land                   | <b>f.</b> To decrease Prepaid Rent        |
| <b>b.</b> To decrease Cash                   | <b>g.</b> To increase Notes Payable       |
| <b>c.</b> To increase Fees Earned (Revenues) | <b>h.</b> To decrease Accounts Receivable |
| <b>d.</b> To increase Office Expense         | <b>i.</b> To increase Owner, Capital      |
| <b>e.</b> To decrease Unearned Revenue       | <b>j.</b> To increase Store Equipment     |

**QS 2-7**

Analyzing debit or credit by account

A trial balance has total debits of \$20,000 and total credits of \$24,500. Which one of the following errors would create this imbalance? Explain.

- A \$2,250 debit to Utilities Expense in a journal entry is incorrectly posted to the ledger as a \$2,250 credit, leaving the Utilities Expense account with a \$3,000 debit balance.
- A \$4,500 debit to Salaries Expense in a journal entry is incorrectly posted to the ledger as a \$4,500 credit, leaving the Salaries Expense account with a \$750 debit balance.
- A \$2,250 credit to Consulting Fees Earned (Revenues) in a journal entry is incorrectly posted to the ledger as a \$2,250 debit, leaving the Consulting Fees Earned account with a \$6,300 credit balance.
- A \$2,250 debit posting to Accounts Receivable was posted mistakenly to Land.
- A \$4,500 debit posting to Equipment was posted mistakenly to Cash.
- An entry debiting Cash and crediting Accounts Payable for \$4,500 was mistakenly not posted.

**QS 2-8**

Identifying a posting error

Indicate the financial statement on which each of the following items appears. Use I for income statement, E for statement of owner's equity, and B for balance sheet.

- |                               |                             |                             |
|-------------------------------|-----------------------------|-----------------------------|
| <b>a.</b> Services Revenue    | <b>e.</b> Equipment         | <b>i.</b> Owner Withdrawals |
| <b>b.</b> Interest Payable    | <b>f.</b> Prepaid Insurance | <b>j.</b> Office Supplies   |
| <b>c.</b> Accounts Receivable | <b>g.</b> Buildings         | <b>k.</b> Interest Expense  |
| <b>d.</b> Salaries Expense    | <b>h.</b> Rental Revenue    | <b>l.</b> Insurance Expense |

**QS 2-9**

Classifying accounts in financial statements

Answer each of the following questions related to international accounting standards.

- What type of journal entry system is applied when accounting follows IFRS?
- Identify the number and usual titles of the financial statements prepared under IFRS.
- How do differences in accounting controls and enforcement impact accounting reports prepared across different countries?

**QS 2-10**

International accounting standards **C4**

Order the following steps in the accounting process that focus on analyzing and recording transactions.

- \_\_\_\_\_ **a.** Prepare and analyze the trial balance.
- \_\_\_\_\_ **b.** Analyze each transaction from source documents.
- \_\_\_\_\_ **c.** Record relevant transactions in a journal.
- \_\_\_\_\_ **d.** Post journal information to ledger accounts.

**EXERCISES****Exercise 2-1**

Steps in analyzing and recording transactions **C1**

Enter the number for the item that best completes each of the descriptions below.

- |                  |                     |                 |
|------------------|---------------------|-----------------|
| <b>1.</b> Asset  | <b>3.</b> Account   | <b>5.</b> Three |
| <b>2.</b> Equity | <b>4.</b> Liability |                 |
- Accounts are arranged into \_\_\_\_\_ general categories.
  - Owner, Capital and Owner, Withdrawals are examples of \_\_\_\_\_ accounts.
  - Accounts Payable, Unearned Revenue, and Note Payable are examples of \_\_\_\_\_ accounts.
  - Accounts Receivable, Prepaid Accounts, Supplies, and Land are examples of \_\_\_\_\_ accounts.
  - An \_\_\_\_\_ is a record of increases and decreases in a specific asset, liability, equity, revenue, or expense item.

**Exercise 2-2**

Identifying and classifying accounts

Enter the number for the item that best completes each of the descriptions below.

- |                 |                          |
|-----------------|--------------------------|
| <b>1.</b> Chart | <b>2.</b> General ledger |
|-----------------|--------------------------|
- A \_\_\_\_\_ of accounts is a list of all accounts a company uses.
  - The \_\_\_\_\_ is a record containing all accounts used by a company.

**Exercise 2-3**

Identifying a ledger and chart of accounts

**Exercise 2-4**

Identifying type and normal balances of accounts

C4

For each of the following (1) identify the type of account as an asset, liability, equity, revenue, or expense, (2) identify the normal balance of the account, and (3) enter *debit (Dr.)* or *credit (Cr.)* to identify the kind of entry that would increase the account balance.

- |                             |                               |                          |
|-----------------------------|-------------------------------|--------------------------|
| <b>a.</b> Land              | <b>e.</b> Accounts Receivable | <b>i.</b> Fees Earned    |
| <b>b.</b> Cash              | <b>f.</b> Owner, Withdrawals  | <b>j.</b> Equipment      |
| <b>c.</b> Legal Expense     | <b>g.</b> License Fee Revenue | <b>k.</b> Notes Payable  |
| <b>d.</b> Prepaid Insurance | <b>h.</b> Unearned Revenue    | <b>l.</b> Owner, Capital |

**Exercise 2-5**

Analyzing effects of transactions on accounts

A1 

Groro Co. bills a client \$62,000 for services provided and agrees to accept the following three items in full payment: (1) \$10,000 cash, (2) computer equipment worth \$80,000, and (3) to assume responsibility for a \$28,000 note payable related to the computer equipment. The entry Groro makes to record this transaction includes which one or more of the following?

- |  |  |
|--|--|
| <b>a.</b> \$28,000 increase in a liability account | <b>d.</b> \$62,000 increase in an asset account  |
| <b>b.</b> \$10,000 increase in the Cash account    | <b>e.</b> \$62,000 increase in a revenue account |
| <b>c.</b> \$10,000 increase in a revenue account   | <b>f.</b> \$62,000 increase in an equity account |

**Exercise 2-6**

Analyzing account entries and balances

A1 

Use the information in each of the following separate cases to calculate the unknown amount.

- Corentine Co. had \$152,000 of accounts payable on September 30 and \$132,500 on October 31. Total purchases on account during October were \$281,000. Determine how much cash was paid on accounts payable during October.
- On September 30, Valerian Co. had a \$102,500 balance in Accounts Receivable. During October, the company collected \$102,890 from its credit customers. The October 31 balance in Accounts Receivable was \$89,000. Determine the amount of sales on account that occurred in October.
- During October, Alameda Company had \$102,500 of cash receipts and \$103,150 of cash disbursements. The October 31 Cash balance was \$18,600. Determine how much cash the company had at the close of business on September 30.

**Exercise 2-7**

Preparing general journal entries

P1

Prepare general journal entries for the following transactions of a new company called Pose-for-Pics.

- Aug. 1 Madison Harris, the owner, invested \$6,500 cash and \$33,500 of photography equipment in the company.
- 2 The company paid \$2,100 cash for an insurance policy covering the next 24 months.
- 5 The company purchased office supplies for \$880 cash.
- 20 The company received \$3,331 cash in photography fees earned.
- 31 The company paid \$675 cash for August utilities.

**Exercise 2-8**

Preparing T-accounts (ledger) and a trial balance P2

Use the information in Exercise 2-7 to prepare an August 31 trial balance for Pose-for-Pics. Begin by opening these T-accounts: Cash; Office Supplies; Prepaid Insurance; Photography Equipment; M. Harris, Capital; Photography Fees Earned; and Utilities Expense. Then, post the general journal entries to these T-accounts (which will serve as the ledger), and prepare the trial balance.

**Exercise 2-9**

Recording effects of transactions in T-accounts

A1

Prepare general journal entries to record the transactions below for Spade Company by using the following accounts: Cash; Accounts Receivable; Office Supplies; Office Equipment; Accounts Payable; K. Spade, Capital; K. Spade, Withdrawals; Fees Earned; and Rent Expense. Use the letters beside each transaction to identify entries. After recording the transactions, post them to T-accounts, which serves as the general ledger for this assignment. Determine the ending balance of each T-account.

- Kacy Spade, owner, invested \$100,750 cash in the company.
- The company purchased office supplies for \$1,250 cash.
- The company purchased \$10,050 of office equipment on credit.
- The company received \$15,500 cash as fees for services provided to a customer.
- The company paid \$10,050 cash to settle the payable for the office equipment purchased in transaction *c*.
- The company billed a customer \$2,700 as fees for services provided.
- The company paid \$1,225 cash for the monthly rent.
- The company collected \$1,125 cash as partial payment for the account receivable created in transaction *f*.
- Kacy Spade withdrew \$10,000 cash from the company for personal use.

**Check** Cash ending balance, \$94,850

After recording the transactions of Exercise 2-9 in T-accounts and calculating the balance of each account, prepare a trial balance. Use May 31, 2015, as its report date.

**Exercise 2-10**  
Preparing a trial balance  
P2

Examine the following transactions and identify those that create expenses for Valdez Services. Prepare general journal entries to record those expense transactions and explain why the other transactions did not create expenses.

- The company paid \$12,200 cash for payment on a 16-month-old liability for office supplies.
- The company paid \$1,233 cash for the just completed two-week salary of the receptionist.
- The company paid \$39,200 cash for equipment purchased.
- The company paid \$870 cash for this month's utilities.
- Owner (Valdez) withdrew \$4,500 cash from the company for personal use.

**Exercise 2-11**  
Analyzing and journalizing expense transactions  
A1 P1 

Examine the following transactions and identify those that create revenues for Valdez Services, a company owned by Brina Valdez. Prepare general journal entries to record those revenue transactions and explain why the other transactions did not create revenues.

- Brina Valdez invests \$39,350 cash in the company.
- The company provided \$2,300 of services on credit.
- The company provided services to a client and immediately received \$875 cash.
- The company received \$10,200 cash from a client in payment for services to be provided next year.
- The company received \$3,500 cash from a client in partial payment of an account receivable.
- The company borrowed \$120,000 cash from the bank by signing a promissory note.

**Exercise 2-12**  
Analyzing and journalizing revenue transactions  
A1 P1 

Assume the following T-accounts reflect Belle Co.'s general ledger and that seven transactions *a* through *g* are posted to them. Provide a short description of each transaction. Include the amounts in your descriptions.

Cash			
(a)	6,000	(b)	4,800
(e)	4,500	(c)	900
		(f)	1,600
		(g)	820

Office Supplies	
(c)	900
(d)	300

Prepaid Insurance	
(b)	4,800

Equipment	
(a)	7,600
(d)	9,700

Automobiles	
(a)	12,000

Accounts Payable	
(f)	1,600
(d)	10,000

D. Belle, Capital	
(a)	25,600

Delivery Services Revenue	
(e)	4,500

Gas and Oil Expense	
(g)	820

**Exercise 2-13**  
Interpreting and describing transactions from T-accounts  
A1 

Use information from the T-accounts in Exercise 2-13 to prepare general journal entries for each of the seven transactions *a* through *g*.

**Exercise 2-14**  
Preparing general journal entries  
P1

**Exercise 2-15**

Computing net income

A sole proprietorship had the following assets and liabilities at the beginning and end of this year.

	Assets	Liabilities
Beginning of the year . . . . .	\$ 60,000	\$20,000
End of the year . . . . .	105,000	36,000

Determine the net income earned or net loss incurred by the business during the year for each of the following *separate* cases:

- a. Owner made no investments in the business and no withdrawals were made during the year.
- b. Owner made no investments in the business but withdrew \$1,250 cash per month for personal use.
- c. Owner made no withdrawals during the year but did invest an additional \$55,000 cash.
- d. Owner withdrew \$1,250 cash per month for personal use and invested an additional \$35,000 cash.

**Exercise 2-16**

Preparing an income statement

Carmen Camry operates a consulting firm called Help Today, which began operations on August 1. On August 31, the company's records show the following accounts and amounts for the month of August. Use this information to prepare an August income statement for the business.

Cash . . . . .	\$25,360	C. Camry, Withdrawals . . . . .	\$ 6,000
Accounts receivable . . . . .	22,360	Consulting fees earned . . . . .	27,000
Office supplies . . . . .	5,250	Rent expense . . . . .	9,550
Land . . . . .	44,000	Salaries expense . . . . .	5,600
Office equipment . . . . .	20,000	Telephone expense . . . . .	860
Accounts payable . . . . .	10,500	Miscellaneous expenses . . . . .	520

**Check** Net income, \$10,470

**Exercise 2-17**

Preparing a statement of owner's equity P3

**Check** End. Capital, \$106,470

Use the information in Exercise 2-16 to prepare an August statement of owner's equity for Help Today; begin with C. Camry, Capital, July 31 of \$0. (The owner invested \$102,000 cash in the company on August 1.)

**Exercise 2-18**

Preparing a balance sheet P3

Use the information in Exercise 2-16 (if completed, use the solution to Exercise 2-17) to prepare an August 31 balance sheet for Help Today.

**Exercise 2-19**

Analyzing changes in a company's equity

Compute the missing amount for each of the following separate companies *a* through *d*.

	A	B	C	D	E
1		(a)	(b)	(c)	(d)
2	Equity, December 31, 2014	\$ 0	\$ 0	\$ 0	\$ 0
3	Owner investments during the year	110,000	?	87,000	210,000
4	Owner withdrawals during the year	?	(47,000)	(10,000)	(55,000)
5	Net income (loss) for the year	22,000	90,000	(4,000)	?
6	Equity, December 31, 2015	<u>104,000</u>	<u>85,000</u>	?	<u>110,000</u>
7					

Posting errors are identified in the following table. In column (1), enter the amount of the difference between the two trial balance columns (debit and credit) due to the error. In column (2), identify the trial balance column (debit or credit) with the larger amount if they are not equal. In column (3), identify the account(s) affected by the error. In column (4), indicate the amount by which the account(s) in column (3) is under- or overstated. Item (a) is completed as an example.

**Exercise 2-20**  
Identifying effects of posting errors on the trial balance

A1 P2

	Description of Posting Error	(1) Difference between Debit and Credit Columns	(2) Column with the Larger Total	(3) Identify Account(s) Incorrectly Stated	(4) Amount that Account(s) Is Over- or Understated
a.	\$3,600 debit to Rent Expense is posted as a \$1,340 debit.	\$2,260	Credit	Rent Expense	Rent Expense understated \$2,260
b.	\$6,500 credit to Cash is posted twice as two credits to Cash.				
c.	\$10,900 debit to the Withdrawals account is debited to Owner's Capital.				
d.	\$2,050 debit to Prepaid Insurance is posted as a debit to Insurance Expense.				
e.	\$38,000 debit to Machinery is posted as a debit to Accounts Payable.				
f.	\$5,850 credit to Services Revenue is posted as a \$585 credit.				
g.	\$1,390 debit to Store Supplies is not posted.				

You are told the column totals in a trial balance are not equal. After careful analysis, you discover only one error. Specifically, a correctly journalized credit purchase of an automobile for \$18,950 is posted from the journal to the ledger with an \$18,950 debit to Automobiles and another \$18,950 debit to Accounts Payable. The Automobiles account has a debit balance of \$37,100 on the trial balance. Answer each of the following questions and compute the dollar amount of any misstatement.

**Exercise 2-21**  
Analyzing a trial balance error

A1 P2

- a. Is the Debit column total of the trial balance overstated, understated, or correctly stated?
- b. Is the Credit column total of the trial balance overstated, understated, or correctly stated?
- c. Is the Automobiles account balance overstated, understated, or correctly stated in the trial balance?
- d. Is the Accounts Payable account balance overstated, understated, or correctly stated in the trial balance?
- e. If the Debit column total of the trial balance is \$200,000 before correcting the error, what is the total of the Credit column before correction?

**Heineken N.V.**, which is a global brewer domiciled in the Netherlands, reports the following balance sheet accounts for the year ended December 31, 2013 (euro in millions). Prepare the balance sheet for this company as of December 31, 2013, following the usual IFRS format.

**Exercise 2-22**  
Preparing a balance sheet following IFRS

Current liabilities . . . . .	€ 8,003	Noncurrent liabilities . . . . .	€12,978
Current assets . . . . .	5,495	Noncurrent assets . . . . .	27,842
Total equity . . . . .	12,356		

- a. Calculate the debt ratio and the return on assets using the year-end information for each of the following six separate companies (\$ thousands).

**Exercise 2-23**  
Interpreting the debt ratio and return on assets

1	Case	Assets	Liabilities	Average Assets	Net Income
2	Company 1	\$90,500	\$11,765	\$100,000	\$20,000
3	Company 2	64,000	46,720	40,000	3,800
4	Company 3	32,500	26,650	50,000	650
5	Company 4	147,000	55,860	200,000	21,000
6	Company 5	92,000	31,280	40,000	7,520
7	Company 6	104,500	52,250	80,000	12,000
8					

- b. Of the six companies, which business relies most heavily on creditor financing?
- c. Of the six companies, which business relies most heavily on equity financing?
- d. Which two companies indicate the greatest risk?
- e. Which two companies earn the highest return on assets?
- f. Which one company would investors likely prefer based on the risk-return relation?

## PROBLEM SET A

### Problem 2-1A

Preparing and posting journal entries; preparing a trial balance

C3 C4 A1 P1 P2

Karla Tanner opens a web consulting business called Linkworks and completes the following transactions in its first month of operations.

- April
- 1 Tanner invests \$80,000 cash along with office equipment valued at \$26,000 in the company.
  - 2 The company prepaid \$9,000 cash for twelve months' rent for office space. (*Hint: Debit Prepaid Rent for \$9,000.*)
  - 3 The company made credit purchases for \$8,000 in office equipment and \$3,600 in office supplies. Payment is due within 10 days.
  - 6 The company completed services for a client and immediately received \$4,000 cash.
  - 9 The company completed a \$6,000 project for a client, who must pay within 30 days.
  - 13 The company paid \$11,600 cash to settle the account payable created on April 3.
  - 19 The company paid \$2,400 cash for the premium on a 12-month insurance policy. (*Hint: Debit Prepaid Insurance for \$2,400.*)
  - 22 The company received \$4,400 cash as partial payment for the work completed on April 9.
  - 25 The company completed work for another client for \$2,890 on credit.
  - 28 Tanner withdrew \$5,500 cash from the company for personal use.
  - 29 The company purchased \$600 of additional office supplies on credit.
  - 30 The company paid \$435 cash for this month's utility bill.

### Required

1. Prepare general journal entries to record these transactions (use account titles listed in part 2).
2. Open the following ledger accounts—their account numbers are in parentheses (use the balance column format): Cash (101); Accounts Receivable (106); Office Supplies (124); Prepaid Insurance (128); Prepaid Rent (131); Office Equipment (163); Accounts Payable (201); K. Tanner, Capital (301); K. Tanner, Withdrawals (302); Services Revenue (403); and Utilities Expense (690). Post journal entries from part 1 to the ledger accounts and enter the balance after each posting.
3. Prepare a trial balance as of April 30.

**Check** (2) Ending balances: Cash, \$59,465; Accounts Receivable, \$4,490; Accounts Payable, \$600

(3) Total debits, \$119,490

### Problem 2-2A

Preparing and posting journal entries; preparing a trial balance

C3 C4 A1 P1 P2

Aracel Engineering completed the following transactions in the month of June.

- a. Jenna Aracel, the owner, invested \$100,000 cash, office equipment with a value of \$5,000, and \$60,000 of drafting equipment to launch the company.
- b. The company purchased land worth \$49,000 for an office by paying \$6,300 cash and signing a long-term note payable for \$42,700.
- c. The company purchased a portable building with \$55,000 cash and moved it onto the land acquired in *b*.
- d. The company paid \$3,000 cash for the premium on an 18-month insurance policy.
- e. The company completed and delivered a set of plans for a client and collected \$6,200 cash.
- f. The company purchased \$20,000 of additional drafting equipment by paying \$9,500 cash and signing a long-term note payable for \$10,500.
- g. The company completed \$14,000 of engineering services for a client. This amount is to be received in 30 days.
- h. The company purchased \$1,150 of additional office equipment on credit.
- i. The company completed engineering services for \$22,000 on credit.
- j. The company received a bill for rent of equipment that was used on a recently completed job. The \$1,333 rent cost must be paid within 30 days.
- k. The company collected \$7,000 cash in partial payment from the client described in transaction *g*.
  - l. The company paid \$1,200 cash for wages to a drafting assistant.
- m. The company paid \$1,150 cash to settle the account payable created in transaction *h*.
- n. The company paid \$925 cash for minor maintenance of its drafting equipment.

- o. Jenna Aracel withdrew \$9,480 cash from the company for personal use.
- p. The company paid \$1,200 cash for wages to a drafting assistant.
- q. The company paid \$2,500 cash for advertisements on the web during June.

**Required**

1. Prepare general journal entries to record these transactions (use the account titles listed in part 2).
2. Open the following ledger accounts—their account numbers are in parentheses (use the balance column format): Cash (101); Accounts Receivable (106); Prepaid Insurance (108); Office Equipment (163); Drafting Equipment (164); Building (170); Land (172); Accounts Payable (201); Notes Payable (250); J. Aracel, Capital (301); J. Aracel, Withdrawals (302); Engineering Fees Earned (402); Wages Expense (601); Equipment Rental Expense (602); Advertising Expense (603); and Repairs Expense (604). Post the journal entries from part 1 to the accounts and enter the balance after each posting.
3. Prepare a trial balance as of the end of June.

**Check** (2) Ending balances: Cash, \$22,945; Accounts Receivable, \$29,000; Accounts Payable, \$1,333

(3) Trial balance totals, \$261,733

Denzel Brooks opens a web consulting business called Venture Consultants and completes the following transactions in March.

- March
- 1 Brooks invested \$150,000 cash along with \$22,000 in office equipment in the company.
  - 2 The company prepaid \$6,000 cash for six months' rent for an office. (*Hint*: Debit Prepaid Rent for \$6,000.)
  - 3 The company made credit purchases of office equipment for \$3,000 and office supplies for \$1,200. Payment is due within 10 days.
  - 6 The company completed services for a client and immediately received \$4,000 cash.
  - 9 The company completed a \$7,500 project for a client, who must pay within 30 days.
  - 12 The company paid \$4,200 cash to settle the account payable created on March 3.
  - 19 The company paid \$5,000 cash for the premium on a 12-month insurance policy. (*Hint*: Debit Prepaid Insurance for \$5,000.)
  - 22 The company received \$3,500 cash as partial payment for the work completed on March 9.
  - 25 The company completed work for another client for \$3,820 on credit.
  - 29 Brooks withdrew \$5,100 cash from the company for personal use.
  - 30 The company purchased \$600 of additional office supplies on credit.
  - 31 The company paid \$500 cash for this month's utility bill.

**Problem 2-3A**

Preparing and posting journal entries; preparing a trial balance

C3 C4 A1 P1 P2

**Required**

1. Prepare general journal entries to record these transactions (use the account titles listed in part 2).
2. Open the following ledger accounts—their account numbers are in parentheses (use the balance column format): Cash (101); Accounts Receivable (106); Office Supplies (124); Prepaid Insurance (128); Prepaid Rent (131); Office Equipment (163); Accounts Payable (201); D. Brooks, Capital (301); D. Brooks, Withdrawals (302); Services Revenue (403); and Utilities Expense (690). Post the journal entries from part 1 to the ledger accounts and enter the balance after each posting.
3. Prepare a trial balance as of the end of March.

**Check** (2) Ending balances: Cash, \$136,700; Accounts Receivable, \$7,820; Accounts Payable, \$600

(3) Total debits, \$187,920

Business transactions completed by Hannah Venedict during the month of September are as follows.

- a. Venedict invested \$60,000 cash along with office equipment valued at \$25,000 in a new sole proprietorship named HV Consulting.
- b. The company purchased land valued at \$40,000 and a building valued at \$160,000. The purchase is paid with \$30,000 cash and a long-term note payable for \$170,000.
- c. The company purchased \$2,000 of office supplies on credit.
- d. Venedict invested her personal automobile in the company. The automobile has a value of \$16,500 and is to be used exclusively in the business.
- e. The company purchased \$5,600 of additional office equipment on credit.
- f. The company paid \$1,800 cash salary to an assistant.
- g. The company provided services to a client and collected \$8,000 cash.
- h. The company paid \$635 cash for this month's utilities.
- i. The company paid \$2,000 cash to settle the account payable created in transaction c.
- j. The company purchased \$20,300 of new office equipment by paying \$20,300 cash.

**Problem 2-4A**

Recording transactions; posting to ledger; preparing a trial balance

C3 A1 P1 P2

- k. The company completed \$6,250 of services for a client, who must pay within 30 days.
- l. The company paid \$1,800 cash salary to an assistant.
- m. The company received \$4,000 cash in partial payment on the receivable created in transaction k.
- n. Venedict withdrew \$2,800 cash from the company for personal use.

**Required**

1. Prepare general journal entries to record these transactions (use account titles listed in part 2).
2. Open the following ledger accounts—their account numbers are in parentheses (use the balance column format): Cash (101); Accounts Receivable (106); Office Supplies (108); Office Equipment (163); Automobiles (164); Building (170); Land (172); Accounts Payable (201); Notes Payable (250); H. Venedict, Capital (301); H. Venedict, Withdrawals (302); Fees Earned (402); Salaries Expense (601); and Utilities Expense (602). Post the journal entries from part 1 to the ledger accounts and enter the balance after each posting.
3. Prepare a trial balance as of the end of September.

**Check** (2) Ending balances: Cash, \$12,665; Office Equipment, \$50,900

(3) Trial balance totals, \$291,350

**Problem 2-5A**

Computing net income from equity analysis, preparing a balance sheet, and computing the debt ratio

C2 A1 A2 P3 

The accounting records of Nettle Distribution show the following assets and liabilities as of December 31, 2014 and 2015.

December 31	2014	2015
Cash .....	\$ 64,300	\$ 15,640
Accounts receivable .....	26,240	19,390
Office supplies .....	3,160	1,960
Office equipment .....	44,000	44,000
Trucks .....	148,000	157,000
Building .....	0	80,000
Land .....	0	60,000
Accounts payable .....	3,500	33,500
Note payable .....	0	40,000

Late in December 2015, the business purchased a small office building and land for \$140,000. It paid \$100,000 cash toward the purchase and a \$40,000 note payable was signed for the balance. Mr. Nettle had to invest \$35,000 cash in the business to enable it to pay the \$100,000 cash. Mr. Nettle withdraws \$3,000 cash per month for personal use.

**Required**

1. Prepare balance sheets for the business as of December 31, 2014 and 2015. (*Hint:* Report only total equity on the balance sheet and remember that total equity equals the difference between assets and liabilities.)
2. By comparing equity amounts from the balance sheets and using the additional information presented in this problem, prepare a calculation to show how much net income was earned by the business during 2015.
3. Compute the 2015 year-end debt ratio (in percent and rounded to one decimal).

**Check** (2) Net income, \$23,290

(3) Debt ratio, 19.4%

**Problem 2-6A**

Analyzing account balances and reconstructing transactions

C1 C3 A1 P2 

Yi Min started an engineering firm called Min Engineering. He began operations and completed seven transactions in May, which included his initial investment of \$18,000 cash. After those seven transactions, the ledger included the following accounts with normal balances.

Cash .....	\$37,641
Office supplies .....	890
Prepaid insurance .....	4,600
Office equipment .....	12,900
Accounts payable .....	12,900
Y. Min, Capital .....	18,000
Y. Min, Withdrawals .....	3,329
Engineering fees earned .....	36,000
Rent expense .....	7,540

**Required**

1. Prepare a trial balance for this business as of the end of May.

**Check** (1) Trial balance totals, \$66,900

**Analysis Components**

2. Analyze the accounts and their balances and prepare a list that describes each of the seven most likely transactions and their amounts.
3. Prepare a report of cash received and cash paid showing how the seven transactions in part 2 yield the \$37,641 ending Cash balance.

(3) Cash paid, \$16,359

Humble Management Services opens for business and completes these transactions in September.

- Sept. 1 Henry Humble, the owner, invests \$38,000 cash along with office equipment valued at \$15,000 in the company.
- 2 The company prepaid \$9,000 cash for 12 months' rent for office space. (*Hint:* Debit Prepaid Rent for \$9,000.)
- 4 The company made credit purchases for \$8,000 in office equipment and \$2,400 in office supplies. Payment is due within 10 days.
- 8 The company completed work for a client and immediately received \$3,280 cash.
- 12 The company completed a \$15,400 project for a client, who must pay within 30 days.
- 13 The company paid \$10,400 cash to settle the payable created on September 4.
- 19 The company paid \$1,900 cash for the premium on an 18-month insurance policy. (*Hint:* Debit Prepaid Insurance for \$1,900.)
- 22 The company received \$7,700 cash as partial payment for the work completed on September 12.
- 24 The company completed work for another client for \$2,100 on credit.
- 28 Henry Humble withdrew \$5,300 cash from the company for personal use.
- 29 The company purchased \$550 of additional office supplies on credit.
- 30 The company paid \$860 cash for this month's utility bill.

**PROBLEM SET B****Problem 2-1B**

Preparing and posting journal entries; preparing a trial balance

C3 C4 A1 P1 P2

**Required**

1. Prepare general journal entries to record these transactions (use account titles listed in part 2).
2. Open the following ledger accounts—their account numbers are in parentheses (use the balance column format): Cash (101); Accounts Receivable (106); Office Supplies (124); Prepaid Insurance (128); Prepaid Rent (131); Office Equipment (163); Accounts Payable (201); H. Humble, Capital (301); H. Humble, Withdrawals (302); Services Revenue (401); and Utilities Expense (690). Post journal entries from part 1 to the ledger accounts and enter the balance after each posting.
3. Prepare a trial balance as of the end of September.

**Check** (2) Ending balances: Cash, \$21,520; Accounts Receivable, \$9,800; Accounts Payable, \$550

(3) Total debits, \$74,330

At the beginning of April, Bernadette Grechus launched a custom computer solutions company called Softworks. The company had the following transactions during April.

- a. Bernadette Grechus invested \$65,000 cash, office equipment with a value of \$5,750, and \$30,000 of computer equipment in the company.
- b. The company purchased land worth \$22,000 for an office by paying \$5,000 cash and signing a long-term note payable for \$17,000.
- c. The company purchased a portable building with \$34,500 cash and moved it onto the land acquired in *b*.
- d. The company paid \$5,000 cash for the premium on a two-year insurance policy.
- e. The company provided services to a client and immediately collected \$4,600 cash.
- f. The company purchased \$4,500 of additional computer equipment by paying \$800 cash and signing a long-term note payable for \$3,700.
- g. The company completed \$4,250 of services for a client. This amount is to be received within 30 days.
- h. The company purchased \$950 of additional office equipment on credit.
- i. The company completed client services for \$10,200 on credit.
- j. The company received a bill for rent of a computer testing device that was used on a recently completed job. The \$580 rent cost must be paid within 30 days.
- k. The company collected \$5,100 cash in partial payment from the client described in transaction *i*.
- l. The company paid \$1,800 cash for wages to an assistant.

**Problem 2-2B**

Preparing and posting journal entries; preparing a trial balance

C3 C4 A1 P1 P2

- m. The company paid \$950 cash to settle the payable created in transaction *h*.
- n. The company paid \$608 cash for minor maintenance of the company's computer equipment.
- o. B. Grechus withdrew \$6,230 cash from the company for personal use.
- p. The company paid \$1,800 cash for wages to an assistant.
- q. The company paid \$750 cash for advertisements on the web during April.

**Required**

1. Prepare general journal entries to record these transactions (use account titles listed in part 2).
2. Open the following ledger accounts—their account numbers are in parentheses (use the balance column format): Cash (101); Accounts Receivable (106); Prepaid Insurance (108); Office Equipment (163); Computer Equipment (164); Building (170); Land (172); Accounts Payable (201); Notes Payable (250); B. Grechus, Capital (301); B. Grechus, Withdrawals (302); Fees Earned (402); Wages Expense (601); Computer Rental Expense (602); Advertising Expense (603); and Repairs Expense (604). Post the journal entries from part 1 to the accounts and enter the balance after each posting.
3. Prepare a trial balance as of the end of April.

**Check** (2) Ending balances: Cash, \$17,262; Accounts Receivable, \$9,350; Accounts Payable, \$580

(3) Trial balance totals, \$141,080

C3 C4 A1 P1 P2

Zucker Management Services opens for business and completes these transactions in November.

- Nov. 1 Matt Zucker, the owner, invested \$30,000 cash along with \$15,000 of office equipment in the company.
- 2 The company prepaid \$4,500 cash for six months' rent for an office. (*Hint*: Debit Prepaid Rent for \$4,500.)
- 4 The company made credit purchases of office equipment for \$2,500 and of office supplies for \$600. Payment is due within 10 days.
- 8 The company completed work for a client and immediately received \$3,400 cash.
- 12 The company completed a \$10,200 project for a client, who must pay within 30 days.
- 13 The company paid \$3,100 cash to settle the payable created on November 4.
- 19 The company paid \$1,800 cash for the premium on a 24-month insurance policy.
- 22 The company received \$5,200 cash as partial payment for the work completed on November 12.
- 24 The company completed work for another client for \$1,750 on credit.
- 28 M. Zucker withdrew \$5,300 cash from the company for personal use.
- 29 The company purchased \$249 of additional office supplies on credit.
- 30 The company paid \$831 cash for this month's utility bill.

**Required**

1. Prepare general journal entries to record these transactions (use account titles listed in part 2).
2. Open the following ledger accounts—their account numbers are in parentheses (use the balance column format): Cash (101); Accounts Receivable (106); Office Supplies (124); Prepaid Insurance (128); Prepaid Rent (131); Office Equipment (163); Accounts Payable (201); M. Zucker, Capital (301); M. Zucker, Withdrawals (302); Services Revenue (403); and Utilities Expense (690). Post the journal entries from part 1 to the ledger accounts and enter the balance after each posting.
3. Prepare a trial balance as of the end of November.

**Check** (2) Ending balances: Cash, \$23,069; Accounts Receivable, \$6,750; Accounts Payable, \$249

(3) Total debits, \$60,599

**Problem 2-4B**

Recording transactions; posting to ledger; preparing a trial balance

C3 A1 P1 P2

Nuncio Consulting completed the following transactions during June.

- a. Armand Nuncio, the owner, invested \$35,000 cash along with office equipment valued at \$11,000 in the new company.
- b. The company purchased land valued at \$7,500 and a building valued at \$40,000. The purchase is paid with \$15,000 cash and a long-term note payable for \$32,500.
- c. The company purchased \$500 of office supplies on credit.
- d. A. Nuncio invested his personal automobile in the company. The automobile has a value of \$8,000 and is to be used exclusively in the business.
- e. The company purchased \$1,200 of additional office equipment on credit.
- f. The company paid \$1,000 cash salary to an assistant.
- g. The company provided services to a client and collected \$3,200 cash.
- h. The company paid \$540 cash for this month's utilities.
- i. The company paid \$500 cash to settle the payable created in transaction *c*.

- j. The company purchased \$3,400 of new office equipment by paying \$3,400 cash.
- k. The company completed \$4,200 of services for a client, who must pay within 30 days.
- l. The company paid \$1,000 cash salary to an assistant.
- m. The company received \$2,200 cash in partial payment on the receivable created in transaction k.
- n. A. Nuncio withdrew \$1,100 cash from the company for personal use.

**Required**

- Prepare general journal entries to record these transactions (use account titles listed in part 2).
- Open the following ledger accounts—their account numbers are in parentheses (use the balance column format): Cash (101); Accounts Receivable (106); Office Supplies (108); Office Equipment (163); Automobiles (164); Building (170); Land (172); Accounts Payable (201); Notes Payable (250); A. Nuncio, Capital (301); A. Nuncio, Withdrawals (302); Fees Earned (402); Salaries Expense (601); and Utilities Expense (602). Post the journal entries from part 1 to the ledger accounts and enter the balance after each posting.
- Prepare a trial balance as of the end of June.

**Check** (2) Ending balances: Cash, \$17,860; Office Equipment, \$15,600

(3) Trial balance totals, \$95,100

The accounting records of Tama Co. show the following assets and liabilities as of December 31, 2014 and 2015.

December 31	2014	2015
Cash .....	\$20,000	\$ 5,000
Accounts receivable .....	35,000	25,000
Office supplies .....	8,000	13,500
Office equipment .....	40,000	40,000
Machinery .....	28,500	28,500
Building .....	0	250,000
Land .....	0	50,000
Accounts payable .....	4,000	12,000
Note payable .....	0	250,000

Late in December 2015, the business purchased a small office building and land for \$300,000. It paid \$50,000 cash toward the purchase and a \$250,000 note payable was signed for the balance. Joe Tama, the owner, had to invest an additional \$15,000 cash to enable it to pay the \$50,000 cash toward the purchase. The owner withdraws \$250 cash per month for personal use.

**Required**

- Prepare balance sheets for the business as of December 31, 2014 and 2015. (*Hint:* Report only total equity on the balance sheet and remember that total equity equals the difference between assets and liabilities.)
- By comparing equity amounts from the balance sheets and using the additional information presented in the problem, prepare a calculation to show how much net income was earned by the business during 2015.
- Calculate the December 31, 2015, debt ratio (in percent and rounded to one decimal).

1. Prepare a trial balance for this business as of the end of April.

**Analysis Component**

2. Analyze the accounts and their balances and prepare a list that describes each of the seven most likely transactions and their amounts.
3. Prepare a report of cash received and cash paid showing how the seven transactions in part 2 yield the \$19,982 ending Cash balance.

**SERIAL PROBLEM**

Business Solutions

A1 P1 P2

(This serial problem started in Chapter 1 and continues through most of the chapters. If the Chapter 1 segment was not completed, the problem can begin at this point. It is helpful, but not necessary, to use the Working Papers that accompany this book.)

**SP 2** On October 1, 2015, Santana Rey launched a computer services company called **Business Solutions**, which provides consulting services, computer system installations, and custom program development. Rey adopts the calendar year for reporting purposes and expects to prepare the company’s first set of financial statements on December 31, 2015. The company’s initial chart of accounts follows.

Account	No.	Account	No.
Cash .....	101	S. Rey, Capital .....	301
Accounts Receivable .....	106	S. Rey, Withdrawals .....	302
Computer Supplies .....	126	Computer Services Revenue .....	403
Prepaid Insurance .....	128	Wages Expense .....	623
Prepaid Rent .....	131	Advertising Expense .....	655
Office Equipment .....	163	Mileage Expense .....	676
Computer Equipment .....	167	Miscellaneous Expenses .....	677
Accounts Payable .....	201	Repairs Expense—Computer .....	684

**Required**

1. Prepare journal entries to record each of the following transactions for Business Solutions.

- Oct. 1 S. Rey invested \$45,000 cash, a \$20,000 computer system, and \$8,000 of office equipment in the company.
- 2 The company paid \$3,300 cash for four months’ rent. (*Hint:* Debit Prepaid Rent for \$3,300.)
- 3 The company purchased \$1,420 of computer supplies on credit from Harris Office Products.
- 5 The company paid \$2,220 cash for one year’s premium on a property and liability insurance policy. (*Hint:* Debit Prepaid Insurance for \$2,220.)
- 6 The company billed Easy Leasing \$4,800 for services performed in installing a new web server.
- 8 The company paid \$1,420 cash for the computer supplies purchased from Harris Office Products on October 3.
- 10 The company hired Lyn Addie as a part-time assistant for \$125 per day, as needed.
- 12 The company billed Easy Leasing another \$1,400 for services performed.
- 15 The company received \$4,800 cash from Easy Leasing as partial payment on its account.
- 17 The company paid \$805 cash to repair computer equipment that was damaged when moving it.
- 20 The company paid \$1,728 cash for advertisements published in the local newspaper.
- 22 The company received \$1,400 cash from Easy Leasing on its account.
- 28 The company billed IFM Company \$5,208 for services performed.
- 31 The company paid \$875 cash for Lyn Addie’s wages for seven days’ work.
- 31 S. Rey withdrew \$3,600 cash from the company for personal use.
- Nov. 1 The company reimbursed S. Rey in cash for business automobile mileage allowance (Rey logged 1,000 miles at \$0.32 per mile).
- 2 The company received \$4,633 cash from Liu Corporation for computer services performed.
- 5 The company purchased computer supplies for \$1,125 cash from Harris Office Products.
- 8 The company billed Gomez Co. \$5,668 for services performed.
- 13 The company received notification from Alex’s Engineering Co. that Business Solutions’ bid of \$3,950 for an upcoming project is accepted.
- 18 The company received \$2,208 cash from IFM Company as partial payment of the October 28 bill.
- 22 The company donated \$250 cash to the United Way in the company’s name.

- 24 The company completed work for Alex’s Engineering Co. and sent it a bill for \$3,950.
  - 25 The company sent another bill to IFM Company for the past-due amount of \$3,000.
  - 28 The company reimbursed S. Rey in cash for business automobile mileage (1,200 miles at \$0.32 per mile).
  - 30 The company paid \$1,750 cash for Lyn Addie’s wages for 14 days’ work.
  - 30 S. Rey withdrew \$2,000 cash from the company for personal use.
2. Open ledger accounts (in balance column format) and post the journal entries from part 1 to them.
  3. Prepare a trial balance as of the end of November.

**Check** (2) Cash, Nov. 30 bal., \$38,264  
 (3) Trial bal. totals, \$98,659

Using transactions from the following assignments, prepare journal entries for each transaction and identify the financial statement impact of each entry. The financial statements are automatically generated based on the journal entries recorded.

Available only in Connect Plus

**Beyond the Numbers**

**BTN 2-1** Refer to **Apple’s** financial statements in Appendix A for the following questions.

**Required**

1. What amount of total liabilities does it report for each of the fiscal years ended September 28, 2013, and September 29, 2012?
2. What amount of total assets does it report for each of the fiscal years ended September 28, 2013, and September 29, 2012?
3. Compute its debt ratio for each of the fiscal years ended September 28, 2013, and September 29, 2012. (Report ratio in percent and round it to one decimal.)
4. In which fiscal year did it employ more financial leverage (September 28, 2013, or September 29, 2012)? Explain.

**Fast Forward**

5. Access its financial statements (10-K report) for a fiscal year ending after September 28, 2013, from its website ([Apple.com](http://Apple.com)) or the SEC’s EDGAR database ([www.SEC.gov](http://www.SEC.gov)). Recompute its debt ratio for any subsequent year’s data and compare it with the debt ratio for 2013 and 2012.

	Current Year	Prior Year	Current Year	Prior Year
Total liabilities . . . . .	\$ 83,451	\$ 57,854	\$ 23,611	\$22,083
Total assets . . . . .	207,000	176,064	110,920	93,798

**COMPARATIVE ANALYSIS**

A1 A2

**APPLE**

**GOOGLE**

1. What is the debt ratio for Apple in the current year and for the prior year?
2. What is the debt ratio for Google in the current year and for the prior year?
3. Which of the two companies has the higher degree of financial leverage? What does this imply?

## ETHICS CHALLENGE

C1 

**BTN 2-3** Review the *Decision Ethics* case from the first part of this chapter involving the cashier. The guidance answer suggests that you should not comply with the assistant manager's request.

### Required

Propose and evaluate two other courses of action you might consider, and explain why.

## COMMUNICATING IN PRACTICE

C1 C2 A1 P3 

**BTN 2-4** Lila Corentine is an aspiring entrepreneur and your friend. She is having difficulty understanding the purposes of financial statements and how they fit together across time.

### Required

Write a one-page memorandum to Corentine explaining the purposes of the four financial statements and how they are linked across time.

## TAKING IT TO THE NET

A1  

**BTN 2-5** Access EDGAR online ([www.SEC.gov](http://www.SEC.gov)) and locate the 2013 10-K report of [Amazon.com](http://Amazon.com) (ticker AMZN) filed on January 30, 2014. Review its financial statements reported for years ended 2013, 2012, and 2011 to answer the following questions.

### Required

1. What are the amounts of its net income or net loss reported for each of these three years?
2. Does Amazon's operating activities provide cash or use cash for each of these three years?
3. If Amazon has a 2013 net income of \$274 million and 2013 operating cash flows of \$5,475 million, how is it possible that its cash balance at December 31, 2013, increases by only \$574 million relative to its balance at December 31, 2012?

## TEAMWORK IN ACTION

C1 C2 C4 A1

**BTN 2-6** The expanded accounting equation consists of assets, liabilities, capital, withdrawals, revenues, and expenses. It can be used to reveal insights into changes in a company's financial position.

### Required

1. Form *learning teams* of six (or more) members. Each team member must select one of the six components and each team must have at least one expert on each component: (a) assets, (b) liabilities, (c) capital, (d) withdrawals, (e) revenues, and (f) expenses.
2. Form *expert teams* of individuals who selected the same component in part 1. Expert teams are to draft a report that each expert will present to his or her learning team addressing the following:
  - a. Identify for its component the (i) increase and decrease side of the account and (ii) normal balance side of the account.
  - b. Describe a transaction, with amounts, that increases its component.
  - c. Using the transaction and amounts in (b), verify the equality of the accounting equation and then explain any effects on the income statement and statement of cash flows.
  - d. Describe a transaction, with amounts, that decreases its component.
  - e. Using the transaction and amounts in (d), verify the equality of the accounting equation and then explain any effects on the income statement and statement of cash flows.
3. Each expert should return to his/her learning team. In rotation, each member presents his/her expert team's report to the learning team. Team discussion is encouraged.

## ENTREPRENEURIAL DECISION

A1 A2 P3  

**BTN 2-7** Assume that Brittany Merrill Underwood of [Akola Project](http://Akola Project) plans on expanding her business to accommodate more product lines. She is considering financing her expansion in one of two ways: (1) contributing more of her own funds to the business or (2) borrowing the funds from a bank.

### Required

Identify at least two issues that Brittany should consider when trying to decide on the method for financing her expansion.

**BTN 2-8** Angel Martin is a young entrepreneur who operates Martin Music Services, offering singing lessons and instruction on musical instruments. Martin wishes to expand but needs a \$30,000 loan. The bank requests that Martin prepare a balance sheet and key financial ratios. Martin has not kept formal records but is able to provide the following accounts and their amounts as of December 31, 2015.

Cash . . . . .	\$ 3,600	Accounts Receivable . . . .	\$ 9,600	Prepaid Insurance . . . . .	\$ 1,500
Prepaid Rent . . . . .	9,400	Store Supplies . . . . .	6,600	Equipment . . . . .	50,000
Accounts Payable . . . . .	2,200	Unearned Lesson Fees . . . .	15,600	Total Equity* . . . . .	62,900
Annual net income . . . . .	40,000				

\*The total equity amount reflects all owner investments, withdrawals, revenues, and expenses as of December 31, 2015.

### Required

1. Prepare a balance sheet as of December 31, 2015, for Martin Music Services. (Report only the total equity amount on the balance sheet.)
2. Compute Martin's debt ratio and its return on assets (the latter ratio is defined in Chapter 1). Assume average assets equal its ending balance.
3. Do you believe the prospects of a \$30,000 bank loan are good? Why or why not?

**BTN 2-9** Obtain a recent copy of the most prominent newspaper distributed in your area. Research the classified section and prepare a report answering the following questions (attach relevant classified clippings to your report). Alternatively, you may want to search the web for the required information. One suitable website is **CareerOneStop** ([www.CareerOneStop.org](http://www.CareerOneStop.org)). For documentation, you should print copies of websites accessed.

1. Identify the number of listings for accounting positions and the various accounting job titles.
2. Identify the number of listings for other job titles, with examples, that require or prefer accounting knowledge/experience but are not specifically accounting positions.
3. Specify the salary range for the accounting and accounting-related positions if provided.
4. Indicate the job that appeals to you, the reason for its appeal, and its requirements.

**BTN 2-10** **Samsung** ([www.Samsung.com](http://www.Samsung.com)) is a market leader in high-tech electronics manufacturing and digital media, and it competes to some extent with both **Apple** and **Google**. Key financial ratios for the current fiscal year follow.

Key Figure	Samsung	Apple	Google
Return on assets . . . . .	15.4%	19.3%	12.6%
Debt ratio . . . . .	29.9%	40.3%	21.3%

### Required

1. Which company is most profitable according to its return on assets?
2. Which company is most risky according to the debt ratio?
3. Which company deserves increased investment based on a joint analysis of return on assets and the debt ratio? Explain.

## ENTREPRENEURIAL DECISION

# Adjusting Accounts and Preparing Financial Statements

## Chapter Preview

### TIMING AND REPORTING

- C1** Accounting period
- C2** Accrual vs. cash  
Recognizing revenues and expenses

### ADJUSTING ACCOUNTS

- C3** Types of adjustments
- P1** Adjustments—Illustrated
- A1** Adjustments—Summarized
- P2** Adjusted trial balance

### PREPARING FINANCIAL STATEMENTS

- P3** Financial statement preparation illustrated
- A2** Profit margin analysis

## Learning Objectives

### CONCEPTUAL

- C1** Explain the importance of periodic reporting and the time period assumption.
- C2** Explain accrual accounting and how it improves financial statements.
- C3** Identify the types of adjustments and their purpose.

### ANALYTICAL

- A1** Explain how accounting adjustments link to financial statements.
- A2** Compute profit margin and describe its use in analyzing company performance.

### PROCEDURAL

- P1** Prepare and explain adjusting entries.

- P2** Explain and prepare an adjusted trial balance.
- P3** Prepare financial statements from an adjusted trial balance.
- P4** *Appendix 3A*—Explain the alternatives in accounting for prepaids.

## Princess of Fashion

COSTA MESA, CA—Life would never be the same for Shannon Keith after she witnessed modern-day slavery. She was volunteering her time to work with women in a red-light area of India when she saw young girls sold into the sex trade by their families, orphans taken off the streets by pimps, and young mothers prostituting to feed their children. “I was exposed to the issue of human trafficking and forced prostitution,” explains Shannon. “I felt a deep calling and responsibility to bring my gifts to bear on this issue.”

That deep calling led Shannon to launch the **International Princess Project** ([Punjammies.com](http://Punjammies.com)), which aims to empower these girls and young mothers. Shannon quickly realized that a business solution was necessary for them to survive outside of brothels. Her idea was to set up an e-commerce site to sell pajamas, aka *punjamies*, which are made by the victims. Shannon began in a single room with six women who made 300 punjamies the first year. Today, she has three sewing centers staffed by nearly 200 women who make more than 20,000 punjamies a year.

Shannon explains how she set up an accounting system early on to account for all business activities, including cash, revenues, receivables, and payables. She also had to learn about the deferral and accrual of revenues and expenses.

Setting up a reliable accounting system was part of her success. Her website explains, “each woman not only receives a wage higher than fair trade along with housing options, medical care and, where applicable, education for her children,” but the women “are also part of a loving, restorative community of other women who were formerly trafficked.”

Financial reporting and analysis are tasks that Shannon emphasizes. She insists on timely and accurate accounting reports, but admits she is happily surprised with how business has blossomed. To achieve that growth, Shannon took time to understand accounting adjustments and their effects on business. “We’re poised to hit \$1 million in sales this year,” proclaims Shannon. Her commitment, however, is first and foremost to the women: “We have a highly traumatized workforce. They come to us with low skills. If their sewing isn’t that great, we’re not going to fire them. We’re going to find something else for them to do.”

It is the bigger picture that is important to Shannon. “I’m learning that social justice is not a cause, it’s a lifestyle and complete worldview,” explains Shannon. “My dream for the future would be to have my children live in a slave-free world, where every human life is valued and free.”

Sources: *International Princess Project website*, September 2014; *Orange County Register*, May 2012; *Crest*, February 2014.

## TIMING AND REPORTING

This section describes the importance of reporting accounting information at regular intervals and its impact for recording revenues and expenses.

### The Accounting Period

#### C1

Explain the importance of periodic reporting and the time period assumption.

The value of information is often linked to its timeliness. Useful information must reach decision makers frequently and promptly. To provide timely information, accounting systems prepare reports at regular intervals. This results in an accounting process impacted by the time period (or periodicity) assumption. The **time period assumption** presumes that an organization's activities can be divided into specific time periods such as a month, a three-month quarter, a six-month interval, or a year. Exhibit 3.1 shows various **accounting, or reporting, periods**. Most organizations use a year as their primary accounting period. Reports covering a one-year period are known as **annual financial statements**. Many organizations also prepare **interim financial statements** covering one, three, or six months of activity.

"Apple announces annual income of . . ."

#### EXHIBIT 3.1

Accounting Periods

C Flanigan/WireImage/Getty Images

The annual reporting period is not always a calendar year ending on December 31. An organization can adopt a **fiscal year** consisting of any 12 consecutive months. It is also acceptable to adopt an annual reporting period of 52 weeks. For example, **Gap's** fiscal year consistently ends the final week of January or the first week of February each year.

Companies with little seasonal variation in sales often choose the calendar year as their fiscal year. **Facebook, Inc.**, uses calendar year reporting. However, the financial statements of **The Kellogg Company** (the company that controls characters such as Tony the Tiger, Snap! Crackle! Pop!, and Keebler Elf) reflect a fiscal year that ends on the Saturday nearest December 31. Companies experiencing seasonal variations in sales often choose a **natural business year** end, which is when sales activities are at their lowest level for the year. The natural business year for retailers such as **Walmart, Target, and Macy's** usually ends around January 31, after the holiday season.

### Accrual Basis versus Cash Basis

#### C2

Explain accrual accounting and how it improves financial statements.

After external transactions and events are recorded, several accounts still need adjustments before their balances appear in financial statements. This need arises because internal transactions and events remain unrecorded. **Accrual basis accounting** uses the adjusting process to recognize revenues when earned and expenses when incurred (matched with revenues).

**Cash basis accounting** recognizes revenues when cash is received and records expenses when cash is paid. This means that cash basis net income for a period is the difference between cash receipts and cash payments. Cash basis accounting is not consistent with generally accepted accounting principles (neither U.S. GAAP nor IFRS).

It is commonly held that accrual accounting better reflects business performance than information about cash receipts and payments. Accrual accounting also increases the *comparability* of financial statements from one period to another. Yet cash basis accounting is useful for several business decisions—which is the reason companies must report a statement of cash flows.

To see the difference between these two accounting systems, let's consider FastForward's Prepaid Insurance account. FastForward paid \$2,400 for 24 months of insurance coverage that began on December 1, 2015. Accrual accounting requires that \$100 of insurance expense be reported each month, from December 2015 through November 2017. (This means expenses are \$100 in 2015, \$1,200 in 2016, and \$1,100 in 2017.) Exhibit 3.2 illustrates this allocation of insurance cost across these three years. Any unexpired premium is reported as a Prepaid Insurance asset on the accrual basis balance sheet.

**EXHIBIT 3.2**

Accrual Accounting for Allocating Prepaid Insurance to Expense

**Point:** Annual income statements for Exhibit 3.2 follow:  
**Accrual Basis**    2015    2016    2017  
 Revenues .....    \$    \$    \$    \$  
 Insur. exp. ....    \$100    \$1,200    \$1,100

Alternatively, a cash basis income statement for December 2015 reports insurance expense of \$2,400, as shown in Exhibit 3.3. The cash basis income statements for years 2016 and 2017 report no insurance expense. The cash basis balance sheet never reports an insurance asset because it is immediately expensed. This shows that cash basis income for 2015–2017 fails to match the cost of insurance with the insurance benefits received for those years and months.

**EXHIBIT 3.3**

Cash Accounting for Allocating Prepaid Insurance to Expense

**Point:** Annual income statements for Exhibit 3.3 follow:  
**Cash Basis**        2015    2016    2017  
 Revenues .....    \$    \$    \$    \$  
 Insur. exp. ....    \$2,400    \$0    \$0

**Recognizing Revenues and Expenses**

We use the time period assumption to divide a company's activities into specific time periods, but not all activities are complete when financial statements are prepared. Thus, adjustments often are required to get correct account balances.

We rely on two principles in the adjusting process: revenue recognition and expense recognition (the latter is often referred to as *matching*). Chapter 1 explained that the *revenue recognition principle* requires that revenue be recorded when earned, not before and not after. Most companies earn revenue when they provide services and products to customers. A major goal of the adjusting process is to have revenue recognized (reported) in the time period when it is earned. The **expense recognition** (or **matching**) **principle** aims to record expenses in the same accounting period as the revenues that are earned as a result of those expenses. This matching of expenses with the revenue benefits is a major part of the adjusting process.

Matching expenses with revenues often requires us to predict certain events. When we use financial statements, we must understand that they require estimates and therefore include measures that are not precise. **Walt Disney's** annual report explains that its production costs from movies, such as its *Pirates of the Caribbean* series, are matched to revenues based on a ratio of current revenues from the movie divided by its predicted total revenues.

**Point:** Recording revenue early overstates current-period revenue and income; recording it late understates current-period revenue and income.

**Point:** Recording expense early overstates current-period expense and understates current-period income; recording it late understates current-period expense and overstates current-period income.

**Decision Insight**

**Diamond Foods, Inc.**, a popular snack maker, was charged by the SEC in 2014 in an accounting scheme to falsify walnut costs to boost income. This alleged late expense recognition caused income to be overstated. The SEC further alleges that its former CFO misled Diamond's independent auditors by giving false and incomplete information to justify its accounting treatment. (For more details, see SEC release 2014-4 from January 9, 2014.) ■

QC1

**ADJUSTING ACCOUNTS**

Adjusting accounts is a 3-step process:

- Step 1:** Determine what the current account balance equals.
- Step 2:** Determine what the current account balance should equal.
- Step 3:** Record an adjusting entry to get from step 1 to step 2.

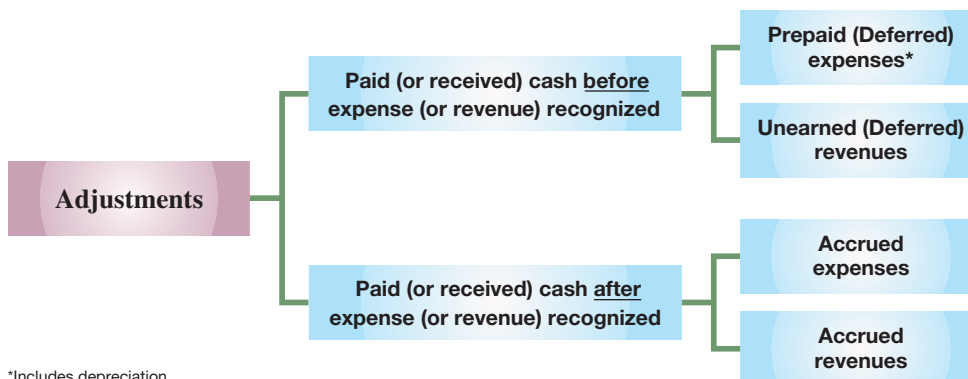

**C3** Identify the types of adjustments and their purpose.

**Framework for Adjustments**

Adjustments are necessary for transactions and events that extend over more than one period. It is helpful to group adjustments by the timing of cash receipt or cash payment in relation to the recognition of the related revenues or expenses. Exhibit 3.4 identifies four types of adjustments.

**EXHIBIT 3.4**

Types of Adjustments

\*Includes depreciation

**Point:** Source documents provide information for most daily transactions, and in many businesses the recordkeepers record them. Adjustments require more knowledge and are usually handled by senior accounting professionals.

The upper half of this exhibit shows prepaid expenses (including depreciation) and unearned revenues, which reflect transactions when cash is paid or received *before* a related expense or revenue is recognized. They are also called *deferrals* because the recognition of an expense (or revenue) is *deferred* until after the related cash is paid (or received). The lower half of this exhibit shows accrued expenses and accrued revenues, which reflect transactions when cash is paid or received *after* a related expense or revenue is recognized. Adjusting entries are necessary for each of these so that revenues, expenses, assets, and liabilities are correctly reported. Specifically, an **adjusting entry** is made at the end of an accounting period to reflect a transaction or event that is not yet recorded. Each adjusting entry affects one or more income statement accounts *and* one or more balance sheet accounts (but never the Cash account). The four types of adjusting entries follow:

Adjustment Type	Adjusting Entry Required	
	Balance Sheet Effect	Income Statement Effect
Prepaid expenses . . . . .	Cr. (decrease) Asset	Dr. (increase) Expense
Unearned revenues . . . . .	Dr. (decrease) Liability	Cr. (increase) Revenue
Accrued expenses . . . . .	Cr. (increase) Liability	Dr. (increase) Expense
Accrued revenues . . . . .	Dr. (increase) Asset	Cr. (increase) Revenue

## Prepaid (Deferred) Expenses

**Prepaid expenses** refer to items *paid for* in advance of receiving their benefits. Prepaid expenses are assets. When these assets are used, their costs become expenses. Adjusting entries for prepaids increase expenses and decrease assets as shown in the T-accounts of Exhibit 3.5. Such adjustments reflect transactions and events that use up prepaid expenses (including passage of time). To illustrate the accounting for prepaid expenses, we look at prepaid insurance, supplies, and depreciation. In each case we decrease an asset (balance sheet) account, and increase an expense (income statement) account.

## P1

Prepare and explain adjusting entries.

### EXHIBIT 3.5

Adjusting for Prepaid Expenses (decrease an asset and record an expense)

**Prepaid Insurance** We use our 3-step process for this and all accounting adjustments.

**Step 1:** We determine that the current balance of FastForward’s prepaid insurance is equal to its \$2,400 payment for 24 months of insurance benefits that began on December 1, 2015.

**Step 2:** With the passage of time, the benefits of the insurance gradually expire and a portion of the Prepaid Insurance asset becomes expense. For instance, one month’s insurance coverage expires by December 31, 2015. This expense is \$100, or 1/24 of \$2,400, which leaves \$2,300.

**Step 3:** The adjusting entry to record this expense and reduce the asset, along with T-account postings, follows:

**Insurance**

Dec. 6 Pay insurance premium and record asset

**Two-Year Insurance Policy**

Total cost is \$2,400

Monthly cost is \$100

Dec. 31 Coverage expires and record expense

Adjustment (a)		
Dec. 31	Insurance Expense .....	100
	Prepaid Insurance .....	100
	<i>To record first month's expired insurance.</i>	

$$\text{Assets} = \text{Liabilities} + \text{Equity}$$

$$-100 \qquad \qquad -100$$

Insurance Expense			Prepaid Insurance		
		637			128
Dec. 31	100		Dec. 6	2,400	Dec. 31
			Balance	2,300	100

**Explanation** After adjusting and posting, the \$100 balance in Insurance Expense and the \$2,300 balance in Prepaid Insurance are ready for reporting in financial statements. *Not* making the adjustment on or before December 31 would (1) understate expenses by \$100 and overstate net income by \$100 for the December income statement and (2) overstate both prepaid insurance (assets) and equity (because of net income) by \$100 in the December 31 balance sheet. (Exhibit 3.2 showed that 2016’s adjustments must transfer a total of \$1,200 from Prepaid Insurance to Insurance Expense, and 2017’s adjustments must transfer the remaining \$1,100 to Insurance Expense.) The following table highlights the December 31, 2015, adjustment for prepaid insurance.

**Point:** Many companies record adjusting entries only at the end of each year because of the time and cost necessary.

Before Adjustment	Adjustment	After Adjustment
<p><b>Prepaid Insurance = \$2,400</b></p> <p>Reports \$2,400 policy for 24-months’ coverage.</p>	<p><b>Deduct \$100 from Prepaid Insurance</b> <b>Add \$100 to Insurance Expense</b></p> <p>Record current month’s \$100 insurance expense and \$100 reduction in prepaid amount.</p>	<p><b>Prepaid Insurance = \$2,300</b></p> <p>Reports \$2,300 in coverage for remaining 23 months.</p>

**Supplies** Supplies are a prepaid expense requiring adjustment.

**Step 1:** FastForward purchased \$9,720 of supplies in December and some of them were used during this month. When financial statements are prepared at December 31, the cost of supplies used during December must be recognized.

**Supplies**

Dec. 2,6,26 Purchase supplies and record asset

Dec. 31 Supplies used and record expense

Assets = Liabilities + Equity  
 -1,050                      -1,050

**Step 2:** When FastForward computes (takes physical count of) its remaining unused supplies at December 31, it finds \$8,670 of supplies remaining of the \$9,720 total supplies. The \$1,050 difference between these two amounts is December’s supplies expense.

**Step 3:** The adjusting entry to record this expense and reduce the Supplies asset account, along with T-account postings, follows:

Supplies Expense		Supplies	
Dec. 31	1,050	Dec. 2	2,500
		6	7,100
		26	120
		Balance	8,670
	652		

Adjustment (b)	
Dec. 31	Supplies Expense ..... 1,050
	Supplies ..... 1,050
	To record supplies used.

**Explanation** The balance of the Supplies account is \$8,670 after posting—equaling the cost of the remaining supplies. *Not* making the adjustment on or before December 31 would (1) understate expenses by \$1,050 and overstate net income by \$1,050 for the December income statement and (2) overstate both supplies and equity (because of net income) by \$1,050 in the December 31 balance sheet. The following table highlights the adjustment for supplies.

Before Adjustment	Adjustment	After Adjustment
<b>Supplies = \$9,720</b>	<b>Deduct \$1,050 from Supplies</b> <b>Add \$1,050 to Supplies Expense</b>	<b>Supplies = \$8,670</b>
Reports \$9,720 in supplies.	Record \$1,050 in supplies used and \$1,050 as supplies expense.	Reports \$8,670 in supplies.

**Point:** We assume that prepaid and unearned items are recorded in balance sheet accounts. An alternative is to record them in income statement accounts; Appendix 3A discusses this alternative. The adjusted financial statements are identical.

**Other Prepaid Expenses** Other prepaid expenses, such as Prepaid Rent, are accounted for exactly as Insurance and Supplies are. We should note that some prepaid expenses are both paid for and fully used up within a single accounting period. One example is when a company pays monthly rent on the first day of each month. This payment creates a prepaid expense on the first day of each month that fully expires by the end of the month. In these special cases, we can record the cash paid with a debit to an expense account instead of an asset account. This practice is described more completely later in the chapter.

**Decision Maker**

**Investor** A small publishing company signs an aspiring Olympic gymnast to write a book. The company pays the gymnast \$500,000 to sign plus future book royalties. A note to the company’s financial statements says that “prepaid expenses include \$500,000 in author signing fees to be matched against future expected sales.” Is this accounting for the signing bonus acceptable? How does it affect your analysis? ■ [Answers follow the chapter’s Summary.]

**Point:** Plant assets are also called *Plant & Equipment*, or *Property, Plant & Equipment*.

**Point:** Depreciation does not necessarily measure decline in market value.

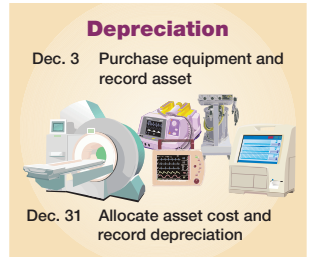

**Point:** An asset’s expected value at the end of its useful life is called *salvage value*.

**Depreciation** A special category of prepaid expenses is **plant assets**, which refers to long-term tangible assets used to produce and sell products and services. Plant assets are expected to provide benefits for more than one period. Examples of plant assets are buildings, machines, vehicles, and fixtures. All plant assets, with a general exception for land, eventually wear out or decline in usefulness. The costs of these assets are deferred but are gradually reported as expenses in the income statement over the assets’ useful lives (benefit periods). **Depreciation** is the process of allocating the costs of these assets over their expected useful lives. Depreciation expense is recorded with an adjusting entry similar to that for other prepaid expenses.

**Step 1:** Recall that FastForward purchased equipment for \$26,000 in early December to use in earning revenue. This equipment’s cost must be depreciated.

**Step 2:** The equipment is expected to have a useful life (benefit period) of five years and to be worth about \$8,000 at the end of five years. This means the *net* cost of this equipment over its useful life is \$18,000 (\$26,000 – \$8,000). We can use any of several methods to allocate this \$18,000 net cost to expense. FastForward uses a method called **straight-line depreciation**, which allocates equal amounts of the asset’s net cost to depreciation during its useful life. Dividing the \$18,000 net cost by the 60 months in the asset’s useful life gives a monthly cost of \$300 (\$18,000/60).

**Step 3:** The adjusting entry to record monthly depreciation expense, along with T-account postings, follows:

Dec. 31		<b>Adjustment (c)</b>			
		Depreciation Expense .....		300	
		Accumulated Depreciation—Equipment .....			300
		To record monthly equipment depreciation.			
				Assets = Liabilities + Equity –300 –300	
<b>Depreciation Expense—Equipment</b>		<b>Equipment</b>		<b>Accumulated Depreciation—Equipment</b>	
612		167		168	
<b>Dec. 31</b>	<b>300</b>	Dec. 3	26,000	<b>Dec. 31</b>	<b>300</b>

**Explanation** After posting the adjustment, the Equipment account (\$26,000) less its Accumulated Depreciation (\$300) account equals the \$25,700 net cost (made up of \$17,700 for the 47 remaining months in the benefit period plus the \$8,000 value at the end of that time). The \$300 balance in the Depreciation Expense account is reported in the December income statement. *Not* making the adjustment at December 31 would (1) understate expenses by \$300 and overstate net income by \$300 for the December income statement and (2) overstate both assets and equity (because of income) by \$300 in the December 31 balance sheet. The following table highlights the adjustment for depreciation.

Before Adjustment	Adjustment	After Adjustment
<b>Equipment, net = \$26,000</b>	<b>Deduct \$300 from Equipment, net</b>	<b>Equipment, net = \$25,700</b>
Reports \$26,000 in equipment.	<b>Add \$300 to Depreciation Expense</b>	Reports \$25,700 in equipment, net of accumulated depreciation.
	Record \$300 in depreciation and \$300 as accumulated depreciation, which is deducted from equipment.	

Accumulated depreciation is kept in a separate contra account. A **contra account** is an account linked with another account, it has an opposite normal balance, and it is reported as a subtraction from that other account’s balance. For instance, FastForward’s contra account of Accumulated Depreciation—Equipment is subtracted from the Equipment account in the balance sheet (see Exhibit 3.7). This contra account allows balance sheet readers to know both the full costs of assets and the total depreciation.

**Point:** Accumulated Depreciation has a normal credit balance; it decreases the asset's reported value.

<b>Equipment</b>		167
Dec. 3	26,000	

<b>Accumulated Depreciation—Equipment</b>		168
	Dec. 31	300
	Jan. 31	300
	Feb. 28	300
	Balance	<b>900</b>

**EXHIBIT 3.6**

Accounts after Three Months of Depreciation Adjustments

**Point:** The cost principle requires an asset to be initially recorded at acquisition cost. Depreciation causes the asset's book value (cost less accumulated depreciation) to decline over time.

**Point:** The net cost of equipment is also called the *depreciable basis*.

The title of the contra account, *Accumulated Depreciation*, reveals that this account includes total depreciation expense for all prior periods for which the asset was used. To illustrate, the Equipment and the Accumulated Depreciation accounts appear as in Exhibit 3.6 on February 28, 2016, after three months of adjusting entries. The \$900 balance in the Accumulated Depreciation account can be subtracted from its related \$26,000 asset cost. The difference (\$25,100) between these two balances is the cost of the asset that has not yet been depreciated. This difference is called the **book value**, or the *net amount*, which equals the asset's costs less its accumulated depreciation.

These account balances are reported in the assets section of the February 28 balance sheet in Exhibit 3.7.

**EXHIBIT 3.7**

Equipment and Accumulated Depreciation on February 28 Balance Sheet

Assets (at February 28, 2016)		
Cash		\$ _____
⋮		
<b>Equipment</b>	<b>\$26,000</b>	
<b>Less accumulated depreciation</b>	<b>900</b>	<b>25,100</b>

**NEED-TO-KNOW**

3-1

Prepaid Expenses

P1

For each separate case below, follow the three-step process for adjusting the prepaid asset account at December 31. Step 1: Determine what the current account balance equals. Step 2: Determine what the current account balance should equal. Step 3: Record the December 31 adjusting entry to get from step 1 to step 2. Assume no other adjusting entries are made during the year.

- 1. Prepaid Insurance.** The Prepaid Insurance account has a \$5,000 debit balance to start the year, and no insurance payments were made during the year. A review of insurance policies and payments shows that \$1,000 of unexpired insurance remains at its December 31 year-end.
- 2. Prepaid Rent.** On October 1 of the current year, the company prepaid \$12,000 for one year of rent for facilities being occupied from that day forward. The company debited Prepaid Rent and credited Cash for \$12,000. December 31 year-end statements must be prepared.
- 3. Supplies.** The Supplies account has a \$1,000 debit balance to start the year. Supplies of \$2,000 were purchased during the current year and debited to the Supplies account. A December 31 physical count shows \$500 of supplies remaining.
- 4. Accumulated Depreciation.** The company has only one fixed asset (equipment) that it purchased at the start of this year. That asset had cost \$38,000, had an estimated life of 10 years, and is expected to be valued at \$8,000 at the end of the 10-year life. December 31 year-end statements must be prepared.

**Solution**

- Step 1: Prepaid Insurance equals \$5,000 (before adjustment)  
Step 2: Prepaid Insurance should equal \$1,000 (the unexpired part)  
Step 3: Adjusting entry to get from step 1 to step 2

Dec. 31	Insurance Expense . . . . .	4,000	
	Prepaid Insurance . . . . .		4,000
	<i>To record insurance coverage that expired (\$5,000 – \$1,000).</i>		

- Step 1: Prepaid Rent equals \$12,000 (before adjustment)  
Step 2: Prepaid Rent should equal \$9,000 (the unexpired part)\*  
Step 3: Adjusting entry to get from step 1 to step 2

Dec. 31	Rent Expense . . . . .	3,000	
	Prepaid Rent . . . . .		3,000
	<i>To record prepaid rent that expired. *(\$12,000 – \$3,000 = \$9,000) where \$3,000 is from: (\$12,000/12 months) × 3 months</i>		

- 3. Step 1: Supplies equal \$3,000 (from \$1,000 + \$2,000; before adjustment)
- Step 2: Supplies should equal \$500 (what's left)
- Step 3: Adjusting entry to get from step 1 to step 2\*

Dec. 31	Supplies Expense .....	2,500	
	Supplies .....		2,500
	<i>To record supplies used. *\$1,000 + \$2,000 purchased – Supplies used = \$500 remaining</i>		

- 4. Step 1: Accumulated Depreciation equals \$0 (before adjustment)
- Step 2: Accumulated Depreciation should equal \$3,000 (after current period depreciation of \$3,000)\*
- Step 3: Adjusting entry to get from step 1 to step 2

Dec. 31	Depreciation Expense—Equipment .....	3,000	
	Accumulated Depreciation—Equipment .....		3,000
	<i>To record depreciation expense for the period. *(\$38,000 – \$8,000)/10 years</i>

QS 3-7, QS 3-8, QS 3-9

### Unearned (Deferred) Revenues

The term **unearned revenues** refers to cash received in advance of providing products and services. Unearned revenues, also called *deferred revenues*, are liabilities. When cash is accepted, an obligation to provide products or services is accepted. As products or services are provided, the liability decreases, and the unearned revenues become *earned* revenues. Adjusting entries for unearned items decrease the unearned (balance sheet) account, and increase the revenue (income statement) account, as shown in Exhibit 3.8.

**Point:** To *defer* is to postpone. We postpone reporting amounts received as revenues until they are earned.

#### EXHIBIT 3.8

Adjusting for Unearned Revenues (decrease a liability and record revenue)

An example of unearned revenues is from **Gannett Co., Inc.**, publisher of *USA TODAY*, which reports unexpired (unearned subscriptions) of \$224 million: “Revenue is recognized in the period in which it is earned (as newspapers are delivered).” Unearned revenues are nearly 25% of the current liabilities for Gannett. Another example comes from the **Boston Celtics**. When the Celtics receive cash from advance ticket sales and broadcast fees, they record it in an unearned revenue account called *Deferred Game Revenues*. The Celtics recognize this unearned revenue with adjusting entries on a game-by-game basis. Since the NBA regular season begins in October and ends in April, revenue recognition is mainly limited to this period. For a recent season, the Celtics’ quarterly revenues were \$0 million for July–September; \$34 million for October–December; \$48 million for January–March; and \$17 million for April–June.

Returning to FastForward, it also has unearned revenues. It agreed on December 26 to provide consulting services to a client for a fixed fee of \$3,000 for 60 days.

**Step 1:** On December 26, the client paid the 60-day fee in advance, covering the period December 27 to February 24. The entry to record the cash received in advance is

Dec. 26	Cash .....	3,000	
	Unearned Consulting Revenue .....		3,000
	<i>Received advance payment for services over the next 60 days.</i>		

Assets = Liabilities + Equity  
+3,000      +3,000

This advance payment increases cash and creates an obligation to do consulting work over the next 60 days (5 days this year and 55 days next year).

**Step 2:** As time passes, FastForward earns this payment through consulting. By December 31, it has provided five days’ service and earned 5/60 of the \$3,000 unearned revenue. This amounts to \$250 ( $\$3,000 \times 5/60$ ). The *revenue recognition principle* implies that \$250 of unearned revenue must be reported as revenue on the December income statement.

**Unearned Revenues**

Dec. 26 Cash received in advance and record liability

Dec. 31 Provided 5 days of services and record revenue

**Step 3:** The adjusting entry to reduce the liability account and recognize earned revenue, along with T-account postings, follows:

Assets = Liabilities + Equity  
 -250            +250

		Adjustment (d)	
Dec. 31	Unearned Consulting Revenue .....	250	
	Consulting Revenue .....		250
	<i>To record earned revenue that was received in advance (\$3,000 × 5/60).</i>		

Unearned Consulting Revenue		236	
Dec. 31	250	Dec. 26	3,000
		Balance	2,750

Consulting Revenue		403	
		Dec. 5	4,200
		12	1,600
		31	250
		Balance	6,050

**Explanation** The adjusting entry transfers \$250 from unearned revenue (a liability account) to a revenue account. *Not* making the adjustment (1) understates revenue and net income by \$250 in the December income statement and (2) overstates unearned revenue and understates equity by \$250 on the December 31 balance sheet. The following highlights the adjustment for unearned revenue.

Before Adjustment	Adjustment	After Adjustment
<b>Unearned Consulting Revenue = \$3,000</b>	<b>Deduct \$250 from Unearned Consulting Revenue</b> <b>Add \$250 to Consulting Revenue</b>	<b>Unearned Consulting Revenue = \$2,750</b>
Reports \$3,000 in unearned revenue for consulting services promised for 60 days (\$50 per day).	Record 5 days of earned consulting revenue, which is 5/60 of unearned amount.	Reports \$2,750 in unearned revenue for consulting services owed over next 55 days (55 days × \$50 = \$2,750).

Accounting for unearned revenues is crucial to many companies. For example, the **National Retail Federation** reports that gift card sales, which are unearned revenues for sellers, exceed \$20 billion annually. Gift cards are now the top selling holiday gift; roughly 60% of all gift givers planned to give at least one gift card within the next year (source: NRF website).

**NEED-TO-KNOW 3-2**

Unearned Revenues

P1

For each separate case below, follow the three-step process for adjusting the unearned revenue liability account at December 31. Step 1: Determine what the current account balance equals. Step 2: Determine what the current account balance should equal. Step 3: Record the December 31 adjusting entry to get from step 1 to step 2. *Assume no other adjusting entries are made during the year.*

- a. Unearned Rent Revenue.** The company collected \$24,000 rent in advance on September 1, debiting Cash and crediting Unearned Rent Revenue. The tenant was paying 12 months' rent in advance and occupancy began September 1.
- b. Unearned Services Revenue.** The company charges \$100 per month to spray a house for insects. A customer paid \$600 on November 1 in advance for six treatments, which was recorded with a debit to Cash and a credit to Unearned Services Revenue. At year-end, the company has applied two treatments for the customer.

**Solution**

- a.** Step 1: Unearned Rent Revenue equals \$24,000 (before adjustment)  
 Step 2: Unearned Rent Revenue should equal \$16,000 (current period earned revenue is \$8,000\*)  
 Step 3: Adjusting entry to get from step 1 to step 2

Dec. 31	Unearned Rent Revenue .....	8,000	
	Rent Revenue .....		8,000
	<i>To record earned portion of rent received in advance.</i>		
	<i>*(\$24,000/12 months) × 4 months' rental usage</i>		

- b. Step 1: Unearned Services Revenue equals \$600 (before adjustment)
- Step 2: Unearned Services Revenue should equal \$400 (current period earned revenue is \$200\*)
- Step 3: Adjusting entry to get from step 1 to step 2

Dec. 31	Unearned Services Revenue.....	200	
	Services Revenue .....		200
	<i>To record earned portion of revenue received in advance.</i>		
	<i>*\$100 × 2 treatments = Services revenue</i>		

Do More: QS 3-10, QS 3-11

## Accrued Expenses

**Accrued expenses** refer to costs that are incurred in a period but are both unpaid and unrecorded. Accrued expenses must be reported on the income statement for the period when incurred. Adjusting entries for recording accrued expenses increase the expense (income statement) account, and increase a liability (balance sheet) account, as shown in Exhibit 3.9. This adjustment recognizes expenses incurred in a period but not yet paid. Common examples of accrued expenses are salaries, interest, rent, and taxes. We use salaries and interest to show how to adjust accounts for accrued expenses.

**Point:** Accrued expenses are also called *accrued liabilities*.

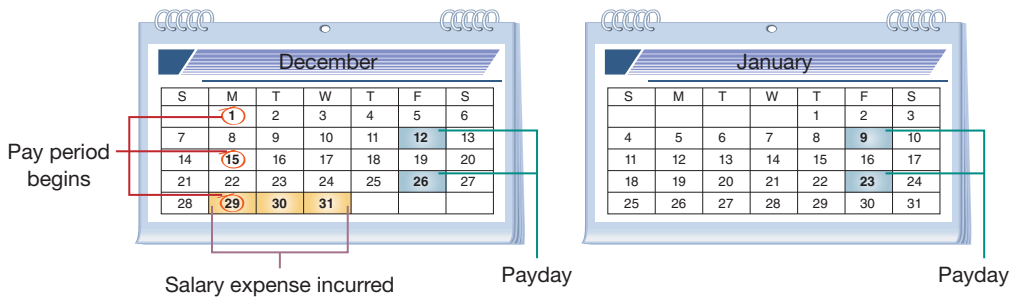

### EXHIBIT 3.9

Adjusting for Accrued Expenses (increase a liability and record an expense)

**Accrued Salaries Expense** FastForward’s employee earns \$70 per day, or \$350 for a five-day workweek beginning on Monday and ending on Friday.

**Step 1:** Its employee is paid every two weeks on Friday. On December 12 and 26, the wages are paid, recorded in the journal, and posted to the ledger.

**Step 2:** The calendar in Exhibit 3.10 shows three working days after the December 26 payday (29, 30, and 31). This means the employee has earned three days’ salary by the close of business

### EXHIBIT 3.10

Salary Accrual and Paydays

on Wednesday, December 31, yet this salary cost has not been paid or recorded. The financial statements would be incomplete if FastForward failed to report the added expense and liability to the employee for unpaid salary from December 29, 30, and 31.

**Point:** An employer records salaries expense and a vacation pay liability when employees earn vacation pay.

**Step 3:** The adjusting entry to account for accrued salaries, along with T-account postings, follows:

<b>Adjustment (e)</b>			
Dec. 31	Salaries Expense .....	210	
	Salaries Payable .....		210
	<i>To record three days’ accrued salary (3 × \$70).</i>		

Assets = Liabilities + Equity  
+210      -210

Salaries Expense		622	Salaries Payable		209
Dec. 12	700				
26	700				
<b>31</b>	<b>210</b>				
Balance	1,610				

			<b>Dec. 31</b>	<b>210</b>	

**Explanation** Salaries expense of \$1,610 is reported on the December income statement and \$210 of salaries payable (liability) is reported in the balance sheet. *Not* making the adjustment (1) understates salaries expense and overstates net income by \$210 in the December income statement and (2) understates salaries payable (liabilities) and overstates equity by \$210 on the December 31 balance sheet. The following highlights the adjustment for salaries incurred.

Before Adjustment	Adjustment	After Adjustment
<b>Salaries Payable = \$0</b>	<b>Add \$210 to Salaries Payable</b> <b>Add \$210 to Salaries Expense</b>	<b>Salaries Payable = \$210</b>
Reports \$0 from employee salaries incurred but not yet paid in cash.	Record 3 days' salaries owed to employee, but not yet paid, at \$70 per day.	Reports \$210 salaries payable to employee but not yet paid.

**Accrued Interest Expense** Companies commonly have accrued interest expense on notes payable and other long-term liabilities at the end of a period. Interest expense is incurred with the passage of time. Unless interest is paid on the last day of an accounting period, we need to adjust for interest expense incurred but not yet paid. This means we must accrue interest cost from the most recent payment date up to the end of the period. The formula for computing accrued interest is:

**Principal amount owed × Annual interest rate × Fraction of year since last payment date.**

**Point:** Interest computations assume a 360-day year; known as the *bankers' rule*.

To illustrate, if a company has a \$6,000 loan from a bank at 6% annual interest, then 30 days' accrued interest expense is \$30—computed as  $\$6,000 \times 0.06 \times 30/360$ . The adjusting entry would be to debit Interest Expense for \$30 and credit Interest Payable for \$30.

**Future Payment of Accrued Expenses** Adjusting entries for accrued expenses foretell cash transactions in future periods. Specifically, accrued expenses at the end of one accounting period result in *cash payment* in a *future period(s)*. To illustrate, recall that FastForward recorded accrued salaries of \$210. On January 9, the first payday of the next period, the following entry settles the accrued liability (salaries payable) and records salaries expense for seven days of work in January:

Assets = Liabilities + Equity  
 -700      -210      -490

Jan. 9	Salaries Payable (3 days at \$70 per day) . . . . .	210	
	Salaries Expense (7 days at \$70 per day) . . . . .	490	
	Cash . . . . .		700
	<i>Paid two weeks' salary including three days accrued in December.</i>		

The \$210 debit reflects the payment of the liability for the three days' salary accrued on December 31. The \$490 debit records the salary for January's first seven working days (including the New Year's Day holiday) as an expense of the new accounting period. The \$700 credit records the total amount of cash paid to the employee.

**NEED-TO-KNOW**

**3-3**

Accrued Expenses

P1

For each separate case below, follow the three-step process for adjusting the accrued expense account at December 31. Step 1: Determine what the current account balance equals. Step 2: Determine what the current account balance should equal. Step 3: Record the December 31 adjusting entry to get from step 1 to step 2. *Assume no other adjusting entries are made during the year.*

- a. Salaries Payable.** At year-end, salaries expense of \$5,000 has been incurred by the company, but is not yet paid to employees.
- b. Interest Payable.** At its December 31 year-end, the company holds a mortgage payable that has incurred \$1,000 in annual interest that is neither recorded nor paid. The company intends to pay the interest on January 3 of the next year.

**Solution**

- a.** Step 1: Salaries Payable equals \$0 (before adjustment)  
 Step 2: Salaries Payable should equal \$5,000 (not yet recorded)  
 Step 3: Adjusting entry to get from step 1 to step 2

Dec. 31	Salaries Expense . . . . .	5,000	
	Salaries Payable . . . . .		5,000
	<i>To record employee salaries earned but not yet paid.</i>		

- b. Step 1: Interest Payable equals \$0 (before adjustment)
- Step 2: Interest Payable should equal \$1,000 (not yet recorded)
- Step 3: Adjusting entry to get from step 1 to step 2

Dec. 31	Interest Expense . . . . .	1,000	
	Interest Payable . . . . .		1,000
	<i>To record interest incurred but not yet paid.</i>		

Do More: QS 3-12, QS 3-13, E 3-3, E 3-5

## Accrued Revenues

The term **accrued revenues** refers to revenues earned in a period that are both unrecorded and not yet received in cash (or other assets). An example is a technician who bills customers only when the job is done. If one-third of a job is complete by the end of a period, then the technician must record one-third of the expected billing as revenue in that period—even though there is no billing or collection. The adjusting entries for accrued revenues increase a revenue (income statement) account, and increase an asset (balance sheet) account, as shown in Exhibit 3.11. Accrued revenues commonly arise from services, products, interest, and rent. We use service fees and interest to show how to adjust for accrued revenues.

**Point:** Accrued revenues are also called *accrued assets*.

### EXHIBIT 3.11

Adjusting for Accrued Revenues (increase an asset and record revenue)

**Accrued Services Revenue** Accrued revenues are not recorded until adjusting entries are made at the end of the accounting period. These accrued revenues are earned but unrecorded because either the buyer has not yet paid for them or the seller has not yet billed the buyer. FastForward provides an example.

**Step 1:** In the second week of December, it agreed to provide 30 days of consulting services to a local fitness club for a fixed fee of \$2,700 (or \$90 per day). The terms of the initial agreement call for FastForward to provide services from December 12, 2015, through January 10, 2016, or 30 days of service. The club agrees to pay FastForward \$2,700 on January 10, 2016, when the service period is complete.

**Step 2:** At December 31, 2015, 20 days of services have already been provided. Since the contracted services have not yet been entirely provided, FastForward has neither billed the club nor recorded the services already provided. Still, FastForward has earned two-thirds of the 30-day fee, or \$1,800 ( $\$2,700 \times 20/30$ ). The *revenue recognition principle* implies that it must report the \$1,800 on the December income statement. The balance sheet also must report that the club owes FastForward \$1,800.

**Step 3:** The year-end adjusting entry to account for accrued services revenue is

Dec. 31	<b>Adjustment (f)</b>		
	Accounts Receivable . . . . .	1,800	
	Consulting Revenue . . . . .		1,800
	<i>To record 20 days' accrued revenue.</i>		

Assets = Liabilities + Equity  
+1,800                                   +1,800

Accounts Receivable		Consulting Revenue	
	106		403
Dec. 12	1,900	Dec. 5	4,200
		12	1,600
<b>31</b>	<b>1,800</b>	31	250
Balance	1,800	<b>31</b>	<b>1,800</b>
		Balance	7,850

**Example:** What is the adjusting entry if the 30-day consulting period began on December 22? *Answer:* One-third of the fee is earned: Accounts Receivable . . . 900 Consulting Revenue . . . . . 900

**Explanation** Accounts receivable are reported on the balance sheet at \$1,800, and the \$7,850 total of consulting revenue is reported on the income statement. *Not* making the adjustment would understate (1) both consulting revenue and net income by \$1,800 in the December income statement and (2) both accounts receivable (assets) and equity by \$1,800 on the December 31 balance sheet. The following table highlights the adjustment for accrued revenue.

Before Adjustment	Adjustment	After Adjustment
<b>Accounts Receivable = \$0</b>	<b>Add \$1,800 to Accounts Receivable</b> <b>Add \$1,800 to Consulting Revenue</b>	<b>Accounts Receivable = \$1,800</b>
Reports \$0 from revenue earned but not yet received in cash.	Record 20 days of earned consulting revenue, which is 20/30 of total contract amount.	Reports \$1,800 in accounts receivable from consulting services provided.

**Accrued Interest Revenue** In addition to the accrued interest expense we described earlier, interest can yield an accrued revenue when a debtor owes money (or other assets) to a company. If a company is holding notes or accounts receivable that produce interest revenue, we must adjust the accounts to record any earned and yet uncollected interest revenue. The adjusting entry is similar to the one for accruing services revenue. Specifically, we debit Interest Receivable (asset) and credit Interest Revenue.

**Future Receipt of Accrued Revenues** Accrued revenues at the end of one accounting period result in *cash receipts* in a *future period(s)*. To illustrate, recall that FastForward made an adjusting entry for \$1,800 to record 20 days' accrued revenue earned from its consulting contract. When FastForward receives \$2,700 cash on January 10 for the entire contract amount, it makes the following entry to remove the accrued asset (accounts receivable) and recognize the revenue earned in January. The \$2,700 debit reflects the cash received. The \$1,800 credit reflects the removal of the receivable, and the \$900 credit records the revenue earned in January.

Assets = Liabilities + Equity  
+2,700 +900  
-1,800

Jan. 10	Cash . . . . .	2,700	
	Accounts Receivable (20 days at \$90 per day) . . . . .		1,800
	Consulting Revenue (10 days at \$90 per day) . . . . .		900
	<i>Received cash for the accrued asset and recorded earned consulting revenue for January.</i>		

**Decision Maker** 

**Loan Officer** The owner of a custom audio, video, and home theater store applies for a business loan. The store's financial statements reveal large increases in current-year revenues and income. Analysis shows that these increases are due to a promotion that let consumers buy now and pay nothing until January 1 of next year. The store recorded these sales as accrued revenue. Does your analysis raise any concerns? ■ [Answers follow the chapter's Summary.]

**NEED-TO-KNOW 3-4**

Accrued Revenues

P1

For each separate case below, follow the three-step process for adjusting the accrued revenue account at December 31. Step 1: Determine what the current account balance equals. Step 2: Determine what the current account balance should equal. Step 3: Record the December 31 adjusting entry to get from step 1 to step 2. Assume no other adjusting entries are made during the year.

- a. **Accounts Receivable.** At year-end, the company has completed services of \$1,000 for a client, but the client has not yet been billed for those services.
- b. **Interest Receivable.** At year-end, the company has earned, but not yet recorded, \$500 of interest earned from its investments in government bonds.

**Solution**

- a. Step 1: Accounts Receivable equals \$0 (before adjustment)  
Step 2: Accounts Receivable should equal \$1,000 (not yet recorded)  
Step 3: Adjusting entry to get from step 1 to step 2

Dec. 31	Accounts Receivable .....	1,000	
	Services Revenue .....		1,000
	<i>To record services revenue earned but not yet received.</i>		

- b. Step 1: Interest Receivable equals \$0 (before adjustment)
- Step 2: Interest Receivable should equal \$500 (not yet recorded)
- Step 3: Adjusting entry to get from step 1 to step 2

Dec. 31	Interest Receivable .....	500	
	Interest Revenue .....		500
	<i>To record interest earned but not yet received.</i>		

Do More: QS 3-3, QS 3-14

### Links to Financial Statements

The process of adjusting accounts is intended to bring an asset or liability account balance to its correct amount. It also updates a related expense or revenue account. These adjustments are necessary for transactions and events that extend over more than one period. (Adjusting entries are posted like any other entry.)

Exhibit 3.12 summarizes the four types of transactions requiring adjustment. Understanding this exhibit is important to understanding the adjusting process and its importance to financial statements. Remember that each adjusting entry affects one or more income statement accounts *and* one or more balance sheet accounts (but never the Cash account).

**A1** Explain how accounting adjustments link to financial statements.

Category	BEFORE Adjusting		Adjusting Entry
	Balance Sheet	Income Statement	
<b>Prepaid expenses</b> <sup>†</sup>	Asset overstated Equity overstated	Expense understated	<b>Dr. Expense</b> <b>Cr. Asset*</b>
<b>Unearned revenues</b> <sup>†</sup>	Liability overstated Equity understated	Revenue understated	<b>Dr. Liability</b> <b>Cr. Revenue</b>
<b>Accrued expenses</b>	Liability understated Equity overstated	Expense understated	<b>Dr. Expense</b> <b>Cr. Liability</b>
<b>Accrued revenues</b>	Asset understated Equity understated	Revenue understated	<b>Dr. Asset</b> <b>Cr. Revenue</b>

**EXHIBIT 3.12**  
Summary of Adjustments and Financial Statement Links

\* For depreciation, the credit is to Accumulated Depreciation (contra asset).

<sup>†</sup> Exhibit assumes that prepaid expenses are initially recorded as assets and that unearned revenues are initially recorded as liabilities.

Information about some adjustments is not always available until several days or even weeks after the period-end. This means that some adjusting and closing entries are recorded later than, but dated as of, the last day of the period. One example is a company that receives a utility bill on January 10 for costs incurred for the month of December. When it receives the bill, the company records the expense and the payable as of December 31. Other examples include long-distance phone usage and costs of many web billings. The December income statement reflects these additional expenses incurred, and the December 31 balance sheet includes these payables, although the amounts were not actually known on December 31.

**Point:** CFOs often feel pressure to pursue fraudulent accounting due to pressure applied by their superiors, such as overbearing CEOs or aggressive boards.

### Decision Ethics

**Financial Officer** At year-end, the president instructs you, the financial officer, not to record accrued expenses until next year because they will not be paid until then. The president also directs you to record in current-year sales a recent purchase order from a customer that requires merchandise to be delivered two weeks after the year-end. Your company would report a net income instead of a net loss if you carry out these instructions. What do you do? ■ [Answers follow the chapter's Summary.]

QC2

## Adjusted Trial Balance

### P2

Explain and prepare an adjusted trial balance.

An **unadjusted trial balance** is a list of accounts and balances prepared *before* adjustments are recorded. An **adjusted trial balance** is a list of accounts and balances prepared *after* adjusting entries have been recorded and posted to the ledger.

Exhibit 3.13 shows both the unadjusted and the adjusted trial balances for FastForward at December 31, 2015. The order of accounts in the trial balance is usually set up to match the order in the chart of accounts. Several new accounts arise from the adjusting entries.

### EXHIBIT 3.13

Unadjusted and Adjusted Trial Balances

FASTFORWARD Trial Balances December 31, 2015							
Acct. No.	Account Title	Unadjusted Trial Balance		Adjustments		Adjusted Trial Balance

167	Equipment	26,000				26,000	
168	Accumulated depreciation—Equip.		\$ 0	(c) 300			\$ 300
201	Accounts payable		6,200				6,200
209	Salaries payable		0	(e) 210			210
236	Unearned consulting revenue		3,000	(d) 250			2,750
301	C. Taylor, Capital		30,000				30,000
302	C. Taylor, Withdrawals	200				200	
403	Consulting revenue		5,800	(d) 250			7,850
				(f) 1,800			
406	Rental revenue		300				300
612	Depreciation expense—Equip.	0		(c) 300			300
622	Salaries expense	1,400		(e) 210			1,610
637	Insurance expense	0		(a) 100			100
640	Rent expense	1,000					1,000
652	Supplies expense	0		(b) 1,050			1,050
690	Utilities expense	305					305
	Totals	\$45,300	\$45,300	\$3,710	\$3,710	\$47,610	\$47,610

**Point: Sarbanes-Oxley Act** requires that financial statements filed with the SEC be certified by the CEO and CFO, including a declaration that the statements fairly present the issuer's operations and financial condition. Violators can receive fines and/or prison terms.

Each adjustment (see middle columns) is identified by a letter in parentheses that links it to an adjusting entry explained earlier. Each amount in the Adjusted Trial Balance columns is computed by taking that account's amount from the Unadjusted Trial Balance columns and adding or subtracting any adjustment(s). To illustrate, Supplies has a \$9,720 Dr. balance in the unadjusted columns. Subtracting the \$1,050 Cr. amount shown in the Adjustments columns yields an adjusted \$8,670 Dr. balance for Supplies. An account can have more than one adjustment, such as for Consulting Revenue. Also, some accounts might not require adjustment for this period, such as Accounts Payable.

## PREPARING FINANCIAL STATEMENTS

### P3

Prepare financial statements from an adjusted trial balance.

We can prepare financial statements directly from information in the *adjusted* trial balance. An adjusted trial balance (see the right-most columns in Exhibit 3.13) includes all accounts and balances appearing in financial statements, and is easier to work from than the entire ledger when preparing financial statements.

Exhibit 3.14 shows how revenue and expense balances are transferred from the adjusted trial balance to the income statement (red lines). The net income and the withdrawals amount are then used to prepare the statement of owner's equity (black lines). Asset and liability balances on the adjusted trial balance are then transferred to the balance sheet (blue lines). The ending capital is determined on the statement of owner's equity and transferred to the balance sheet (green lines).

**EXHIBIT 3.14**

Preparing Financial Statements (Adjusted Trial Balance from Exhibit 3.13)

FASTFORWARD Adjusted Trial Balance December 31, 2015				
Acct. No.	Account Title	Debit	Credit	
101	Cash .....	\$ 4,275		
106	Accounts receivable .....	1,800		
126	Supplies .....	8,670		
128	Prepaid insurance .....	2,300		
167	Equipment .....	26,000		
168	Accumulated depreciation—Equip. ...		\$ 300	
201	Accounts payable .....		6,200

406	Rental revenue .....		300	
612	Depreciation expense—Equip. ....	300		
622	Salaries expense .....	1,610		
637	Insurance expense .....	100		
640	Rent expense .....	1,000		
652	Supplies expense .....	1,050		
690	Utilities expense .....	305		
	Totals .....	<u>\$47,610</u>	<u>\$47,610</u>	

**Step 3** Prepare balance sheet

FASTFORWARD Balance Sheet December 31, 2015	
<b>Assets</b>	
Cash .....	\$ 4,275
Accounts receivable .....	1,800
Supplies .....	8,670
Prepaid insurance .....	2,300
Equipment .....	\$26,000
Less accumulated depreciation ...	<u>300</u>
Total assets .....	<u>\$ 42,745</u>
<b>Liabilities</b>	
Accounts payable .....	\$ 6,200
Salaries payable .....	210
Unearned consulting revenue .....	<u>2,750</u>
Total liabilities .....	9,160
<b>Equity</b>	
C. Taylor, Capital .....	<u>33,585</u>
Total liabilities and equity .....	<u>\$ 42,745</u>

**Step 2** Prepare statement of owner's equity

FASTFORWARD Statement of Owner's Equity For Month Ended December 31, 2015	
C. Taylor, Capital, December 1 .....	\$ 0
Plus: Investments by owner .....	\$30,000
Net income .....	<u>3,785</u>
	33,785
Less: Withdrawals by owner .....	<u>200</u>
C. Taylor, Capital, December 31 .....	<u>\$33,585</u>

**Step 1** Prepare income statement

FASTFORWARD Income Statement For Month Ended December 31, 2015	
<b>Revenues</b>	
Consulting revenue .....	\$7,850
Rental revenue .....	<u>300</u>
Total revenues .....	\$8,150
<b>Expenses</b>	
Depreciation expense—Equip.....	300
Salaries expense.....	1,610
Insurance expense.....	100
Rent expense.....	1,000
Supplies expense.....	1,050
Utilities expense.....	<u>305</u>
Total expenses.....	<u>4,365</u>
Net income.....	<u>\$3,785</u>

**Steps to Prepare Financial Statements**

- Step 1** Prepare income statement using revenue and expense accounts from trial balance
- Step 2** Prepare statement of owner's equity using capital and withdrawals accounts from trial balance; and pull net income from step 1
- Step 3** Prepare balance sheet using asset and liability account from trial balance; and pull updated capital balance from step 2
- Step 4** Prepare statement of cash flows from changes in cash flows for the period (illustrated later in the book)

We prepare financial statements in the following order: income statement, statement of owner's equity, and balance sheet. This order makes sense because the balance sheet uses information from the statement of owner's equity, which in turn uses information from the income statement. The statement of cash flows is usually the final statement prepared.

**Point:** Each trial balance amount is used in only one financial statement and, when financial statements are completed, each account will have been used once.

**NEED-TO-KNOW 3-5**

Preparing Financial Statements from a Trial Balance

P3

Use the following adjusted trial balance of Magic Company to prepare its (1) income statement, (2) statement of owner's equity, and (3) balance sheet (unclassified) for the year ended, or date of, December 31, 2015. The Magic, Capital account balance is \$75,000 at December 31, 2014.

MAGIC COMPANY Adjusted Trial Balance December 31, 2015		
Account Title	Debit	Credit
Cash .....	\$ 13,000	
Accounts receivable .....	17,000	
Land .....	85,000	
Accounts payable .....		\$ 12,000
Long-term notes payable .....		33,000
Magic, Capital .....		75,000
Magic, Withdrawals .....	20,000	
Fees earned .....		79,000
Salaries expense .....	56,000	
Office supplies expense .....	8,000	
Totals .....	<u>\$199,000</u>	<u>\$199,000</u>

**Solution**

**Step 1**

MAGIC COMPANY Income Statement For Year Ended December 31, 2015		
Fees earned .....		\$79,000
Expenses		
Salaries expense .....	\$56,000	
Office supplies expense .....	<u>8,000</u>	
Total expenses .....	<u>64,000</u>	
Net income .....		<u>\$15,000</u>

**Step 2**

MAGIC COMPANY Statement of Owner's Equity For Year Ended December 31, 2015		
Magic, Capital, December 31, 2014 .....	\$75,000	
Add: Net income .....	<u>15,000</u>	
	90,000	
Less: Withdrawals by owner .....	<u>20,000</u>	
Magic, Capital, December 31, 2015 .....	<u>\$70,000</u>

QC3

**GLOBAL VIEW**

We explained that accounting under U.S. GAAP is similar, but not identical, to that under IFRS. This section discusses differences in adjusting accounts, preparing financial statements, and reporting assets and liabilities on a balance sheet.

**Adjusting Accounts** Both U.S. GAAP and IFRS include broad and similar guidance for adjusting accounts. Although some variations exist in revenue and expense recognition and other principles, all of the adjustments in this chapter are accounted for identically under the two systems. In later chapters we describe how certain assets and liabilities can result in different adjusted amounts using fair value measurements.

**Preparing Financial Statements** Both U.S. GAAP and IFRS prepare the same four basic financial statements following the same process discussed in this chapter. Chapter 2 explained how both U.S. GAAP and IFRS require current items to be separated from noncurrent items on the balance sheet (yielding a classified balance sheet). U.S. GAAP balance sheets report current items first. Assets are listed from most liquid to least liquid, where liquid refers to the ease of converting an asset to cash. Liabilities are listed from nearest to maturity to furthest from maturity, where maturity refers to the nearness of paying off the liability. IFRS balance sheets normally present noncurrent items first (and equity before liabilities), but this is not a requirement. Other differences with financial statements exist, which we identify in later chapters. **Piaggio** provides the following example of IFRS reporting for its assets, liabilities, and equity within the balance sheet:

**PIAGGIO**

<b>PIAGGIO</b>			
Balance Sheet (in thousands of euros)			
December 31, 2011			
Assets		Equity and Liabilities	
Noncurrent assets		Total equity	€ 446,218
Intangible assets	€ 649,420	Noncurrent liabilities	
Property, plant and equipment	274,871	Financial liabilities falling due after one year	329,200
Other noncurrent assets	86,185	Other long-term liabilities	100,489
Total noncurrent assets	1,010,476	Total noncurrent liabilities	429,689
Current assets		Current liabilities	
Trade, tax and other receivables	120,833	Financial liabilities falling due within one year	170,261
Inventories	236,988	Trade, tax and other payables	460,901
Cash and cash equivalents	151,887	Current portion of other long-term provisions	13,115
Total current assets	509,708	Total current liabilities	644,277
Total assets	€1,520,184	Total equity and liabilities	€1,520,184

**Point:** IASB and FASB are working to improve financial statements. One proposal would reorganize the balance sheet to show assets and liabilities classified as operating, investing, or financing.

**IFRS:** New revenue recognition rules proposed by the FASB and the IASB reduce variation between U.S. GAAP and IFRS when accounting for revenue.

 **IFRS**

Revenue and expense recognition are key to recording accounting adjustments. IFRS tends to be more *principles-based* relative to U.S. GAAP, which is viewed as more *rules-based*. A principles-based system depends heavily on control procedures to reduce the potential for fraud or misconduct. Failure in judgment led to improper accounting adjustments at **Fannie Mae**, **Xerox**, **WorldCom**, and others. A KPMG survey of accounting and finance employees found that more than 10% of them had witnessed falsification or manipulation of accounting data within the past year. Internal controls and governance processes are directed at curtailing such behavior. Yet, a 2011 KPMG fraud survey found that one in seven frauds was uncovered by chance, which emphasizes our need to improve internal controls and governance. ■

**Sustainability and Accounting** **International Princess Project**, as introduced in this chapter’s opening feature, emphasizes the social aspects of its business for its sustainability. Its entrepreneurial founder, Shannon Keith, explained that “because economics and abject poverty is a root issue to sex slavery, it was inherent in the business model to bring an economic solution for long-term freedom for the victims and their children.” That business model and its social dimensions are key to her business’s success and its sustainability.

**Profit Margin**  **Decision Analysis**

A useful measure of a company’s operating results is the ratio of its net income to net sales. This ratio is called **profit margin**, or *return on sales*, and is computed as in Exhibit 3.15.

$$\text{Profit margin} = \frac{\text{Net income}}{\text{Net sales}}$$

This ratio is interpreted as reflecting the percent of profit in each dollar of sales. To illustrate how we compute and use profit margin, let’s look at the results of **Limited Brands, Inc.**, in Exhibit 3.16 for its fiscal years 2009 through 2013.

**EXHIBIT 3.15**

Profit Margin

**A2**

Compute profit margin and describe its use in analyzing company performance.

**EXHIBIT 3.16**

Limited Brands' Profit Margin

\$ in millions	2013	2012	2011	2010	2009
Net income .....	\$ 753	\$ 850	\$ 805	\$ 448	\$ 220
Net sales .....	\$10,459	\$10,364	\$9,613	\$8,632	\$9,043
<b>Profit margin .....</b>	<b>7.2%</b>	<b>8.2%</b>	<b>8.4%</b>	<b>5.2%</b>	<b>2.4%</b>
Industry profit margin .....	1.7%	1.9%	2.1%	0.9%	0.3%

Limited's average profit margin is 6.3% during this 5-year period. This favorably compares to the average industry profit margin of 1.4%. Moreover, we see that Limited's profit margin has rebounded from the recent recessionary period and is at the 7% to 8% margin for the past three years (see margin graph). Future success depends on Limited maintaining its market share and increasing its profit margin.

**NEED-TO-KNOW**

**COMPREHENSIVE 1**

The following information relates to Fanning's Electronics on December 31, 2015. The company, which uses the calendar year as its annual reporting period, initially records prepaid and unearned items in balance sheet accounts (assets and liabilities, respectively).

- The company's weekly payroll is \$8,750, paid each Friday for a five-day workweek. Assume December 31, 2015, falls on a Monday, but the employees will not be paid their wages until Friday, January 4, 2016.
- Eighteen months earlier, on July 1, 2014, the company purchased equipment that cost \$20,000. Its useful life is predicted to be five years, at which time the equipment is expected to be worthless (zero salvage value).
- On October 1, 2015, the company agreed to work on a new housing development. The company is paid \$120,000 on October 1 in advance of future installation of similar alarm systems in 24 new homes. That amount was credited to the Unearned Services Revenue account. Between October 1 and December 31, work on 20 homes was completed.
- On September 1, 2015, the company purchased a 12-month insurance policy for \$1,800. The transaction was recorded with an \$1,800 debit to Prepaid Insurance.
- On December 29, 2015, the company completed a \$7,000 service that has not been billed and not recorded as of December 31, 2015.

**Required**

- Prepare any necessary adjusting entries on December 31, 2015, in relation to transactions and events *a* through *e*.
- Prepare T-accounts for the accounts affected by adjusting entries, and post the adjusting entries. Determine the adjusted balances for the Unearned Revenue and the Prepaid Insurance accounts.
- Complete the following table and determine the amounts and effects of your adjusting entries on the year 2015 income statement and the December 31, 2015, balance sheet. Use up (down) arrows to indicate an increase (decrease) in the Effect columns.

Entry	Amount in the Entry	Effect on Net Income	Effect on Total Assets	Effect on Total Liabilities	Effect on Total Equity

**PLANNING THE SOLUTION**

- Analyze each situation to determine which accounts need to be updated with an adjustment.
- Calculate the amount of each adjustment and prepare the necessary journal entries.
- Show the amount of each adjustment in the designated accounts, determine the adjusted balance, and identify the balance sheet classification of the account.
- Determine each entry's effect on net income for the year and on total assets, total liabilities, and total equity at the end of the year.

**SOLUTION****1. Adjusting journal entries.**

(a) Dec. 31	Wages Expense . . . . .	1,750	
	Wages Payable . . . . .		1,750
	<i>To accrue wages for the last day of the year (\$8,750 × 1/5).</i>		
(b) Dec. 31	Depreciation Expense—Equipment . . . . .	4,000	
	Accumulated Depreciation—Equipment . . . . .		4,000
	<i>To record depreciation expense for the year (\$20,000/5 years = \$4,000 per year).</i>		
(c) Dec. 31	Unearned Services Revenue . . . . .	100,000	
	Services Revenue . . . . .		100,000
	<i>To recognize services revenue earned (\$120,000 × 20/24).</i>		
(d) Dec. 31	Insurance Expense . . . . .	600	
	Prepaid Insurance . . . . .		600
	<i>To adjust for expired portion of insurance (\$1,800 × 4/12).</i>		
(e) Dec. 31	Accounts Receivable . . . . .	7,000	
	Services Revenue . . . . .		7,000
	<i>To record services revenue earned.</i>		

**2. T-accounts for adjusting journal entries a through e.**

<b>Wages Expense</b>		<b>Wages Payable</b>

## NEED-TO-KNOW

## COMPREHENSIVE 2

Use the following adjusted trial balance to answer questions 1–3.

CHOI COMPANY Adjusted Trial Balance December 31		
	Debit	Credit
Cash . . . . .	\$ 3,050	
Accounts receivable . . . . .	400	
Prepaid insurance . . . . .	830	
Supplies . . . . .	80	
Equipment . . . . .	217,200	
Accumulated depreciation—Equipment . . . . .		\$ 29,100
Wages payable . . . . .		880
Interest payable . . . . .		3,600
Unearned rent . . . . .		460
Long-term notes payable . . . . .		150,000
M. Choi, Capital . . . . .		40,340
M. Choi, Withdrawals . . . . .	21,000	
Rent earned . . . . .		57,500
Wages expense . . . . .	25,000	
Utilities expense . . . . .	1,900	
Insurance expense . . . . .	3,200	
Supplies expense . . . . .	250	
Depreciation expense—Equipment . . . . .	5,970	
Interest expense . . . . .	3,000	
Totals . . . . .	<u>\$281,880</u>	<u>\$281,880</u>

1. Prepare the annual income statement from the adjusted trial balance of Choi Company.

**Answer:**

CHOI COMPANY Income Statement For Year Ended December 31		
Revenues		
Rent earned . . . . .		\$57,500
Expenses		
Wages expense . . . . .	\$25,000	
Utilities expense . . . . .	1,900	
Insurance expense . . . . .	3,200	
Supplies expense . . . . .	250	
Depreciation expense—Equipment . . . . .	5,970	
Interest expense . . . . .	<u>3,000</u>	
Total expenses . . . . .		<u>39,320</u>
Net income . . . . .		<u>\$18,180</u>

2. Prepare a statement of owner's equity from the adjusted trial balance of Choi Company. Choi's capital account balance of \$40,340 consists of a \$30,340 balance from the prior year-end, plus a \$10,000 owner investment during the current year.

**Answer:**

CHOI COMPANY Statement of Owner's Equity For Year Ended December 31		
M. Choi, Capital, December 31 prior year-end . . . . .		\$30,340
Plus: Owner investments . . . . .	\$10,000	
Net income . . . . .	<u>18,180</u>	<u>28,180</u>
		58,520
Less: Withdrawals by owner . . . . .		<u>21,000</u>
M. Choi, Capital, December 31 current year-end . . . . .		<u>\$37,520</u>

3. Prepare a balance sheet (unclassified) from the adjusted trial balance of Choi Company.

**Answer:**

<b>CHOI COMPANY</b>		
<b>Balance Sheet</b>		
<b>December 31</b>		
<b>Assets</b>		
Cash .....		\$ 3,050
Accounts receivable .....		400
Prepaid insurance .....		830
Supplies .....		80
Equipment .....	\$217,200	
Less accumulated depreciation .....	<u>29,100</u>	<u>188,100</u>
Total assets .....		<u>\$192,460</u>
<b>Liabilities</b>		
Wages payable .....		\$ 880
Interest payable .....		3,600
Unearned rent .....		460
Long-term notes payable .....		<u>150,000</u>
Total liabilities .....		154,940
<b>Equity</b>		
M. Choi, Capital .....		<u>37,520</u>
Total liabilities and equity .....		<u>\$192,460</u>

## APPENDIX

# Alternative Accounting for Prepayments

# 3A

This appendix explains an alternative in accounting for prepaid expenses and unearned revenues.

## RECORDING PREPAYMENT OF EXPENSES IN EXPENSE ACCOUNTS

An alternative method is to record *all* prepaid expenses with debits to expense accounts. If any prepaids remain unused or unexpired at the end of an accounting period, then adjusting entries must transfer the cost of the unused portions from expense accounts to prepaid expense (asset) accounts. This alternative method is acceptable. The financial statements are identical under either method, but the adjusting entries are different. To illustrate the differences between these two methods, let's look at FastForward's cash payment of December 6 for 24 months of insurance coverage beginning on December 1. FastForward recorded that payment with a debit to an asset account, but it could have recorded a debit to an expense account. These alternatives are shown in Exhibit 3A.1.

## P4

Explain the alternatives in accounting for prepaids.

		Payment Recorded as Asset	Payment Recorded as Expense
Dec. 6	Prepaid Insurance .....	2,400	
	Cash .....		2,400
Dec. 6	Insurance Expense .....		2,400
	Cash .....		2,400

## EXHIBIT 3A.1

Alternative Initial Entries for Prepaid Expenses

At the end of its accounting period on December 31, insurance protection for one month has expired. This means \$100 (\$2,400/24) of insurance coverage expired and is an expense for December. The adjusting entry depends on how the original payment was recorded. This is shown in Exhibit 3A.2.

**EXHIBIT 3A.2**

Adjusting Entry for Prepaid Expenses for the Two Alternatives

		Payment Recorded as Asset	Payment Recorded as Expense
Dec. 31	Insurance Expense .....	100	
	Prepaid Insurance .....		100
Dec. 31	Prepaid Insurance .....		2,300
	Insurance Expense .....		2,300

When these entries are posted to the accounts in the ledger, we can see that these two methods give identical results. The December 31 adjusted account balances in Exhibit 3A.3 show Prepaid Insurance of \$2,300 and Insurance Expense of \$100 for both methods.

**EXHIBIT 3A.3**

Account Balances under Two Alternatives for Recording Prepaid Expenses

Payment Recorded as Asset				Payment Recorded as Expense			
<b>Prepaid Insurance</b> 128				<b>Prepaid Insurance</b> 128			
Dec. 6	2,400	Dec. 31	100	Dec. 31	<b>2,300</b>		
Balance	<b>2,300</b>						
<b>Insurance Expense</b> 637				<b>Insurance Expense</b> 637			
Dec. 31	<b>100</b>			Dec. 6	2,400	Dec. 31	2,300
				Balance	<b>100</b>		

**RECORDING PREPAYMENT OF REVENUES IN REVENUE ACCOUNTS**

As with prepaid expenses, an alternative method is to record *all* unearned revenues with credits to revenue accounts. If any revenues are unearned at the end of an accounting period, then adjusting entries must transfer the unearned portions from revenue accounts to unearned revenue (liability) accounts. This alternative method is acceptable. The adjusting entries are different for these two alternatives, but the financial statements are identical. To illustrate the accounting differences between these two methods, let's look at FastForward's December 26 receipt of \$3,000 for consulting services covering the period December 27 to February 24. FastForward recorded this transaction with a credit to a liability account. The alternative is to record it with a credit to a revenue account, as shown in Exhibit 3A.4.

**EXHIBIT 3A.4**

Alternative Initial Entries for Unearned Revenues

		Receipt Recorded as Liability	Receipt Recorded as Revenue
Dec. 26	Cash .....	3,000	
	Unearned Consulting Revenue .....		3,000
Dec. 26	Cash .....		3,000
	Consulting Revenue .....		3,000

By the end of its accounting period on December 31, FastForward has earned \$250 of this revenue. This means \$250 of the liability has been satisfied. Depending on how the initial receipt is recorded, the adjusting entry is as shown in Exhibit 3A.5.

**EXHIBIT 3A.5**

Adjusting Entry for Unearned Revenues for the Two Alternatives

		Receipt Recorded as Liability	Receipt Recorded as Revenue
Dec. 31	Unearned Consulting Revenue .....	250	
	Consulting Revenue .....		250
Dec. 31	Consulting Revenue .....		2,750
	Unearned Consulting Revenue .....		2,750

After adjusting entries are posted, the two alternatives give identical results. The December 31 adjusted account balances in Exhibit 3A.6 show unearned consulting revenue of \$2,750 and consulting revenue of \$250 for both methods.

Receipt Recorded as Liability				Receipt Recorded as Revenue			
<b>Unearned Consulting Revenue</b> 236				<b>Unearned Consulting Revenue</b> 236

**EXHIBIT 3A.6**

Account Balances under Two Alternatives for Recording Unearned Revenues

## Summary

**C1 Explain the importance of periodic reporting and the time period assumption.** The value of information is often linked to its timeliness. To provide timely information, accounting systems prepare periodic reports at regular intervals. The time period assumption presumes that an organization's activities can be divided into specific time periods for periodic reporting.

**C2 Explain accrual accounting and how it improves financial statements.** Accrual accounting recognizes revenue when earned and expenses when incurred—not necessarily when cash inflows and outflows occur. This information is valuable in assessing a company's financial position and performance.

**C3 Identify the types of adjustments and their purpose.** Adjustments can be grouped according to the timing of cash receipts and cash payments relative to when they are recognized as revenues or expenses as follows: prepaid expenses, unearned revenues, accrued expenses, and accrued revenues. Adjusting entries are necessary so that revenues, expenses, assets, and liabilities are correctly reported.

**A1 Explain how accounting adjustments link to financial statements.** Accounting adjustments bring an asset or liability account balance to its correct amount. They also update related expense or revenue accounts. Every adjusting entry affects one or more income statement accounts *and* one or more balance sheet accounts. An adjusting entry never affects the Cash account.

**A2 Compute profit margin and describe its use in analyzing company performance.** *Profit margin* is defined as the reporting period's net income divided by its net sales. Profit margin reflects on a company's earnings activities by showing how much income is in each dollar of sales.

**P1 Prepare and explain adjusting entries.** *Prepaid expenses* refer to items paid for in advance of receiving their

benefits. Prepaid expenses are assets. Adjusting entries for prepaids involve increasing (debiting) expenses and decreasing (crediting) assets. *Unearned (or prepaid) revenues* refer to cash received in advance of providing products and services. Unearned revenues are liabilities. Adjusting entries for unearned revenues involve increasing (crediting) revenues and decreasing (debiting) unearned revenues. *Accrued expenses* refer to costs incurred in a period that are both unpaid and unrecorded. Adjusting entries for recording accrued expenses involve increasing (debiting) expenses and increasing (crediting) liabilities. *Accrued revenues* refer to revenues earned in a period that are both unrecorded and not yet received in cash. Adjusting entries for recording accrued revenues involve increasing (debiting) assets and increasing (crediting) revenues.

**P2 Explain and prepare an adjusted trial balance.** An adjusted trial balance is a list of accounts and balances prepared after recording and posting adjusting entries. Financial statements are often prepared from the adjusted trial balance.

**P3 Prepare financial statements from an adjusted trial balance.** Revenue and expense balances are reported on the income statement. Asset, liability, and equity balances are reported on the balance sheet. We usually prepare statements in the following order: income statement, statement of owner's equity, balance sheet, and statement of cash flows.

**P4A Explain the alternatives in accounting for prepaids.** Charging all prepaid expenses to expense accounts when they are purchased is acceptable. When this is done, adjusting entries must transfer any unexpired amounts from expense accounts to asset accounts. Crediting all unearned revenues to revenue accounts when cash is received is also acceptable. In this case, the adjusting entries must transfer any unearned amounts from revenue accounts to unearned revenue accounts.

## Guidance Answers to Decision Maker and Decision Ethics

**Investor** Prepaid expenses are items paid for in advance of receiving their benefits. They are assets and are expensed as they are used up. The publishing company's treatment of the signing bonus is acceptable provided future book sales can at least match the \$500,000 expense. As an investor, you are concerned about the risk of future book sales. The riskier the likelihood of future book sales is, the more likely your analysis is to treat the \$500,000, or a portion of it, as an expense, not a prepaid expense (asset).

**Loan Officer** Your concern in lending to this store arises from analysis of current-year sales. While increased revenues and income are fine, your concern is with collectibility of these promotional sales. If the owner sold products to customers with

poor records of paying bills, then collectibility of these sales is low. Your analysis must assess this possibility and recognize any expected losses.

**Financial Officer** Omitting accrued expenses and recognizing revenue early can mislead financial statement users. One action is to request a second meeting with the president so you can explain that accruing expenses when incurred and recognizing revenue when earned are required practices. If the president persists, you might discuss the situation with legal counsel and any auditors involved. Your ethical action might cost you this job, but the potential pitfalls for falsification of statements, reputation and personal integrity loss, and other costs are too great.

### Key Terms

Accounting periods	Cash basis accounting	Plant assets
Accrual basis accounting	Contra account	Prepaid expenses
Accrued expenses	Depreciation	Profit margin
Accrued revenues	Expense recognition (or matching) principle	Revenue recognition principle
Adjusted trial balance	Fiscal year	Straight-line depreciation method
Adjusting entry	Interim financial statements	Time period assumption
Annual financial statements	Natural business year	Unadjusted trial balance
Book value		Unearned revenues

### Multiple Choice Quiz

### Answers at end of chapter

- A company forgot to record accrued and unpaid employee wages of \$350,000 at period-end. This oversight would
  - Understate net income by \$350,000.
  - Overstate net income by \$350,000.
  - Have no effect on net income.
  - Overstate assets by \$350,000.
  - Understate assets by \$350,000.
- Prior to recording adjusting entries, the Supplies account has a \$450 debit balance. A physical count of supplies shows \$125 of unused supplies still available. The required adjusting entry is:
  - Debit Supplies \$125; Credit Supplies Expense \$125.
  - Debit Supplies \$325; Credit Supplies Expense \$325.
  - Debit Supplies Expense \$325; Credit Supplies \$325.
  - Debit Supplies Expense \$325; Credit Supplies \$125.
  - Debit Supplies Expense \$125; Credit Supplies \$125.
- On May 1, 2015, a two-year insurance policy was purchased for \$24,000 with coverage to begin immediately. What is the amount of insurance expense that appears on the company's income statement for the year ended December 31, 2015?
  - \$4,000
  - \$8,000
  - \$12,000
  - \$20,000
  - \$24,000
- On November 1, 2015, Stockton Co. receives \$3,600 cash from Hans Co. for consulting services to be provided evenly over the period November 1, 2015, to April 30, 2016—at which time Stockton credited \$3,600 to Unearned Consulting Fees. The adjusting entry on December 31, 2015 (Stockton's year-end) would include a
  - Debit to Unearned Consulting Fees for \$1,200.
  - Debit to Unearned Consulting Fees for \$2,400.
  - Credit to Consulting Fees Earned for \$2,400.
  - Debit to Consulting Fees Earned for \$1,200.
  - Credit to Cash for \$3,600.
- If a company had \$15,000 in net income for the year, and its sales were \$300,000 for the same year, what is its profit margin?
  - 20%
  - 2,000%
  - \$285,000
  - \$315,000
  - 5%

A *Superscript letter A denotes assignments based on Appendix 3A.*

 Icon denotes assignments that involve decision making.

## Discussion Questions

1. What is the difference between the cash basis and the accrual basis of accounting?
2.  Why is the accrual basis of accounting generally preferred over the cash basis?
3. What type of business is most likely to select a fiscal year that corresponds to its natural business year instead of the calendar year?
4. What is a prepaid expense and where is it reported in the financial statements?
5.  What type of assets requires adjusting entries to record depreciation?
6.  What contra account is used when recording and reporting the effects of depreciation? Why is it used?
7.  Assume **Samsung** has unearned revenue. What is unearned revenue and where is it reported in financial statements? **Samsung**
8. What is an accrued revenue? Give an example.
9. <sup>A</sup> If a company initially records prepaid expenses with debits to expense accounts, what type of account is debited in the adjusting entries for those prepaid expenses?
10.  Review the balance sheet of **Apple** in Appendix A. Identify one asset account that requires adjustment before annual financial statements can be prepared. What would be the effect on the income statement if this asset account were not adjusted? (Number not required, but comment on over- or understating of net income.) **APPLE**
11.  Review the balance sheet of **Google** in Appendix A. Identify the amount for property and equipment. What adjusting entry is necessary (no numbers required) for this account when preparing financial statements? **GOOGLE**
12.  Refer to **Samsung's** balance sheet in Appendix A. If it made an adjustment for unpaid wages at year-end, where would the accrued wages be reported on its balance sheet? **Samsung**

Choose from the following list of terms/phrases to best complete the statements below.

- |                  |                                 |                           |
|------------------|---------------------------------|---------------------------|
| a. Fiscal year   | d. Accounting period            | g. Natural business year  |
| b. Timeliness    | e. Annual financial statements  | h. Time period assumption |
| c. Calendar year | f. Interim financial statements | i. Quarterly statements   |
1. \_\_\_\_\_ presumes that an organization's activities can be divided into specific time periods.
  2. Financial reports covering a one-year period are known as \_\_\_\_\_.
  3. A \_\_\_\_\_ consists of any 12 consecutive months.
  4. A \_\_\_\_\_ consists of 12 consecutive months ending on December 31.
  5. The value of information is often linked to its \_\_\_\_\_.

## QUICK STUDY

### QS 3-1

Periodic reporting

 C1

In its first year of operations, Roma Co. earned \$45,000 in revenues and received \$37,000 cash from these customers. The company incurred expenses of \$25,500 but had not paid \$5,250 of them at year-end. The company also prepaid \$6,750 cash for costs that will not be expensed until the next year. Calculate the first year's net income under both the cash basis and the accrual basis of accounting.

### QS 3-2

Computing accrual and cash income  C2 

Classify the following adjusting entries as involving prepaid expenses (PE), unearned revenues (UR), accrued expenses (AE), or accrued revenues (AR).

- \_\_\_\_\_ To record revenue earned that was previously received as cash in advance.
- \_\_\_\_\_ To record wages expense incurred but not yet paid (nor recorded).
- \_\_\_\_\_ To record revenue earned but not yet billed (nor recorded).
- \_\_\_\_\_ To record expiration of prepaid insurance.
- \_\_\_\_\_ To record annual depreciation expense.

### QS 3-3

Identifying accounting adjustments

 C3

During the year, a company recorded prepayments of expenses in asset accounts, and cash receipts of unearned revenues in liability accounts. At the end of its annual accounting period, the company must make three adjusting entries: (1) accrue salaries expense, (2) adjust the Unearned Services Revenue account to recognize earned revenue, and (3) record services revenue earned for which cash will be

### QS 3-4

Concepts of adjusting entries  C3

received the following period. For each of these adjusting entries (1), (2), and (3), indicate the account from *a* through *i* to be debited and the account to be credited.

- |                            |                                     |                               |
|----------------------------|-------------------------------------|-------------------------------|
| <b>a.</b> Prepaid Salaries | <b>d.</b> Unearned Services Revenue | <b>g.</b> Accounts Receivable |
| <b>b.</b> Cash             | <b>e.</b> Salaries Expense          | <b>h.</b> Accounts Payable    |
| <b>c.</b> Salaries Payable | <b>f.</b> Services Revenue          | <b>i.</b> Equipment           |

**QS 3-5**

Prepaid (deferred)  
expenses adjustments

**P1**

For each separate case below, follow the 3-step process for adjusting the prepaid asset account at December 31. Step 1: Determine what the current account balance equals. Step 2: Determine what the current account balance should equal. Step 3: Record the December 31 adjusting entry to get from step 1 to step 2. *Assume no other adjusting entries are made during the year.*

- a. Prepaid Insurance.** The Prepaid Insurance account has a \$4,700 debit balance to start the year. A review of insurance policies and payments shows that \$900 of unexpired insurance remains at year-end.
- b. Prepaid Insurance.** The Prepaid Insurance account has a \$5,890 debit balance at the start of the year. A review of insurance policies and payments shows \$1,040 of insurance has expired by year-end.
- c. Prepaid Rent.** On September 1 of the current year, the company prepaid \$24,000 for 2 years of rent for facilities being occupied that day. The company debited Prepaid Rent and credited Cash for \$24,000.

**QS 3-6**

Prepaid (deferred)  
expenses adjustments

**P1**

For each separate case below, follow the 3-step process for adjusting the supplies asset account at December 31. Step 1: Determine what the current account balance equals. Step 2: Determine what the current account balance should equal. Step 3: Record the December 31 adjusting entry to get from step 1 to step 2. *Assume no other adjusting entries are made during the year.*

- a. Supplies.** The Supplies account has a \$300 debit balance to start the year. No supplies were purchased during the current year. A December 31 physical count shows \$110 of supplies remaining.
- b. Supplies.** The Supplies account has an \$800 debit balance to start the year. Supplies of \$2,100 were purchased during the current year and debited to the Supplies account. A December 31 physical count shows \$650 of supplies remaining.
- c. Supplies.** The Supplies account has a \$4,000 debit balance to start the year. During the current year, supplies of \$9,400 were purchased and debited to the Supplies account. The inventory of supplies available at December 31 totaled \$2,660.

**QS 3-7**

Adjusting prepaid  
expenses

**P1**

**a.** On July 1, 2015, Lopez Company paid \$1,200 for six months of insurance coverage. No adjustments have been made to the Prepaid Insurance account, and it is now December 31, 2015. Prepare the journal entry to reflect expiration of the insurance as of December 31, 2015.

**b.** Zim Company has a Supplies account balance of \$5,000 on January 1, 2015. During 2015, it purchased \$2,000 of supplies. As of December 31, 2015, a supplies inventory shows \$800 of supplies available. Prepare the adjusting journal entry to correctly report the balance of the Supplies account and the Supplies Expense account as of December 31, 2015.

**QS 3-8**

Accumulated  
depreciation adjustments

**P1**

For each separate case below, follow the 3-step process for adjusting the accumulated depreciation account at December 31. Step 1: Determine what the current account balance equals. Step 2: Determine what the current account balance should equal. Step 3: Record the December 31 adjusting entry to get from step 1 to step 2. *Assume no other adjusting entries are made during the year.*

- a. Accumulated Depreciation.** The Krug Company's Accumulated Depreciation account has a \$13,500 balance to start the year. A review of depreciation schedules reveals that \$14,600 of depreciation expense must be recorded for the year.
- b. Accumulated Depreciation.** The company has only one fixed asset (truck) that it purchased at the start of this year. That asset had cost \$44,000, had an estimated life of five years, and is expected to have zero value at the end of the five years.
- c. Accumulated Depreciation.** The company has only one fixed asset (equipment) that it purchased at the start of this year. That asset had cost \$32,000, had an estimated life of seven years, and is expected to be valued at \$4,000 at the end of the seven years.

**QS 3-9**

Adjusting for  
depreciation

**P1**

**a.** Barga Company purchases \$20,000 of equipment on January 1, 2015. The equipment is expected to last five years and be worth \$2,000 at the end of that time. Prepare the entry to record one year's depreciation expense of \$3,600 for the equipment as of December 31, 2015.

**b.** Welch Company purchases \$10,000 of land on January 1, 2015. The land is expected to last indefinitely. What depreciation adjustment, if any, should be made with respect to the Land account as of December 31, 2015?

For each separate case below, follow the 3-step process for adjusting the unearned revenue liability account at December 31. Step 1: Determine what the current account balance equals. Step 2: Determine what the current account balance should equal. Step 3: Record the December 31 adjusting entry to get from step 1 to step 2. *Assume no other adjusting entries are made during the year.*

- Unearned Rent Revenue.** The Krug Company collected \$6,000 rent in advance on November 1, debiting Cash and crediting Unearned Rent Revenue. The tenant was paying 12 months' rent in advance and occupancy began November 1.
- Unearned Services Revenue.** The company charges \$75 per month to spray a house for insects. A customer paid \$300 on October 1 in advance for four treatments, which was recorded with a debit to Cash and a credit to Unearned Services Revenue. At year-end, the company has applied three treatments for the customer.
- Unearned Rent Revenue.** On September 1, a client paid the company \$24,000 cash for six months of rent in advance (the client leased a building and took occupancy immediately). The company recorded the cash as Unearned Rent Revenue.

**QS 3-10**

Unearned (deferred) revenues adjustments

P1

- Tao Co. receives \$10,000 cash in advance for 4 months of legal services on October 1, 2015, and records it by debiting Cash and crediting Unearned Revenue both for \$10,000. It is now December 31, 2015, and Tao has provided legal services as planned. What adjusting entry should Tao make to account for the work performed from October 1 through December 31, 2015?
- A. Caden started a new publication called *Contest News*. Its subscribers pay \$24 to receive 12 monthly issues. With every new subscriber, Caden debits Cash and credits Unearned Subscription Revenue for the amounts received. The company has 100 new subscribers as of July 1, 2015. It sends *Contest News* to each of these subscribers every month from July through December. Assuming no changes in subscribers, prepare the journal entry that Caden must make as of December 31, 2015, to adjust the Subscription Revenue account and the Unearned Subscription Revenue account.

**QS 3-11**

Adjusting for unearned revenues

P1

For each separate case below, follow the 3-step process for adjusting the accrued expense account at December 31. Step 1: Determine what the current account balance equals. Step 2: Determine what the current account balance should equal. Step 3: Record the December 31 adjusting entry to get from step 1 to step 2. *Assume no other adjusting entries are made during the year.*

- Salaries Payable.** At year-end, salaries expense of \$15,500 has been incurred by the company, but is not yet paid to employees.
- Interest Payable.** At its December 31 year-end, the company owes \$250 of interest on a line-of-credit loan. That interest will not be paid until sometime in January of the next year.
- Interest Payable.** At its December 31 year-end, the company holds a mortgage payable that has incurred \$875 in annual interest that is neither recorded nor paid. The company intends to pay the interest on January 7 of the next year.

**QS 3-12**

Accrued expenses adjustments

P1

Molly Mocha employs one college student every summer in her coffee shop. The student works the five weekdays and is paid on the following Monday. (For example, a student who works Monday through Friday, June 1 through June 5, is paid for that work on Monday, June 8.) The coffee shop adjusts its books *monthly*, if needed, to show salaries earned but unpaid at month-end. The student works the last week of July—Friday is August 1. If the student earns \$100 per day, what adjusting entry must the coffee shop make on July 31 to correctly record accrued salaries expense for July?

**QS 3-13**

Accruing salaries

P1 A1

For each separate case below, follow the 3-step process for adjusting the accrued revenue account at December 31. Step 1: Determine what the current account balance equals. Step 2: Determine what the current account balance should equal. Step 3: Record the December 31 adjusting entry to get from step 1 to step 2. *Assume no other adjusting entries are made during the year.*

- Accounts Receivable.** At year-end, the Krug Company has completed services of \$19,000 for a client, but the client has not yet been billed for those services.
- Interest Receivable.** At year-end, the company has earned, but not yet recorded, \$390 of interest earned from its investments in government bonds.
- Accounts Receivable.** A painting company collects fees when jobs are complete. The work for one customer, whose job was bid at \$1,300, has been completed, but the customer has not yet been billed.

**QS 3-14**

Accrued revenues adjustments

P1

**QS 3-15**

Recording and analyzing adjusting entries

**A1**

Adjusting entries affect at least one balance sheet account and at least one income statement account. For the following entries, identify the account to be debited and the account to be credited. Indicate which of the accounts is the income statement account and which is the balance sheet account.

- Entry to record revenue earned that was previously received as cash in advance.
- Entry to record wage expenses incurred but not yet paid (nor recorded).
- Entry to record revenue earned but not yet billed (nor recorded).
- Entry to record expiration of prepaid insurance.
- Entry to record annual depreciation expense.

**QS 3-16**

Determining effects of adjusting entries

**A1**

In making adjusting entries at the end of its accounting period, Chao Consulting failed to record \$3,200 of insurance coverage that had expired. This \$3,200 cost had been initially debited to the Prepaid Insurance account. The company also failed to record accrued salaries expense of \$2,000. As a result of these two oversights, the financial statements for the reporting period will [choose one] (1) understate assets by \$3,200; (2) understate expenses by \$5,200; (3) understate net income by \$2,000; or (4) overstate liabilities by \$2,000.

**QS 3-17**

Interpreting adjusting entries

**P2**

The following information is taken from Camara Company's unadjusted and adjusted trial balances.

	Unadjusted		Adjusted	
	Debit	Credit	Debit	Credit
Prepaid insurance . . . . .	\$4,100		\$3,700	
Interest payable . . . . .		\$ 0		\$800

Given this information, which of the following is likely included among its adjusting entries?

- A \$400 debit to Insurance Expense and an \$800 debit to Interest Payable.
- A \$400 debit to Insurance Expense and an \$800 debit to Interest Expense.
- A \$400 credit to Prepaid Insurance and an \$800 debit to Interest Payable.

**QS 3-18**

International accounting standards

**P3**

Answer each of the following questions related to international accounting standards.

- Do financial statements prepared under IFRS normally present assets from least liquid to most liquid or vice versa?
- Do financial statements prepared under IFRS normally present liabilities from furthest from maturity to nearest to maturity or vice versa?

**QS 3-19**

Analyzing profit margin

**A2**

Damita Company reported net income of \$48,025 and net sales of \$425,000 for the current year. Calculate the company's profit margin and interpret the result. Assume that its competitors earn an average profit margin of 15%.

**QS 3-20<sup>A</sup>**

Preparing adjusting entries

**P4**

Cal Consulting initially records prepaid and unearned items in income statement accounts. Given this company's accounting practices, which of the following applies to the preparation of adjusting entries at the end of its first accounting period?

- Unearned fees (on which cash was received in advance earlier in the period) are recorded with a debit to Consulting Fees Earned of \$500 and a credit to Unearned Consulting Fees of \$500.
- Unpaid salaries of \$400 are recorded with a debit to Prepaid Salaries of \$400 and a credit to Salaries Expense of \$400.
- Office supplies purchased for the period were \$1,000. The cost of unused office supplies of \$650 is recorded with a debit to Supplies Expense of \$650 and a credit to Office Supplies of \$650.
- Earned but unbilled (and unrecorded) consulting fees for the period were \$1,200, which are recorded with a debit to Unearned Consulting Fees of \$1,200 and a credit to Consulting Fees Earned of \$1,200.

On March 1, 2013, a company paid an \$18,000 premium on a 36-month insurance policy for coverage beginning on that date. Refer to that policy and fill in the blanks in the following table.

	Balance Sheet Prepaid Insurance Asset Using		Insurance Expense Using	
	Accrual Basis	Cash Basis	Accrual Basis	Cash Basis
Dec. 31, 2013	\$ _____	\$ _____	2013	\$ _____
Dec. 31, 2014	_____	_____	2014	_____
Dec. 31, 2015	_____	_____	2015	_____
Dec. 31, 2016	_____	_____	2016	_____
			Total	\$ _____

## EXERCISES

### Exercise 3-1

Determining assets and expenses for accrual and cash accounting

C2

**Check** 2015 insurance expense: Accrual, \$6,000; Cash, \$0.  
Dec. 31, 2015, asset: Accrual, \$1,000; Cash, \$0.

In the blank space beside each adjusting entry, enter the letter of the explanation *A* through *F* that most closely describes the entry.

- |   |  |
|---|--|
| <b>A.</b> To record this period's depreciation expense.     | <b>D.</b> To record accrued interest revenue.                  |
| <b>B.</b> To record accrued salaries expense.               | <b>E.</b> To record accrued interest expense.                  |
| <b>C.</b> To record this period's use of a prepaid expense. | <b>F.</b> To record the earning of previously unearned income. |

### Exercise 3-2

Classifying adjusting entries

C3

_____ 1.	Interest Expense .....	2,208	
	Interest Payable .....		2,208
_____ 2.	Insurance Expense .....	3,180	
	Prepaid Insurance .....		3,180
_____ 3.	Unearned Professional Fees .....	19,250	
	Professional Fees Earned .....		19,250
_____ 4.	Interest Receivable .....	3,300	
	Interest Revenue .....		3,300
_____ 5.	Depreciation Expense .....	38,217	
	Accumulated Depreciation .....		38,217
_____ 6.	Salaries Expense .....	13,280	
	Salaries Payable .....		13,280

Pablo Management has five part-time employees, each of whom earns \$250 per day. They are normally paid on Fridays for work completed Monday through Friday of the same week. Assume that December 28, 2015, was a Friday, and that they were paid in full on that day. The next week, the five employees worked only four days because New Year's Day was an unpaid holiday. (a) Assuming that December 31, 2015, was a Monday, prepare the adjusting entry that would be recorded at the close of that day. (b) Assuming that January 4, 2016, was a Friday, prepare the journal entry that would be made to record payment of the employees' wages.

### Exercise 3-3

Adjusting and paying accrued wages

C1 P1

Determine the missing amounts in each of these four separate situations *a* through *d*.

	a	b	c	d
Supplies available—prior year-end .....	\$ 400	\$1,200	\$1,260	?
Supplies purchased during the current year .....	2,800	6,500	?	\$3,000
Supplies available—current year-end .....	650	?	1,350	700
Supplies expense for the current year .....	?	1,200	8,400	4,588

### Exercise 3-4

Determining cost flows through accounts

C1 A1 P1

**Exercise 3-5**

Adjusting and paying accrued expenses

A1 P1

**Check** (b) May 20 Dr. Interest Expense, \$6,000

The following three separate situations require adjusting journal entries to prepare financial statements as of April 30. For each situation, present both the April 30 adjusting entry and the subsequent entry during May to record the payment of the accrued expenses.

- On April 1, the company retained an attorney for a flat monthly fee of \$3,500. Payment for April legal services was made by the company on May 12.
- A \$900,000 note payable requires 12% annual interest, or \$9,000 to be paid at the 20th day of each month. The interest was last paid on April 20 and the next payment is due on May 20. As of April 30, \$3,000 of interest expense has accrued.
- Total weekly salaries expense for all employees is \$10,000. This amount is paid at the end of the day on Friday of each five-day workweek. April 30 falls on Tuesday of this year, which means that the employees had worked two days since the last payday. The next payday is May 3.

**Exercise 3-6**

Preparing adjusting entries

P1

**Check** (c) Dr. Office Supplies Expense, \$3,880; (e) Dr. Insurance Expense, \$5,800

Prepare adjusting journal entries for the year ended (date of) December 31, 2015, for each of these separate situations. Assume that prepaid expenses are initially recorded in asset accounts. Also assume that fees collected in advance of work are initially recorded as liabilities.

- Depreciation on the company's equipment for 2015 is computed to be \$18,000.
- The Prepaid Insurance account had a \$6,000 debit balance at December 31, 2015, before adjusting for the costs of any expired coverage. An analysis of the company's insurance policies showed that \$1,100 of unexpired insurance coverage remains.
- The Office Supplies account had a \$700 debit balance on December 31, 2014; and \$3,480 of office supplies were purchased during the year. The December 31, 2015, physical count showed \$300 of supplies available.
- Two-thirds of the work related to \$15,000 of cash received in advance was performed this period.
- The Prepaid Insurance account had a \$6,800 debit balance at December 31, 2015, before adjusting for the costs of any expired coverage. An analysis of insurance policies showed that \$5,800 of coverage had expired.
- Wage expenses of \$3,200 have been incurred but are not paid as of December 31, 2015.

**Exercise 3-7**

Preparing adjusting entries

P1

**Check** (e) Dr. Insurance Expense, \$2,800; (f) Cr. Interest Revenue, \$1,050

For each of the following separate cases, prepare adjusting entries required of financial statements for the year ended (date of) December 31, 2015. (Assume that prepaid expenses are initially recorded in asset accounts and that fees collected in advance of work are initially recorded as liabilities.)

- One-third of the work related to \$15,000 cash received in advance is performed this period.
- Wages of \$8,000 are earned by workers but not paid as of December 31, 2015.
- Depreciation on the company's equipment for 2015 is \$18,000.
- The Office Supplies account had a \$240 debit balance on December 31, 2014. During 2015, \$5,200 of office supplies are purchased. A physical count of supplies at December 31, 2015, shows \$440 of supplies available.
- The Prepaid Insurance account had a \$4,000 balance on December 31, 2014. An analysis of insurance policies shows that \$1,200 of unexpired insurance benefits remain at December 31, 2015.
- The company has earned (but not recorded) \$1,050 of interest from investments in CDs for the year ended December 31, 2015. The interest revenue will be received on January 10, 2016.
- The company has a bank loan and has incurred (but not recorded) interest expense of \$2,500 for the year ended December 31, 2015. The company must pay the interest on January 2, 2016.

**Exercise 3-8**

Analyzing and preparing adjusting entries

A1 P1 P3 

Following are two income statements for Alexis Co. for the year ended December 31. The left column is prepared before any adjusting entries are recorded, and the right column includes the effects of adjusting entries. The company records cash receipts and payments related to unearned and prepaid items in balance sheet accounts. Analyze the statements and prepare the eight adjusting entries that likely were recorded. (Note: 30% of the \$7,000 adjustment for Fees Earned has been earned but not billed, and the other 70% has been earned by performing services that were paid for in advance.)

<b>ALEXIS CO.</b>		
<b>Income Statements</b>		
<b>For Year Ended December 31</b>		
	<b>Unadjusted</b>	<b>Adjusted</b>
<b>Revenues</b>		
Fees earned .....	\$18,000	\$25,000
Commissions earned .....	36,500	36,500
Total revenues .....	54,500	61,500
<b>Expenses</b>		
Depreciation expense—Computers .....	0	1,600
Depreciation expense—Office furniture .....	0	1,850
Salaries expense .....	13,500	15,750
Insurance expense .....	0	1,400
Rent expense .....	3,800	3,800
Office supplies expense .....	0	580
Advertising expense .....	2,500	2,500
Utilities expense .....	1,245	1,335
Total expenses .....	21,045	28,815
Net income .....	<u>\$33,455</u>	<u>\$32,685</u>

**adidas AG** reports the following balance sheet accounts for the year ended December 31, 2013 (euros in millions). Prepare the balance sheet for this company as of December 31, 2013, following usual IFRS practices.

Tangible and other assets .....	€ 304	Intangible assets .....	€ 148
Total equity .....	2,489	Total current liabilities .....	794
Receivables and other assets .....	1,928	Inventories .....	29
Total noncurrent liabilities .....	3,411	Total liabilities .....	4,205
Cash and cash equivalents .....	736	Other current assets .....	73
Total current assets .....	2,766	Total noncurrent assets .....	3,928
Other noncurrent assets .....	3,476		

**Exercise 3-9**

Preparing a balance sheet following IFRS

P3

Use the following information to compute profit margin for each separate company *a* through *e*.

	<b>Net Income</b>	<b>Net Sales</b>		<b>Net Income</b>	<b>Net Sales</b>
<b>a.</b>	\$ 4,361	\$ 44,500	<b>d.</b>	\$65,646	\$1,458,800
<b>b.</b>	97,706	398,800	<b>e.</b>	80,132	435,500
<b>c.</b>	111,281	257,000			

**Exercise 3-10**

Computing and interpreting profit margin

A2

Which of the five companies is the most profitable according to the profit margin ratio? Interpret that company's profit margin ratio.

Ricardo Construction began operations on December 1. In setting up its accounting procedures, the company decided to debit expense accounts when it prepaits its expenses and to credit revenue accounts when customers pay for services in advance. Prepare journal entries for items *a* through *d* and the adjusting entries as of its December 31 period-end for items *e* through *g*.

- Supplies are purchased on December 1 for \$2,000 cash.
- The company prepaid its insurance premiums for \$1,540 cash on December 2.
- On December 15, the company receives an advance payment of \$13,000 cash from a customer for remodeling work.
- On December 28, the company receives \$3,700 cash from another customer for remodeling work to be performed in January.

**Exercise 3-11<sup>A</sup>**

Adjusting for prepaits recorded as expenses and unearned revenues recorded as revenues

P4

**Check** (f) Cr. Insurance Expense, \$1,200; (g) Dr. Remodeling Fees Earned, \$11,130

- e. A physical count on December 31 indicates that the Company has \$1,840 of supplies available.
- f. An analysis of the insurance policies in effect on December 31 shows that \$340 of insurance coverage had expired.
- g. As of December 31, only one remodeling project has been worked on and completed. The \$5,570 fee for this project had been received in advance and recorded as remodeling fees earned.

**Exercise 3-12<sup>A</sup>**

Recording and reporting revenues received in advance

P4

Costanza Company experienced the following events and transactions during July.

- July 1 Received \$3,000 cash in advance of performing work for Vivian Solana.
- 6 Received \$7,500 cash in advance of performing work for Iris Haru.
- 12 Completed the job for Solana.
- 18 Received \$8,500 cash in advance of performing work for Amina Jordan.
- 27 Completed the job for Haru.
- 31 None of the work for Jordan has been performed.

- a. Prepare journal entries (including any adjusting entries as of the end of the month) to record these events using the procedure of initially crediting the Unearned Fees account when payment is received from a customer in advance of performing services.
- b. Prepare journal entries (including any adjusting entries as of the end of the month) to record these events using the procedure of initially crediting the Fees Earned account when payment is received from a customer in advance of performing services.
- c. Under each method, determine the amount of earned fees reported on the income statement for July and the amount of unearned fees reported on the balance sheet as of July 31.

**Check** (c) Fees Earned—using entries from part b, \$10,500

**PROBLEM SET A**

For each of the following entries, enter the letter of the explanation that most closely describes it in the space beside each entry. (You can use letters more than once.)

**Problem 3-1A**

Identifying adjusting entries with explanations

C3 P1

- A. To record receipt of unearned revenue.
- B. To record this period's earning of prior unearned revenue.
- C. To record payment of an accrued expense.
- D. To record receipt of an accrued revenue.
- E. To record an accrued expense.
- F. To record an accrued revenue.
- G. To record this period's use of a prepaid expense.
- H. To record payment of a prepaid expense.
- I. To record this period's depreciation expense.

_____ 12.	Rent Expense .....	2,000	
	Prepaid Rent .....		2,000

Arnez Co. follows the practice of recording prepaid expenses and unearned revenues in balance sheet accounts. The company's annual accounting period ends on December 31, 2015. The following information concerns the adjusting entries to be recorded as of that date.

- The Office Supplies account started the year with a \$4,000 balance. During 2015, the company purchased supplies for \$13,400, which was added to the Office Supplies account. The inventory of supplies available at December 31, 2015, totaled \$2,554.
- An analysis of the company's insurance policies provided the following facts.

Policy	Date of Purchase	Months of Coverage	Cost
A	April 1, 2013	24	\$14,400
B	April 1, 2014	36	12,960
C	August 1, 2015	12	2,400

The total premium for each policy was paid in full (for all months) at the purchase date, and the Prepaid Insurance account was debited for the full cost. (Year-end adjusting entries for Prepaid Insurance were properly recorded in all prior years.)

- The company has 15 employees, who earn a total of \$1,960 in salaries each working day. They are paid each Monday for their work in the five-day workweek ending on the previous Friday. Assume that December 31, 2015, is a Tuesday, and all 15 employees worked the first two days of that week. Because New Year's Day is a paid holiday, they will be paid salaries for five full days on Monday, January 6, 2016.
- The company purchased a building on January 1, 2015. It cost \$960,000 and is expected to have a \$45,000 salvage value at the end of its predicted 30-year life. Annual depreciation is \$30,500.
- Since the company is not large enough to occupy the entire building it owns, it rented space to a tenant at \$3,000 per month, starting on November 1, 2015. The rent was paid on time on November 1, and the amount received was credited to the Rent Earned account. However, the tenant has not paid the December rent. The company has worked out an agreement with the tenant, who has promised to pay both December and January rent in full on January 15. The tenant has agreed not to fall behind again.
- On November 1, the company rented space to another tenant for \$2,800 per month. The tenant paid five months' rent in advance on that date. The payment was recorded with a credit to the Unearned Rent account.

**Required**

- Use the information to prepare adjusting entries as of December 31, 2015.
- Prepare journal entries to record the first subsequent cash transaction in 2016 for parts *c* and *e*.

**Problem 3-2A**

Preparing adjusting and subsequent journal entries

C1 A1 P1

**Check** (1*b*) Dr. Insurance Expense, \$7,120 (1*d*) Dr. Depreciation Expense, \$30,500

Wells Technical Institute (WTI), a school owned by Tristana Wells, provides training to individuals who pay tuition directly to the school. WTI also offers training to groups in off-site locations. Its unadjusted trial balance as of December 31, 2015, follows. WTI initially records prepaid expenses and unearned revenues in balance sheet accounts. Descriptions of items *a* through *h* that require adjusting entries on December 31, 2015, follow.

**Problem 3-3A**

Preparing adjusting entries, adjusted trial balance, and financial statements

A1 P1 P2 P3

**Additional Information Items**

- a. An analysis of WTI's insurance policies shows that \$2,400 of coverage has expired.
- b. An inventory count shows that teaching supplies costing \$2,800 are available at year-end 2015.
- c. Annual depreciation on the equipment is \$13,200.
- d. Annual depreciation on the professional library is \$7,200.
- e. On November 1, WTI agreed to do a special six-month course (starting immediately) for a client. The contract calls for a monthly fee of \$2,500, and the client paid the first five months' fees in advance. When the cash was received, the Unearned Training Fees account was credited. The fee for the sixth month will be recorded when it is collected in 2016.
- f. On October 15, WTI agreed to teach a four-month class (beginning immediately) for an individual for \$3,000 tuition per month payable at the end of the class. The class started on October 15, but no payment has yet been received. (WTI's accruals are applied to the nearest half-month; for example, October recognizes one-half month accrual.)
- g. WTI's two employees are paid weekly. As of the end of the year, two days' salaries have accrued at the rate of \$100 per day for each employee.
- h. The balance in the Prepaid Rent account represents rent for December.

**Required**

1. Prepare T-accounts (representing the ledger) with balances from the unadjusted trial balance.
2. Prepare the necessary adjusting journal entries for items *a* through *h* and post them to the T-accounts. Assume that adjusting entries are made only at year-end.
3. Update balances in the T-accounts for the adjusting entries and prepare an adjusted trial balance.
4. Prepare Wells Technical Institute's income statement and statement of owner's equity for the year 2015 and prepare its balance sheet as of December 31, 2015.

**Check** (2e) Cr. Training Fees Earned, \$5,000; (2f) Cr. Tuition Fees Earned, \$7,500; (3) Adj. trial balance totals, \$345,700; (4) Net income, \$49,600; Ending T. Wells, Capital \$89,600

A six-column table for JKL Company follows. The first two columns contain the unadjusted trial balance for the company as of July 31, 2015. The last two columns contain the adjusted trial balance as of the same date.

### Required

#### Analysis Component

- Analyze the differences between the unadjusted and adjusted trial balances to determine the eight adjustments that likely were made. Show the results of your analysis by inserting these adjustment amounts in the table's two middle columns. Label each adjustment with a letter *a* through *h* and provide a short description of it at the bottom of the table.

#### Preparation Component

- Use the information in the adjusted trial balance to prepare the company's (a) income statement and its statement of owner's equity for the year ended July 31, 2015 (*Note*: J. Logan, Capital at July 31, 2014, was \$40,000, and the current-year withdrawals were \$5,000), and (b) the balance sheet as of July 31, 2015.

- Calculate the profit margin for year 2015.

**Problem 3-6A<sup>A</sup>**

Recording prepaid expenses and unearned revenues

P1 P4

Gomez Co. had the following transactions in the last two months of its year ended December 31.

- Nov. 1 Paid \$1,800 cash for future newspaper advertising.  
       1 Paid \$2,460 cash for 12 months of insurance through October 31 of the next year.  
       30 Received \$3,600 cash for future services to be provided to a customer.
- Dec. 1 Paid \$3,000 cash for a consultant's services to be received over the next three months.  
       15 Received \$7,950 cash for future services to be provided to a customer.  
       31 Of the advertising paid for on November 1, \$1,200 worth is not yet used.  
       31 A portion of the insurance paid for on November 1 has expired. No adjustment was made in November to Prepaid Insurance.  
       31 Services worth \$1,500 are not yet provided to the customer who paid on November 30.  
       31 One-third of the consulting services paid for on December 1 have been received.  
       31 The company has performed \$3,300 of services that the customer paid for on December 15.

**Required**

- Prepare entries for these transactions under the method that records prepaid expenses as assets and records unearned revenues as liabilities. Also prepare adjusting entries at the end of the year.
- Prepare entries for these transactions under the method that records prepaid expenses as expenses and records unearned revenues as revenues. Also prepare adjusting entries at the end of the year.

**Analysis Component**

- Explain why the alternative sets of entries in requirements 1 and 2 do not result in different financial statement amounts.

For each of the following entries, enter the letter of the explanation that most closely describes it in the space beside each entry. (You can use letters more than once.)

- A.** To record payment of a prepaid expense.                      **F.** To record an accrued expense.  
**B.** To record this period's use of a prepaid expense.           **G.** To record payment of an accrued expense.  
**C.** To record this period's depreciation expense.              **H.** To record an accrued revenue.  
**D.** To record receipt of unearned revenue.                      **I.** To record receipt of accrued revenue.  
**E.** To record this period's earning of prior unearned revenue.

Natsu Co. follows the practice of recording prepaid expenses and unearned revenues in balance sheet accounts. The company's annual accounting period ends on October 31, 2015. The following information concerns the adjusting entries that need to be recorded as of that date.

- a.** The Office Supplies account started the fiscal year with a \$600 balance. During the fiscal year, the company purchased supplies for \$4,570, which was added to the Office Supplies account. The supplies available at October 31, 2015, totaled \$800.  
**b.** An analysis of the company's insurance policies provided the following facts.

**Problem 3-2B**

Preparing adjusting and subsequent journal entries

**C1 A1 P1**

Policy	Date of Purchase	Months of Coverage	Cost
A	April 1, 2014	24	\$6,000
B	April 1, 2015	36	7,200
C	August 1, 2015	12	1,320

The total premium for each policy was paid in full (for all months) at the purchase date, and the Prepaid Insurance account was debited for the full cost. (Year-end adjusting entries for Prepaid Insurance were properly recorded in all prior fiscal years.)

- c. The company has four employees, who earn a total of \$1,000 for each workday. They are paid each Monday for their work in the five-day workweek ending on the previous Friday. Assume that October 31, 2015, is a Monday, and all four employees worked the first day of that week. They will be paid salaries for five full days on Monday, November 7, 2015.
- d. The company purchased a building on November 1, 2012, that cost \$175,000 and is expected to have a \$40,000 salvage value at the end of its predicted 25-year life. Annual depreciation is \$5,400.
- e. Since the company does not occupy the entire building it owns, it rented space to a tenant at \$1,000 per month, starting on September 1, 2015. The rent was paid on time on September 1, and the amount received was credited to the Rent Earned account. However, the October rent has not been paid. The company has worked out an agreement with the tenant, who has promised to pay both October and November rent in full on November 15. The tenant has agreed not to fall behind again.
- f. On September 1, the company rented space to another tenant for \$725 per month. The tenant paid five months' rent in advance on that date. The payment was recorded with a credit to the Unearned Rent account.

### Required

1. Use the information to prepare adjusting entries as of October 31, 2015.
2. Prepare journal entries to record the first subsequent cash transaction in November 2015 for parts c and e.

**Check** (1b) Dr. Insurance Expense, \$4,730; (1d) Dr. Depreciation Expense, \$5,400

### Problem 3-3B

Preparing adjusting entries, adjusted trial balance, and financial statements

A1 P1 P2 P3

Following is the unadjusted trial balance for Alonzo Institute as of December 31, 2015, which initially records prepaid expenses and unearned revenues in balance sheet accounts. The Institute provides one-on-one training to individuals who pay tuition directly to the business and offers extension training to groups in off-site locations. Shown after the trial balance are items *a* through *h* that require adjusting entries as of December 31, 2015.

	A	B	C
1	<b>ALONZO INSTITUTE</b>		
	<b>Unadjusted Trial Balance</b>		
	<b>December 31, 2015</b>		
2		<b>Debit</b>	<b>Credit</b>
3	Cash	\$ 60,000	
4	Accounts receivable	0	
5	Teaching supplies	70,000	
6	Prepaid insurance	19,000	
7	Prepaid rent	3,800	
8	Professional library	12,000	
9	Accumulated depreciation—Professional library		\$ 2,500
10	Equipment	40,000	
11	Accumulated depreciation—Equipment		20,000
12	Accounts payable		11,200
13	Salaries payable		0
14	Unearned training fees		28,600
15	C. Alonzo, Capital		71,500
16	C. Alonzo, Withdrawals	20,000	
17	Tuition fees earned		129,200
18	Training fees earned		68,000
19	Depreciation expense—Professional library	0	
20	Depreciation expense—Equipment	0	
21	Salaries expense	44,200	
22	Insurance expense	0	
23	Rent expense	29,600	
24	Teaching supplies expense	0	
25	Advertising expense	19,000	
26	Utilities expense	13,400	
27	<b>Totals</b>	<b>\$ 331,000</b>	<b>\$331,000</b>
28			

**Additional Information Items**

- An analysis of the Institute's insurance policies shows that \$9,500 of coverage has expired.
- An inventory count shows that teaching supplies costing \$20,000 are available at year-end 2015.
- Annual depreciation on the equipment is \$5,000.
- Annual depreciation on the professional library is \$2,400.
- On November 1, the Institute agreed to do a special five-month course (starting immediately) for a client. The contract calls for a \$14,300 monthly fee, and the client paid the first two months' fees in advance. When the cash was received, the Unearned Training Fees account was credited. The last two months' fees will be recorded when collected in 2016.
- On October 15, the Institute agreed to teach a four-month class (beginning immediately) to an individual for \$2,300 tuition per month payable at the end of the class. The class started on October 15, but no payment has yet been received. (The Institute's accruals are applied to the nearest half-month; for example, October recognizes one-half month accrual.)
- The Institute's only employee is paid weekly. As of the end of the year, three days' salaries have accrued at the rate of \$150 per day.
- The balance in the Prepaid Rent account represents rent for December.

**Required**

- Prepare T-accounts (representing the ledger) with balances from the unadjusted trial balance.
- Prepare the necessary adjusting journal entries for items *a* through *h*, and post them to the T-accounts. Assume that adjusting entries are made only at year-end.
- Update balances in the T-accounts for the adjusting entries and prepare an adjusted trial balance.
- Prepare the company's income statement and statement of owner's equity for the year 2015, and prepare its balance sheet as of December 31, 2015.

**Check** (2e) Cr. Training Fees Earned, \$28,600; (2f) Cr. Tuition Fees Earned, \$5,750; (3) Adj. trial balance totals, \$344,600; (4) Net income, \$54,200; Ending C. Alonzo, Capital, \$105,700

A six-column table for Yan Consulting Company follows. The first two columns contain the unadjusted trial balance for the company as of December 31, 2015, and the last two columns contain the adjusted trial balance as of the same date.

	Unadjusted Trial Balance		Adjustments		Adjusted Trial Balance	
Cash .....	\$	45,000			\$	45,000
Accounts receivable .....		60,000				66,660
Office supplies .....		40,000				17,000
Prepaid insurance .....		8,200				3,600
Office equipment .....		120,000				120,000
Accumulated depreciation—						
Office equip. ....	\$	20,000			\$	30,000
Accounts payable .....		26,000				32,000
Interest payable .....		0				2,150
Salaries payable .....		0				16,000
Unearned consulting fees .....		40,000				27,800
Long-term notes payable .....		75,000				75,000
Z. Yan, Capital .....		80,200				80,200
Z. Yan, Withdrawals .....		20,000				20,000

Advertising expense .....		42,000				48,000
Totals .....	\$	475,800	\$	475,800	\$	516,610
					\$	516,610

**Problem 3-4B**

Interpreting unadjusted and adjusted trial balances, and preparing financial statements

C3 A1 P1 P2 P3

**Required****Analysis Component**

1. Analyze the differences between the unadjusted and adjusted trial balances to determine the eight adjustments that likely were made. Show the results of your analysis by inserting these adjustment amounts in the table's two middle columns. Label each adjustment with a letter *a* through *h* and provide a short description of it at the bottom of the table.

**Preparation Component**

2. Use the information in the adjusted trial balance to prepare this company's (a) income statement and its statement of owner's equity for the year ended December 31, 2015 (*Note*: Z. Yan, Capital at December 31, 2014, was \$80,200, and the current-year withdrawals were \$20,000), and (b) the balance sheet as of December 31, 2015.

**Check** (2) Net income, \$9,110; Z. Yan, Capital (12/31/15), \$69,310; Total assets, \$222,260

**Problem 3-5B**

Preparing financial statements from the adjusted trial balance and calculating profit margin

P3 A1 A2

The adjusted trial balance for Speedy Courier as of December 31, 2015, follows.

	Debit	Credit
Cash .....	\$ 58,000	
Accounts receivable .....	120,000	
Interest receivable .....	7,000	
Notes receivable (due in 90 days) .....	210,000	
Office supplies .....	22,000	
Trucks .....	134,000	
Accumulated depreciation—Trucks .....		\$ 58,000
Equipment .....	270,000	
Accumulated depreciation—Equipment .....		200,000
Land .....	100,000	
Accounts payable .....		134,000
Interest payable .....		20,000
Salaries payable .....		28,000
Unearned delivery fees .....		120,000
Long-term notes payable .....		200,000
L. Horace, Capital .....		125,000
L. Horace, Withdrawals .....	50,000	
Delivery fees earned .....		611,800
Interest earned .....		34,000
Depreciation expense—Trucks .....	29,000	
Depreciation expense—Equipment .....	48,000	
Salaries expense .....	74,000	
Wages expense .....	300,000	
Interest expense .....	15,000	
Office supplies expense .....	31,000	
Advertising expense .....	27,200	
Repairs expense—Trucks .....	35,600	
Totals .....	<u>\$1,530,800</u>	<u>\$1,530,800</u>

**Required**

1. Use the information in the adjusted trial balance to prepare (a) the income statement for the year ended December 31, 2015, (b) the statement of owner's equity for the year ended December 31, 2015, and (c) the balance sheet as of December 31, 2015.
2. Calculate the profit margin for year 2015.

**Check** (1) Total assets, \$663,000

**Problem 3-6B<sup>A</sup>**

Recording prepaid expenses and unearned revenues

P1 P4

Tremor Co. had the following transactions in the last two months of its fiscal year ended May 31.

- |      |    |   |
|------|----|---|
| Apr. | 1  | Paid \$2,450 cash to an accounting firm for future consulting services.           |
|      | 1  | Paid \$3,600 cash for 12 months of insurance through March 31 of the next year.   |
|      | 30 | Received \$8,500 cash for future services to be provided to a customer.           |
| May  | 1  | Paid \$4,450 cash for future newspaper advertising.                               |
|      | 23 | Received \$10,450 cash for future services to be provided to a customer.          |
|      | 31 | Of the consulting services paid for on April 1, \$2,000 worth has been performed. |

- 31 A portion of the insurance paid for on April 1 has expired. No adjustment was made in April to Prepaid Insurance.
- 31 Services worth \$4,600 are not yet provided to the customer who paid on April 30.
- 31 Of the advertising paid for on May 1, \$2,050 worth is not yet used.
- 31 The company has performed \$5,500 of services that the customer paid for on May 23.

**Required**

1. Prepare entries for these transactions under the method that records prepaid expenses and unearned revenues in balance sheet accounts. Also prepare adjusting entries at the end of the year.
2. Prepare entries for these transactions under the method that records prepaid expenses and unearned revenues in income statement accounts. Also prepare adjusting entries at the end of the year.

**Analysis Component**

3. Explain why the alternative sets of entries in parts 1 and 2 do not result in different financial statement amounts.

*This serial problem began in Chapter 1 and continues through most of the book. If previous chapter segments were not completed, the serial problem can still begin at this point. It is helpful, but not necessary, to use the Working Papers that accompany the book.*

**SERIAL PROBLEM**

Business Solutions

P1 P2 P3

**SP 3** After the success of the company's first two months, Santana Rey continues to operate Business Solutions. (Transactions for the first two months are described in the serial problem of Chapter 2.) The November 30, 2015, unadjusted trial balance of Business Solutions (reflecting its transactions for October and November of 2015) follows.

No.	Account Title	Debit	Credit
101	Cash .....	\$38,264	
106	Accounts receivable .....	12,618	
126	Computer supplies .....	2,545	
128	Prepaid insurance .....	2,220	
131	Prepaid rent .....	3,300	
163	Office equipment .....	8,000	
164	Accumulated depreciation—Office equipment .....		\$ 0
167	Computer equipment .....	20,000	
168	Accumulated depreciation—Computer equipment .....		0
201	Accounts payable .....		0
210	Wages payable .....		0
236	Unearned computer services revenue .....		0
301	S. Rey, Capital .....		73,000
302	S. Rey, Withdrawals .....	5,600	
403	Computer services revenue .....		25,659
612	Depreciation expense—Office equipment .....	0	
613	Depreciation expense—Computer equipment .....	0	
623	Wages expense .....	2,625	
637	Insurance expense .....	0	
640	Rent expense .....	0	
652	Computer supplies expense .....	0	
655	Advertising expense .....	1,728	
676	Mileage expense .....	704	
677	Miscellaneous expenses .....	250	
684	Repairs expense—Computer .....	805	
	Totals .....	<u>\$98,659</u>	<u>\$98,659</u>

Business Solutions had the following transactions and events in December 2015.

- Dec. 2 Paid \$1,025 cash to Hillside Mall for Business Solutions' share of mall advertising costs.
- 3 Paid \$500 cash for minor repairs to the company's computer.
- 4 Received \$3,950 cash from Alex's Engineering Co. for the receivable from November.
- 10 Paid cash to Lyn Addie for six days of work at the rate of \$125 per day.

- 14 Notified by Alex's Engineering Co. that Business Solutions' bid of \$7,000 on a proposed project has been accepted. Alex's paid a \$1,500 cash advance to Business Solutions.
- 15 Purchased \$1,100 of computer supplies on credit from Harris Office Products.
- 16 Sent a reminder to Gomez Co. to pay the fee for services recorded on November 8.
- 20 Completed a project for Liu Corporation and received \$5,625 cash.
- 22–26 Took the week off for the holidays.
- 28 Received \$3,000 cash from Gomez Co. on its receivable.
- 29 Reimbursed S. Rey for business automobile mileage (600 miles at \$0.32 per mile).
- 31 S. Rey withdrew \$1,500 cash from the company for personal use.

The following additional facts are collected for use in making adjusting entries prior to preparing financial statements for the company's first three months:

- a. The December 31 inventory count of computer supplies shows \$580 still available.
- b. Three months have expired since the 12-month insurance premium was paid in advance.
- c. As of December 31, Lyn Addie has not been paid for four days of work at \$125 per day.
- d. The computer system, acquired on October 1, is expected to have a four-year life with no salvage value.
- e. The office equipment, acquired on October 1, is expected to have a five-year life with no salvage value.
- f. Three of the four months' prepaid rent has expired.

### Required

1. Prepare journal entries to record each of the December transactions and events for Business Solutions. Post those entries to the accounts in the ledger.
2. Prepare adjusting entries to reflect *a* through *f*. Post those entries to the accounts in the ledger.
3. Prepare an adjusted trial balance as of December 31, 2015.
4. Prepare an income statement for the three months ended December 31, 2015.
5. Prepare a statement of owner's equity for the three months ended December 31, 2015.
6. Prepare a balance sheet as of December 31, 2015.

**Check** (3) Adjusted trial balance totals, \$109,034

(6) Total assets, \$83,460

## GL GENERAL LEDGER PROBLEM

Available only in Connect Plus

The General Ledger tool in Connect allows students to immediately see the financial statements as of a specific date. Each of the following questions begins with an unadjusted trial balance. Using transactions from the following assignment, prepare the necessary adjustments, and determine the impact each adjustment has on net income. The financial statements are automatically populated.

**GL 3-1** Based on the FastForward illustration in this chapter

Using transactions from the following assignments, prepare the necessary adjustments, create the financial statements, and determine the impact each adjustment has on net income.

**GL 3-2** Based on Problem 3-3A

**GL 3-4** Extension of Problem 2-2A

**GL 3-3** Extension of Problem 2-1A

**GL 3-5** Based on Serial Problem SP 3

## Beyond the Numbers

### REPORTING IN ACTION

C1 C2 A1 A2

## APPLE

**BTN 3-1** Refer to **Apple's** financial statements in Appendix A to answer the following.

1. Identify and write down the revenue recognition principle as explained in the chapter.
2. Review Apple's footnotes (in Appendix A and/or from its 10-K on its website) to discover how it applies the revenue recognition principle and when it recognizes revenue. Report what you discover.
3. What is Apple's profit margin for fiscal years ended September 28, 2013, and September 29, 2012.

### Fast Forward

4. Access Apple's annual report (10-K) for fiscal years ending after September 28, 2013, at its website ([Apple.com](http://Apple.com)) or the SEC's EDGAR database ([www.SEC.gov](http://www.SEC.gov)). Assess and compare the September 28, 2013, fiscal year profit margin to any subsequent year's profit margin that you compute.

**BTN 3-2** Key figures for the recent two years of both **Apple** and **Google** follow.

(\$ millions)	Apple		Google	
	Current Year	Prior Year	Current Year	Prior Year
Net income.....	\$ 37,037	\$ 41,733	\$12,920	\$10,737
Net sales.....	170,910	156,508	59,825	50,175

## COMPARATIVE ANALYSIS

A2 

**APPLE**  
**GOOGLE**

### Required

1. Compute profit margins for (a) Apple and (b) Google for the two years of data shown.
2. Which company is more successful on the basis of profit margin? Explain.

**BTN 3-3** Jessica Boland works for Sea Biscuit Co. She and Farah Smith, her manager, are preparing adjusting entries for annual financial statements. Boland computes depreciation and records it as

Depreciation Expense—Equipment .....	123,000
Accumulated Depreciation—Equipment .....	123,000

## ETHICS CHALLENGE

C1 C2 A1 

Smith agrees with her computation but says the credit entry should be directly to the Equipment account. Smith argues that while accumulated depreciation is technically correct, “it is less hassle not to use a contra account and just credit the Equipment account directly. And besides, the balance sheet shows the same amount for total assets under either method.”

### Required

1. How should depreciation be recorded? Do you support Boland or Smith?
2. Evaluate the strengths and weaknesses of Smith’s reasons for preferring her method.
3. Indicate whether the situation Boland faces is an ethical problem. Explain.

**BTN 3-4** The class should be divided into teams. Teams are to select an industry (such as automobile manufacturing, airlines, defense contractors), and each team member is to select a different company in that industry. Each team member is to acquire the annual report of the company selected. Annual reports can be downloaded from company websites or from the SEC’s EDGAR database at ([www.SEC.gov](http://www.SEC.gov)).

## COMMUNICATING IN PRACTICE

C1 A2 

### Required

1. Use the annual report to compute the return on assets, debt ratio, and profit margin.
2. Communicate with team members via a meeting, e-mail, or telephone to discuss the meaning of the ratios, how different companies compare to each other, and the industry norm. The team must prepare a single memo reporting the ratios for each company and identifying the conclusions or consensus of opinion reached during the team’s discussion. The memo is to be copied and distributed to the instructor and all classmates.

**BTN 3-5** Access EDGAR online ([www.SEC.gov](http://www.SEC.gov)) and locate the 10-K report of **The Gap, Inc.**, (ticker GPS) filed on March 26, 2012. Review its financial statements reported for the year ended January 28, 2012, to answer the following questions.

## TAKING IT TO THE NET

C1 A2  

### Required

1. What are Gap’s main brands?
2. What is Gap’s fiscal year-end?
3. What is Gap’s net sales for the period ended January 28, 2012?
4. What is Gap’s net income for the period ended January 28, 2012?
5. Compute Gap’s profit margin for the year ended January 28, 2012.
6. Do you believe Gap’s decision to use a year-end of late January or early February relates to its natural business year? Explain.

**TEAMWORK IN ACTION**

**BTN 3-6** Four types of adjustments are described in the chapter: (1) prepaid expenses, (2) unearned revenues, (3) accrued expenses, and (4) accrued revenues.

**Required**

- Form *learning teams* of four (or more) members. Each team member must select one of the four adjustments as an area of expertise (each team must have at least one expert in each area).
- Form *expert teams* from the individuals who have selected the same area of expertise. Expert teams are to discuss and write a report that each expert will present to his or her learning team addressing the following:
  - Description of the adjustment and why it's necessary.
  - Example of a transaction or event, with dates and amounts, that requires adjustment.
  - Adjusting entry(ies) for the example in requirement *b*.
  - Status of the affected account(s) before and after the adjustment in requirement *c*.
  - Effects on financial statements of not making the adjustment.
- Each expert should return to his or her learning team. In rotation, each member should present his or her expert team's report to the learning team. Team discussion is encouraged.

**ENTREPRENEURIAL DECISION**

**BTN 3-7** Review the opening feature of this chapter dealing with **International Princess Project** and the entrepreneurial owner, Shannon Keith.

**Required**

- Assume that International Princess Project sells a \$300 gift certificate to a customer, collecting the \$300 cash in advance. Prepare the journal entry for the (a) collection of the cash for delivery of the gift certificate to the customer and (b) revenue from the subsequent delivery of merchandise when the gift certificate is used.
- How can keeping less inventory help to improve International Princess Project's profit margin?
- Shannon Keith understands that many companies carry considerable inventory, and she is thinking of carrying additional inventory of merchandise for sale. Shannon desires your advice on the pros and cons of carrying such inventory. Provide at least one reason for, and one reason against, carrying additional inventory.

**HITTING THE ROAD**

**BTN 3-8** Visit the website of a major company that interests you. Use the "Investor Relations" link at the website to obtain the toll-free telephone number of the Investor Relations Department. Call the company, ask to speak to Investor Relations, and request a copy of the company's most recent annual report (a company will sometimes send a prepackaged *investor packet*, which includes the annual report plus other relevant information). You should receive the requested report within one to two weeks. Once you have received your report, use it throughout the term to see that the principles you are learning in class are being applied in practice.

**GLOBAL DECISION**

**BTN 3-9** **Samsung** ([Samsung.com](http://Samsung.com)) is a leading manufacturer of consumer electronic products. The following selected information is available from Samsung's financial statements along with that from **Apple** and **Google**.

(millions)	Samsung	Apple	Google
Net income . . . . .	₩ 30,474,764	\$ 37,037	\$12,920
Net sales . . . . .	228,692,667	170,910	59,825

**Required**

- Compute profit margin for the current year for Samsung, Apple, and Google.
- Which company has the higher profit margin? For that company, how much net income does it receive for each \$1 or ₩1 of sales?

**Samsung**  
**APPLE**  
**GOOGLE**

**ANSWERS TO MULTIPLE CHOICE QUIZ**

1. b; the forgotten adjusting entry is: *dr.* Wages Expense, *cr.* Wages Payable.
2. c; Supplies used =  $\$450 - \$125 = \$325$
3. b; Insurance expense =  $\$24,000 \times (8/24) = \$8,000$ ; adjusting entry is: *dr.* Insurance Expense for \$8,000, *cr.* Prepaid Insurance for \$8,000.
4. a; Consulting fees earned =  $\$3,600 \times (2/6) = \$1,200$ ; adjusting entry is: *dr.* Unearned Consulting Fee for \$1,200, *cr.* Consulting Fees Earned for \$1,200.
5. e; Profit margin =  $\$15,000/\$300,000 = 5\%$

# chapter 4

# Completing the Accounting Cycle

## Chapter Preview

### WORK SHEET

- P1** Benefits of a work sheet
- Preparing a work sheet
- Applying a work sheet

### CLOSING PROCESS

- C1** Temporary accounts
- P2** Closing entries
- P3** Post-closing trial balance
- C2** Accounting cycle

### CLASSIFIED BALANCE SHEET AND ANALYSIS

- C3** Classified balance sheet—Structure and categories
- A1** Current ratio analysis

## Learning Objectives

### CONCEPTUAL

- C1** Explain why temporary accounts are closed each period.
- C2** Identify steps in the accounting cycle.
- C3** Explain and prepare a classified balance sheet.

### ANALYTICAL

- A1** Compute the current ratio and describe what it reveals about a company's financial condition.

### PROCEDURAL

- P1** Prepare a work sheet and explain its usefulness.

- P2** Describe and prepare closing entries.

- P3** Explain and prepare a post-closing trial balance.

- P4** *Appendix 4A*—Prepare reversing entries and explain their purpose.

## THE Naked Hippy

TAMPA—“Our business is ‘green’ at the core,” explains Adrien Edwards. “For me it has always been a passion to combine business with truly sustainable philanthropy.” Adrien is the founder of **TheNakedHippy** ([TheNakedHippy.com](http://TheNakedHippy.com)), which is a “purposed brand” of statement t-shirts. For example, a popular brand is: BE KIND TO ONE ANOTHER. “We coined the term ‘eco-tee;” says Adrien. “An eco-tee is . . . grown without chemicals . . . [and] printed with water-based earth-friendly ink.”

Success, however, requires Adrien to monitor and control costs. “What makes us green also saves us money,” insists Adrien. He set up an accounting system to track costs and match them with revenues. Adrien explains, “Our boxes are recycled. You never know what kind of box you’ll get your eco-tee in. We sent out a red box with Christmas wrapping paper. I wish I could have been there when they opened it!”

His effective use of recycled materials to preserve much-needed cash is good management. “I have an extensive background in business,” says Adrien, “so this was almost a logical progression.” He explains that implementing the accounting cycle, using a work sheet, preparing classified financial statements, and acting on that information all increase his chances

of success. For example, his focus on expenses means, “We rarely have to pay for shipping materials.”

To date, Adrien has successfully controlled costs while growing revenue and meeting customer needs. He also invests 100% (yes, *all*) of his net income as micro-loans to mom-and-pop businesses in developing countries. “Giving people things is one thing, but helping them get it for them-

selves is, to me, the ultimate social enterprise,” explains Adrien. “I don’t know of another for-profit business that views philanthropy like that.” Thus, how he applies

the accounting cycle, including closing entries, to identify and match costs with revenues to compute net income has a direct bearing on the people he helps. “Our success is directly connected to the success of the people we help.”

Adrien is on a mission. “It has been extremely profitable,” says Adrien, “[but] it’s not all about money.” The goal, explains Adrien, is to “help people get on their feet and gain a sense of pride and confidence that can in turn make a huge change in their environment.”

## WORK SHEET AS A TOOL

Information preparers use various analyses and internal documents when organizing information for internal and external decision makers. Internal documents are often called **working papers**. One widely used working paper is the **work sheet**, which is a useful tool for preparers in working with accounting information. It is usually not available to external decision makers such as investors.

### Benefits of a Work Sheet (Spreadsheet)

A work sheet is *not* a required report, yet using a manual or electronic work sheet has several potential benefits. Specifically, a work sheet

- Aids the preparation of financial statements.
- Reduces the possibility of errors when working with many accounts and adjustments.
- Links accounts and adjustments to their impacts in financial statements.
- Assists in planning and organizing an audit of financial statements—as it can be used to reflect any adjustments necessary.
- Helps in preparing interim (monthly and quarterly) financial statements when the journalizing and posting of adjusting entries are postponed until year-end.
- Shows the effects of proposed or “what-if” transactions.

### P1

Prepare a work sheet and explain its usefulness.

### Decision Insight

**High-Tech Work Sheet** An electronic work sheet using spreadsheet software such as Excel allows us to easily change numbers, assess the impact of alternative strategies, and quickly prepare financial statements at less cost. **Google Docs** (or **Microsoft Office Online** or **Zoho Docs**) allows the sharing of a spreadsheet so that team members can work on the same work sheet simultaneously. Electronic work sheets can also increase the available time for analysis and interpretation. ■

Image Source/Getty Images

**Point:** Since a work sheet is *not* a required report or an accounting record, its format is flexible and can be modified by its user to fit his/her preferences.

### Use of a Work Sheet

When a work sheet is used to prepare financial statements, it is constructed at the end of a period before the adjusting process. The complete work sheet includes a list of the accounts, their balances and adjustments, and their sorting into financial statement columns. It provides two columns each for the unadjusted trial balance, the adjustments, the adjusted trial balance, the income statement, and the balance sheet (including the statement of owner’s equity). To describe and interpret the work sheet, we use the information from FastForward. Preparing the work sheet has five important steps. Each step, 1 through 5, is color-coded and explained with reference to Exhibits 4.1 and 4.2.

#### 1 Step 1. Enter Unadjusted Trial Balance

*Refer to Exhibit 4.1—green section.* The first step in preparing a work sheet is to list the title of every account and its account number that is expected to appear on its financial statements. This includes all accounts in the ledger plus any new ones from adjusting entries. Most adjusting entries—including expenses from salaries, supplies, depreciation, and insurance—are predictable and recurring. The unadjusted balance for each account is then entered in the appropriate Debit or Credit column of the unadjusted trial balance columns. The totals of these two columns must be equal. The light green section of Exhibit 4.1 shows FastForward’s work sheet after completing this first step (dark green rows reflect accounts expected to arise as part of the adjustments). Sometimes blank lines are left on the work sheet based on past experience to indicate where lines will be needed for adjustments to certain accounts. Exhibit 4.1 shows Consulting Revenue as one example. An alternative is to squeeze adjustments on one line or to combine the effects of two or more adjustments in one amount. In the unusual case when an account is not predicted, we can add a new line for such an account following the *Totals* line.

## 2 Step 2. Enter Adjustments

Refer to Exhibit 4.1—yellow section. The second step in preparing a work sheet is to enter adjustments in the Adjustments columns. The adjustments shown are the same ones shown in Exhibit 3.13. An identifying letter links the debit and credit of each adjustment. This is called *keying* the adjustments. After preparing a work sheet, adjustments must still be entered in the journal and posted to the ledger. The Adjustments columns provide the information for adjusting entries in the journal.

**Point:** A recordkeeper often can complete the procedural task of journalizing and posting adjusting entries by using a work sheet and the guidance that *keying* provides.

## 3 Step 3. Prepare Adjusted Trial Balance

Refer to Exhibit 4.1—blue section. The adjusted trial balance is prepared by combining the adjustments with the unadjusted balances for each account. As an example, the Prepaid Insurance account has a \$2,400 debit balance in the Unadjusted Trial Balance columns. This \$2,400 debit is combined with the \$100 credit in the Adjustments columns to give Prepaid Insurance a \$2,300 debit in the Adjusted Trial Balance columns. The totals of the Adjusted Trial Balance columns confirm the equality of debits and credits.

**Point:** To avoid omitting the transfer of an account balance, start with the first line (Cash) and continue in account order.

## 4 Step 4. Sort Adjusted Trial Balance Amounts to Financial Statements

Refer to Exhibit 4.1—orange section. This step involves sorting account balances from the adjusted trial balance to their proper financial statement columns. Expenses go to the Income Statement Debit column and revenues to the Income Statement Credit column. Assets and withdrawals go to the Balance Sheet & Statement of Owner's Equity Debit column. Liabilities and owner's capital go to the Balance Sheet & Statement of Owner's Equity Credit column.

## 5 Step 5. Total Statement Columns, Compute Income or Loss, and Balance Columns

Refer to Exhibit 4.1—purple section. Each financial statement column (from step 4) is totaled. The difference between the totals of the Income Statement columns is net income or net loss. This occurs because revenues are entered in the Credit column and expenses in the Debit column. If the Credit total exceeds the Debit total, there is net income. If the Debit total exceeds the Credit total, there is a net loss. For FastForward, the Credit total exceeds the Debit total, giving a \$3,785 net income.

The net income from the Income Statement columns is then entered in the Balance Sheet & Statement of Owner's Equity Credit column. Adding net income to the last Credit column implies that it is to be added to owner's capital. If a loss occurs, it is added to the Debit column. This implies that it is to be subtracted from owner's capital. The ending balance of owner's capital does not appear in the last two columns as a single amount, but it is computed in the statement of owner's equity using these account balances. When net income or net loss is added to the proper Balance Sheet & Statement of Owner's Equity column, the totals of the last two columns must balance. If they do not, one or more errors have been made. The error can either be mathematical or involve sorting one or more amounts to incorrect columns.

## Decision Maker

**Entrepreneur** You make a printout of the electronic work sheet used to prepare financial statements. There is no depreciation adjustment, yet you own a large amount of equipment. Does the absence of depreciation adjustment concern you? ■ [Answers follow the chapter's Summary.]

## Work Sheet Applications and Analysis

A work sheet does not substitute for financial statements. It is a tool we can use at the end of an accounting period to help organize data and prepare financial statements. FastForward's financial statements are shown in Exhibit 4.2. Its income statement amounts are taken from the Income Statement columns of the work sheet. Similarly, amounts for its balance sheet and its statement of owner's equity are taken from the Balance Sheet & Statement of Owner's Equity columns of the work sheet.

Information from the Adjustments columns of a work sheet can be used to journalize adjusting entries. It is important to remember that a work sheet is not a journal. This means that even when a work sheet is prepared, it is necessary to both journalize adjustments and post them to the ledger.

**EXHIBIT 4.1**

Work Sheet with Five-Step Process for Completion

	Totals	45,300	45,300	3,710	3,710	47,610	47,610	4,365	8,150	43,245	39,460
	Net income							3,785			3,785
	Totals							8,150	8,150	43,245	43,245

**1a** List all accounts from the ledger; include those accounts (shaded in dark green) necessary to make accounting adjustments.

**1b** Enter all amounts available from ledger accounts. Column totals must be equal.

**2** Enter adjustment amounts and use letters to cross-reference debit and credit adjustments. Column totals must be equal.

**3** Combine unadjusted trial balance amounts with the adjustments to get the adjusted trial balance amounts. Column totals must be equal.

**4a** Extend all revenue and expense amounts to the income statement columns.

**4b** Extend all asset, liability, capital, and withdrawals amounts to these columns.

**5a** Enter two new lines for the (1) net income or loss (2) totals.

**5b** First "Totals" row for income statement columns differ by the amount of net income or net loss.

**5c** Net income (loss) is extended to the credit (debit) column.

**A work sheet organizes information used to prepare adjusting entries, financial statements, and closing entries.**

Work sheets are also useful in analyzing the effects of proposed, or what-if, transactions. This is done by entering financial statement amounts in the Unadjusted (what-if) columns. Proposed transactions are then entered in the Adjustments columns. We then compute “adjusted” amounts from these proposed transactions. The extended amounts in the financial statement columns show the effects of these proposed transactions. These financial statement columns yield **pro forma financial statements** because they show the statements *as if* the proposed transactions occurred.

Work Sheet

P1

The following 10-column work sheet contains the year-end unadjusted trial balance for Magic Company as of December 31. Complete the work sheet by entering the necessary adjustments, computing the adjusted account balances, extending the adjusted balances into the appropriate financial statement columns, and entering the amount of net income for the period. *Note:* The Magic, Capital account balance was \$75,000 at December 31, 2014.

- Prepare and complete the work sheet, starting with the unadjusted trial balance and including adjustments based on the following.
  - The company has earned \$9,000 in fees that were not yet recorded at year-end.
  - The company incurred \$2,000 in salary expense that was not yet recorded at year-end. (*Hint:* For simplicity, assume it records any salary not yet paid as part of accounts payable.)
  - The long-term note payable was issued on December 31 this year. Thus, no interest has yet accrued on this loan.
- Use information from the completed work sheet in part 1 to prepare adjusting entries.
- Prepare the income statement and the statement of owner's equity for the year ended December 31 and the unclassified balance sheet at December 31.

**CLOSING PROCESS**

The **closing process** is an important step at the end of an accounting period *after* financial statements have been completed. It prepares accounts for recording the transactions and the events of the *next* period. In the closing process we must (1) identify accounts for closing, (2) record and post the closing entries, and (3) prepare a post-closing trial balance. The purpose of the closing process is twofold. First, it resets revenue, expense, and withdrawals account balances to zero at the end of each period (which also updates the owner's capital account for inclusion on the balance sheet). This is done so that these accounts can properly measure income and withdrawals for the next period. Second, it helps in summarizing a period's revenues and expenses. This section explains the closing process.

**Temporary and Permanent Accounts**

**Temporary** (or *nominal*) **accounts** accumulate data related to one accounting period. They include all income statement accounts, the withdrawals account, and the Income Summary account. They are temporary because the accounts are opened at the beginning of a period, used to record transactions and events for that period, and then closed at the end of the period. *The closing process applies only to temporary accounts.* **Permanent** (or *real*) **accounts** report on activities related to one or more future accounting periods. They carry their ending balances into the next period and generally consist of all balance sheet accounts. These asset, liability, and equity accounts are not closed (balance sheet accounts are permanent).

**Recording Closing Entries**

To record and post **closing entries** is to transfer the end-of-period balances in revenue, expense, and withdrawals accounts to the permanent capital account. Closing entries are necessary at the end of each period after financial statements are prepared because

- Revenue, expense, and withdrawals accounts must begin each period with zero balances.
- Owner's capital must reflect prior periods' revenues, expenses, and withdrawals.

An income statement aims to report revenues and expenses for a *specific accounting period*. The statement of owner's equity reports similar information, including withdrawals. Since

**C1** Explain why temporary accounts are closed each period.

Temporary Accounts (closed at period-end)
Revenues
Expenses
Owner, Withdrawals
Income Summary

Permanent Accounts (not closed at period-end)
Assets
Liabilities
Owner, Capital

**Point:** The Withdrawals account is also called the *Drawing account*.

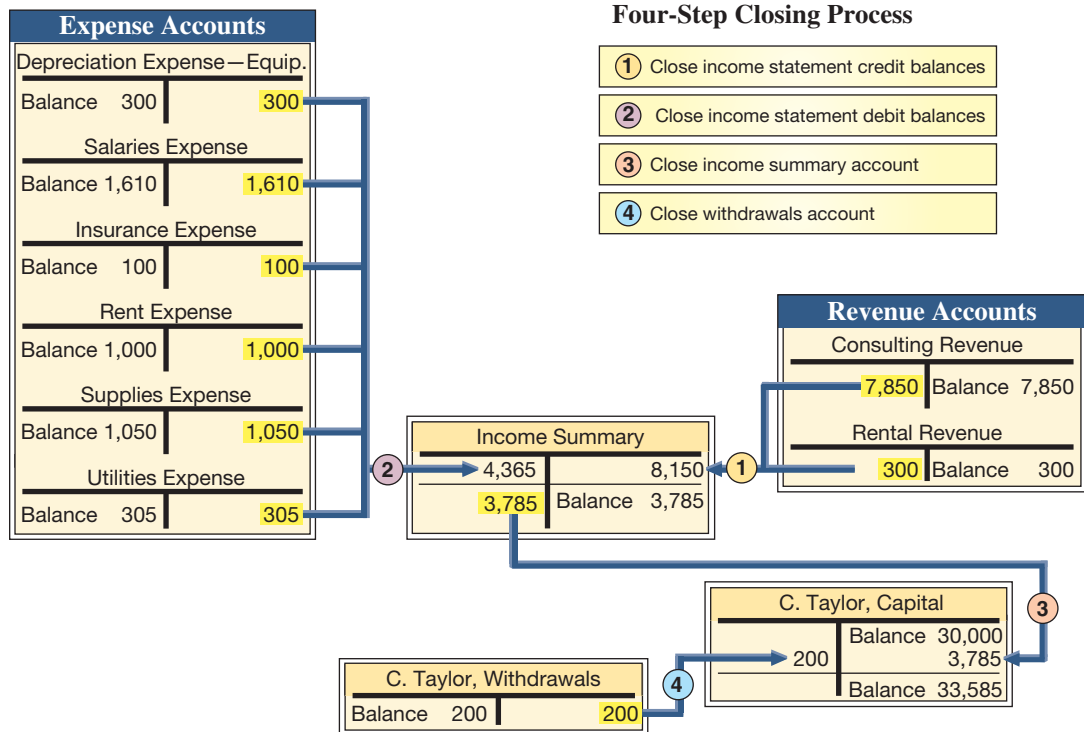

**Point:** To understand the closing process, focus on its outcomes—updating the capital account balance to its proper ending balance, and getting temporary accounts to show zero balances for purposes of accumulating data for the next period.

## P2

Describe and prepare closing entries.

### EXHIBIT 4.3

Four-Step Closing Process

**Point:** C. Taylor, Capital is the only permanent account in Exhibit 4.3.

**Point:** It is possible to close revenue and expense accounts directly to owner's capital. Computerized accounting systems do this.

revenue, expense, and withdrawals accounts must accumulate information separately for each period, they must start each period with zero balances. To close these accounts, we transfer their balances first to an account called *Income Summary*. **Income Summary** is a temporary account (only used for the closing process) that contains a credit for the sum of all revenues (and gains) and a debit for the sum of all expenses (and losses). Its balance equals net income or net loss and it is transferred to the capital account. Next the withdrawals account balance is transferred to the capital account. After these closing entries are posted, the revenue, expense, withdrawals, and Income Summary accounts have zero balances. These accounts are then said to be *closed* or *cleared*.

Exhibit 4.3 uses the adjusted account balances of FastForward (from the Adjusted Trial Balance columns of Exhibit 4.1 or from the left side of Exhibit 4.4) to show the four steps necessary to close its temporary accounts. We explain each step.

**Step 1: Close Credit Balances in Revenue Accounts to Income Summary** The first closing entry transfers credit balances in revenue (and gain) accounts to the Income Summary account. We bring accounts with credit balances to zero by debiting them. For FastForward, this journal entry is step 1 in Exhibit 4.4. This entry closes revenue accounts and leaves them with zero balances. The accounts are now ready to record revenues when they occur in the next period. The \$8,150 credit entry to Income Summary equals total revenues for the period.

**Step 2: Close Debit Balances in Expense Accounts to Income Summary** The second closing entry transfers debit balances in expense (and loss) accounts to the Income Summary account. We bring expense accounts' debit balances to zero by crediting them. With a balance of zero, these accounts are ready to accumulate a record of expenses for the next period. This second closing entry for FastForward is step 2 in Exhibit 4.4. Exhibit 4.3 shows that posting this entry gives each expense account a zero balance.

**Step 3: Close Income Summary to Owner's Capital** After steps 1 and 2, the balance of Income Summary is equal to December's net income of \$3,785 (\$8,150 credit less \$4,365 debit). The third closing entry transfers the balance of the Income Summary account to the capital account. This entry closes the Income Summary account—see step 3 in Exhibit 4.4. The

	C. Taylor, Withdrawals.....	200
	<i>To close the withdrawals account.</i>	

**EXHIBIT 4.4**

Preparing Closing Entries

Income Summary account has a zero balance after posting this entry. It continues to have a zero balance until the closing process again occurs at the end of the next period. (If a net loss occurred because expenses exceeded revenues, the third entry is reversed: debit Owner, Capital and credit Income Summary.)

**Step 4: Close Withdrawals Account to Owner's Capital** The fourth closing entry transfers any debit balance in the withdrawals account to the owner's capital account—see step 4 in Exhibit 4.4. This entry gives the withdrawals account a zero balance, and the account is now ready to accumulate next period's withdrawals. This entry also reduces the capital account balance to the \$33,585 amount reported on the balance sheet.

We could also have selected the accounts and amounts needing to be closed by identifying individual revenue, expense, and withdrawals accounts in the ledger. This is illustrated in Exhibit 4.4 where we prepare closing entries using the adjusted trial balance.<sup>1</sup> (Information for closing entries is also in the financial statement columns of a work sheet.)

## Post-Closing Trial Balance

Exhibit 4.5 shows the entire ledger of FastForward as of December 31 after adjusting and closing entries are posted. (The transaction and adjusting entries are in Chapters 2 and 3.) The temporary accounts (revenues, expenses, and withdrawals) have ending balances equal to zero.

A **post-closing trial balance** is a list of permanent accounts and their balances from the ledger after all closing entries have been journalized and posted. It lists the balances for all accounts not closed. These accounts comprise a company's assets, liabilities, and equity, which are identical to those in the balance sheet. The aim of a post-closing trial balance is to verify that (1) total debits equal total credits for permanent accounts and (2) all temporary accounts have

**P3** Explain and prepare a post-closing trial balance.

<sup>1</sup> The closing process has focused on proprietorships. It is identical for partnerships with the exception that each owner has separate capital and withdrawals accounts (for steps 3 and 4). The closing process for a corporation is similar with the exception that it uses a Dividend account instead of a withdrawals account, and Income Summary and Dividends are closed to a Retained Earnings account instead of a capital account.

zero balances. FastForward's post-closing trial balance is shown in Exhibit 4.6. The post-closing trial balance usually is the last step in the accounting process.

<b>FASTFORWARD</b> Post-Closing Trial Balance December 31, 2015		
	Debit	Credit
Cash .....	\$ 4,275	
Accounts receivable .....	1,800	
Supplies .....	8,670	
Prepaid insurance .....	2,300	
Equipment .....	26,000	
Accumulated depreciation—Equipment .....		\$ 300
Accounts payable .....		6,200
Salaries payable .....		210
Unearned consulting revenue .....		2,750
C. Taylor, Capital .....		<u>33,585</u>
Totals .....	<u>\$43,045</u>	<u>\$43,045</u>

**EXHIBIT 4.6**

Post-Closing Trial Balance

**Point:** Only balance sheet (permanent) accounts are on a post-closing trial balance.

**Decision Maker**

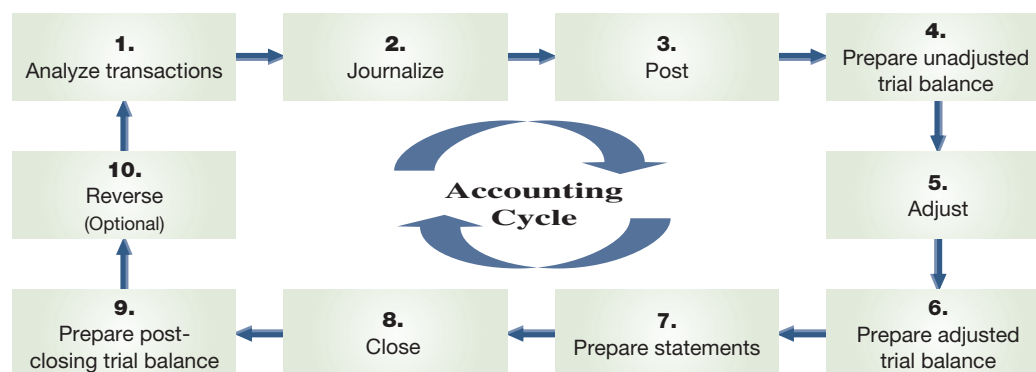

**Colleague** A friend shows you the post-closing trial balance she is working on as part of a class assignment. You review the statement quickly and see a line item for rent expense. You immediately tell your friend, "I see that you have an error." How did you conclude so quickly that an error exists? ■ [Answers follow the chapter's Summary.]

**ACCOUNTING CYCLE**

The term **accounting cycle** refers to the steps in preparing financial statements. It is called a *cycle* because the steps are repeated each reporting period. Exhibit 4.7 shows the 10 steps in the cycle, beginning with analyzing transactions and ending with a post-closing trial balance or reversing entries. Steps 1 through 3 usually occur regularly as a company enters into transactions.

**C2**

Identify steps in the accounting cycle.

**EXHIBIT 4.7**

Steps in the Accounting Cycle\*

## Explanations

- |                                       |   |
|---------------------------------------|---|
| 1. Analyze transactions               | Analyze transactions to prepare for journalizing.   |
| 2. Journalize                         | Record accounts, including debits and credits, in a journal.                              |
| 3. Post                               | Transfer debits and credits from the journal to the ledger.                               |
| 4. Prepare unadjusted trial balance   | Summarize unadjusted ledger accounts and amounts.   |
| 5. Adjust                             | Record adjustments to bring account balances up to date; journalize and post adjustments. |
| 6. Prepare adjusted trial balance     | Summarize adjusted ledger accounts and amounts.   |
| 7. Prepare statements                 | Use adjusted trial balance to prepare financial statements.                               |
| 8. Close                              | Journalize and post entries to close temporary accounts.                                  |
| 9. Prepare post-closing trial balance | Test clerical accuracy of the closing procedures.   |
| 10. Reverse (optional)                | Reverse certain adjustments in the next period—optional step; see Appendix 4A.            |

\* Steps 4, 6, and 9 can be done on a work sheet. A work sheet is useful in planning adjustments, but adjustments (step 5) must always be journalized and posted. Steps 3, 4, 6, and 9 are automatic with a computerized system.

Steps 4 through 9 are done at the end of a period. *Reversing entries* in step 10 are optional and are explained in Appendix 4A.

**CLASSIFIED BALANCE SHEET**

**C3**

Explain and prepare a classified balance sheet.

Our discussion to this point has been limited to unclassified financial statements. This section describes a classified balance sheet. The next chapter describes a classified income statement. An **unclassified balance sheet** is one whose items are broadly grouped into assets, liabilities, and equity. One example is FastForward’s balance sheet in Exhibit 4.2. A **classified balance sheet** organizes assets and liabilities into important subgroups that provide more information to decision makers.

**Classification Structure**

A classified balance sheet has no required layout, but it usually contains the categories in Exhibit 4.8. One of the more important classifications is the separation between current and non-current items for both assets and liabilities. Current items are those expected to come due (either collected or owed) within one year or the company’s operating cycle, whichever is longer. The **operating cycle** is the time span from when *cash is used* to acquire goods and services until *cash is received* from the sale of goods and services. “Operating” refers to company operations and “cycle” refers to the circular flow of cash used for company inputs and then cash received from its outputs. The length of a company’s operating cycle depends on its activities. For a service company, the operating cycle is the time span between (1) paying employees who perform the services and (2) receiving cash from customers. For a merchandiser selling products, the operating cycle is the time span between (1) paying suppliers for merchandise and (2) receiving cash from customers.

**EXHIBIT 4.8**

Typical Categories in a Classified Balance Sheet

Assets	Liabilities and Equity
Current assets	Current liabilities
Noncurrent assets	Noncurrent liabilities
Long-term investments	Equity
Plant assets	
Intangible assets	

Most operating cycles are less than one year. This means most companies use a one-year period in deciding which assets and liabilities are current. A few companies have an operating cycle longer than one year. For instance, producers of certain beverages (wine) and products (ginseng) that require aging for several years have operating cycles longer than one year. A balance sheet lists current assets before noncurrent assets and current liabilities before noncurrent liabilities. This consistency in presentation allows users to quickly identify current assets that are most easily converted to cash and current liabilities that are shortly coming due. Items in current assets and current liabilities are listed in the order of how quickly they will be converted to, or paid in, cash.

## Classification Categories

This section describes the most common categories in a classified balance sheet. The balance sheet for Snowboarding Components in Exhibit 4.9 shows the typical categories. Its assets are classified as either current or noncurrent. Its noncurrent assets include three main categories: long-term investments, plant assets, and intangible assets. Its liabilities are

Cameron Spencer/Getty Images

### EXHIBIT 4.9

Example of a Classified Balance Sheet

<b>SNOWBOARDING COMPONENTS</b>	
Balance Sheet	
January 31, 2015	
<b>Assets</b>	
<b>Current assets</b>	
Cash .....	\$ 6,500
Short-term investments .....	2,100
Accounts receivable, net .....	4,400

Prepaid expenses .....	<u>2,400</u>
Total current assets .....	\$ 42,900
<b>Long-term investments</b>	
Notes receivable .....	1,500
Investments in stocks and bonds .....	18,000
Land held for future expansion .....	<u>48,000</u>
Total long-term investments .....	67,500
<b>Plant assets</b>	
Equipment and buildings .....	203,200
Less accumulated depreciation .....	<u>53,000</u>
Equipment and buildings, net .....	150,200
Land .....	<u>73,200</u>
Total plant assets .....	223,400
<b>Intangible assets</b> .....	<u>10,000</u>
Total assets .....	<u><u>\$343,800</u></u>
<b>Liabilities</b>	
<b>Current liabilities</b>	
Accounts payable .....	\$ 15,300
Wages payable .....	3,200
Notes payable .....	3,000
Current portion of long-term liabilities .....	<u>7,500</u>
Total current liabilities .....	\$ 29,000
<b>Long-term liabilities (net of current portion)</b> .....	<u>150,000</u>
Total liabilities .....	179,000
<b>Equity</b>	
T. Hawk, Capital .....	<u>164,800</u>
Total liabilities and equity .....	<u><u>\$343,800</u></u>

classified as either current or long-term. Not all companies use the same categories of assets and liabilities for their balance sheets. **K2 Sports**, a manufacturer of snowboards, reported a balance sheet with only three asset classes: current assets; property, plant and equipment; and other assets.

**Current Assets** **Current assets** are cash and other resources that are expected to be sold, collected, or used within one year or the company's operating cycle, whichever is longer. Examples are cash, short-term investments, accounts receivable, short-term notes receivable, goods for sale (called *merchandise* or *inventory*), and prepaid expenses. The individual prepaid expenses of a company are usually small in amount compared to many other assets and are often combined and shown as a single item. The prepaid expenses in Exhibit 4.9 likely include items such as prepaid insurance, prepaid rent, office supplies, and store supplies. Prepaid expenses are usually listed last because they will not be converted to cash (instead, they are used).

**Point:** Current is also called *short-term*, and noncurrent is also called *long-term*.

©Stephen D. Cannerelli/Syracuse Newspapers/The Image Works

**Point:** Plant assets are also called *fixed assets*; *property, plant and equipment*; or *long-lived assets*.

**Point:** Furniture and fixtures are referred to as *F&F*, which are classified as *noncurrent assets*.

**Long-Term Investments** A second major balance sheet classification is **long-term** (or *noncurrent*) **investments**. Notes receivable and investments in stocks and bonds are long-term assets when they are expected to be held for more than the longer of one year or the operating cycle. Land held for future expansion is a long-term investment because it is *not* used in operations.

**Plant Assets** Plant assets are tangible assets that are both *long-lived* and *used to produce or sell products and services*. Examples are equipment, machinery, buildings, and land that are used to produce or sell products and services. The order listing for plant assets is usually from most liquid to least liquid such as equipment and machinery to buildings and land.

**Intangible Assets** **Intangible assets** are long-term resources that benefit business operations, usually lack physical form, and have uncertain benefits. Examples are patents, trademarks, copyrights, franchises, and goodwill. Their value comes from the privileges or rights granted to or held by the owner. **K2 Sports** reported intangible assets of \$228 million, which is nearly 20 percent of its total assets. Its intangibles included trademarks, patents, and licensing agreements.

**Current Liabilities** **Current liabilities** are obligations due to be paid or settled within one year or the operating cycle, whichever is longer. They are usually settled by paying out current assets such as cash. Current liabilities often include accounts payable, notes payable, wages payable, taxes payable, interest payable, and unearned revenues. Also, any portion of a long-term liability due to be paid within one year or the operating cycle, whichever is longer, is a current liability. Unearned revenues are current liabilities when they will be settled by delivering products or services within one year or the operating cycle, whichever is longer. Current liabilities are reported in the order of those to be settled first.

**Point:** Many financial ratios are distorted if accounts are not classified correctly.

**Long-Term Liabilities** **Long-term liabilities** are obligations *not* due within one year or the operating cycle, whichever is longer. Notes payable, mortgages payable, bonds payable, and lease obligations are common long-term liabilities. If a company has both short- and long-term items in each of these categories, they are commonly separated into two accounts in the ledger.

**Point:** Only assets and liabilities (not equity) are classified as *current* or *noncurrent*.

**Equity** Equity is the owner's claim on assets. For a proprietorship, this claim is reported in the equity section with an owner's capital account. (For a partnership, the equity section reports a capital account for each partner. For a corporation, the equity section is divided into two main subsections, contributed capital and retained earnings.)

Use the adjusted trial balance solution for Magic Company from Need-To-Know 4-1 to prepare its classified balance sheet as of December 31, 2015.

**QC3**

**GLOBAL VIEW**

We explained that accounting under U.S. GAAP is similar, but not identical, to that under IFRS. This section discusses differences in the closing process and in reporting assets and liabilities on a balance sheet.

**Closing Process** The closing process is identical under U.S. GAAP and IFRS. Although unique accounts can arise under either system, the closing process remains the same.

**Reporting Assets and Liabilities** The definition of an asset is similar under U.S. GAAP and IFRS and involves three basic criteria: (1) the company owns or controls the right to use the item, (2) the right arises from a past transaction or event, and (3) the item can be reliably measured. Both systems define the initial asset value as historical cost for nearly all assets. After acquisition, one of two asset measurement systems is applied: historical cost or fair value. Generally, U.S. GAAP defines fair value as the amount to be received in an orderly sale. IFRS defines fair value as *exchange value*—either replacement cost or selling price. We describe these differences, and the assets to which they apply, in later chapters.

The definition of a liability is similar under U.S. GAAP and IFRS and involves three basic criteria: (1) the item is a *present* obligation requiring a probable future resource outlay, (2) the obligation arises from a past transaction or event, and (3) the obligation can be reliably measured. As with assets, both systems apply one of two measurement systems to liabilities: historical cost or fair value. Later chapters discuss specific differences.

**Sustainability and Accounting** **TheNakedHippie**, as introduced in this chapter’s opening feature, puts great emphasis on its computation of net income. This is because it reinvests 100% (all) of its net income into supporting sidewalk businesses and small shops in poor countries. Its *recycling of profits* is depicted in the graphic below from its website. This is an extension of the ancient adage, “give a man a fish and you feed him for a day; teach a man to fish and you feed him for a lifetime.” Accounting plays a key role, serving as the metric to compute the profits that are recycled. The computation of net income requires reliable use of the accounting cycle and adherence to basic accounting principles for computing revenues, expenses, and profits.

**Decision Analysis** ■ ■ ■ **Current Ratio**

**A1** Compute the current ratio and describe what it reveals about a company’s financial condition.

An important use of financial statements is to help assess a company’s ability to pay its debts in the near future. Such analysis affects decisions by suppliers when allowing a company to buy on credit. It also affects decisions by creditors when lending money to a company, including loan terms such as interest rate, due date, and collateral requirements. It can also affect a manager’s decisions about using cash to pay debts when they come due. The **current ratio** is one measure of a company’s ability to pay its short-term obligations. It is defined in Exhibit 4.10 as current assets divided by current liabilities.

**EXHIBIT 4.10**

Current Ratio

$$\text{Current ratio} = \frac{\text{Current assets}}{\text{Current liabilities}}$$

Using financial information from **Limited Brands, Inc.**, we compute its current ratio for the recent six-year period. The results are in Exhibit 4.11.

**EXHIBIT 4.11**

Limited Brands’ Current Ratio

\$ in millions	2013	2012	2011	2010	2009	2008
Current assets . . . . .	\$2,205	\$2,368	\$2,592	\$3,250	\$2,867	\$2,919
Current liabilities . . . . .	\$1,538	\$1,526	\$1,504	\$1,322	\$1,255	\$1,374
<b>Current ratio . . . . .</b>	<b>1.4</b>	<b>1.6</b>	<b>1.7</b>	<b>2.5</b>	<b>2.3</b>	<b>2.1</b>
Industry current ratio . . . . .	1.5	1.6	1.7	1.9	2.0	2.1

Limited Brands' current ratio averaged 1.9 for its fiscal years 2008 through 2013. The current ratio for each of these years suggests that the company's short-term obligations can be covered with its short-term assets. However, if its ratio would approach 1.0, Limited would expect to face challenges in covering liabilities. If the ratio were *less* than 1.0, current liabilities would exceed current assets, and the company's ability to pay short-term obligations could be in doubt. Limited Brands' liquidity, as evidenced by its current ratio, declined in 2011, 2012, and 2013, which roughly matches the industry decline.

### Decision Maker

**Analyst** You are analyzing the financial condition of a company to assess its ability to meet upcoming loan payments. You compute its current ratio as 1.2. You also find that a major portion of accounts receivable is due from one client who has not made any payments in the past 12 months. Removing this receivable from current assets lowers the current ratio to 0.7. What do you conclude? [Answers follow the chapter's Summary.]

The partial work sheet of Midtown Repair Company at December 31, 2015, follows.

### NEED-TO-KNOW

#### COMPREHENSIVE

	Adjusted Trial Balance		Income Statement		Balance Sheet and Statement of Owner's Equity	
	Debit	Credit	Debit	Credit	Debit	Credit
Cash .....	95,600					
Notes receivable (current) .....	50,000					
Prepaid insurance .....	16,000					
Prepaid rent .....	4,000					
Equipment .....	170,000					
Accumulated depreciation—Equipment .....		57,000				
Accounts payable .....		52,000				
Long-term notes payable .....		63,000				
C. Trout, Capital .....		178,500				
C. Trout, Withdrawals .....	30,000					
Repair services revenue .....		180,800				
Interest revenue .....		7,500				
Depreciation expense—Equipment .....	28,500					
Wages expense .....	85,000					
Rent expense .....	48,000					
Insurance expense .....	6,000					
Interest expense .....	5,700					
Totals .....	<u>538,800</u>	<u>538,800</u>				

### Required

1. Complete the work sheet by extending the adjusted trial balance totals to the appropriate financial statement columns.
2. Prepare closing entries for Midtown Repair Company.
3. Set up the Income Summary and the C. Trout, Capital account in the general ledger (in balance column format) and post the closing entries to these accounts.
4. Determine the balance of the C. Trout, Capital account to be reported on the December 31, 2015, balance sheet.
5. Prepare an income statement, statement of owner's equity, and classified balance sheet (in report form) as of December 31, 2015. The balance in C. Trout, Capital on December 31, 2014, was \$178,500.

## PLANNING THE SOLUTION

- Extend the adjusted trial balance account balances to the appropriate financial statement columns.
- Prepare entries to close the revenue accounts to Income Summary, to close the expense accounts to Income Summary, to close Income Summary to the capital account, and to close the withdrawals account to the capital account.
- Post the first and second closing entries to the Income Summary account. Examine the balance of income summary and verify that it agrees with the net income shown on the work sheet.
- Post the third and fourth closing entries to the capital account.
- Use the work sheet's two right-most columns and your answer in part 4 to prepare the classified balance sheet.

## SOLUTION

### 1. Completing the work sheet.

	Adjusted Trial Balance		Income Statement		Balance Sheet and Statement of Owner's Equity	
	Debit	Credit	Debit	Credit	Debit	Credit
Cash .....	95,600				95,600	
Notes receivable (current) .....	50,000				50,000	
Prepaid insurance .....	16,000				16,000	
Prepaid rent .....	4,000				4,000

## APPENDIX

# 4A

## Reversing Entries

**Point:** As a general rule, adjusting entries that create new asset or liability accounts are likely candidates for reversing.

**Reversing entries** are optional. They are recorded in response to accrued assets and accrued liabilities that were created by adjusting entries at the end of a reporting period. The purpose of reversing entries is to simplify a company's recordkeeping. Exhibit 4A.1 shows an example of FastForward's reversing entries. The top of the exhibit shows the adjusting entry FastForward recorded on December 31 for its employee's earned but unpaid salary. The entry recorded three days' salary of \$210, which increased December's total salary expense to \$1,610. The entry also recognized a liability of \$210. The expense is reported on December's income statement. The expense account is then closed. The ledger on January 1, 2016, shows a \$210 liability and a zero balance in the Salaries Expense account. At this point, the choice is made between using or not using reversing entries.

**Point:** Firms that use reversing entries hope that this simplification will reduce errors.

**Accounting without Reversing Entries** The path down the left side of Exhibit 4A.1 is described in the chapter. To summarize here, when the next payday occurs on January 9, we record payment with a compound entry that debits both the expense and liability accounts and credits Cash. Posting that entry creates a \$490 balance in the expense account and reduces the liability account balance to zero because the debt has been settled. The disadvantage of this approach is the slightly more complex entry required on January 9. Paying the accrued liability means that this entry differs from the routine entries made on all other paydays. To construct the proper entry on January 9, we must recall the effect of the December 31 adjusting entry. Reversing entries overcome this disadvantage.

**P4** Prepare reversing entries and explain their purpose.

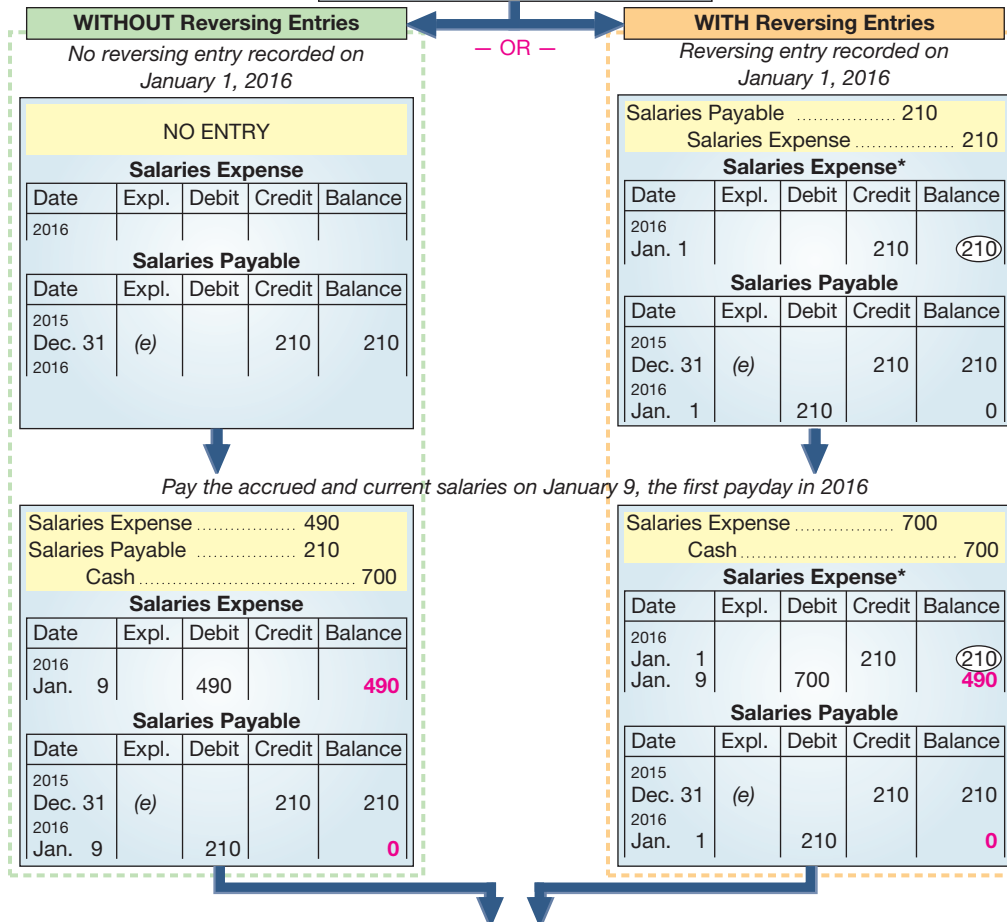

**Accounting with Reversing Entries** The right side of Exhibit 4A.1 shows how a reversing entry on January 1 overcomes the disadvantage of the January 9 entry when not using reversing entries. A reversing entry is the exact opposite of an adjusting entry. For FastForward, the Salaries Payable liability account is debited for \$210, meaning that this account now has a zero balance after the entry is posted. The Salaries Payable account temporarily understates the liability, but this is not a problem

Accrue salaries expense on December 31, 2015

Salaries Expense ..... 210				
Salaries Payable ..... 210				
Salaries Expense				
Date	Expl.	Debit	Credit	Balance
2015				
Dec. 12	(7)	700		700
26	(16)	700		1,400
31	(e)	210		1,610
Salaries Payable				
Date	Expl.	Debit	Credit	Balance
2015				
Dec. 31	(e)		210	210

**EXHIBIT 4A.1**

Reversing Entries for an Accrued Expense

Under both approaches, the expense and liability accounts have identical balances after the cash payment on January 9.

Salaries Expense	.....	\$490
Salaries Payable	.....	\$ 0

\*Circled numbers in the Balance column indicate abnormal balances.

since financial statements are not prepared before the liability is settled on January 9. The credit to the Salaries Expense account is unusual because it gives the account an *abnormal credit balance*. We highlight an abnormal balance by circling it. Because of the reversing entry, the January 9 entry to record payment is straightforward. This entry debits the Salaries Expense account and credits Cash for the full \$700 paid. It is the same as all other entries made to record 10 days' salary for the employee. Notice that after the payment entry is posted, the Salaries Expense account has a \$490 balance that reflects seven days' salary of \$70 per day (see the lower right side of Exhibit 4A.1). The zero balance in the Salaries Payable account is now correct. The lower section of Exhibit 4A.1 shows that the expense and liability accounts have exactly the same balances whether reversing entries are used or not. This means that both approaches yield identical results.

# Summary

**C1 Explain why temporary accounts are closed each period.** Temporary accounts are closed at the end of each accounting period for two main reasons. First, the closing process updates the capital account to include the effects of all transactions and events recorded for the period. Second, it prepares revenue, expense, and withdrawals accounts for the next reporting period by giving them zero balances.

**C2 Identify steps in the accounting cycle.** The accounting cycle consists of 10 steps: (1) analyze transactions, (2) journalize, (3) post, (4) prepare an unadjusted trial balance, (5) adjust accounts, (6) prepare an adjusted trial balance, (7) prepare statements, (8) close, (9) prepare a post-closing trial balance, and (10) prepare (optional) reversing entries.

**C3 Explain and prepare a classified balance sheet.** Classified balance sheets report assets and liabilities in two categories: current and noncurrent. Noncurrent assets often include long-term investments, plant assets, and intangible assets. Owner's equity for proprietorships (and partnerships) report the capital account balance. A corporation separates equity into common stock and retained earnings.

**A1 Compute the current ratio and describe what it reveals about a company's financial condition.** A company's current ratio is defined as current assets divided by current liabilities. We use it to evaluate a company's ability to pay its current liabilities out of current assets.

**P1 Prepare a work sheet and explain its usefulness.** A work sheet can be a useful tool in preparing and analyzing financial statements. It is helpful at the end of a period in preparing adjusting entries, an adjusted trial balance, and financial statements. A work sheet usually contains five pairs of columns: Unadjusted Trial Balance, Adjustments, Adjusted Trial Balance, Income Statement, and Balance Sheet & Statement of Owner's Equity.

**P2 Describe and prepare closing entries.** Closing entries involve four steps: (1) close credit balances in revenue (and gain) accounts to Income Summary, (2) close debit balances in expense (and loss) accounts to Income Summary, (3) close Income Summary to the capital account, and (4) close withdrawals account to owner's capital.

**P3 Explain and prepare a post-closing trial balance.** A post-closing trial balance is a list of permanent accounts and their balances after all closing entries have been journalized and posted. Its purpose is to verify that (1) total debits equal total credits for permanent accounts and (2) all temporary accounts have zero balances.

**P4<sup>A</sup> Prepare reversing entries and explain their purpose.** Reversing entries are an optional step. They are applied to accrued expenses and revenues. The purpose of reversing entries is to simplify subsequent journal entries. Financial statements are unaffected by the choice to use or not use reversing entries.

## Guidance Answers to Decision Maker

**Entrepreneur** Yes, you are concerned about the absence of a depreciation adjustment. Equipment does depreciate, and financial statements must recognize this occurrence. Its absence suggests an error or a misrepresentation (there is also the possibility that equipment is fully depreciated).

**Colleague** The error is readily spotted in your friend's postclosing trial balance as you know that rent expense is a temporary account. Post-closing trial balances only show permanent accounts.

**Analyst** A current ratio of 1.2 suggests that current assets are sufficient to cover current liabilities, but it implies a minimal buffer in case of errors in measuring current assets or current liabilities. Removing the past due receivable reduces the current ratio to 0.7. Your assessment is that the company will have some difficulty meeting its loan payments.

## Multiple Choice Quiz

## Answers at end of chapter

1. G. Venda, owner of Venda Services, withdrew \$25,000 from the business during the current year. The entry to close the withdrawals account at the end of the year is:

a. G. Venda, Withdrawals	25,000	
G. Venda, Capital		25,000
b. Income Summary	25,000	
G. Venda, Capital		25,000
c. G. Venda, Withdrawals	25,000	
Cash		25,000
d. G. Venda, Capital	25,000	
Salary Expense		25,000
e. G. Venda, Capital	25,000	
G. Venda, Withdrawals		25,000

2. The following information is available for the R. Kandamil Company before closing the accounts. After all of the closing entries are made, what will be the balance in the R. Kandamil, Capital account?

Total revenues	\$300,000
Total expenses	195,000
R. Kandamil, Capital	100,000
R. Kandamil, Withdrawals	45,000

- a. \$360,000                      d. \$150,000  
 b. \$250,000                     e. \$60,000  
 c. \$160,000
3. Which of the following errors would cause the Balance Sheet and Statement of Owner's Equity columns of a work sheet to be out of balance?
- a. Entering a revenue amount in the Balance Sheet and Statement of Owner's Equity Debit column.

- b. Entering a liability amount in the Balance Sheet and Statement of Owner's Equity Credit column.  
 c. Entering an expense account in the Balance Sheet and Statement of Owner's Equity Debit column.  
 d. Entering an asset account in the Income Statement Debit column.  
 e. Entering a liability amount in the Income Statement Credit column.
4. The temporary account used only in the closing process to hold the amounts of revenues and expenses before the net difference is added or subtracted from the owner's capital account is called the
- a. Closing account.                      d. Balance Column account.  
 b. Nominal account.                    e. Contra account.  
 c. Income Summary account.

5. Based on the following information from Repicor Company's balance sheet, what is Repicor Company's current ratio?

Current assets	\$ 75,000
Investments	30,000
Plant assets	300,000
Current liabilities	50,000
Long-term liabilities	60,000
D. Repicor, Capital	295,000

- a. 2.10                              d. 0.95  
 b. 1.50                              e. 0.67  
 c. 1.00

<sup>A</sup> *Superscript letter A denotes assignments based on Appendix 4A.*

 *Icon denotes assignments that involve decision making.*

## Discussion Questions

- What are the steps in recording closing entries?
- What accounts are affected by closing entries? What accounts are not affected?
-  What two purposes are accomplished by recording closing entries?
- What is the purpose of the Income Summary account?
-  Explain whether an error has occurred if a post-closing trial balance includes a Depreciation Expense account.
- What tasks are aided by a work sheet?
- Why are the debit and credit entries in the Adjustments columns of the work sheet identified with letters?
- What is a company's operating cycle?
- What classes of assets and liabilities are shown on a typical classified balance sheet?
- How is unearned revenue classified on the balance sheet?
- What are the characteristics of plant assets?
- <sup>A</sup> How do reversing entries simplify recordkeeping?
- <sup>A</sup> If a company recorded accrued salaries expense of \$500 at the end of its fiscal year, what reversing entry could be made? When would it be made?
-  Refer to the most recent balance sheet for **APPLE** in Appendix A. What five main non-current asset categories are used on its classified balance sheet?

15. Refer to **Samsung**'s most recent balance sheet in Appendix A. Identify and list its nine current assets.

**Samsung**

16. Refer to **Google**'s most recent balance sheet in Appendix A. Identify the eight accounts listed as current liabilities.

**GOOGLE**

17. Refer to **Samsung**'s financial statements in Appendix A. What journal entry was likely recorded as of December 31, 2013, to close its Income Summary account?

**QUICK STUDY**

List the following steps in preparing a work sheet in their proper order by writing a number from 1 through 5 in the blank space provided.

**QS 4-1**

Ordering work sheet steps

P1

- a. \_\_\_\_\_ Total the statement columns, compute net income (loss), and complete work sheet.
- b. \_\_\_\_\_ Extend adjusted balances to appropriate financial statement columns.
- c. \_\_\_\_\_ Prepare an unadjusted trial balance on the work sheet.
- d. \_\_\_\_\_ Prepare an adjusted trial balance on the work sheet.
- e. \_\_\_\_\_ Enter adjustments data on the work sheet.

**QS 4-2**

Applying a work sheet

P1

In preparing a work sheet, indicate the financial statement Debit column to which a normal balance in the following accounts should be extended. Use IS for the Income Statement Debit column and BS for the Balance Sheet and Statement of Owner's Equity Debit column.

- \_\_\_\_\_ a. Equipment
- \_\_\_\_\_ b. Owner, Withdrawals
- \_\_\_\_\_ c. Prepaid Rent
- \_\_\_\_\_ d. Depreciation Expense—Equipment
- \_\_\_\_\_ e. Accounts Receivable
- \_\_\_\_\_ f. Insurance Expense

**QS 4-3**

Interpreting a work sheet

P1

The following selected information is taken from the work sheet for Warton Company as of December 31, 2015. Using this information, determine the amount for B. Warton, Capital, that should be reported on its December 31, 2015, balance sheet.

	Income Statement		Balance Sheet and Statement of Owner's Equity	
	Dr.	Cr.	Dr.	Cr.
:				
:				
B. Warton, Capital .....				72,000
B. Warton, Withdrawals .....			39,000	
:				
:				
Totals .....	122,000	181,000		

**QS 4-4**

Preparing a partial work sheet

P1

The ledger of Claudell Company includes the following unadjusted normal balances: Prepaid Rent \$1,000, Services Revenue \$55,600, and Wages Expense \$5,000. Adjusting entries are required for (a) prepaid rent expired, \$200; (b) accrued services revenue \$900; and (c) accrued wages expense \$700. Enter these unadjusted balances and the necessary adjustments on a work sheet and complete the work sheet for these accounts. *Note:* Also include the following accounts: Accounts Receivable, Wages Payable, and Rent Expense.

**QS 4-5**

Explaining temporary and permanent accounts

C1

Choose from the following list of terms/phrases to best complete the statements below.

- a. Temporary
  - b. Permanent
  - c. One or more
  - d. One
  - e. Zero balances
  - f. Income Summary
1. \_\_\_\_\_ accounts generally consist of all balance sheet accounts, and these accounts are not closed.
  2. Permanent accounts report on activities related to \_\_\_\_\_ future accounting periods, and they carry their ending balances into the next period.
  3. Temporary accounts accumulate data related to \_\_\_\_\_ accounting period.
  4. \_\_\_\_\_ accounts include all income statement accounts, the withdrawals account, and the Income Summary account.

**QS 4-6**

Prepare closing entries from the ledger P2

The ledger of Mai Company includes the following accounts with normal balances: D. Mai, Capital \$9,000; D. Mai, Withdrawals \$800; Services Revenue \$13,000; Wages Expense \$8,400; and Rent Expense \$1,600. Prepare the necessary closing entries from the available information at December 31.

Identify which of the following accounts would be included in a post-closing trial balance.

- \_\_\_\_\_ a. Accounts Receivable      \_\_\_\_\_ c. Goodwill      \_\_\_\_\_ e. Income Tax Expense  
 \_\_\_\_\_ b. Salaries Expense      \_\_\_\_\_ d. Land      \_\_\_\_\_ f. Salaries Payable

**QS 4-7**Identify post-closing accounts **P3**

List the following steps of the accounting cycle in their proper order.

- \_\_\_\_\_ a. Posting the journal entries.      \_\_\_\_\_ f. Preparing the financial statements.  
 \_\_\_\_\_ b. Journalizing and posting adjusting entries.      \_\_\_\_\_ g. Preparing the unadjusted trial balance.  
 \_\_\_\_\_ c. Preparing the adjusted trial balance.      \_\_\_\_\_ h. Journalizing transactions and events.  
 \_\_\_\_\_ d. Journalizing and posting closing entries.      \_\_\_\_\_ i. Preparing the post-closing trial balance.  
 \_\_\_\_\_ e. Analyzing transactions and events.

**QS 4-8**

Identifying the accounting cycle

**C2**

The following are common categories on a classified balance sheet.

- A.** Current assets      **D.** Intangible assets  
**B.** Long-term investments      **E.** Current liabilities  
**C.** Plant assets      **F.** Long-term liabilities

**QS 4-9**

Classifying balance sheet items

**C3**

For each of the following items, select the letter that identifies the balance sheet category where the item typically would appear.

- \_\_\_\_\_ 1. Land not currently used in operations      \_\_\_\_\_ 5. Accounts payable  
 \_\_\_\_\_ 2. Notes payable (due in five years)      \_\_\_\_\_ 6. Store equipment  
 \_\_\_\_\_ 3. Accounts receivable      \_\_\_\_\_ 7. Wages payable  
 \_\_\_\_\_ 4. Trademarks      \_\_\_\_\_ 8. Cash

Answer each of the following questions related to international accounting standards.

- a.** Explain how the closing process is different between accounting under IFRS versus U.S. GAAP.  
**b.** What basic principle do U.S. GAAP and IFRS rely upon in recording the initial acquisition value for nearly all assets?

**QS 4-10**International accounting standards **P2**

Compute Chavez Company's current ratio using the following information.

Accounts receivable	\$18,000	Long-term notes payable	\$21,000
Accounts payable	11,000	Office supplies	2,800
Buildings	45,000	Prepaid insurance	3,560
Cash	7,000	Unearned services revenue	3,000

**QS 4-11**

Identifying current accounts and computing the current ratio

**A1**

On December 31, 2014, Yates Co. prepared an adjusting entry for \$12,000 of earned but unrecorded management fees. On January 16, 2015, Yates received \$26,700 cash in management fees, which included the accrued fees earned in 2014. Assuming the company uses reversing entries, prepare the January 1, 2015, reversing entry and the January 16, 2015, cash receipt entry.

**QS 4-12<sup>A</sup>**

Reversing entries

**P4**

These 16 accounts are from the Adjusted Trial Balance columns of a company's 10-column work sheet. In the blank space beside each account, write the letter of the appropriate financial statement column (A, B, C, or D) to which a normal account balance is extended.

- A.** Debit column for the Income Statement columns.  
**B.** Credit column for the Income Statement columns.  
**C.** Debit column for the Balance Sheet and Statement of Owner's Equity columns.  
**D.** Credit column for the Balance Sheet and Statement of Owner's Equity columns.
- \_\_\_\_\_ 1. Interest Revenue      \_\_\_\_\_ 9. Accounts Receivable  
 \_\_\_\_\_ 2. Machinery      \_\_\_\_\_ 10. Accumulated Depreciation  
 \_\_\_\_\_ 3. Owner, Withdrawals      \_\_\_\_\_ 11. Office Supplies  
 \_\_\_\_\_ 4. Depreciation Expense      \_\_\_\_\_ 12. Insurance Expense  
 \_\_\_\_\_ 5. Accounts Payable      \_\_\_\_\_ 13. Interest Receivable  
 \_\_\_\_\_ 6. Service Fees Revenue      \_\_\_\_\_ 14. Cash  
 \_\_\_\_\_ 7. Owner, Capital      \_\_\_\_\_ 15. Rent Expense  
 \_\_\_\_\_ 8. Interest Expense      \_\_\_\_\_ 16. Wages Payable

**EXERCISES****Exercise 4-1**

Extending adjusted account balances on a work sheet

**P1**

**Exercise 4-2**

Extending accounts in a work sheet **P1**

The Adjusted Trial Balance columns of a 10-column work sheet for Planta Company follow. Complete the work sheet by extending the account balances into the appropriate financial statement columns and by entering the amount of net income for the reporting period.

1	A	B	C		D		E		F		G		H		I		J		K		L

**Exercise 4-4**

Completing a work sheet **P1**

The following data are taken from the unadjusted trial balance of the Westcott Company at December 31, 2015. Each account carries a normal balance and the accounts are shown here in alphabetical order.

Accounts Payable .....	\$ 6	Prepaid Insurance ....	\$18	W. Westcott, Withdrawals ..	\$ 6
Accounts Receivable .....	12	Revenue .....	75	Unearned Revenue .....	12
Accumulated Depreciation—Equip. . .	15	Salaries Expense .....	18	Utilities Expense .....	12
Cash .....	21	Supplies .....	24		
Equipment .....	39	W. Westcott, Capital ..	42		

- Use the data above to prepare a work sheet. Enter the accounts in proper order and enter their balances in the correct Debit or Credit column.
- Use the following adjustment information to complete the work sheet.
  - Depreciation on equipment, \$3
  - Accrued salaries, \$6
  - The \$12 of unearned revenue has been earned
  - Supplies available at December 31, 2015, \$15
  - Expired insurance, \$15

Capri Company began the current period with a \$20,000 credit balance in the K. Capri, Capital account. At the end of the period, the company's adjusted account balances include the following temporary accounts with normal balances.

Service fees earned . . . . .	\$70,000	Interest revenue . . . . .	\$ 7,000
Salaries expense . . . . .	38,000	K. Capri, Withdrawals . . . . .	12,000
Depreciation expense . . . . .	8,000	Utilities expense . . . . .	4,600

After closing the revenue and expense accounts, what will be the balance of the Income Summary account? After all closing entries are journalized and posted, what will be the balance of the K. Capri, Capital account?

These partially completed Income Statement columns from a 10-column work sheet are for Brown's Bike Rental Company. (1) Use the information to determine the amount that should be entered on the net income line of the work sheet. (2) Prepare the company's closing entries. The owner, H. Brown, did not make any withdrawals this period.

Account Title	Debit	Credit
Rent earned . . . . .		120,000
Salaries expense . . . . .	46,300	
Insurance expense . . . . .	7,400	
Office supplies expense . . . . .	16,000	
Bike repair expense . . . . .	4,200	
Depreciation expense—Bikes . . . . .	20,500	
Totals . . . . .	_____	_____
Net income . . . . .	_____	_____
Totals . . . . .	=====	=====

**Exercise 4-5**

Determining effects of closing entries

**Exercise 4-6**

Completing the income statement columns and preparing closing entries

P1 P2

**Check** Net income, \$25,600

The following unadjusted trial balance contains the accounts and balances of Dylan Delivery Company as of December 31, 2015.

- Use the following information about the company's adjustments to complete a 10-column work sheet.
  - Unrecorded depreciation on the trucks at the end of the year is \$40,000.
  - The total amount of accrued interest expense at year-end is \$6,000.
  - The cost of unused office supplies still available at year-end is \$2,000.
- Prepare the year-end closing entries for this company, and determine the capital amount to be reported on its year-end balance sheet.

**Exercise 4-7**

Preparing a work sheet and recording closing entries

P1 P2

	A	B	C

209	Salaries payable .....		4,200				
233	Unearned fees .....		3,600				
301	E. Salon, Capital .....		68,500				
302	E. Salon, Withdrawals .....	15,400					
401	Marketing fees earned .....		80,000				
611	Depreciation expense—Equipment .....	12,000					
622	Salaries expense .....	32,500					
640	Rent expense .....	13,000					
677	Miscellaneous expenses .....	8,700					
901	Income summary .....						
	Totals .....	<u>\$188,800</u>	<u>\$188,800</u>				

Use the following adjusted trial balance of Wilson Trucking Company to prepare the (1) income statement and (2) statement of owner's equity for the year ended December 31, 2015. The K. Wilson, Capital account balance is \$175,000 at December 31, 2014.

**Exercise 4-11**  
Preparing the financial statements

**C2**

Account Title	Debit	Credit
Cash .....	\$ 8,000	
Accounts receivable .....	17,500	
Office supplies .....	3,000	
Trucks .....	172,000	
Accumulated depreciation—Trucks .....		\$ 36,000
Land .....	85,000	
Accounts payable .....		12,000
Interest payable .....		4,000
Long-term notes payable .....		53,000
K. Wilson, Capital .....		175,000
K. Wilson, Withdrawals .....	20,000	
Trucking fees earned .....		130,000
Depreciation expense—Trucks .....	23,500	
Salaries expense .....	61,000	
Office supplies expense .....	8,000	
Repairs expense—Trucks .....	12,000	
Totals .....	<u>\$410,000</u>	<u>\$410,000</u>

Use the information in the adjusted trial balance reported in Exercise 4-11 to prepare Wilson Trucking Company's classified balance sheet as of December 31, 2015.

**Exercise 4-12**  
Preparing a classified balance sheet

**C3**

**Check** Total assets, \$249,500; K. Wilson, Capital, \$180,500 (ending)

**Exercise 4-13**

Computing the current ratio

Use the information in the adjusted trial balance reported in Exercise 4-11 to compute the current ratio as of the balance sheet date (round the ratio to two decimals). Interpret the current ratio for the Wilson Trucking Company. (Assume that the industry average for the current ratio is 1.5.)

**Exercise 4-14**

Preparing closing entries

Following are **Nintendo's** revenue and expense accounts for a recent calendar year (yen in millions). Prepare the company's closing entries for its revenues and its expenses.

Net sales .....	¥1,014,345
Cost of sales .....	626,379
Advertising expense .....	96,359
Other expense, net .....	213,986

**Exercise 4-15**

Computing and analyzing the current ratio

Calculate the current ratio in each of the following separate cases (round the ratio to two decimals). Identify the company case with the strongest liquidity position. (These cases represent competing companies in the same industry.)

	Current Assets	Current Liabilities
Case 1 .....	\$ 79,040	\$ 32,000
Case 2 .....	104,880	76,000
Case 3 .....	45,080	49,000
Case 4 .....	85,680	81,600
Case 5 .....	61,000	100,000

**Exercise 4-16<sup>A</sup>**

Preparing reversing entries

P4

Hawk Company records prepaid assets and unearned revenues in balance sheet accounts. The following information was used to prepare adjusting entries for the company as of August 31, the end of the company's fiscal year.

- The company has earned \$6,000 in service fees that were not yet recorded at period-end.
- The expired portion of prepaid insurance is \$3,700.
- The company has earned \$2,900 of its Unearned Service Fees account balance.
- Depreciation expense for office equipment is \$3,300.
- Employees have earned but have not been paid salaries of \$3,400.

Prepare any necessary reversing entries for the accounting adjustments *a* through *e* assuming that the company uses reversing entries in its accounting system.

**Exercise 4-17<sup>A</sup>**

Preparing reversing entries

P4

The following two events occurred for Trey Co. on October 31, 2015, the end of its fiscal year.

- Trey rents a building from its owner for \$2,800 per month. By a prearrangement, the company delayed paying October's rent until November 5. On this date, the company paid the rent for both October and November.
- Trey rents space in a building it owns to a tenant for \$850 per month. By prearrangement, the tenant delayed paying the October rent until November 8. On this date, the tenant paid the rent for both October and November.

**Required**

- Prepare adjusting entries that the company must record for these events as of October 31.
- Assuming Trey does *not* use reversing entries, prepare journal entries to record Trey's payment of rent on November 5 and the collection of the tenant's rent on November 8.
- Assuming that the company uses reversing entries, prepare reversing entries on November 1 and the journal entries to record Trey's payment of rent on November 5 and the collection of the tenant's rent on November 8.

On April 1, 2015, Jiro Nozomi created a new travel agency, Adventure Travel. The following transactions occurred during the company's first month.

- April 1 Nozomi invested \$30,000 cash and computer equipment worth \$20,000 in the company.  
 2 The company rented furnished office space by paying \$1,800 cash for the first month's (April) rent.  
 3 The company purchased \$1,000 of office supplies for cash.  
 10 The company paid \$2,400 cash for the premium on a 12-month insurance policy. Coverage begins on April 11.  
 14 The company paid \$1,600 cash for two weeks' salaries earned by employees.  
 24 The company collected \$8,000 cash on commissions from airlines on tickets obtained for customers.  
 28 The company paid \$1,600 cash for two weeks' salaries earned by employees.  
 29 The company paid \$350 cash for minor repairs to the company's computer.  
 30 The company paid \$750 cash for this month's telephone bill.  
 30 Nozomi withdrew \$1,500 cash from the company for personal use.

The company's chart of accounts follows:

101 Cash	405 Commissions Earned
106 Accounts Receivable	612 Depreciation Expense—Computer Equip.
124 Office Supplies	622 Salaries Expense
128 Prepaid Insurance	637 Insurance Expense
167 Computer Equipment	640 Rent Expense
168 Accumulated Depreciation—Computer Equip.	650 Office Supplies Expense
209 Salaries Payable	684 Repairs Expense
301 J. Nozomi, Capital	688 Telephone Expense
302 J. Nozomi, Withdrawals	901 Income Summary

### Required

- Use the balance column format to set up each ledger account listed in its chart of accounts.
- Prepare journal entries to record the transactions for April and post them to the ledger accounts. The company records prepaid and unearned items in balance sheet accounts.
- Prepare an unadjusted trial balance as of April 30.
- Use the following information to journalize and post adjusting entries for the month:
  - Two-thirds (or \$133) of one month's insurance coverage has expired.
  - At the end of the month, \$600 of office supplies are still available.
  - This month's depreciation on the computer equipment is \$500.
  - Employees earned \$420 of unpaid and unrecorded salaries as of month-end.
  - The company earned \$1,750 of commissions that are not yet billed at month-end.
- Prepare the adjusted trial balance as of April 30. Prepare the income statement and the statement of owner's equity for the month of April and the balance sheet at April 30, 2015.
- Prepare journal entries to close the temporary accounts and post these entries to the ledger.
- Prepare a post-closing trial balance.

The following unadjusted trial balance is for Ace Construction Co. as of the end of its 2015 fiscal year. The June 30, 2014, credit balance of the owner's capital account was \$53,660, and the owner invested \$35,000 cash in the company during the 2015 fiscal year.

## PROBLEM SET A

### Problem 4-1A

Applying the accounting cycle

C1 C2 P2 P3

**Check** (3) Unadj. trial balance totals, \$58,000

(4a) Dr. Insurance Expense, \$133

(5) Net income, \$2,197; J. Nozomi, Capital (4/30/2015), \$50,697; Total assets, \$51,117

(7) P-C trial balance totals, \$51,617

### Problem 4-2A

Preparing a work sheet, adjusting and closing entries, and financial statements

C3 P1 P2

	A	B	C	D
1		<b>ACE CONSTRUCTION CO.</b>		
2		<b>Unadjusted Trial Balance</b>		
3		<b>June 30, 2015</b>		
4	<b>No.</b>	<b>Account Title</b>	<b>Debit</b>	<b>Credit</b>
5	101	Cash	\$ 18,500	
6	126	Supplies	9,900	
7	128	Prepaid insurance	7,200	
8	167	Equipment	132,000	
9	168	Accumulated depreciation—Equipment		\$ 26,250
10	201	Accounts payable		6,800
11	203	Interest payable		0
12	208	Rent payable		0
13	210	Wages payable		0
14	213	Property taxes payable		0
15	251	Long-term notes payable		25,000
16	301	V. Ace, Capital		88,660
17	302	V. Ace, Withdrawals	33,000	
18	401	Construction fees earned		132,100
19	612	Depreciation expense—Equipment	0	
20	623	Wages expense	46,860	
21	633	Interest expense	2,750	
22	637	Insurance expense	0	
23	640	Rent expense	12,000	
24	652	Supplies expense	0	
25	683	Property taxes expense	7,800	
26	684	Repairs expense	2,910	
27	690	Utilities expense	5,890	
28		Totals	\$278,810	\$278,810
29				

**Required**

- Prepare and complete a 10-column work sheet for fiscal year 2015, starting with the unadjusted trial balance and including adjustments based on these additional facts.
  - The supplies available at the end of fiscal year 2015 had a cost of \$3,300.
  - The cost of expired insurance for the fiscal year is \$3,800.
  - Annual depreciation on equipment is \$8,400.
  - The June utilities expense of \$650 is not included in the unadjusted trial balance because the bill arrived after the trial balance was prepared. The \$650 amount owed needs to be recorded.
  - The company's employees have earned \$1,800 of accrued wages at fiscal year-end.
  - The rent expense incurred and not yet paid or recorded at fiscal year-end is \$500.
  - Additional property taxes of \$1,000 have been assessed for this fiscal year but have not been paid or recorded in the accounts.
  - The long-term note payable bears interest at 12% per year. The unadjusted Interest Expense account equals the amount paid for the first 11 months of the 2015 fiscal year. The \$250 accrued interest for June has not yet been paid or recorded. (The company is required to make a \$5,000 payment toward the note payable during the 2016 fiscal year.)
- Using information from the completed 10-column work sheet in part 1, journalize the adjusting entries and the closing entries.
- Prepare the income statement and the statement of owner's equity for the year ended June 30 and the classified balance sheet at June 30, 2015.

**Check** (3) Total assets, \$122,550; Current liabilities, \$16,000; Net income, \$30,890

**Analysis Component**

- Analyze the following separate errors and describe how each would affect the 10-column work sheet. Explain whether the error is likely to be discovered in completing the work sheet and, if not, the effect of the error on the financial statements.
  - Assume that the adjustment for supplies used consisted of a credit to Supplies and a debit to Supplies Expense for \$3,300, when the correct amount was \$6,600.
  - When the adjusted trial balance in the work sheet is completed, assume that the \$18,500 Cash balance is incorrectly entered in the Credit column.

In the blank space beside each numbered balance sheet item, enter the letter of its balance sheet classification. If the item should not appear on the balance sheet, enter a Z in the blank.

**A.** Current assets

**E.** Current liabilities

**B.** Long-term investments

**F.** Long-term liabilities

**C.** Plant assets

**G.** Equity

**D.** Intangible assets

	Totals .....	<u>\$411,900</u>	<u>\$411,900</u>

### Problem 4-4A

Preparing closing entries, financial statements, and ratios

C3 A1 P2

O. Tybalt invested \$5,000 cash in the business during year 2015 (the December 31, 2014, credit balance of the O. Tybalt, Capital account was \$121,400). Tybalt Construction is required to make a \$7,000 payment on its long-term notes payable during 2016.

### Required

1. Prepare the income statement and the statement of owner's equity for the calendar year 2015 and the classified balance sheet at December 31, 2015.
2. Prepare the necessary closing entries at December 31, 2015.
3. Use the information in the financial statements to compute these ratios: (a) return on assets (total assets at December 31, 2014, was \$200,000), (b) debt ratio, (c) profit margin ratio (use total revenues as the denominator), and (d) current ratio. Round ratios to three decimals for parts a and c, and to two decimals for parts b and d.

**Check** (1) Total assets (12/31/2015), \$218,100; Net income, \$4,300

### Problem 4-5A

Preparing trial balances, closing entries, and financial statements

The adjusted trial balance of Karise Repairs on December 31, 2015, follows.

KARISE REPAIRS Adjusted Trial Balance December 31, 2015			
No.	Account Title	Debit	Credit
101	Cash .....	\$ 14,000	
124	Office supplies .....	1,300	
128	Prepaid insurance .....	2,050	
167	Equipment .....	50,000	
168	Accumulated depreciation—Equipment .....		\$ 5,000
201	Accounts payable .....		14,000
210	Wages payable .....		600
301	C. Karise, Capital .....		33,000
302	C. Karise, Withdrawals .....	16,000	
401	Repair fees earned .....		90,950
612	Depreciation expense—Equipment .....	5,000	
623	Wages expense .....	37,500	
637	Insurance expense .....	800	
640	Rent expense .....	10,600	
650	Office supplies expense .....	3,600	
690	Utilities expense .....	2,700	
	Totals .....	<u>\$143,550</u>	<u>\$143,550</u>

### Required

1. Prepare an income statement and a statement of owner's equity for the year 2015, and a classified balance sheet at December 31, 2015. There are no owner investments in 2015.
2. Enter the adjusted trial balance in the first two columns of a six-column table. Use columns three and four for closing entry information and the last two columns for a post-closing trial balance. Insert an Income Summary account as the last item in the trial balance.
3. Enter closing entry information in the six-column table and prepare journal entries for it.

### Analysis Component

4. Assume for this part only that
  - a. None of the \$800 insurance expense had expired during the year. Instead, assume it is a prepayment of the next period's insurance protection.
  - b. There are no earned and unpaid wages at the end of the year. (*Hint:* Reverse the \$600 wages payable accrual.)

Describe the financial statement changes that would result from these two assumptions.

**Check** (1) Ending capital balance, \$47,750; net income, \$30,750

(2) P-C trial balance totals, \$67,350

The following six-column table for Hawkeye Ranges includes the unadjusted trial balance as of December 31, 2015.

**Problem 4-6A<sup>A</sup>**

Preparing adjusting, reversing, and next period entries

P4

**Required**

- Complete the six-column table by entering adjustments that reflect the following information.
  - As of December 31, 2015, employees had earned \$1,200 of unpaid and unrecorded salaries. The next payday is January 4, at which time \$1,500 of salaries will be paid.
  - The cost of supplies still available at December 31, 2015, is \$3,000.
  - The notes payable requires an interest payment to be made every three months. The amount of unrecorded accrued interest at December 31, 2015, is \$1,875. The next interest payment, at an amount of \$2,250, is due on January 15, 2016.
  - Analysis of the unearned member fees account shows \$5,800 remaining unearned at December 31, 2015.
  - In addition to the member fees included in the revenue account balance, the company has earned another \$9,300 in unrecorded fees that will be collected on January 31, 2016. The company is also expected to collect \$10,000 on that same day for new fees earned in January 2016.
  - Depreciation expense for the year is \$15,000.
- Prepare journal entries for the adjustments entered in the six-column table for part 1.
- Prepare journal entries to reverse the effects of the adjusting entries that involve accruals.
- Prepare journal entries to record the cash payments and cash collections described for January.

**Check** (1) Adjusted trial balance totals, \$239,625

On July 1, 2015, Lula Plume created a new self-storage business, Safe Storage Co. The following transactions occurred during the company's first month.

- July 1 Plume invested \$30,000 cash and buildings worth \$150,000 in the company.  
 2 The company rented equipment by paying \$2,000 cash for the first month's (July) rent.  
 5 The company purchased \$2,400 of office supplies for cash.  
 10 The company paid \$7,200 cash for the premium on a 12-month insurance policy. Coverage begins on July 11.  
 14 The company paid an employee \$1,000 cash for two weeks' salary earned.  
 24 The company collected \$9,800 cash for storage fees from customers.  
 28 The company paid \$1,000 cash for two weeks' salary earned by an employee.  
 29 The company paid \$950 cash for minor repairs to a leaking roof.  
 30 The company paid \$400 cash for this month's telephone bill.  
 31 Plume withdrew \$2,000 cash from the company for personal use.

**PROBLEM SET B****Problem 4-1B**

Applying the accounting cycle

C1 C2 P2 P3

The company's chart of accounts follows:

101	Cash	401	Storage Fees Earned
106	Accounts Receivable	606	Depreciation Expense—Buildings
124	Office Supplies	622	Salaries Expense
128	Prepaid Insurance	637	Insurance Expense
173	Buildings	640	Rent Expense
174	Accumulated Depreciation—Buildings	650	Office Supplies Expense
209	Salaries Payable	684	Repairs Expense
301	L. Plume, Capital	688	Telephone Expense
302	L. Plume, Withdrawals	901	Income Summary

### Required

- Use the balance column format to set up each ledger account listed in its chart of accounts.
- Prepare journal entries to record the transactions for July and post them to the ledger accounts. Record prepaid and unearned items in balance sheet accounts.
- Prepare an unadjusted trial balance as of July 31.
- Use the following information to journalize and post adjusting entries for the month:
  - Two-thirds of one month's insurance coverage has expired.
  - At the end of the month, \$1,525 of office supplies are still available.
  - This month's depreciation on the buildings is \$1,500.
  - An employee earned \$100 of unpaid and unrecorded salary as of month-end.
  - The company earned \$1,150 of storage fees that are not yet billed at month-end.
- Prepare the adjusted trial balance as of July 31. Prepare the income statement and the statement of owner's equity for the month of July and the balance sheet at July 31, 2015.
- Prepare journal entries to close the temporary accounts and post these entries to the ledger.
- Prepare a post-closing trial balance.

**Check** (3) Unadj. trial balance totals, \$189,800

(4a) Dr. Insurance Expense, \$400

27	690 Utilities expense	4,800	
28	Totals	\$324,700	\$324,700
29			

**Required**

1. Prepare and complete a 10-column work sheet for fiscal year 2015, starting with the unadjusted trial balance and including adjustments based on these additional facts.
  - a. The supplies available at the end of fiscal year 2015 had a cost of \$7,900.
  - b. The cost of expired insurance for the fiscal year is \$10,600.
  - c. Annual depreciation on equipment is \$7,000.
  - d. The April utilities expense of \$800 is not included in the unadjusted trial balance because the bill arrived after the trial balance was prepared. The \$800 amount owed needs to be recorded.
  - e. The company's employees have earned \$2,000 of accrued wages at fiscal year-end.
  - f. The rent expense incurred and not yet paid or recorded at fiscal year-end is \$3,000.
  - g. Additional property taxes of \$550 have been assessed for this fiscal year but have not been paid or recorded in the accounts.
  - h. The long-term note payable bears interest at 12% per year. The unadjusted Interest Expense account equals the amount paid for the first 11 months of the 2015 fiscal year. The \$300 accrued interest for April has not yet been paid or recorded. (Note that the company is required to make a \$10,000 payment toward the note payable during the 2016 fiscal year.)
2. Using information from the completed 10-column work sheet in part 1, journalize the adjusting entries and the closing entries.
3. Prepare the income statement and the statement of owner's equity for the year ended April 30 and the classified balance sheet at April 30, 2015.

**Check** (3) Total assets, \$195,900; current liabilities, \$23,450; Net income, \$77,550

**Analysis Component**

4. Analyze the following separate errors and describe how each would affect the 10-column work sheet. Explain whether the error is likely to be discovered in completing the work sheet and, if not, the effect of the error on the financial statements.
  - a. Assume the adjusting entry to reflect expiration of insurance coverage for the period was recorded with a \$2,000 credit to Prepaid Insurance and a \$2,000 debit to Insurance Expense. The adjustment should have been for \$10,600.
  - b. When the adjusted trial balance in the work sheet was completed, assume that the \$4,700 Repairs Expense account balance is extended to the Debit column of the balance sheet columns.

In the blank space beside each numbered balance sheet item, enter the letter of its balance sheet classification. If the item should not appear on the balance sheet, enter a Z in the blank.

- A.** Current assets  
**B.** Long-term investments  
**C.** Plant assets  
**D.** Intangible assets  
**E.** Current liabilities  
**F.** Long-term liabilities  
**G.** Equity

P. Anara invested \$40,000 cash in the business during year 2015 (the December 31, 2014, credit balance of the P. Anara, Capital account was \$52,800). Anara Company is required to make a \$8,400 payment on its long-term notes payable during 2016.

**Check** (1) Total assets  
(12/31/2015), \$218,100; Net  
income, \$4,300

**Required**

1. Prepare the income statement and the statement of owner's equity for the calendar year 2015 and the classified balance sheet at December 31, 2015.

[continued on next page]

2. Prepare the necessary closing entries at December 31, 2015.
3. Use the information in the financial statements to calculate these ratios: (a) return on assets (total assets at December 31, 2014, were \$160,000), (b) debt ratio, (c) profit margin ratio (use total revenues as the denominator), and (d) current ratio. Round ratios to three decimals for parts a and c, and to two decimals for parts b and d.

Santo Company's adjusted trial balance on December 31, 2015, follows.

SANTO COMPANY Adjusted Trial Balance December 31, 2015			
No.	Account Title	Debit	Credit
101	Cash .....	\$ 14,450	
125	Store supplies .....	5,140

690	Utilities expense .....	1,960	
	Totals .....	<u>\$102,550</u>	<u>\$102,550</u>

### Problem 4-5B

Preparing trial balances, closing entries, and financial statements

### Required

1. Prepare an income statement and a statement of owner's equity for the year 2015, and a classified balance sheet at December 31, 2015. There are no owner investments in 2015.
2. Enter the adjusted trial balance in the first two columns of a six-column table. Use the middle two columns for closing entry information and the last two columns for a post-closing trial balance. Insert an Income Summary account (No. 901) as the last item in the trial balance.
3. Enter closing entry information in the six-column table and prepare journal entries for it.

**Check** (1) Ending capital balance, \$39,590  
(2) P-C trial balance totals, \$51,790

### Analysis Component

4. Assume for this part only that
  - a. None of the \$600 insurance expense had expired during the year. Instead, assume it is a prepayment of the next period's insurance protection.
  - b. There are no earned and unpaid wages at the end of the year. (*Hint:* Reverse the \$2,700 wages payable accrual.)

Describe the financial statement changes that would result from these two assumptions.

The following six-column table for Solutions Co. includes the unadjusted trial balance as of December 31, 2015.

### Problem 4-6B<sup>A</sup>

Preparing adjusting, reversing, and next period entries

21	Supplies expense	0					
22	<b>Totals</b>	<b>\$103,850</b>	<b>\$103,850</b>				
23							

**Required**

- Complete the six-column table by entering adjustments that reflect the following information:
  - As of December 31, 2015, employees had earned \$400 of unpaid and unrecorded wages. The next payday is January 4, at which time \$1,200 in wages will be paid.
  - The cost of supplies still available at December 31, 2015, is \$3,450.
  - The notes payable requires an interest payment to be made every three months. The amount of unrecorded accrued interest at December 31, 2015, is \$800. The next interest payment, at an amount of \$900, is due on January 15, 2016.
  - Analysis of the unearned rental fees shows that \$3,200 remains unearned at December 31, 2015.
  - In addition to the machinery rental fees included in the revenue account balance, the company has earned another \$2,450 in unrecorded fees that will be collected on January 31, 2016. The company is also expected to collect \$5,400 on that same day for new fees earned in January 2016.
  - Depreciation expense for the year is \$3,800.
- Prepare journal entries for the adjustments entered in the six-column table for part 1.
- Prepare journal entries to reverse the effects of the adjusting entries that involve accruals.
- Prepare journal entries to record the cash payments and cash collections described for January.

**Check** (1) Adjusted trial balance totals, \$111,300

## SERIAL PROBLEM

Business Solutions

P2 P3

(This serial problem began in Chapter 1 and continues through most of the book. If previous chapter segments were not completed, the serial problem can begin at this point. It is helpful, but not necessary, to use the Working Papers that accompany the book.)

**SP 4** The December 31, 2015, adjusted trial balance of Business Solutions (reflecting its transactions from October through December of 2015) follows.

No.	Account Title	Debit	Credit
101	Cash .....	\$ 48,372

	Totals .....	<u>\$109,034</u>	<u>\$109,034</u>

**Required**

- Record and post the necessary closing entries for Business Solutions.
- Prepare a post-closing trial balance as of December 31, 2015.

**Check** Post-closing trial balance totals, \$85,110

The following General Ledger assignments focus on transactions related to the closing process. For each of the following questions, prepare the required closing entries, create the income statement and the classified balance sheet, and then indicate which accounts appear on the post-closing trial balance. Three options exist for displaying the trial balance: unadjusted, adjusted, or post-closing.

**GL 4-1** Transactions from the FastForward illustration in this chapter

**GL 4-2** Based on Problem 4-1A

**GL 4-3** Based on Problem 4-2A

**GL 4-4** Based on Problem 4-6A

**GL 4-5** Based on Serial Problem SP 4

## GL GENERAL LEDGER PROBLEM

Available only in Connect Plus

## Beyond the Numbers

**BTN 4-1** Refer to **Apple's** financial statements in Appendix A to answer the following.

- For the fiscal year ended September 28, 2013, what amount is credited to Income Summary to summarize its revenues earned?
- For the fiscal year ended September 28, 2013, what amount is debited to Income Summary to summarize its expenses incurred?
- For the fiscal year ended September 28, 2013, what is the balance of its Income Summary account before it is closed?

**Fast Forward**

- Access Apple's annual report (10-K) for fiscal years ending after September 28, 2013, at its website ([Apple.com](http://Apple.com)) or the SEC's EDGAR database ([www.SEC.gov](http://www.SEC.gov)). How has the amount of net income closed to Income Summary changed in the fiscal years ending after September 28, 2013?

## REPORTING IN ACTION

C1 P2

## APPLE

**BTN 4-2** Key figures for the recent two years of both **Apple** and **Google** follow.

(\$ millions)	Apple		Google	
	Current Year	Prior Year	Current Year	Prior Year
Current assets .....	\$73,286	\$57,653	\$72,886	\$60,454
Current liabilities .....	43,658	38,542	15,908	14,337

## COMPARATIVE ANALYSIS

A1

## APPLE GOOGLE

**Required**

1. Compute the current ratio for both years for both companies.
2. Which company has the better ability to pay short-term obligations according to the current ratio?
3. Analyze and comment on each company's current ratios for the past two years.
4. How do Apple's and Google's current ratios compare to their industry (assumed) average ratio of 2.0?

**ETHICS CHALLENGE**

**BTN 4-3** On January 20, 2015, Tamira Nelson, the accountant for Picton Enterprises, is feeling pressure to complete the annual financial statements. The company president has said he needs up-to-date financial statements to share with the bank on January 21 at a dinner meeting that has been called to discuss Picton's obtaining loan financing for a special building project. Tamira knows that she will not be able to gather all the needed information in the next 24 hours to prepare the entire set of adjusting entries. Those entries must be posted before the financial statements accurately portray the company's performance and financial position for the fiscal period ended December 31, 2014. Tamira ultimately decides to estimate several expense accruals at the last minute. When deciding on estimates for the expenses, she uses low estimates because she does not want to make the financial statements look worse than they are. Tamira finishes the financial statements before the deadline and gives them to the president without mentioning that several account balances are estimates that she provided.

**Required**

1. Identify several courses of action that Tamira could have taken instead of the one she took.
2. If you were in Tamira's situation, what would you have done? Briefly justify your response.

**COMMUNICATING IN PRACTICE**

C1 P2

**BTN 4-4** Assume that one of your classmates states that a company's books should be ongoing and therefore not closed until that business is terminated. Write a half-page memo to this classmate explaining the concept of the closing process by drawing analogies between (1) a scoreboard for an athletic event and the revenue and expense accounts of a business or (2) a sports team's record book and the capital account. (*Hint:* Think about what would happen if the scoreboard is not cleared before the start of a new game.)

**TAKING IT TO THE NET**

**BTN 4-5** Access **Motley Fool's** discussion of the current ratio at [Fool.com/School/Valuation/CurrentAndQuickRatio.htm](http://Fool.com/School/Valuation/CurrentAndQuickRatio.htm). (If the page changed, search that site for the *current ratio*.)

**Required**

1. What level for the current ratio is generally regarded as sufficient to meet near-term operating needs?
2. Once you have calculated the current ratio for a company, what should you compare it against?
3. What are the implications for a company that has a current ratio that is too high?

**TEAMWORK IN ACTION**

P1 P2 P3

**BTN 4-6** The unadjusted trial balance and information for the accounting adjustments of Noseworthy Investigators follow. Each team member involved in this project is to assume one of the four responsibilities listed. After completing each of these responsibilities, the team should work together to prove the accounting equation utilizing information from teammates (1 and 4). If your equation does not balance, you are to work as a team to resolve the error. The team's goal is to complete the task as quickly and accurately as possible.

Unadjusted Trial Balance		
Account Title	Debit	Credit
Cash .....	\$16,000	
Supplies .....	12,000	
Prepaid insurance .....	3,000	
Equipment .....	25,000	
Accumulated depreciation—Equipment .....		\$ 7,000
Accounts payable .....		3,000
D. Noseworthy, Capital .....		34,000
D. Noseworthy, Withdrawals .....	6,000	
Investigation fees earned .....		33,000
Rent expense .....	15,000	
Totals .....	<u>\$77,000</u>	<u>\$77,000</u>

**Additional Year-End Information**

- Insurance that expired in the current period amounts to \$2,200.
- Equipment depreciation for the period is \$4,000.
- Unused supplies total \$5,000 at period-end.
- Services in the amount of \$800 have been provided but have not been billed or collected.

**Responsibilities for Individual Team Members**

- Determine the accounts and adjusted balances to be extended to the balance sheet columns of the work sheet for Noseworthy. Also determine total assets and total liabilities.
- Determine the adjusted revenue account balance and prepare the entry to close this account.
- Determine the adjusted account balances for expenses and prepare the entry to close these accounts.
- Prepare T-accounts for both D. Noseworthy, Capital (reflecting the unadjusted trial balance amount) and Income Summary. Prepare the third and fourth closing entries. Ask teammates assigned to parts 2 and 3 for the postings for Income Summary. Obtain amounts to complete the third closing entry and post both the third and fourth closing entries. Provide the team with the ending capital account balance.
- The entire team should prove the accounting equation using post-closing balances.

**BTN 4-7** Review this chapter's opening feature involving Adrien Edwards and his **TheNakedHippie** business.

- Explain how a classified balance sheet can help Adrien know what bills are due when, and whether he has the resources to pay those bills.
- Why is it important for Adrien to match costs and revenues in a specific time period? How do closing entries help him in this regard?
- What objectives are met when Adrien applies closing procedures each fiscal year-end?

**ENTREPRENEURIAL DECISION**

**BTN 4-8** Select a company that you can visit in person or interview on the telephone. Call ahead to the company to arrange a time when you can interview an employee (preferably an accountant) who helps prepare the annual financial statements. Inquire about the following aspects of its *accounting cycle*:

- Does the company prepare interim financial statements? What time period(s) is used for interim statements?
- Does the company use the cash or accrual basis of accounting?
- Does the company use a work sheet in preparing financial statements? Why or why not?
- Does the company use a spreadsheet program? If so, which software program is used?
- How long does it take after the end of its reporting period to complete annual statements?

**HITTING THE ROAD**

**BTN 4-9** **Samsung (Samsung.com)** is a leading manufacturer of consumer electronic products. The following selected information is available from Samsung's financial statements.

(millions of Korean won)	Current Year	Prior Year
Current assets .....	₩110,760,271	₩87,269,017
Current liabilities .....	51,315,409	46,933,052

**GLOBAL DECISION****Samsung****Required**

- Compute Samsung's current ratio for both the current year and the prior year.
- Comment on any change from the prior year to the current year for the current ratio.

# Accounting for Merchandising Operations

## Chapter Preview

### MERCHANDISING ACTIVITIES

- C1** Reporting income and inventory
- C2** Operating cycles and inventory system

### MERCHANDISING PURCHASES

- P1** Accounting for:
  - Purchase discounts
  - Purchase returns and allowances
  - Transportation costs

### MERCHANDISING SALES

- P2** Accounting for:
  - Sales of merchandise
  - Sales discounts
  - Sales returns and allowances

### MERCHANDISE REPORTING AND ANALYSIS

- P3** Adjusting and closing for merchandisers
- P4** Multiple-step and single-step income statements
- A1** Acid-test analysis
- A2** Gross margin analysis

## Learning Objectives

### CONCEPTUAL

- C1** Describe merchandising activities and identify income components for a merchandising company.
- C2** Identify and explain the inventory asset and cost flows of a merchandising company.

### ANALYTICAL

- A1** Compute the acid-test ratio and explain its use to assess liquidity.

- A2** Compute the gross margin ratio and explain its use to assess profitability.

### PROCEDURAL

- P1** Analyze and record transactions for merchandise purchases using a perpetual system.
- P2** Analyze and record transactions for merchandise sales using a perpetual system.

- P3** Prepare adjustments and close accounts for a merchandising company.
- P4** Define and prepare multiple-step and single-step income statements.
- P5** *Appendix 5A*—Record and compare merchandising transactions using both periodic and perpetual inventory systems.

## Fashioning a Future

PORTLAND—“I’m passionate about social entrepreneurship,” exclaims Liz Forkin Bohannon, “and dreaming about the way business can be an incredibly powerful force for positive social change.” For Liz, her dream began with a postcollege trip to Uganda for a new job. What she discovered were young women who were unable to earn enough money to pay for their college tuition. “These women saw the education they were receiving as such a gift,” explains Liz. “All they needed was an opportunity.”

Armed with her passion, Liz launched **Sseko (SsekoDesigns.com)**—inspiration for its name derives from *enseko*, the Lugandan word for “laughter.” Sseko’s mission, explains Liz, is “to provide employment to vulnerable groups of women.” She hires young women who need money for college. The women make products from materials Liz acquires, and Liz then exports the finished products. Liz began with sandals and has expanded into scarves and leather bags.

Her start-up, however, was a struggle. “I spent a few weeks scouring the country for the materials we needed,” admits Liz. She recalls how the business required a merchandising accounting system to account for purchases and sales transactions and to effectively track materials. Inventory was especially important to account for and monitor. Liz admits

*“Assume a posture of asking ‘why not?’”*

—Liz Forkin Bohannon

that early on, soon after her sandals made it into Martha Stewart’s holiday gift guide, she ran out of sandals. While a nice problem on one hand, Liz knew she had to get her accounting in order.

Liz ultimately set up an accounting system to capture and communicate costs and sales information. Tracking merchandising activities was necessary to set prices and to manage discounts, allowances, and returns for both sales and purchases. A perpetual inventory system enabled her to stock the right kind and amount of merchandise and to avoid the costs of out-of-stock and excess inventory. “I am still learning. I am making mistakes,” admits Liz. “But, it is a beautiful adventure!”

Mastering accounting for merchandising is important to Liz. “We needed to generate income,” says Liz. “I had committed to these young women . . . I owed it to them to push as hard as I could to make it work.” And push she has. “All they needed was an opportunity; an opportunity to work; an opportunity to succeed and earn and save,” insists Liz. “There is nothing better than . . . the opportunity to work hard in a dignified way.”

## MERCHANDISING ACTIVITIES

**C1**  
Describe merchandising activities and identify income components for a merchandising company.

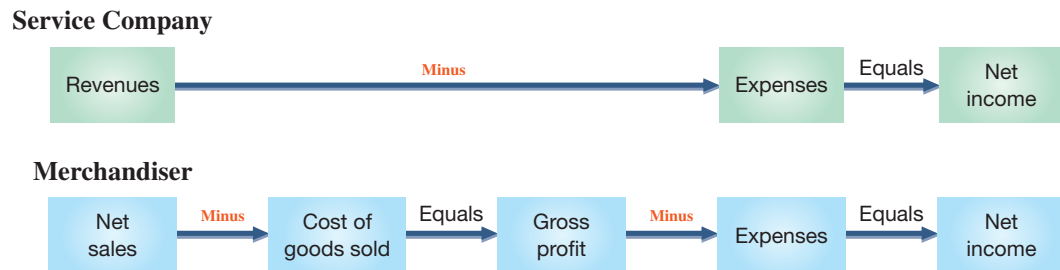

Previous chapters emphasized the accounting and reporting activities of service companies. A merchandising company’s activities differ from those of a service company. **Merchandise** consists of products, also called *goods*, that a company acquires to resell to customers. A **merchandiser** earns net income by buying and selling merchandise. Merchandisers are often identified as either wholesalers or retailers. A **wholesaler** is an *intermediary* that buys products from manufacturers or other wholesalers and sells them to retailers or other wholesalers. A **retailer** is an intermediary that buys products from manufacturers or wholesalers and sells them to consumers. Many retailers sell both products and services.

### Reporting Income for a Merchandiser

Net income for a merchandiser equals revenues from selling merchandise minus both the cost of merchandise sold to customers and the cost of other expenses for the period; see Exhibit 5.1. The usual accounting term for revenues from selling merchandise is *sales*, and the term used for the expense of buying and preparing the merchandise is **cost of goods sold**. (Some service companies use the term *sales* instead of revenues; and cost of goods sold is also called *cost of sales*.)

#### EXHIBIT 5.1

Computing Income for a Merchandising Company versus a Service Company

**Point:** Fleming, SuperValu, and SYSCO are wholesalers. Aeropostale, Coach, Target, and Walmart are retailers.

The income statement for Z-Mart in Exhibit 5.2 illustrates these key components of a merchandiser’s net income. The first two lines show that products are acquired at a cost of \$230,400 and sold for \$314,700. The third line shows an \$84,300 **gross profit**, also called **gross margin**, which equals net sales less cost of goods sold. Additional expenses of \$71,400 are reported, which leaves \$12,900 in net income.

#### EXHIBIT 5.2

Merchandiser’s Income Statement

Z-MART Income Statement For Year Ended December 31, 2015	
Net sales .....	\$314,700
<b>Cost of goods sold .....</b>	<b><u>230,400</u></b>
<b>Gross profit .....</b>	<b>84,300</b>
Expenses .....	<u>71,400</u>
Net income .....	<b><u>\$ 12,900</u></b>

**C2**  
Identify and explain the inventory asset and cost flows of a merchandising company.

### Reporting Inventory for a Merchandiser

A merchandiser’s balance sheet includes a current asset called *merchandise inventory*, an item not on a service company’s balance sheet. **Merchandise inventory**, or simply *inventory*, refers to products that a company owns and intends to sell. The cost of this asset includes the cost incurred to buy the goods, ship them to the store, and make them ready for sale.

## Operating Cycle for a Merchandiser

A merchandising company's operating cycle begins by purchasing merchandise and ends by collecting cash from selling the merchandise. The length of an operating cycle differs across the types of businesses. Department stores often have operating cycles of two to five months. Operating cycles for grocery merchants usually range from two to eight weeks. A grocer has more operating cycles in a year than, say, clothing or electronics retailers.

Exhibit 5.3 illustrates an operating cycle for a merchandiser with credit sales. The cycle moves from (a) cash purchases of merchandise to (b) inventory for sale to (c) credit sales to (d) accounts receivable to (e) cash. Companies try to keep their operating cycles short because assets tied up in inventory and receivables are not productive. Cash sales shorten operating cycles.

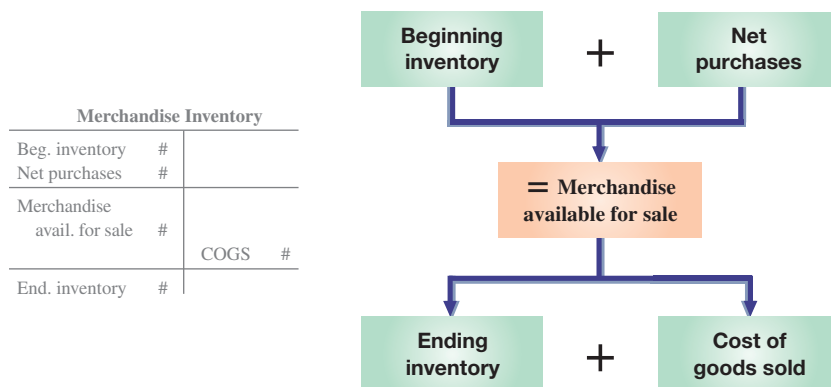

### EXHIBIT 5.3

Merchandiser's Operating Cycle

## Inventory Systems

Cost of goods sold is the cost of merchandise sold to customers during a period. It is often the largest single expense on a merchandiser's income statement. **Inventory** refers to products a company owns and expects to sell in its normal operations. Exhibit 5.4 shows that a company's merchandise available for sale consists of what it begins with (beginning inventory) and what it purchases (net purchases). The merchandise available is either sold (cost of goods sold) or kept for future sales (ending inventory).

### EXHIBIT 5.4

Merchandiser's Cost Flow for a Single Time Period

**Point:** Mathematically, Exhibit 5.4 says

$BI + NP = MAS$ ,  
 where BI is beginning inventory, NP is net purchases, and MAS is merchandise available for sale. Exhibit 5.4 also says  $MAS = EI + COGS$ , which can be rewritten as  $MAS - EI = COGS$  or  $MAS - COGS = EI$ , where EI is ending inventory and COGS is cost of goods sold. In both equations above, if we know two of the three values, we can solve for the third.

**Point:** Growth of superstores such as **Costco** and **Sam's** is fueled by efficient use of perpetual inventory. Such large stores evolved only after scannable UPC codes to help control inventory were invented.

OC1

The following sections, consisting of the next 11 pages on purchasing, selling, and adjusting merchandise, use the perpetual system. Appendix 5A uses the periodic system (with the perpetual results on the side). An instructor can choose to cover either one or both inventory systems.

# ACCOUNTING FOR MERCHANDISE PURCHASES

**P1**  
Analyze and record transactions for merchandise purchases using a perpetual system.

Assets = Liabilities + Equity  
+1,200  
-1,200

The cost of merchandise purchased for resale is recorded in the Merchandise Inventory asset account. To illustrate, Z-Mart records a \$1,200 cash purchase of merchandise on November 2 as follows:

Nov. 2	Merchandise Inventory . . . . .	1,200	
	Cash . . . . .		1,200
	<i>Purchased merchandise for cash.</i>		

**Point:** The Merchandise Inventory account reflects the cost of goods available for resale. Costs recorded in Merchandise Inventory are sometimes called *inventoriable costs*.

The invoice for this merchandise is shown in Exhibit 5.5. The buyer usually receives the original invoice, and the seller keeps a copy. This *source document* serves as the purchase invoice of Z-Mart (buyer) and the sales invoice for Trex (seller). The amount recorded for merchandise inventory includes its purchase cost, shipping fees, taxes, and any other costs necessary to make it ready for sale. This section explains how we compute the recorded cost of merchandise purchases.

## EXHIBIT 5.5

	<b>8 Total</b>	1,200

Key: **1** Seller **2** Invoice date **3** Purchaser **4** Order date **5** Credit terms  
**6** Freight terms **7** Goods **8** Total invoice amount

### Decision Insight

**Point:** Lowes and Home Depot offer trade discounts to construction companies and contractors. Trade discounts help create loyalty among customers. Trade discounts are not journalized; purchases are recorded based on the invoice amount.

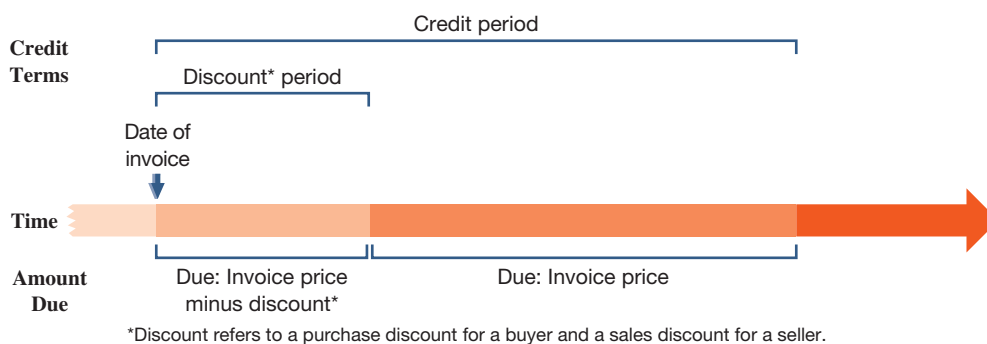

**Trade Discounts** When a manufacturer or wholesaler prepares a catalog of items it has for sale, it usually gives each item a **list price**, also called a *catalog price*. However, an item's intended *selling price* equals list price minus a given percent called a **trade discount**. The amount of trade discount usually depends on whether a buyer is a wholesaler, retailer, or final consumer. A wholesaler buying in large quantities is often granted a larger discount than a retailer buying in smaller quantities. A buyer records the net amount of list price minus trade discount. For example, in the November 2 purchase of merchandise by Z-Mart, the merchandise was listed in the seller's catalog at \$2,000 and Z-Mart received a 40% trade discount. This meant that Z-Mart's purchase price was \$1,200, computed as \$2,000 - (40% × \$2,000). ■

## Purchase Discounts

The purchase of goods on credit requires a clear statement of expected future payments and dates to avoid misunderstandings. **Credit terms** for a purchase include the amounts and timing of payments from a buyer to a seller. Credit terms usually reflect an industry’s practices. To illustrate, when sellers require payment within 10 days after the end of the month of the invoice date, the invoice will show credit terms as “n/10 EOM,” which stands for net 10 days after end of month (EOM). When sellers require payment within 30 days after the invoice date, the invoice shows credit terms of “n/30,” which stands for *net 30 days*.

Exhibit 5.6 portrays credit terms. The amount of time allowed before full payment is due is called the **credit period**. Sellers can grant a **cash discount** to encourage buyers to pay earlier. A buyer views a cash discount as a **purchase discount**. A seller views a cash discount as a **sales discount**. Any cash discounts are described in the credit terms on the invoice. For example, credit terms of “2/10, n/60” mean that full payment is due within a 60-day credit period, but the buyer can deduct 2% of the invoice amount if payment is made within 10 days of the invoice date. This reduced payment applies only for the **discount period**.

**Point:** Since both the buyer and seller know the invoice date, this date is used in setting the discount and credit periods.

### EXHIBIT 5.6

Credit Terms

To illustrate how a buyer accounts for a purchase discount, assume that Z-Mart’s \$1,200 purchase of merchandise is on credit with terms of 2/10, n/30. Its entry is

**Point:** Appendix 5A repeats journal entries a through f using a periodic inventory system.

(a) Nov. 2	Merchandise Inventory .....	1,200	
	Accounts Payable .....		1,200
	<i>Purchased merchandise on credit, invoice dated Nov. 2, terms 2/10, n/30.</i>		

Assets = Liabilities + Equity  
+1,200    +1,200

If Z-Mart pays the amount due on (or before) November 12, the entry is

(b) Nov. 12	Accounts Payable .....	1,200	
	Merchandise Inventory .....		24
	Cash .....		1,176
	<i>Paid for the \$1,200 purchase of Nov. 2 less the discount of \$24 (2% × \$1,200).</i>		

Assets = Liabilities + Equity  
–24    –1,200  
–1,176

The Merchandise Inventory account after these entries reflects the net cost of merchandise purchased, and the Accounts Payable account shows a zero balance. Both ledger accounts, in T-account form, follow:

**Point:** These entries illustrate what is called the *gross method* of accounting for purchases with discount terms.

Merchandise Inventory		Accounts Payable	
Nov. 2	1,200	Nov. 12	1,200
		Nov. 2	1,200
Balance	1,176	Balance	0

**Point:** Inventory balance of \$1,176 equals the cash paid for it (*measurement principal*).

A buyer’s failure to pay within a discount period can be expensive. To illustrate, if Z-Mart does not pay within the 10-day 2% discount period, it can delay payment by 20 more days. This delay costs Z-Mart \$24, computed as 2% × \$1,200. Most buyers take advantage of a purchase

**Point:** Buyers sometimes make partial payments toward amounts owed. Assume that credit terms apply to both partial and full payments.

discount because of the usually high interest rate implied from not taking it.<sup>1</sup> Also, good cash management means that no invoice is paid until the last day of the discount or credit period.

**Decision Maker**

**Entrepreneur** You purchase a batch of products on terms of 3/10, n/90, but your company has limited cash and you must borrow funds at an 11% annual rate if you are to pay within the discount period. Is it to your advantage to take the purchase discount? Explain. ■ [Answers follow the chapter's Summary.]

**Purchase Returns and Allowances**

*Purchase returns* refer to merchandise a buyer acquires but then returns to the seller. A *purchase allowance* is a reduction in the cost of defective or unacceptable merchandise that a buyer acquires. Buyers often keep defective but still marketable merchandise if the seller grants an acceptable allowance. When a buyer returns or takes an allowance on merchandise, the buyer issues a **debit memorandum** to inform the seller of a debit made to the account payable in the buyer's records (debits reduce liabilities).

**Purchase Allowances** To illustrate purchase allowances, assume that on November 15, Z-Mart (buyer) issues a \$300 debit memorandum for an allowance from Trex for defective merchandise. Z-Mart's November 15 entry to update its Merchandise Inventory account to reflect the purchase allowance is

**Point:** The sender (maker) of a *debit memorandum* will debit the account payable of the memo's receiver. The memo's receiver will credit the sender's account receivable.

Assets = Liabilities + Equity  
-300      -300

(c) Nov. 15	Accounts Payable .....	300	
	Merchandise Inventory .....		300
	Allowance for defective merchandise.		

The buyer's allowance for defective merchandise is usually offset against the buyer's current account payable balance to the seller. When cash is refunded, the Cash account is debited instead of Accounts Payable.

**Point:** In the perpetual system, all purchases, purchase discounts, purchase returns, and cost of sales are recorded in the Merchandise Inventory account. This is different from the periodic system as explained in Appendix 5A.

**Purchase Returns** Returns are recorded at the net costs charged to buyers. To illustrate the accounting for returns, suppose Z-Mart purchases \$1,000 of merchandise on June 1 with terms 2/10, n/60. Two days later, Z-Mart returns \$100 of goods before paying the invoice. When Z-Mart later pays on June 11, it takes the 2% discount only on the \$900 remaining balance. When goods are returned, a buyer can take a purchase discount on only the remaining balance of the invoice. The resulting discount is \$18 (2% × \$900) and the cash payment is \$882 (\$900 - \$18). The following entries reflect this illustration.

Merchandise Inventory	
Purch. 1,000	Return 100
	Discount 18
Net purch. 882	

June 1	Merchandise Inventory .....	1,000	
	Accounts Payable .....		1,000
	<i>Purchased merchandise, invoice dated June 1, terms 2/10, n/60.</i>		
June 3	Accounts Payable .....	100	
	Merchandise Inventory .....		100
	<i>Returned merchandise to seller.</i>		
June 11	Accounts Payable .....	900	
	Merchandise Inventory .....		18
	Cash .....		882
		<i>Paid for \$900 merchandise (\$1,000 - \$100) less \$18 discount (2% × \$900).</i>	

**Example:** Assume Z-Mart pays \$980 cash for \$1,000 of merchandise purchased within its 2% discount period. Later, it returns \$100 of the original \$1,000 merchandise. The return entry is  
Cash ..... 98  
    Merch. Inv. .... 98

<sup>1</sup> The implied annual interest rate formula is:

$$[365 \text{ days} \div (\text{Credit period} - \text{Discount period})] \times \text{Cash discount rate.}$$

For terms of 2/10, n/30, missing the 2% discount for an additional 20 days is equal to an annual interest rate of 36.5%, computed as [365 days/(30 days - 10 days)] × 2% discount rate. *Favorable purchase discounts* are those with implied annual interest rates that exceed the purchaser's annual rate for borrowing money.

**Decision Ethics**

**Payables Manager** As a new accounts payable manager, you are being trained by the outgoing manager. She explains that the system prepares checks for amounts net of favorable cash discounts, and the checks are dated the last day of the discount period. She also tells you that checks are not mailed until five days later, adding that “the company gets free use of cash for an extra five days, and our department looks better. When a supplier complains, we blame the computer system and the mailroom.” Do you continue this payment policy? [Answers follow the chapter’s Summary.]

**Transportation Costs and Ownership Transfer**

The buyer and seller must agree on who is responsible for paying any freight costs and who bears the risk of loss during transit for merchandising transactions. This is essentially the same as asking at what point ownership transfers from the seller to the buyer. The point of transfer is called the **FOB** (*free on board*) point, which determines who pays transportation costs (and often other incidental costs of transit such as insurance). Whoever owns the goods in transit takes on the shipping cost.

Exhibit 5.7 identifies two alternative points of transfer. (1) *FOB shipping point*, also called *FOB factory*, means the buyer accepts ownership when the goods depart the seller’s place of business. The buyer is then responsible for paying shipping costs and bearing the risk of damage or loss when goods are in transit. The goods are part of the buyer’s inventory when they are in transit since ownership has transferred to the buyer. **1-800-FLOWERS.COM**, a floral and gift merchandiser, and **Bare Escentuals**, a cosmetic manufacturer, both use FOB shipping point. (2) *FOB destination* means ownership of goods transfers to the buyer when the goods arrive at the buyer’s place of business. The seller is responsible for paying shipping charges and bears the risk of damage or loss in transit. The seller does not record revenue from this sale until the goods arrive at the destination because this transaction is not complete before that point. **Kyocera**, a manufacturer, uses FOB destination.

Shipping Terms	Ownership Transfers at	Goods in Transit Owned by	Transportation Costs Paid by
FOB shipping point	Shipping point	Buyer	<b>Buyer</b> Merchandise Inventory . . . # Cash . . . . . #
FOB destination	Destination	Seller	<b>Seller</b> Delivery Expense . . . . . # Cash . . . . . #

**Point:** The party not responsible for shipping cost sometimes pays shipping cost. In these cases, the party paying this cost either bills the party responsible or, more commonly, adjusts its account payable or account receivable with the other party. For example, a buyer paying shipping cost when terms are FOB destination can decrease its account payable to the seller by the amount of shipping cost. Assume that any freight payments to carriers are not applied in computing merchandise discounts.

**EXHIBIT 5.7**

Ownership Transfer and Transportation Costs

**Point:** If we place an order online and receive free shipping, we have terms FOB destination.

Z-Mart’s \$1,200 purchase on November 2 is on terms of FOB destination. This means Z-Mart is not responsible for paying transportation costs. When a buyer is responsible for paying transportation costs, the payment is made to a carrier or directly to the seller depending on the agreement. The cost principle requires that any necessary transportation costs of a buyer (often called *transportation-in* or *freight-in*) be included as part of the cost of purchased merchandise. To illustrate, Z-Mart’s entry to record a \$75 freight charge from an independent carrier for merchandise purchased FOB shipping point is

© Royalty Free/Corbis

(d) Nov. 24	Merchandise Inventory . . . . .	75	
	Cash . . . . .		75
	<i>Paid freight costs on purchased merchandise.</i>		

Assets = Liabilities + Equity  
+75  
-75

**Point:** Incoming freight costs are charged to Inventory; when inventory exits it is charged to Expense.

**Point:** With tracking numbers it is possible to know the exact time shipped goods arrive at their destination.

**EXHIBIT 5.8**

Itemized Costs of Merchandise Purchases

**Point:** Some companies have separate accounts for purchase discounts, returns and allowances, and transportation-in. These accounts are then transferred to Merchandise Inventory at period-end. This is a hybrid system of perpetual and periodic. That is, Merchandise Inventory is updated on a perpetual basis but only for purchases and cost of goods sold.

A seller records the costs of shipping goods to customers in a Delivery Expense account when the seller is responsible for these costs. Delivery expense, also called *transportation-out* or *freight-out*, is reported as a selling expense in the seller's income statement.

In summary, purchases are recorded as debits to Merchandise Inventory. Any later purchase discounts, returns, and allowances are credited (decreases) to Merchandise Inventory. Transportation-in is debited (added) to Merchandise Inventory. Z-Mart's itemized costs of merchandise purchases for year 2015 are in Exhibit 5.8.

Z-MART Itemized Costs of Merchandise Purchases For Year Ended December 31, 2015	
Invoice cost of merchandise purchases . . . . .	\$ 235,800
Less: Purchase discounts received . . . . .	(4,200)
Purchase returns and allowances . . . . .	(1,500)
Add: Costs of transportation-in . . . . .	<u>2,300</u>
<b>Total net cost of merchandise purchases . . . . .</b>	<b><u>\$232,400</u></b>

The accounting system described here does not provide separate records (accounts) for total purchases, total purchase discounts, total purchase returns and allowances, and total transportation-in. Yet nearly all companies collect this information in supplementary records because managers need this information to evaluate and control each of these cost elements. **Supplementary records**, also called *supplemental records*, refer to information outside the usual general ledger accounts.

**NEED-TO-KNOW 5-1**

Merchandise Purchases  
P1

Prepare journal entries to record each of the following purchases transactions of a merchandising company. Show supporting calculations and assume a perpetual inventory system.

- Oct. 1 Purchased 125 units of a product at a cost of \$4 per unit. Terms of the sale are 2/10, n/30, and FOB shipping point; the invoice is dated October 1.
- Oct. 3 Paid \$30 cash for freight charges from UPS for the October 1 purchase.
- Oct. 7 Returned 50 defective units from the October 1 purchase and received full credit.
- Oct. 11 Paid the amount due from the October 1 purchase, less the return on October 7.
- Oct. 31 Assume the October 11 payment was never made and, instead, payment of the amount due on the October 1 purchase, less the return on October 7, occurred on October 31.

**Solution**

Oct. 1	Merchandise Inventory . . . . .	500	
	Accounts Payable . . . . .		500
	<i>To record credit purchase (125 units × \$4).</i>		
Oct. 1	Merchandise Inventory . . . . .	30	
	Cash . . . . .		30
	<i>Paid freight costs on goods purchased FOB shipping point.</i>		
Oct. 7	Accounts Payable . . . . .	200	
	Merchandise Inventory . . . . .		200
	<i>Returned defective units (50 units × \$4).</i>		
Oct. 11	Accounts Payable . . . . .	300	
	Cash . . . . .		294
	Merchandise Inventory* . . . . .		6
	<i>Paid for purchases less cash discount</i>		
	<i>*[((\$500 - \$200) × 2%).</i>		
Oct. 31	Accounts Payable . . . . .	300	
	Cash . . . . .		300
	<i>Paid for purchases (no cash discount received).</i>

QS 5-16, E 5-4, E 5-6

## ACCOUNTING FOR MERCHANDISE SALES

Merchandising companies also must account for sales, sales discounts, sales returns and allowances, and cost of goods sold. A merchandising company such as Z-Mart reflects these items in its gross profit computation, as shown in Exhibit 5.9. This section explains how this information is derived from transactions.

**P2**

Analyze and record transactions for merchandise sales using a perpetual system.

### EXHIBIT 5.9

Gross Profit Computation

Z-MART Computation of Gross Profit For Year Ended December 31, 2015		
Sales . . . . .		\$321,000
Less: Sales discounts . . . . .	\$4,300	
Sales returns and allowances . . . . .	<u>2,000</u>	<u>6,300</u>
Net sales . . . . .		314,700
Cost of goods sold . . . . .		<u>230,400</u>
<b>Gross profit . . . . .</b>		<b><u>\$ 84,300</u></b>

### Sales of Merchandise

Each sales transaction for a seller of merchandise involves two parts.

1. Revenue received in the form of an asset from the customer.
2. Cost of goods sold incurred for merchandise sold to the customer.

Accounting for a sales transaction under the perpetual system requires recording information about both parts. This means that each sales transaction for merchandisers, whether for cash or on credit, requires *two entries*: one for revenue and one for cost. To illustrate, Z-Mart sold \$2,400 of merchandise on credit on November 3. The revenue part of this transaction is recorded as

(e) Nov. 3	Accounts Receivable . . . . .	2,400	
	Sales . . . . .		2,400
	<i>Sold merchandise on credit.</i>		

Assets = Liabilities + Equity  
+2,400                      +2,400

This entry reflects an increase in Z-Mart's assets in the form of accounts receivable. It also shows the increase in revenue (Sales). If the sale is for cash, the debit is to Cash instead of Accounts Receivable. We explain accounting for credit card sales in Chapter 7.

The cost part of each sales transaction ensures that the Merchandise Inventory account under a perpetual inventory system reflects the updated cost of the merchandise available for sale. For example, the cost of the merchandise Z-Mart sold on November 3 is \$1,600, and the entry to record the cost part of this sales transaction follows. (This shows the *expense recognition principle* as expense is recorded when sales are; and, when a UPC code is scanned using point-of-sale software, the sale and cost are both recorded, and inventory is reduced.)

(e) Nov. 3	Cost of Goods Sold . . . . .	1,600	
	Merchandise Inventory . . . . .		1,600
<i>To record the cost of Nov. 3 sale.</i>			

Assets = Liabilities + Equity  
-1,600                      -1,600

### Decision Insight

**Suppliers and Demands** Large merchandising companies often bombard suppliers with demands. These include discounts for bar coding and technology support systems, and fines for shipping errors. Merchandisers' goals are to reduce inventories, shorten lead times, and eliminate errors. Many colleges now offer programs in supply chain management and logistics to train future employees to help merchandisers meet such goals. ■

**Point:** Radio-frequency identification (RFID) tags attach to objects for tracking purposes. Such tags help employees find items in a store, monitor shipments, and check on production progress.

### Sales Discounts

*Sales discounts* on credit sales can benefit a seller by decreasing the delay in receiving cash and reducing future collection efforts. At the time of a credit sale, a seller does not know whether a customer will pay within the discount period and take advantage of a discount. This means the seller usually does not record a sales discount until a customer actually pays within the discount period. To illustrate, Z-Mart completes a credit sale for \$1,000 on November 12 with terms of 2/10, n/60. The entry to record the revenue part of this sale is

Assets = Liabilities + Equity  
+1,000                      +1,000

Nov. 12	Accounts Receivable .....	1,000	
	Sales .....		1,000
	<i>Sold merchandise under terms of 2/10, n/60.*</i>		
	<i>*The entry to record cost of this sale is not shown here.</i>		

This entry records the receivable and the revenue as if the customer will pay the full amount. The customer has two options, however. One option is to wait 60 days until January 11 and pay the full \$1,000. In this case, Z-Mart records that payment as

Assets = Liabilities + Equity  
+1,000  
-1,000

Jan. 11	Cash .....	1,000	
	Accounts Receivable .....		1,000
	<i>Received payment for Nov. 12 sale.</i>		

The customer’s second option is to pay \$980 within a 10-day period ending November 22. If the customer pays on (or before) November 22, Z-Mart records the payment as

Assets = Liabilities + Equity  
+980                      -20  
-1,000

Nov. 22	Cash (\$1,000 × 0.98).....	980	
	Sales Discounts (\$1,000 × 0.02).....	20	
	Accounts Receivable .....		1,000
	<i>Received payment for Nov. 12 sale less discount.</i>		

**Sales Discounts is a contra revenue account**, meaning the Sales Discounts account is deducted from the Sales account when computing a company’s net sales (see Exhibit 5.9). Management monitors Sales Discounts to assess the effectiveness and cost of its discount policy.

### Sales Returns and Allowances

**Point:** Published income statements rarely disclose sales discounts, returns, and allowances. Instead, net sales are reported.

*Sales returns* refer to merchandise that customers return to the seller after a sale. Many companies allow customers to return merchandise for a full refund. *Sales allowances* refer to reductions in the selling price of merchandise sold to customers. This can occur with damaged or defective merchandise that a customer is willing to purchase with a decrease in selling price. Sales returns and allowances usually involve dissatisfied customers and the possibility of lost future sales, and managers monitor information about returns and allowances.

**Sales Returns** To illustrate, recall Z-Mart’s sale of merchandise on November 3 for \$2,400 that had cost \$1,600. Assume that the customer returns part of the merchandise on November 6, and the returned items sell for \$800 and cost \$600. The revenue part of this transaction must reflect the decrease in sales from the customer’s return of merchandise as follows:

Assets = Liabilities + Equity  
-800                      -800

(f) Nov. 6	Sales Returns and Allowances .....	800	
	Accounts Receivable .....		800
	<i>Customer returns merchandise from Nov. 3 sale.</i>		

If the merchandise returned to Z-Mart is not defective and can be resold to another customer, Z-Mart returns these goods to its inventory. The entry to restore the cost of such goods to the Merchandise Inventory account is

Assets = Liabilities + Equity  
+600                      +600

Nov. 6	Merchandise Inventory .....	600	
	Cost of Goods Sold .....		600
	<i>Returned goods added to inventory.</i>		

*This entry changes if the goods returned are defective.* In this case, the returned inventory is recorded at its estimated value, not its cost. To illustrate, if the goods (costing \$600) returned to Z-Mart are defective and estimated to be worth \$150, the following entry is made: Dr. Merchandise Inventory for \$150, Dr. Loss from Defective Merchandise for \$450, and Cr. Cost of Goods Sold for \$600.

**Point:** Some sellers charge buyers a restocking fee for returns.

**Sales Allowances** To illustrate sales allowances, assume that \$800 of the merchandise Z-Mart sold on November 3 is defective but the buyer decides to keep it because Z-Mart offers a \$100 price reduction. Z-Mart records this allowance as follows:

Nov. 6	Sales Returns and Allowances .....	100	
	Accounts Receivable .....		100
	<i>To record sales allowance on Nov. 3 sale.</i>		

Assets = Liabilities + Equity  
 -100                                      -100

**Sales Returns and Allowances is a contra revenue account**, meaning it is deducted from sales when computing net sales. The seller usually prepares a credit memorandum to confirm a buyer's return or allowance. A seller's **credit memorandum** informs a buyer of the seller's credit to the buyer's Account Receivable (on the seller's books). In summary, net sales equals sales minus sales discounts and minus sales returns and allowances. This means net sales is the amount customers paid for goods kept.

**Point:** The sender (maker) of a credit memorandum will credit the account of the receiver. The receiver of a credit memorandum will debit the sender's account.

Prepare journal entries to record each of the following sales transactions of a merchandising company. Show supporting calculations and assume a perpetual inventory system.

- June 1 Sold 500 units of merchandise to a customer for \$14 per unit under credit terms of 2/10, n/30, FOB shipping point, and the invoice is dated June 1. The merchandise had cost \$10 per unit.
- June 7 The customer returns 20 units because those units did not fit the customer's needs. The seller restores those units to its inventory.
- June 8 The customer discovers that 30 units are damaged but are still of some use and, therefore, keeps the units because the seller sends the buyer a credit memorandum for \$90 to compensate for the damage.
- June 11 The customer discovers that 10 units are the wrong color, but keeps 8 of these units because the seller sends a \$12 credit memorandum to compensate. The customer returns the remaining 2 units to the seller. The seller restores the 2 returned units to its inventory.

**NEED-TO-KNOW** 5-2

Merchandise Sales  
 P2

**Solution**

June 1	Accounts Receivable .....	7,000	
	Sales .....		7,000
	<i>Sold merchandise on credit (500 × \$14).</i>		
June 1	Cost of Goods Sold .....	5,000	
	Merchandise Inventory .....		5,000
	<i>To record cost of sale (500 × \$10).</i>		
June 7	Sales Returns and Allowances .....	280	
	Accounts Receivable .....		280
	<i>Accepted a return from a customer (20 × \$14).</i>

# COMPLETING THE ACCOUNTING CYCLE

Exhibit 5.10 shows the flow of merchandising costs during a period and where these costs are reported at period-end. Specifically, beginning inventory plus the net cost of purchases is the merchandise available for sale. As inventory is sold, its cost is recorded in cost of goods sold on the income statement; what remains is ending inventory on the balance sheet. A period's ending inventory is the next period's beginning inventory.

### EXHIBIT 5.10

Merchandising Cost Flow in the Accounting Cycle

## Adjusting Entries for Merchandisers

**P3** Prepare adjustments and close accounts for a merchandising company.

Each of the steps in the accounting cycle described in the prior chapter for a service company applies to a merchandiser. This section and the next two further explain three steps of the accounting cycle for a merchandiser—adjustments, statement preparation, and closing.

Adjusting entries are generally the same for merchandising companies and service companies, including those for prepaid expenses (including depreciation), accrued expenses, unearned revenues, and accrued revenues. However, a merchandiser using a perpetual inventory system is usually required to make another adjustment to update the Merchandise Inventory account to reflect any loss of merchandise, including theft and deterioration. **Shrinkage** is the term used to refer to the loss of inventory, and it is computed by comparing a physical count of inventory with recorded amounts. A physical count is usually performed at least once annually.

To illustrate, Z-Mart's Merchandise Inventory account at the end of year 2015 has a balance of \$21,250, but a physical count reveals that only \$21,000 of inventory exists. The adjusting entry to record this \$250 shrinkage is

**Point:** About two-thirds of shoplifting losses are thefts by employees.

$$\text{Assets} = \text{Liabilities} + \text{Equity}$$

$$-250 \qquad \qquad \qquad -250$$

Dec. 31	Cost of Goods Sold .....	250	
	Merchandise Inventory .....		250
	<i>To adjust for \$250 shrinkage revealed by a physical count of inventory.</i>		

## Preparing Financial Statements

The financial statements of a merchandiser, and their preparation, are similar to those for a service company described in Chapters 2 through 4. The income statement mainly differs by the inclusion of *cost of goods sold* and *gross profit*. Also, net sales is affected by discounts, returns, and allowances, and some additional expenses are possible such as delivery expense and loss from defective merchandise. The balance sheet mainly differs by the inclusion of *merchandise inventory* as part of current assets. The statement of owner's equity is unchanged. A work sheet can be used to help prepare these statements, and one for Z-Mart is illustrated in Appendix 5B.

**Point:** Staples's costs of shipping merchandise to its stores is included in its costs of inventories as required by the cost principle.

## Closing Entries for Merchandisers

Closing entries are similar for service companies and merchandising companies using a perpetual system. The difference is that we must close some new temporary accounts that arise from merchandising activities. Z-Mart has several temporary accounts unique to merchandisers: Sales (of goods), Sales Discounts, Sales Returns and Allowances, and Cost of Goods Sold. Their existence in the ledger means that the first two closing entries for a merchandiser are slightly different from the ones described in the prior chapter for a service company. These differences are set in **red boldface** in the closing entries of Exhibit 5.11.

**Point:** The Inventory account is not affected by the closing process under a perpetual system.

<b>Step 1: Close Credit Balances in Temporary Accounts to Income Summary.</b>			
Dec. 31	<b>Sales</b> .....	<b>321,000</b>	
	Income Summary .....		321,000
	<i>To close credit balances in temporary accounts.</i>		
<b>Step 2: Close Debit Balances in Temporary Accounts to Income Summary.</b>			
Dec. 31	Income Summary .....	308,100	
	<b>Sales Discounts</b> .....		<b>4,300</b>
	<b>Sales Returns and Allowances</b> .....		<b>2,000</b>
	<b>Cost of Goods Sold</b> .....		<b>230,400</b>
	Depreciation Expense .....		3,700
	Salaries Expense .....		43,800
	Insurance Expense .....		600
	Rent Expense .....		9,000
	Supplies Expense .....		3,000
	Advertising Expense .....		11,300
	<i>To close debit balances in temporary accounts.</i>		
<b>Step 3: Close Income Summary to Owner's Capital.</b>			
The third closing entry is identical for a merchandising company and a service company. The \$12,900 amount is net income reported on the income statement.			
Dec. 31	Income Summary .....	12,900	
	K. Marty, Capital .....		12,900
	<i>To close the Income Summary account.</i>		
<b>Step 4: Close Withdrawals Account to Owner's Capital.</b>			
The fourth closing entry is identical for a merchandising company and a service company. It closes the Withdrawals account and adjusts the Owner's Capital account to the amount shown on the balance sheet.			
Dec. 31	K. Marty, Capital .....	4,000	
	K. Marty, Withdrawals .....		4,000
	<i>To close the Withdrawals account.</i>		

### EXHIBIT 5.11

Closing Entries for a Merchandiser

## Summary of Merchandising Entries

Exhibit 5.12 summarizes the key adjusting and closing entries of a merchandiser (using a perpetual inventory system) that are different from those of a service company described in prior chapters (**Need-To-Know Comprehensive 2** illustrates these merchandising entries).

**EXHIBIT 5.12**

5-3

Recording Shrinkage and Closing Process

P3

A merchandising company's ledger on May 31, its fiscal year-end, includes the following selected accounts that have normal balances (it uses the perpetual inventory system). A physical count of its May 31 year-end inventory reveals that the cost of the merchandise inventory still available is \$718. (a) Prepare the entry to record any inventory shrinkage. (b) Prepare journal entries to close the balances in temporary revenue and expense accounts.

Merchandise inventory .....	\$ 756	Sales returns and allowances .....	\$ 130
Z. Zee, Capital .....	2,306	Cost of goods sold .....	2,100
Z. Zee, Withdrawals .....	140	Depreciation expense .....	206
Sales .....	3,204	Salaries expense .....	650
Sales discounts .....	94	Other operating expenses .....	100

**Solution**

May 31	Cost of Goods Sold .....	38	
	Merchandise Inventory .....		38
	<i>To adjust for shrinkage based on physical count [\$756 - \$718].</i>		
May 31	Sales .....	3,204	
	Income Summary .....		3,204
	<i>To close temporary accounts with credit balances.</i>

## FINANCIAL STATEMENT FORMATS

Generally accepted accounting principles do not require companies to use any one presentation format for financial statements so we see many different formats in practice. This section describes two common income statement formats: multiple-step and single-step. The classified balance sheet of a merchandiser is also explained.

**P4** Define and prepare multiple-step and single-step income statements.

### Multiple-Step Income Statement

A **multiple-step income statement** format shows detailed computations of net sales and other costs and expenses, and reports subtotals for various classes of items. Exhibit 5.13 shows a multiple-step income statement for Z-Mart. The statement has three main parts: (1) *gross profit*, determined by net sales less cost of goods sold, (2) *income from operations*, determined by

Z-MART Income Statement For Year Ended December 31, 2015		
Sales . . . . .		\$ 321,000
Less: Sales discounts . . . . .	\$ 4,300	
Sales returns and allowances . . . . .	2,000	6,300
Net sales . . . . .		314,700
Cost of goods sold* . . . . .		230,400
<b>Gross profit</b> . . . . .		<b>84,300</b>
Operating Expenses		
Selling expenses		
Depreciation expense—Store equipment . . . . .	3,000	
Sales salaries expense . . . . .	18,500	
Rent expense—Selling space . . . . .	8,100	
Store supplies expense . . . . .	1,200	
Advertising expense . . . . .	11,300	
Total selling expenses . . . . .	42,100	
General and administrative expenses		
Depreciation expense—Office equipment . . . . .	700	
Office salaries expense . . . . .	25,300	
Insurance expense . . . . .	600	
Rent expense—Office space . . . . .	900	
Office supplies expense . . . . .	1,800	
Total general and administrative expenses . . . . .	29,300	
Total operating expenses . . . . .		71,400
<b>Income from operations</b> . . . . .		<b>12,900</b>
Other revenues and gains (expenses and losses)		
Interest revenue . . . . .	1,000	
Gain on sale of building . . . . .	2,500	
Interest expense . . . . .	(1,500)	
Total other revenue and gains (expenses and losses) . . . . .		2,000
<b>Net income</b> . . . . .		<b>\$ 14,900</b>

**EXHIBIT 5.13**  
Multiple-Step Income Statement

\*Cost of goods sold consists of the following:

Beginning inventory . . . . .	\$ 19,000
Net cost of purchases . . . . .	232,400
Goods available for sale . . . . .	251,400
Less ending inventory . . . . .	21,000
Cost of goods sold . . . . .	\$230,400

**Point:** Z-Mart did not have any nonoperating activities; however, Exhibit 5.13 includes some for illustrative purposes.

**Point:** Many companies report interest expense and interest revenue in separate categories after operating income and before subtracting income tax expense. As one example, see **Samsung's** income statement in Appendix A.

**Example:** Sometimes interest revenue and interest expense are reported on the income statement as *interest, net*. To illustrate, if a company has \$1,000 of interest expense and \$600 of interest revenue, it might report \$400 as *interest, net*.

gross profit less operating expenses, and (3) *net income*, determined by income from operations adjusted for nonoperating items.

Operating expenses are classified into two sections. **Selling expenses** include the expenses of promoting sales by displaying and advertising merchandise, making sales, and delivering goods to customers. **General and administrative expenses** support a company's overall operations and include expenses related to accounting, human resource management, and financial management. Expenses are allocated between sections when they contribute to more than one. Z-Mart allocates rent expense of \$9,000 from its store building between two sections: \$8,100 to selling expense and \$900 to general and administrative expense.

*Nonoperating activities* consist of other expenses, revenues, losses, and gains that are unrelated to a company's operations. *Other revenues and gains* commonly include interest revenue, dividend revenue, rent revenue, and gains from asset disposals. *Other expenses and losses* commonly include interest expense, losses from asset disposals, and casualty losses. When a company has no reportable nonoperating activities, its income from operations is simply labeled net income.

### Single-Step Income Statement

A **single-step income statement** is another widely used format and is shown in Exhibit 5.14 for Z-Mart. It lists cost of goods sold as another expense and shows only one subtotal for total expenses. Expenses are grouped into very few, if any, categories. Many companies use formats that combine features of both the single- and multiple-step statements. Provided that income statement items are shown sensibly, management can choose the format. (In later chapters, we describe some items, such as extraordinary gains and losses, that must be reported in certain locations on the income statement.) Similar presentation options are available for the statement of owner's equity and statement of cash flows.

#### EXHIBIT 5.14

Single-Step Income Statement

Z-MART Income Statement For Year Ended December 31, 2015	
<b>Revenues</b>	
Net sales .....	\$314,700
Interest revenue .....	1,000
Gain on sale of building .....	<u>2,500</u>
Total revenues .....	318,200
<b>Expenses</b>	
Cost of goods sold .....	\$230,400
Selling expenses .....	42,100
General and administrative expenses .....	29,300
Interest expense .....	<u>1,500</u>
Total expenses .....	<u>303,300</u>
<b>Net income</b> .....	<u>\$ 14,900</u>

**Point:** Net income is identical under the single-step and multiple-step formats.

### Classified Balance Sheet

The merchandiser's classified balance sheet reports merchandise inventory as a current asset, usually after accounts receivable according to an asset's nearness to liquidity. Inventory is usually less liquid than accounts receivable because inventory must first be sold before cash can be received; but it is more liquid than supplies and prepaid expenses. Exhibit 5.15 shows

#### EXHIBIT 5.15

Classified Balance Sheet (partial) of a Merchandiser

Z-MART Balance Sheet (partial) December 31, 2015	
<b>Current assets</b>

Accounts receivable .....	11,200
<b>Merchandise inventory</b> .....	<b>21,000</b>
Office supplies .....	550
Store supplies .....	250
Prepaid insurance .....	<u>300</u>
Total current assets .....	\$ 41,500

the current asset section of Z-Mart’s classified balance sheet (other sections are as shown and explained in our previous chapter).

**Decision Insight**

**Merchandising Shenanigans** Accurate invoices are important to both sellers and buyers. Merchandisers rely on invoices to make certain they receive all monies for products provided—no more, no less. To achieve this, controls are set up. Still, failures arise. A survey reports that 9% of employees in sales and marketing witnessed false or misleading invoices sent to customers. Another 14% observed employees violating contract terms with customers (KPMG 2009). ■

Assume Target’s adjusted trial balance on April 30, 2015, its fiscal year-end, follows. (a) Prepare a multiple-step income statement that includes separate categories for selling expenses and for general and administrative expenses. (b) Prepare a single-step income statement that includes these expense categories: cost of goods sold, selling expenses, and general and administrative expenses.

## GLOBAL VIEW

This section discusses similarities and differences between U.S. GAAP and IFRS in accounting and reporting for merchandise purchases and sales, and for the income statement.

**Accounting for Merchandise Purchases and Sales** Both U.S. GAAP and IFRS include broad and similar guidance for the accounting of merchandise purchases and sales. Specifically, all of the transactions presented and illustrated in this chapter are accounted for identically under the two systems. The closing process for merchandisers also is identical for U.S. GAAP and IFRS. In the next chapter we describe how inventory valuation can, in some cases, be different for the two systems.

**Income Statement Presentation** We explained that net income, profit, and earnings refer to the same (*bottom line*) item. However, IFRS tends to use the term *profit* more than any other term, whereas U.S. statements tend to use *net income* more than any other term. Both U.S. GAAP and IFRS income statements begin with the net sales or net revenues (*top line*) item. For merchandisers and manufacturers, this is followed by cost of goods sold. The presentation is similar for the remaining items with the following differences.

- U.S. GAAP offers little guidance about the presentation or order of expenses. IFRS requires separate disclosures for financing costs (interest expense), income tax expense, and some other special items.
- Both systems require separate disclosure of items when their size, nature, or frequency are important.
- IFRS permits expenses to be presented by their function or their nature. U.S. GAAP provides no direction but the SEC requires presentation by function.
- Neither U.S. GAAP nor IFRS define *operating* income, which results in latitude in reporting.
- IFRS permits alternative income measures on the income statement; U.S. GAAP does not.

### VOLKSWAGEN

**Volkswagen Group** provides the following example of income statement reporting. We see the separate disclosure of finance costs, taxes, and other items. We also see the unusual practice of using the minus symbol in an income statement.

VOLKSWAGEN GROUP	
Income Statement (in euros million)	
For Year Ended December 31, 2013	
Sales revenue . . . . .	€ 197,007
Cost of sales . . . . .	– 161,407
Gross profit . . . . .	35,600
Distribution expenses . . . . .	– 19,655
Administrative expenses . . . . .	– 6,888
Other operating income (net of other expenses) . . . . .	2,613
Operating profit . . . . .	11,671
Finance costs . . . . .	– 2,366
Other financial results (including equity investments) . . . . .	3,123
Profit before tax . . . . .	12,428
Income tax . . . . .	– 3,283
Profit . . . . .	€ 9,145

**Balance Sheet Presentation** Chapters 2 and 3 explained how both U.S. GAAP and IFRS require current items to be separated from noncurrent items on the balance sheet (yielding a *classified balance sheet*). As discussed, U.S. GAAP balance sheets report current items first. Assets are listed from most liquid to least liquid, whereas liabilities are listed from nearest to maturity to furthest from maturity. IFRS balance sheets normally present noncurrent items first (and equity before liabilities), but this is *not* a requirement as evidenced in **Samsung**'s balance sheet in Appendix A.

**Sustainability and Accounting** **Sseko Designs**, as introduced in this chapter's opening feature, places great emphasis on creating opportunities for young women. Sseko's model is in contrast to some other social businesses that offer to give some portion of their products or income to underprivileged communities. Sseko's founder, Liz Forkin Bohannon, explains, "We've seen firsthand the effects of brands

that donate products to impoverished communities. Although the immediate need may be met, local economies often suffer. Economies simply cannot thrive when the market is flooded with free product.” Liz explains Sseko’s approach as follows: “Instead of donating product to help meet immediate needs, we try to go back further into the cycle of poverty and ask how we can empower and enable communities to take care of themselves and one another. We believe that job creation is a key component to that. Give her the opportunity and she will do the rest!” Her model is portrayed here.

Acid-Test and Gross Margin Ratios ■ ■ ■ Decision Analysis

### Acid-Test Ratio

For many merchandisers, inventory makes up a large portion of current assets. Inventory must be sold and any resulting accounts receivable must be collected before cash is available. Chapter 4 explained that the current ratio, defined as current assets divided by current liabilities, is useful in assessing a company’s ability to pay current liabilities. Because it is sometimes unreasonable to assume that inventories are a source of payment for current liabilities, we look to other measures.

One measure of a merchandiser’s ability to pay its current liabilities (referred to as its *liquidity*) is the acid-test ratio. It differs from the current ratio by excluding less liquid current assets such as inventory and prepaid expenses that take longer to be converted to cash. The **acid-test ratio**, also called *quick ratio*, is defined as *quick assets* (cash, short-term investments, and current receivables) divided by current liabilities—see Exhibit 5.16.

**A1** Compute the acid-test ratio and explain its use to assess liquidity.

$$\text{Acid-test ratio} = \frac{\text{Cash and cash equivalents} + \text{Short-term investments} + \text{Current receivables}}{\text{Current liabilities}}$$

**EXHIBIT 5.16**  
Acid-Test (Quick) Ratio

Exhibit 5.17 shows both the acid-test and current ratios of retailer **JCPenney** for fiscal years 2009 through 2014—also see margin graph. JCPenney’s acid-test ratio reveals an increase from 2009 through 2011 that exceeds the industry average, and then a marked decline in 2012 and 2013, with a slight rebound in 2014. Further, JCPenney’s current ratio shows a marked decline in 2012 to 1.84, and even more in 2013 to 1.43 (with a slight rebound in 2014). This suggests that its short-term obligations are less confidently covered with short-term assets compared with prior years (especially in 2013).

**EXHIBIT 5.17**  
JCPenney’s Acid-Test and Current Ratios

(\$ millions)	2014	2013	2012	2011	2010	2009
Total quick assets . . . . .	\$1,519	\$ 987	\$1,920	\$2,956	\$3,406	\$2,704
Total current assets . . . . .	\$4,833	\$3,683	5,081	\$6,370	\$6,652	\$6,220
Total current liabilities . . . . .	\$2,846	\$2,568	2,756	\$2,647	\$3,249	\$2,794
<b>Acid-test ratio</b> . . . . .	<b>0.53</b>	<b>0.38</b>	<b>0.70</b>	<b>1.12</b>	<b>1.05</b>	<b>0.97</b>
<b>Current ratio</b> . . . . .	<b>1.70</b>	<b>1.43</b>	<b>1.84</b>	<b>2.41</b>	<b>2.05</b>	<b>2.23</b>
Industry acid-test ratio . . . . .	0.50	0.51	0.54	0.61	0.59	0.63
Industry current ratio . . . . .	1.99	1.94	2.01	2.27	2.15	2.31

An acid-test ratio less than 1.0 means that current liabilities exceed quick assets. A rule of thumb is that the acid-test ratio should have a value near, or higher than, 1.0 to conclude that a company is unlikely to face near-term liquidity problems. A value much less than 1.0 raises liquidity concerns unless a company can generate enough cash from inventory sales or if much of its liabilities are not due until late in the next period. Similarly, a value slightly larger than 1.0 can hide a liquidity problem if payables are due shortly and receivables are not collected until late in the next period. Analysis of JCPenney shows some need for concern regarding its liquidity as its acid-test ratio is less than one. However, retailers such as JCPenney pay many current liabilities from inventory sales and in all years except 2013, JCPenney’s acid-test ratios exceed the industry norm (and its inventory is fairly liquid).

**Point:** Successful use of a just-in-time inventory system can narrow the gap between the acid-test ratio and the current ratio.

**Decision Maker**

**Supplier** A retailer requests to purchase supplies on credit from your company. You have no prior experience with this retailer. The retailer’s current ratio is 2.1, its acid-test ratio is 0.5, and inventory makes up most of its current assets. Do you extend credit? ■ [Answers follow the chapter’s Summary.]

**Gross Margin Ratio**

The cost of goods sold makes up much of a merchandiser’s expenses. Without sufficient gross profit, a merchandiser will likely fail. Users often compute the gross margin ratio to help understand this relation. It differs from the profit margin ratio in that it excludes all costs except cost of goods sold. The **gross margin ratio** (also called *gross profit ratio*) is defined as *gross margin* (net sales minus cost of goods sold) divided by net sales—see Exhibit 5.18.

**A2** Compute the gross margin ratio and explain its use to assess profitability.

**EXHIBIT 5.18**

Gross Margin Ratio

$$\text{Gross margin ratio} = \frac{\text{Net sales} - \text{Cost of goods sold}}{\text{Net sales}}$$

**Point:** The power of a ratio is often its ability to identify areas for more detailed analysis.

Exhibit 5.19 shows the gross margin ratio of **JCPenney** for fiscal years 2009 through 2014. For JCPenney, each \$1 of sales in 2014 yielded about 29.4¢ in gross margin to cover all other expenses and still produce a net income. This 29.4¢ margin is down from 37.4¢ in 2009. This decrease is not a favorable development. Success for merchandisers such as JCPenney depends on adequate gross margin. For example, the 8.0¢ decrease in the gross margin ratio, computed as 29.4¢ – 37.4¢, means that JCPenney has \$948.72 million less in gross margin! (This is computed as net sales of \$11,859 million multiplied by the 8.0% decrease in gross margin.) Management’s discussion in its annual report attributes this decline “to sales of clearance merchandise at lower margins . . . including additional markdowns taken to sell through inventory associated with our previous strategy, as well as our transition back to a promotional pricing strategy.”

**EXHIBIT 5.19**

JCPenney’s Gross Margin Ratio

(\$ millions)	2014	2013	2012	2011	2010	2009
Gross margin . . . . .	\$ 3,492	\$ 4,066	\$ 6,218	\$ 6,960	\$ 6,910	\$ 6,915
Net sales . . . . .	\$11,859	\$12,985	\$17,260	\$17,759	\$17,556	\$18,486
<b>Gross margin ratio . . . . .</b>	<b>29.4%</b>	<b>31.3%</b>	<b>36.0%</b>	<b>39.2%</b>	<b>39.4%</b>	<b>37.4%</b>

**Decision Maker**

**Financial Officer** Your company has a 36% gross margin ratio and a 17% net profit margin ratio. Industry averages are 44% for gross margin and 16% for net profit margin. Do these comparative results concern you? ■ [Answers follow the chapter’s Summary.]

Use the following adjusted trial balance and additional information to complete the requirements.

**NEED-TO-KNOW**
**COMPREHENSIVE 1**

KC ANTIQUES Adjusted Trial Balance December 31, 2015		
	Debit	Credit
Cash .....	\$ 7,000	
Accounts receivable .....	13,000	
Merchandise inventory .....	60,000	
Store supplies .....	1,500	
Equipment .....	45,600	
Accumulated depreciation—Equipment .....		\$ 16,600
Accounts payable .....		9,000
Salaries payable .....		2,000
K. Carter, Capital .....		79,000
K. Carter, Withdrawals .....	10,000	
Sales .....		343,250
Sales discounts .....	5,000	
Sales returns and allowances .....	6,000	
Cost of goods sold .....	159,900	
Depreciation expense—Store equipment .....	4,100	
Depreciation expense—Office equipment .....	1,600	
Sales salaries expense .....	30,000	
Office salaries expense .....	34,000	
Insurance expense .....	11,000	
Rent expense (70% is store, 30% is office) .....	24,000	
Store supplies expense .....	5,750	
Advertising expense .....	31,400	
Totals .....	<u>\$449,850</u>	<u>\$449,850</u>

KC Antiques's *supplementary records* for 2015 reveal the following itemized costs for merchandising activities:

Invoice cost of merchandise purchases .....	\$150,000
Purchase discounts received .....	2,500
Purchase returns and allowances .....	2,700
Cost of transportation-in .....	5,000

**Required**

1. Use the supplementary records to compute the total cost of merchandise purchases for 2015.
2. Prepare a 2015 multiple-step income statement. (Inventory at December 31, 2014, is \$70,100.)
3. Prepare a single-step income statement for 2015.
4. Prepare closing entries for KC Antiques at December 31, 2015.
5. Compute the acid-test ratio and the gross margin ratio. Explain the meaning of each ratio and interpret them for KC Antiques.

**PLANNING THE SOLUTION**

- Compute the total cost of merchandise purchases for 2015.
- To prepare the multiple-step statement, first compute net sales. Then, to compute cost of goods sold, add the net cost of merchandise purchases for the year to beginning inventory and subtract the cost of ending inventory. Subtract cost of goods sold from net sales to get gross profit. Then classify expenses as selling expenses or general and administrative expenses.
- To prepare the single-step income statement, begin with net sales. Then list and subtract the expenses.
- The first closing entry debits all temporary accounts with credit balances and opens the Income Summary account. The second closing entry credits all temporary accounts with debit balances. The

third entry closes the Income Summary account to the capital account, and the fourth entry closes the withdrawals account to the capital account.

- Identify the quick assets on the adjusted trial balance. Compute the acid-test ratio by dividing quick assets by current liabilities. Compute the gross margin ratio by dividing gross profit by net sales.

**SOLUTION**

1.

Invoice cost of merchandise purchases . . . . .	\$150,000
Less: Purchases discounts received . . . . .	2,500
Purchase returns and allowances . . . . .	2,700
Add: Cost of transportation-in . . . . .	5,000
Total cost of merchandise purchases . . . . .	<u>\$149,800</u>

2. Multiple-step income statement

<b>KC ANTIQUES</b> Income Statement For Year Ended December 31, 2015		
Sales . . . . .		\$343,250
Less: Sales discounts . . . . .	\$ 5,000	
Sales returns and allowances . . . . .	<u>6,000</u>	<u>11,000</u>
Net sales . . . . .		332,250
Cost of goods sold* . . . . .		<u>159,900</u>
Gross profit . . . . .		172,350
Expenses		
Selling expenses		
Depreciation expense—Store equipment . . . . .	4,100	
Sales salaries expense . . . . .	30,000	
Rent expense—Selling space . . . . .	16,800	
Store supplies expense . . . . .	5,750	
Advertising expense . . . . .	<u>31,400</u>	
Total selling expenses . . . . .	88,050	
General and administrative expenses		
Depreciation expense—Office equipment . . . . .	1,600	
Office salaries expense . . . . .	34,000	
Insurance expense . . . . .	11,000	
Rent expense—Office space . . . . .	<u>7,200</u>	
Total general and administrative expenses . . . . .	<u>53,800</u>	
Total operating expenses . . . . .		<u>141,850</u>
Net income . . . . .		<u>\$ 30,500</u>

Tax Expense for a corporation appears immediately before net income in its own category.

\* Cost of goods sold can also be directly computed (applying concepts from Exhibit 5.4):

Merchandise inventory, December 31, 2014 . . . . .	\$ 70,100
Total cost of merchandise purchases (from part 1) . . . . .	<u>149,800</u>
Goods available for sale . . . . .	219,900
Merchandise inventory, December 31, 2015 . . . . .	<u>60,000</u>
Cost of goods sold . . . . .	\$159,900

3. Single-step income statement

<b>KC ANTIQUES</b> Income Statement For Year Ended December 31, 2015		
Net sales . . . . .		\$332,250
Expenses		
Cost of goods sold . . . . .	\$159,900	
Selling expenses . . . . .	88,050	
General and administrative expenses . . . . .	<u>53,800</u>	
Total expenses . . . . .		<u>301,750</u>
Net income . . . . .		<u>\$ 30,500</u>

4.	Dec. 31	Sales .....	343,250	
		Income Summary .....		343,250
		<i>To close credit balances in temporary accounts.</i>		
	Dec. 31	Income Summary .....	312,750	
		Sales Discounts .....		5,000
		Sales Returns and Allowances .....		6,000
		Cost of Goods Sold .....		159,900
		Depreciation Expense—Store Equipment .....		4,100
		Depreciation Expense—Office Equipment .....		1,600
		Sales Salaries Expense .....		30,000
		Office Salaries Expense .....		34,000
		Insurance Expense .....		11,000
		Rent Expense .....		24,000
		Store Supplies Expense .....		5,750
		Advertising Expense .....		31,400
		<i>To close debit balances in temporary accounts.</i>		
	Dec. 31	Income Summary .....	30,500	
		K. Carter, Capital .....		30,500
		<i>To close the Income Summary account.</i>		
	Dec. 31	K. Carter, Capital .....	10,000	
		K. Carter, Withdrawals .....		10,000
		<i>To close the Withdrawals account.</i>		

5. Acid-test ratio = (Cash and equivalents + Short-term investments + Current receivables) / Current liabilities  
 = (Cash + Accounts receivable) / (Accounts payable + Salaries payable)  
 = (\$7,000 + \$13,000) / (\$9,000 + \$2,000) = \$20,000 / \$11,000 = 1.82  
 Gross margin ratio = Gross profit / Net sales = \$172,350 / \$332,250 = 0.52 (or 52%)

KC Antiques has a healthy acid-test ratio of 1.82. This means it has more than \$1.80 in liquid assets to satisfy each \$1.00 in current liabilities. The gross margin of 0.52 shows that KC Antiques spends 48¢ (\$1.00 – \$0.52) of every dollar of net sales on the costs of acquiring the merchandise it sells. This leaves 52¢ of every dollar of net sales to cover other expenses incurred in the business and to provide a net profit.

Prepare journal entries to record the following merchandising transactions for both the seller (BMX) and buyer (Sanuk).

- May 4 BMX sold \$1,500 of merchandise on account to Sanuk, terms FOB shipping point, n/45, invoice dated May 4. The cost of the merchandise was \$900.  
 May 6 Sanuk paid transportation charges of \$30 on the May 4 purchase from BMX.  
 May 8 BMX sold \$1,000 of merchandise on account to Sanuk, terms FOB destination, n/30, invoice dated May 8. The cost of the merchandise was \$700.  
 May 10 BMX paid transportation costs of \$50 for delivery of merchandise sold to Sanuk on May 8.  
 May 16 BMX issued Sanuk a \$200 credit memorandum for merchandise returned. The merchandise was purchased by Sanuk on account on May 8. The cost of the merchandise returned was \$140.  
 May 18 BMX received payment from Sanuk for purchase of May 8.  
 May 21 BMX sold \$2,400 of merchandise on account to Sanuk, terms FOB shipping point, 2/10, n/EOM. BMX prepaid transportation costs of \$100, which were added to the invoice. The cost of the merchandise was \$1,440.  
 May 31 BMX received payment from Sanuk for purchase of May 21, less discount (2% × \$2,400).

**APPENDIX****5A****Periodic Inventory System**

A periodic inventory system requires updating the inventory account only at the *end of a period* to reflect the quantity and cost of both the goods available and the goods sold. Thus, during the period, the Merchandise Inventory balance remains unchanged. It reflects the beginning inventory balance until it is updated at the end of the period. During the period the cost of merchandise is recorded in a temporary *Purchases* account. When a company sells merchandise, it records revenue **but not the cost of the goods sold**. At the end of the period when a company prepares financial statements, it takes a *physical count of inventory* by counting the quantities and costs of merchandise available. The cost of goods sold is then computed by subtracting the ending inventory amount from the cost of merchandise available for sale.

**P5**

Record and compare merchandising transactions using both periodic and perpetual inventory systems.

**Recording Merchandise Transactions** Under a periodic system, purchases, purchase returns and allowances, purchase discounts, and transportation-in transactions are recorded in separate temporary accounts. At period-end, each of these temporary accounts is closed and the Merchandise Inventory account is updated. To illustrate, journal entries under the periodic inventory system are shown for the most common transactions (codes *a* through *f* link these transactions to those in the chapter, and we drop explanations for simplicity). For comparison, perpetual system journal entries are shown to the right of each periodic entry, where differences are highlighted in yellow.

**Purchases** The periodic system uses a temporary *Purchases* account that accumulates the cost of all purchase transactions during each period. Z-Mart's November 2 entry to record the purchase of merchandise for \$1,200 on credit with terms of 2/10, n/30 is

<b>(a) Periodic</b>		<b>Perpetual</b>	
Purchases . . . . .	1,200	Merchandise Inventory . . . . .	1,200
Accounts Payable . . . . .	1,200	Accounts Payable . . . . .	1,200

**Purchase Discounts** The periodic system uses a temporary *Purchase Discounts* account that accumulates discounts taken on purchase transactions during the period. If payment in (a) is delayed until after the discount period expires, the entry is to debit Accounts Payable and credit Cash for \$1,200 each. However, if Z-Mart pays the supplier for the previous purchase in (a) within the discount period, the required payment is \$1,176 ( $\$1,200 \times 98\%$ ) and is recorded as

<b>(b) Periodic</b>		<b>Perpetual</b>	
Accounts Payable . . . . .	1,200	Accounts Payable . . . . .	1,200
Purchase Discounts . . . . .	24	Merchandise Inventory . . . . .	24
Cash . . . . .	1,176	Cash . . . . .	1,176

**Purchase Returns and Allowances** Z-Mart returned merchandise purchased on November 2 because of defects. In the periodic system, the temporary *Purchase Returns and Allowances* account accumulates the cost of all returns and allowances during a period. The recorded cost (including discounts) of the defective merchandise is \$300, and Z-Mart records the November 15 return with this entry:

**Point:** Purchase Discounts and Purchase Returns and Allowances are both classified as contra purchases accounts and have normal credit balances.

<b>(c) Periodic</b>		<b>Perpetual</b>	
Accounts Payable . . . . .	300	Accounts Payable . . . . .	300
Purchase Returns and Allowances . . . . .	300	Merchandise Inventory . . . . .	300

**Transportation-In** Z-Mart paid a \$75 freight charge to transport merchandise to its store. In the periodic system, this cost is charged to a temporary *Transportation-In* account.

<b>(d) Periodic</b>		<b>Perpetual</b>	
Transportation-In . . . . .	75	Merchandise Inventory . . . . .	75
Cash . . . . .	75	Cash . . . . .	75

**Sales** Under the periodic system, the cost of goods sold is *not* recorded at the time of each sale. (We later show how to compute total cost of goods sold at the end of a period.) Z-Mart's November 3 entry to record sales of \$2,400 in merchandise on credit (when its cost is \$1,600) is:

<b>(e) Periodic</b>		<b>Perpetual</b>	
Accounts Receivable . . . . .	2,400	Accounts Receivable . . . . .	2,400
Sales . . . . .	2,400	Sales . . . . .	2,400
<b>None</b>		Cost of Goods Sold . . . . .	1,600
		Merchandise Inventory . . . . .	1,600

**Sales Returns** A customer returned part of the merchandise from the transaction in (e), where the returned items sell for \$800 and cost \$600. (*Recall:* The periodic system records only the revenue effect, not the cost effect, for sales transactions.) Z-Mart restores the merchandise to inventory and records the November 6 return as

<b>(f) Periodic</b>		<b>Perpetual</b>	
Sales Returns and Allowances . . . . .	800	Sales Returns and Allowances . . . . .	800
Accounts Receivable . . . . .	800	Accounts Receivable . . . . .	800
<b>None</b>		Merchandise Inventory . . . . .	600
		Cost of Goods Sold . . . . .	600

**Sales Discounts** To illustrate sales discounts, assume that the remaining \$1,600 of receivables (computed as \$2,400 from e less \$800 for f) has credit terms of 3/10, n/90 and that customers all pay within the discount period. Z-Mart records this payment as

<i>Periodic</i>		<i>Perpetual</i>	
Cash .....	1,552	Cash .....	1,552
Sales Discounts (\$1,600 × 0.03) ...	48	Sales Discounts (\$1,600 × 0.03) .....	48
Accounts Receivable .....	1,600	Accounts Receivable .....	1,600

**Adjusting and Closing Entries** The periodic and perpetual inventory systems have slight differences in adjusting and closing entries. The period-end Merchandise Inventory balance (unadjusted) is \$19,000 under the periodic system. Since the periodic system does not update the Merchandise Inventory balance during the period, the \$19,000 amount is the beginning inventory.

A physical count of inventory taken at the end of the period reveals \$21,000 of merchandise available. The adjusting and closing entries for the two systems are shown in Exhibit 5A.1. Recording the periodic inventory balance is a two-step process. The ending inventory balance of \$21,000 (which includes shrinkage) is entered by debiting the inventory account in the first closing entry. The beginning inventory balance of \$19,000 is deleted by crediting the inventory account in the second closing entry.<sup>2</sup>

**EXHIBIT 5A.1**

Comparison of Adjusting and Closing Entries—Periodic and Perpetual

PERIODIC		PERPETUAL	
<b>Adjusting Entry—Shrinkage</b>		<b>Adjusting Entry—Shrinkage</b>	
None		Cost of Goods Sold .....	250
		Merchandise Inventory .....	250
PERIODIC		PERPETUAL	
<b>Closing Entries</b>		<b>Closing Entries</b>	
(1) Sales .....	321,000	(1) Sales .....	321,000
<b>Merchandise Inventory (Ending) .....</b>	<b>21,000</b>	Income Summary .....	321,000
<b>Purchase Discounts .....</b>	<b>4,200</b>	(2) Income Summary .....	308,100
<b>Purchase Returns and Allowances .....</b>	<b>1,500</b>	Sales Discounts .....	4,300
Income Summary .....	347,700	Sales Returns and Allowances .....	2,000
(2) Income Summary .....	334,800	<b>Cost of Goods Sold .....</b>	<b>230,400</b>
Sales Discounts .....	4,300	Depreciation Expense .....	3,700
Sales Returns and Allowances .....	2,000	Salaries Expense .....	43,800
<b>Merchandise Inventory (Beginning) .....</b>	<b>19,000</b>	Insurance Expense .....	600
<b>Purchases .....</b>	<b>235,800</b>	Rent Expense .....	9,000
<b>Transportation-In .....</b>	<b>2,300</b>	Supplies Expense .....	3,000
Depreciation Expense .....	3,700	Advertising Expense .....	11,300
Salaries Expense .....	43,800	(3) Income Summary .....	12,900
Insurance Expense .....	600	K. Marty, Capital .....	12,900
Rent Expense .....	9,000	(4) K. Marty, Capital .....	4,000
Supplies Expense .....	3,000	K. Marty, Withdrawals .....	4,000
Advertising Expense .....	11,300		
(3) Income Summary .....	12,900		
K. Marty, Capital .....	12,900		
(4) K. Marty, Capital .....	4,000		
K. Marty, Withdrawals .....	4,000		

By updating Merchandise Inventory and closing Purchases, Purchase Discounts, Purchase Returns and Allowances, and Transportation-In, the periodic system transfers the cost of goods sold amount to Income Summary. Review the periodic side of Exhibit 5A.1 and notice that the **red boldface** items affect Income Summary as follows.

<sup>2</sup> This approach is called the *closing entry method*. An alternative approach, referred to as the *adjusting entry method*, would not make any entries to Merchandise Inventory in the closing entries of Exhibit 5A.1, but instead would make two adjusting entries. Using Z-Mart data, the two adjusting entries would be: (1) Dr. Income Summary and Cr. Merchandise Inventory for \$19,000 each, and (2) Dr. Merchandise Inventory and Cr. Income Summary for \$21,000 each. The first entry removes the beginning balance of Merchandise Inventory, and the second entry records the actual ending balance.

## APPENDIX

## 5B

## Work Sheet—Perpetual System

Exhibit 5B.1 shows the work sheet for preparing financial statements of a merchandiser. It differs slightly from the work sheet layout in Chapter 4—the differences are in **red boldface**. Also, the adjustments in the work sheet reflect the following: (a) expiration of \$600 of prepaid insurance, (b) use of \$3,000 of supplies, (c) depreciation of \$3,700 for equipment, (d) accrual of \$800 of unpaid salaries, and (e) inventory shrinkage of \$250. Once the adjusted amounts are extended into the financial statement columns, the information is used to develop financial statements. We also see that the far-right Balance Sheet and Statement of Equity columns are identical under the perpetual and periodic methods.

## Summary

**C1 Describe merchandising activities and identify income components for a merchandising company.**

Merchandisers buy products and resell them. Examples of merchandisers include Walmart, Home Depot, The Limited, and Barnes & Noble. A merchandiser's costs on the income statement include an amount for cost of goods sold. Gross profit, or gross margin, equals sales minus cost of goods sold.

**C2 Identify and explain the inventory asset and cost flows of a merchandising company.**

The current asset section of a merchandising company's balance sheet includes *merchandise inventory*, which refers to the products a merchandiser sells and are available for sale at the balance sheet date. Cost of merchandise purchases flows into Merchandise Inventory and from there to Cost of Goods Sold on the income statement. Any

remaining inventory is reported as a current asset on the balance sheet.

**A1 Compute the acid-test ratio and explain its use to assess liquidity.** The acid-test ratio is computed as quick assets (cash, short-term investments, and current receivables) divided by current liabilities. It indicates a company's ability to pay its current liabilities with its existing quick assets. An acid-test ratio equal to or greater than 1.0 is often adequate.

**A2 Compute the gross margin ratio and explain its use to assess profitability.** The gross margin ratio is computed as gross margin (net sales minus cost of goods sold) divided by net sales. It indicates a company's profitability before considering other expenses.

**P1 Analyze and record transactions for merchandise purchases using a perpetual system.** For a perpetual inventory system, purchases of inventory (net of trade discounts) are added to the Merchandise Inventory account. Purchase discounts and purchase returns and allowances are subtracted from Merchandise Inventory, and transportation-in costs are added to Merchandise Inventory.

**P2 Analyze and record transactions for merchandise sales using a perpetual system.** A merchandiser records sales at list price less any trade discounts. The cost of items sold is transferred from Merchandise Inventory to Cost of Goods Sold. Refunds or credits given to customers for unsatisfactory merchandise are recorded in Sales Returns and Allowances, a contra account to Sales. If merchandise is returned and restored to inventory, the cost of this merchandise is removed from Cost of Goods Sold and transferred back to Merchandise Inventory. When cash discounts from the sales price are offered and customers pay within the discount period, the seller records this in Sales Discounts, a contra account to Sales.

**P3 Prepare adjustments and close accounts for a merchandising company.** With a perpetual system, it is often necessary to make an adjustment for inventory shrinkage.

This is computed by comparing a physical count of inventory with the Merchandise Inventory balance. Shrinkage is normally charged to Cost of Goods Sold. Temporary accounts closed to Income Summary for a merchandiser include Sales, Sales Discounts, Sales Returns and Allowances, and Cost of Goods Sold.

**P4 Define and prepare multiple-step and single-step income statements.** Multiple-step income statements include greater detail for sales and expenses than do single-step income statements. They also show details of net sales and report expenses in categories reflecting different activities.

**P5A Record and compare merchandising transactions using both periodic and perpetual inventory systems.** A perpetual inventory system continuously tracks the cost of goods available for sale and the cost of goods sold. A periodic system accumulates the cost of goods purchased during the period and does not compute the amount of inventory or the cost of goods sold until the end of a period. Transactions involving the sale and purchase of merchandise are recorded and analyzed under both the periodic and perpetual inventory systems. Adjusting and closing entries for both inventory systems are illustrated and explained.

## Guidance Answers to Decision Maker and Decision Ethics

**Entrepreneur** For terms of 3/10, n/90, missing the 3% discount for an additional 80 days equals an implied annual interest rate of 13.69%, computed as  $(365 \text{ days} \div 80 \text{ days}) \times 3\%$ . Since you can borrow funds at 11% (assuming no other processing costs), it is better to borrow and pay within the discount period. You save 2.69% ( $13.69\% - 11\%$ ) in interest costs by paying early.

**Payables Manager** Your decision is whether to comply with prior policy or to create a new policy and not abuse discounts offered by suppliers. Your first step should be to meet with your superior to find out if the late payment policy is the actual policy and, if so, its rationale. If it is the policy to pay late, you must apply your own sense of ethics. One point of view is that the late payment policy is unethical. A deliberate plan to make late payments means the company lies when it pretends to make payment within the discount period. Another view is that the late payment policy is acceptable. In some markets, attempts to take discounts through late payments are accepted as a continued phase of “price negotiation.” Also, your company’s suppliers can respond by billing your company for the discounts not accepted because of late payments. However, this is a dubious viewpoint, especially since the prior manager proposes that you

dishonestly explain late payments as computer or mail problems and since some suppliers have complained.

**Supplier** A current ratio of 2.1 suggests sufficient current assets to cover current liabilities. An acid-test ratio of 0.5 suggests, however, that quick assets can cover only about one-half of current liabilities. This implies that the retailer depends on money from sales of inventory to pay current liabilities. If sales of inventory decline or profit margins decrease, the likelihood that this retailer will default on its payments increases. Your decision is probably not to extend credit. If you do extend credit, you are likely to closely monitor the retailer’s financial condition. (It is better to hold unsold inventory than uncollectible receivables.)

**Financial Officer** Your company’s net profit margin is about equal to the industry average and suggests typical industry performance. However, gross margin reveals that your company is paying far more in cost of goods sold or receiving far less in sales price than competitors. Your attention must be directed to finding the problem with cost of goods sold, sales, or both. One positive note is that your company’s expenses make up 19% of sales ( $36\% - 17\%$ ). This favorably compares with competitors’ expenses that make up 28% of sales ( $44\% - 16\%$ ).

## Key Terms

**Multiple Choice Quiz**

Answers at end of chapter

- A company has \$550,000 in net sales and \$193,000 in gross profit. This means its cost of goods sold equals
  - \$743,000
  - \$550,000
  - \$357,000
  - \$193,000
  - \$(193,000)
- A company purchased \$4,500 of merchandise on May 1 with terms of 2/10, n/30. On May 6, it returned \$250 of that merchandise. On May 8, it paid the balance owed for merchandise, taking any discount it is entitled to. The cash paid on May 8 is
  - \$4,500
  - \$4,250
  - \$4,160
  - \$4,165
  - \$4,410
- A company has cash sales of \$75,000, credit sales of \$320,000, sales returns and allowances of \$13,700, and sales discounts of \$6,000. Its net sales equal
  - \$395,000
  - \$375,300
  - \$300,300
  - \$339,700
  - \$414,700
- A company's quick assets are \$37,500, its current assets are \$80,000, and its current liabilities are \$50,000. Its acid-test ratio equals
  - 1.600
  - 0.750
  - 0.625
  - 1.333
  - 0.469
- A company's net sales are \$675,000, its cost of goods sold is \$459,000, and its net income is \$74,250. Its gross margin ratio equals
  - 32%
  - 68%
  - 47%
  - 11%
  - 34%

A(B) *Superscript letter A (B) denotes assignments based on Appendix 5A (5B).*

 **Icon denotes assignments that involve decision making.**

**Discussion Questions**

- What items appear in financial statements of merchandising companies but not in the statements of service companies?
- In comparing the accounts of a merchandising company with those of a service company, what additional accounts would the merchandising company likely use, assuming it employs a perpetual inventory system?
-  Explain how a business can earn a positive gross profit on its sales and still have a net loss.
-  Why do companies offer a cash discount?
- How does a company that uses a perpetual inventory system determine the amount of inventory shrinkage?
- Distinguish between cash discounts and trade discounts. Is the amount of a trade discount on purchased merchandise recorded in the accounts?
- What is the difference between a sales discount and a purchase discount?
-  Why would a company's manager be concerned about the quantity of its purchase returns if its suppliers allow unlimited returns?
- Does the sender (maker) of a debit memorandum record a debit or a credit in the recipient's account? What entry (debit or credit) does the recipient record?
- What is the difference between the single-step and multiple-step income statement formats?
-  Refer to the balance sheet and income statement for **Apple** in Appendix A. What does the company title its inventory account? Does the company present a detailed calculation of its cost of goods sold? **APPLE**
- Refer to **Google**'s income statement in Appendix A. What title does it use for cost of goods sold? **GOOGLE**
- Refer to the income statement for **Samsung** in Appendix A. What does Samsung title its cost of goods sold account? **Samsung**
- Refer to the income statement of **Samsung** in Appendix A. Does its income statement report a gross profit figure? If yes, what is the amount? **Samsung**
-  Buyers negotiate purchase contracts with suppliers. What type of shipping terms should a buyer attempt to negotiate to minimize freight-in costs?

Enter the letter for each term in the blank space beside the definition that it most closely matches.

- |                           |                                 |                             |

| <b>A.</b> Sales discount  | <b>E.</b> FOB shipping point    | <b>H.</b> Purchase discount |
| <b>B.</b> Credit period   | <b>F.</b> Gross profit          | <b>I.</b> Cash discount     |
| <b>C.</b> Discount period | <b>G.</b> Merchandise inventory | <b>J.</b> Trade discount    |
| <b>D.</b> FOB destination |                                 |                             |

- \_\_\_\_\_ 1. Goods a company owns and expects to sell to its customers.
- \_\_\_\_\_ 2. Time period that can pass before a customer's payment is due.
- \_\_\_\_\_ 3. Seller's description of a cash discount granted to buyers in return for early payment.
- \_\_\_\_\_ 4. Reduction below list or catalog price that is negotiated in setting the price of goods.
- \_\_\_\_\_ 5. Ownership of goods is transferred when the seller delivers goods to the carrier.
- \_\_\_\_\_ 6. Purchaser's description of a cash discount received from a supplier of goods.
- \_\_\_\_\_ 7. Reduction in a receivable or payable if it is paid within the discount period.
- \_\_\_\_\_ 8. Difference between net sales and the cost of goods sold.
- \_\_\_\_\_ 9. Time period in which a cash discount is available.
- \_\_\_\_\_ 10. Ownership of goods is transferred when delivered to the buyer's place of business.

## QUICK STUDY

### QS 5-1

Applying merchandising terms

C1

Costs of \$5,000 were incurred to acquire goods and make them ready for sale. The goods were shipped to the buyer (FOB shipping point) for a cost of \$200. Additional necessary costs of \$400 were incurred to acquire the goods. What is the buyer's total cost of merchandise inventory?

- a.** \$5,000    **b.** \$5,200    **c.** \$5,400    **d.** \$5,600

### QS 5-2

Identifying inventory costs

C2

Use the following information (in random order) from a service company and from a merchandiser to compute net income. For the merchandiser, also compute gross profit, the goods available for sale, and the cost of goods sold. *Hint:* Not all information may be necessary.

Krug Service Company		Kleiner Merchandising Company	
Expenses . . . . .	\$ 8,500	Accumulated depreciation . . . . .	\$ 700
Revenues . . . . .	14,000	Beginning inventory . . . . .	5,000
Owner, Withdrawals . . . . .	1,600	Owner, Capital . . . . .	950
Cash . . . . .	700	Ending inventory . . . . .	1,700
Prepaid rent . . . . .	800	Operating expenses . . . . .	1,450
Accounts payable . . . . .	200	Purchases . . . . .	3,900
Owner, Capital . . . . .	3,000	Sales . . . . .	9,500
Equipment . . . . .	1,300	Owner, Withdrawals . . . . .	1,600

### QS 5-3

Merchandise equations and flows

C2

Prepare journal entries to record each of the following purchases transactions of a merchandising company. Show supporting calculations and assume a perpetual inventory system.

- Nov. 5 Purchased 600 units of product at a cost of \$10 per unit. Terms of the sale are 2/10, n/60; the invoice is dated November 5.
- Nov. 7 Returned 25 defective units from the November 5 purchase and received full credit.
- Nov. 15 Paid the amount due from the November 5 purchase, less the return on November 7.

### QS 5-4

Recording purchases—perpetual system

P1

On August 1, Gilmore Company purchased merchandise from Hendren with an invoice price of \$60,000 and credit terms of 2/10, n/30. Gilmore Company paid Hendren on August 11. Prepare any required journal entry(ies) for Gilmore Company (the purchaser) on: (a) August 1, and (b) August 11. Assume Gilmore uses the perpetual inventory method.

### QS 5-5

Recording discounts taken—perpetual

P1

On September 15, Krug Company purchased merchandise inventory from Makarov with an invoice price of \$35,000 and credit terms of 2/10, n/30. Krug Company paid Makarov on September 28. Prepare any required journal entry(ies) for Krug Company (the purchaser) on: (a) September 15, and (b) September 28. Assume Krug uses the perpetual inventory method.

### QS 5-6

Recording discounts missed—perpetual

P1

**QS 5-7**  
Recording sales—perpetual system

P2

Prepare journal entries to record each of the following sales transactions of a merchandising company. Show supporting calculations and assume a perpetual inventory system.

- Apr. 1 Sold merchandise for \$3,000, granting the customer terms of 2/10, EOM; invoice dated April 1. The cost of the merchandise is \$1,800.
- Apr. 4 The customer in the April 1 sale returned merchandise and received credit for \$600. The merchandise, which had cost \$360, is returned to inventory.
- Apr. 11 Received payment for the amount due from the April 1 sale less the return on April 4.

**QS 5-8**  
Accounting for shrinkage—perpetual system

P3

Nix’It Company’s ledger on July 31, its fiscal year-end, includes the following selected accounts that have normal balances (Nix’It uses the perpetual inventory system).

Merchandise inventory	\$ 37,800	Sales returns and allowances	\$ 6,500
T. Nix, Capital	115,300	Cost of goods sold	105,000
T. Nix, Withdrawals	7,000	Depreciation expense	10,300
Sales	160,200	Salaries expense	32,500
Sales discounts	4,700	Miscellaneous expenses	5,000

A physical count of its July 31 year-end inventory discloses that the cost of the merchandise inventory still available is \$35,900. Prepare the entry to record any inventory shrinkage.

**QS 5-9**  
Closing entries P3

Refer to QS 5-8 and prepare journal entries to close the balances in temporary revenue and expense accounts. Remember to consider the entry for shrinkage that is made to solve QS 5-8.

**QS 5-10**  
Multiple-step income statement

P4

For each item below indicate whether the statement describes a multiple-step income statement or a single-step income statement.

- |  |  |
|--|--|
| <b>a. Multiple-step income statement</b>   | <b>b. Single-step income statement</b> |
| _____ 1. Shows detailed computations of net sales and other costs and expenses.                  |  |
| _____ 2. Statement limited to two main categories (revenues and expenses).                       |  |
| _____ 3. Reports gross profit as a separate line item.   |  |
| _____ 4. Reports net income equal to income from operations adjusted for any nonoperating items. |  |

**QS 5-11**  
Computing and interpreting acid-test ratio

A1 

Use the following information on current assets and current liabilities to compute and interpret the acid-test ratio. Explain what the acid-test ratio of a company measures.

Cash	\$1,490	Prepaid expenses	\$ 700
Accounts receivable	2,800	Accounts payable	5,750
Inventory	6,000	Other current liabilities	850

**QS 5-12**  
Contrasting liquidity ratios A1

Identify similarities and differences between the acid-test ratio and the current ratio. Compare and describe how the two ratios reflect a company’s ability to meet its current obligations.

**QS 5-13**  
Computing and analyzing gross margin

A2 

Compute net sales, gross profit, and the gross margin ratio for each separate case *a* through *d*. Interpret the gross margin ratio for case *a*.

	a	b	c	d
Sales	\$150,000	\$550,000	\$38,700	\$255,700
Sales discounts	5,000	17,500	600	4,800
Sales returns and allowances	20,000	6,000	5,100	900
Cost of goods sold	79,750	329,589	24,453	126,500

Income statement information for **adidas Group**, a German footwear, apparel, and accessories manufacturer, for the year ended December 31, 2013, follows. The company applies IFRS, as adopted by the European Union, and reports its results in millions of euros. Prepare its calendar year 2013 (1) multiple-step income statement and (2) single-step income statement.

Net income . . . . .	€ 790
Financial income . . . . .	26
Financial expenses . . . . .	94
Operating profit . . . . .	1,202
Cost of sales . . . . .	7,352
Income taxes . . . . .	344
Income before taxes . . . . .	1,134
Gross profit . . . . .	7,140
Royalty and commission income . . . . .	104
Other operating income . . . . .	143
Other operating expenses . . . . .	6,185
Net sales . . . . .	14,492

**QS 5-14**  
IFRS income statement presentation

Identify whether each description best applies to a periodic or a perpetual inventory system.

- \_\_\_\_\_ a. Updates the inventory account only at period-end.
- \_\_\_\_\_ b. Requires an adjusting entry to record inventory shrinkage.
- \_\_\_\_\_ c. Markedly increased in frequency and popularity in business within the past decade.
- \_\_\_\_\_ d. Records cost of goods sold each time a sales transaction occurs.
- \_\_\_\_\_ e. Provides more timely information to managers.

**QS 5-15<sup>A</sup>**  
Contrasting periodic and perpetual systems

Refer to QS 5-4 and prepare journal entries to record each of the merchandising transactions assuming that the periodic inventory system is used.

**QS 5-16<sup>A</sup>**  
Recording purchases—periodic system **P5**

Refer to QS 5-7 and prepare journal entries to record each of the merchandising transactions assuming that the periodic inventory system is used.

**QS 5-17<sup>A</sup>**  
Recording purchases—periodic system **P5**

Answer each of the following questions related to international accounting standards.

- a. Explain how the accounting for merchandise purchases and sales is different between accounting under IFRS versus U.S. GAAP.
- b. Income statements prepared under IFRS usually report an item titled *finance costs*. What do finance costs refer to?
- c. U.S. GAAP prohibits alternative measures of income reported on the income statement. Does IFRS permit such alternative measures on the income statement?

**QS 5-18**  
International accounting standards

Using your accounting knowledge, fill in the blanks in the following separate income statements *a* through *e*. Identify any negative amount by putting it in parentheses.

	a	b	c	d	e
Sales . . . . .	\$62,000	\$43,500	\$46,000	\$ ?	\$25,600
Cost of goods sold					
Merchandise inventory (beginning) . . . . .	8,000	17,050	7,500	8,000	4,560
Total cost of merchandise purchases . . . . .	38,000	?	?	32,000	6,600
Merchandise inventory (ending) . . . . .	?	(3,000)	(9,000)	(6,600)	?
Cost of goods sold . . . . .	<u>34,050</u>	<u>16,000</u>	<u>?</u>	<u>?</u>	<u>7,000</u>
Gross profit . . . . .	?	?	3,750	45,600	?
Expenses . . . . .	<u>10,000</u>	<u>10,650</u>	<u>12,150</u>	<u>3,600</u>	<u>6,000</u>
Net income (loss) . . . . .	<u>\$ ?</u>	<u>\$16,850</u>	<u>\$ (8,400)</u>	<u>\$42,000</u>	<u>\$ ?</u>

**EXERCISES**

**Exercise 5-1**  
Computing revenues, expenses, and income

**Exercise 5-2**

Operating cycle for merchandiser

C2

The operating cycle of a merchandiser with credit sales includes the following five activities. Starting with merchandise acquisition, identify the chronological order of these five activities.

- \_\_\_\_\_ Inventory made available for sale.
- \_\_\_\_\_ Cash collections from customers.
- \_\_\_\_\_ Credit sales to customers.
- \_\_\_\_\_ Purchases of merchandise.
- \_\_\_\_\_ Accounts receivable accounted for.

**Exercise 5-3**

Sales returns and allowances C1

Business decision makers desire information on sales returns and allowances. (1) Explain why a company's manager wants the accounting system to record customers' returns of unsatisfactory goods in the Sales Returns and Allowances account instead of the Sales account. (2) Explain whether this information would be useful for external decision makers.

**Exercise 5-4**

Recording entries for merchandise purchases

P1

Prepare journal entries to record the following transactions for a retail store. Assume a perpetual inventory system.

- Apr. 2 Purchased merchandise from Lyon Company under the following terms: \$4,600 price, invoice dated April 2, credit terms of 2/15, n/60, and FOB shipping point.
- 3 Paid \$300 for shipping charges on the April 2 purchase.
- 4 Returned to Lyon Company unacceptable merchandise that had an invoice price of \$600.
- 17 Sent a check to Lyon Company for the April 2 purchase, net of the discount and the returned merchandise.
- 18 Purchased merchandise from Frist Corp. under the following terms: \$8,500 price, invoice dated April 18, credit terms of 2/10, n/30, and FOB destination.
- 21 After negotiations, received from Frist a \$1,100 allowance on the April 18 purchase.
- 28 Sent check to Frist paying for the April 18 purchase, net of the discount and allowance.

**Check** April 28, Cr. Cash  
\$7,252

**Exercise 5-5**

Recording sales returns and allowances

P2

Allied Parts was organized on May 1, 2015, and made its first purchase of merchandise on May 3. The purchase was for 2,000 units at a price of \$10 per unit. On May 5, Allied Parts sold 1,500 of the units for \$14 per unit to Baker Co. Terms of the sale were 2/10, n/60. Prepare entries for Allied Parts to record the May 5 sale and each of the following separate transactions *a* through *c* using a perpetual inventory system.

- On May 7, Baker returns 200 units because they did not fit the customer's needs. Allied Parts restores the units to its inventory.
- On May 8, Baker discovers that 300 units are damaged but are still of some use and, therefore, keeps the units. Allied Parts sends Baker a credit memorandum for \$600 to compensate for the damage.
- On May 15, Baker discovers that 100 units are the wrong color. Baker keeps 60 of these units because Allied Parts sends a \$120 credit memorandum to compensate. Baker returns the remaining 40 units to Allied Parts. Allied Parts restores the 40 returned units to its inventory.

**Check** (c) Dr. Merchandise  
Inventory \$400

**Exercise 5-6**

Recording purchase returns and allowances

P1

Refer to Exercise 5-5 and prepare the appropriate journal entries for Baker Co. to record the May 5 purchase and each of the three separate transactions *a* through *c*. Baker is a retailer that uses a perpetual inventory system and purchases these units for resale.

**Exercise 5-7**

Analyzing and recording merchandise transactions—both buyer and seller

P1 P2

Santa Fe Company purchased merchandise for resale from Mesa Company with an invoice price of \$24,000 and credit terms of 3/10, n/60. The merchandise had cost Mesa \$16,000. Santa Fe paid within the discount period. Assume that both buyer and seller use a perpetual inventory system.

- Prepare entries that the buyer should record for (a) the purchase and (b) the cash payment.
- Prepare entries that the seller should record for (a) the sale and (b) the cash collection.
- Assume that the buyer borrowed enough cash to pay the balance on the last day of the discount period at an annual interest rate of 8% and paid it back on the last day of the credit period. Compute how much the buyer saved by following this strategy. (Assume a 365-day year and round dollar amounts to the nearest cent, including computation of interest per day.)

**Check** (3) \$465 savings

On May 11, Sydney Co. accepts delivery of \$40,000 of merchandise it purchases for resale from Troy Corporation. With the merchandise is an invoice dated May 11, with terms of 3/10, n/90, FOB shipping point. The goods cost Troy \$30,000. When the goods are delivered, Sydney pays \$345 to Express Shipping for delivery charges on the merchandise. On May 12, Sydney returns \$1,400 of goods to Troy, who receives them one day later and restores them to inventory. The returned goods had cost Troy \$800. On May 20, Sydney mails a check to Troy Corporation for the amount owed. Troy receives it the following day. (Both Sydney and Troy use a perpetual inventory system.)

1. Prepare journal entries that Sydney Co. records for these transactions.
2. Prepare journal entries that Troy Corporation records for these transactions.

**Exercise 5-8**

Analyzing and recording merchandise transactions—both buyer and seller

P1 P2

**Check** (1) May 20, Cr. Cash \$37,442

The following supplementary records summarize Tosca Company's merchandising activities for year 2015. Set up T-accounts for Merchandise Inventory and Cost of Goods Sold. Then record the summarized activities in those T-accounts and compute account balances.

Cost of merchandise sold to customers in sales transactions . . . . .	\$196,000
Merchandise inventory, December 31, 2014 . . . . .	25,000
Invoice cost of merchandise purchases . . . . .	192,500
Shrinkage determined on December 31, 2015 . . . . .	800
Cost of transportation-in . . . . .	2,900
Cost of merchandise returned by customers and restored to inventory . . . . .	2,100
Purchase discounts received . . . . .	1,700
Purchase returns and allowances . . . . .	4,000

**Exercise 5-9**

Recording effects of merchandising activities

P1 P2

**Check** Year-end Merchandise Inventory, Dec. 31, \$20,000

Journalize the following merchandising transactions for Chilton Systems assuming it uses a perpetual inventory system.

1. On November 1, Chilton Systems purchases merchandise for \$1,500 on credit with terms of 2/5, n/30, FOB shipping point; invoice dated November 1.
2. On November 5, Chilton Systems pays cash for the November 1 purchase.
3. On November 7, Chilton Systems discovers and returns \$200 of defective merchandise purchased on November 1 for a cash refund.
4. On November 10, Chilton Systems pays \$90 cash for transportation costs with the November 1 purchase.
5. On November 13, Chilton Systems sells merchandise for \$1,600 on credit. The cost of the merchandise is \$800.
6. On November 16, the customer returns merchandise from the November 13 transaction. The returned items are priced at \$300 and cost \$130; the items were not damaged and were returned to inventory.

**Exercise 5-10**

Preparing journal entries—perpetual system

P1 P2

The following list includes selected permanent accounts and all of the temporary accounts from the December 31, 2015, unadjusted trial balance of Emiko Co., a business owned by Kumi Emiko. Use these account balances along with the additional information to journalize (a) adjusting entries and (b) closing entries. Emiko Co. uses a perpetual inventory system.

**Exercise 5-11**

Preparing adjusting and closing entries for a merchandiser

P3

	Debit	Credit
Merchandise inventory . . . . .	\$ 30,000	
Prepaid selling expenses . . . . .	5,600	
K. Emiko, Withdrawals . . . . .	33,000	
Sales . . . . .		\$529,000
Sales returns and allowances . . . . .	17,500	
Sales discounts . . . . .	5,000	
Cost of goods sold . . . . .	212,000	
Sales salaries expense . . . . .	48,000	
Utilities expense . . . . .	15,000	
Selling expenses . . . . .	36,000	
Administrative expenses . . . . .	105,000	

**Additional Information**

Accrued sales salaries amount to \$1,700. Prepaid selling expenses of \$3,000 have expired. A physical count of year-end merchandise inventory shows \$28,450 of goods still available.

**Check** Entry to close Income Summary: Cr. K. Emiko, Capital \$84,250

**Exercise 5-12**Multiple-step income statement **P4**

A company reports the following sales-related information. Prepare the net sales portion only of this company's multiple-step income statement.

Sales, gross . . . . .	\$200,000	Sales returns and allowances . . . . .	\$16,000
Sales discounts . . . . .	4,000	Sales salaries expense . . . . .	10,000

**Exercise 5-13**

Interpreting a physical count error as inventory shrinkage

**A1** 

A retail company recently completed a physical count of ending merchandise inventory to use in preparing adjusting entries. In determining the cost of the counted inventory, company employees failed to consider that \$3,000 of incoming goods had been shipped by a supplier on December 31 under an FOB shipping point agreement. These goods had been recorded in Merchandise Inventory as a purchase, but they were not included in the physical count because they were in transit. Explain how this overlooked fact affects the company's financial statements and the following ratios: return on assets, debt ratio, current ratio, and acid-test ratio.

**Exercise 5-14**Physical count error and profits **A2**

Refer to the information in Exercise 5-13 and explain how the error in the physical count affects the company's gross margin ratio and its profit margin ratio.

**Exercise 5-15**

Computing and analyzing acid-test and current ratios

**A1** 

Compute the current ratio and acid-test ratio for each of the following separate cases. (Round ratios to two decimals.) Which company case is in the best position to meet short-term obligations? Explain.

	Case X	Case Y	Case Z
Cash . . . . .	\$2,000	\$ 110	\$1,000
Short-term investments . . . . .	50	0	580
Current receivables . . . . .	350	470	700
Inventory . . . . .	2,600	2,420	4,230
Prepaid expenses . . . . .	<u>200</u>	<u>500</u>	<u>900</u>
Total current assets . . . . .	<u>\$5,200</u>	<u>\$3,500</u>	<u>\$7,410</u>
Current liabilities . . . . .	<u>\$2,000</u>	<u>\$1,000</u>	<u>\$3,800</u>

**Exercise 5-16<sup>A</sup>**Recording purchases—periodic system **P5**

Refer to Exercise 5-4 and prepare journal entries to record each of the merchandising transactions assuming that the periodic inventory system is used.

**Exercise 5-17<sup>A</sup>**

Recording purchases and sales—periodic system

**P5**

Refer to Exercise 5-7 and prepare journal entries to record each of the merchandising transactions assuming that the periodic inventory system is used by both the buyer and the seller. (Skip the part 3 requirement.)

**Exercise 5-18<sup>A</sup>**Buyer and seller transactions—periodic system **P5**

Refer to Exercise 5-8 and prepare journal entries to record each of the merchandising transactions assuming that the periodic inventory system is used by both the buyer and the seller.

**Exercise 5-19<sup>A</sup>**Recording purchases—periodic system **P5**

Refer to Exercise 5-10 and prepare journal entries to record each of the merchandising transactions assuming that the periodic inventory system is used.

**L'Oréal** reports the following income statement accounts for the year ended December 31, 2013 (euros in millions). Prepare the income statement for this company for the year ended December 31, 2013, following usual IFRS practices.

Net profit . . . . .	€ 2,961.4	Income tax expense . . . . .	€ 1,063.0
Finance costs . . . . .	29.1	Profit before tax expense . . . . .	4,024.4
Net sales . . . . .	22,976.6	Research and development expense . . . . .	857.0
Gross profit . . . . .	16,374.8	Selling, general and administrative expense . . . . .	4,756.8
Other income . . . . .	145.2	Advertising and promotion expense . . . . .	6,886.2
Cost of sales . . . . .	6,601.8	Finance income . . . . .	33.5

**Exercise 5-20**

Preparing an income statement following IFRS

P4

Prepare journal entries to record the following merchandising transactions of Blink Company, which applies the perpetual inventory system. (*Hint:* It will help to identify each receivable and payable; for example, record the purchase on July 1 in Accounts Payable—Boden.)

- July 1 Purchased merchandise from Boden Company for \$6,000 under credit terms of 1/15, n/30, FOB shipping point, invoice dated July 1.
- 2 Sold merchandise to Creek Co. for \$900 under credit terms of 2/10, n/60, FOB shipping point, invoice dated July 2. The merchandise had cost \$500.
- 3 Paid \$125 cash for freight charges on the purchase of July 1.
- 8 Sold merchandise that had cost \$1,300 for \$1,700 cash.
- 9 Purchased merchandise from Leight Co. for \$2,200 under credit terms of 2/15, n/60, FOB destination, invoice dated July 9.
- 11 Received a \$200 credit memorandum from Leight Co. for the return of part of the merchandise purchased on July 9.
- 12 Received the balance due from Creek Co. for the invoice dated July 2, net of the discount.
- 16 Paid the balance due to Boden Company within the discount period.
- 19 Sold merchandise that cost \$800 to Art Co. for \$1,200 under credit terms of 2/15, n/60, FOB shipping point, invoice dated July 19.
- 21 Issued a \$200 credit memorandum to Art Co. for an allowance on goods sold on July 19.
- 24 Paid Leight Co. the balance due after deducting the discount.
- 30 Received the balance due from Art Co. for the invoice dated July 19, net of discount.
- 31 Sold merchandise that cost \$4,800 to Creek Co. for \$7,000 under credit terms of 2/10, n/60, FOB shipping point, invoice dated July 31.

**PROBLEM SET A****Problem 5-1A**

Preparing journal entries for merchandising activities—perpetual system P1 P2

**Check** July 12, Dr. Cash \$882  
 July 16, Cr. Cash \$5,940  
 July 24, Cr. Cash \$1,960  
 July 30, Dr. Cash \$980

Prepare journal entries to record the following merchandising transactions of Sheng Company, which applies the perpetual inventory system. (*Hint:* It will help to identify each receivable and payable; for example, record the purchase on August 1 in Accounts Payable—Arotek.)

- Aug. 1 Purchased merchandise from Arotek Company for \$7,500 under credit terms of 1/10, n/30, FOB destination, invoice dated August 1.
- 5 Sold merchandise to Laird Corp. for \$5,200 under credit terms of 2/10, n/60, FOB destination, invoice dated August 5. The merchandise had cost \$4,000.
- 8 Purchased merchandise from Waters Corporation for \$5,400 under credit terms of 1/10, n/45, FOB shipping point, invoice dated August 8. The invoice showed that at Sheng's request, Waters paid the \$140 shipping charges and added that amount to the bill. (*Hint:* Discounts are not applied to freight and shipping charges.)
- 9 Paid \$125 cash for shipping charges related to the August 5 sale to Laird Corp.
- 10 Laird returned merchandise from the August 5 sale that had cost Sheng \$400 and been sold for \$600. The merchandise was restored to inventory.
- 12 After negotiations with Waters Corporation concerning problems with the merchandise purchased on August 8, Sheng received a credit memorandum from Waters granting a price reduction of \$700.

**Problem 5-2A**

Preparing journal entries for merchandising activities—perpetual system P1 P2

**Check** Aug. 9, Dr. Delivery Expense, \$125

Aug. 18, Cr. Cash  
\$4,793

Aug. 29, Dr. Cash  
\$4,257

- 14 At Arotek’s request, Sheng paid \$200 cash for freight charges on the August 1 purchase, reducing the amount owed to Arotek.
- 15 Received balance due from Laird Corp. for the August 5 sale less the return on August 10.
- 18 Paid the amount due Waters Corporation for the August 8 purchase less the price reduction granted.
- 19 Sold merchandise to Tux Co. for \$4,800 under credit terms of 1/10, n/30, FOB shipping point, invoice dated August 19. The merchandise had cost \$2,400.
- 22 Tux requested a price reduction on the August 19 sale because the merchandise did not meet specifications. Sheng sent Tux a \$500 credit memorandum to resolve the issue.
- 29 Received Tux’s cash payment for the amount due from the August 19 sale.
- 30 Paid Arotek Company the amount due from the August 1 purchase.

**Problem 5-3A**

Computing merchandising amounts and formatting income statements

C2 P4

Valley Company’s adjusted trial balance on August 31, 2015, its fiscal year-end, follows.

	Debit	Credit
Merchandise inventory . . . . .	\$ 41,000	
Other (noninventory) assets . . . . .	130,400	
Total liabilities . . . . .		\$ 25,000
K. Valley, Capital . . . . .		104,550
K. Valley, Withdrawals . . . . .	8,000	
Sales . . . . .		225,600
Sales discounts . . . . .	2,250	
Sales returns and allowances . . . . .	12,000	
Cost of goods sold . . . . .	74,500	
Sales salaries expense . . . . .	32,000	
Rent expense—Selling space . . . . .	8,000	
Store supplies expense . . . . .	1,500	
Advertising expense . . . . .	13,000	
Office salaries expense . . . . .	28,500	
Rent expense—Office space . . . . .	3,600	
Office supplies expense . . . . .	400	
Totals . . . . .	<u>\$355,150</u>	<u>\$355,150</u>

On August 31, 2014, merchandise inventory was \$25,400. Supplementary records of merchandising activities for the year ended August 31, 2015, reveal the following itemized costs.

Invoice cost of merchandise purchases . . . . .	\$92,000
Purchase discounts received . . . . .	2,000
Purchase returns and allowances . . . . .	4,500
Costs of transportation-in . . . . .	4,600

**Required**

1. Compute the company’s net sales for the year.
2. Compute the company’s total cost of merchandise purchased for the year.
3. Prepare a multiple-step income statement that includes separate categories for selling expenses and for general and administrative expenses.
4. Prepare a single-step income statement that includes these expense categories: cost of goods sold, selling expenses, and general and administrative expenses.

**Check** (2) \$90,100  
 (3) Gross profit, \$136,850; Net income, \$49,850  
 (4) Total expenses, \$161,500

Use the data for Valley Company in Problem 5-3A to complete the following requirements.

### Required

1. Prepare closing entries as of August 31, 2015 (the perpetual inventory system is used).

### Analysis Component

2. The company makes all purchases on credit, and its suppliers uniformly offer a 3% sales discount. Does it appear that the company's cash management system is accomplishing the goal of taking all available discounts? Explain.
3. In prior years, the company experienced a 4% returns and allowance rate on its sales, which means approximately 4% of its gross sales were eventually returned outright or caused the company to grant allowances to customers. How do this year's results compare to prior years' results?

### Problem 5-4A

Preparing closing entries and interpreting information about discounts and returns

C2 P3

### Problem 5-5A

Preparing adjusting entries and income statements; and computing gross margin, acid-test, and current ratios

A1 A2 P3 P4 

Rent expense and salaries expense are equally divided between selling activities and the general and administrative activities. Nelson Company uses a perpetual inventory system.

### Required

1. Prepare adjusting journal entries to reflect each of the following:
  - a. Store supplies still available at fiscal year-end amount to \$1,750.
  - b. Expired insurance, an administrative expense, for the fiscal year is \$1,400.
  - c. Depreciation expense on store equipment, a selling expense, is \$1,525 for the fiscal year.
  - d. To estimate shrinkage, a physical count of ending merchandise inventory is taken. It shows \$10,900 of inventory is still available at fiscal year-end.
2. Prepare a multiple-step income statement for fiscal year 2015.
3. Prepare a single-step income statement for fiscal year 2015.
4. Compute the current ratio, acid-test ratio, and gross margin ratio as of January 31, 2015. (Round ratios to two decimals.)

**Check** (2) Gross profit, \$67,750  
(3) Total expenses, \$106,775; Net income, \$975

**Problem 5-6A<sup>B</sup>**

Preparing a work sheet  
for a merchandiser

P3

Refer to the data and information in Problem 5-5A.

**Required**

Prepare and complete the entire 10-column work sheet for Nelson Company. Follow the structure of Exhibit 5B.1 in Appendix 5B.

Prepare journal entries to record the following merchandising transactions of Yarvelle Company, which applies the perpetual inventory system. (*Hint:* It will help to identify each receivable and payable; for example, record the purchase on May 2 in Accounts Payable—Havel.)

- May 2 Purchased merchandise from Havel Co. for \$10,000 under credit terms of 1/15, n/30, FOB shipping point, invoice dated May 2.
- 4 Sold merchandise to Heather Co. for \$11,000 under credit terms of 2/10, n/60, FOB shipping point, invoice dated May 4. The merchandise had cost \$5,600.
- 5 Paid \$250 cash for freight charges on the purchase of May 2.
- 9 Sold merchandise that had cost \$2,000 for \$2,500 cash.
- 10 Purchased merchandise from Duke Co. for \$3,650 under credit terms of 2/15, n/60, FOB destination, invoice dated May 10.
- 12 Received a \$400 credit memorandum from Duke Co. for the return of part of the merchandise purchased on May 10.
- 14 Received the balance due from Heather Co. for the invoice dated May 4, net of the discount.
- 17 Paid the balance due to Havel Co. within the discount period.
- 20 Sold merchandise that cost \$1,450 to Tameron Co. for \$2,800 under credit terms of 2/15, n/60, FOB shipping point, invoice dated May 20.
- 22 Issued a \$400 credit memorandum to Tameron Co. for an allowance on goods sold from May 20.
- 25 Paid Duke Co. the balance due after deducting the discount.
- 30 Received the balance due from Tameron Co. for the invoice dated May 20, net of discount and allowance.
- 31 Sold merchandise that cost \$3,600 to Heather Co. for \$7,200 under credit terms of 2/10, n/60, FOB shipping point, invoice dated May 31.

**Problem 5-2B**

Preparing journal entries  
for merchandising  
activities—perpetual  
system

P1 P2

**Check** July 17, Dr. Cash  
\$9,457  
July 20, Cr. Cash  
\$12,578

July 30, Dr. Cash  
\$9,603

Prepare journal entries to record the following merchandising transactions of Mason Company, which applies the perpetual inventory system. (*Hint:* It will help to identify each receivable and payable; for example, record the purchase on July 3 in Accounts Payable—OLB.)

- July 3 Purchased merchandise from OLB Corp. for \$15,000 under credit terms of 1/10, n/30, FOB destination, invoice dated July 3.
- 7 Sold merchandise to Brill Co. for \$11,500 under credit terms of 2/10, n/60, FOB destination, invoice dated July 7. The merchandise had cost \$7,750.
- 10 Purchased merchandise from Rupert Corporation for \$14,200 under credit terms of 1/10, n/45, FOB shipping point, invoice dated July 10. The invoice showed that at Mason's request, Rupert paid the \$500 shipping charges and added that amount to the bill. (*Hint:* Discounts are not applied to freight and shipping charges.)
- 11 Paid \$300 cash for shipping charges related to the July 7 sale to Brill Co.
- 12 Brill returned merchandise from the July 7 sale that had cost Mason \$1,450 and been sold for \$1,850. The merchandise was restored to inventory.
- 14 After negotiations with Rupert Corporation concerning problems with the merchandise purchased on July 10, Mason received a credit memorandum from Rupert granting a price reduction of \$2,000.
- 15 At OLB's request, Mason paid \$150 cash for freight charges on the July 3 purchase, reducing the amount owed to OLB.
- 17 Received balance due from Brill Co. for the July 7 sale less the return on July 12.
- 20 Paid the amount due Rupert Corporation for the July 10 purchase less the price reduction granted.
- 21 Sold merchandise to Brown for \$11,000 under credit terms of 1/10, n/30, FOB shipping point, invoice dated July 21. The merchandise had cost \$7,000.
- 24 Brown requested a price reduction on the July 21 sale because the merchandise did not meet specifications. Mason sent Brown a credit memorandum for \$1,300 to resolve the issue.
- 30 Received Brown's cash payment for the amount due from the July 21 sale.
- 31 Paid OLB Corp. the amount due from the July 3 purchase.

Barkley Company's adjusted trial balance on March 31, 2015, its fiscal year-end, follows.

	Debit	Credit
Merchandise inventory . . . . .	\$ 56,500	
Other (noninventory) assets . . . . .	202,600	
Total liabilities . . . . .		\$ 42,500
C. Barkley, Capital . . . . .		164,425
C. Barkley, Withdrawals . . . . .	3,000	
Sales . . . . .		332,650
Sales discounts . . . . .	5,875	
Sales returns and allowances . . . . .	20,000	
Cost of goods sold . . . . .	115,600	
Sales salaries expense . . . . .	44,500	
Rent expense—Selling space . . . . .	16,000	
Store supplies expense . . . . .	3,850	
Advertising expense . . . . .	26,000	
Office salaries expense . . . . .	40,750	
Rent expense—Office space . . . . .	3,800	
Office supplies expense . . . . .	1,100	
Totals . . . . .	<u>\$539,575</u>	<u>\$539,575</u>

On March 31, 2014, merchandise inventory was \$37,500. Supplementary records of merchandising activities for the year ended March 31, 2015, reveal the following itemized costs.

Invoice cost of merchandise purchases . . . . .	\$138,500
Purchase discounts received . . . . .	2,950
Purchase returns and allowances . . . . .	6,700
Costs of transportation-in . . . . .	5,750

### Required

- Calculate the company's net sales for the year.
- Calculate the company's total cost of merchandise purchased for the year.
- Prepare a multiple-step income statement that includes separate categories for selling expenses and for general and administrative expenses.
- Prepare a single-step income statement that includes these expense categories: cost of goods sold, selling expenses, and general and administrative expenses.

**Check** (2) \$134,600  
 (3) Gross profit, \$191,175; Net income, \$55,175  
 (4) Total expenses, \$251,600

Use the data for Barkley Company in Problem 5-3B to complete the following requirements.

### Required

- Prepare closing entries as of March 31, 2015 (the perpetual inventory system is used).

### Analysis Component

- The company makes all purchases on credit, and its suppliers uniformly offer a 3% sales discount. Does it appear that the company's cash management system is accomplishing the goal of taking all available discounts? Explain.
- In prior years, the company experienced a 5% returns and allowance rate on its sales, which means approximately 5% of its gross sales were eventually returned outright or caused the company to grant allowances to customers. How do this year's results compare to prior years' results?

### Problem 5-4B

Preparing closing entries and interpreting information about discounts and returns

C2 P3 

**Check** (1) \$55,175 Dr. to close Income Summary

(3) Current-year rate, 6.0%

### Problem 5-3B

Computing merchandising amounts and formatting income statements

C1 C2 P4

**Problem 5-5B**

Preparing adjusting entries and income statements; and computing gross margin, acid-test, and current ratios

A1 A2 P3 P4

The following unadjusted trial balance is prepared at fiscal year-end for Foster Products Company.

	A	B	C
	<b>FOSTER PRODUCTS COMPANY</b>		
	<b>Unadjusted Trial Balance</b>		
	<b>October 31, 2015</b>		
1		<b>Debit</b>	<b>Credit</b>
2	Cash	\$ 7,400	
3	Merchandise inventory	24,000	
4	Store supplies	9,700	
5	Prepaid insurance	6,600	
6	Store equipment	81,800	
7	Accumulated depreciation—Store equipment		\$ 32,000
8	Accounts payable		18,000
9	D. Foster, Capital		43,000
10	D. Foster, Withdrawals	2,000	
11	Sales		227,100
12	Sales discounts	1,000	
13	Sales returns and allowances	5,000	
14	Cost of goods sold	75,800	
15	Depreciation expense—Store equipment	0	
16	Salaries expense	63,000	
17	Insurance expense	0	
18	Rent expense	26,000	
19	Store supplies expense	0	
20	Advertising expense	17,800	
21	<b>Totals</b>	<b>\$320,100</b>	<b>\$320,100</b>
22			

Rent expense and salaries expense are equally divided between selling activities and the general and administrative activities. Foster Products Company uses a perpetual inventory system.

**Required**

- Prepare adjusting journal entries to reflect each of the following.
  - Store supplies still available at fiscal year-end amount to \$3,700.
  - Expired insurance, an administrative expense, for the fiscal year is \$2,800.
  - Depreciation expense on store equipment, a selling expense, is \$3,000 for the fiscal year.
  - To estimate shrinkage, a physical count of ending merchandise inventory is taken. It shows \$21,300 of inventory is still available at fiscal year-end.
- Prepare a multiple-step income statement for fiscal year 2015.
- Prepare a single-step income statement for fiscal year 2015.
- Compute the current ratio, acid-test ratio, and gross margin ratio as of October 31, 2015. (Round ratios to two decimals.)

**Check** (2) Gross profit, \$142,600  
(3) Total expenses, \$197,100; Net income, \$24,000

**Problem 5-6B<sup>B</sup>**

Preparing a work sheet for a merchandiser

P3

Refer to the data and information in Problem 5-5B.

**Required**

Prepare and complete the entire 10-column work sheet for Foster Products Company. Follow the structure of Exhibit 5B.1 in Appendix 5B.

**SERIAL PROBLEM**

Business Solutions

P1 P2 P3 P4

(This serial problem began in Chapter 1 and continues through most of the book. If previous chapter segments were not completed, the serial problem can begin at this point. It is helpful, but not necessary, to use the Working Papers that accompany the book.)

**SP 5** Santana Rey created Business Solutions on October 1, 2015. The company has been successful, and its list of customers has grown. To accommodate the growth, the accounting system is modified to set

up separate accounts for each customer. The following chart of accounts includes the account number used for each account and any balance as of December 31, 2015. Santana Rey decided to add a fourth digit with a decimal point to the 106 account number that had been used for the single Accounts Receivable account. This change allows the company to continue using the existing chart of accounts.

No.	Account Title	Dr.	Cr.	No.	Account Title	Dr.	Cr.
101	Cash .....	\$48,372		210	Wages payable .....	\$ 500	
106.1	Alex's Engineering Co. ....	0		236	Unearned computer services revenue .....		1,500
106.2	Wildcat Services .....	0		301	S. Rey, Capital .....		80,360
106.3	Easy Leasing .....	0		302	S. Rey, Withdrawals .....	\$0	
106.4	IFM Co. ....	3,000		403	Computer services revenue .....		0
106.5	Liu Corp. ....	0		413	Sales .....		0
106.6	Gomez Co. ....	2,668		414	Sales returns and allowances .....	0	
106.7	Delta Co. ....	0		415	Sales discounts .....	0	
106.8	KC, Inc. ....	0		502	Cost of goods sold .....	0	
106.9	Dream, Inc. ....	0		612	Depreciation expense—Office equipment .....	0	
119	Merchandise inventory .....	0		613	Depreciation expense— Computer equipment .....	0	
126	Computer supplies .....	580		623	Wages expense .....	0	
128	Prepaid insurance .....	1,665		637	Insurance expense .....	0	
131	Prepaid rent .....	825		640	Rent expense .....	0	
163	Office equipment .....	8,000		652	Computer supplies expense .....	0	
164	Accumulated depreciation— Office equipment .....		\$ 400	655	Advertising expense .....	0	
167	Computer equipment .....	20,000		676	Mileage expense .....	0	
168	Accumulated depreciation— Computer equipment .....		1,250	677	Miscellaneous expenses .....	0	
201	Accounts payable .....		1,100	684	Repairs expense—Computer .....	0	

In response to requests from customers, S. Rey will begin selling computer software. The company will extend credit terms of 1/10, n/30, FOB shipping point, to all customers who purchase this merchandise. However, no cash discount is available on consulting fees. Additional accounts (Nos. 119, 413, 414, 415, and 502) are added to its general ledger to accommodate the company's new merchandising activities. Also, Business Solutions does not use reversing entries and, therefore, all revenue and expense accounts have zero beginning balances as of January 1, 2016. Its transactions for January through March follow:

- Jan. 4 The company paid cash to Lyn Addie for five days' work at the rate of \$125 per day. Four of the five days relate to wages payable that were accrued in the prior year.
- 5 Santana Rey invested an additional \$25,000 cash in the company.
- 7 The company purchased \$5,800 of merchandise from Kansas Corp. with terms of 1/10, n/30, FOB shipping point, invoice dated January 7.
- 9 The company received \$2,668 cash from Gomez Co. as full payment on its account.
- 11 The company completed a five-day project for Alex's Engineering Co. and billed it \$5,500, which is the total price of \$7,000 less the advance payment of \$1,500.
- 13 The company sold merchandise with a retail value of \$5,200 and a cost of \$3,560 to Liu Corp., invoice dated January 13.
- 15 The company paid \$600 cash for freight charges on the merchandise purchased on January 7.
- 16 The company received \$4,000 cash from Delta Co. for computer services provided.
- 17 The company paid Kansas Corp. for the invoice dated January 7, net of the discount.
- 20 Liu Corp. returned \$500 of defective merchandise from its invoice dated January 13. The returned merchandise, which had a \$320 cost, is discarded. (The policy of Business Solutions is to leave the cost of defective products in Cost of Goods Sold.)
- 22 The company received the balance due from Liu Corp., net of both the discount and the credit for the returned merchandise.
- 24 The company returned defective merchandise to Kansas Corp. and accepted a credit against future purchases. The defective merchandise invoice cost, net of the discount, was \$496.

**Check** Jan. 11, Dr.  
Unearned Computer  
Services Revenue \$1,500

**Check** Jan. 20, No entry  
to Cost of Goods Sold

- 26 The company purchased \$9,000 of merchandise from Kansas Corp. with terms of 1/10, n/30, FOB destination, invoice dated January 26.
- 26 The company sold merchandise with a \$4,640 cost for \$5,800 on credit to KC, Inc., invoice dated January 26.
- 31 The company paid cash to Lyn Addie for 10 days' work at \$125 per day.
- Feb. 1 The company paid \$2,475 cash to Hillside Mall for another three months' rent in advance.
- 3 The company paid Kansas Corp. for the balance due, net of the cash discount, less the \$496 amount in the credit memorandum.
- 5 The company paid \$600 cash to the local newspaper for an advertising insert in today's paper.
- 11 The company received the balance due from Alex's Engineering Co. for fees billed on January 11.
- 15 Santana Rey withdrew \$4,800 cash from the company for personal use.
- 23 The company sold merchandise with a \$2,660 cost for \$3,220 on credit to Delta Co., invoice dated February 23.
- 26 The company paid cash to Lyn Addie for eight days' work at \$125 per day.
- 27 The company reimbursed Santana Rey for business automobile mileage (600 miles at \$0.32 per mile).
- Mar. 8 The company purchased \$2,730 of computer supplies from Harris Office Products on credit, invoice dated March 8.
- 9 The company received the balance due from Delta Co. for merchandise sold on February 23.
- 11 The company paid \$960 cash for minor repairs to the company's computer.
- 16 The company received \$5,260 cash from Dream, Inc., for computing services provided.
- 19 The company paid the full amount due to Harris Office Products, consisting of amounts created on December 15 (of \$1,100) and March 8.
- 24 The company billed Easy Leasing for \$9,047 of computing services provided.
- 25 The company sold merchandise with a \$2,002 cost for \$2,800 on credit to Wildcat Services, invoice dated March 25.
- 30 The company sold merchandise with a \$1,048 cost for \$2,220 on credit to IFM Company, invoice dated March 30.
- 31 The company reimbursed Santana Rey for business automobile mileage (400 miles at \$0.32 per mile).

The following additional facts are available for preparing adjustments on March 31 prior to financial statement preparation:

- The March 31 amount of computer supplies still available totals \$2,005.
- Three more months have expired since the company purchased its annual insurance policy at a \$2,220 cost for 12 months of coverage.
- Lyn Addie has not been paid for seven days of work at the rate of \$125 per day.
- Three months have passed since any prepaid rent has been transferred to expense. The monthly rent expense is \$825.
- Depreciation on the computer equipment for January 1 through March 31 is \$1,250.
- Depreciation on the office equipment for January 1 through March 31 is \$400.
- The March 31 amount of merchandise inventory still available totals \$704.

### Required

- Prepare journal entries to record each of the January through March transactions.
- Post the journal entries in part 1 to the accounts in the company's general ledger. (*Note:* Begin with the ledger's post-closing adjusted balances as of December 31, 2015.)
- Prepare a partial work sheet consisting of the first six columns (similar to the one shown in Exhibit 5B.1) that includes the unadjusted trial balance, the March 31 adjustments (a) through (g), and the adjusted trial balance. Do not prepare closing entries and do not journalize the adjustments or post them to the ledger.
- Prepare an income statement (from the adjusted trial balance in part 3) for the three months ended March 31, 2016. Use a single-step format. List all expenses without differentiating between selling expenses and general and administrative expenses.
- Prepare a statement of owner's equity (from the adjusted trial balance in part 3) for the three months ended March 31, 2016.
- Prepare a classified balance sheet (from the adjusted trial balance) as of March 31, 2016.

**Check** (2) Ending balances at March 31: Cash, \$68,057; Sales, \$19,240  
(3) Unadj. TB totals, \$151,557; Adj. TB totals, \$154,082

(4) Net income, \$18,833

(5) S. Rey, Capital (at March 31), \$119,393

(6) Total assets, \$120,268

The **General Ledger** tool in *Connect* automates several of the procedural steps in the accounting cycle so that the accounting professional can focus on the impacts of each transaction on the various financial reports. The following General Ledger questions highlight the operating cycle of a merchandising company. In each case, the trial balance is automatically updated from the journal entries recorded.

**GL 5-1** Based on Problem 5-1A

**GL 5-2** Based on Problem 5-2A

**GL 5-3** Based on Problem 5-5A

**GL GENERAL LEDGER PROBLEM**

Available only in **Connect Plus**

**Beyond the Numbers**

**BTN 5-1** Refer to **Apple's** financial statements in Appendix A to answer the following.

**Required**

1. Assume that the amounts reported for inventories and cost of sales reflect items purchased in a form ready for resale. Compute the net cost of goods purchased for the year ended September 28, 2013.
2. Compute the current ratio and acid-test ratio as of September 28, 2013, and September 29, 2012. Interpret and comment on the ratio results. How does Apple compare to the industry average of 1.5 for the current ratio and 1.25 for the acid-test ratio?

**Fast Forward**

3. Access Apple's financial statements (form 10-K) for fiscal years ending after September 28, 2013, from its website ([Apple.com](http://Apple.com)) or the SEC's EDGAR database ([www.SEC.gov](http://www.SEC.gov)). Recompute and interpret the current ratio and acid-test ratio for these current fiscal years.

**REPORTING IN ACTION**

A1

**APPLE**

**BTN 5-2** Key comparative figures for both **Apple** and **Google** follow.

(\$ millions)	Apple		Google	
	Current Year	Prior Year	Current Year	Prior Year
Net sales . . . . .	\$170,910	\$156,508	\$59,825	\$50,175
Cost of sales . . . . .	106,606	87,846	25,858	20,634

**COMPARATIVE ANALYSIS**

A2

**APPLE  
GOOGLE**

**Required**

1. Compute the dollar amount of gross margin and the gross margin ratio for the two years shown for each of these companies.
2. Which company earns more in gross margin for each dollar of net sales? How do they compare to the industry average of 45.0%?
3. Did the gross margin ratio improve or decline for these companies?

**BTN 5-3** Amy Martin is a student who plans to attend approximately four professional events a year at her college. Each event necessitates a financial outlay of \$100 to \$200 for a new suit and accessories. After incurring a major hit to her savings for the first event, Amy developed a different approach. She buys the suit on credit the week before the event, wears it to the event, and returns it the next week to the store for a full refund on her charge card.

**ETHICS CHALLENGE**

C1 P2

**Required**

1. Comment on the ethics exhibited by Amy and possible consequences of her actions.
2. How does the merchandising company account for the suits that Amy returns?

**COMMUNICATING IN PRACTICE**

**BTN 5-4** You are the financial officer for Music Plus, a retailer that sells goods for home entertainment needs. The business owner, Vic Velakturi, recently reviewed the annual financial statements you prepared and sent you an e-mail stating that he thinks you overstated net income. He explains that although he has invested a great deal in security, he is sure shoplifting and other forms of inventory shrinkage have occurred, but he does not see any deduction for shrinkage on the income statement. The store uses a perpetual inventory system.

**Required**

Prepare a brief memorandum that responds to the owner’s concerns.

**TAKING IT TO THE NET**

**BTN 5-5** Access the SEC’s EDGAR database ([www.SEC.gov](http://www.SEC.gov)) and obtain the March 24, 2014, filing of its fiscal 2014 10-K report (for year ended February 1, 2014) for **J. Crew Group, Inc.** (ticker: JCG).

**Required**

Prepare a table that reports the gross margin ratios for J. Crew using the revenues and cost of goods sold data from J. Crew’s income statement for each of its most recent three years. Analyze and comment on the trend in its gross margin ratio.

**TEAMWORK IN ACTION**

**BTN 5-6** Official Brands’ general ledger and supplementary records at the end of its current period reveal the following.

Sales .....	\$600,000	Merchandise inventory (beginning of period) .....	\$ 98,000
Sales returns & allowances .....	20,000	Invoice cost of merchandise purchases .....	360,000
Sales discounts .....	13,000	Purchase discounts received .....	9,000
Cost of transportation-in .....	22,000	Purchase returns and allowances .....	11,000
Operating expenses .....	50,000	Merchandise inventory (end of period) .....	84,000

**Required**

1. Each member of the team is to assume responsibility for computing *one* of the following items. You are not to duplicate your teammates’ work. Get any necessary amounts to compute your item from the appropriate teammate. Each member is to explain his or her computation to the team in preparation for reporting to the class.
 

<ol style="list-style-type: none"> <li>a. Net sales</li> <li>b. Total cost of merchandise purchases</li> <li>c. Cost of goods sold</li> </ol>	<ol style="list-style-type: none"> <li>d. Gross profit</li> <li>e. Net income</li> </ol>
---	--
2. Check your net income with the instructor. If correct, proceed to step 3.
3. Assume that a physical inventory count finds that actual ending inventory is \$76,000. Discuss how this affects previously computed amounts in step 1.

**Point:** In teams of four, assign the same student *a* and *e*. Rotate teams for reporting on a different computation and the analysis in step 3.

**ENTREPRENEURIAL DECISION**

**BTN 5-7** Refer to the opening feature about **Sseko Designs**. Assume that Liz Forkin Bohannon reports current annual sales at approximately \$1 million and prepares the following income statement.

SSEKO DESIGNS Income Statement For Year Ended January 31, 2014	
Net sales .....	\$1,000,000
Cost of sales .....	610,000
Expenses (other than cost of sales) .....	200,000
Net income .....	<u>\$ 190,000</u>

Liz Forkin Bohannon sells to individuals and retailers, ranging from small shops to large chains. Assume that she currently offers credit terms of 1/15, n/60, and ships FOB destination. To improve her cash flow, she is considering changing credit terms to 3/10, n/30. In addition, she proposes to change shipping terms to FOB shipping point. She expects that the increase in discount rate will increase net sales by 9%, but the gross margin ratio (and ratio of cost of sales divided by net sales) is expected to remain unchanged. She also expects that delivery expenses will be zero under this proposal; thus, expenses other than cost of sales are expected to increase only 6%.

### Required

1. Prepare a forecasted income statement for the year ended January 31, 2015, based on the proposal.
2. Based on the forecasted income statement alone (from your part 1 solution), do you recommend that Liz implement the new sales policies? Explain.
3. What else should Liz consider before deciding whether or not to implement the new policies? Explain.

**BTN 5-8** Arrange an interview (in person or by phone) with the manager of a retail shop in a mall or in the downtown area of your community. Explain to the manager that you are a student studying merchandising activities and the accounting for sales returns and sales allowances. Ask the manager what the store policy is regarding returns. Also find out if sales allowances are ever negotiated with customers. Inquire whether management perceives that customers are abusing return policies and what actions management takes to counter potential abuses. Be prepared to discuss your findings in class.

### HITTING THE ROAD

C1

**Point:** This activity complements the Ethics Challenge assignment.

**BTN 5-9** **Samsung** ([www.Samsung.com](http://www.Samsung.com)), **Apple**, and **Google** are competitors in the global marketplace. Key comparative figures for each company follow.

	Net Sales	Cost of Sales
Samsung* . . . . .	₩228,692,667	₩137,696,309
Apple† . . . . .	\$ 170,910	\$ 106,606
Google† . . . . .	\$ 59,825	\$ 25,858

\* Millions of Korean won for Samsung.

† Millions of dollars for Apple and Google.

### GLOBAL DECISION

A2 P4

**Samsung**  
**APPLE**  
**GOOGLE**

### Required

1. Rank the three companies (highest to lowest) based on the gross margin ratio.
2. Which of the companies uses a multiple-step income statement format? (These companies' income statements are in Appendix A.)

## ANSWERS TO MULTIPLE CHOICE QUIZ

1. c; Gross profit =  $\$550,000 - \$193,000 = \underline{\underline{\$357,000}}$
2. d;  $(\$4,500 - \$250) \times (100\% - 2\%) = \underline{\underline{\$4,165}}$
3. b; Net sales =  $\$75,000 + \$320,000 - \$13,700 - \$6,000 = \underline{\underline{\$375,300}}$
4. b; Acid-test ratio =  $\$37,500/\$50,000 = \underline{\underline{0.750}}$
5. a; Gross margin ratio =  $(\$675,000 - \$459,000)/\$675,000 = \underline{\underline{32\%}}$

# chapter 6

# Inventories and Cost of Sales

## Chapter Preview

### INVENTORY BASICS

- C1** Determining inventory items
- C2** Determining inventory costs  
Internal control of inventory and taking a physical count

### INVENTORY COSTING

- P1** Cost flow assumptions using:
  - Specific identification
  - First-in, first-out
  - Last-in, first-out
  - Weighted average
- A1** Effects on financial statements

### INVENTORY VALUATION, ERRORS, AND ANALYSIS

- P2** Inventory valuation at lower of cost or market
- A2** Financial statement effects of inventory errors
- A3** Inventory management
- P4** Inventory estimation

## Learning Objectives

### CONCEPTUAL

- C1** Identify the items making up merchandise inventory.
- C2** Identify the costs of merchandise inventory.

### ANALYTICAL

- A1** Analyze the effects of inventory methods for both financial and tax reporting.

- A2** Analyze the effects of inventory errors on current and future financial statements.
- A3** Assess inventory management using both inventory turnover and days' sales in inventory.

### PROCEDURAL

- P1** Compute inventory in a perpetual system using the methods of specific identification, FIFO, LIFO, and weighted average.

- P2** Compute the lower of cost or market amount of inventory.
- P3** *Appendix 6A*—Compute inventory in a periodic system using the methods of specific identification, FIFO, LIFO, and weighted average.
- P4** *Appendix 6B*—Apply both the retail inventory and gross profit methods to estimate inventory.

## Out of the Woods

BOISE—"We make the world's best handcrafted eyewear and boast the largest sustainable eyewear line in the industry," exclaims Brooks Dame. Brooks, along with his brothers Taylor and Tanner, launched **Proof Eyewear (IWantProof.com)** out of their garage in 2010 making wooden glasses for family and friends. They targeted surfers and skateboarders such as themselves, but quickly found that the market was much larger. "Wood adds a fresh take on sunglasses and makes them a little more edgy," explains Brooks. "Wood eyewear is a crazy idea [and] that crazy idea has become a business and a passion."

The company's launch, however, was a challenge. "We had to get our financials in order," admits Brooks. "We really hadn't run any numbers." The brothers also had to confront inventory production and sales planning, and had to deal with discounts and allowances. A major challenge was identifying the appropriate inventories while controlling costs. "We didn't know what to expect," recalls Brooks. "We had money in the bank and our savings was growing and we felt good about it."

Applying inventory management, and old-fashioned trial and error, the brothers learned to fill orders, collect money, and maintain the right level and mix of inventory. To help, they set up an inventory system to account for sales and purchases

in real time. The brothers insist that while it is important to stay on the cutting edge, business success demands sound inventory management. "We needed cash to fund inventory and cover new orders coming in," explains Brooks. Nevertheless, success requires more than perpetual inventory management. "We swam with the sharks and made it out and we did it our way," says Brooks.

*"Don't sleep on your dreams"*

— Brooks Dame

Although the brothers continue to measure, monitor, and manage inventories and costs, their success and growth are pushing them into new products and opportunities. "We are never satisfied; we're always looking for ways to improve our products and to make things better," explains Tanner. "We are hungry and never stop exploring and pushing the envelope."

Their inventory procedures and accounting systems contribute to their lean business model. "We get things done quickly and efficiently working as brothers," insists Brooks. Sustainability is also part of their success. "Sustainability is a key test in every product decision that we make," explains Brooks. "Making a product that would not harm Mother Nature was just a given. It is part of our constitution as a company." Now that is timeless.

## INVENTORY BASICS

This section identifies the items and costs making up merchandise inventory. It also describes the importance of internal controls in taking a physical count of inventory.

### Determining Inventory Items

**C1** Identify the items making up merchandise inventory.

Merchandise inventory includes all goods that a company owns and holds for sale. This rule holds regardless of where the goods are located when inventory is counted. Certain inventory items require special attention, including goods in transit, goods on consignment, and goods that are damaged or obsolete.

**Point:** FOB shipping point is also called FOB origin or FOB supplier's warehouse.

**Goods in Transit** Does a purchaser's inventory include goods in transit from a supplier? The answer is that if ownership has passed to the purchaser, the goods are included in the purchaser's inventory. We determine this by reviewing the shipping terms: *FOB destination* or *FOB shipping point*. Goods purchased FOB shipping point are included in the buyer's inventory when the items are shipped. Goods purchased FOB destination are not included in the buyer's inventory until they arrive at their destination.

**Goods on Consignment** Goods on consignment are goods shipped by the owner, called the **consignor**, to another party, the **consignee**. A consignee sells goods for the owner. The consignor continues to own the consigned goods and reports them in its inventory. **Upper Deck**, for instance, pays sports celebrities such as Aaron Rodgers of the Green Bay Packers to sign memorabilia, which are offered to shopping networks on consignment. Upper Deck, the consignor, must report these items in its inventory until sold. The consignee never includes consigned goods in inventory.

**Goods Damaged or Obsolete** Damaged and obsolete (and deteriorated) goods are not counted in inventory if they cannot be sold. If these goods can be sold at a reduced price, they are included in inventory at a conservative estimate of their **net realizable value**. Net realizable value is sales price minus the cost of making the sale. The period when damage or obsolescence (or deterioration) occurs is the period when the loss in value is reported.

### Decision Insight

A wireless portable device with a two-way radio allows clerks to quickly record inventory by scanning bar codes and to instantly send and receive inventory data. It gives managers access to up-to-date information on inventory and its location. Bar codes have influenced nearly all aspects of inventory control and management. The use of bar codes makes accounting for inventory simpler, more accurate, and more efficient. ■

Clerkenwell/Getty Images

### Determining Inventory Costs

**C2** Identify the costs of merchandise inventory.

Merchandise inventory includes costs of expenditures necessary, directly or indirectly, to bring an item to a salable condition and location. This means that the cost of an inventory item includes its invoice cost minus any discount, and plus any incidental costs necessary to put it in a place and condition for sale. Incidental costs can include import tariffs, freight, storage, insurance, and costs incurred in an aging process (for example, aging wine or cheese).

Accounting principles prescribe that incidental costs be added to inventory. Also, the *matching (expense recognition) principle* states that inventory costs should be recorded against revenue in the period when inventory is sold. However, some companies use the *materiality constraint (cost-to-benefit constraint)* to avoid assigning some incidental costs of acquiring merchandise to inventory. Instead, they expense them to cost of goods sold when incurred. These companies argue either that those incidental costs are immaterial or that the effort in assigning them outweighs the benefit.

## Internal Controls and Taking a Physical Count

Events can cause the Inventory account balance to differ from the actual inventory available. Such events include theft, loss, damage, and errors. Thus, nearly all companies take a *physical count of inventory* at least once each year—informally called *taking an inventory*. This often occurs at the end of a fiscal year or when inventory amounts are low. This physical count is used to adjust the Inventory account balance to the actual inventory available.

**Fraud:** Auditors commonly observe employees as they take a physical inventory. Auditors take their own test counts to monitor the accuracy of a company's count.

### Fraud

A company applies internal controls when taking a physical count of inventory that usually include the following procedures to minimize fraud and to increase reliability:

- *Prenumbered inventory tickets* are distributed to *counters*—each ticket must be accounted for.
- Counters of inventory are assigned and do not include those responsible for inventory.
- Counters confirm the validity of inventory, including its existence, amount, and quality.
- A second count is taken by a different counter.
- A manager confirms that all inventories are ticketed once, and only once.

**Point:** The Inventory account is a controlling account for the inventory subsidiary ledger. This *subsidiary ledger* contains a separate record (units and costs) for each separate product, and it can be in electronic or paper form. Subsidiary records assist managers in planning and monitoring inventory.

1. A master carver of wooden birds operates her business out of a garage. At the end of the current period, the carver has 17 units (carvings) in her garage, three of which were damaged by water and cannot be sold. The distributor also has another five units in her truck, ready to deliver per a customer order, terms FOB destination, and another 11 units out on consignment at several small retail stores. How many units does the carver include in the business's period-end inventory?
2. A distributor of artistic iron-based fixtures acquires a piece for \$1,000, terms FOB shipping point. Additional costs in obtaining it and offering it for sale include \$150 for transportation-in, \$300 for import duties, \$100 for insurance during shipment, \$200 for advertising, a \$50 voluntary gratuity to the delivery person, \$75 for enhanced store lighting, and \$250 for sales staff salaries. For computing inventory, what cost is assigned to this artistic piece?

## INVENTORY COSTING UNDER A PERPETUAL SYSTEM

Accounting for inventory affects both the balance sheet and the income statement. A major goal in accounting for inventory is to properly match costs with sales. We use the *expense recognition* (or *matching*) *principle* to decide how much of the cost of the goods available for sale is deducted from sales and how much is carried forward as inventory and matched against future sales.

Management decisions in accounting for inventory involve the following:

- Items included in inventory and their costs.
- Costing method (specific identification, FIFO, LIFO, or weighted average).
- Inventory system (perpetual or periodic).
- Use of market values or other estimates.

The first point was explained on the prior two pages. The second and third points will be addressed now. The fourth point is the focus at the end of this chapter. Decisions on these points affect the reported amounts for inventory, cost of goods sold, gross profit, income, current assets, and other accounts.

One of the most important issues in accounting for inventory is determining the per unit costs assigned to inventory items. When all units are purchased at the same unit cost, this process is simple. When identical items are purchased at different costs, however, a question arises as to which amounts to record in cost of goods sold and which amounts remain in inventory.

**EXHIBIT 6.1**

Frequency in Use of Inventory Methods

Four methods are commonly used to assign costs to inventory and to cost of goods sold: (1) specific identification; (2) first-in, first-out (FIFO); (3) last-in, first-out (LIFO); and (4) weighted average. Exhibit 6.1 shows the frequency in the use of these methods.

Each method assumes a particular pattern for how costs flow through inventory. Each of these four methods is acceptable whether or not the actual physical flow of goods follows the cost flow assumption. Physical flow of goods depends on the type of product and the way it is stored. (Perishable goods such as fresh fruit demand that a business attempt to sell them in a first-in, first-out physical

flow. Other products such as crude oil and minerals such as coal, gold, and decorative stone can be sold in a last-in, first-out physical flow.) With the exception of specific identification, the **physical flow and cost flow need not be the same.**

**Inventory Cost Flow Assumptions**

**Point:** Cost of goods sold is abbreviated COGS.

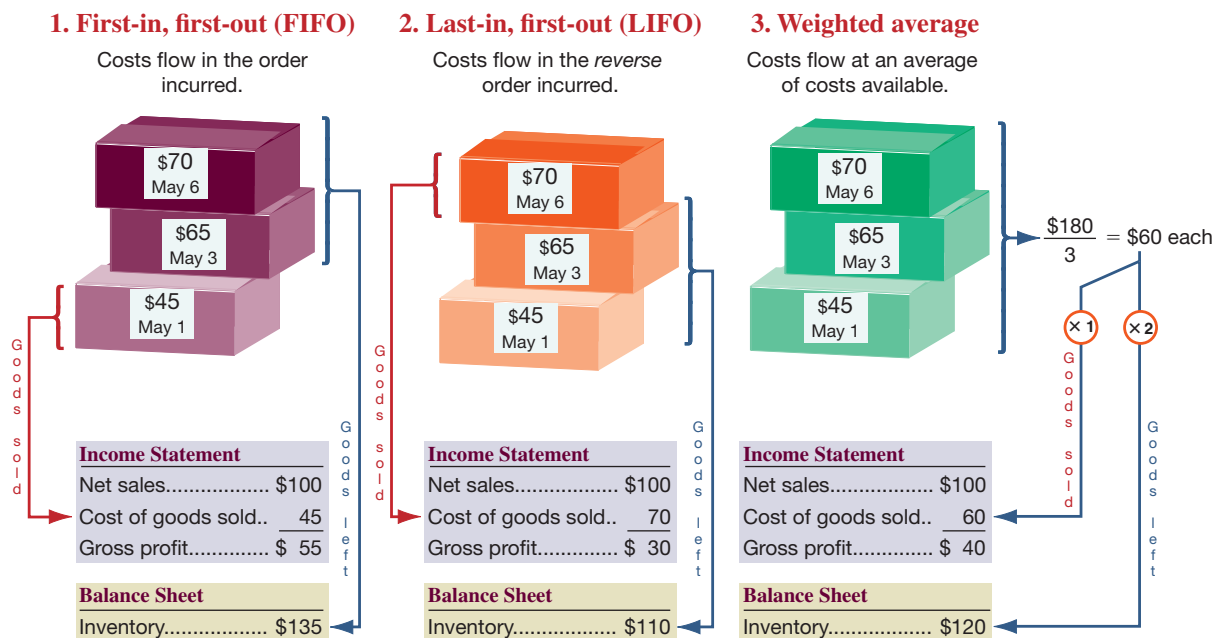

This section introduces inventory cost flow assumptions. For this purpose, assume that three identical units are purchased separately at the following three dates and costs: May 1 at \$45, May 3 at \$65, and May 6 at \$70. One unit is then sold on May 7 for \$100. Exhibit 6.2 gives a visual layout of the flow of costs to either the gross profit section of the income statement or the inventory reported on the balance sheet for FIFO, LIFO, and weighted average.

(1) *FIFO assumes costs flow in the order incurred.* The unit purchased on May 1 for \$45 is the earliest cost incurred—it is sent to cost of goods sold on the income statement first. The remaining two units (\$65 and \$70) are reported in inventory on the balance sheet.

(2) *LIFO assumes costs flow in the reverse order incurred.* The unit purchased on May 6 for \$70 is the most recent cost incurred—it is sent to cost of goods sold on the income

**EXHIBIT 6.2**

Cost Flow Assumptions

statement. The remaining two units (\$45 and \$65) are reported in inventory on the balance sheet.

(3) *Weighted average assumes costs flow at an average of the costs available.* The units available at the May 7 sale average \$60 in cost, computed as  $(\$45 + \$65 + \$70)/3$ . One unit's \$60 average cost is sent to cost of goods sold on the income statement. The remaining two units' average costs are reported in inventory at \$120 on the balance sheet.

Cost flow assumptions can markedly impact gross profit and inventory numbers. Exhibit 6.2 shows that gross profit as a percent of net sales ranges from 30% to 55% due to nothing else but the cost flow assumption.

**Point:** It is helpful to recall the cost flow of inventory.

The following 5 pages on inventory costing use the perpetual system. Appendix 6A uses the periodic system. An instructor can choose to cover either one or both systems. If the perpetual system is skipped, then read Appendix 6A and return to the Decision Maker box (5 pages ahead) titled "Cost Analyst."

### Inventory Costing Illustration

This section provides a comprehensive illustration of inventory costing methods. We use information from Trekking, a sporting goods store. Among its many products, Trekking carries one type of mountain bike whose sales are directed at resorts that provide inexpensive mountain bikes for complimentary guest use. We use Trekking's data from August. Its mountain bike (unit) inventory at the beginning of August and its purchases and sales during August are shown in Exhibit 6.3. It ends August with 12 bikes remaining in inventory.

**P1** Compute inventory in a perpetual system using the methods of specific identification, FIFO, LIFO, and weighted average.

Date	Activity	Units Acquired at Cost	Units Sold at Retail	Unit Inventory
Aug. 1	Beginning inventory . . . .	10 units @ \$ 91 = \$ 910		10 units
Aug. 3	Purchases . . . . .	15 units @ \$106 = \$ 1,590		25 units
Aug. 14	Sales . . . . .		20 units @ \$130	5 units
Aug. 17	Purchases . . . . .	20 units @ \$115 = \$ 2,300		25 units
Aug. 28	Purchases . . . . .	10 units @ \$119 = \$ 1,190		35 units
Aug. 31	Sales . . . . .		23 units @ \$150	12 units
	Totals . . . . .	55 units	43 units	12 units

Units available for sale
Goods available for sale
Units sold
Units left

### EXHIBIT 6.3

Purchases and Sales of Goods

Trekking uses the perpetual inventory system, which means that its Merchandise Inventory account is continually updated to reflect purchases and sales. (Appendix 6A describes the assignment of costs to inventory using a periodic system.) Regardless of what inventory method or system is used, cost of goods available for sale must be allocated between cost of goods sold and ending inventory.

**Point:** The perpetual inventory system is the most dominant system for U.S. businesses.

### Specific Identification

When each item in inventory can be identified with a specific purchase and invoice, we can use **specific identification** or **SI** (also called *specific invoice inventory pricing*) to assign costs. We also need sales records that identify exactly which items were sold and when. For example, each bike's serial number could be used to track costs and compute cost of goods sold. Trekking's internal documents reveal the following specific unit sales:

- August 14 Sold 8 bikes costing \$91 each and 12 bikes costing \$106 each
- August 31 Sold 2 bikes costing \$91 each, 3 bikes costing \$106 each, 15 bikes costing \$115 each, and 3 bikes costing \$119 each

Applying specific identification, and using the information above and from Exhibit 6.3, we prepare Exhibit 6.4. This exhibit starts with 10 bikes at \$91 each in beginning inventory. On August 3,

**Point:** Three key variables determine the value assigned to ending inventory: (1) inventory quantity, (2) unit costs of inventory, and (3) cost flow assumption.

**EXHIBIT 6.4**

Specific Identification Computations

For the 20 units sold on Aug. 14, the company specifically identified that 8 of those had cost \$91 and 12 had cost \$106.

For the 23 units sold on Aug. 31, the company specifically identified each bike sold and its acquisition cost from prior purchases.

	"goods in"	"goods out"	"what's left"
Date	Goods Purchased	Cost of Goods Sold	Inventory Balance
Aug. 1	Beginning balance		10 @ \$ 91 = \$ 910
Aug. 3	15 @ \$106 = \$1,590		10 @ \$ 91 } 15 @ \$106 } = \$2,500
Aug. 14		8 @ \$ 91 = \$ 728 } 12 @ \$106 = \$1,272 } = <b>\$2,000*</b>	2 @ \$ 91 } 3 @ \$106 } = \$ 500
Aug. 17	20 @ \$115 = \$2,300		2 @ \$ 91 } 3 @ \$106 } 20 @ \$115 } = \$2,800
Aug. 28	10 @ \$119 = \$1,190		2 @ \$ 91 } 3 @ \$106 } 20 @ \$115 } 10 @ \$119 } = \$3,990
Aug. 31		2 @ \$ 91 = \$ 182 } 3 @ \$106 = \$ 318 } 15 @ \$115 = \$1,725 } 3 @ \$119 = \$ 357 } = <b>\$2,582*</b>	5 @ \$115 } 7 @ \$119 } = <b><u>\$1,408</u></b>
		<b><u>\$4,582</u></b>	

**Merchandise Inventory (SI)**

Aug. 1	910	
Aug. 3	1,590	
		Aug. 14
Aug. 17	2,300	2,000
Aug. 28	1,190	
		Aug. 31
Aug. 31	1,408	2,582

\* Identification of items sold (and their costs) is obtained from internal documents that track each unit from its purchase to its sale.

**Point:** Specific identification is usually practical for companies with expensive or custom-made inventory. Examples include car dealerships, implement dealers, jewelers, and fashion designers.

**Point:** The assignment of costs to goods sold and to inventory using specific identification is the same for both the perpetual and periodic systems.

**Point:** "Goods Purchased" column is identical for all methods. Data are taken from Exhibit 6.3.

**Point:** Under FIFO, a unit sold is assigned the earliest (oldest) cost from inventory. This leaves the most recent costs in ending inventory.

15 more bikes are purchased at \$106 each for \$1,590. Inventory available now consists of 10 bikes at \$91 each and 15 bikes at \$106 each, for a total of \$2,500. On August 14 (see sales data on previous page), 20 bikes costing \$2,000 are sold—leaving 5 bikes costing \$500 in inventory. On August 17, 20 bikes costing \$2,300 are purchased, and on August 28, another 10 bikes costing \$1,190 are purchased, for a total of 35 bikes costing \$3,990 in inventory. On August 31 (see sales data on previous page), 23 bikes costing \$2,582 are sold, which leaves 12 bikes costing \$1,408 in ending inventory. Carefully study this exhibit and the boxed explanations to see the flow of costs both in and out of inventory. Each unit, whether sold or remaining in inventory, has its own specific cost attached to it.

When using specific identification, Trekking's cost of goods sold reported on the income statement totals **\$4,582**, the sum of \$2,000 and \$2,582 from the third column of Exhibit 6.4. Trekking's ending inventory reported on the balance sheet is **\$1,408**, which is the final inventory balance from the fourth column of Exhibit 6.4.

**First-In, First-Out**

The **first-in, first-out (FIFO)** method of assigning costs to both inventory and cost of goods sold assumes that inventory items are sold in the order acquired. When sales occur, the costs of the earliest units acquired are charged to cost of goods sold. This leaves the costs of the most recent purchases in ending inventory. Use of FIFO for computing the cost of inventory and cost of goods sold is shown in Exhibit 6.5.

This exhibit starts with beginning inventory of 10 bikes at \$91 each. On August 3, 15 more bikes costing \$106 each are bought for \$1,590. Inventory now consists of 10 bikes at \$91 each and 15 bikes at \$106 each, for a total of \$2,500. On August 14, 20 bikes are sold—applying FIFO, the first 10 sold cost \$91 each and the next 10 sold cost \$106 each, for a total cost of \$1,970. This leaves 5 bikes costing \$106 each, or \$530, in inventory. On August 17, 20 bikes costing \$2,300 are purchased, and on August 28, another 10 bikes costing \$1,190 are purchased, for a total of 35 bikes costing \$4,020 in inventory. On August 31, 23 bikes are sold—applying FIFO, the first 5 bikes sold cost \$530 and the next 18 sold cost \$2,070, which leaves 12 bikes costing \$1,420 in ending inventory.

Date	Goods Purchased	Cost of Goods Sold	Inventory Balance
Aug. 1	Beginning balance		10 @ \$ 91 = \$ 910
Aug. 3	15 @ \$106 = \$1,590		10 @ \$ 91 } 15 @ \$106 } = \$2,500
Aug. 14		10 @ \$ 91 = \$ 910 } 10 @ \$106 = \$1,060 } = <b>\$1,970</b>	5 @ \$106 = \$ 530
Aug. 17	20 @ \$115 = \$2,300		5 @ \$106 } 20 @ \$115 } = \$2,830
Aug. 28	10 @ \$119 = \$1,190		5 @ \$106 } 20 @ \$115 } = \$4,020 10 @ \$119 }
Aug. 31		5 @ \$106 = \$ 530 } 18 @ \$115 = \$2,070 } = <b>\$2,600</b>	2 @ \$115 } 10 @ \$119 } = <b>\$1,420</b>
		<b>\$4,570</b>	

**EXHIBIT 6.5**

FIFO Computations—  
Perpetual System

For the 20 units sold on Aug. 14, the first 10 sold are assigned the earliest cost of \$91 (from beg. bal.). The next 10 sold are assigned the next earliest cost of \$106.

For the 23 units sold on Aug. 31, the first 5 sold are assigned the earliest available cost of \$106 (from Aug. 3 purchase). The next 18 sold are assigned the next earliest cost of \$115 (from Aug. 17 purchase).

Trekking’s FIFO cost of goods sold reported on its income statement (reflecting the 43 units sold) is **\$4,570** (\$1,970 + \$2,600), and its ending inventory reported on the balance sheet (reflecting the 12 units unsold) is **\$1,420**.

**Last-In, First-Out**

The **last-in, first-out (LIFO)** method of assigning costs assumes that the most recent purchases are sold first. These more recent costs are charged to the goods sold, and the costs of the earliest purchases are assigned to inventory. As with other methods, LIFO is acceptable even when the physical flow of goods does not follow a last-in, first-out pattern. One appeal of LIFO is that by assigning costs from the most recent purchases to cost of goods sold, LIFO comes closest to matching current costs of goods sold with revenues (compared to FIFO or weighted average).

Exhibit 6.6 shows the LIFO computations. It starts with beginning inventory of 10 bikes at \$91 each. On August 3, 15 more bikes costing \$106 each are bought for \$1,590. Inventory now consists of 10 bikes at \$91 each and 15 bikes at \$106 each, for a total of \$2,500. On August 14, 20 bikes are sold—applying LIFO, the first 15 sold are from the most recent purchase costing \$106 each, and

**Merchandise Inventory (FIFO)**

Aug. 1	910	
Aug. 3	1,590	
Aug. 14		1,970
Aug. 17	2,300	
Aug. 28	1,190	
Aug. 31		2,600
Aug. 31	1,420	

**Point:** Under LIFO, a unit sold is assigned the most recent (latest) cost from inventory. This leaves the oldest costs in inventory.

Date	Goods Purchased	Cost of Goods Sold	Inventory Balance
Aug. 1	Beginning balance		10 @ \$ 91 = \$ 910
Aug. 3	15 @ \$106 = \$1,590		10 @ \$ 91 } 15 @ \$106 } = \$ 2,500
Aug. 14		15 @ \$106 = \$1,590 } 5 @ \$ 91 = \$ 455 } = <b>\$2,045</b>	5 @ \$ 91 = \$ 455
Aug. 17	20 @ \$115 = \$2,300		5 @ \$ 91 } 20 @ \$115 } = \$ 2,755
Aug. 28	10 @ \$119 = \$1,190		5 @ \$ 91 } 20 @ \$115 } = \$ 3,945 10 @ \$119 }
Aug. 31		10 @ \$119 = \$1,190 } 13 @ \$115 = \$1,495 } = <b>\$2,685</b>	5 @ \$ 91 } 7 @ \$115 } = <b>\$1,260</b>
		<b>\$4,730</b>	

**EXHIBIT 6.6**

LIFO Computations—  
Perpetual System

For the 20 units sold on Aug. 14, the first 15 sold are assigned the most recent cost of \$106. The next 5 sold are assigned the next most recent cost of \$91.

For the 23 units sold on Aug. 31, the first 10 sold are assigned the most recent cost of \$119. The next 13 sold are assigned the next most recent cost of \$115.

Merchandise Inventory (LIFO)	
Aug. 1	910
Aug. 3	1,590
	Aug. 14 2,045
Aug. 17	2,300
Aug. 28	1,190
	Aug. 31 2,685
Aug. 31	1,260

the next 5 sold are from the next most recent purchase costing \$91 each, for a total cost of \$2,045. This leaves 5 bikes costing \$91 each, or \$455, in inventory. On August 17, 20 bikes costing \$2,300 are purchased, and on August 28, another 10 bikes costing \$1,190 are purchased, for a total of 35 bikes costing \$3,945 in inventory. On August 31, 23 bikes are sold—applying LIFO, the first 10 bikes sold are from the most recent purchase costing \$1,190, and the next 13 sold are from the next most recent purchase costing \$1,495, which leaves 12 bikes costing \$1,260 in ending inventory.

Trekking’s LIFO cost of goods sold reported on the income statement is **\$4,730** (\$2,045 + \$2,685), and its ending inventory reported on the balance sheet is **\$1,260**.

### Weighted Average

The **weighted average** (also called **average cost**) method of assigning cost requires that we use the weighted average cost per unit of inventory at the time of each sale. Weighted average cost per unit at the time of each sale equals the cost of goods available for sale divided by the units available. The results using weighted average (WA) for Trekking are shown in Exhibit 6.7.

#### EXHIBIT 6.7

Weighted Average Computations—Perpetual System

For the 20 units sold on Aug. 14, the cost assigned is the \$100 average cost per unit from the Inventory Balance column at the time of sale.

For the 23 units sold on Aug. 31, the cost assigned is the \$114 average cost per unit from the Inventory Balance column at the time of sale.

Date	Goods Purchased	Cost of Goods Sold	Inventory Balance
Aug. 1	Beginning balance		10 @ \$ 91 = \$ 910
Aug. 3	15 @ \$106 = \$1,590		10 @ \$ 91 } = \$2,500 (or \$100 per unit) <sup>a</sup> 15 @ \$106 }
Aug. 14		20 @ \$100 = <b>\$2,000</b>	5 @ \$100 = \$ 500 (or \$100 per unit) <sup>b</sup>
Aug. 17	20 @ \$115 = \$2,300		5 @ \$100 } = \$2,800 (or \$112 per unit) <sup>c</sup> 20 @ \$115 }
Aug. 28	10 @ \$119 = \$1,190		5 @ \$100 } = \$3,990 (or \$114 per unit) <sup>d</sup> 20 @ \$115 } 10 @ \$119 }
Aug. 31		23 @ \$114 = <b>\$2,622</b>	12 @ \$114 = <b>\$1,368</b> (or \$114 per unit) <sup>e</sup>
		<b>\$4,622</b>	

<sup>a</sup> \$100 per unit = (\$2,500 inventory balance ÷ 25 units in inventory).  
<sup>b</sup> \$100 per unit = (\$500 inventory balance ÷ 5 units in inventory).  
<sup>c</sup> \$112 per unit = (\$2,800 inventory balance ÷ 25 units in inventory).  
<sup>d</sup> \$114 per unit = (\$3,990 inventory balance ÷ 35 units in inventory).  
<sup>e</sup> \$114 per unit = (\$1,368 inventory balance ÷ 12 units in inventory).

Merchandise Inventory (WA)	
Aug. 1	910
Aug. 3	1,590
	Aug. 14 2,000
Aug. 17	2,300
Aug. 28	1,190
	Aug. 31 2,622
Aug. 31	1,368

This exhibit starts with beginning inventory of 10 bikes at \$91 each. On August 3, 15 more bikes costing \$106 each are bought for \$1,590. Inventory now consists of 10 bikes at \$91 each and 15 bikes at \$106 each, for a total of \$2,500. The average cost per bike for that inventory is \$100, computed as \$2,500/(10 bikes + 15 bikes). On August 14, 20 bikes are sold—applying WA, the 20 sold are assigned the \$100 average cost, for a total cost of \$2,000. This leaves 5 bikes with an average cost of \$100 each, or \$500, in inventory. On August 17, 20 bikes costing \$2,300 are purchased, and on August 28, another 10 bikes costing \$1,190 are purchased, for a total of 35 bikes costing \$3,990 in inventory at August 28. The average cost per bike for the August 28 inventory is \$114, computed as \$3,990/(5 bikes + 20 bikes + 10 bikes). On August 31, 23 bikes are sold—applying WA, the 23 sold are assigned the \$114 average cost, for a total cost of \$2,622. This leaves 12 bikes costing \$1,368 in ending inventory.

Trekking’s cost of goods sold reported on the income statement (reflecting the 43 units sold) is **\$4,622** (\$2,000 + \$2,622), and its ending inventory reported on the balance sheet (reflecting the 12 units unsold) is **\$1,368**.

This completes computations under the four most common perpetual inventory costing methods. Advances in technology have greatly reduced the cost of a perpetual inventory system. Many companies now ask whether they can afford *not* to have a perpetual inventory system because timely access to inventory information is a competitive advantage and it can help reduce the amount of inventory, which reduces costs.

**Point:** Under weighted average, a unit sold is assigned the average cost of all items currently available for sale at the date of each sale. This means a new average cost is computed after each purchase.

**Point:** Cost of goods available for sale, units available for sale, and units in ending inventory are identical for all methods.

## Decision Insight

**Inventory Control** Inventory safeguards include restricted access, use of authorized requisitions, security measures, and controlled environments to prevent damage. Proper accounting includes matching inventory received with purchase order terms and quality requirements, preventing misstatements, and controlling access to inventory records. A study reports that 23% of employees in purchasing and procurement observed inappropriate kickbacks or gifts from suppliers. Another study reports that submission of fraudulent supplier invoices is now common, and perpetrators are often employees (KPMG 2011). ■

## Financial Statement Effects of Costing Methods

When purchase prices do not change, each inventory costing method assigns the same cost amounts to inventory and to cost of goods sold. When purchase prices are different, however, the methods nearly always assign different cost amounts. We show these differences in Exhibit 6.8 using Trekking's data.

**A1** Analyze the effects of inventory methods for both financial and tax reporting.

TREKKING COMPANY For Month Ended August 31				
	Specific Identification	FIFO	LIFO	Weighted Average
<b>Income Statement</b>				
Sales .....	\$ 6,050	\$ 6,050	\$ 6,050	\$ 6,050

### EXHIBIT 6.8

Financial Statement  
Effects of Inventory  
Costing Methods

This exhibit reveals two important results. First, when purchase costs *regularly rise*, as in Trekking's case, the following occurs:

- FIFO assigns the lowest amount to cost of goods sold—yielding the highest gross profit and net income.
- LIFO assigns the highest amount to cost of goods sold—yielding the lowest gross profit and net income, which also yields a temporary tax advantage by postponing payment of some income tax.
- Weighted average yields results between FIFO and LIFO.
- Specific identification always yields results that depend on which units are sold.

**Point:** Managers prefer FIFO when costs are rising and incentives exist to report higher income for reasons such as bonus plans, job security, and reputation.

Second, when costs *regularly decline*, the reverse occurs for FIFO and LIFO. Namely, FIFO gives the highest cost of goods sold—yielding the lowest gross profit and income. However, LIFO then gives the lowest cost of goods sold—yielding the highest gross profit and income.

**Point:** LIFO inventory is often less than the inventory's replacement cost because LIFO inventory is valued using the oldest inventory purchase costs.

All four inventory costing methods are acceptable. However, a company must disclose the inventory method it uses in its financial statements or notes. Each method offers certain advantages as follows:

- FIFO assigns an amount to inventory on the balance sheet that approximates its current cost; it also mimics the actual flow of goods for most businesses.
- LIFO assigns an amount to cost of goods sold on the income statement that approximates its current cost; it also better matches current costs with revenues in computing gross profit.
- Weighted average tends to smooth out erratic changes in costs.
- Specific identification exactly matches the costs of items with the revenues they generate.

### Decision Maker

**Cost Analyst** Your supervisor says she finds managing product costs easier if the balance sheet reflects inventory values that closely reflect replacement cost. Which inventory costing method do you advise adopting? ■ [Answers follow the chapter's Summary.]

**Tax Effects of Costing Methods** Trekking's segment income statement in Exhibit 6.8 includes income tax expense (at a rate of 30%) because it was formed as a corporation. Since inventory costs affect net income, they have potential tax effects. Trekking gains a temporary tax advantage by using LIFO. Many companies use LIFO for this reason.

Companies can and often do use different costing methods for financial reporting and tax reporting. *The only exception is when LIFO is used for tax reporting; in this case, the IRS requires that it also be used in financial statements*—called the LIFO conformity rule.

**Point:** LIFO conformity rule may be revised if IFRS is adopted for U.S. companies as IFRS currently does not permit LIFO (see Global View).

### Consistency in Using Costing Methods

The **consistency concept** prescribes that a company use the same accounting methods period after period so that financial statements are comparable across periods—the only exception is when a change from one method to another will improve its financial reporting. The *full-disclosure principle* prescribes that the notes to the statements report this type of change, its justification, and its effect on income.

The consistency concept does *not* require a company to use one method exclusively. For example, it can use different methods to value different categories of inventory.

### Decision Ethics

**Inventory Manager** Your compensation as inventory manager includes a bonus plan based on gross profit. Your superior asks your opinion on changing the inventory costing method from FIFO to LIFO. Since costs are expected to continue to rise, your superior predicts that LIFO would match higher current costs against sales, thereby lowering taxable income (and gross profit). What do you recommend? ■ [Answers follow the chapter's Summary.]

### NEED-TO-KNOW 6-2

Perpetual SI, FIFO, LIFO, and WA

P3

A company reported the following December purchases and sales data for its only product.

Date	Activities	Units Acquired at Cost	Units Sold at Retail
Dec. 1	Beginning inventory.....	5 units @ \$3.00 = \$ 15.00	
Dec. 8	Purchase .....	10 units @ \$4.50 = 45.00	
Dec. 9	Sales.....		8 units @ \$7.00
Dec. 19	Purchase .....	13 units @ \$5.00 = 65.00	
Dec. 24	Sales.....		18 units @ \$8.00
Dec. 30	Purchase .....	8 units @ \$5.30 = 42.40	
Totals	.....	<u>36 units</u> <u>\$167.40</u>	<u>26 units</u>

The company uses a *perpetual inventory system*. Determine the cost assigned to ending inventory and to cost of goods sold using (a) specific identification, (b) FIFO, (c) LIFO, and (d) weighted average. (Round per unit costs and inventory amounts to cents.) For specific identification, ending inventory consists of 10 units, where 8 are from the December 30 purchase and 2 are from the December 8 purchase.

#### Solutions

- a. Specific identification: Ending inventory—eight units from December 30 purchase and two units from December 8 purchase

Specific Identification	Ending Inventory	Cost of Goods Sold
$(8 \times \$5.30) + (2 \times \$4.50)$ .....	\$51.40	
$(5 \times \$3.00) + (8 \times \$4.50) + (13 \times \$5.00) + (0 \times \$5.30)$ .....		\$116.00
or \$167.40 [Total Goods Available] – \$51.40 [Ending Inventory] . . . .		\$116.00

Merchandise Inventory (SI)		
Beg. inventory	15.00	
Net purchases	152.40	
Avail. for sale	167.40	
		COGS 116.00
End. inventory	51.40	

**b. FIFO—Perpetual**

Date	Goods Purchased	Cost of Goods Sold	Inventory Balance
12/1			5 @ \$3.00 = \$15.00
12/8	10 @ \$4.50		5 @ \$3.00 } = \$60.00 10 @ \$4.50 }
12/9		5 @ \$3.00 } = \$ 28.50 3 @ \$4.50 }	7 @ \$4.50 = \$31.50
12/19	13 @ \$5.00		7 @ \$4.50 } = \$96.50 13 @ \$5.00 }
12/24		7 @ \$4.50 } = \$ 86.50 11 @ \$5.00 }	2 @ \$5.00 = \$10.00
12/30	8 @ \$5.30		2 @ \$5.00 } = \$52.40 8 @ \$5.30 }
		<u>\$115.00</u>	

Merchandise Inventory (FIFO)		
Beg. inventory	15.00	
Net purchases	152.40	
Avail. for sale	167.40	
		COGS 115.00
End. inventory	52.40	

OR “short-cut” FIFO—Perpetual

FIFO	Ending Inventory	Cost of Goods Sold
$(8 \times \$5.30) + (2 \times \$5.00)$ .....	\$52.40	
$(5 \times \$3.00) + (10 \times \$4.50) + (11 \times \$5.00)$ .....		\$115.00
or \$167.40 [Total Goods Available] – \$52.40 [Ending Inventory] . . . .		\$115.00

**c. LIFO—Perpetual**

Date	Goods Purchased	Cost of Goods Sold	Inventory Balance
12/1			5 @ \$3.00 = \$15.00
12/8	10 @ \$4.50		5 @ \$3.00 } = \$60.00 10 @ \$4.50 }
12/9		8 @ \$4.50 = \$ 36.00	5 @ \$3.00 } = \$24.00 2 @ \$4.50 }
12/19	13 @ \$5.00		5 @ \$3.00 } = \$89.00 2 @ \$4.50 } 13 @ \$5.00 }
12/24		13 @ \$5.00 } = \$ 83.00 2 @ \$4.50 } 3 @ \$3.00 }	2 @ \$3.00 = \$ 6.00
12/30	8 @ \$5.30		2 @ \$3.00 } = \$48.40 8 @ \$5.30 }
		<u>\$119.00</u>	

Merchandise Inventory (LIFO)		
Beg. inventory	15.00

		<u>\$115.70</u>	

**VALUING INVENTORY AT LCM AND THE EFFECTS OF INVENTORY ERRORS**

This section examines the role of market costs in determining inventory on the balance sheet and also the financial statement effects of inventory errors.

**Lower of Cost or Market**

**P2**  
Compute the lower of cost or market amount of inventory.

We explained how to assign costs to ending inventory and cost of goods sold using one of four costing methods (FIFO, LIFO, weighted average, or specific identification). However, *accounting principles require that inventory be reported at the market value (cost) of replacing inventory when market value is lower than cost.* Merchandise inventory is then said to be reported on the balance sheet at the **lower of cost or market (LCM).**

**Computing the Lower of Cost or Market** *Market* in the term *LCM* is defined as the current replacement cost of purchasing the same inventory items in the usual manner. A decline in replacement cost reflects a loss of value in inventory. When the recorded cost of inventory is higher than the replacement cost, a loss is recognized. When the recorded cost is lower, no adjustment is made.

**Point:** LCM applied to each individual item always yields the lowest inventory.

LCM is applied in one of three ways: (1) to each individual item separately, (2) to major categories of items, or (3) to the whole of inventory. The less similar the items that make up inventory, the more likely companies are to apply LCM to individual items or categories. With the increasing application of technology and inventory tracking, companies increasingly apply LCM to each individual item separately. Accordingly, we show that method only; however, advanced courses cover the other two methods. To illustrate LCM, we apply it to the ending inventory of a motorsports retailer in Exhibit 6.9.

**EXHIBIT 6.9**

Lower of Cost or Market Computations

\$140,000 is the lower of \$160,000 or \$140,000.

Market amount of \$265,000 is lower than the \$295,000 recorded cost.

Inventory Items	Units	Per Unit		Total Cost	Total Market	LCM Applied to Items
		Cost	Market			
<b>Cycles</b>						
Roadster .....	20	\$8,000	\$7,000	\$160,000	\$140,000	\$ 140,000
Sprint .....	10	5,000	6,000	50,000	60,000	50,000
<b>Off-Road</b>						
Trax-4 .....	8	5,000	6,500	40,000	52,000	40,000
Blazer .....	5	9,000	7,000	45,000	35,000	35,000
Totals .....				<u>\$295,000</u>		<u>\$265,000</u>

**LCM Applied to Individual Items** When LCM is applied to individual *items* of inventory, the number of comparisons equals the number of items. For Roadster, \$140,000 is the lower of the \$160,000 cost and the \$140,000 market. For Sprint, \$50,000 is the lower of the \$50,000 cost and the \$60,000 market. For Trax-4, \$40,000 is the lower of the \$40,000 cost and the \$52,000 market. For Blazer, \$35,000 is the lower of the \$45,000 cost and the \$35,000 market. This yields a \$265,000 reported inventory, computed from \$140,000 for Roadster plus \$50,000 for Sprint plus \$40,000 for Trax-4 plus \$35,000 for Blazer.

The retailer **The Buckle** applies LCM and reports that its “inventory is stated at the lower of cost or market. Cost is determined using the average cost method.”

**Point:** Advances in technology encourage the individual-item approach for LCM.

**Global:** IFRS requires that LCM be applied to individual items; this results in the most conservative inventory amount.

**Recording the Lower of Cost or Market** Inventory must be adjusted downward when market is less than cost. To illustrate, if LCM is applied to the individual items of inventory in Exhibit 6.9, the Merchandise Inventory account must be adjusted from the \$295,000 recorded cost down to the \$265,000 market amount as follows.

Cost of Goods Sold .....	30,000	
Merchandise Inventory .....		30,000
<i>To adjust inventory cost to market.</i>		

Accounting rules require that inventory be adjusted to market when market is less than cost, but inventory normally cannot be written up to market when market exceeds cost. If recording inventory down to market is acceptable, why are companies not allowed to record inventory up to market? One view is that a gain from a market increase should not be realized until a sales transaction verifies the gain. However, this view also applies when market is less than cost. A second and primary reason is the **conservatism constraint**, which prescribes the use of the less optimistic amount when more than one estimate of the amount to be received or paid exists and these estimates are about equally likely.

A company has the following products in its ending inventory, along with cost and market values. (a) Compute the lower of cost or market for its inventory when applied *separately to each product*. (b) If the market amount is less than the recorded cost of the inventory, then record the December 31 LCM adjustment to the Merchandise Inventory account.

**NEED-TO-KNOW 6-3**

LCM Method P2

	Units	Per Unit	
		Cost	Market
Road bikes .....	5	\$1,000	\$800

## Financial Statement Effects of Inventory Errors

**A2** Analyze the effects of inventory errors on current and future financial statements.

Companies must take care in both taking a physical count of inventory and in assigning a cost to it. An inventory error causes misstatements in cost of goods sold, gross profit, net income, current assets, and equity. It also causes misstatements in the next period's statements because ending inventory of one period is the beginning inventory of the next. As we consider the financial statement effects in this section, it is helpful if we recall the following *inventory relation*.

**Income Statement Effects** Exhibit 6.10 shows the effects of inventory errors on key amounts in the current and next periods' income statements. Let's look at row 1 and year 1. We see that understating ending inventory overstates cost of goods sold. This can be seen from the above inventory relation where we subtract a smaller ending inventory amount in computing cost of goods sold. Then a higher cost of goods sold yields a lower income.

To understand year 2 of row 1, remember that an understated ending inventory for year 1 becomes an understated beginning inventory for year 2. Using the above inventory relation, we see that if beginning inventory is understated, then cost of goods sold is understated (because we are starting with a smaller amount). A lower cost of goods sold yields a higher income.

Turning to overstatements, let's look at row 2 and year 1. If ending inventory is overstated, we use the inventory relation to see that cost of goods sold is understated. A lower cost of goods sold yields a higher income.

For year 2 of row 2, we again recall that an overstated ending inventory for year 1 becomes an overstated beginning inventory for year 2. If beginning inventory is overstated, we use the inventory relation to see that cost of goods sold is overstated. A higher cost of goods sold yields a lower income.

### EXHIBIT 6.10

Effects of Inventory Errors on the Income Statement

Ending Inventory	Year 1		Year 2	
	Cost of Goods Sold	Net Income	Cost of Goods Sold	Net Income
Understated ↓	Overstated ↑	Understated ↓	Understated ↓	Overstated ↑
Overstated* ↑	Understated ↓	Overstated ↑	Overstated ↑	Understated ↓

\* This error is less likely under a perpetual system versus a periodic because it implies more inventory than is recorded (or less shrinkage than expected). Management will normally follow up and discover and correct this error before it impacts any accounts.

To illustrate, consider an inventory error for a company with \$100,000 in sales for each of the years 2013, 2014, and 2015. If this company maintains a steady \$20,000 inventory level during this period and makes \$60,000 in purchases in each of these years, its cost of goods sold is \$60,000 and its gross profit is \$40,000 each year.

**Ending Inventory Understated—Year 1** Assume that this company errs in computing its 2013 ending inventory and reports \$16,000 instead of the correct amount of \$20,000. The effects of this error are shown in Exhibit 6.11. The \$4,000 understatement of 2013 ending inventory causes a \$4,000 overstatement in 2013 cost of goods sold and a \$4,000 understatement in both gross profit and net income for 2013. We see that these effects match the effects predicted in Exhibit 6.10.

**Ending Inventory Understated—Year 2** The 2013 understated ending inventory becomes the 2014 understated *beginning* inventory. We see in Exhibit 6.11 that this error causes an understatement in 2014 cost of goods sold and a \$4,000 overstatement in both gross profit and net income for 2014.

**Ending Inventory Understated—Year 3** Exhibit 6.11 shows that the 2013 ending inventory error affects only that period and the next. It does not affect 2015 results or any period thereafter. An inventory error is said to be *self-correcting* because it always yields an offsetting error in the

**Example:** If 2013 ending inventory in Exhibit 6.11 is overstated by \$3,000 (not understated by \$4,000), what is the effect on cost of goods sold, gross profit, assets, and equity? *Answer:* Cost of goods sold is understated by \$3,000 in 2013 and overstated by \$3,000 in 2014. Gross profit and net income are overstated in 2013 and understated in 2014. Assets and equity are overstated in 2013.

Income Statements			
	2013	2014	2015
Sales .....	\$100,000	\$100,000	\$100,000
Cost of goods sold			
Beginning inventory .....	\$20,000	\$16,000*	\$20,000
Cost of goods purchased .....	60,000	60,000	60,000
Goods available for sale .....	80,000	76,000	80,000
Ending inventory .....	16,000*	20,000	20,000
Cost of goods sold .....	64,000†	56,000†	60,000
Gross profit .....	36,000	44,000	40,000
Expenses .....	10,000	10,000	10,000
Net income .....	\$ 26,000	\$ 34,000	\$ 30,000

**EXHIBIT 6.11**

Effects of Inventory Errors on Three Periods' Income Statements

Correct income is \$30,000 for each year.

\* Correct amount is \$20,000. † Correct amount is \$60,000.

next period. This does not reduce the severity of inventory errors. Managers, lenders, owners, and others make important decisions from analysis of income and costs.

We can also do an analysis of beginning inventory errors. The income statement effects are the opposite of those for ending inventory.

**Balance Sheet Effects** Balance sheet effects of an inventory error can be seen by considering the accounting equation: Assets = Liabilities + Equity. For example, understating ending inventory understates both current and total assets. An understatement in ending inventory also yields an understatement in equity because of the understatement in net income. Exhibit 6.12 shows the effects of inventory errors on the current period's balance sheet amounts. Errors in *beginning* inventory do not yield misstatements in the end-of-period balance sheet, but they do affect that current period's income statement.

**Point:** A former internal auditor at **Coca-Cola** alleges that just before midnight at a prior calendar year-end, fully loaded Coke trucks were ordered to drive about 2 feet away from the loading dock so that Coke could record millions of dollars in extra sales.

Ending Inventory	Assets	Equity
Understated ↓	Understated ↓	Understated ↓
Overstated ↑	Overstated ↑	Overstated ↑

**EXHIBIT 6.12**

Effects of Inventory Errors on Current Period's Balance Sheet

A company had \$10,000 of sales in each of three consecutive years, 2012–2014, and it purchased merchandise costing \$7,000 in each of those years. It also maintained a \$2,000 physical inventory from the beginning to the end of that three-year period. In accounting for inventory, it made an error at the end of year 2012 that caused its year-end 2012 inventory to appear on its statements as \$1,600 rather than the correct \$2,000. (a) Determine the correct amount of the company's gross profit in each of the years 2012–2014. (b) Prepare comparative income statements as in Exhibit 6.11 to show the effect of this error on the company's cost of goods sold and gross profit for each of the years 2012–2014.

**NEED-TO-KNOW 6-4**

Effects of Inventory Errors

A2

**Solution**

- a. Correct gross profit = \$10,000 – \$7,000 = \$3,000 (for each year).
- b. Cost of goods sold and gross profit figures follow:

	Year 2012	Year 2013	Year 2014
Sales .....	\$10,000	\$10,000	\$10,000
Cost of goods sold			
Beginning inventory .....	\$2,000	\$1,600	\$2,000
Cost of purchases .....	7,000	7,000	7,000
Goods available for sale .....	9,000	8,600	9,000
Ending inventory .....	1,600	2,000	2,000
Cost of goods sold .....	7,400	6,600	7,000
Gross profit .....	\$ 2,600	\$ 3,400	\$ 3,000

Do More: QS 6-20, E 6-12

See that combined income for the 3 years is \$9,000 (\$2,600 + \$3,400 + \$3,000); which is correct, meaning the inventory error is "self-correcting" (even though individual year's inventory amounts are in error).

## GLOBAL VIEW

This section discusses differences between U.S. GAAP and IFRS in the items and costs making up merchandise inventory, in the methods to assign costs to inventory, and in the methods to estimate inventory values.

**Items and Costs Making Up Inventory** Both U.S. GAAP and IFRS include broad and similar guidance for the items and costs making up merchandise inventory. Specifically, under both accounting systems, merchandise inventory includes all items that a company owns and holds for sale. Further, merchandise inventory includes costs of expenditures necessary, directly or indirectly, to bring those items to a salable condition and location.

**Assigning Costs to Inventory** Both U.S. GAAP and IFRS allow companies to use specific identification in assigning costs to inventory. Further, both systems allow companies to apply a *cost flow assumption*. The usual cost flow assumptions are: FIFO, weighted average, and LIFO. However, IFRS does not (currently) allow use of LIFO. As the convergence project progresses, this prohibition may or may not persist.

**Estimating Inventory Costs** The value of inventory can change while it awaits sale to customers. That value can decrease or increase.

**Decreases in Inventory Value** Both U.S. GAAP and IFRS require companies to write down (reduce the cost recorded for) inventory when its value falls below the cost recorded. This is referred to as the *lower of cost or market* method explained in this chapter. U.S. GAAP prohibits any later increase in the recorded value of that inventory even if that decline in value is reversed through value increases in later periods. However, IFRS allows reversals of those write-downs up to the original acquisition cost. For example, if **Apple** wrote down its 2013 inventory from \$1,764 million to \$1,700 million, it could not reverse this in future periods even if its value increased to more than \$1,764 million. However, if Apple applied IFRS, it could reverse that previous loss. (Another difference is that value refers to *replacement cost* under U.S. GAAP, but *net realizable value* under IFRS.)

**Increases in Inventory Value** Neither U.S. GAAP nor IFRS allow inventory to be adjusted upward beyond the original cost. (One exception is that IFRS requires agricultural assets such as animals, forests, and plants to be measured at fair value less point-of-sale costs.)

**APPLE**

**NOKIA**

**Nokia** provides the following description of its inventory valuation procedures:

Inventories are stated at the lower of cost or net realizable value. Cost . . . approximates actual cost on a FIFO (first-in first-out) basis. Net realizable value is the amount that can be realized from the sale of the inventory in the normal course of business after allowing for the costs of realization.

**Sustainability and Accounting** The founders of **Proof Eyewear**, as introduced in this chapter's opening feature, assert that "sustainability is a key test in every product decision . . . it has to have an aspect of sustainability to it or we just won't develop it." This level of commitment to sustainability is impressive. The founders also impose a "three-pillar foundation" in everything they do, which is graphically portrayed below. Some of their recent activities include: (1) planting a tree for each pair of sunglasses sold on Earth Day, (2) financing a portion of sight-saving surgeries for each pair of frames purchased, (3) using only wood from sustainably managed forests and rejecting endangered wood, and (4) contributing to reforestation efforts.

## Inventory Turnover and Days' Sales in Inventory

## Decision Analysis

## Inventory Turnover

Earlier chapters described two important ratios useful in evaluating a company's short-term liquidity: current ratio and acid-test ratio. A merchandiser's ability to pay its short-term obligations also depends on how quickly it sells its merchandise inventory. **Inventory turnover**, also called *merchandise inventory turnover* or, simply, *turns*, is one ratio used to assess this and is defined in Exhibit 6.13.

$$\text{Inventory turnover} = \frac{\text{Cost of goods sold}}{\text{Average inventory}}$$

This ratio reveals how many *times* a company turns over (sells) its inventory during a period. If a company's inventory greatly varies within a year, average inventory amounts can be computed from interim periods such as quarters or months.

Users apply inventory turnover to help analyze short-term liquidity and to assess whether management is doing a good job controlling the amount of inventory available. A low ratio compared to that of competitors suggests inefficient use of assets. The company may be holding more inventory than it needs to support its sales volume. Similarly, a very high ratio compared to that of competitors suggests inventory might be too low. This can cause lost sales if customers must back-order merchandise. Inventory turnover has no simple rule except to say *a high ratio is preferable provided inventory is adequate to meet demand*.

## Days' Sales in Inventory

To better interpret inventory turnover, many users measure the adequacy of inventory to meet sales demand. **Days' sales in inventory**, also called *days' stock on hand*, is a ratio that reveals how much inventory is available in terms of the number of days' sales. It can be interpreted as the number of days one can sell from inventory if no new items are purchased. This ratio is often viewed as a measure of the buffer against out-of-stock inventory and is useful in evaluating liquidity of inventory. It is defined in Exhibit 6.14.

$$\text{Days' sales in inventory} = \frac{\text{Ending inventory}}{\text{Cost of goods sold}} \times 365$$

Days' sales in inventory focuses on ending inventory and it estimates how many days it will take to convert inventory at the end of a period into accounts receivable or cash. Days' sales in inventory focuses on *ending* inventory whereas inventory turnover focuses on *average* inventory.

## Analysis of Inventory Management

Inventory management is a major emphasis for merchandisers. They must both plan and control inventory purchases and sales. **Toys "R" Us** is one of those merchandisers. Its inventory in fiscal year 2014 was \$2,171 million. This inventory constituted 67% of its current assets and 29% of its total assets. We apply the analysis tools in this section to Toys "R" Us, as shown in Exhibit 6.15—also see margin graph.

(\$ millions)	2014	2013	2012	2011	2010	2009
Cost of goods sold . . . . .	\$8,154	\$8,592	\$8,939	\$8,939	\$8,790	\$8,976
Ending inventory . . . . .	\$2,171	\$2,229	\$2,232	\$2,104	\$1,810	\$1,781
<b>Inventory turnover</b> . . . . .	<b>3.7 times</b>	<b>3.9 times</b>	<b>4.1 times</b>	<b>4.6 times</b>	<b>4.9 times</b>	<b>4.8 times</b>
Industry inventory turnover . . . . .	3.4 times	3.2 times	3.4 times	3.3 times	3.5 times	3.2 times
<b>Days' sales in inventory</b> . . . . .	<b>97 days</b>	<b>95 days</b>	<b>91 days</b>	<b>86 days</b>	<b>75 days</b>	<b>72 days</b>
Industry days' sales in inventory . . . . .	129 days	132 days	128 days	132 days	129 days	124 days

### A3

Assess inventory management using both inventory turnover and days' sales in inventory.

### EXHIBIT 6.13

Inventory Turnover

**Point:** We must take care when comparing turnover ratios across companies that use different costing methods (such as FIFO and LIFO).

**Point:** Companies with low inventory turnover can be susceptible to losses due to obsolescence and trend changes.

**Point:** Inventory turnover is higher and days' sales in inventory is lower for industries such as foods and other perishable products. The reverse holds for nonperishable product industries.

### EXHIBIT 6.14

Days' Sales in Inventory

### EXHIBIT 6.15

Inventory Turnover and Days' Sales in Inventory for Toys "R" Us

Its 2014 inventory turnover of 3.7 times means that Toys “R” Us turns over its inventory 3.7 times per year, or once every 99 days (365 days ÷ 3.7). We prefer inventory turnover to be high provided inventory is not out of stock and the company is not losing customers. The second metric computed, the 2014 days’ sales in inventory of 97 days, reveals that it is carrying 97 days of sales in inventory. This inventory buffer seems more than adequate. The increased days’ sales in inventory suggests that Toys “R” Us would benefit from management efforts to increase inventory turnover and to especially reduce inventory levels.

### Decision Maker

**Entrepreneur** Analysis of your retail store yields an inventory turnover of 5.0 and a days’ sales in inventory of 73 days. The industry norm for inventory turnover is 4.4 and for days’ sales in inventory is 74 days. What is your assessment of inventory management? [Answers follow the chapter’s Summary.]

## NEED-TO-KNOW

### COMPREHENSIVE 1

Perpetual Method

Craig Company buys and sells one product. Its beginning inventory, purchases, and sales during calendar year 2015 follow:

Date	Activity	Units Acquired at Cost	Units Sold at Retail	Unit Inventory
Jan. 1	Beg. inventory . . . .	400 units @ \$14 = \$ 5,600		400 units
Jan. 15	Sale . . . . .		200 units @ \$30	200 units
March 10	Purchase . . . . .	200 units @ \$15 = \$ 3,000		400 units
April 1	Sale . . . . .		200 units @ \$30	200 units
May 9	Purchase . . . . .	300 units @ \$16 = \$ 4,800		500 units
Sept. 22	Purchase . . . . .	250 units @ \$20 = \$ 5,000		750 units
Nov. 1	Sale . . . . .		300 units @ \$35	450 units
Nov. 28	Purchase . . . . .	100 units @ \$21 = \$ 2,100		550 units
	Totals . . . . .	1,250 units      \$20,500	700 units	

**Additional tracking data for specific identification:** (1) January 15 sale—200 units @ \$14, (2) April 1 sale—200 units @ \$15, and (3) November 1 sale—200 units @ \$14 and 100 units @ \$20.

### Required

1. Calculate the cost of goods available for sale.
2. Apply the four different methods of inventory costing (FIFO, LIFO, weighted average, and specific identification) to calculate ending inventory and cost of goods sold under each method using the perpetual system.
3. Compute gross profit earned by the company for each of the four costing methods in part 2. Also, report the inventory amount reported on the balance sheet for each of the four methods.
4. In preparing financial statements for year 2015, the financial officer was instructed to use FIFO but failed to do so and instead computed cost of goods sold according to LIFO, which led to a \$1,400 overstatement in cost of goods sold from using LIFO. Determine the impact on year 2015’s income from the error. Also determine the effect of this error on year 2016’s income. Assume no income taxes.

5. Management wants a report that shows how changing from FIFO to another method would change net income. Prepare a table showing (1) the cost of goods sold amount under each of the four methods, (2) the amount by which each cost of goods sold total is different from the FIFO cost of goods sold, and (3) the effect on net income if another method is used instead of FIFO.

### PLANNING THE SOLUTION

- Compute cost of goods available for sale by multiplying the units of beginning inventory and each purchase by their unit costs to determine the total cost of goods available for sale.
- Prepare a perpetual FIFO table starting with beginning inventory and showing how inventory changes after each purchase and after each sale (see Exhibit 6.5).
- Prepare a perpetual LIFO table starting with beginning inventory and showing how inventory changes after each purchase and after each sale (see Exhibit 6.6).
- Make a table of purchases and sales recalculating the average cost of inventory prior to each sale to arrive at the weighted average cost of ending inventory. Total the average costs associated with each sale to determine cost of goods sold (see Exhibit 6.7).
- Prepare a table showing the computation of cost of goods sold and ending inventory using the specific identification method (see Exhibit 6.4).
- Compare the year-end 2015 inventory amounts under FIFO and LIFO to determine the misstatement of year 2015 income that results from using LIFO. The errors for year 2015 and 2016 are equal in amount but opposite in effect.
- Create a table showing cost of goods sold under each method and how net income would differ from FIFO net income if an alternate method were adopted.

### SOLUTION

1. Cost of goods available for sale (this amount is the same for all methods).

Date		Units	Unit Cost	Cost
Jan. 1	Beg. inventory . . . . .	400	\$14	\$ 5,600
March 10	Purchase . . . . .	200	15	3,000
May 9	Purchase . . . . .	300	16	4,800
Sept. 22	Purchase . . . . .	250	20	5,000
Nov. 28	Purchase . . . . .	100	21	2,100
	Total goods available for sale . . . . .	<u>1,250</u>		<u>\$20,500</u>

- 2a. FIFO perpetual method.

Date	Goods Purchased	Cost of Goods Sold	Inventory Balance
Jan. 1	Beginning balance		400 @ \$14 = \$ 5,600
Jan. 15		200 @ \$14 = \$2,800	200 @ \$14 = \$ 2,800
Mar. 10	200 @ \$15 = \$3,000		200 @ \$14 } 200 @ \$15 } = \$ 5,800
April 1		200 @ \$14 = \$2,800	200 @ \$15 = \$ 3,000
May 9	300 @ \$16 = \$4,800		200 @ \$15 } 300 @ \$16 } = \$ 7,800
Sept. 22	250 @ \$20 = \$5,000		200 @ \$15 } 300 @ \$16 } 250 @ \$20 } = \$12,800
Nov. 1		200 @ \$15 = \$3,000 100 @ \$16 = \$1,600	200 @ \$16 } 250 @ \$20 } = \$ 8,200
Nov. 28	100 @ \$21 = \$2,100		200 @ \$16 } 250 @ \$20 } 100 @ \$21 } = <u>\$10,300</u>
	<b>Total cost of goods sold</b>	<u>\$10,200</u>	

**Point:** Students often mistakenly assume that the costing acronym refers to what remains in inventory. For example, it is important to realize that FIFO refers to costs that are assumed to flow into COGS; namely, the first units purchased are assumed to be the first ones to flow out to cost of goods sold. For FIFO, this means that the goods purchased most recently are assumed to be in ending inventory.

*Note to students: In a classroom situation, once we compute cost of goods available for sale, we can compute the amount for either cost of goods sold or ending inventory—it is a matter of preference. In practice, the costs of items sold are identified as sales are made and immediately transferred from the Inventory account to the Cost of Goods Sold account. The previous solution showing the line-by-line approach illustrates actual application in practice. The following alternate solutions illustrate that, once the concepts are understood, other solution approaches are available. Although this is only shown for FIFO, it could be shown for all methods.*

**Alternate Methods to Compute FIFO Perpetual Numbers**

[FIFO Alternate No. 1: Computing cost of goods sold first]

Cost of goods available for sale (from part 1) . . . . .		\$ 20,500
<b>Cost of goods sold</b>		
Jan. 15 Sold (200 @ \$14) . . . . .	\$2,800	
April 1 Sold (200 @ \$14) . . . . .	2,800	
Nov. 1 Sold (200 @ \$15 and 100 @ \$16) . . . . .	4,600	<u>10,200</u>
<b>Ending inventory</b> . . . . .		<u><u>\$10,300</u></u>

[FIFO Alternate No. 2: Computing ending inventory first]

Cost of goods available for sale (from part 1) . . . . .		\$ 20,500
Ending inventory*		
Nov. 28 Purchase (100 @ \$21) . . . . .	\$2,100	
Sept. 22 Purchase (250 @ \$20) . . . . .	5,000	
May 9 Purchase (200 @ \$16) . . . . .	<u>3,200</u>	
<b>Ending inventory</b> . . . . .		<u>10,300</u>
<b>Cost of goods sold</b> . . . . .		<u><u>\$10,200</u></u>

\* Since FIFO assumes that the earlier costs are the first to flow out, we determine ending inventory by assigning the most recent costs to the remaining items.

**2b. LIFO perpetual method.**

Date	Goods Purchased	Cost of Goods Sold	Inventory Balance
Jan. 1	Beginning balance		400 @ \$14 = \$ 5,600
Jan. 15		200 @ \$14 = \$2,800	200 @ \$14 = \$ 2,800
Mar. 10	200 @ \$15 = \$3,000		200 @ \$14 } 200 @ \$15 } = \$ 5,800
April 1		200 @ \$15 = \$3,000	200 @ \$14 = \$ 2,800
May 9	300 @ \$16 = \$4,800		200 @ \$14 } 300 @ \$16 } = \$ 7,600
Sept. 22	250 @ \$20 = \$5,000		200 @ \$14 } 300 @ \$16 } 250 @ \$20 } = \$12,600
Nov. 1		250 @ \$20 = \$5,000 50 @ \$16 = \$ 800	200 @ \$14 } 250 @ \$16 } = \$ 6,800
Nov. 28	100 @ \$21 = \$2,100		200 @ \$14 } 250 @ \$16 } 100 @ \$21 } = <u>\$ 8,900</u>
<b>Total cost of goods sold</b>		<u><u>\$11,600</u></u>	

**2c.** Weighted average perpetual method.

Date	Goods Purchased	Cost of Goods Sold	Inventory Balance
Jan. 1	Beginning balance		400 @ \$14 = \$ 5,600 (\$5,600/400 units = \$14.00 avg. cost)
Jan. 15		200 @ \$14 = \$2,800	200 @ \$14 = \$ 2,800
Mar. 10	200 @ \$15 = \$3,000		200 @ \$14 } = \$ 5,800 200 @ \$15 } (\$5,800/400 units = \$14.50 avg. cost)
April 1		200 @ \$14.5 = \$2,900	200 @ \$14.5 = \$ 2,900
May 9	300 @ \$16 = \$4,800		200 @ \$14.5 } = \$ 7,700 300 @ \$16 } (\$7,700/500 units = \$15.40 avg. cost)
Sept. 22	250 @ \$20 = \$5,000		200 @ \$14.5 } = \$ 12,700 300 @ \$16 } 250 @ \$20 } (\$12,700/750 units = \$16.93** avg. cost)
Nov. 1		300 @ \$16.93 = \$5,079	450 @ \$16.93 = \$ 7,618.5
Nov. 28	100 @ \$21 = \$2,100		450 @ \$16.93 } = <u>\$9,718.5</u> 100 @ \$21 }
<b>Total cost of goods sold*</b>		<b><u>\$10,779</u></b>	

\* Cost of goods sold (\$10,779) plus ending inventory (\$9,718.5) is \$2.5 less than the cost of goods available for sale (\$20,500) due to rounding.

\*\* Rounded to 2 decimal places.

**2d.** Specific identification method.

Date	Goods Purchased	Cost of Goods Sold	Inventory Balance
Jan. 1	Beginning balance		400 @ \$14 = \$ 5,600
Jan. 15		200 @ \$14 = \$2,800	200 @ \$14 = \$ 2,800
Mar. 10	200 @ \$15 = \$3,000		200 @ \$14 } = \$ 5,800 200 @ \$15 }
April 1		200 @ \$15 = \$3,000	200 @ \$14 = \$ 2,800
May 9	300 @ \$16 = \$4,800		200 @ \$14 } = \$ 7,600 300 @ \$16 }
Sept. 22	250 @ \$20 = \$5,000		200 @ \$14 } = \$ 12,600 300 @ \$16 } 250 @ \$20 }
Nov. 1		200 @ \$14 = \$2,800 100 @ \$20 = \$2,000	300 @ \$16 } = \$ 7,800 150 @ \$20 }
Nov. 28	100 @ \$21 = \$2,100		300 @ \$16 } = <u>\$ 9,900</u> 150 @ \$20 } 100 @ \$21 }
<b>Total cost of goods sold</b>		<b><u>\$10,600</u></b>	

3.

	FIFO	LIFO	Weighted Average	Specific Identification
<b>Income Statement</b>				
Sales* . . . . .	\$ 22,500	\$22,500	\$ 22,500	\$22,500
<b>Cost of goods sold</b> . . . . .	<b>10,200</b>	<b>11,600</b>	<b>10,779</b>	<b>10,600</b>
Gross profit . . . . .	\$ 12,300	\$10,900	\$ 11,721	\$11,900
<b>Balance Sheet</b>				
<b>Inventory</b> . . . . .	<b>\$10,300</b>	<b>\$ 8,900</b>	<b>\$9,718.5</b>	<b>\$ 9,900</b>

\* Sales = (200 units × \$30) + (200 units × \$30) + (300 units × \$35) = \$22,500

- Mistakenly using LIFO when FIFO should have been used overstates cost of goods sold in year 2015 by \$1,400, which is the difference between the FIFO and LIFO amounts of ending inventory. It understates income in 2015 by \$1,400. In year 2016, income is overstated by \$1,400 because of the understatement in beginning inventory.
- Analysis of the effects of alternative inventory methods.

	Cost of Goods Sold	Difference from FIFO Cost of Goods Sold	Effect on Net Income If Adopted Instead of FIFO
FIFO . . . . .	\$10,200	—	—
LIFO . . . . .	11,600	+\$1,400	\$1,400 lower
Weighted average . . . . .	10,779	+ 579	579 lower
Specific identification . . . . .	10,600	+ 400	400 lower

**NEED-TO-KNOW**

**COMPREHENSIVE 2**

Periodic Method

Refer to the information in **Need-To-Know Comprehensive 1** to answer the following requirements.

**Required**

- Calculate the cost of goods available for sale.
- Apply the four different methods of inventory costing (FIFO, LIFO, weighted average, and specific identification) to calculate ending inventory and cost of goods sold under each method using the periodic system.
- Compute gross profit earned by the company for each of the four costing methods in part 2. Also, report the inventory amount reported on the balance sheet for each of the four methods.
- In preparing financial statements for year 2015, the financial officer was instructed to use FIFO but failed to do so and instead computed cost of goods sold according to LIFO. Determine the impact of the error on year 2015’s income. Also determine the effect of this error on year 2016’s income. Assume no income taxes.

**SOLUTION**

- The solution is identical to the solution for part 1 of **Need-To-Know Comprehensive 1**.
- FIFO periodic method (FIFO under periodic and perpetual yields identical results).

Cost of goods available for sale (from part 1) . . . . .	\$ 20,500
Ending inventory*	
Nov. 28 Purchase (100 @ \$21) . . . . .	\$2,100
Sept. 22 Purchase (250 @ \$20) . . . . .	5,000
May 9 Purchase (200 @ \$16) . . . . .	3,200
<b>Ending inventory</b> . . . . .	<b>10,300</b>
<b>Cost of goods sold</b> . . . . .	<b>\$10,200</b>

\* Since FIFO assumes that the earlier costs are the first to flow out, we determine ending inventory by assigning the most recent costs to the remaining items.

**2b.** LIFO periodic method.

Cost of goods available for sale (from part 1) .....	\$ 20,500
Ending inventory*	
January 1 Beg. inventory (400 @ \$14) .....	\$5,600
March 10 Purchase (150 @ \$15) .....	<u>2,250</u>
<b>Ending inventory</b> .....	<b><u>7,850</u></b>
<b>Cost of goods sold</b> .....	<b><u>\$12,650</u></b>

\* Since LIFO assumes that the most recent (newest) costs are the first to flow out, we determine ending inventory by assigning the earliest (oldest) costs to the remaining items.

**2c.** Weighted average periodic method.

<b>Step 1:</b>	400 units @ \$14 = \$ 5,600
	200 units @ \$15 = 3,000
	300 units @ \$16 = 4,800
	250 units @ \$20 = 5,000
	100 units @ \$21 = <u>2,100</u>
	<b><u>1,250</u>                  <u>\$20,500</u></b>
<b>Step 2:</b>	\$20,500/1,250 units = <b>\$16.40</b> weighted average cost per unit
<b>Step 3:</b>	Total cost of 1,250 units available for sale .....
	\$20,500
	Less <b>ending inventory</b> priced on a weighted average
	cost basis: 550 units at \$16.40 each .....
	<b><u>9,020</u></b>
	<b>Cost of goods sold (700 units at \$16.40 each) .....</b>
	<b><u>\$11,480</u></b>

**2d.** Specific identification method.

The solution is identical to the solution shown in part 2d of **Need-To-Know Comprehensive 1**. This is because specific identification is *not* a cost flow assumption; instead, this method specifically identifies each item in inventory and each item that is sold.

**3.**

	FIFO	LIFO	Weighted Average	Specific Identification
<b>Income Statement</b>				
Sales* .....	\$ 22,500	\$22,500	\$ 22,500	\$22,500
<b>Cost of goods sold</b> .....	<b><u>10,200</u></b>	<b><u>12,650</u></b>	<b><u>11,480</u></b>	<b><u>10,600</u></b>
Gross profit .....	<u>\$ 12,300</u>	<u>\$ 9,850</u>	<u>\$ 11,020</u>	<u>\$11,900</u>
<b>Balance Sheet</b>				
<b>Inventory</b> .....	<b>\$10,300</b>	<b>\$ 7,850</b>	<b>\$ 9,020</b>	<b>\$ 9,900</b>

\* Sales = (200 units × \$30) + (200 units × \$30) + (300 units × \$35) = \$22,500

- 4.** Mistakenly using LIFO, when FIFO should have been used, overstates cost of goods sold in year 2015 by \$2,450, which is the difference between the FIFO and LIFO amounts of ending inventory. It understates income in 2015 by \$2,450. In year 2016, income is overstated by \$2,450 because of the understatement in beginning inventory.

**APPENDIX**

# Inventory Costing under a Periodic System

## 6A

This section illustrates inventory costing methods. We use information from Trekking, a sporting goods store. Among its products, Trekking carries one type of mountain bike whose sales are directed at resorts that provide inexpensive mountain bikes for complimentary guest use. These resorts usually purchase in amounts of 10 or more bikes. We use Trekking's data from August. Its mountain bike (unit) inventory at the beginning of August and its purchases and sales during August are in Exhibit 6A.1. It ends August with 12 bikes in inventory. Trekking uses the **periodic inventory system**, which means that its

**P3**

Compute inventory in a periodic system using the methods of specific identification, FIFO, LIFO, and weighted average.

**EXHIBIT 6A.1**

Purchases and Sales of Goods

Date	Activity	Units Acquired at Cost	Units Sold at Retail	Unit Inventory
Aug. 1	Beginning inventory . . . .	10 units @ \$ 91 = \$ 910		10 units
Aug. 3	Purchases . . . . .	15 units @ \$106 = \$ 1,590		25 units
Aug. 14	Sales . . . . .		20 units @ \$130	5 units
Aug. 17	Purchases . . . . .	20 units @ \$115 = \$ 2,300		25 units
Aug. 28	Purchases . . . . .	10 units @ \$119 = \$ 1,190		35 units
Aug. 31	Sales . . . . .		23 units @ \$150	12 units

Units available for sale

Goods available for sale

Units sold

Units left

Merchandise Inventory account is updated at the end of each period (monthly for Trekking) to reflect purchases and sales. Regardless of what inventory method or system is used, cost of goods available for sale must be allocated between cost of goods sold and ending inventory.

**Point:** Three key variables determine the value assigned to ending inventory: (1) inventory quantity, (2) unit costs of inventory, and (3) cost flow assumption.

**Specific Identification** When each item in inventory can be identified with a specific purchase and invoice, we can use **specific identification** or **SI** (also called *specific invoice inventory pricing*) to assign costs. We also need sales records that identify exactly which items were sold and when. Trekking’s internal documents reveal the following specific unit sales:

- August 14 Sold 8 bikes costing \$91 each and 12 bikes costing \$106 each
- August 31 Sold 2 bikes costing \$91 each, 3 bikes costing \$106 each, 15 bikes costing \$115 each, and 3 bikes costing \$119 each

Applying specific identification, and using the information above and from Exhibit 6A.1, we prepare Exhibit 6A.2. This exhibit begins with the \$5,990 in total units available for sale—this is from Exhibit 6A.1. Applying specific identification, we know that for the 20 units sold on August 14, the company specifically identified that 8 of them had cost \$91 each and 12 had cost \$106 each, resulting in an August 14 cost of sales of \$2,000. Next, for the 23 units sold on August 31, the company specifically identified that 2 of them had cost \$91 each, that 3 had cost \$106 each, that 15 had cost \$115 each, and 3 had cost \$119 each, resulting in an August 31 cost of sales of \$2,582. This yields a total cost of sales for the period of \$4,582. We then subtract this \$4,582 in cost of goods sold from the \$5,990 in cost of goods available to get \$1,408 in ending inventory. Carefully study this exhibit and the explanations to see the flow of costs. Each unit, whether sold or remaining in inventory, has its own specific cost attached to it.

**EXHIBIT 6A.2**

Specific Identification Computations

Total cost of 55 units available for sale (from Exhibit 6A.1) . . . . .	\$5,990
<b>Cost of goods sold*</b>	
Aug. 14 (8 @ \$91) + (12 @ \$106) . . . . .	2,000
Aug. 31 (2 @ \$91) + (3 @ \$106) + (15 @ \$115) + (3 @ \$119) . . . . .	<u>2,582</u>
<b>Ending inventory</b> . . . . .	<b><u>1,408</u></b>

\* Identification of items sold (and their costs) is obtained from internal documents that track each unit from its purchase to its sale.

**Point:** SI yields identical results under both periodic and perpetual.

**Point:** Specific identification is usually practical for companies with expensive or custom-made inventory. Examples include car dealerships, implement dealers, jewelers, and fashion designers.

When using specific identification, Trekking’s cost of goods sold reported on the income statement totals **\$4,582**, the sum of \$2,000 and \$2,582 from the cost of goods sold section of Exhibit 6A.2. Trekking’s ending inventory reported on the balance sheet is **\$1,408**, which is the final inventory balance from Exhibit 6A.2. The following graphic visually reflects the computations under specific identification.

**First-In, First-Out** The **first-in, first-out (FIFO)** method of assigning costs to both inventory and cost of goods sold assumes that inventory items are sold in the order acquired. When sales occur, the costs of the earliest units acquired are charged to cost of goods sold. This leaves the costs from the most recent purchases in ending inventory. Use of FIFO for computing the cost of inventory and cost of goods sold is shown in Exhibit 6A.3.

This exhibit starts with computing \$5,990 in total units available for sale—this is from Exhibit 6A.1. Applying FIFO, we know that the 12 units in ending inventory will be reported at the cost of the most recent 12 purchases. Reviewing purchases in reverse order, we assign costs to the 12 bikes in ending inventory as follows: \$119 cost to 10 bikes and \$115 cost to 2 bikes. This yields 12 bikes costing \$1,420 in ending inventory. We then subtract this \$1,420 in ending inventory from \$5,990 in cost of goods available to get \$4,570 in cost of goods sold.

Total cost of 55 units available for sale (from Exhibit 6A.1) . . . . .	\$5,990
Less ending inventory priced using FIFO	
10 units from August 28 purchase at \$119 each . . . . .	\$1,190
2 units from August 17 purchase at \$115 each . . . . .	230
<b>Ending inventory</b> . . . . .	<b>1,420</b>
<b>Cost of goods sold</b> . . . . .	<b>\$4,570</b>

**EXHIBIT 6A.3**

FIFO Computations—  
Periodic System

Exhibit 6A.1 shows that the 12 units in ending inventory consist of 10 units from the latest purchase on Aug. 28 and 2 units from the next latest purchase on Aug. 17.

Trekking’s ending inventory reported on the balance sheet is **\$1,420**, and its cost of goods sold reported on the income statement is **\$4,570**. The following graphic visually reflects the computations under FIFO.

**Point:** The assignment of costs to goods sold and to inventory using FIFO is the same for both the periodic and perpetual systems.

**Last-In, First-Out** The **last-in, first-out (LIFO)** method of assigning costs assumes that the most recent purchases are sold first. These more recent costs are charged to goods sold, and the costs of the earliest purchases are assigned to inventory. LIFO results in costs of the most recent purchases being assigned to cost of goods sold, which means that LIFO comes close to matching current costs of goods sold with revenues. Use of LIFO for computing cost of inventory and cost of goods sold is shown in Exhibit 6A.4.

This exhibit starts with computing \$5,990 in total units available for sale—this is from Exhibit 6A.1. Applying LIFO, we know that the 12 units in ending inventory will be reported at the cost of the earliest 12 purchases. Reviewing the earliest purchases in order, we assign costs to the 12 bikes in ending inventory as follows: \$91 cost to 10 bikes and \$106 cost to 2 bikes. This yields 12 bikes costing \$1,122 in ending inventory. We then subtract this \$1,122 in ending inventory from \$5,990 in cost of goods available to get \$4,868 in cost of goods sold.

Total cost of 55 units available for sale (from Exhibit 6A.1) . . . . .	\$5,990
Less ending inventory priced using LIFO	
10 units in beginning inventory at \$91 each . . . . .	\$910
2 units from August 3 purchase at \$106 each . . . . .	212
<b>Ending inventory</b> . . . . .	<b>1,122</b>
<b>Cost of goods sold</b> . . . . .	<b>\$4,868</b>

**EXHIBIT 6A.4**

LIFO Computations—  
Periodic System

Exhibit 6A.1 shows that the 12 units in ending inventory consist of 10 units from the earliest purchase (beg. inv.) and 2 units from the next earliest purchase on Aug. 3.

Trekking’s ending inventory reported on the balance sheet is **\$1,122**, and its cost of goods sold reported on the income statement is **\$4,868**. The following graphic visually reflects the computations under LIFO.

**Weighted Average** The **weighted average** or **WA** (also called **average cost**) method of assigning cost requires that we use the average cost per unit of inventory at the end of the period. Weighted average cost per unit equals the cost of goods available for sale divided by the units available. The weighted average method of assigning cost involves three important steps. The first two steps are shown in Exhibit 6A.5. First, multiply the per unit cost for beginning inventory and each particular purchase by the corresponding number of units (from Exhibit 6A.1). Second, add these amounts and divide by the total number of units available for sale to find the weighted average cost per unit.

**EXHIBIT 6A.5**

Weighted Average Cost per Unit

**Example:** In Exhibit 6A.5, if 5 more units had been purchased at \$120 each, what would be the weighted average cost per unit?

Answer: \$109.83 (\$6,590/60)

<b>Step 1:</b>	10 units @ \$ 91 = \$ 910
	15 units @ \$106 = 1,590
	20 units @ \$115 = 2,300
	10 units @ \$119 = 1,190
	<b>55</b> <span style="float:right"><b>\$5,990</b></span>
<b>Step 2:</b>	\$5,990/55 units = <b>\$108.91</b> weighted average cost per unit

The third step is to use the weighted average cost per unit to assign costs to inventory and to the units sold as shown in Exhibit 6A.6.

**EXHIBIT 6A.6**

Weighted Average Computations—Periodic

<b>Step 3:</b>	Total cost of 55 units available for sale (from Exhibit 6A.1). . . . .	\$ 5,990
	Less <b>ending inventory</b> priced on a weighted average cost basis: 12 units at \$108.91 each (from Exhibit 6A.5). . . . .	<b>1,307</b>
	<b>Cost of goods sold (43 units at \$108.91 each)</b> . . . . .	<b>\$4,683</b>

Trekking’s ending inventory reported on the balance sheet is **\$1,307**, and its cost of goods sold reported on the income statement is **\$4,683** when using the weighted average (periodic) method. The following graphic visually reflects the computations under weighted average.

**A1** Analyze the effects of inventory methods for both financial and tax reporting.

**Financial Statement Effects of Costing Methods** When purchase prices do not change, each inventory costing method assigns the same cost amounts to inventory and to cost of goods sold. When purchase prices are different, however, the methods nearly always assign different cost amounts. We show these differences in Exhibit 6A.7 using Trekking’s data.

<b>TREKKING COMPANY</b> For Month Ended August 31				
	Specific Identification	FIFO	LIFO	Weighted Average
<b>Income Statement</b>				
Sales .....	\$ 6,050	\$ 6,050	\$ 6,050	\$ 6,050

<b>Inventory</b> .....	<b>\$1,408</b>	<b>\$1,420</b>	<b>\$1,122</b>	<b>\$1,307</b>

**EXHIBIT 6A.7**

Financial Statement Effects  
of Inventory Costing  
Methods

This exhibit reveals two important results. First, when purchase costs *regularly rise*, as in Trekking's case, observe the following:

- FIFO assigns the lowest amount to cost of goods sold—yielding the highest gross profit and net income.
- LIFO assigns the highest amount to cost of goods sold—yielding the lowest gross profit and net income, which also yields a temporary tax advantage by postponing payment of some income tax.
- Weighted average yields results between FIFO and LIFO.
- Specific identification always yields results that depend on which units are sold.

**Point:** Managers prefer FIFO when costs are rising and incentives exist to report higher income for reasons such as bonus plans, job security, and reputation.

Second, when costs *regularly decline*, the reverse occurs for FIFO and LIFO. FIFO gives the highest cost of goods sold—yielding the lowest gross profit and income. And LIFO gives the lowest cost of goods sold—yielding the highest gross profit and income.

All four inventory costing methods are acceptable in practice. A company must disclose the inventory method it uses. Each method offers certain advantages as follows:

- FIFO assigns an amount to inventory on the balance sheet that approximates its current cost; it also mimics the actual flow of goods for most businesses.
- LIFO assigns an amount to cost of goods sold on the income statement that approximates its current cost; it also better matches current costs with revenues in computing gross profit.
- Weighted average tends to smooth out erratic changes in costs.
- Specific identification exactly matches the costs of items with the revenues they generate.

**Point:** LIFO inventory is often less than the inventory's replacement cost because LIFO inventory is valued using the oldest inventory purchase costs.

A company reported the following December purchases and sales data for its only product.

Date	Activities	Units Acquired at Cost	Units Sold at Retail
Dec. 1	Beginning inventory .....	5 units @ \$3.00 = \$ 15.00	
Dec. 8	Purchase .....	10 units @ \$4.50 = 45.00	
Dec. 9	Sales .....		8 units @ \$7.00
Dec. 19	Purchase .....	13 units @ \$5.00 = 65.00	
Dec. 24	Sales .....		18 units @ \$8.00
Dec. 30	Purchase .....	8 units @ \$5.30 = 42.40	
Totals	.....	<u>36 units</u> <u>\$167.40</u>	<u>26 units</u>

**NEED-TO-KNOW 6-5**

Periodic SI, FIFO, LIFO,  
and WA

P1

The company uses a *periodic inventory system*. Determine the cost assigned to ending inventory and to cost of goods sold using (a) specific identification, (b) FIFO, (c) LIFO, and (d) weighted average. (Round per unit costs and inventory amounts to cents.) For specific identification, ending inventory consists of 10 units, where eight are from the December 30 purchase and two are from the December 8 purchase.

**Solutions**

- a. Specific identification: Ending inventory—eight units from December 30 purchase and two units from December 8 purchase

Specific Identification	Ending Inventory	Cost of Goods Sold
$(8 \times \$5.30) + (2 \times \$4.50)$ .....	\$51.40	
$(5 \times \$3.00) + (8 \times \$4.50) + (13 \times \$5.00) + (0 \times \$5.30)$ .....		\$116.00
or $\$167.40$ [Total Goods Available] $-$ $\$51.40$ [Ending Inventory] .....		\$116.00

- b. FIFO—Periodic

FIFO	Ending Inventory	Cost of Goods Sold
$(8 \times \$5.30) + (2 \times \$5.00)$ .....	\$52.40	
$(5 \times \$3.00) + (10 \times \$4.50) + (11 \times \$5.00)$ .....		\$115.00
or $\$167.40$ [Total Goods Available] $-$ $\$52.40$ [Ending Inventory] .....		\$115.00

- c. LIFO—Periodic

LIFO	Ending Inventory	Cost of Goods Sold
$(5 \times \$3.00) + (5 \times \$4.50)$ .....	\$37.50	
$(8 \times \$5.30) + (13 \times \$5.00) + (5 \times \$4.50)$ .....		\$129.90
or $\$167.40$ [Total Goods Available] $-$ $\$37.50$ [Ending Inventory] .....		\$129.90

- d. WA—Periodic

WA	Ending Inventory	Cost of Goods Sold
$10 \times \$4.65$ (computed from $\$167.40/36$ ) .....	\$46.50	
$26 \times \$4.65$ (computed from $\$167.40/36$ ) .....		\$120.90
or $\$167.40$ [Total Goods Available] $-$ $\$46.50$ [Ending Inventory] .....		\$120.90

**APPENDIX**

# 6B

## Inventory Estimation Methods

**P4**  
Apply both the retail inventory and gross profit methods to estimate inventory.

**Point:** When a retailer takes a physical inventory, it can restate the retail value of inventory to a cost basis by applying the cost-to-retail ratio. It can also estimate the amount of shrinkage by comparing the inventory computed with the amount from a physical inventory.

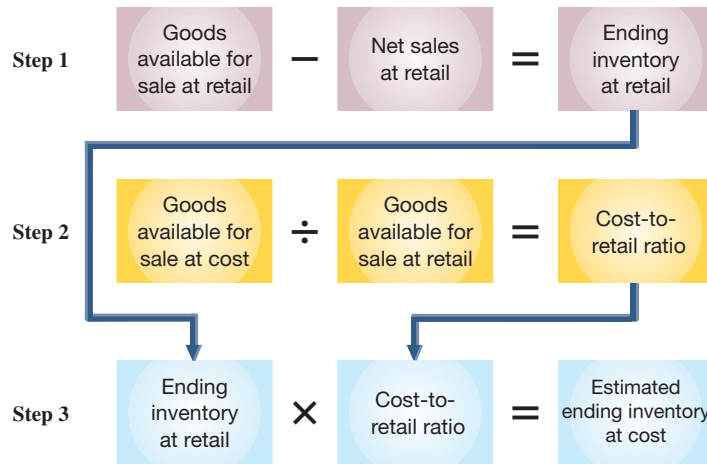

Inventory sometimes requires estimation for two reasons. First, companies often require **interim statements** (financial statements prepared for periods of less than one year), but they only annually take a physical count of inventory. Second, companies may require an inventory estimate if some casualty such as fire or flood makes taking a physical count impossible. Estimates are usually only required for companies that use the periodic system. Companies using a perpetual system would presumably have updated inventory data.

This appendix describes two methods to estimate inventory.

**Retail Inventory Method** To avoid the time-consuming and expensive process of taking a physical inventory each month or quarter, some companies use the **retail inventory method** to estimate cost of goods sold and ending inventory. Some companies even use the retail inventory method to prepare the annual statements. **Home Depot**, for instance, says in its annual report: “Inventories are stated at the lower of cost (first-in, first-out) or market, as determined by the retail inventory method.” A company may also estimate inventory for audit purposes or when inventory is damaged or destroyed.

The retail inventory method uses a three-step process to estimate ending inventory. We need to know the amount of inventory a company had at the beginning of the period in both *cost* and *retail* amounts. We already explained how to compute the cost of inventory. The *retail amount of inventory* refers to its dollar amount measured using selling prices of inventory items. We also need to know the net amount of goods purchased (minus returns, allowances, and discounts) in the period, both at cost and at retail. The amount of net sales at retail is also needed. The process is shown in Exhibit 6B.1.

The reasoning behind the retail inventory method is that if we can get a good estimate of the cost-to-retail ratio, we can multiply ending inventory at retail by this ratio to estimate ending inventory at cost. We show in Exhibit 6B.2 how these steps are applied to estimate ending inventory for a typical company. First, we find that \$100,000 of goods (at retail selling prices) were available for sale. We see that \$70,000 of these goods were sold, leaving \$30,000 (retail value) of merchandise in ending inventory. Second, the cost of these goods is 60% of the \$100,000 retail value. Third, since cost for these goods is 60% of retail, the estimated cost of ending inventory is \$18,000.

**EXHIBIT 6B.1**

Retail Inventory Method of Inventory Estimation

**Example:** What is the cost of ending inventory in Exhibit 6B.2 if the cost of beginning inventory is \$22,500 and its retail value is \$34,500? Answer:  $\$30,000 \times 62\% = \$18,600$

	At Cost	At Retail
Goods available for sale		
Beginning inventory .....	\$ 20,500	\$ 34,500
Cost of goods purchased .....	39,500	65,500
Goods available for sale .....	60,000	100,000
<b>Step 1:</b> Deduct net sales at retail .....		70,000
Ending inventory at retail .....		\$ 30,000
<b>Step 2:</b> Cost-to-retail ratio: $(\$60,000 \div \$100,000) = 60\%$		
<b>Step 3:</b> Estimated ending inventory at cost $(\$30,000 \times 60\%)$ .....	\$ 18,000	

**EXHIBIT 6B.2**

Estimated Inventory Using the Retail Inventory Method

**Point:** A retailer such as Target can speed up its year-end physical count by using the retail inventory method. Inventory counters can record the item's retail price without having to look up the cost of each item.

**Gross Profit Method** The **gross profit method** estimates the cost of ending inventory by applying the gross profit ratio to net sales (at retail). This type of estimate often is needed when inventory is destroyed, lost, or stolen. These cases require an inventory estimate so that a company can file a claim with its insurer. Users also apply this method to see whether inventory amounts from a physical count are reasonable. This method uses the historical relation between cost of goods sold and net sales to estimate the proportion of cost of goods sold making up current sales. This cost of goods sold estimate is then subtracted from cost of goods available for sale to estimate the ending inventory at cost. These two steps are shown in Exhibit 6B.3.

**EXHIBIT 6B.3**

Gross Profit Method of Inventory Estimation

**Point:** A fire or other catastrophe can result in an insurance claim for lost inventory or income. Backup and off-site storage of data help ensure coverage for such losses.

**Point:** Reliability of the gross profit method depends on an accurate and stable estimate of the gross profit ratio.

To illustrate, assume that a company's inventory is destroyed by fire in March 2015. When the fire occurs, the company's accounts show the following balances for January through March: Sales, \$31,500; Sales Returns, \$1,500; Inventory (January 1, 2015), \$12,000; and Cost of Goods Purchased, \$20,500. If this company's gross profit ratio is 30%, then 30% of each net sales dollar is gross profit and 70% is cost of goods sold. We show in Exhibit 6B.4 how this 70% is used to

**EXHIBIT 6B.4**

Estimated Inventory Using the Gross Profit Method

	Goods available for sale	
	Inventory, January 1, 2015 .....	\$ 12,000
	Cost of goods purchased .....	<u>20,500</u>
	Goods available for sale (at cost) .....	32,500
	Net sales at retail (\$31,500 - \$1,500) .....	\$30,000
<b>Step 1:</b>	<b>Estimated cost of goods sold (\$30,000 × 70%) .....</b>	<b>(21,000)</b> ← $\times 0.70$
<b>Step 2:</b>	<b>Estimated March inventory at cost .....</b>	<b><u>\$11,500</u></b>

estimate lost inventory of \$11,500. To understand this exhibit, think of subtracting the cost of goods sold from the goods available for sale to get the ending inventory.

**NEED-TO-KNOW**

6-6

Using the retail method and the following data, estimate the cost of ending inventory.

Retail Inventory Estimation

P4

	Cost	Retail
Beginning inventory .....	\$324,000	\$530,000
Cost of goods purchased .....	195,000	335,000
Net sales .....		320,000

**Solution**

Estimated ending inventory (at cost) is \$327,000. It is computed as follows:

Step 1:  $(\$530,000 + \$335,000) - \$320,000 = \$545,000$

Step 2:  $\frac{\$324,000 + \$195,000}{\$530,000 + \$335,000} = 60\%$

Step 3:  $\$545,000 \times 60\% = \underline{\underline{\$327,000}}$

Do More: QS 6-22, E 6-16, E 6-17

# Summary

**C1 Identify the items making up merchandise inventory.** Merchandise inventory refers to goods owned by a company and held for resale. Three special cases merit our attention. Goods in transit are reported in inventory of the company that holds ownership rights. Goods on consignment are reported in the consignor’s inventory. Goods damaged or obsolete are reported in inventory at their net realizable value.

**C2 Identify the costs of merchandise inventory.** Costs of merchandise inventory include expenditures necessary to bring an item to a salable condition and location. This includes its invoice cost minus any discount plus any added or incidental costs necessary to put it in a place and condition for sale.

**A1 Analyze the effects of inventory methods for both financial and tax reporting.** When purchase costs are rising or falling, the inventory costing methods are likely to assign different costs to inventory. Specific identification exactly matches costs and revenues. Weighted average smooths out cost changes. FIFO assigns an amount to inventory closely approximating current replacement cost. LIFO assigns the most recent costs incurred to cost of goods sold and likely better matches current costs with revenues.

**A2 Analyze the effects of inventory errors on current and future financial statements.** An error in the amount of ending inventory affects assets (inventory), net income (cost of

goods sold), and equity for that period. Since ending inventory is next period’s beginning inventory, an error in ending inventory affects next period’s cost of goods sold and net income. Inventory errors in one period are offset in the next period.

**A3 Assess inventory management using both inventory turnover and days’ sales in inventory.** We prefer a high inventory turnover, provided that goods are not out of stock and customers are not turned away. We use days’ sales in inventory to assess the likelihood of goods being out of stock. We prefer a small number of days’ sales in inventory if we can serve customer needs and provide a buffer for uncertainties.

**P1 Compute inventory in a perpetual system using the methods of specific identification, FIFO, LIFO, and weighted average.** Costs are assigned to the Cost of Goods Sold account *each time* a sale occurs in a perpetual system. Specific identification assigns a cost to each item sold by referring to its actual cost (for example, its net invoice cost). Weighted average assigns a cost to items sold by dividing the current balance in the Inventory account by the total items available for sale to determine cost per unit. We then multiply the number of units sold by this cost per unit to get the cost of each sale. FIFO assigns cost to items sold assuming that the earliest units purchased are the first units sold. LIFO assigns cost to items sold assuming that the most recent units purchased are the first units sold.

**P2 Compute the lower of cost or market amount of inventory.** Inventory is reported at market cost when market is lower than recorded cost, called the *lower of cost or market (LCM) inventory*. Market is typically measured as replacement cost. Lower of cost or market can be applied separately to each item, to major categories of items, or to the entire inventory.

**P3A Compute inventory in a periodic system using the methods of specific identification, FIFO, LIFO, and weighted average.** Periodic inventory systems allocate the cost of goods available for sale between cost of goods sold and ending inventory *at the end of a period*. Specific identification and FIFO give identical results whether the periodic or perpetual system is used. LIFO assigns costs to cost of goods sold assuming the last units purchased for the period are the first units sold. The weighted average cost per unit is computed by dividing the

total cost of beginning inventory and net purchases for the period by the total number of units available. Then, it multiplies cost per unit by the number of units sold to give cost of goods sold.

**P4B Apply both the retail inventory and gross profit methods to estimate inventory.** The retail inventory method involves three steps: (1) goods available at retail minus net sales at retail equals ending inventory at retail, (2) goods available at cost divided by goods available at retail equals the cost-to-retail ratio, and (3) ending inventory at retail multiplied by the cost-to-retail ratio equals estimated ending inventory at cost. The gross profit method involves two steps: (1) net sales at retail multiplied by 1 minus the gross profit ratio equals estimated cost of goods sold, and (2) goods available at cost minus estimated cost of goods sold equals estimated ending inventory at cost.

### Guidance Answers to Decision Maker and Decision Ethics

**Cost Analyst** Explain to your supervisor that when inventory costs are increasing, FIFO results in an inventory valuation that approximates replacement cost. The most recently purchased goods are assigned to ending inventory under FIFO and are likely closer to replacement values than earlier costs that would be assigned to inventory if LIFO were used.

**Inventory Manager** It seems your company can save (or at least postpone) taxes by switching to LIFO, but the switch is likely to reduce bonus money that you think you have earned and deserve. Since the U.S. tax code requires companies that use LIFO for tax reporting also to use it for financial reporting, your options are further constrained. Your best decision is to tell your superior about the tax savings with LIFO. You also should

discuss your bonus plan and how this is likely to hurt you unfairly. You might propose to compute inventory under the LIFO method for reporting purposes but use the FIFO method for your bonus calculations. Another solution is to revise the bonus plan to reflect the company's use of the LIFO method.

**Entrepreneur** Your inventory turnover is markedly higher than the norm, whereas days' sales in inventory approximates the norm. Since your turnover is already 14% better than average, you are probably best served by directing attention to days' sales in inventory. You should see whether you can reduce the level of inventory while maintaining service to customers. Given your higher turnover, you should be able to hold less inventory.

### Multiple Choice Quiz

### Answers at end of chapter

Use the following information from Marvel Company for the month of July to answer questions 1 through 4.

July 1	Beginning inventory	75 units @ \$25 each
July 3	Purchase	348 units @ \$27 each
July 8	Sale	300 units
July 15	Purchase	257 units @ \$28 each
July 23	Sale	275 units

1. **Perpetual:** Assume that Marvel uses a *perpetual* FIFO inventory system. What is the dollar value of its ending inventory?
- |            |            |
|------------|------------|
| a. \$2,940 | d. \$2,852 |
| b. \$2,685 | e. \$2,705 |
| c. \$2,625 |            |

- 2. Perpetual:** Assume that Marvel uses a *perpetual* LIFO inventory system. What is the dollar value of its ending inventory?  
**a.** \$2,940      **c.** \$2,625      **e.** \$2,705  
**b.** \$2,685      **d.** \$2,852
- 3. Perpetual:** Assume that Marvel uses a *perpetual* specific identification inventory system. Its ending inventory consists of 20 units from beginning inventory, 40 units from the July 3 purchase, and 45 units from the July 15 purchase. What is the dollar value of its ending inventory?  
**a.** \$2,940      **c.** \$2,625      **e.** \$2,840  
**b.** \$2,685      **d.** \$2,852
- 4. Periodic:** Assume that Marvel uses a *periodic* FIFO inventory system. What is the dollar value of its ending inventory?  
**a.** \$2,940      **c.** \$2,625      **e.** \$2,705  
**b.** \$2,685      **d.** \$2,852
- 5. Periodic:** A company reports the following beginning inventory and purchases, and it ends the period with 30 units in inventory.
- |                               |                                 |
|-------------------------------|---------------------------------|
| Beginning inventory . . . . . | 100 units at \$10 cost per unit |
| Purchase 1 . . . . .          | 40 units at \$12 cost per unit  |
| Purchase 2 . . . . .          | 20 units at \$14 cost per unit  |
- a.** Compute ending inventory using the FIFO *periodic* system.  
**b.** Compute cost of goods sold using the LIFO *periodic* system.
- 6.** A company has cost of goods sold of \$85,000 and ending inventory of \$18,000. Its days' sales in inventory equals:  
**a.** 49.32 days      **d.** 77.29 days  
**b.** 0.21 days      **e.** 1,723.61 days  
**c.** 4.72 days

<sup>B</sup> *Superscript letter A (B) denotes assignments based on Appendix 6A (6B).*  
 *Icon denotes assignments that involve decision making.*

## Discussion Questions

- Describe how costs flow from inventory to cost of goods sold for the following methods: (a) FIFO and (b) LIFO.
- Where is the amount of merchandise inventory disclosed in the financial statements?
- Why are incidental costs sometimes ignored in inventory costing? Under what accounting constraint is this permitted?
-  If costs are declining, will the LIFO or FIFO method of inventory valuation yield the lower cost of goods sold? Why?
- What does the full-disclosure principle prescribe if a company changes from one acceptable accounting method to another?
- Can a company change its inventory method each accounting period? Explain.
-  Does the accounting concept of consistency preclude any changes from one accounting method to another?
-  If inventory errors are said to correct themselves, why are accounting users concerned when such errors are made?
- Explain the following statement: "Inventory errors correct themselves."
- What is the meaning of *market* as it is used in determining the lower of cost or market for inventory?
-  What guidance does the accounting constraint of conservatism offer?
- What factors contribute to (or cause) inventory shrinkage?
- <sup>B</sup> When preparing interim financial statements, what two methods can companies utilize to estimate cost of goods sold and ending inventory?
- Refer to **Google**'s financial statements in Appendix A. On December 31, 2013, **GOOGLE** what percent of current assets are represented by inventory?
- Refer to **Apple**'s financial statements in Appendix A and compute its cost of goods available for sale for the year ended September 28, 2013. **APPLE**
- Refer to **Samsung**'s financial statements in Appendix A. Compute its cost of goods available for sale for the year ended December 31, 2013. **Samsung**
- Refer to **Samsung**'s financial statements in Appendix A. What percent of its current assets are inventory as of December 31, 2013 and 2012? **Samsung**

## QUICK STUDY

### QS 6-1

Inventory ownership 

Homestead Crafts, a distributor of handmade gifts, operates out of owner Emma Finn's house. At the end of the current period, Emma reports she has 1,300 units (products) in her basement, 20 of which were damaged by water and cannot be sold. She also has another 350 units in her van, ready to deliver per a customer order, terms FOB destination, and another 80 units out on consignment to a friend who owns a retail store. How many units should Emma include in her company's period-end inventory?

A car dealer acquires a used car for \$14,000, terms FOB shipping point. Additional costs in obtaining and offering the car for sale include \$250 for transportation-in, \$900 for import duties, \$300 for insurance during shipment, \$150 for advertising, and \$1,250 for sales staff salaries. For computing inventory, what cost is assigned to the used car?

**QS 6-2**  
Inventory costs  
C2

Wattan Company reports beginning inventory of 10 units at \$60 each. Every week for four weeks it purchases an additional 10 units at respective costs of \$61, \$62, \$65, and \$70 per unit for weeks 1 through 4. Calculate the cost of goods available for sale and the units available for sale for this four-week period. Assume that no sales occur during those four weeks.

**QS 6-3**  
Computing goods available for sale P1

A company reports the following beginning inventory and purchases for the month of January. On January 26, the company sells 350 units. 150 units remain in ending inventory at January 31.

**QS 6-4**  
**Perpetual:** Inventory costing with FIFO  
P1

	Units	Unit Cost
Beginning inventory on January 1 . . . . .	320	\$3.00
Purchase on January 9 . . . . .	80	3.20
Purchase on January 25 . . . . .	100	3.34

### Required

Assume the perpetual inventory system is used and then determine the costs assigned to ending inventory when costs are assigned based on the FIFO method. (Round per unit costs and inventory amounts to cents.)

Refer to the information in QS 6-4 and assume the perpetual inventory system is used. Determine the costs assigned to ending inventory when costs are assigned based on LIFO. (Round per unit costs and inventory amounts to cents.)

**QS 6-5**  
**Perpetual:** Inventory costing with LIFO P1

Refer to the information in QS 6-4 and assume the perpetual inventory system is used. Determine the costs assigned to ending inventory when costs are assigned based on the weighted average method. (Round per unit costs and inventory amounts to cents.)

**QS 6-6**  
**Perpetual:** Inventory costing with weighted average P1  
**Check** End. inv., \$465

Refer to the information in QS 6-4 and assume the periodic inventory system is used. Determine the costs assigned to ending inventory when costs are assigned based on the FIFO method. (Round per unit costs and inventory amounts to cents.)

**QS 6-7<sup>A</sup>**  
**Periodic:** Inventory costing with FIFO P3

Refer to the information in QS 6-4 and assume the periodic inventory system is used. Determine the costs assigned to ending inventory when costs are assigned based on the LIFO method. (Round per unit costs and inventory amounts to cents.)

**QS 6-8<sup>A</sup>**  
**Periodic:** Inventory costing with LIFO P3

Refer to the information in QS 6-4 and assume the periodic inventory system is used. Determine the costs assigned to ending inventory when costs are assigned based on the weighted average method. (Round per unit costs and inventory amounts to cents.)

**QS 6-9<sup>A</sup>**  
**Periodic:** Inventory costing with weighted average P3

Trey Monson starts a merchandising business on December 1 and enters into the following three inventory purchases. Also, on December 15, Monson sells 15 units for \$20 each.

Purchases on December 7	10 units @ \$ 6.00 cost
Purchases on December 14	20 units @ \$12.00 cost
Purchases on December 21	15 units @ \$14.00 cost

**QS 6-10**  
**Perpetual:** Assigning costs with FIFO  
P1

### Required

Monson uses a perpetual inventory system. Determine the costs assigned to the December 31 ending inventory based on the FIFO method. (Round per unit costs and inventory amounts to cents.)

**QS 6-11****Perpetual:** Inventory costing with LIFO P1

Refer to the information in QS 6-10 and assume the perpetual inventory system is used. Determine the costs assigned to ending inventory when costs are assigned based on the LIFO method. (Round per unit costs and inventory amounts to cents.)

**QS 6-12****Perpetual:** Inventory costing with weighted average P1

Refer to the information in QS 6-10 and assume the perpetual inventory system is used. Determine the costs assigned to ending inventory when costs are assigned based on the weighted average method. (Round per unit costs and inventory amounts to cents.)

**Check** End. inv., \$360**QS 6-13****Perpetual:** Inventory costing with specific identification P1

Refer to the information in QS 6-10 and assume the perpetual inventory system is used. Determine the costs assigned to ending inventory when costs are assigned based on specific identification. Of the units sold, eight are from the December 7 purchase and seven are from the December 14 purchase. (Round per unit costs and inventory amounts to cents.)

**QS 6-14<sup>A</sup>****Periodic:** Inventory costing with FIFO P3

Refer to the information in QS 6-10 and assume the periodic inventory system is used. Determine the costs assigned to ending inventory when costs are assigned based on the FIFO method. (Round per unit costs and inventory amounts to cents.)

**QS 6-15****Periodic:** Inventory costing with LIFO P3

Refer to the information in QS 6-10 and assume the periodic inventory system is used. Determine the costs assigned to ending inventory when costs are assigned based on the LIFO method. (Round per unit costs and inventory amounts to cents.)

**QS 6-16<sup>A</sup>****Periodic:** Inventory costing with weighted average P3

Refer to the information in QS 6-10 and assume the periodic inventory system is used. Determine the costs assigned to ending inventory when costs are assigned based on the weighted average method. (Round per unit costs and inventory amounts to cents.)

**QS 6-17<sup>A</sup>****Periodic:** Inventory costing with specific identification P3

Refer to the information in QS 6-10 and assume the periodic inventory system is used. Determine the costs assigned to ending inventory when costs are assigned based on specific identification. Of the units sold, eight are from the December 7 purchase and seven are from the December 14 purchase. (Round per unit costs and inventory amounts to cents.)

**QS 6-18**

Contrasting inventory costing methods

A1 

Identify the inventory costing method best described by each of the following separate statements. Assume a period of increasing costs.

- \_\_\_\_\_ 1. Yields a balance sheet inventory amount often markedly less than its replacement cost.
- \_\_\_\_\_ 2. Results in a balance sheet inventory amount approximating replacement cost.
- \_\_\_\_\_ 3. Provides a tax advantage (deferral) to a corporation when costs are rising.
- \_\_\_\_\_ 4. Recognizes (matches) recent costs against net sales.
- \_\_\_\_\_ 5. The preferred method when each unit of product has unique features that markedly affect cost.

**QS 6-19**

Applying LCM to inventories

P2

Ames Trading Co. has the following products in its ending inventory. Compute lower of cost or market for inventory applied separately to each product.

Product	Quantity	Cost per Unit	Market per Unit
Mountain bikes . . . . .	11	\$600	\$550
Skateboards . . . . .	13	350	425
Gliders . . . . .	26	800	700

**QS 6-20**

Inventory errors

A2 

In taking a physical inventory at the end of year 2015, Grant Company forgot to count certain units. Explain how this error affects the following: (a) 2015 cost of goods sold, (b) 2015 gross profit, (c) 2015 net income, (d) 2016 net income, (e) the combined two-year income, and (f) income for years after 2016.

Endor Company begins the year with \$140,000 of goods in inventory. At year-end, the amount in inventory has increased to \$180,000. Cost of goods sold for the year is \$1,200,000. Compute Endor's inventory turnover and days' sales in inventory. Assume that there are 365 days in the year.

**QS 6-21**  
Analyzing inventory **A3**

Confucius Bookstore's inventory is destroyed by a fire on September 5, 2015. The following data for year 2015 are available from the accounting records. Estimate the cost of the inventory destroyed.

**QS 6-22<sup>B</sup>**  
Estimating inventories—  
gross profit method  
**P4**

Jan. 1 inventory .....	\$190,000
Jan. 1 through Sept. 5 purchases (net) .....	\$352,000
Jan. 1 through Sept. 5 sales (net) .....	\$685,000
Year 2015 estimated gross profit rate .....	44%

Answer each of the following questions related to international accounting standards.

- Explain how the accounting for items and costs making up merchandise inventory is different between IFRS and U.S. GAAP.
- Can companies reporting under IFRS apply a cost flow assumption in assigning costs to inventory? If yes, identify at least two acceptable cost flow assumptions.
- Both IFRS and U.S. GAAP apply the lower of cost or market method for reporting inventory values. If inventory is written down from applying the lower of cost or market method, explain in general terms how IFRS and U.S. GAAP differ in accounting for any subsequent period reversal of that reported decline in inventory value.

**QS 6-23**  
International accounting  
standards

**C1 C2 P2**

- At year-end, Harris Co. had shipped \$12,500 of merchandise FOB destination to Harlow Co. Which company should include the \$12,500 of merchandise in transit as part of its year-end inventory?
- Harris Company has shipped \$20,000 of goods to Harlow Co., and Harlow Co. has arranged to sell the goods for Harris. Identify the consignor and the consignee. Which company should include any unsold goods as part of its inventory?

## EXERCISES

**Exercise 6-1**  
Inventory ownership **C1**

Walberg Associates, antique dealers, purchased the contents of an estate for \$75,000. Terms of the purchase were FOB shipping point, and the cost of transporting the goods to Walberg Associates' warehouse was \$2,400. Walberg Associates insured the shipment at a cost of \$300. Prior to putting the goods up for sale, they cleaned and refurbished them at a cost of \$980. Determine the cost of the inventory acquired from the estate.

**Exercise 6-2**  
Inventory costs  
**C2**

Laker Company reported the following January purchases and sales data for its only product.

Date	Activities	Units Acquired at Cost	Units Sold at Retail
Jan. 1	Beginning inventory .....	140 units @ \$6.00 = \$ 840	
Jan. 10	Sales .....		100 units @ \$15
Jan. 20	Purchase .....	60 units @ \$5.00 = 300	
Jan. 25	Sales .....		80 units @ \$15
Jan. 30	Purchase .....	180 units @ \$4.50 = 810	
	Totals .....	<u>380 units</u> <u>\$1,950</u>	<u>180 units</u>

**Exercise 6-3**  
**Perpetual:** Inventory  
costing methods  
**P1**

### Required

The company uses a perpetual inventory system. Determine the cost assigned to ending inventory and to cost of goods sold using (a) specific identification, (b) weighted average, (c) FIFO, and (d) LIFO. (Round per unit costs and inventory amounts to cents.) For specific identification, ending inventory consists of 200 units, where 180 are from the January 30 purchase, 5 are from the January 20 purchase, and 15 are from beginning inventory.

**Check** Ending inventory:  
LIFO, \$930; WA, \$918

**Exercise 6-4**

**Perpetual:** Income effects of inventory methods

A1 

Use the data in Exercise 6-3 to prepare comparative income statements for the month of January for Laker Company similar to those shown in Exhibit 6.8 for the four inventory methods. Assume expenses are \$1,250, and that the applicable income tax rate is 40%. (Round amounts to cents.)

1. Which method yields the highest net income?
2. Does net income using weighted average fall between that using FIFO and LIFO?
3. If costs were rising instead of falling, which method would yield the highest net income?

**Exercise 6-5<sup>A</sup>**

**Periodic:** Inventory costing P3

Refer to the information in Exercise 6-3 and assume the periodic inventory system is used. Determine the costs assigned to ending inventory and to cost of goods sold using (a) specific identification, (b) weighted average, (c) FIFO, and (d) LIFO. (Round per unit costs and inventory amounts to cents.)

**Exercise 6-6<sup>A</sup>**

**Periodic:** Income effects of inventory methods

A1

Use the data and results from Exercise 6-5 to prepare comparative income statements for the month of January for the company similar to those shown in Exhibit 6.8 for the four inventory methods. Assume expenses are \$1,250, and that the applicable income tax rate is 40%. (Round amounts to cents.)

**Required**

1. Which method yields the highest net income?
2. Does net income using weighted average fall between that using FIFO and LIFO?
3. If costs were rising instead of falling, which method would yield the highest net income?

**Exercise 6-7**

**Perpetual:** Inventory costing methods—FIFO and LIFO

P1

Hemming Co. reported the following current-year purchases and sales for its only product.

Date	Activities	Units Acquired at Cost	Units Sold at Retail
Jan. 1	Beginning inventory . . . . .	200 units @ \$10 = \$ 2,000	
Jan. 10	Sales . . . . .		150 units @ \$40
Mar. 14	Purchase . . . . .	350 units @ \$15 = 5,250	
Mar. 15	Sales . . . . .		300 units @ \$40
July 30	Purchase . . . . .	450 units @ \$20 = 9,000	
Oct. 5	Sales . . . . .		430 units @ \$40
Oct. 26	Purchase . . . . .	100 units @ \$25 = 2,500	
Totals . . . . .		<u>1,100 units</u> <u>\$18,750</u>	<u>880 units</u>

**Required**

Hemming uses a perpetual inventory system. Determine the costs assigned to ending inventory and to cost of goods sold using (a) FIFO and (b) LIFO. Compute the gross margin for each method. (Round amounts to cents.)

**Check** Ending inventory: LIFO, \$4,150

**Exercise 6-8**

Specific identification P1

Refer to the information in Exercise 6-7. Ending inventory consists of 45 units from the March 14 purchase, 75 units from the July 30 purchase, and all 100 units from the October 26 purchase. Using the specific identification method, calculate (a) the cost of goods sold and (b) the gross profit. (Round amounts to cents.)

**Exercise 6-9<sup>A</sup>**

**Periodic:** Inventory costing P3

Refer to the information in Exercise 6-7 and assume the periodic inventory system is used. Determine the costs assigned to ending inventory and to cost of goods sold using (a) FIFO and (b) LIFO. Then (c) compute the gross margin for each method.

**Exercise 6-10**

Lower of cost or market

P2

Martinez Company's ending inventory includes the following items. Compute the lower of cost or market for ending inventory applied separately to each product.

Product	Units	Per Unit	
		Cost	Market
Helmets . . . . .	24	\$50	\$54
Bats . . . . .	17	78	72
Shoes . . . . .	38	95	91
Uniforms . . . . .	42	36	36

**Check** LCM = \$7,394

Cruz Company uses LIFO for inventory costing and reports the following financial data. It also recomputed inventory and cost of goods sold using FIFO for comparison purposes.

	2015	2014
LIFO inventory	\$160	\$110
LIFO cost of goods sold	740	680
FIFO inventory	240	110
FIFO cost of goods sold	660	645
Current assets (using LIFO)	220	180
Current liabilities	200	170

1. Compute its current ratio, inventory turnover, and days' sales in inventory for 2015 using (a) LIFO numbers and (b) FIFO numbers. (Round answers to one decimal.)
2. Comment on and interpret the results of part 1.

**Exercise 6-11**  
Comparing LIFO numbers to FIFO numbers; ratio analysis

A1 A3 

**Check** (1) FIFO: Current ratio, 1.5; Inventory turnover, 3.8 times

Vibrant Company had \$850,000 of sales in each of three consecutive years 2014–2016, and it purchased merchandise costing \$500,000 in each of those years. It also maintained a \$250,000 physical inventory from the beginning to the end of that three-year period. In accounting for inventory, it made an error at the end of year 2014 that caused its year-end 2014 inventory to appear on its statements as \$230,000 rather than the correct \$250,000.

1. Determine the correct amount of the company's gross profit in each of the years 2014–2016.
2. Prepare comparative income statements as in Exhibit 6.11 to show the effect of this error on the company's cost of goods sold and gross profit for each of the years 2014–2016.

**Exercise 6-12**  
Analysis of inventory errors

A2 

**Check** 2014 reported gross profit, \$330,000

Use the following information for Palmer Co. to compute inventory turnover for 2015 and 2014, and its days' sales in inventory at December 31, 2015 and 2014. (Round answers to one decimal.) Comment on Palmer's efficiency in using its assets to increase sales from 2014 to 2015.

	2015	2014	2013
Cost of goods sold	\$643,825	\$426,650	\$391,300
Ending inventory	97,400	87,750	92,500

**Exercise 6-13**  
Inventory turnover and days' sales in inventory

A3 

Lopez Company reported the following current-year data for its only product. The company uses a periodic inventory system, and its ending inventory consists of 150 units—50 from each of the last three purchases. Determine the cost assigned to ending inventory and to cost of goods sold using (a) specific identification, (b) weighted average, (c) FIFO, and (d) LIFO. (Round per unit costs and inventory amounts to cents.) Which method yields the highest net income?

Jan. 1	Beginning inventory	96 units @ \$2.00 = \$	192
Mar. 7	Purchase	220 units @ \$2.25 =	495
July 28	Purchase	544 units @ \$2.50 =	1,360
Oct. 3	Purchase	480 units @ \$2.80 =	1,344
Dec. 19	Purchase	160 units @ \$2.90 =	464
	Totals	1,500 units	\$3,855

**Exercise 6-14<sup>A</sup>**  
**Periodic:** Cost flow assumptions

P3

**Check** Inventory; LIFO, \$313.50; FIFO, \$435.00

Flora's Gifts reported the following current-month data for its only product. The company uses a periodic inventory system, and its ending inventory consists of 60 units—50 units from the January 6 purchase, and 10 units from the January 25 purchase. Determine the cost assigned to ending inventory and to cost of goods sold using (a) specific identification, (b) weighted average, (c) FIFO, and (d) LIFO. (Round per unit costs and inventory amounts to cents.) Which method yields the lowest net income?

**Exercise 6-15**  
**Periodic:** Cost flow assumptions

P3

Jan. 1	Beginning inventory . . . . .	138 units @ \$3.00 = \$	414
Jan. 6	Purchase . . . . .	300 units @ \$2.80 =	840
Jan. 17	Purchase . . . . .	540 units @ \$2.30 =	1,242
Jan. 25	Purchase . . . . .	22 units @ \$2.00 =	44
	Totals . . . . .	1,000 units	\$2,540

**Check** Inventory: LIFO, \$180.00; FIFO, \$131.40

**Exercise 6-16<sup>B</sup>**  
Estimating ending inventory—retail method

P4

In 2015, Dakota Company had net sales (at retail) of \$260,000. The following additional information is available from its records at the end of 2015. Use the retail inventory method to estimate Dakota’s 2015 ending inventory at cost.

	At Cost	At Retail
Beginning inventory . . . . .	\$ 63,800	\$128,400
Cost of goods purchased . . . . .	115,060	196,800

**Check** End. inventory at cost, \$35,860

**Exercise 6-17<sup>B</sup>**  
Estimating ending inventory—gross profit method

P4

On January 1, JKR Shop had \$225,000 of inventory at cost. In the first quarter of the year, it purchased \$795,000 of merchandise, returned \$11,550, and paid freight charges of \$18,800 on purchased merchandise, terms FOB shipping point. The company’s gross profit averages 30%, and the store had \$1,000,000 of net sales (at retail) in the first quarter of the year. Use the gross profit method to estimate its cost of inventory at the end of the first quarter.

**Exercise 6-18**  
Accounting for inventory following IFRS

**Samsung Electronics** reports the following regarding its accounting for inventories.

Inventories are stated at the lower of cost or net realizable value. Cost is determined using the average cost method, except for materials-in-transit. Inventories are reduced for the estimated losses arising from excess, obsolescence, and the decline in value. This reduction is determined by estimating market value based on future customer demand. The losses on inventory obsolescence are recorded as a part of cost of sales.

1. What cost flow assumption(s) does Samsung apply in assigning costs to its inventories?
2. If at year-end 2013 there was an increase in the value of its inventories such that there was a reversal of ₩550 (₩ is Korean won) million for the 2012 write-down, how would Samsung account for this under IFRS? Would Samsung’s accounting be different for this reversal if it reported under U.S. GAAP? Explain.

**PROBLEM SET A**

**Problem 6-1A**  
**Perpetual:** Alternative cost flows

P1

Warnerwoods Company uses a perpetual inventory system. It entered into the following purchases and sales transactions for March. (For specific identification, the March 9 sale consisted of 80 units from beginning inventory and 340 units from the March 5 purchase; the March 29 sale consisted of 40 units from the March 18 purchase and 120 units from the March 25 purchase.)

Date	Activities	Units Acquired at Cost	Units Sold at Retail
Mar. 1	Beginning inventory . . . . .	100 units @ \$50.00 per unit	
Mar. 5	Purchase . . . . .	400 units @ \$55.00 per unit	
Mar. 9	Sales . . . . .		420 units @ \$85.00 per unit
Mar. 18	Purchase . . . . .	120 units @ \$60.00 per unit	
Mar. 25	Purchase . . . . .	200 units @ \$62.00 per unit	
Mar. 29	Sales . . . . .		160 units @ \$95.00 per unit
	Totals . . . . .	820 units	580 units

**Required**

1. Compute cost of goods available for sale and the number of units available for sale.
2. Compute the number of units in ending inventory.
3. Compute the cost assigned to ending inventory using (a) FIFO, (b) LIFO, (c) weighted average, and (d) specific identification. (Round all amounts to cents.)
4. Compute gross profit earned by the company for each of the four costing methods in part 3.

**Check** (3) Ending inventory: FIFO, \$14,800; LIFO, \$13,680, WA, \$14,352  
(4) LIFO gross profit, \$17,980

Refer to the information in Problem 6-1A and assume the periodic inventory system is used.

**Required**

1. Compute cost of goods available for sale and the number of units available for sale.
2. Compute the number of units in ending inventory.
3. Compute the cost assigned to ending inventory using (a) FIFO, (b) LIFO, (c) weighted average, and (d) specific identification. (Round all amounts to cents.)
4. Compute gross profit earned by the company for each of the four costing methods in part 3.

**Problem 6-2A<sup>A</sup>**  
**Periodic:** Alternative cost flows

P1

Montoure Company uses a perpetual inventory system. It entered into the following calendar-year 2015 purchases and sales transactions. (For specific identification, units sold consist of 600 units from beginning inventory, 300 from the February 10 purchase, 200 from the March 13 purchase, 50 from the August 21 purchase, and 250 from the September 5 purchase.)

**Problem 6-3A**  
**Perpetual:** Alternative cost flows

P1

Date	Activities	Units Acquired at Cost	Units Sold at Retail
Jan. 1	Beginning inventory . . . . .	600 units @ \$45.00 per unit	
Feb. 10	Purchase . . . . .	400 units @ \$42.00 per unit	
Mar. 13	Purchase . . . . .	200 units @ \$27.00 per unit	
Mar. 15	Sales . . . . .		800 units @ \$75.00 per unit
Aug. 21	Purchase . . . . .	100 units @ \$50.00 per unit	
Sept. 5	Purchase . . . . .	500 units @ \$46.00 per unit	
Sept. 10	Sales . . . . .		600 units @ \$75.00 per unit
	Totals . . . . .	1,800 units	1,400 units

**Required**

1. Compute cost of goods available for sale and the number of units available for sale.
2. Compute the number of units in ending inventory.
3. Compute the cost assigned to ending inventory using (a) FIFO, (b) LIFO, (c) weighted average, and (d) specific identification. (Round all amounts to cents.)
4. Compute gross profit earned by the company for each of the four costing methods in part 3.

**Check** (3) Ending inventory: FIFO, \$18,400; LIFO, \$18,000; WA, \$17,760  
(4) LIFO gross profit, \$45,800

**Analysis Component**

5. If the company's manager earns a bonus based on a percent of gross profit, which method of inventory costing will the manager likely prefer?

Refer to the information in Problem 6-3A and assume the periodic inventory system is used.

**Required**

1. Compute cost of goods available for sale and the number of units available for sale.
2. Compute the number of units in ending inventory.
3. Compute the cost assigned to ending inventory using (a) FIFO, (b) LIFO, (c) weighted average, and (d) specific identification. (Round all amounts to cents.)
4. Compute gross profit earned by the company for each of the four costing methods in part 3.

**Problem 6-4A<sup>A</sup>**  
**Periodic:** Alternative cost flows

P1

**Analysis Component**

5. If the company's manager earns a bonus based on a percentage of gross profit, which method of inventory costing will the manager likely prefer?

**Problem 6-5A**

Lower of cost or market

P2

A physical inventory of Liverpool Company taken at December 31 reveals the following.

	A	B	C	D
1	<b>Per Unit</b>			
2	<b>Item</b>	<b>Units</b>	<b>Cost</b>	<b>Market</b>
3	Audio equipment			
4	Receivers	345	\$ 90	\$ 98
5	CD players	260	111	100
6	MP3 players	326	86	95
7	Speakers	204	52	41
8	Video equipment			
9	Handheld LCDs	480	150	125
10	VCRs	291	93	84
11	Camcorders	212	310	322
12	Car audio equipment			
13	Satellite radios	185	70	84
14	CD/MP3 radios	170	97	105
15				

**Required****Check** (1) \$273,054

1. Calculate the lower of cost or market for the inventory applied separately to each item.
2. If the market amount is less than the recorded cost of the inventory, then record the LCM adjustment to the Merchandise Inventory account.

**Problem 6-6A**

Analysis of inventory errors

A2

Navajo Company's financial statements show the following. The company recently discovered that in making physical counts of inventory, it had made the following errors: Inventory on December 31, 2014, is understated by \$56,000, and inventory on December 31, 2015, is overstated by \$20,000.

	For Year Ended December 31	2014	2015	2016
(a)	Cost of goods sold .....	\$ 615,000	\$ 957,000	\$ 780,000
(b)	Net income .....	230,000	285,000	241,000
(c)	Total current assets .....	1,255,000	1,365,000	1,200,000
(d)	Total equity .....	1,387,000	1,530,000	1,242,000

**Required**

1. For each key financial statement figure—(a), (b), (c), and (d) above—prepare a table similar to the following to show the adjustments necessary to correct the reported amounts.

Figure: _____	2014	2015	2016
Reported amount .....	_____	_____	_____
Adjustments for: 12/31/2014 error .....	_____	_____	_____
12/31/2015 error .....	_____	_____	_____
Corrected amount .....	=====	=====	=====

**Check** (1) Corrected net income: 2014, \$286,000; 2015, \$209,000; 2016, \$261,000

**Analysis Component**

2. What is the error in total net income for the combined three-year period resulting from the inventory errors? Explain.
3. Explain why the understatement of inventory by \$56,000 at the end of 2014 results in an understatement of equity by the same amount in that year.

**Problem 6-7A<sup>A</sup>**

Periodic: Alternative cost flows P3

Seminole Company began year 2015 with 23,000 units of product in its January 1 inventory costing \$15 each. It made successive purchases of its product in year 2015 as follows. The company uses a periodic inventory system. On December 31, 2015, a physical count reveals that 40,000 units of its product remain in inventory.

Mar. 7	30,000 units @ \$18.00 each
May 25	39,000 units @ \$20.00 each
Aug. 1	23,000 units @ \$25.00 each
Nov. 10	35,000 units @ \$26.00 each

**Required**

1. Compute the number and total cost of the units available for sale in year 2015.
2. Compute the amounts assigned to the 2015 ending inventory and the cost of goods sold using (a) FIFO, (b) LIFO, and (c) weighted average. (Round all amounts to cents.)

**Check** (2) Cost of goods sold: FIFO, \$2,115,000; LIFO, \$2,499,000; WVA, \$2,310,000

QP Corp. sold 4,000 units of its product at \$50 per unit in year 2015 and incurred operating expenses of \$5 per unit in selling the units. It began the year with 700 units in inventory and made successive purchases of its product as follows.

Jan. 1	Beginning inventory	700 units @ \$18.00 per unit
Feb. 20	Purchase	1,700 units @ \$19.00 per unit
May 16	Purchase	800 units @ \$20.00 per unit
Oct. 3	Purchase	500 units @ \$21.00 per unit
Dec. 11	Purchase	2,300 units @ \$22.00 per unit
	Total	6,000 units

**Problem 6-8A<sup>A</sup>**

**Periodic:** Income comparisons and cost flows

A1 P3

**Required**

1. Prepare comparative income statements similar to Exhibit 6.8 for the three inventory costing methods of FIFO, LIFO, and weighted average. (Round all amounts to cents.) Include a detailed cost of goods sold section as part of each statement. The company uses a periodic inventory system, and its income tax rate is 40%.
2. How would the financial results from using the three alternative inventory costing methods change if the company had been experiencing declining costs in its purchases of inventory?
3. What advantages and disadvantages are offered by using (a) LIFO and (b) FIFO? Assume the continuing trend of increasing costs.

**Check** (1) Net income: FIFO, \$61,200; LIFO, \$57,180; WA, \$59,196

The records of Alaska Company provide the following information for the year ended December 31.

	At Cost	At Retail
January 1 beginning inventory	\$ 469,010	\$ 928,950
Cost of goods purchased	3,376,050	6,381,050
Sales		5,595,800
Sales returns		42,800

**Problem 6-9A<sup>B</sup>**

Retail inventory method

P4

**Required**

1. Use the retail inventory method to estimate the company's year-end inventory at cost.
2. A year-end physical inventory at retail prices yields a total inventory of \$1,686,900. Prepare a calculation showing the company's loss from shrinkage at cost and at retail.

**Check** (1) Inventory, \$924,182 cost  
(2) Inventory shortage at cost, \$36,873

Wayward Company wants to prepare interim financial statements for the first quarter. The company wishes to avoid making a physical count of inventory. Wayward's gross profit rate averages 34%. The following information for the first quarter is available from its records.

January 1 beginning inventory	\$ 302,580
Cost of goods purchased	941,040
Sales	1,211,160
Sales returns	8,410

**Problem 6-10A<sup>B</sup>**

Gross profit method

P4

**Required**

Use the gross profit method to estimate the company's first quarter ending inventory.

**Check** Estimated ending inventory, \$449,805

**PROBLEM SET B**

**Problem 6-1B**

**Perpetual:** Alternative cost flows

P1

Ming Company uses a perpetual inventory system. It entered into the following purchases and sales transactions for April. (For specific identification, the April 9 sale consisted of 8 units from beginning inventory and 27 units from the April 6 purchase; the April 30 sale consisted of 12 units from beginning inventory, 3 units from the April 6 purchase, and 10 units from the April 25 purchase.)

Date	Activities	Units Acquired at Cost	Units Sold at Retail
Apr. 1	Beginning inventory . . . . .	20 units @ \$3,000.00 per unit	
Apr. 6	Purchase . . . . .	30 units @ \$3,500.00 per unit	
Apr. 9	Sales . . . . .		35 units @ \$12,000.00 per unit
Apr. 17	Purchase . . . . .	5 units @ \$4,500.00 per unit	
Apr. 25	Purchase . . . . .	10 units @ \$4,800.00 per unit	
Apr. 30	Sales . . . . .		25 units @ \$14,000.00 per unit
	Total . . . . .	65 units	60 units

**Required**

1. Compute cost of goods available for sale and the number of units available for sale.
2. Compute the number of units in ending inventory.
3. Compute the cost assigned to ending inventory using (a) FIFO, (b) LIFO, (c) weighted average, and (d) specific identification. (Round all amounts to cents.)
4. Compute gross profit earned by the company for each of the four costing methods in part 3.

**Check** (3) Ending inventory: FIFO, \$24,000; LIFO, \$15,000; WA, \$20,000  
(4) LIFO gross profit, \$549,500

**Problem 6-2B<sup>A</sup>**

**Periodic:** Alternative cost flows

P1

Refer to the information in Problem 6-1B and assume the periodic inventory system is used.

**Required**

1. Compute cost of goods available for sale and the number of units available for sale.
2. Compute the number of units in ending inventory.
3. Compute the cost assigned to ending inventory using (a) FIFO, (b) LIFO, (c) weighted average, and (d) specific identification. (Round all amounts to cents.)
4. Compute gross profit earned by the company for each of the four costing methods in part 3.

**Problem 6-3B**

**Perpetual:** Alternative cost flows

P1

Aloha Company uses a perpetual inventory system. It entered into the following calendar-year 2015 purchases and sales transactions. (For specific identification, the May 9 sale consisted of 80 units from beginning inventory and 100 units from the May 6 purchase; the May 30 sale consisted of 200 units from the May 6 purchase and 100 units from the May 25 purchase.)

Date	Activities	Units Acquired at Cost	Units Sold at Retail
May 1	Beginning inventory . . . . .	150 units @ \$300.00 per unit	
May 6	Purchase . . . . .	350 units @ \$350.00 per unit	
May 9	Sales . . . . .		180 units @ \$1,200.00 per unit
May 17	Purchase . . . . .	80 units @ \$450.00 per unit	
May 25	Purchase . . . . .	100 units @ \$458.00 per unit	
May 30	Sales . . . . .		300 units @ \$1,400.00 per unit
	Total . . . . .	680 units	480 units

**Required**

1. Compute cost of goods available for sale and the number of units available for sale.
2. Compute the number of units in ending inventory.
3. Compute the cost assigned to ending inventory using (a) FIFO, (b) LIFO, (c) weighted average, and (d) specific identification. (Round all amounts to cents.)
4. Compute gross profit earned by the company for each of the four costing methods in part 3.

**Check** (3) Ending inventory: FIFO, \$88,800; LIFO, \$62,500; WA, \$75,600  
(4) LIFO gross profit, \$449,200

**Analysis Component**

5. If the company's manager earns a bonus based on a percent of gross profit, which method of inventory costing will the manager likely prefer?

Refer to the information in Problem 6-3B and assume the periodic inventory system is used.

**Required**

1. Compute cost of goods available for sale and the number of units available for sale.
2. Compute the number of units in ending inventory.
3. Compute the cost assigned to ending inventory using (a) FIFO, (b) LIFO, (c) weighted average, and (d) specific identification. (Round all amounts to cents.)
4. Compute gross profit earned by the company for each of the four costing methods in part 3.

**Analysis Component**

5. If the company's manager earns a bonus based on a percentage of gross profit, which method of inventory costing will the manager likely prefer?

**Problem 6-4B<sup>A</sup>**

**Periodic:** Alternative cost flows

P1

A physical inventory of Office Necessities Company taken at December 31 reveals the following.

	A	B	C	D
1	<b>Per Unit</b>			
2	<b>Item</b>	<b>Units</b>	<b>Cost</b>	<b>Market</b>
3	Office furniture			
4	Desks	536	\$261	\$305
5	Credenzas	395	227	256
6	Chairs	687	49	43
7	Bookshelves	421	93	82
8	Filing cabinets			
9	Two-drawer	114	81	70
10	Four-drawer	298	135	122
11	Lateral	75	104	118
12	Office equipment			
13	Fax machines	370	168	200
14	Copiers	475	317	288
15	Telephones	302	125	117
16				

**Problem 6-5B**

Lower of cost or market

P2

**Required**

1. Compute the lower of cost or market for the inventory applied separately to each item.
2. If the market amount is less than the recorded cost of the inventory, then record the LCM adjustment to the Merchandise Inventory account.

**Check** (1) \$580,054

Hallam Company's financial statements show the following. The company recently discovered that in making physical counts of inventory, it had made the following errors: Inventory on December 31, 2014, is overstated by \$18,000, and inventory on December 31, 2015, is understated by \$26,000.

For Year Ended December 31	2014	2015	2016
(a) Cost of goods sold . . . . .	\$207,200	\$213,800	\$197,030
(b) Net income . . . . .	175,800	212,270	184,910
(c) Total current assets . . . . .	276,000	277,500	272,950
(d) Total equity . . . . .	314,000	315,000	346,000

**Problem 6-6B**

Analysis of inventory errors

A2

**Required**

- For each key financial statement figure—(a), (b), (c), and (d) above—prepare a table similar to the following to show the adjustments necessary to correct the reported amounts.

Figure: _____	2014	2015	2016
Reported amount .....	_____	_____	_____
Adjustments for: 12/31/2014 error .....	_____	_____	_____
12/31/2015 error .....	_____	_____	_____
Corrected amount .....	_____	_____	_____

**Check** (1) Corrected net income: 2014, \$157,800; 2015, \$256,270; 2016, \$158,910

**Analysis Component**

- What is the error in total net income for the combined three-year period resulting from the inventory errors? Explain.
- Explain why the overstatement of inventory by \$18,000 at the end of 2014 results in an overstatement of equity by the same amount in that year.

**Problem 6-7B<sup>A</sup>**

**Periodic:** Alternative cost flows

P3

Seneca Co. began year 2015 with 6,500 units of product in its January 1 inventory costing \$35 each. It made successive purchases of its product in year 2015 as follows. The company uses a periodic inventory system. On December 31, 2015, a physical count reveals that 8,500 units of its product remain in inventory.

Jan. 4 .....	11,500 units @ \$33 each
May 18 .....	13,400 units @ \$32 each
July 9 .....	11,000 units @ \$29 each
Nov. 21 .....	7,600 units @ \$27 each

**Check** (2) Cost of goods sold: FIFO, \$1,328,700; LIFO, \$1,266,500; WA, \$1,294,800

**Required**

- Compute the number and total cost of the units available for sale in year 2015.
- Compute the amounts assigned to the 2015 ending inventory and the cost of goods sold using (a) FIFO, (b) LIFO, and (c) weighted average. (Round all amounts to cents.)

**Problem 6-8B<sup>A</sup>**

**Periodic:** Income comparisons and cost flows

A1 P3

Shepard Company sold 4,000 units of its product at \$100 per unit in year 2015 and incurred operating expenses of \$15 per unit in selling the units. It began the year with 840 units in inventory and made successive purchases of its product as follows.

Jan. 1	Beginning inventory .....	840 units @ \$58 per unit
April 2	Purchase .....	600 units @ \$59 per unit
June 14	Purchase .....	1,205 units @ \$61 per unit
Aug. 29	Purchase .....	700 units @ \$64 per unit
Nov. 18	Purchase .....	1,655 units @ \$65 per unit
	Total .....	5,000 units

**Required**

- Prepare comparative income statements similar to Exhibit 6.8 for the three inventory costing methods of FIFO, LIFO, and weighted average. (Round all amounts to cents.) Include a detailed cost of goods sold section as part of each statement. The company uses a periodic inventory system, and its income tax rate is 40%.
- How would the financial results from using the three alternative inventory costing methods change if the company had been experiencing decreasing prices in its purchases of inventory?
- What advantages and disadvantages are offered by using (a) LIFO and (b) FIFO? Assume the continuing trend of increasing costs.

**Check** (1) Net income: LIFO, \$52,896; FIFO, \$57,000; WA, \$55,200

The records of Macklin Co. provide the following information for the year ended December 31.

	At Cost	At Retail
January 1 beginning inventory . . . . .	\$ 90,022	\$115,610
Cost of goods purchased . . . . .	502,250	761,830
Sales . . . . .		782,300
Sales returns . . . . .		3,460

### Required

- Use the retail inventory method to estimate the company's year-end inventory.
- A year-end physical inventory at retail prices yields a total inventory of \$80,450. Prepare a calculation showing the company's loss from shrinkage at cost and at retail.

### Problem 6-9B<sup>B</sup>

Retail inventory method  
P4

**Check** (1) Inventory,  
\$66,555 cost  
(2) Inventory  
shrinkage at cost, \$12,251.25

Otingo Equipment Co. wants to prepare interim financial statements for the first quarter. The company wishes to avoid making a physical count of inventory. Otingo's gross profit rate averages 35%. The following information for the first quarter is available from its records.

January 1 beginning inventory . . . . .	\$ 802,880
Cost of goods purchased . . . . .	2,209,636
Sales . . . . .	3,760,260
Sales returns . . . . .	79,300

### Required

Use the gross profit method to estimate the company's first-quarter ending inventory.

**Check** Est. ending  
inventory, \$619,892

*(This serial problem began in Chapter 1 and continues through most of the book. If previous chapter segments were not completed, the serial problem can begin at this point.)*

### SP 6

#### Part A

Santana Rey of Business Solutions is evaluating her inventory to determine whether it must be adjusted based on lower of cost or market rules. Business Solutions has three different types of software in its inventory and the following information is available for each.

Inventory Items	Units	Per Unit	
		Cost	Market
Office productivity . . . . .	3	\$ 76	\$ 74
Desktop publishing . . . . .	2	103	100
Accounting . . . . .	3	90	96

### Required

- Compute the lower of cost or market for ending inventory assuming Rey applies the lower of cost or market rule to inventory as a whole. Must Rey adjust the reported inventory value? Explain.
- Assume that Rey had instead applied the lower of cost or market rule to each product in inventory. Under this assumption, must Rey adjust the reported inventory value? Explain.

#### Part B

Selected accounts and balances for the three months ended March 31, 2016, for Business Solutions follow.

January 1 beginning inventory . . . . .	\$ 0
Cost of goods sold . . . . .	14,052
March 31 ending inventory . . . . .	704

## SERIAL PROBLEM

Business Solutions

P2 A3 

**Required**

1. Compute inventory turnover and days' sales in inventory for the three months ended March 31, 2016.
2. Assess the company's performance if competitors average 15 times for inventory turnover and 25 days for days' sales in inventory.

**Beyond the Numbers**

**REPORTING IN ACTION**

C2 A3 

**APPLE**

**BTN 6-1** Refer to **Apple's** financial statements in Appendix A to answer the following.

**Required**

1. What amount of inventories did Apple report as a current asset on September 28, 2013? On September 29, 2012?
2. Inventories represent what percent of total assets on September 28, 2013? On September 29, 2012?
3. Comment on the relative size of Apple's inventories compared to its other types of assets.
4. What accounting method did Apple use to compute inventory amounts on its balance sheet?
5. Compute inventory turnover for fiscal year ended September 28, 2013, and days' sales in inventory as of September 28, 2013.

**Fast Forward**

6. Access Apple's financial statements for fiscal years ended after September 28, 2013, from its website ([Apple.com](http://Apple.com)) or the SEC's EDGAR database ([www.SEC.gov](http://www.SEC.gov)). Answer questions 1 through 5 using the current Apple information and compare results to those prior years.

**COMPARATIVE ANALYSIS**

A3 

**APPLE**

**GOOGLE**

**BTN 6-2** Comparative figures for **Apple** and **Google** follow.

(\$ millions)	Apple			Google		
	Current Year	One Year Prior	Two Years Prior	Current Year	One Year Prior	Two Years Prior
Inventory .....	\$ 1,764	\$ 791	\$ 776	\$ 426	\$ 505	\$ 35
Cost of sales .....	106,606	87,846	64,431	25,858	20,634	13,188

**Required**

1. Compute inventory turnover for each company for the most recent two years shown.
2. Compute days' sales in inventory for each company for the three years shown.
3. Comment on and interpret your findings from parts 1 and 2. Assume an industry average for inventory turnover of 40.

**ETHICS CHALLENGE**

A1  

**BTN 6-3** Golf Challenge Corp. is a retail sports store carrying golf apparel and equipment. The store is at the end of its second year of operation and is struggling. A major problem is that its cost of inventory has continually increased in the past two years. In the first year of operations, the store assigned inventory costs using LIFO. A loan agreement the store has with its bank, its prime source of financing, requires the store to maintain a certain profit margin and current ratio. The store's owner is currently looking over Golf Challenge's preliminary financial statements for its second year. The numbers are not favorable. The only way the store can meet the required financial ratios agreed on with the bank is to change from LIFO to FIFO. The store originally decided on LIFO because of its tax advantages. The owner recalculates ending inventory using FIFO and submits those numbers and statements to the loan officer at the bank for the required bank review. The owner thankfully reflects on the available latitude in choosing the inventory costing method.

**Required**

1. How does Golf Challenge's use of FIFO improve its net profit margin and current ratio?
2. Is the action by Golf Challenge's owner ethical? Explain.

**BTN 6-4** You are a financial adviser with a client in the wholesale produce business that just completed its first year of operations. Due to weather conditions, the cost of acquiring produce to resell has escalated during the later part of this period. Your client, Javonte Gish, mentions that because her business sells perishable goods, she has striven to maintain a FIFO flow of goods. Although sales are good, the increasing cost of inventory has put the business in a tight cash position. Gish has expressed concern regarding the ability of the business to meet income tax obligations.

### Required

Prepare a memorandum that identifies, explains, and justifies the inventory method you recommend your client, Ms. Gish, adopt.

## COMMUNICATING IN PRACTICE

**BTN 6-5** Access the September 28, 2013, 10-K report for **Apple, Inc.** (Ticker AAPL), filed on October 29, 2013, from the EDGAR filings at [www.SEC.gov](http://www.SEC.gov).

### Required

1. What products are manufactured by Apple?
2. What inventory method does Apple use? (*Hint:* See the Note 1 to its financial statements.)
3. Compute its gross margin and gross margin ratio for the 2013 fiscal year. Comment on your computations—assume an industry average of 40% for the gross margin ratio.
4. Compute its inventory turnover and days' sales in inventory for the year ended September 28, 2013. Comment on your computations—assume an industry average of 40 for inventory turnover and 9 for days' sales in inventory.

## TAKING IT TO THE NET

## APPLE

**BTN 6-6** Each team member has the responsibility to become an expert on an inventory method. This expertise will be used to facilitate teammates' understanding of the concepts relevant to that method.

1. Each learning team member should select an area for expertise by choosing one of the following inventory methods: specific identification, LIFO, FIFO, or weighted average.
2. Form expert teams made up of students who have selected the same area of expertise. The instructor will identify where each expert team will meet.
3. Using the following data, each expert team must collaborate to develop a presentation that illustrates the relevant concepts and procedures for its inventory method. Each team member must write the presentation in a format that can be shown to the learning team.

### Data

The company uses a *perpetual* inventory system. It had the following beginning inventory and current-year purchases of its product.

Jan. 1	Beginning inventory.....	50 units @ \$100 = \$ 5,000
Jan. 14	Purchase .....	150 units @ \$120 = 18,000
Apr. 30	Purchase .....	200 units @ \$150 = 30,000
Sept. 26	Purchase .....	300 units @ \$200 = 60,000

The company transacted sales on the following dates at a \$350 per unit sales price.

Jan. 10	30 units	(specific cost: 30 @ \$100)
Feb. 15	100 units	(specific cost: 100 @ \$120)
Oct. 5	350 units	(specific cost: 100 @ \$150 and 250 @ \$200)

## TEAMWORK IN ACTION

**Point:** Step 1 allows four choices or areas for expertise. Larger teams will have some duplication of choice, but the specific identification method should not be duplicated.

**Concepts and Procedures to Illustrate in Expert Presentation**

- a. Identify and compute the costs to assign to the units sold. (Round per unit costs to three decimals.)
  - b. Identify and compute the costs to assign to the units in ending inventory. (Round inventory balances to the dollar.)
  - c. How likely is it that this inventory costing method will reflect the actual physical flow of goods? How relevant is that factor in determining whether this is an acceptable method to use?
  - d. What is the impact of this method versus others in determining net income and income taxes?
  - e. How closely does the ending inventory amount reflect replacement cost?
4. Re-form learning teams. In rotation, each expert is to present to the team the presentation developed in part 3. Experts are to encourage and respond to questions.

**ENTREPRENEURIAL DECISION**

**BTN 6-7** Review the chapter’s opening feature highlighting the Dame brothers (Brooks, Taylor, and Tanner) and their company, **Proof Eyewear**. Assume that Proof Eyewear consistently maintains an inventory level of \$30,000, meaning that its average and ending inventory levels are the same. Also assume its annual cost of sales is \$120,000. To cut costs, the Dame brothers propose to slash inventory to a constant level of \$15,000 with no impact on cost of sales. They plan to work with suppliers to get quicker deliveries and to order smaller quantities more often.

**Required**

- 1. Compute the company’s inventory turnover and its days’ sales in inventory under (a) current conditions and (b) proposed conditions.
- 2. Evaluate and comment on the merits of their proposal given your analysis for part 1. Identify any concerns you might have about the proposal.

**HITTING THE ROAD**

**BTN 6-8** Visit four retail stores with another classmate. In each store, identify whether the store uses a bar coding system to help manage its inventory. Try to find at least one store that does not use bar coding. If a store does not use bar coding, ask the store’s manager or clerk whether he or she knows which type of inventory method the store employs. Create a table that shows columns for the name of store visited, type of merchandise sold, use or nonuse of bar coding, and the inventory method used if bar coding is not employed. You might also inquire as to what the store’s inventory turnover is and how often physical inventory is taken.

**GLOBAL DECISION**

**Samsung**  
**APPLE**  
**GOOGLE**

**BTN 6-9** Following are key figures (in millions of Korean won) for **Samsung** ([www.Samsung.com](http://www.Samsung.com)), which is a leading manufacturer of consumer electronics products.

₩ in millions	Current Year	One Year Prior	Two Years Prior
Inventory . . . . .	₩ 19,134,868	₩ 17,747,413	₩ 15,716,715
Cost of sales . . . . .	137,696,309	126,651,931	112,145,120

**Required**

- 1. Use these data and those from BTN 6-2 to compute (a) inventory turnover and (b) days’ sales in inventory for the most recent two years shown for **Samsung**, **Apple**, and **Google**.
- 2. Comment on and interpret your findings from part 1.

## ANSWERS TO MULTIPLE CHOICE QUIZ

1. a; FIFO perpetual

Date	Goods Purchased	Cost of Goods Sold	Inventory Balance
July 1			75 units @ \$25 = \$ 1,875
July 3	348 units @ \$27 = \$9,396		75 units @ \$25 } = \$ 11,271 348 units @ \$27 }
July 8		75 units @ \$25 } = \$ 7,950 225 units @ \$27 }	123 units @ \$27 = \$ 3,321
July 15	257 units @ \$28 = \$7,196		123 units @ \$27 } = \$10,517 257 units @ \$28 }
July 23		123 units @ \$27 } = \$ 7,577 152 units @ \$28 } = <u>\$15,527</u>	105 units @ \$28 = <u>\$ 2,940</u>

2. b; LIFO perpetual

Date	Goods Purchased	Cost of Goods Sold	Inventory Balance
July 1			75 units @ \$25 = \$ 1,875
July 3	348 units @ \$27 = \$9,396		75 units @ \$25 } = \$ 11,271 348 units @ \$27 }
July 8		300 units @ \$27 = \$ 8,100	75 units @ \$25 } = \$ 3,171 48 units @ \$27 }
July 15	257 units @ \$28 = \$7,196		75 units @ \$25 } = \$10,367 48 units @ \$27 } 257 units @ \$28 }
July 23		257 units @ \$28 } = \$ 7,682 18 units @ \$27 } = <u>\$15,782</u>	75 units @ \$25 } = \$ 2,685 30 units @ \$27 }

3. e; Specific identification (perpetual and periodic are identical for specific identification)—Ending inventory computation.

20 units @ \$25	\$ 500
40 units @ \$27	1,080
45 units @ \$28	1,260
105 units	<u>\$2,840</u>

4. a; FIFO periodic. Ending inventory computation:  
105 units @ \$28 each = \$2,940; The FIFO periodic inventory computation is identical to the FIFO perpetual inventory computation (see question 1).

5. a; FIFO periodic inventory =  $(20 \times \$14) + (10 \times \$12)$   
= \$400

a; LIFO periodic cost of goods sold =  $(20 \times \$14) + (40 \times \$12)$   
+  $(70 \times \$10)$  = \$1,460

6. d; Days' sales in inventory =  $(\text{Ending inventory}/\text{Cost of goods sold}) \times 365$   
=  $(\$18,000/\$85,000) \times 365$   
= 77.29 days

- P2** Proving the ledgers

### SYSTEM TECHNOLOGY

- Computers
- Data processing
- Networks
- Enterprise resource planning (ERP)
- A1** Analyze segment return

## Learning Objectives

### CONCEPTUAL

- C1** Identify the principles and components of accounting information systems.
- C2** Explain the goals and uses of special journals.
- C3** Describe the use of controlling accounts and subsidiary ledgers.

### ANALYTICAL

- A1** Compute segment return on assets and use it to evaluate segment performance.

### PROCEDURAL

- P1** Journalize and post transactions using special journals.

- P2** Prepare and prove the accuracy of subsidiary ledgers.

## Pillow Talk

MENLO PARK, CA—"I am inspired by love, compassion, good vibes, and simplicity," proclaims Aimi Duong. "Life and its obstacles can sometimes be daunting but I don't believe in wasting time dwelling on the bad. I seek and embrace beauty in the simplest things." That positive, determined attitude is what Aimi used to launch **Oimei Company (Oimeico.com)**, which aims to empower poor Thai artisans by marketing and selling their handwoven pillows.

"I've always loved ethnic-inspired textiles; all the vibrant bold colors and patterns that are rich with cultural and historical context," explains Aimi. "I saw that many artisans live in undeveloped communities struggling to make a living." Working with a cooperative partnership from Thailand, she now imports and sells Thai products. Aimi also set up an accounting system to measure, track, summarize, and report on her operations. "We are working on getting our products at retail locations, expanding our product line, and exploring other artisan groups we can work with." This mission influences Aimi's accounting system and its controls.

"I discovered social enterprise, which has completely changed my future aspirations," explains Aimi. Those aspirations

are aided by her application of internal controls, special journals, accounting ledgers, and systems technology. Aimi maintains special journals for sales, cash receipts, purchases, and cash disbursements. Developing her accounting system to capture all aspects of her operations is no easy task, but it is worth the effort. Explains Aimi, "I realized that by helping them gain exposure to new markets, they are able to work for a fair wage, preserve a traditional craft, and be self-sustainable." This organizational structure, in turn, helps shape the special journals for her company, including appropriate control procedures.

Aimi's company is riding high with the right accounting systems and controls for long-run success. "They [artisans] create beautiful products that are eco-friendly and have a meaningful story," says Aimi. "Learning about their lives is a humbling experience." (Incidentally, *Oimei* is Aimi's Chinese name meaning "love beauty," which Aimi explains is "a constant reminder to embrace all the beauty around us.")

*"Small effort can make a big difference"*

—Aimi Duong

# FUNDAMENTAL SYSTEM PRINCIPLES

**C1** Identify the principles and components of accounting information systems.

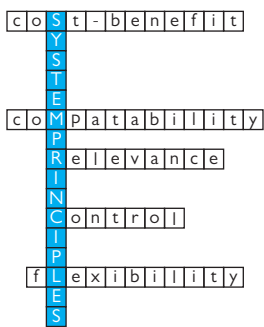

**EXHIBIT 7.1**

System Principles

**Accounting information systems** collect and process data from transactions and events, organize them in useful reports, and communicate results to decision makers. With the increasing complexity of business and the growing need for information, accounting information systems are more important than ever. All decision makers need to have a basic knowledge of how accounting information systems work. This knowledge gives decision makers a competitive edge as they gain a better understanding of information constraints, measurement limitations, and potential applications. It allows them to make more informed decisions and to better balance the risks and returns of different strategies. This section explains five basic principles of accounting information systems, shown in Exhibit 7.1.

**Point:** Hackers stole 45 million debit and credit card numbers from **T.J. Maxx**. The security breach is estimated to have cost the company \$100 per card or \$4.5 billion.

**Point:** Law requires that all employers destroy credit-check and other employee records before tossing them. A cross-cut shredder is the tool of choice.

## Control Principle

Managers need to control and monitor business activities. The **control principle** prescribes that an accounting information system have internal controls. **Internal controls** are methods and procedures allowing managers to control and monitor business activities. They include policies to direct operations toward

common goals, procedures to ensure reliable financial reports, safeguards to protect company assets, and methods to achieve compliance with laws and regulations.

## Relevance Principle

Decision makers need relevant information to make informed decisions. The **relevance principle** prescribes that an accounting information system report useful, understandable, timely, and pertinent information for effective decision making. The system must be designed to capture data that make a difference in decisions. To ensure this, we must consider all decision makers when identifying relevant information for disclosure.

## Compatibility Principle

Accounting information systems must be consistent with the aims of a company. The **compatibility principle** prescribes that an accounting information system conform with a company’s activities, personnel, and structure. It also must adapt to a company’s unique characteristics. The system must not be intrusive but must work in harmony with and be driven by company goals. Most start-up entrepreneurs require only a simple information system. **Starbucks**, on the other hand, demands both a merchandising and a manufacturing information system able to assemble data from its global operations.

## Flexibility Principle

Accounting information systems must be able to adjust to changes. The **flexibility principle** prescribes that an accounting information system be able to adapt to changes in the company, business environment, and needs of decision makers. Technological advances, competitive pressures, consumer tastes, regulations, and company activities constantly evolve. A system must be designed to adapt to these changes.

## Cost-Benefit Principle

The **cost-benefit principle** prescribes that the benefits from an activity in an accounting information system outweigh the costs of that activity. The costs and benefits of an activity such as producing a specific report will impact the decisions of both external and internal users. Decisions regarding other systems principles (control, relevance, compatibility, and flexibility) are also affected by the cost-benefit principle.

## Decision Insight

**Digitals Are Forever** E-communications have helped bring down many employees, including the former CEO of **Boeing**. To comply with Sarbanes-Oxley, more and more companies now archive and monitor e-mails, instant messages, blog postings, and Net-based phone calls. Using natural-language software, companies sift through digital communications in milliseconds, checking for trade secrets, bad language, porn, and pirated files. ■

## COMPONENTS OF ACCOUNTING SYSTEMS

Accounting information systems consist of people, records, methods, and equipment. The systems are designed to capture information about a company's transactions and to provide output including financial, managerial, and tax reports. All accounting information systems have these same goals, and thus share some basic components. These components apply whether or not a system is heavily computerized, yet the components of computerized systems usually provide more accuracy, speed, efficiency, and convenience than those of manual systems.

The five basic **components of accounting systems** are source documents, input devices, information processors, information storage, and output devices. Exhibit 7.2 shows these components as a series of steps, yet we know that much two-way communication occurs between many of these components. We briefly describe each of these key components in this section.

### EXHIBIT 7.2

Accounting System Components

### Source Documents

We introduced source documents in Chapters 1 and 2 and explained their importance for both business transactions and information collection. Source documents provide the basic information processed by an accounting system. Examples of source documents include bank statements and checks, invoices from suppliers, billings to customers, cash register files, and employee earnings records. Source documents can be paper, although they increasingly are taking the form of electronic files and web communications. A growing number of companies are sending documents directly from their systems to their customers' and suppliers' systems. The web is playing a major role in this transformation from paper-based to *paperless* systems.

Accurate source documents are crucial to accounting information systems. Input of faulty or incomplete information seriously impairs the reliability and relevance of the information system. We commonly refer to this as “garbage in, garbage out.” Information systems are set up with attention on control procedures to limit the possibility of entering faulty data in the system.

### Input Devices

**Input devices** capture information from source documents and enable its transfer to the system's information processing component. These devices often involve converting data on source documents from written or electronic form to a form usable for the system. Journal entries, both electronic and paper based, are a type of input device. Keyboards, scanners, and modems are some of the most common input devices in practice today. For example, bar code readers capture code numbers and transfer them to the organization's computer for processing. Moreover, a scanner can capture writing samples and other input directly from source documents. Cell phone cameras also can serve as input devices via bar codes.

Vstock LLC/Getty Images

**Point:** Understanding a manual accounting system is useful in understanding an electronic system.

**Point:** BusinessWeek reported that 75% of all e-mail traffic is spam.

**Point:** Well-designed accounting software includes a report generator that allows accountants to design and customize internal reports.

Controls are used to ensure that only authorized individuals input data to the system. Controls increase the system's reliability and allow information to be traced back to its source.

## Information Processors

**Information processors** are systems that interpret, transform, and summarize information for use in analysis and reporting. An important part of an information processor in accounting systems is professional judgment. Accounting principles are never so structured that they limit the need for professional judgment. Other parts of an information processor include journals, ledgers, working papers, and posting procedures. Each assists in transforming raw data to useful information.

Increasingly, computer technology (both computing hardware and software) is assisting manual information processors. This assistance is freeing accounting professionals to take on increased analysis, interpretive, and managerial roles. Web-based application service providers (ASPs) offer another type of information processor.

## Information Storage

**Information storage** is the accounting system component that keeps data in a form accessible to information processors. After being input and processed, data are stored for use in future analyses and reports. The database must be accessible to preparers of periodic financial reports. Auditors rely on this database when they audit both financial statements and a company's controls. Companies also maintain files of source documents.

Older systems consisted almost exclusively of paper documents, but most modern systems depend on electronic storage devices or, increasingly, cloud storage. Advances in information storage enable accounting systems to increasingly store more detailed data. This means managers have more data to access and work with in planning and controlling business activities. Information storage can be online, meaning that data can be accessed whenever, and from wherever, it is needed. Off-line storage means access often requires assistance and authorization. Information storage is increasingly augmented by web sources such as SEC databases, benchmarking services, and financial and product markets. Also, audit technology allows external auditors 365-day real-time access to client records from remote locations.

### Decision Insight

**Virtual Output** A screenless computer display, called *virtual retinal display* (VRD), scans rows of pixels directly onto the user's retina by means of a laser. VRDs can simulate three-dimensional virtual worlds, including 3D financial graphics. VRDs have a control advantage as only the intended user can see the image displayed. ■

©Royalty-Free/CORBIS

## Output Devices

**Point:** The SEC database allows searchable data fields in required company filings. The software that facilitates this capability is XBRL (eXtensible Business Reporting Language).

**Output devices** are the means to take information out of an accounting system and make it available to users. Common output devices are printers, monitors, projectors, and web communications. Output devices provide users a variety of items including graphics, analysis reports, bills to customers, checks to suppliers, employee paychecks, financial statements, and internal reports. When requests for output occur, an information processor takes the needed data from a database and prepares the necessary report, which is then sent to an output device. A special type of output is an electronic funds transfer (EFT). One example is the transfer of payroll from the company's bank account to its employees' bank accounts. This requires an interface to allow a company's accounting system to send payroll data directly to the bank's accounting system. This interface can involve a company recording its payroll data in an encrypted zip file and forwarding it to the bank. The bank then uses this output to transfer wages earned to employees' accounts.

Match each of the numbered descriptions with the principle, component, or descriptor that it best reflects. Indicate your answer by entering the letter *A* through *J* in the blank provided.

## SPECIAL JOURNALS IN ACCOUNTING

This section describes the underlying records of accounting information systems. Designed correctly, these records support efficiency in processing transactions and events. They are part of all systems in various forms and are increasingly electronic. Even in technologically advanced systems, a basic understanding of the records we describe in this section aids in using, interpreting, and applying accounting information. It also improves our knowledge of computer-based systems. Remember that all accounting systems have common purposes and internal workings whether or not they depend on technology. (Popular accounting software that utilizes special journals includes Great Plains and QuickBooks.)

This section focuses on special journals and subsidiary ledgers that are an important part of accounting systems. We describe how special journals are used to capture transactions, and we explain how subsidiary ledgers are set up to capture details of accounts. This section uses a *perpetual* inventory system, and the special journals are set up using this system. We include a note at the bottom of each of the special journals explaining the change required if a company uses a periodic system.

### Basics of Special Journals

A **general journal** is an all-purpose journal in which we can record any transaction. Use of a general journal for all transactions is usually more costly for a business *and* is a less effective control procedure. Moreover, for less technologically advanced systems, use of a general journal requires that each debit and each credit entered be individually posted to its respective ledger account. To enhance internal control and reduce costs, transactions are organized into common groups. A **special journal** is used to record and post transactions of similar type. Most transactions of a merchandiser, for instance, can be categorized into the journals shown in Exhibit 7.3.

**C2** \_\_\_\_\_  
Explain the goals and uses of special journals.

### EXHIBIT 7.3

Using Special Journals with a General Journal

**Point:** Companies can use as many special journals as necessary given their unique business activities.

**Point:** A specific transaction is recorded in only one journal.

This section assumes the use of these four special journals along with the general journal. The general journal continues to be used for transactions not covered by special journals and for adjusting, closing, and correcting entries. We show in the following discussion that special journals are *efficient tools in helping journalize and post transactions*. This is done, for instance, by accumulating debits and credits of similar transactions, which allows posting of amounts as column *totals* rather than as individual amounts. The advantage of this system increases as the number of transactions increases. Special journals allow an *efficient division of labor*, which is also an effective control procedure.

It is important to note that special journals and subsidiary ledgers *are designed in a manner that is best suited for each business*. The most likely candidates for special journal status are recurring transactions—for many businesses those are sales, cash receipts, purchases, and cash disbursements. However, good systems design for a business could involve collapsing sales and cash receipts in one journal, or purchases and cash disbursements in another. It could also involve adding more special journals or additional subsidiary ledgers for other recurring transactions. This design decision extends to journal and ledger format. That is, the selection on number of columns, column headings, and so forth is based on what is best suited for each business. Thus, read the following sections as one example of a common systems design, but not the only design. (Proprietary software is internally developed by companies to meet system needs not met by off-the-shelf accounting software.)

## Subsidiary Ledgers

To understand special journals, it is necessary to understand the workings of a **subsidiary ledger**, which is a list of individual accounts with a common characteristic. A subsidiary ledger contains detailed information on specific accounts in the general ledger. Information systems often include several subsidiary ledgers. Two of the most important are:

- *Accounts receivable ledger*—stores transaction data of individual customers.
- *Accounts payable ledger*—stores transaction data of individual suppliers.

Individual accounts in subsidiary ledgers are often arranged alphabetically, which is the approach taken here. We describe accounts receivable and accounts payable ledgers in this section. Our discussion of special journals uses these ledgers.

**Accounts Receivable Ledger** When we recorded credit sales in prior chapters, we debited (increased) Accounts Receivable. When a company has more than one credit customer, the accounts receivable records must show how much *each* customer purchased, paid, and has yet to pay. This information is collected by keeping a separate account receivable for each credit customer. A separate account for each customer *could* be kept in the general ledger with the other financial statement accounts, but this is uncommon. Instead, the general ledger usually has a single Accounts Receivable account, and a *subsidiary ledger* is set up to keep a separate account for each customer. This subsidiary ledger is called the **accounts receivable ledger** (also called *accounts receivable subsidiary ledger* or *customers ledger*), and it can exist in electronic or paper form.

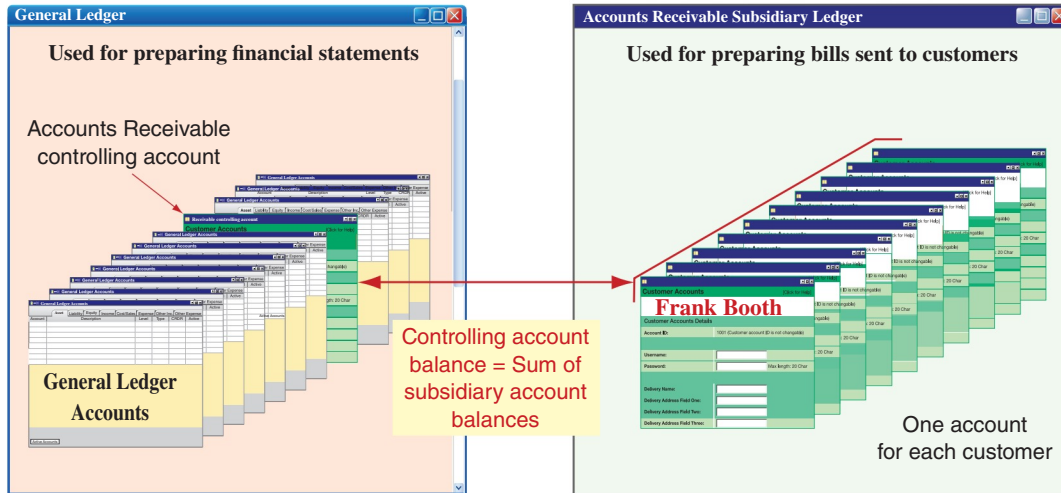

Exhibit 7.4 shows the relation between the Accounts Receivable account and its individual accounts in the subsidiary ledger. After all items are posted, the balance in the Accounts Receivable account must equal the sum of all balances of its customers' accounts. The Accounts Receivable account is said to control the accounts receivable ledger and is called a **controlling account**. Since the accounts receivable ledger is a supplementary record controlled by an account in the general ledger, it is called a *subsidiary ledger*.

**Accounts Payable Ledger** There are other controlling accounts and subsidiary ledgers. We know, for example, that many companies buy on credit from several suppliers. This means that companies must keep a separate account for each supplier by keeping an Accounts Payable controlling account in the general ledger and a separate account for each supplier (creditor) in an **accounts payable ledger** (also called *accounts payable subsidiary ledger* or *creditors ledger*).

### C3

Describe the use of controlling accounts and subsidiary ledgers.

**Point:** When a general ledger account has a subsidiary ledger, any transaction that impacts one of them also impacts the other—some refer to this as *general and subsidiary ledgers kept in tandem*.

**EXHIBIT 7.4**

Accounts Receivable Controlling Account and Its Subsidiary Ledger

**Point:** A control account refers to any general ledger account that summarizes subsidiary ledger data.

**Other Subsidiary Ledgers** Subsidiary ledgers are common for several other accounts. A company with many classes of equipment, for example, might keep only one Equipment account in its general ledger, but its Equipment account would control a subsidiary ledger in which each class of equipment is recorded in a separate account. Similar treatment is common for investments, inventory, and any accounts needing separate detailed records. **Genmar Holdings**, which manufactures boats by Champion, Glastron, Four Winns, and Larson, reports sales information by product line in its report. Yet its accounting system keeps much more detailed sales records. Genmar Holdings, for instance, sells hundreds of different products and must be able to analyze the sales performance of each. This detail can be captured by many different general ledger sales accounts but is instead captured by using supplementary records that function like subsidiary ledgers. Overall, subsidiary ledgers are applied in many different ways to ensure that the accounting system captures sufficient details to support analyses that decision makers need. At least four benefits derive from subsidiary ledgers:

1. Removal of excessive details, and detailed accounts, from the general ledger.
2. Up-to-date information readily available on specific customers and suppliers.
3. Aid in error identification for specific accounts.
4. Potential efficiencies in recordkeeping through division of labor in posting.

Match each of the numbered descriptions with the term, title, or phrase that it best reflects. Indicate your answer by entering the letter *A* through *J* in the blank provided.

## Sales Journal

**P1**  
Journalize and post transactions using special journals.

A typical **sales journal** is used to record sales of inventory *on credit*. Sales of inventory for cash are not recorded in a sales journal but in a cash receipts journal. Sales of noninventory assets on credit are recorded in the general journal.

**Journalizing** Credit sale transactions are recorded with information about each sale entered separately in a sales journal. This information is often taken from a copy of the sales ticket or invoice prepared at the time of sale. The top portion of Exhibit 7.5 shows a typical sales journal from a merchandiser. It has columns for recording the date, customer's name, invoice number, posting reference, and the sales and cost amounts of each credit sale. The sales journal in this exhibit is called a **columnar journal**, which is any journal with more than one column.

Each transaction recorded in the sales journal yields an entry in the Accounts Receivable Dr., Sales Cr. column. We usually need only one column for these two accounts. (An exception is when managers need more information about taxes, returns, and other sales details.) Each transaction in the sales journal also yields an entry in the Cost of Goods Sold Dr., Inventory Cr. column. This entry reflects the perpetual inventory system of tracking costs with each sale. To illustrate, on February 2, this company sold merchandise on account to Jason Henry for \$450. The invoice number is 307, and the cost of this merchandise is \$315. This information is captured on one line in the sales journal. No further explanations or entries are necessary, saving

**Point:** Each transaction in the sales journal includes a debit to accounts receivable and a credit to sales.

### EXHIBIT 7.5

Sales Journal with Posting\*

The screenshot displays a software interface with three main windows:

- Sales Journal:** A table with columns: Date, Account Debited, Invoice Number, PR, Accounts Receivable Dr. Sales Cr., and Cost of Goods Sold Dr. Inventory Cr. It lists transactions from Feb. 2 to Feb. 28, ending with a Totals row showing a debit of 2,150 and a credit of 1,500.
- Accounts Receivable Ledger:** A series of subsidiary ledgers for customers: Albert Co., Frank Booth, Jason Henry, Kam Moore, and Paul Roth. Each ledger shows the date, PR, Debit, Credit, and Balance. Arrows point from the Sales Journal entries to these ledgers.
- General Ledger:** A summary ledger with sub-tables for Accounts Receivable (No. 106), Inventory (No. 119), Sales (No. 413), and Cost of Goods Sold (No. 502). Arrows point from the Sales Journal Totals row to these summary entries.

Totals are posted at the end of the period to general ledger accounts.

Individual line item amounts in the Accounts Receivable Dr. and Sales Cr. column are posted immediately to the subsidiary ledger.

Customer accounts are in a subsidiary ledger and the financial statement accounts are in the general ledger.

**Point:** The \$2,150 sum of the five customer accounts equals the balance in Accounts Receivable control account.

\*The sales journal in a *periodic* system would exclude the column on the far right titled "Cost of Goods Sold Dr., Inventory Cr."

time and effort. Moreover, this sales journal is consistent with most inventory systems that use bar codes to record both sales and costs with each sale transaction. Note that the Posting Reference (PR) column is not used when entering transactions but instead is used when posting.

**Posting** A sales journal is posted as reflected in the arrow lines of Exhibit 7.5. Two types of posting can be identified: (1) posting to the subsidiary ledger(s) and (2) posting to the general ledger.

**Posting to subsidiary ledger.** Individual transactions in the sales journal are posted regularly (typically concurrently) to customer accounts in the accounts receivable ledger. These postings keep customer accounts up-to-date, which is important for the person granting credit to customers. When sales recorded in the sales journal are individually posted to customer accounts in the accounts receivable ledger, check marks are entered in the sales journal’s PR column. Check marks are used rather than account numbers because customer accounts usually are arranged alphabetically in the accounts receivable ledger. Note that posting debits to Accounts Receivable twice—once to Accounts Receivable and once to the customer’s subsidiary account—does not violate the accounting equation of debits equal credits. The equality of debits and credits is always maintained in the general ledger.

**Posting to general ledger.** The sales journal’s account columns are totaled at the end of each period (the month of February in this case). For the “sales” column, the \$2,150 total is debited to Accounts Receivable and credited to Sales in the general ledger (see Exhibit 7.5). For the “cost” column, the \$1,500 total is debited to Cost of Goods Sold and credited to Inventory in the general ledger. When totals are posted to accounts in the general ledger, the account numbers are entered below the column total in the sales journal for tracking. For example, we enter (106/413) below the total in the sales column after this amount is posted to account number 106 (Accounts Receivable) and account number 413 (Sales).

A company identifies in the PR column of its subsidiary ledgers the journal and page number from which an amount is taken. We identify a journal by using an initial. Items posted from the sales journal carry the initial *S* before their journal page numbers in a PR column. Likewise, items from the cash receipts journal carry the initial *R*; items from the cash disbursements journal carry the initial *D*; items from the purchases journal carry the initial *P*; and items from the general journal carry the initial *G*.

**Proving the Ledgers** Account balances in the general ledger and subsidiary ledgers are periodically proved (or reviewed) for accuracy after posting. To do this we first prepare a trial balance of the general ledger to confirm that debits equal credits. Second, we test a subsidiary ledger by preparing a *schedule* of individual accounts and amounts. A **schedule of accounts receivable** lists each customer and the balance owed. If this total equals the balance of the Accounts Receivable controlling account, the accounts in the accounts receivable ledger are assumed correct. Exhibit 7.6 shows a schedule of accounts receivable drawn from the accounts receivable ledger of Exhibit 7.5. (Accountants may use the expression “tie out” when checking whether the balance of the Accounts Receivable control account matches the total balance on the subsidiary listing of accounts receivable.)

**Point:** Continuously updated customer accounts provide timely information for customer inquiries on those accounts and on current amounts owed.

**Point:** The PR column is only checked after the amount(s) is posted.

**Point:** Postings are automatic in a computerized system.

**P2** Prepare and prove the accuracy of subsidiary ledgers.

Schedule of Accounts Receivable February 28	
Albert Co. . . . .	\$ 750
Frank Booth . . . . .	175
Jason Henry . . . . .	675
Kam Moore . . . . .	350
Paul Roth . . . . .	200
Total accounts receivable . . . . .	<u>\$2,150</u>

**EXHIBIT 7.6**

Schedule of Accounts Receivable

**Additional Issues** We consider three additional issues with the sales journal: (1) recording sales taxes, (2) recording sales returns and allowances, and (3) using actual sales invoices as a journal.

**Point:** In accounting, the word *schedule* generally means a list.

**Sales taxes.** Governmental agencies such as cities and states often require sellers to collect sales taxes from customers and to periodically send these taxes to the appropriate agency. When using a columnar sales journal, we can keep a record of taxes collected by adding a Sales Taxes Payable column as follows.

Sales Journal								Page 3
Date	Account Debited	Invoice Number	PR	Accounts Receivable Dr.	Sales Taxes Payable Cr.	Sales Cr.	Cost of Goods Sold Dr. Inventory Cr.	
Dec. 1	Favre Co.	7-1698		103	3	100	75	

Individual amounts in the Accounts Receivable column would continue to be posted immediately to customer accounts in the accounts receivable ledger. Individual amounts in the Sales Taxes Payable and Sales columns are not posted. Column totals would continue to be posted as usual. (A company that collects sales taxes on its cash sales can also use a Sales Taxes Payable column in its cash receipts journal.)

**Sales returns and allowances.** A company with only a few sales returns and allowances can record them in a general journal with an entry such as the following:

Assets = Liabilities + Equity  
 -175                                  -175

May 17	Sales Returns and Allowances .....	414	175
	Accounts Receivable—Ray Ball .....	106/✓	175
	Customer returned merchandise.		

The debit in this entry is posted to the Sales Returns and Allowances account (no. 414). The credit is posted to both the Accounts Receivable controlling account (no. 106) and to the customer’s account. When we enter the account number and the check mark, 106/✓, in the PR column on the credit line, this means both the Accounts Receivable controlling account in the general ledger and the Ray Ball account in the accounts receivable ledger are credited for \$175. [Note: If the returned goods can be resold to another customer, the company would debit (increase) the Inventory account and credit (decrease) the Cost of Goods Sold account. If the returned goods are defective, the returned inventory is recorded at its estimated value, not its cost; for example, if defective goods costing \$60 are returned and estimated to be worth \$20, the seller debits Inventory for \$20, debits Loss from Defective Inventory for \$40, and credits Cost of Goods Sold for \$60. (see Chapter 5).] A company with a large number of sales returns and allowances can save time by recording them in a separate sales returns and allowances journal.

**Sales invoices as a sales journal.** To save costs, some small companies avoid using a sales journal for credit sales and instead post each sales invoice amount directly to the customer’s account in the accounts receivable ledger. They then put copies of invoices in a file. At the end of the period, they total all invoices for that period and make a general journal entry to debit Accounts Receivable and credit Sales for the total amount. The file of invoice copies acts as a sales journal. This is called *direct posting of sales invoices*.

### NEED-TO-KNOW 7-3

#### Sales Journal

P1

Prepare headings for a sales journal like the one in Exhibit 7.5 and then record the following sales transactions.

- July 7 Sold merchandise costing \$400 to J. Dahl for \$600, terms 2/10, n/30, invoice no. 704.
- 12 Sold merchandise costing \$100 to R. Lim for \$150, terms n/30, invoice no. 705.

#### Solution

July 7	J. Dahl	704		600	400	
12	R. Lim	705		150	100	

## Cash Receipts Journal

A **cash receipts journal** is typically used to record all receipts of cash (all transactions that include a debit to Cash). Exhibit 7.7 shows one common form of the cash receipts journal.

**Journalizing and Posting** Cash receipts can be separated into one of three types: (1) cash from credit customers in payment of their accounts, (2) cash from cash sales, and (3) cash from other sources. The cash receipts journal in Exhibit 7.7 has a separate credit column for each of these three sources. We describe how to journalize transactions from each of these three sources. (An Explanation column is included in the cash receipts journal to identify the source.)

**Point:** Each transaction in the cash receipts journal involves a debit to Cash. Credit accounts will vary.

Date	Account Credited	Explanation	PR	Cash Dr.	Sales Discount Dr.	Accounts Receivable Cr.	Sales Cr.	Other Accounts Cr.	Cost of Goods Sold Dr. Inventory Cr.
Feb. 7	Sales	Cash sales	X	4,450			4,450		3,150

Sales No. 413				
Date	PR	Debit	Credit	Balance
Feb. 28	S3	2,150		2,150
28	R2		17,300	19,450

Sales Discounts No. 415				
Date	PR	Debit	Credit	Balance
Feb. 28	R2	30		30

Cost of Goods Sold No. 502				
Date	PR	Debit	Credit	Balance
Feb. 28	S3	1,500		1,500
28	R2	12,550		14,050

**Point:** The \$650 sum of the five customer accounts equals the balance in Accounts Receivable control account.

\*The cash receipts journal in a *periodic* system would exclude the column on the far right titled "Cost of Goods Sold Dr., Inventory Cr."

**Cash from credit customers.** *Journalizing.* To record cash received in payment of a customer’s account, the customer’s name is first entered in the Account Credited column—see transactions dated February 12, 17, 23, and 25. Then the amounts debited to both Cash and Sales Discount (if any) are entered in their respective columns, and the amount credited to the customer’s account is entered in the Accounts Receivable Cr. column.

*Posting.* Individual amounts in the Accounts Receivable Cr. column are posted immediately to customer accounts in the subsidiary accounts receivable ledger. The \$1,500 column total is posted at the end of the period (month in this case) as a credit to the Accounts Receivable controlling account in the general ledger.

**Cash sales.** *Journalizing.* The amount for each cash sale is entered in the Cash Dr. column and the Sales Cr. column. The February 7, 14, 21, and 28 transactions are examples. (Cash sales are usually journalized daily or at point of sale, but are journalized weekly in Exhibit 7.7 for brevity.) Each cash sale also yields an entry to Cost of Goods Sold Dr. and Inventory Cr. for the cost of merchandise—see the far right column.

*Posting.* For cash sales, we place an *x* in the PR column to indicate that its amount is not individually posted. We do post the \$17,300 Sales Cr. total and the \$12,550 total from the “cost” column.

**Cash from other sources.** *Journalizing.* Examples of cash from other sources are money borrowed from a bank, cash interest received on account, and cash sale of noninventory assets. The transactions of February 20 and 22 are illustrative. The Other Accounts Cr. column is used for these transactions.

*Posting.* Amounts from these transactions are immediately posted to their general ledger accounts and the PR column identifies those accounts.

**Footing, Crossfooting, and Posting** To be sure that total debits and credits in a columnar journal are equal, we often crossfoot column totals before posting them. To *foot* a column of numbers is to add it. To *crossfoot* in this case is to add the Debit column totals, then add the Credit column totals, and compare the two sums for equality. Footing and crossfooting of the numbers in Exhibit 7.7 result in the report in Exhibit 7.8.

**Point:** Some software packages put cash sales in the sales journal.

**Example:** Record in the cash receipts journal a \$700 cash sale of land when the land carries a \$700 original cost. Answer: Debit the Cash column for \$700, and credit the Other Accounts column for \$700 (the account credited is Land).

**Point:** Subsidiary ledgers and their controlling accounts are in balance only after all posting is complete.

**EXHIBIT 7.8**

Footing and Crossfooting Journal Totals

Debit Columns		Credit Columns	
Cash Dr. ....	\$19,770	Accounts Receivable Cr. ....	\$ 1,500
Sales Discounts Dr. ....	30	Sales Cr. ....	17,300
Cost of Goods Sold Dr. ....	12,550	Other Accounts Cr. ....	1,000
		Inventory Cr. ....	12,550
Total .....	<u>\$32,350</u>	Total .....	<u>\$32,350</u>

At the end of the period, after crossfooting the journal to confirm that debits equal credits, the total amounts from the columns of the cash receipts journal are posted to their general ledger accounts. The Other Accounts Cr. column total is not posted because the individual amounts are directly posted to their general ledger accounts. We place an *x* below the Other Accounts Cr. column to indicate that this column total is not posted. The account numbers for the column totals that are posted are entered in parentheses below each column. (*Note:* Posting items immediately from the Other Accounts Cr. column with a delayed posting of their offsetting items in the Cash column total causes the general ledger to be out of balance during the period. Posting the Cash Dr. column total at the end of the period corrects this imbalance in the general ledger before the trial balance and financial statements are prepared.)

**Decision Maker**

**Entrepreneur** You want to know how promptly customers are paying their bills. This information can help you decide whether to extend credit and to plan your cash payments. Where do you find this information? ■ [Answers follow the chapter’s Summary.]

Prepare headings for a cash receipts journal like the one in Exhibit 7.7 and then record the following cash receipts transactions.

**NEED-TO-KNOW 7-4**

- July 1 The company borrowed \$5,000 cash by signing a note payable to the bank.
- 2 C.Ming, the owner, contributed \$1,000 cash to the company.
- 11 The company sold merchandise costing \$100 to Mulan for \$400 cash.
- 29 The company received \$950 cash from Chan in payment of a July 7 purchase (where the company sold merchandise costing \$700 on credit to Chan for \$1,000, subject to a \$50 sales discount if paid by end of month).

**Cash Receipts Journal P1**

**Solution**

Cash Receipts Journal										Page 2
Date	Account Credited	Explanation	PR	Cash Dr.	Sales Discount Dr.	Accounts Receivable Cr.	Sales Cr.	Other Accounts Cr.	Cost of Goods Sold Dr. Inventory Cr.

29	Chan	Invoice, 7/7		950	50	1,000				

Do More: E 7-3

**Purchases Journal**

A **purchases journal** is typically used to record all credit purchases, including those for inventory. Purchases for cash are recorded in the cash disbursements journal.

**Journalizing** Entries in the purchases journal in Exhibit 7.9 reflect purchase invoices or other source documents. We use the invoice date and terms to compute the date when payment

**EXHIBIT 7.9**

Purchases Journal with Posting\*

Individual amounts in the Other Accounts Dr. column and the Accounts Payable Cr. column are posted immediately.

Column totals, except for the Other Accounts Dr. column, are posted at the end of the period.

**Point:** The \$1,325 sum of the five vendor accounts equals the balance in Accounts Payable control account.

\*The purchases journal in a *periodic* system replaces "Inventory Dr." with "Purchases Dr."

**Point:** The number of special journals and the design of each are based on a company's specific needs.

**Point:** Each transaction in the purchases journal has a credit to Accounts Payable. Debit accounts will vary.

**Point:** The Other Accounts Dr. column allows the purchases journal to be used for any purchase on credit.

for each purchase is due. The Accounts Payable Cr. column is used to record the amounts owed to each creditor. Inventory purchases are recorded in the Inventory Dr. column.

To illustrate, inventory costing \$200 is purchased from Ace Manufacturing on February 5. The creditor's name (Ace) is entered in the Account column, the invoice date is entered in the Date of Invoice column, the purchase terms are entered in the Terms column, and the \$200 amount is entered in the Accounts Payable Cr. and the Inventory Dr. columns. When a purchase involves an amount recorded in the Other Accounts Dr. column, we use the Account column to identify the general ledger account debited. For example, the February 28 transaction involves purchases of inventory, office supplies, and store supplies from ITT. The journal has no column for store supplies, so the Other Accounts Dr. column is used. In this case, Store Supplies is entered in the Account column along with the creditor's name (ITT). This purchases journal also includes a separate column for credit purchases of office supplies. A separate column such as this is useful when several transactions involve debits to the same account. Each company uses its own judgment in deciding on the number of separate columns necessary.

**Posting** The amounts in the Accounts Payable Cr. column are immediately posted to individual creditor accounts in the accounts payable subsidiary ledger. Individual amounts in the Other Accounts Dr. column are immediately posted to their general ledger accounts. At the end of the period, all column totals except the Other Accounts Dr. column are posted to their general ledger accounts.

**Proving the Ledger** Accounts payable balances in the subsidiary ledger can be periodically proved after posting. We prove the subsidiary ledger by preparing a **schedule of accounts payable**, which is a list of accounts from the accounts payable ledger with their balances and the total. If this total of the individual balances equals the balance of the Accounts Payable controlling account, the accounts in the accounts payable ledger are assumed correct. Exhibit 7.10 shows a schedule of accounts payable drawn from the accounts payable ledger of Exhibit 7.9. (This schedule can be done after any posting; for example, we could prepare another schedule of accounts payable after the postings in Exhibit 7.11.)

**EXHIBIT 7.10**

Schedule of Accounts Payable

Schedule of Accounts Payable February 28	
Ace Mfg. Company	\$ 300
Horning Supply Company	350
ITT Company	225
Smite Company	300
Wynet & Company	150
Total accounts payable	<u>\$1,325</u>

## Cash Disbursements Journal

A **cash disbursements journal**, also called a *cash payments journal*, is typically used to record all cash payments (all transactions with a credit to Cash).

**Journalizing** The cash disbursements journal shown in Exhibit 7.11 illustrates repetitive entries to the Cash Cr. column of this journal (reflecting cash payments). Also note the frequent credits to Inventory (which reflect purchase discounts) and the debits to Accounts Payable. For example, on February 15, the company pays Ace on account (credit terms of 2/10, n/30—see February 5 transaction in Exhibit 7.9). Since payment occurs in the discount period, the company pays \$196 (\$200 invoice less \$4 discount). The \$4 discount is credited to Inventory. Note that when this company purchases inventory for cash, it is recorded using the Other Accounts Dr. column and the Cash Cr. column as illustrated in the February 3 and 12 transactions. Generally, the Other Accounts column is used to record cash payments on items for which no column exists. For example, on February 15, the company pays salaries expense of \$250. The title of the account debited (Salaries Expense) is entered in the Account Debited column.

The cash disbursements journal has a column titled Ck. No. (check number). For control over cash disbursements, all payments except for those of small amounts are made by check. Checks should be prenumbered and each check's number entered in the journal in numerical order in the column headed Ck. No. This makes it possible to scan the numbers in the column for omitted checks. When a cash disbursements journal has a column for check numbers, it is sometimes called a **check register**.

**Point:** Each transaction in the cash disbursements journal involves a credit to Cash. The debit accounts will vary.

The screenshot displays a software interface for a Cash Disbursements Journal. The main window shows a table with columns: Date, Ck. No., Payee, Account Debited, PR, Cash Cr., Inventory Cr., Other Accounts Dr., and Accounts Payable Dr. Transactions include payments to L. & N. Railroad, East Sales Co., Ace Mfg. Co., Jerry Hale, Wynet & Co., and Smite Co. A 'Totals' row shows a credit to Cash of 927 and debits to Inventory (13), Other Accounts (290), and Accounts Payable (650). Below the journal, several ledgers are shown: Cash (No. 101), Inventory (No. 119), Accounts Payable (No. 201), Salaries Expense (No. 622), and five Accounts Payable Ledgers for Ace Mfg. Company, Horning Supply Company, ITT Company, Smite Company, and Wynet & Company. Arrows indicate the flow of data from the journal entries to the corresponding ledger entries.

### EXHIBIT 7.11

Cash Disbursements Journal with Posting\*

Individual amounts in the Other Accounts Dr. column and the Accounts Payable Dr. column are posted immediately.

Column totals, except for the Other Accounts column, are posted at the end of the period.

**Point:** The \$675 sum of the five vendor accounts equals the balance in Accounts Payable control account.

\*The cash disbursements journal in a *periodic* system replaces "Inventory Cr." with "Purchases Discounts Cr."

**Posting** Individual amounts in the Other Accounts Dr. column of a cash disbursements journal are immediately posted to their general ledger accounts. Individual amounts in the Accounts Payable Dr. column are also immediately posted to creditors' accounts in the subsidiary accounts payable ledger. At the end of the period, we crossfoot column totals and post the Accounts Payable Dr. column total to the Accounts Payable controlling account. Also, the Inventory Cr. column total is posted to the Inventory account, and the Cash Cr. column total is posted to the Cash account.

**Decision Maker**

**Controller** You wish to analyze your company's cash payments to suppliers and its purchases discounts. Where do you find this information? ■ [Answers follow the chapter's Summary.]

**General Journal Transactions**

When special journals are used, we still need a general journal for adjusting, closing, and any other transactions for which no special journal has been set up. Examples of these other transactions might include purchases returns and allowances, purchases of plant assets by issuing a note payable, sales returns if a sales returns and allowances journal is not used, and receipt of a note receivable from a customer. We described the recording of transactions in a general journal in Chapters 2 and 3.

**NEED-TO-KNOW 7-6**

Cash Disbursements Journal

P1

Prepare headings for a cash disbursements journal like the one in Exhibit 7.11 and then record the following cash payments transactions.

- July 5 Issued Check No. 910 to Kam Corp. to buy store supplies for \$500.
- 13 Issued Check No. 911 for \$4,000 to pay off a note payable to China Bank.
- 24 Issued Check No. 912 to Lim to pay the amount due from a July 16 purchase, less the discount (it purchased merchandise for \$1,000 on credit from Lim, terms 2/10, n/30).
- 29 Paid salary of \$700 to B.Tung by issuing Check No. 913.

**TECHNOLOGY-BASED ACCOUNTING SYSTEMS**

Accounting information systems are supported with technology, which can range from simple calculators to advanced computerized systems. Since technology is increasingly important in accounting information systems, we discuss the impact of computer technology, how data processing works with accounting data, and the role of computer networks.

**Computer Technology in Accounting**

Computer technology provides accuracy, speed, efficiency, and convenience in performing accounting tasks. A program can be written, for instance, to process customers' merchandise orders. Multipurpose off-the-shelf software applications exist for a variety of business operations.

These include familiar accounting programs such as Sage 50 Complete Accounting (formerly known as Peachtree®) and QuickBooks®. Off-the-shelf programs are designed to be user friendly and menu driven, and many operate more efficiently as *integrated* systems. In an integrated system, actions taken in one part of the system automatically affect related parts. When a credit sale is recorded in an integrated system, for instance, several parts of the system are automatically updated, such as posting.

Computer technology can dramatically reduce the time and effort devoted to recordkeeping. Less effort spent on recordkeeping means more time for accounting professionals to concentrate on analysis and managerial decision making. These advances have created a greater demand for accounting professionals who understand financial reports and can draw insights and information from mountains of processed data. Accounting professionals have expertise in determining relevant and reliable information for decision making. They also can assess the effects of transactions and events on a company and its financial statements. (The IRS allows individuals to enter tax info online and receive free processing of such returns.)

**Point:** Companies that have reported missing or stolen employee data such as Social Security numbers include Time Warner, Polo Ralph Lauren, LexisNexis, ChoicePoint, and DSW Shoes.

Gl. Account	Description	Debit	Credit	Job
101	Owner invests cash and equipment	55,000.00		
Cash			Account will be increased	
163	Owner invests cash and equipment	8,000.00		
Office Equipment			Account will be increased	
167	Owner invests cash and equipment	20,000.00		
Computer Equipment			Account will be increased	
301	Owner invests cash and equipment		83,000.00	
R. Ray, Capital			Account will be increased	
Totals:		83,000.00	83,000.00	
Out of Balance:		0.00		

## Decision Insight

**Middleware** is software allowing different computer programs in a company or across companies to work together. It allows transfer of purchase orders, invoices, and other electronic documents between accounting systems. For example, suppliers can monitor inventory levels of their buyers for production and shipping purposes. ■

Lawrence Lawry/Getty Images

## Data Processing in Accounting

Accounting systems differ with regard to how input is entered and processed. **Online processing** enters and processes data as soon as source documents are available. This means that databases are immediately updated. **Batch processing** accumulates source documents for a period of time and then processes them all at once such as daily, weekly, or monthly. The advantage of online processing is timeliness. This often requires additional costs related to both software and hardware requirements. Companies such as **Intuit (Intuit.com)** are making online processing of accounting data a reality for many businesses. The advantage of batch processing is that it requires only periodic updating of databases. Records used to send bills to customers, for instance, might require updating only once a month. The disadvantage of batch processing is the lack of updated databases for management to use when making business decisions. (Businesses and individuals can now deposit checks into bank accounts using scanners with capabilities of reading amounts, ensuring that each item passes a specified image quality standard, and reducing the risk that the scanned image is a duplicate of a previously scanned check.)

## Computer Networks in Accounting

Networking, or linking computers with each other, can create information advantages (and cost efficiencies). **Computer networks** are links among computers giving different users and different computers access to common databases, programs, and hardware. Many college computer labs, for instance, are networked. A small computer network is called a *local area network (LAN)*; it links machines with *hard-wire* hookups. Large computer networks extending over long distances often rely on *modem* or *wireless* communication.

Demand for information sometimes requires advanced networks such as the systems **Federal Express** and **UPS** use to track packages and bill customers and the system **Walmart** uses to monitor inventory levels in its stores. These networks include many computers and satellite communications to gather information and to provide ready access to its databases from all locations.

## Enterprise Resource Planning Software

**Enterprise resource planning (ERP) software** includes the programs that manage a company's vital operations. They extend from order taking to manufacturing to accounting. (Your college likely relies on ERP software to track its budget and student records information.) When working properly, these integrated programs can speed decision making, identify costs for reduction, and give managers control over operations with the click of a mouse. For many managers, ERP software allows them to scrutinize business, identify where inventories are piling up, and see what plants are most efficient. The software is designed to link every part of a company's operations. This software allowed **Butterball**, one of America's leading poultry brands, to reduce costs, enable rapid acquisitions, realize return on IT investment, and drive business improvements.

ERP has several suppliers. **SAP** leads the market, with **Oracle**, which gobbled up PeopleSoft and J.D. Edwards, a distant second (*AMR Research*). SAP software is used by more than half of the world's 500 largest companies. It links ordering, inventory, production, purchasing, planning, tracking, and human resources. A transaction or event triggers an immediate chain reaction of events throughout the enterprise. It is making companies more efficient and profitable. **Tasty Baking Company**, a leading U.S. producer of snack cakes and other baked goods, uses SAP solutions to access real-time

information, gain greater efficiencies, plan and respond to business needs, and achieve measurable results.

ERP is pushing into cyberspace and customer relationship management (CRM). Now companies can share data with customers and suppliers. Applesauce maker **Mott's** is using SAP so that distributors can check the status of orders and place them over the net, and the **Coca-Cola Company** uses it to ship soda on time. ERP is also increasingly used by small business. One-third of Oracle's sales in North America are to companies with less than \$500 million in annual revenue. Worldwide, small and midsize companies are 25% to 30% of Oracle's sales. For example, **NetSuite's** accounting services to small and medium businesses are powered by Oracle's system. Jeff Johanson, director of channel operations of SAP's practice for small and midsize businesses asserts that: "Small and medium businesses don't have different needs from larger companies, but they generally can't afford customized solutions."

### Decision Insight

A new generation of accounting support is available. With the touch of a key, users can create real-time inventory reports showing all payments, charges, and credit limits at any point in the accounting cycle. Many services also include "alert signals" notifying the company when, for example, a large order exceeds a customer's credit limit or when purchases need to be made or when a bank balance is running low. ■

## Cloud Computing

Cloud computing is the delivery of computing as a service rather than a product. Many argue that its introduction will revolutionize information systems applications. Cloud computing uses applications via the web instead of installing them on individual computers. This means that companies lease, rather than purchase, those applications, which also means that the user does not need to update applications as that is the job of the computing service provider. Thus, as tax laws change or when rates are revised, the service provider takes on that responsibility (and cost).

When a company transfers computing applications to a provider, there is much less risk if a user's computers crash or are stolen. Further, many users and their clients can access the same

applications and share data. Accountants, lawyers, and analysts can similarly access data for quicker and easier processing and analysis. For example, all invoices could be offloaded to a web-based bill management system, where documentation, disbursement, and recordkeeping could all be handled in the cloud. However, the user does lose control over the data and is dependent on the provider's control system. Today, many companies are exploring cloud computing and often begin with applications that are independent of other systems so that if problems arise, they are concentrated within that application only. Examples are training programs and workflow systems. Further, many argue that the gains of cloud computing are great for small and medium-sized companies, which do not have large IT departments or require unique information systems.

Cloud computing has enormous potential for greater efficiency and effectiveness with information systems applications. The future will reveal whether or not that potential will be achieved. Cloud computing has the potential to improve controls due to data centralization and the enhanced security from providers who can spread that cost over many customers. Still, some users worry about exposure to sensitive data. Users should consider the following factors when looking at providers of cloud computing:

- Provider's knowledge of the user's business.
- Security of the provider's cloud, including firewalls.
- Provider's history, reputation, and references.
- Service level agreement for hardware and software.
- Provider's cloud compatibility with user's system.

QC5

## GLOBAL VIEW

This section discusses similarities and differences between U.S. GAAP and IFRS regarding system principles and components, and special journals.

**System Principles and Components** Both U.S. GAAP and IFRS aim for high-quality financial reporting. That aim implies that sound information system principles and components are applied worldwide. However, while system principles and components are fundamentally similar across the globe, culture and other realities often mean different emphases are placed on the mix of system controls. **BMW** provides the following description of its system controls:

The internal control system ensures that all the information needed to achieve the objectives set for the internal control system is made available to those responsible in an appropriate and timely manner. Controls are carried out with the aid of the IT applications, thus reducing the incidence of process risks.

**Special Journals** Accounting systems for recording sales, purchases, cash receipts, and cash disbursements are similar worldwide. Although the exact structure of special journals is unique to each company, the basic structure is identical. Companies desire to apply accounting in an efficient manner. Accordingly, systems that employ special journals are applied worldwide.

**Sustainability and Accounting** The founder, Aimi Duong, of **Oimei**, as introduced in this chapter's opening feature, explains that her entrepreneurial efforts to help "marginalized workers in developing communities throughout Southeast Asia . . . [enable those workers] to earn a fair wage, be self-sustainable, and flourish in their communities." In addition, Oimei proclaims that it will source only "fair trade products." The motivations behind fair trade initiatives include higher quality of life, stronger communities, support for craftsmanship and culture, and environmental conservation.

**Decision Analysis**

**Segment Return on Assets**

**A1**  
 Compute segment return on assets and use it to evaluate segment performance.

Good accounting information systems collect financial data for a company’s various segments. A *segment* refers to a part of a company that is separately identified by its products or services, or by the geographic market it serves. **Callaway Golf Company** reports that it operates in two business segments: (1) golf clubs and (2) golf balls. Users of financial statements are especially interested in segment information to better understand a company’s activities because segments often vary on profitability, risk, and growth.

Companies must report segment information, including their sales, operating income, identifiable assets, capital expenditures, and depreciation. However, managers are reluctant to release information that can harm competitive position. Exhibit 7.12 shows survey results on the number of companies with different (reported) segments.

**EXHIBIT 7.12**

Companies Reporting Operations by Types of Segments\*

\*Total exceeds 100% because companies can report more than one segment.

One measure of success for business segments is the **segment return on assets** ratio defined as follows.

$$\text{Segment return on assets} = \frac{\text{Segment operating income}}{\text{Segment average assets}}$$

This ratio reflects on the profitability of a segment. Exhibit 7.13 shows the segments’ pretax income, average assets, and return on assets for Callaway Golf Company.

**EXHIBIT 7.13**

Callaway Golf’s Segment Return on Assets

Golf Segment* (\$ thousands)	2013		2012	
	Clubs	Balls	Clubs	Balls
Net sales	\$710,654	\$132,147	\$694,489	\$139,576
Operating income	\$27,684	\$1,582	\$(59,827)	\$(15,019)
Average assets	\$351,342	\$56,732	\$368,642	\$78,242
Segment return on assets	<b>7.9%</b>	<b>2.8%</b>	<b>n.a.</b>	<b>n.a.</b>

\* A segment’s operating income is usually measured as pretax income, and assets is usually measured as identifiable assets.

Callaway’s performance has been mixed over the past few years. Year 2013 was a good one for Callaway as both its golf club and golf ball segments generated positive income. However, its golf club segment yields a much higher return on assets of 7.9% versus 2.8% for its golf ball segment. Year 2012 produced losses for both segments, which meant its returns for 2012 were *not applicable* (n.a.) or noninterpretable for analysis purposes. Callaway must work at sustaining positive returns in the long run if it is to be successful. It should also emphasize its golf club segment vis-à-vis its golf ball segment given the greater returns and larger total income from that segment. Its golf club segment already makes up a greater portion of its operations; for example, 2013 sales of \$710,654 from golf clubs makes up 84% of its total sales of \$842,801 from both segments. This analysis can be extended to geographical segments and any other segments that companies report.

## Decision Maker

**Banker** A soccer equipment merchandiser requests a loan from you to expand operations. Its net income is \$220,000, reflecting a 10% increase over the prior year. You ask about segment results. The owner reports that \$160,000 of net income is from Cuban operations, reflecting a 60% increase over the prior year. The remaining \$60,000 of net income is from U.S. operations, reflecting a 40% decrease. Does this segment information impact your loan decision? ■ [Answers follow the chapter's Summary.]

Pepper Company completed the following selected transactions and events during March of this year. (Terms of all credit sales for the company are 2/10, n/30.)

- Mar. 4 Sold merchandise on credit to Jennifer Nelson, Invoice No. 954, for \$16,800 (cost is \$12,200).
- 6 Purchased \$1,220 of office supplies on credit from Mack Company. Invoice dated March 3, terms n/30.
- 6 Sold merchandise on credit to Dennie Hoskins, Invoice No. 955, for \$10,200 (cost is \$8,100).
- 11 Purchased \$52,600 of merchandise, invoice dated March 6, terms 2/10, n/30, from Defore Industries.
- 12 Borrowed \$26,000 cash by giving Commerce Bank a long-term promissory note payable.
- 14 Received cash payment from Jennifer Nelson for the March 4 sale less the discount (Invoice No. 954).
- 16 Received a \$200 credit memorandum from Defore Industries for unsatisfactory merchandise Pepper purchased on March 11 and later returned.
- 16 Received cash payment from Dennie Hoskins for the March 6 sale less the discount (Invoice No. 955).
- 18 Purchased \$22,850 of store equipment on credit from Schmidt Supply, invoice dated March 15, terms n/30.
- 20 Sold merchandise on credit to Marjorie Allen, Invoice No. 956, for \$5,600 (cost is \$3,800).
- 21 Sent Defore Industries Check No. 516 in payment of its March 6 dated invoice less the return and the discount.
- 22 Purchased \$41,625 of merchandise, invoice dated March 18, terms 2/10, n/30, from Welch Company.
- 26 Issued a \$600 credit memorandum to Marjorie Allen for defective merchandise Pepper sold on March 20 and Allen later returned.
- 31 Issued Check No. 517, payable to Payroll, in payment of \$15,900 sales salaries for the month. Cashed the check and paid the employees.
- 31 Cash sales for the month are \$134,680 (cost is \$67,340). (Cash sales are recorded daily but are recorded only once here to reduce repetitive entries.)

### Required

1. Open the following selected general ledger accounts: Cash (101), Accounts Receivable (106) Inventory (119), Office Supplies (124), Store Equipment (165), Accounts Payable (201), Long-Term Notes Payable (251), Sales (413), Sales Returns and Allowances (414), Sales Discounts (415), Cost of Goods Sold (502), and Sales Salaries Expense (621). Open the following accounts receivable ledger accounts: Marjorie Allen, Dennie Hoskins, and Jennifer Nelson. Open the following accounts payable ledger accounts: Defore Industries, Mack Company, Schmidt Supply, and Welch Company.
2. Enter the transactions using a sales journal, a purchases journal, a cash receipts journal, a cash disbursements journal, and a general journal similar to the ones illustrated in the chapter. Regularly post to the individual customer and creditor accounts. Also, post any amounts that should be posted as individual amounts to general ledger accounts. Foot and crossfoot the journals and make the month-end postings. *Pepper Co. uses the perpetual inventory system.*
3. Prepare a trial balance for the selected general ledger accounts in part 1 and prove the accuracy of subsidiary ledgers by preparing schedules of accounts receivable and accounts payable.

### PLANNING THE SOLUTION

- Set up the required general ledger, the subsidiary ledger accounts, and the five required journals as illustrated in the chapter.
- Read and analyze each transaction and decide in which special journal (or general journal) the transaction is recorded.

### NEED-TO-KNOW

#### COMPREHENSIVE

Perpetual System

- Record each transaction in the proper journal (and post the appropriate individual amounts).
- Once you have recorded all transactions, total the journal columns. Post from each journal to the appropriate ledger accounts.
- Prepare a trial balance (covering the selected transactions for this problem only) to prove the equality of the debit and credit balances in your general ledger.
- Prepare schedules of accounts receivable and accounts payable. Compare the totals of these schedules to the Accounts Receivable and Accounts Payable controlling account balances, making sure that they agree.

# Summary

- C1 Identify the principles and components of accounting information systems.** Accounting information systems are governed by five fundamental principles: control, relevance, compatibility, flexibility, and cost-benefit. The five basic components of an accounting information system are source documents, input devices, information processors, information storage, and output devices.
- C2 Explain the goals and uses of special journals.** Special journals are used for recording transactions of similar type, each meant to cover one kind of transaction. Four of the most common special journals are the sales journal, cash receipts journal, purchases journal, and cash disbursements journal. Special journals are efficient and cost-effective tools in the journalizing and posting processes.
- C3 Describe the use of controlling accounts and subsidiary ledgers.** A general ledger keeps controlling accounts such as Accounts Receivable and Accounts Payable, but details on individual accounts making up the controlling account are kept in subsidiary ledgers (such as an accounts receivable ledger). The balance in a controlling account must equal the sum of its subsidiary account balances after posting is complete.
- A1 Compute segment return on assets and use it to evaluate segment performance.** A business segment is a part of a company that is separately identified by its products or

services or by the geographic market it serves. Analysis of a company's segments is aided by the segment return on assets (segment operating income divided by segment average assets).

- P1 Journalize and post transactions using special journals.** Each special journal is devoted to similar kinds of transactions. Transactions are journalized on one line of a special journal, with columns devoted to specific accounts, dates, names, posting references, explanations, and other necessary information. Posting is threefold: (1) individual amounts in the Other Accounts column are posted to their general ledger accounts on a regular (daily) basis, (2) individual amounts in a column whose total is *not* posted to a controlling account at the end of a period (month) are posted regularly (daily) to their general ledger accounts, and (3) total amounts for all columns except the Other Accounts column are posted at the end of a period (month) to their column's account title in the general ledger.
- P2 Prepare and prove the accuracy of subsidiary ledgers.** Account balances in the general ledger and its subsidiary ledgers are tested for accuracy after posting is complete. This procedure is twofold: (1) prepare a trial balance of the general ledger to confirm that debits equal credits and (2) prepare a schedule to confirm that the controlling account's balance equals the subsidiary ledger's balance.

## Guidance Answers to Decision Maker

**Entrepreneur** The accounts receivable ledger has much of the information you need. It lists detailed information for each customer's account, including the amounts, dates for transactions, and dates of payments. It can be reorganized into an "aging schedule" to show how long customers wait before paying their bills.

**Controller** Much of the information you need is in the accounts payable ledger. It contains information for each supplier, the amounts due, and when payments are made. This subsidiary ledger along with information on credit terms should enable you to conduct your analyses.

**Banker** This merchandiser's segment information is likely to greatly impact your loan decision. The risks associated with the company's two sources of net income are quite different. While net income is up by 10%, U.S. operations are performing poorly and Cuban operations are subject to many uncertainties. These uncertainties depend on political events, legal issues, business relationships, Cuban economic conditions, and a host of other risks. Overall, net income results suggested a low-risk loan opportunity, but the segment information reveals a high-risk situation.

## Discussion Questions

- What are five basic components of an accounting system?
- What are source documents? Give two examples.
- What are the five fundamental principles of accounting information systems?
- What is the purpose of an input device? Give examples of input devices for computer systems.
- What is the difference between data that are stored off-line and data that are stored online?

6. What purpose is served by the output devices of an accounting system?
7. When special journals are used, they are usually used to record each of four different types of transactions. What are these four types of transactions?
8. What notations are entered into the Posting Reference column of a ledger account?
9.  When a general journal entry is used to record sales returns, the credit of the entry must be posted twice. Does this cause the trial balance to be out of balance? Explain.
10. Describe the procedures involving the use of copies of a company's sales invoices as a sales journal.
11. Credits to customer accounts and credits to Other Accounts are individually posted from a cash receipts journal such as the one in Exhibit 7.7. Why not put both types of credits in the same column and save journal space?
12.  Why should sales to and receipts of cash from credit customers be recorded and posted immediately?
13. Locate "Note 11" that reports **Apple's** segments from its September 28, 2013, annual report on its website ([Apple.com](http://Apple.com)). Identify its segments and list the net sales for each. **APPLE**
14. Locate "Note 15" that reports **Google's** geographical segments from its 2013 annual report on its website ([Google.com](http://Google.com)). Identify its geographical segments and list the revenues for each. **GOOGLE**
15. Locate "Note 11" that reports **Apple's** segments from its September 28, 2013, annual report on its website ([Apple.com](http://Apple.com)). Compute the ratio "Operating income/Net sales" for each segment. Comment on the results. **APPLE**

**QUICK STUDY**

Identify the most likely role in an accounting system played by each of the numbered items 1 through 12 by assigning a letter from the list A through E on the left.

**QS 7-1**

Accounting information system components

C1

- |                                  |       |                                   |
|----------------------------------|-------|-----------------------------------|
| <b>A.</b> Source documents       | _____ | <b>1.</b> Computer keyboard       |
| <b>B.</b> Input devices          | _____ | <b>2.</b> Computer printer        |
| <b>C.</b> Information processors | _____ | <b>3.</b> Computer monitor        |
| <b>D.</b> Information storage    | _____ | <b>4.</b> Bank statement          |
| <b>E.</b> Output devices         | _____ | <b>5.</b> Computer software       |
|                                  | _____ | <b>6.</b> Bar code reader         |
|                                  | _____ | <b>7.</b> Digital camera          |
|                                  | _____ | <b>8.</b> Invoice from a supplier |
|                                  | _____ | <b>9.</b> Computer scanner        |
|                                  | _____ | <b>10.</b> Filing cabinet         |

**QS 7-2**

Accounting information system principles

C1

Enter the letter of each system principle in the blank next to its best description.

- |                                   |                                  |
|-----------------------------------|----------------------------------|
| <b>A.</b> Control principle       | <b>D.</b> Flexibility principle  |
| <b>B.</b> Relevance principle     | <b>E.</b> Cost-benefit principle |
| <b>C.</b> Compatibility principle |                                  |
- \_\_\_\_\_ **1.** The principle prescribes the accounting information system to help monitor activities.
  - \_\_\_\_\_ **2.** The principle prescribes the accounting information system to adapt to the unique characteristics of the company.
  - \_\_\_\_\_ **3.** The principle prescribes the accounting information system to change in response to technological advances and competitive pressures.
  - \_\_\_\_\_ **4.** The principle that affects all other accounting information system principles.
  - \_\_\_\_\_ **5.** The principle prescribes the accounting information system to provide timely information for effective decision making.

**QS 7-3**

Identifying the special journal of entry

C2 

Wilcox Electronics uses a sales journal, a purchases journal, a cash receipts journal, a cash disbursements journal, and a general journal as illustrated in this chapter. Wilcox recently completed the following transactions *a* through *h*. Identify the journal in which each transaction should be recorded.

- |  |  |
|--|--|
| _____ <b>a.</b> Sold merchandise on credit.        | _____ <b>e.</b> Sold merchandise for cash.       |
| _____ <b>b.</b> Purchased shop supplies on credit. | _____ <b>f.</b> Purchased merchandise on credit. |
| _____ <b>c.</b> Paid an employee's salary in cash. | _____ <b>g.</b> Purchased inventory for cash.    |
| _____ <b>d.</b> Borrowed cash from the bank.       | _____ <b>h.</b> Paid cash to a creditor.         |

Biloxi Gifts uses a sales journal, a purchases journal, a cash receipts journal, a cash disbursements journal, and a general journal as illustrated in this chapter. Journalize its November transactions that should be recorded in the general journal. For those not recorded in the general journal, identify the special journal where each should be recorded.

**QS 7-4**  
 Entries in the general journal  
**C2**

- Nov. 2 The company purchased \$2,600 of merchandise on credit from the Midland Co., terms 2/10, n/30.
- 12 The owner, T. Biloxi, contributed an automobile worth \$17,000 to the company.
- 16 The company sold \$1,200 of merchandise (cost is \$800) on credit to K. Myer, terms n/30.
- 19 K. Myer returned \$175 of (worthless) merchandise originally purchased on November 16 to the company (assume the cost of this merchandise is left in cost of goods sold).

Following is information from Fredrickson Company for its initial month of business. (1) Identify the balances listed in the accounts receivable subsidiary ledger. (2) Identify the accounts receivable balance listed in the general ledger at month's end.

**QS 7-5**  
 Controlling accounts and subsidiary ledgers  
**C3**

Credit Sales			Cash Collections		
Jan. 10	Stern Company	\$4,000	Jan. 20	Stern Company	\$2,000
19	Diaz Brothers	1,600	28	Diaz Brothers	1,600
23	Rex Company	2,500	31	Rex Company	1,300

Peachtree Company uses a sales journal, a purchases journal, a cash receipts journal, a cash disbursements journal, and a general journal. The following transactions occur in the month of May.

**QS 7-6**  
 Purchases journal—perpetual  
**P1**

- May 1 Purchased \$10,100 of merchandise on credit from Krause, Inc., terms n/30.
- 8 Sold merchandise costing \$900 on credit to G. Seles for \$1,500 subject to a \$30 sales discount if paid by the end of the month.
- 14 Purchased \$240 of store supplies from Chang Company on credit, terms n/30.
- 17 Purchased \$260 of office supplies on credit from Monder Company, terms n/30.
- 24 Sold merchandise costing \$400 to D. Air for \$650 cash.
- 28 Purchased store supplies from Porter's for \$90 cash.
- 29 Paid Krause, Inc., \$10,100 cash for the merchandise purchased on May 1.

Prepare headings for a purchases journal like the one in Exhibit 7.9. Journalize the May transactions that should be recorded in the purchases journal.

Refer to QS 7-6 and for each of the May transactions identify the journal in which it would be recorded. Assume the company uses a sales journal, purchases journal, cash receipts journal, cash disbursements journal, and general journal as illustrated in this chapter.

**QS 7-7**  
 Identifying journal of entry  
**C2**

Warton Company posts its sales invoices directly and then binds them into a sales journal. The company had the following credit sales to these customers during July.

**QS 7-8**  
 Accounts receivable ledger; posting from sales journal  
**P2**

July 2	Mary Mack	\$ 8,600
8	Eric Horner	11,100
10	Troy Wilson	13,400
14	Hong Jiang	20,500
20	Troy Wilson	11,200
29	Mary Mack	7,300
	Total credit sales	<u>\$72,100</u>

**Required**

1. Open an accounts receivable subsidiary ledger having a T-account for each customer. Post the invoices to the subsidiary ledger.
2. Open an Accounts Receivable controlling T-account and a Sales T-account to reflect general ledger accounts. Post the end-of-month total from the sales journal to these accounts.
3. Prepare a schedule of accounts receivable and prove that its total equals the Accounts Receivable controlling account balance.

**QS 7-9**

Analyzing segment reports **A1**

**APPLE**

**Apple** reports the following net sales by product segments. Compute the percentage of total sales for each of its six product segments. Comment on the relative contributions of each product segment.

\$ millions	iPhone	iPad	Mac	iPod	iTunes	Accessories	Total
Sales . . . . .	\$91,279	\$31,980	\$21,483	\$4,411	\$16,051	\$5,706	\$170,910

**QS 7-10**

International accounting and special journals

**C2**

**Nestlé**, a Switzerland-based company, uses a sales journal, a purchases journal, a cash receipts journal, a cash disbursements journal, and a general journal in a manner similar to that explained in this chapter. Journalize the following summary transactions of Nestlé transactions that should be recorded in the general journal. For those not recorded in the general journal, identify only the special journal where each should be recorded. (All amounts in millions of Swiss franc, CHF.)

1. Assume Nestlé purchased CHF 17,000 of merchandise on credit from the suppliers.
2. Assume Nestlé sold CHF 94,000 of merchandise (cost is CHF 42,300) on credit to customers.
3. Assume a key customer returned CHF 2,400 of (worthless) merchandise to Nestlé (assume the cost of this merchandise is left in cost of goods sold).

**EXERCISES**

**Exercise 7-1**

Sales journal—perpetual

**P1**

Finer Company uses a sales journal, a purchases journal, a cash receipts journal, a cash disbursements journal, and a general journal. The following transactions occur in the month of May.

- May 2 Sold merchandise costing \$300 to B. Facer for \$450 cash, Invoice No. 5703.
- 5 Purchased \$2,400 of merchandise on credit from Marchant Corp.
- 7 Sold merchandise costing \$800 to J. Dryer for \$1,250, terms 2/10, n/30, Invoice No. 5704.
- 8 Borrowed \$9,000 cash by signing a note payable to the bank.
- 12 Sold merchandise costing \$200 to R. Lamb for \$340, terms n/30, Invoice No. 5705.
- 16 Received \$1,225 cash from J. Dryer to pay for the purchase of May 7.
- 19 Sold used store equipment for \$900 cash to Golf, Inc.
- 25 Sold merchandise costing \$500 to T. Taylor for \$750, terms n/30, Invoice No. 5706.

Prepare headings for a sales journal like the one in Exhibit 7.5. Journalize the May transactions that should be recorded in this sales journal.

**Exercise 7-2**

Identifying journal of entry **C2**

Refer to Exercise 7-1 and for each of the May transactions identify the journal in which it would be recorded. Assume the company uses a sales journal, purchases journal, cash receipts journal, cash disbursements journal, and general journal as illustrated in this chapter.

**Exercise 7-3**

Cash receipts journal—perpetual

**P1**

Ali Co. uses a sales journal, a purchases journal, a cash receipts journal, a cash disbursements journal, and a general journal. The following transactions occur in the month of November.

- Nov. 3 The company purchased \$3,200 of merchandise on credit from Hart Co., terms n/20.
- 7 The company sold merchandise costing \$840 on credit to J. Than for \$1,000, subject to a \$20 sales discount if paid by the end of the month.
- 9 The company borrowed \$3,750 cash by signing a note payable to the bank.
- 13 J. Ali, the owner, contributed \$5,000 cash to the company.
- 18 The company sold merchandise costing \$250 to B. Cox for \$330 cash.
- 22 The company paid Hart Co. \$3,200 cash for the merchandise purchased on November 3.
- 27 The company received \$980 cash from J. Than in payment of the November 7 purchase.
- 30 The company paid salaries of \$1,650 in cash.

Prepare headings for a cash receipts journal like the one in Exhibit 7.7. Journalize the November transactions that should be recorded in the cash receipts journal.

**Exercise 7-4**

Identifying journal of entry **C2**

Refer to Exercise 7-3 and for each of the November transactions identify the journal in which it would be recorded. Assume the company uses a sales journal, purchases journal, cash receipts journal, cash disbursements journal, and general journal as illustrated in this chapter.

Following is information from Jesper Company for its initial month of business. (1) Identify the balances listed in the accounts payable subsidiary ledger. (2) Identify the accounts payable balance listed in the general ledger at month's end.

Credit Purchases			Cash Paid		
Jan. 9	Bailey Company . . . . .	\$14,000	Jan. 19	Bailey Company . . . . .	\$10,100
18	Johnson Brothers . . . . .	6,600	27	Johnson Brothers . . . . .	6,600
22	Preston Company . . . . .	6,200	31	Preston Company . . . . .	5,400

**Exercise 7-5**

Controlling accounts and subsidiary ledgers

Marx Supply uses a sales journal, a purchases journal, a cash receipts journal, a cash disbursements journal, and a general journal. The following transactions occur in the month of April.

- Apr. 3 Purchased merchandise for \$2,950 on credit from Seth, Inc., terms 2/10, n/30.  
 9 Issued Check No. 210 to Kitt Corp. to buy store supplies for \$650.  
 12 Sold merchandise costing \$500 on credit to C. Myrs for \$770, terms n/30.  
 17 Issued Check No. 211 for \$1,400 to pay off a note payable to City Bank.  
 20 Purchased merchandise for \$4,500 on credit from Lite, terms 2/10, n/30.  
 28 Issued Check No. 212 to Lite to pay the amount due for the purchase of April 20, less the discount.  
 29 Paid salary of \$1,800 to B. Dock by issuing Check No. 213.  
 30 Issued Check No. 214 to Seth, Inc., to pay the amount due for the purchase of April 3.

**Exercise 7-6**

Cash disbursements journal—perpetual

Prepare headings for a cash disbursements journal like the one in Exhibit 7.11. Journalize the April transactions that should be recorded in the cash disbursements journal.

Refer to Exercise 7-6 and for each of the April transactions identify the journal in which it would be recorded. Assume the company uses a sales journal, purchases journal, cash receipts journal, cash disbursements journal, and general journal as illustrated in this chapter.

**Exercise 7-7**

Identifying journal of entry

A company that records credit purchases in a purchases journal and records purchases returns in a general journal made the following errors. Enter A, B, or C indicating when each error should be discovered.

- A.** When preparing the schedule of accounts payable.  
**B.** When crossfooting the purchases journal.  
**C.** When preparing the trial balance.
- \_\_\_\_\_ 1. Made an addition error in totaling the Office Supplies column of the purchases journal.  
 \_\_\_\_\_ 2. Made an addition error in determining the balance of a creditor's subsidiary account.  
 \_\_\_\_\_ 3. Posted a purchases return to the Accounts Payable account and to the creditor's subsidiary account but did not post the purchases return to the Inventory account.  
 \_\_\_\_\_ 4. Correctly recorded an \$8,000 purchase in the purchases journal but posted it to the creditor's subsidiary account as an \$800 purchase.  
 \_\_\_\_\_ 5. Posted a purchases return to the Inventory account and to the Accounts Payable account but did not post to the creditor's subsidiary account.

**Exercise 7-8**

Purchases journal and error identification

Post Pharmacy uses the following journals: sales journal, purchases journal, cash receipts journal, cash disbursements journal, and general journal. The following two transactions were processed.

On June 5, Post Pharmacy purchased merchandise priced at \$14,000, subject to credit terms of 2/10, n/30. On June 14, Post Pharmacy paid the net amount due for the merchandise purchased on June 5.

In journalizing the June 14 payment, the pharmacy debited Accounts Payable for \$14,000 but failed to record the cash discount on the purchase. Cash was properly credited for the actual \$13,720 paid.

- a.** In what journals would the June 5 and the June 14 transactions be recorded?  
**b.** What procedure is likely to discover the error in journalizing the June 14 transaction?

**Exercise 7-9**

Special journal transactions and error discovery

**Exercise 7-10**

Posting to subsidiary ledger accounts; preparing a schedule of accounts receivable

P2

At the end of May, the sales journal of Mountain View appears as follows.

Date	Account Debited	Invoice Number	PR	Accounts Receivable Dr. Sales Cr.	Cost of Goods Sold Dr. Inventory Cr.
May 6	Aaron Reckers	190		3,880	3,120
10	Sara Reed	191		2,940	2,325
17	Anna Page	192		1,850	1,480
25	Sara Reed	193		1,340	1,075
31	Totals			<u>10,010</u>	<u>8,000</u>

Mountain View also recorded the return of defective merchandise with the following entry.

May 20	Sales Returns and Allowances .....	350	
	Accounts Receivable—Anna Page .....		350
	<i>Customer returned (worthless) merchandise.</i>		

**Required**

1. Open an accounts receivable subsidiary ledger that has a T-account for each customer listed in the sales journal. Post to the customer accounts the entries in the sales journal and any portion of the general journal entry that affects a customer’s account.
2. Open a general ledger that has T-accounts for Accounts Receivable, Inventory, Sales, Sales Returns and Allowances, and Cost of Goods Sold. Post the sales journal and any portion of the general journal entry that affects these accounts.
3. Prepare a schedule of accounts receivable and prove that its total equals the balance in the Accounts Receivable controlling account.

**Check** (3) Ending Accounts Receivable, \$9,660

**Exercise 7-11**

Computing and analyzing segment return on assets

A1 

Complete the following segment return on assets table for Teton Company (round ratios to three decimals, or one decimal if shown in percent form). Analyze your findings and identify the segment with the highest, and that with the lowest, segment return on assets.

Segment	Segment Operating Income (in \$ mil.)		Segment Assets (in \$ mil.)		Segment Return on Assets
	2015	2014	2015	2014	2015
<b>Specialty</b>					
Skiing Group .....	\$ 72	\$ 68	\$ 591	\$ 450	
Skating Group .....	19	16	63	52	
Specialty Footwear .....	32	29	165	146	
Other Specialty .....	21	14	47	34	
Subtotal .....	144	127	866	682	
<b>General Merchandise</b>					
South America .....	42	46	315	284	
United States .....	17	18	62	45	
Europe .....	15	13	24	22	
Subtotal .....	74	77	401	351	
Total .....	<u>\$218</u>	<u>\$204</u>	<u>\$1,267</u>	<u>\$1,033</u>	

**Check** Europe segment return, 65.2%

**PROBLEM SET A**

Church Company completes these transactions and events during March of the current year (terms for all its credit sales are 2/10, n/30).

**Problem 7-1A**

Special journals, subsidiary ledgers, trial balance—perpetual

C3 P1 P2

- Mar. 1 Purchased \$43,600 of merchandise from Van Industries, invoice dated March 1, terms 2/15, n/30.
- 2 Sold merchandise on credit to Min Cho, Invoice No. 854, for \$16,800 (cost is \$8,400).
- 3 Purchased \$1,230 of office supplies on credit from Gabel Company, invoice dated March 3, terms n/10 EOM.
- 3 Sold merchandise on credit to Linda Witt, Invoice No. 855, for \$10,200 (cost is \$5,800).

- 6 Borrowed \$82,000 cash from Federal Bank by signing a long-term note payable.
- 9 Purchased \$21,850 of office equipment on credit from Spell Supply, invoice dated March 9, terms n/10 EOM.
- 10 Sold merchandise on credit to Jovita Albany, Invoice No. 856, for \$5,600 (cost is \$2,900).
- 12 Received payment from Min Cho for the March 2 sale less the discount.
- 13 Sent Van Industries Check No. 416 in payment of the March 1 invoice less the discount.
- 13 Received payment from Linda Witt for the March 3 sale less the discount.
- 14 Purchased \$32,625 of merchandise from the CD Company, invoice dated March 13, terms 2/10, n/30.
- 15 Issued Check No. 417, payable to Payroll, in payment of sales salaries expense for the first half of the month, \$18,300. Cashed the check and paid the employees.
- 15 Cash sales for the first half of the month are \$34,680 (cost is \$20,210). (Cash sales are recorded daily, but are recorded only twice here to reduce repetitive entries.)
- 16 Purchased \$1,770 of store supplies on credit from Gabel Company, invoice dated March 16, terms n/10 EOM.
- 17 Received a \$2,425 credit memorandum from CD Company for the return of unsatisfactory merchandise purchased on March 14.
- 19 Received a \$630 credit memorandum from Spell Supply for office equipment received on March 9 and returned for credit.
- 20 Received payment from Jovita Albany for the sale of March 10 less the discount.
- 23 Issued Check No. 418 to CD Company in payment of the invoice of March 13 less the March 17 return and the discount.
- 27 Sold merchandise on credit to Jovita Albany, Invoice No. 857, for \$14,910 (cost is \$7,220).
- 28 Sold merchandise on credit to Linda Witt, Invoice No. 858, for \$4,315 (cost is \$3,280).
- 31 Issued Check No. 419, payable to Payroll, in payment of sales salaries expense for the last half of the month, \$18,300. Cashed the check and paid the employees.
- 31 Cash sales for the last half of the month are \$30,180 (cost is \$16,820).
- 31 Verify that amounts impacting customer and creditor accounts were posted and that any amounts that should have been posted as individual amounts to the general ledger accounts were posted. Foot and crossfoot the journals and make the month-end postings.

### Required

1. Open the following general ledger accounts: Cash; Accounts Receivable; Inventory (March 1 beg. bal. is \$10,000); Office Supplies; Store Supplies; Office Equipment; Accounts Payable; Long-Term Notes Payable; Z. Church, Capital (March 1 beg. bal. is \$10,000); Sales; Sales Discounts; Cost of Goods Sold; and Sales Salaries Expense. Open the following accounts receivable subsidiary ledger accounts: Jovita Albany, Min Cho, and Linda Witt. Open the following accounts payable subsidiary ledger accounts: Gabel Company, Van Industries, Spell Supply, and CD Company.
2. Enter these transactions in a sales journal like Exhibit 7.5, a purchases journal like Exhibit 7.9, a cash receipts journal like Exhibit 7.7, a cash disbursements journal like Exhibit 7.11, or a general journal. Number all journal pages as page 2.
3. Prepare a trial balance of the general ledger and prove the accuracy of the subsidiary ledgers by preparing schedules of both accounts receivable and accounts payable.

**Check** Trial balance totals, \$232,905

Wiset Company completes these transactions during April of the current year (the terms of all its credit sales are 2/10, n/30).

- Apr. 2 Purchased \$14,300 of merchandise on credit from Noth Company, invoice dated April 2, terms 2/10, n/60.
- 3 Sold merchandise on credit to Page Alistair, Invoice No. 760, for \$4,000 (cost is \$3,000).
- 3 Purchased \$1,480 of office supplies on credit from Custer, Inc. Invoice dated April 2, terms n/10 EOM.
- 4 Issued Check No. 587 to *World View* for advertising expense, \$899.
- 5 Sold merchandise on credit to Paula Kohr, Invoice No. 761, for \$8,000 (cost is \$6,500).
- 6 Received an \$80 credit memorandum from Custer, Inc., for the return of some of the office supplies received on April 3.
- 9 Purchased \$12,125 of store equipment on credit from Hal's Supply, invoice dated April 9, terms n/10 EOM.
- 11 Sold merchandise on credit to Nic Nelson, Invoice No. 762, for \$10,500 (cost is \$7,000).

### Problem 7-2A

Special journals, subsidiary ledgers, and schedule of accounts receivable—perpetual

**C3** P1 P2 

- 12 Issued Check No. 588 to Noth Company in payment of its April 2 invoice, less the discount.
- 13 Received payment from Page Alistair for the April 3 sale, less the discount.
- 13 Sold \$5,100 of merchandise on credit to Page Alistair (cost is \$3,600), Invoice No. 763.
- 14 Received payment from Paula Kohr for the April 5 sale, less the discount.
- 16 Issued Check No. 589, payable to Payroll, in payment of sales salaries expense for the first half of the month, \$10,750. Cashed the check and paid employees.
- 16 Cash sales for the first half of the month are \$52,840 (cost is \$35,880). (Cash sales are recorded daily from cash register data but are recorded only twice in this problem to reduce repetitive entries.)
- 17 Purchased \$13,750 of merchandise on credit from Grant Company, invoice dated April 17, terms 2/10, n/30.
- 18 Borrowed \$60,000 cash from First State Bank by signing a long-term note payable.
- 20 Received payment from Nic Nelson for the April 11 sale, less the discount.
- 20 Purchased \$830 of store supplies on credit from Hal's Supply, invoice dated April 19, terms n/10 EOM.
- 23 Received a \$750 credit memorandum from Grant Company for the return of defective merchandise received on April 17.
- 23 Received payment from Page Alistair for the April 13 sale, less the discount.
- 25 Purchased \$11,375 of merchandise on credit from Noth Company, invoice dated April 24, terms 2/10, n/60.
- 26 Issued Check No. 590 to Grant Company in payment of its April 17 invoice, less the return and the discount.
- 27 Sold \$3,170 of merchandise on credit to Paula Kohr, Invoice No. 764 (cost is \$2,520).
- 27 Sold \$6,700 of merchandise on credit to Nic Nelson, Invoice No. 765 (cost is \$4,305).
- 30 Issued Check No. 591, payable to Payroll, in payment of the sales salaries expense for the last half of the month, \$10,750.
- 30 Cash sales for the last half of the month are \$73,975 (cost is \$58,900).

### Required

1. Prepare a sales journal like that in Exhibit 7.5 and a cash receipts journal like that in Exhibit 7.7. Number both journal pages as page 3. Then review the transactions of Wiset Company and enter those that should be journalized in the sales journal and those that should be journalized in the cash receipts journal. Ignore any transactions that should be journalized in a purchases journal, a cash disbursements journal, or a general journal.
2. Open the following general ledger accounts: Cash; Accounts Receivable; Inventory; Long-Term Notes Payable; B. Wiset, Capital; Sales; Sales Discounts; and Cost of Goods Sold. Enter the March 31 balances for Cash (\$85,000), Inventory (\$125,000), Long-Term Notes Payable (\$110,000), and B. Wiset, Capital (\$100,000). Also open accounts receivable subsidiary ledger accounts for Paula Kohr, Page Alistair, and Nic Nelson.
3. Verify that amounts that should be posted as individual amounts from the journals have been posted. (Such items are immediately posted.) Foot and crossfoot the journals and make the month-end postings.
4. Prepare a trial balance of the general ledger accounts opened as required for part 2; then prove the accuracy of the subsidiary ledger by preparing a schedule of accounts receivable.

**Check** Trial balance totals, \$434,285

### Analysis Component

5. Assume that the total for the schedule of accounts receivable does not equal the balance of the controlling account in the general ledger. Describe steps you would take to discover the error(s).

### Problem 7-3A

Special journals, subsidiary ledgers, and schedule of accounts payable—perpetual

C3 P1 P2

The April transactions of Wiset Company are described in Problem 7-2A.

### Required

1. Prepare a general journal, a purchases journal like that in Exhibit 7.9, and a cash disbursements journal like that in Exhibit 7.11. Number all journal pages as page 3. Review the April transactions of Wiset Company and enter those transactions that should be journalized in the general journal, the purchases journal, or the cash disbursements journal. Ignore any transactions that should be journalized in a sales journal or cash receipts journal.
2. Open the following general ledger accounts: Cash; Inventory; Office Supplies; Store Supplies; Store Equipment; Accounts Payable; Long-Term Notes Payable; B. Wiset, Capital; Sales Salaries Expense; and Advertising Expense. Enter the March 31 balances of Cash (\$85,000), Inventory (\$125,000),

Long-Term Notes Payable (\$110,000), and B. Wiset, Capital (\$100,000). Also open accounts payable subsidiary ledger accounts for Hal's Supply, Noth Company, Grant Company, and Custer, Inc.

3. Verify that amounts that should be posted as individual amounts from the journals have been posted. (Such items are immediately posted.) Foot and crossfoot the journals and make the month-end postings.
4. Prepare a trial balance of the general ledger accounts opened as required for part 2; then prepare a schedule of accounts payable.

**Check** Trial balance totals, \$235,730

Grassley Company completes these transactions during November of the current year (terms for all its credit sales are 2/10, n/30).

- Nov. 1 Purchased \$5,058 of office equipment on credit from Brun Supply, invoice dated November 1, terms n/10 EOM.
- 2 Borrowed \$88,500 cash from Wisconsin Bank by signing a long-term note payable.
- 4 Purchased \$33,500 of merchandise from BLR Industries, invoice dated November 3, terms 2/10, n/30.
- 5 Purchased \$1,040 of store supplies on credit from Grebe Company, invoice dated November 5, terms n/10 EOM.
- 8 Sold merchandise on credit to Cyd Rounder, Invoice No. 439, for \$6,550 (cost is \$3,910).
- 10 Sold merchandise on credit to Carlos Mantel, Invoice No. 440, for \$13,500 (cost is \$8,500).
- 11 Purchased \$2,557 of merchandise from Lo Company, invoice dated November 10, terms 2/10, n/30.
- 12 Sent BLR Industries Check No. 633 in payment of its November 3 invoice less the discount.
- 15 Issued Check No. 634, payable to Payroll, in payment of sales salaries expense for the first half of the month, \$6,585. Cashed the check and paid the employees.
- 15 Cash sales for the first half of the month are \$18,170 (cost is \$9,000). (Cash sales are recorded daily but are recorded only twice in this problem to reduce repetitive entries.)
- 15 Sold merchandise on credit to Tori Tripp, Invoice No. 441, for \$5,250 (cost is \$2,450).
- 16 Purchased \$459 of office supplies on credit from Grebe Company, invoice dated November 16, terms n/10 EOM.
- 17 Received a \$557 credit memorandum from Lo Company for the return of unsatisfactory merchandise purchased on November 11.
- 18 Received payment from Cyd Rounder for the November 8 sale less the discount.
- 19 Received payment from Carlos Mantel for the November 10 sale less the discount.
- 19 Issued Check No. 635 to Lo Company in payment of its invoice of November 10 less the return and the discount.
- 22 Sold merchandise on credit to Carlos Mantel, Invoice No. 442, for \$3,695 (cost is \$2,060).
- 24 Sold merchandise on credit to Tori Tripp, Invoice No. 443, for \$4,280 (cost is \$2,130).
- 25 Received payment from Tori Tripp for the sale of November 15 less the discount.
- 26 Received a \$922 credit memorandum from Brun Supply for the return of office equipment purchased on November 1.
- 30 Issued Check No. 636, payable to Payroll, in payment of sales salaries expense for the last half of the month, \$6,585. Cashed the check and paid the employees.
- 30 Cash sales for the last half of the month are \$16,703 (cost is \$10,200).
- 30 Verify that amounts impacting customer and creditor accounts were posted and that any amounts that should have been posted as individual amounts to the general ledger accounts were posted. Foot and crossfoot the journals and make the month-end postings.

## PROBLEM SET B

### Problem 7-1B

Special journals, subsidiary ledgers, trial balance—perpetual

C3 P2 P3

### Required

1. Open the following general ledger accounts: Cash; Accounts Receivable; Inventory (November 1 beg. bal. is \$40,000); Office Supplies; Store Supplies; Office Equipment; Accounts Payable; Long-Term Notes Payable; C. Grassley, Capital (Nov. 1 beg. bal. is \$40,000); Sales; Sales Discounts; Cost of Goods Sold; and Sales Salaries Expense. Open the following accounts receivable subsidiary ledger accounts: Carlos Mantel, Tori Tripp, and Cyd Rounder. Open the following accounts payable subsidiary ledger accounts: Grebe Company, BLR Industries, Brun Supply, and Lo Company.
2. Enter these transactions in a sales journal like that in Exhibit 7.5, a purchases journal like that in Exhibit 7.9, a cash receipts journal like that in Exhibit 7.7, a cash disbursements journal like that in Exhibit 7.11, or a general journal. Number all journal pages as page 2.
3. Prepare a trial balance of the general ledger and prove the accuracy of the subsidiary ledgers by preparing schedules of both accounts receivable and accounts payable.

**Check** Trial balance totals, \$202,283

**Problem 7-2B**

Special journals,  
subsidiary ledgers,  
schedule of accounts  
receivable—perpetual

Acorn Industries completes these transactions during July of the current year (the terms of all its credit sales are 2/10, n/30).

- July 1 Purchased \$6,500 of merchandise on credit from Teton Company, invoice dated June 30, terms 2/10, n/30.
- 3 Issued Check No. 300 to *The Weekly* for advertising expense, \$625.
- 5 Sold merchandise on credit to Kim Nettle, Invoice No. 918, for \$19,200 (cost is \$10,500).
- 6 Sold merchandise on credit to Ruth Blake, Invoice No. 919, for \$7,500 (cost is \$4,300).
- 7 Purchased \$1,250 of store supplies on credit from Plaine, Inc., invoice dated July 7, terms n/10 EOM.
- 8 Received a \$250 credit memorandum from Plaine, Inc., for the return of store supplies received on July 7.
- 9 Purchased \$38,220 of store equipment on credit from Charm's Supply, invoice dated July 8, terms n/10 EOM.
- 10 Issued Check No. 301 to Teton Company in payment of its June 30 invoice, less the discount.
- 13 Sold merchandise on credit to Ashton Moore, Invoice No. 920, for \$8,550 (cost is \$5,230).
- 14 Sold merchandise on credit to Kim Nettle, Invoice No. 921, for \$5,100 (cost is \$3,800).
- 15 Received payment from Kim Nettle for the July 5 sale, less the discount.
- 15 Issued Check No. 302, payable to Payroll, in payment of sales salaries expense for the first half of the month, \$31,850. Cashed the check and paid employees.
- 15 Cash sales for the first half of the month are \$118,350 (cost is \$76,330). (Cash sales are recorded daily using data from the cash registers but are recorded only twice in this problem to reduce repetitive entries.)
- 16 Received payment from Ruth Blake for the July 6 sale, less the discount.
- 17 Purchased \$7,200 of merchandise on credit from Drake Company, invoice dated July 17, terms 2/10, n/30.
- 20 Purchased \$650 of office supplies on credit from Charm's Supply, invoice dated July 19, terms n/10 EOM.
- 21 Borrowed \$15,000 cash from College Bank by signing a long-term note payable.
- 23 Received payment from Ashton Moore for the July 13 sale, less the discount.
- 24 Received payment from Kim Nettle for the July 14 sale, less the discount.
- 24 Received a \$2,400 credit memorandum from Drake Company for the return of defective merchandise received on July 17.
- 26 Purchased \$9,770 of merchandise on credit from Teton Company, invoice dated July 26, terms 2/10, n/30.
- 27 Issued Check No. 303 to Drake Company in payment of its July 17 invoice, less the return and the discount.
- 29 Sold merchandise on credit to Ruth Blake, Invoice No. 922, for \$17,500 (cost is \$10,850).
- 30 Sold merchandise on credit to Ashton Moore, Invoice No. 923, for \$16,820 (cost is \$9,840).
- 31 Issued Check No. 304, payable to Payroll, in payment of the sales salaries expense for the last half of the month, \$31,850.
- 31 Cash sales for the last half of the month are \$80,244 (cost is \$53,855).

**Required**

1. Prepare a sales journal like that in Exhibit 7.5 and a cash receipts journal like that in Exhibit 7.7. Number both journals as page 3. Then review the transactions of Acorn Industries and enter those transactions that should be journalized in the sales journal and those that should be journalized in the cash receipts journal. Ignore any transactions that should be journalized in a purchases journal, a cash disbursements journal, or a general journal.
2. Open the following general ledger accounts: Cash; Accounts Receivable; Inventory; Long-Term Notes Payable; R. Acorn, Capital; Sales; Sales Discounts; and Cost of Goods Sold. Enter the June 30 balances for Cash (\$100,000), Inventory (\$200,000), Long-Term Notes Payable (\$200,000), and R. Acorn, Capital (\$100,000). Also open accounts receivable subsidiary ledger accounts for Kim Nettle, Ashton Moore, and Ruth Blake.
3. Verify that amounts that should be posted as individual amounts from the journals have been posted. (Such items are immediately posted.) Foot and crossfoot the journals and make the month-end postings.
4. Prepare a trial balance of the general ledger accounts opened as required for part 2; then prove the accuracy of the subsidiary ledger by preparing a schedule of accounts receivable.

**Check** Trial balance totals,  
\$588,264

**Analysis Component**

5. Assume that the total for the schedule of accounts receivable does not equal the balance of the controlling account in the general ledger. Describe steps you would take to discover the error(s).

The July transactions of Acorn Industries are described in Problem 7-2B.

### Required

1. Prepare a general journal, a purchases journal like that in Exhibit 7.9, and a cash disbursements journal like that in Exhibit 7.11. Number all journal pages as page 3. Review the July transactions of Acorn Industries and enter those transactions that should be journalized in the general journal, the purchases journal, or the cash disbursements journal. Ignore any transactions that should be journalized in a sales journal or cash receipts journal.
2. Open the following general ledger accounts: Cash; Inventory; Office Supplies; Store Supplies; Store Equipment; Accounts Payable; Long-Term Notes Payable; R. Acorn, Capital; Sales Salaries Expense; and Advertising Expense. Enter the June 30 balances of Cash (\$100,000), Inventory (\$200,000), Long-Term Notes Payable (\$200,000), and R. Acorn, Capital (\$100,000). Also open accounts payable subsidiary ledger accounts for Charm's Supply, Teton Company, Drake Company, and Plaine, Inc.
3. Verify that amounts that should be posted as individual amounts from the journals have been posted. (Such items are immediately posted.) Foot and crossfoot the journals and make the month-end postings.
4. Prepare a trial balance of the general ledger accounts opened as required for part 2; then prepare a schedule of accounts payable.

### Problem 7-3B

Special journals, subsidiary ledgers, and schedule of accounts payable—perpetual

C3 P1 P2

**Check** Trial balance totals, \$349,640

(This serial problem began in Chapter 1 and continues through most of the book. If previous chapter segments were not completed, the serial problem can begin at this point. It is helpful, but not necessary, to use the Working Papers that accompany the book.)

### SERIAL PROBLEM

Business Solutions

P1

**SP 7** Assume that Santana Rey expands Business Solutions' accounting system to include special journals.

### Required

1. Locate the transactions related to January through March 2016 for Business Solutions in Chapter 5.
2. Enter the Business Solutions transactions for January through March in a sales journal like that in Exhibit 7.5 (insert "n/a" in the Invoice column), a cash receipts journal like that in Exhibit 7.7, a purchases journal like that in Exhibit 7.9 (use Computer Supplies heading instead of Office Supplies), and a cash disbursements journal like that in Exhibit 7.11 (insert "n/a" in the Check Number column), or a general journal. Number journal pages as page 2. If the transaction does not specify the name of the payee, state "not specified" in the Payee column of the cash disbursements journal.
3. The transactions on the following dates should be journalized in the general journal: January 5, 11, 20, 24, and 29 (no entry required) and March 24. Do not record and post the adjusting entries for the end of March.

(If the Working Papers that accompany this book are not available, omit this comprehensive problem.) Assume it is Monday, May 1, the first business day of the month, and you have just been hired as the accountant for Colo Company, which operates with monthly accounting periods. All of the company's accounting work is completed through the end of April and its ledgers show April 30 balances. During your first month on the job, the company experiences the following transactions and events (terms for all its credit sales are 2/10, n/30 unless stated differently):

- May 1 Issued Check No. 3410 to S&P Management Co. in payment of the May rent, \$3,710. (Use two lines to record the transaction. Charge 80% of the rent to Rent Expense—Selling Space and the balance to Rent Expense—Office Space.)
- 2 Sold merchandise on credit to Hensel Company, Invoice No. 8785, for \$6,100 (cost is \$4,100).
- 2 Issued a \$175 credit memorandum to Knox Co. for defective (worthless) merchandise sold on April 28 and returned for credit. The total selling price (gross) was \$4,725.
- 3 Received a \$798 credit memorandum from Peyton Products for the return of merchandise purchased on April 29.

### COMPREHENSIVE PROBLEM

Colo Company

- 4 Purchased the following on credit from Gear Supply Co.: merchandise, \$37,072; store supplies, \$574; and office supplies, \$83. Invoice dated May 4, terms n/10 EOM.
- 5 Received payment from Knox Co. for the balance from the April 28 sale less the May 2 return and the discount.
- 8 Issued Check No. 3411 to Peyton Products to pay for the \$7,098 of merchandise purchased on April 29 less the May 3 return and a 2% discount.
- 9 Sold store supplies to the merchant next door at their cost of \$350 cash.
- 10 Purchased \$4,074 of office equipment on credit from Gear Supply Co., invoice dated May 10, terms n/10 EOM.
- 11 Received payment from Hensel Company for the May 2 sale less the discount.
- 11 Purchased \$8,800 of merchandise from Garcia, Inc., invoice dated May 10, terms 2/10, n/30.
- 12 Received an \$854 credit memorandum from Gear Supply Co. for the return of defective office equipment received on May 10.
- 15 Issued Check No. 3412, payable to Payroll, in payment of sales salaries, \$5,320, and office salaries, \$3,150. Cashed the check and paid the employees.
- 15 Cash sales for the first half of the month are \$59,220 (cost is \$38,200). (Cash sales are recorded daily but are recorded only twice here to reduce repetitive entries.)
- 15 Post to the customer and creditor accounts. Also post individual items that are not included in column totals at the end of the month to the general ledger accounts. (Such items are posted daily but are posted only twice each month because they are few in number.)
- 16 Sold merchandise on credit to Hensel Company, Invoice No. 8786, for \$3,990 (cost is \$1,890).
- 17 Purchased \$13,650 of merchandise from Fink Corp., invoice dated May 14, terms 2/10, n/60.
- 19 Issued Check No. 3413 to Garcia, Inc., in payment of its May 10 invoice less the discount.
- 22 Sold merchandise to Lee Services, Invoice No. 8787, for \$6,850 (cost is \$4,990), terms 2/10, n/60.
- 23 Issued Check No. 3414 to Fink Corp. in payment of its May 14 invoice less the discount.
- 24 Purchased the following on credit from Gear Supply Co.: merchandise, \$8,120; store supplies, \$630; and office supplies, \$280. Invoice dated May 24, terms n/10 EOM.
- 25 Purchased \$3,080 of merchandise from Peyton Products, invoice dated May 23, terms 2/10, n/30.
- 26 Sold merchandise on credit to Crane Corp., Invoice No. 8788, for \$14,210 (cost is \$8,230).
- 26 Issued Check No. 3415 to Perennial Power in payment of the May electric bill, \$1,283.
- 29 The owner of Colo Company, Jenny Colo, used Check No. 3416 to withdraw \$7,000 cash from the business for personal use.
- 30 Received payment from Lee Services for the May 22 sale less the discount.
- 30 Issued Check No. 3417, payable to Payroll, in payment of sales salaries, \$5,320, and office salaries, \$3,150. Cashed the check and paid the employees.
- 31 Cash sales for the last half of the month are \$66,052 (cost is \$42,500).
- 31 Post to the customer and creditor accounts. Also post individual items that are not included in column totals at the end of the month to the general ledger accounts. Foot and crossfoot the journals and make the month-end postings.

### Required

1. Enter these transactions in a sales journal, a purchases journal, a cash receipts journal, a cash disbursements journal, or a general journal as illustrated in this chapter (number all journal pages as page 2). Post when instructed to do so. Assume a perpetual inventory system.
2. Prepare a trial balance in the Trial Balance columns of the work sheet form provided with the working papers. Complete the work sheet using the following information for accounting adjustments.
  - a. Expired insurance, \$553.
  - b. Ending store supplies inventory, \$2,632.
  - c. Ending office supplies inventory, \$504.
  - d. Depreciation of store equipment, \$567.
  - e. Depreciation of office equipment, \$329.
 Prepare and post adjusting and closing entries.
3. Prepare a May 2015 multiple-step income statement, a May 2015 statement of owner's equity, and a May 31, 2015, classified balance sheet.
4. Prepare a post-closing trial balance. Also prove the accuracy of subsidiary ledgers by preparing schedules of both accounts receivable and accounts payable.

**Check** (2) Unadjusted trial balance totals, \$545,020; Adjustments column totals, \$2,407

(3) Net income, \$31,647; Total assets, \$385,791

The **General Ledger** tool in *Connect* automates several of the procedural steps in the accounting cycle so that the accounting professional can focus on the impacts of each transaction on the various financial reports.

**GL GENERAL LEDGER PROBLEM**

Available only in **Connect Plus**

**GL 7-1** General Ledger assignment GL 7-1, based on Problem 7-1A, highlights the relation between the subsidiary ledgers and the control accounts. Prepare journal entries for a merchandiser, both purchase and sale transactions.

**Beyond the Numbers**

**BTN 7-1** Refer to **Apple's** financial statements in Appendix A to answer the following.

1. Identify the note that reports on Apple's business segments.
2. Describe the focus and activities of each of Apple's business segments.
3. Apple reports the following operating income and average segment assets (which exclude shared corporate assets) for its geographic segments. Compute Apple's return on assets for each of its geographic segments. Assess the relative performance and contribution of these segments.

**REPORTING IN ACTION**

**APPLE**

\$ millions	Americas	Europe	Greater China	Japan	Rest of Asia Pacific	Retail
Operating income . . . . .	\$22,817	\$13,025	\$8,541	\$6,819	\$3,753	\$4,025
Average assets . . . . .	5,589	3,115	2,132	2,315	918	3,027

**Fast Forward**

4. Access Apple's annual report for fiscal years ending after September 28, 2013, from its website ([Apple.com](http://Apple.com)) or the SEC's EDGAR database ([www.SEC.gov](http://www.SEC.gov)). Has Apple changed its reporting policy regarding segment information? Explain.

**BTN 7-2** Key figures for **Apple** and **Google** follow (\$ millions).

**COMPARATIVE ANALYSIS**

**APPLE**

**GOOGLE**

Apple Segment	Current Year			One Year Prior		
	Segment Revenue	Segment Income	Segment Assets	Segment Revenue	Segment Income	Segment Assets
Domestic . . . . .	\$ 62,739	\$22,817	\$ 5,653	\$57,512	\$23,414	\$5,525
International . . . . .	108,171	36,163	13,261	98,996	39,439	9,752

Google Segment	Current Year			One Year Prior		
	Segment Revenue	Segment Income	Segment Assets	Segment Revenue	Segment Income	Segment Assets
Domestic . . . . .	\$26,768	\$ n.a.	\$24,004	\$23,502	\$ n.a.	\$20,985
International . . . . .	33,057	n.a.	14,030	26,673	n.a.	12,359

**Required**

1. Compute the ratio of segment revenue divided by segment assets for each of the segments of Apple and Google for the most recent year shown. (We do not compute the segment return on assets as Google did not report its segment income.)
2. Interpret and comment on your results of part 1.

## ETHICS CHALLENGE

**BTN 7-3** Erica Gray, CPA, is a sole practitioner. She has been practicing as an auditor for 10 years. Recently a long-standing audit client asked Gray to design and implement an integrated computer-based accounting information system. The fees associated with this additional engagement with the client are very attractive. However, Gray wonders if she can remain objective on subsequent audits in her evaluation of the client's accounting system and its records if she was responsible for its design and implementation. Gray knows that professional auditing standards require her to remain independent in fact and appearance from her auditing clients.

### Required

1. What do you believe auditing standards are mainly concerned with when they require independence in fact? In appearance?
2. Why is it important that auditors remain independent of their clients?
3. Do you think Gray can accept this engagement and remain independent? Justify your response.

## COMMUNICATING IN PRACTICE

**BTN 7-4** Your friend, Wendy Geiger, owns a small retail store that sells candies and nuts. Geiger acquires her goods from a few select vendors. She generally makes purchase orders by phone and on credit. Sales are primarily for cash. Geiger keeps her own manual accounting system using a general journal and a general ledger. At the end of each business day, she records one summary entry for cash sales. Geiger recently began offering items in creative gift packages. This has increased sales substantially, and she is now receiving orders from corporate and other clients who order large quantities and prefer to buy on credit. As a result of increased credit transactions in both purchases and sales, keeping the accounting records has become extremely time-consuming. Geiger wants to continue to maintain her own manual system and calls you for advice. Write a memo to her advising how she might modify her current manual accounting system to accommodate the expanded business activities. Geiger is accustomed to checking her ledger by using a trial balance. Your memo should explain the advantages of what you propose and of any other verification techniques you recommend.

## TAKING IT TO THE NET

**BTN 7-5** Access the March 12, 2013, filing of the fiscal 2013 10-K report for **Dell** (ticker DELL) at [www.SEC.gov](http://www.SEC.gov). Read its Note 15 that details Dell's segment information and answer the following.

1. Dell's operations are divided among which four global business segments?
2. In fiscal year 2013, which segment had the largest dollar amount of operating income? Which had the largest amount of assets?
3. Compute the return on assets for each segment for fiscal year 2013. Use operating income and average total assets by segment for your calculation. Which segment has the highest return on assets?
4. For what product groups does Dell provide segment data? What percent of Dell's net revenue is earned by each product group?

## TEAMWORK IN ACTION

**BTN 7-6** Each member of the team is to assume responsibility for one of the following tasks:

- a. Journalizing in the purchases journal.
- b. Journalizing in the cash disbursements journal.
- c. Maintaining and verifying the accounts payable ledger.
- d. Journalizing in the sales journal and the general journal.
- e. Journalizing in the cash receipts journal.
- f. Maintaining and verifying the accounts receivable ledger.

The team should abide by the following procedures in carrying out responsibilities.

### Required

1. After tasks *a–f* are assigned, each team member is to quickly read the list of transactions in Problem 7-1A, identifying with initials the journal in which each transaction is to be recorded. Upon completion, the team leader is to read transaction dates, and the appropriate team member is to vocalize responsibility. Any disagreement between teammates must be resolved.
2. Journalize and continually update subsidiary ledgers. Journal recorders should alert teammates assigned to subsidiary ledgers when an entry must be posted to their subsidiary ledger.

- Team members responsible for tasks *a*, *b*, *d*, and *e* are to summarize and prove journals; members responsible for tasks *c* and *f* are to prepare both payables and receivables schedules.
- The team leader is to take charge of the general ledger, rotating team members to obtain amounts to be posted. The person responsible for a journal must complete posting references in that journal. Other team members should verify the accuracy of account balance computations. To avoid any abnormal account balances, post in the following order: P, S, G, R, D. (*Note:* Posting any necessary individual general ledger amounts is also done at this time.)
- The team leader is to read out general ledger account balances while another team member fills in the trial balance form. Concurrently, one member should keep a running balance of debit account balance totals and another credit account balance totals. Verify the final total of the trial balance and the schedules. If necessary, the team must resolve any errors. Turn in the trial balance and schedules to the instructor.

**BTN 7-7** Refer to the chapter's opening feature about Aimi Duong and her company, **Oimei Company**. Her company deals with numerous suppliers and customers.

#### Required

- Identify the special journals that Oimei Company would be likely to use in its operations. Also identify any subsidiary ledgers that it would likely use.
- Assume that Oimei Company hopes to double yearly sales within five years from its current \$1 million annual amount. Assume that its sales growth projections are as follows.

Year	One Year Hence	Two Years Hence	Three Years Hence	Four Years Hence	Five Years Hence
Projected growth in sales (from the preceding year) . . . . .	0%	20%	15%	25%	20%

Estimate Oimei Company's projected sales for each year (round to the nearest dollar). If this pattern of sales growth holds, will Oimei Company achieve its goal of doubling sales in five years?

**BTN 7-8** Access and refer to the December 31, 2013, annual report for **Samsung** at [http://www.samsung.com/us/aboutsamsung/investor\\_relations/financial\\_information/financial\\_statement.html](http://www.samsung.com/us/aboutsamsung/investor_relations/financial_information/financial_statement.html).

#### Required

- Identify its footnote #33 on Segment Information to its financial statements and locate its part (B) on Regional Information. List its five regional segments.
- What four items of accounting information does it disclose for each of its regional segments? (Answers need only list titles for the accounting line items, not numbers, disclosed for each segment.)
- Does Samsung have a dominant regional segment (from a dollar standpoint)? Explain.

### ENTREPRENEURIAL DECISION

# Cash and Internal Controls

## Chapter Preview

### INTERNAL CONTROL

- C1** Purpose and Principles of controls
- Technology and controls
- Limitations of controls

### CONTROL OF CASH

- C2** Definition and reporting of cash
- P1** Control of cash receipts and cash disbursements

### TOOLS OF CONTROL AND ANALYSIS

- P2** Control of petty cash
- P3** Bank reconciliation as a control tool
- A1** Assessing liquidity

## Learning Objectives

### CONCEPTUAL

- C1** Define internal control and identify its purpose and principles.
- C2** Define cash and cash equivalents and explain how to report them.

### ANALYTICAL

- A1** Compute the days' sales uncollected ratio and use it to assess liquidity.

### PROCEDURAL

- P1** Apply internal control to cash receipts and disbursements.
- P2** Explain and record petty cash fund transactions.
- P3** Prepare a bank reconciliation.

- P4** *Appendix 8A*—Describe the use of documentation and verification to control cash disbursements.
- P5** *Appendix 8B*—Apply the net method to control purchase discounts.

## Chocoholics

SAN FRANCISCO—“We spent about two years in a garage roasting beans, building machines, and figuring out how to make chocolate from the bean,” explains Todd Masonis. “When we shared our chocolate with friends and family, they were surprised by the unique and distinct flavors of each bean.” Soon thereafter Todd, along with Cameron Ring, launched **Dandelion Chocolate** ([DandelionChocolate.com](http://DandelionChocolate.com)). “Our business model is pretty simple—we make great chocolate and people buy it.”

“We don’t really have any gimmicks,” insists Todd. “We believe that if you start with great cocoa beans and take the time to process them carefully, you can find some amazing flavors.” Amazing flavors translate to business success. Todd and Cam presently sell more than 10,000 chocolate bars and 3,000 hot chocolate drinks per month. “It’s a really exciting time for chocolate,” proclaims Todd. “What happened to coffee, micro-brew, and wine, is all happening to chocolate right now.”

Although the chocolate experience is key to their success, Todd and Cam’s management of internal controls and cash is equally impressive. Several control procedures monitor business activities and safeguard assets. An example is their inventory control system. Explains Todd, quality ingredients are crucial to customer satisfaction, and monitoring controls ensure

the quality of their ingredients. “In the kitchen we have an iPad where the pastry team tracks every brownie and cookie sold.” Similar controls are applied throughout their factory and retail store. The owners explain that such controls raise productivity, cut expenses, and enhance the customer experience.

Their store’s cash management practices are equally impressive, including controls over cash receipts, disbursements, and petty cash. The use of bank reconciliations further helps

*“It’s really fun to make chocolate”*

— Todd Masonis

with the company’s control and management of cash. “All the tools play nicely together,” explains Todd. “For instance, when

someone orders online, it goes straight into our accounting software and a shipping label pops out of the shipping printer. The demand dashboard updates and the fulfillment team gets a notification. Each application is being attacked in its own niche way.” The owners explain that they take advantage of available banking services to enhance further controls over cash.

Internal controls are crucial when on a busy day their business transacts with hundreds of customers. “It’s a challenge with having to keep up production to meet the demand,” explains Todd. “There’s something very magical about that.”

## INTERNAL CONTROL

### C1

Define internal control and identify its purpose and principles.

This section describes internal control and its fundamental principles. We also discuss the impact of technology on internal control and the limitations of control procedures.

### Purpose of Internal Control

Managers (or owners) of small businesses often control the entire operation. These managers usually purchase all assets, hire and manage employees, negotiate all contracts, and sign all checks. They know from personal contact and observation whether the business is actually receiving the assets and services paid for. Most companies, however, cannot maintain this close personal supervision. They must delegate responsibilities and rely on formal procedures rather than personal contact in controlling business activities.

**Internal Control System** Managers use an internal control system to monitor and control business activities. An **internal control system** consists of the policies and procedures managers use to

- Protect assets.
- Ensure reliable accounting.
- Promote efficient operations.
- Urge adherence to company policies.

A properly designed internal control system is a key part of systems design, analysis, and performance. Managers place a high priority on internal control systems because they can prevent avoidable losses, help managers plan operations, and monitor company and employee performance. For example, internal controls for health care must protect patient records and privacy. Internal controls do not provide guarantees, but they lower the company's risk of loss.

**Sarbanes-Oxley Act (SOX)** The **Sarbanes-Oxley Act (SOX)** requires the managers and auditors of companies whose stock is traded on an exchange (called *public companies*) to document and certify the system of internal controls. Following are some of the specific requirements:

- Auditors must evaluate internal controls and issue an internal control report.
- Auditors of a client are restricted as to what consulting services they can provide that client.
- The person leading an audit can serve no more than seven years without a two-year break.
- Auditors' work is overseen by the *Public Company Accounting Oversight Board (PCAOB)*.
- Harsh penalties exist for violators—sentences up to 25 years in prison with severe fines.

SOX has markedly impacted companies, and the costs of its implementation are high. Importantly, **Section 404** of SOX requires that managers document and assess the effectiveness of all internal control processes that can impact financial reporting. The benefits include greater confidence in accounting systems and their related reports. However, the public continues to debate the costs versus the benefits of SOX as nearly all business activities of these companies are impacted by SOX. Section 404 of SOX requires that managers document and assess their internal controls *and* that auditors provide an opinion on managers' documentation and assessment. Costs of complying with Section 404 for companies is reported to average \$4 million (Financial Executives Institute).

### Principles of Internal Control

Internal control policies and procedures vary from company to company according to such factors as the nature of the business and its size. Certain fundamental internal control principles apply to all companies. The **principles of internal control** are to

1. Establish responsibilities.
2. Maintain adequate records.
3. Insure assets and bond key employees.
4. Separate recordkeeping from custody of assets.
5. Divide responsibility for related transactions.
6. Apply technological controls.
7. Perform regular and independent reviews.

Andre Kudyusov/Photodisc/Alamy

This section explains these seven principles and describes how internal control procedures minimize the risk of fraud and theft. These procedures also increase the reliability and accuracy of accounting records. A framework for how these seven principles improve the quality of financial reporting is provided by the **Committee of Sponsoring Organizations (COSO)** ([www.COSO.org](http://www.COSO.org)). Specifically, these principles link to five aspects of internal control: control activities, control environment, risk assessment, monitoring, and communication.

**Establish Responsibilities** Proper internal control means that responsibility for a task is clearly established and assigned to one person. When a problem occurs in a company where responsibility is not identified, determining who is at fault is difficult. For instance, if two salesclerks share the same cash register and there is a cash shortage, neither clerk can be held accountable. To prevent this problem, one clerk might be given responsibility for handling all cash sales. Alternately, a company can use a register with separate cash drawers for each clerk. Most of us have waited at a retail counter during a shift change while employees swap cash drawers.

**Maintain Adequate Records** Good recordkeeping is part of an internal control system. It helps protect assets and ensures that employees use prescribed procedures. Reliable records are also a source of information that managers use to monitor company activities. When detailed records of equipment are kept, for instance, items are unlikely to be lost or stolen without detection. Similarly, transactions are less likely to be entered in wrong accounts if a chart of accounts is set up and carefully used. Many preprinted forms and internal documents are also designed for use in a good internal control system. When sales slips are properly designed, for instance, sales personnel can record needed information efficiently with less chance of errors or delays to customers. When sales slips are prenumbered and controlled, each one issued is the responsibility of one salesperson, preventing the salesperson from pocketing cash by making a sale and destroying the sales slip. Computerized point-of-sale systems achieve the same control results.

**Insure Assets and Bond Key Employees** Good internal control means that assets are adequately insured against casualty and that employees handling large amounts of cash and easily transferable assets are bonded. An employee is *bonded* when a company purchases an insurance policy, or a bond, against losses from theft by that employee. Bonding reduces the risk of loss. It also discourages theft because bonded employees know an independent bonding company will be involved when theft is uncovered and is unlikely to be sympathetic with an employee involved in theft. (A common question on job applications is whether you are bonded or bondable.)

**Point: Sarbanes-Oxley Act (SOX)** requires that each annual report contain an *internal control report*, which must: (1) state managers' responsibility for establishing and maintaining adequate internal controls for financial reporting and (2) assess the effectiveness of those controls.

**Point:** Many companies have a mandatory vacation policy for employees who handle cash. When another employee must cover for the one on vacation, it is more difficult to hide cash frauds.

## Decision Insight

**Asset Theft Control** A novel technique exists for marking physical assets. It involves embedding a less than one-inch-square tag of fibers that creates a unique optical signature recordable by scanners. Manufacturers hope to embed tags in everything from compact discs and credit cards to designer clothes for purposes of internal control and efficiency. ■

Ingram Publishing

**Separate Recordkeeping from Custody of Assets** A person who controls or has access to an asset must not keep that asset's accounting records. This principle reduces the risk of theft or waste of an asset because the person with control over it knows that another person keeps its records. Also, a recordkeeper who does not have access to the asset has no reason to falsify records. This means that to steal an asset and hide the theft from the records, two or more people must *collude*—or agree in secret to commit the fraud. Some payroll cash checking services require fingerprint ID before the payroll check is cashed.

**Divide Responsibility for Related Transactions** Good internal control divides responsibility for a transaction or a series of related transactions between two or more individuals or departments. This is to ensure that the work of one individual acts as a check on the other. This

**Point:** The Association of Certified Fraud Examiners ([acfe.com](http://acfe.com)) estimates that employee fraud costs companies more than \$140,000 per incident.

principle, often called *separation of duties*, is not a call for duplication of work. Each employee or department should perform unduplicated effort. Examples of transactions with divided responsibility are placing purchase orders, receiving merchandise, and paying vendors. These tasks should not be given to one individual or department. Assigning responsibility for two or more of these tasks to one party increases mistakes and perhaps fraud. Having an independent person, for example, check incoming goods for quality and quantity encourages more care and attention to detail than having the person who placed the order do the checking. Added protection can result from identifying a third person to approve payment of the invoice. A company can even designate a fourth person with authority to write checks as another protective measure.

**Point:** There's a new security device—a person's ECG (electrocardiogram) reading—that is as unique as a fingerprint and a lot harder to lose or steal than a PIN. ECGs can be read through fingertip touches. An ECG also shows that a living person is actually there, whereas fingerprint and facial recognition software can be fooled.

**Apply Technological Controls** Cash registers, check protectors, time clocks, and personal identification scanners are examples of devices that can improve internal control. Technology often improves the effectiveness of controls. A cash register with a locked-in tape or electronic file makes a record of each cash sale. A check protector perforates the amount of a check into its face and makes it difficult to alter the amount. A time clock registers the exact time an employee both arrives at and departs from the job. Mechanical change and currency counters quickly and accurately count amounts, and personal scanners limit access to only authorized individuals. Each of these and other technological controls are an effective part of many internal control systems. Some companies video record workers as they clock in and out, which discourages them from clocking in or out for others.

### Decision Insight

**Face Reading** Face-recognition software snaps a digital picture of the face and converts key facial features—say, the distance between the eyes—into a series of numerical values. These can be stored on an ID or ATM card as a simple bar code to prohibit unauthorized access. ■

**Perform Regular and Independent Reviews** Changes in personnel, stress of time pressures, and technological advances present opportunities for shortcuts and lapses. To counter these factors, regular reviews of internal control systems are needed to ensure that procedures are followed. These reviews are preferably done by internal auditors not directly involved in the activities. Their impartial perspective encourages an evaluation of the efficiency as well as the effectiveness of the internal control system. Many companies also pay for audits by independent, external auditors. These external auditors test the company's financial records to give an opinion as to whether its financial statements are presented fairly. Before external auditors decide on how much testing is needed, they evaluate the effectiveness of the internal control system. This evaluation is often helpful to a client. Independent, external audits are usually performed by auditors who work for public accounting firms.

**Point:** COSO organizes control components into five types:

- Control environment
- Control activities
- Risk assessment
- Monitoring
- Information and communication

### Decision Maker

**Entrepreneur** As owner of a start-up information services company, you hire a systems analyst. The analyst sees that your company employs only two workers. She recommends you improve controls and says that as owner you must serve as a compensating control. What does the analyst mean? ■ [Answers follow the chapter's Summary.]

## Technology and Internal Control

The fundamental principles of internal control are relevant no matter what the technological state of the accounting system, from purely manual to fully automated systems. Technology impacts an internal control system in several important ways. Perhaps the most obvious is that technology allows us quicker access to databases and information. Used effectively, technology greatly improves managers' abilities to monitor and control business activities. This section describes some technological impacts we must be alert to.

**Reduced Processing Errors** Technologically advanced systems reduce the number of errors in processing information. Provided the software and data entry are correct, the risk of mechanical and mathematical errors is nearly eliminated. However, we must remember that erroneous software or data entry does exist. Also, less human involvement in data processing can cause data

**Point:** Information on Internet fraud can be found at these websites:

[sec.gov/investor/pubs/cyberfraud.htm](http://sec.gov/investor/pubs/cyberfraud.htm)  
[consumer.ftc.gov](http://consumer.ftc.gov)  
[www.fraud.org](http://www.fraud.org)

**Point:** Evidence of any internal control failure for a company reduces user confidence in its financial statements.

entry errors to go undiscovered. Moreover, errors in software can produce consistent but erroneous processing of transactions. Continually checking and monitoring all types of systems are important.

**More Extensive Testing of Records** A company's review and audit of electronic records can include more extensive testing when information is easily and rapidly accessed. When accounting records are kept manually, auditors and others likely select only small samples of data to test. When data are accessible with computer technology, however, auditors can quickly analyze large samples or even the entire database.

**Limited Evidence of Processing** Many data processing steps are increasingly done by computer. Accordingly, fewer hard-copy items of documentary evidence are available for review. Yet technologically advanced systems can provide new evidence. They can, for instance, record who made the entries, the date and time, the source of the entry, and so on. Technology can also be designed to require the use of passwords or other identification before access to the system is granted. This means that internal control depends more on the design and operation of the information system and less on the analysis of its resulting documents.

**Crucial Separation of Duties** Technological advances in accounting information systems often yield some job eliminations or consolidations. While those who remain have the special skills necessary to operate advanced programs and equipment, a company with a reduced workforce risks losing its crucial separation of duties. The company must establish ways to control and monitor employees to minimize risk of error and fraud. For instance, the person who designs and programs the information system must not be the one who operates it. The company must also separate control over programs and files from the activities related to cash receipts and disbursements. For instance, a computer operator should not control check-writing activities. Achieving acceptable separation of duties can be especially difficult and costly in small companies with few employees.

**Increased E-Commerce** Technology has encouraged the growth of e-commerce. **Amazon.com** and **eBay** are examples of companies that have successfully exploited e-commerce. Most companies have some e-commerce transactions. All such transactions involve at least three risks. (1) *Credit card number theft* is a risk of using, transmitting, and storing such data online. This increases the cost of e-commerce. (2) *Computer viruses* are malicious programs that attach themselves to innocent files for purposes of infecting and harming other files and programs. (3) *Impersonation* online can result in charges of sales to bogus accounts, purchases of inappropriate materials, and the unknowing giving up of confidential information to hackers. Companies use both firewalls and encryption to combat some of these risks—firewalls are points of entry to a system that require passwords to continue, and encryption is a mathematical process to rearrange contents that cannot be read without the process code. Nearly 5% of Americans already report being victims of identity theft, and roughly 10 million say their privacy has been compromised.

**Point:** We look to several sources when assessing a company's internal controls. Sources include the auditor's report, management report on controls (if available), management discussion and analysis, and financial press.

"Worst case of identity theft I've ever seen!"

Copyright 2004 by Randy Glasbergen. www.glasbergen.com

## Decision Insight

**Winnings and Controls** Certified Fraud Examiners website reports the following: Andrew Cameron stole Jacqueline Boanson's credit card. Cameron headed to the racetrack and promptly charged two bets for \$150 on the credit card—winning \$400. Unfortunately for Cameron, the racetrack refused to pay him cash as its internal control policy is to credit winnings from bets made on a credit card to that same card. Cameron was later nabbed; and the racetrack let Ms. Boanson keep the winnings. ■

## Limitations of Internal Control

All internal control policies and procedures have limitations that usually arise from either (1) the human element or (2) the cost-benefit principle.

Internal control policies and procedures are applied by people. This human element creates several potential limitations that we can categorize as either (1) human error or (2) human fraud. *Human error* can occur from negligence, fatigue, misjudgment, or confusion. *Human fraud* involves intent by people to defeat internal controls, such as *management override*, for personal gain. Fraud also includes collusion to thwart the separation of duties. The human element highlights the

importance of establishing an *internal control environment* to convey management’s commitment to internal control policies and procedures. Human fraud is driven by the *triple-threat* of fraud:

- **Opportunity**—refers to internal control deficiencies in the workplace.
- **Pressure**—refers to financial, family, society, and other stresses to succeed.
- **Rationalization**—refers to employees justifying fraudulent behavior.

The second major limitation on internal control is the *cost-benefit principle*, which dictates that the costs of internal controls must not exceed their benefits. Analysis of costs and benefits must consider all factors, including the impact on morale. Most companies, for instance, have a legal right to read employees’ e-mails, yet companies seldom exercise that right unless they are confronted with evidence of potential harm to the company. The same holds for drug testing, phone tapping, and hidden cameras. The bottom line is that managers must establish internal control policies and procedures with a net benefit to the company.

**Point: Cybercrime.gov** pursues computer and intellectual property crimes, including that of e-commerce.

## Hacker’s Guide to Cyberspace

**Pharming** Viruses attached to e-mails and websites load software onto your PC that monitors keystrokes; when you sign on to financial websites, it steals your passwords.

**Phishing** Hackers send e-mails to you posing as banks; you are asked for information using fake websites where they reel in your passwords and personal data.

**Wi-Phishing** Cybercrooks set up wireless networks hoping you will use them to connect to the web; your passwords and data are stolen as you use their network.

**Bot-Networking** Hackers send remote-control programs to your PC that take control to send out spam and viruses; they even rent your bot to other cybercrooks.

**Typo-Squatting** Hackers set up websites with addresses similar to legit outfits; when you make a typo and hit their sites, they infect your PC with viruses or take them over as bots.

Hackers also have their own self-identification system:

- *Hackers*, or *external attackers*, crack systems and take data for illicit gains (as unauthorized users).
- *Rogue insiders*, or *internal attackers*, crack systems and take data for illicit gains or revenge (as authorized users).
- *Ethical hackers*, or *good-guys* or *white-hat hackers*, crack systems and reveal vulnerabilities to enhance controls.
- *Crackers*, or *criminal hackers*, crack systems illegally for illicit gains, fame, or revenge.

## CONTROL OF CASH

*Cash* is a necessary asset of every company. Most companies also own *cash equivalents* (defined below), which are assets similar to cash. Cash and cash equivalents are the most liquid of all assets and are easily hidden and moved. Cash is also the most desired asset as other assets

must be *fenced* (sold in a secondary market). An effective system of internal controls protects cash assets and it should meet three basic guidelines:

1. Handling cash is separate from recordkeeping of cash.
2. Cash receipts are promptly deposited in a bank.
3. Cash disbursements are made by check (or electronic funds transfer, EFT).

The first guideline applies separation of duties to minimize errors and fraud. When duties are separated, two or more people must collude to steal cash and conceal this action in the accounting records. The second guideline uses immediate (say, daily) deposits of all cash receipts to produce a timely independent record of the cash received. It also reduces the likelihood of cash theft (or loss) and the risk that an employee could personally use the money before depositing it. The third guideline uses payments by check to develop an independent bank record of cash disbursements. This guideline also reduces the risk of cash theft (or loss).

This section begins with definitions of cash and cash equivalents. Discussion then focuses on controls and accounting for both cash receipts and disbursements. The exact procedures used to achieve control over cash vary across companies. They depend on factors such as company size, number of employees, volume of cash transactions, and sources of cash.

## Cash, Cash Equivalents, and Liquidity

Good accounting systems help in managing the amount of cash and controlling who has access to it. Cash is the usual means of payment when paying for assets, services, or liabilities. **Liquidity** refers to a company's ability to pay for its near-term obligations. Cash and similar assets are called **liquid assets** because they can be readily used to settle such obligations. A company needs liquid assets to effectively operate.

**Cash** includes currency and coins along with the amounts on deposit in bank accounts, checking accounts (called *demand deposits*), and many savings accounts (called *time deposits*). Cash also includes items that are acceptable for deposit in these accounts such as customer checks, cashier's checks, certified checks, and money orders. **Cash equivalents** are short-term, highly liquid investment assets meeting two criteria: (1) readily convertible to a known cash amount and (2) sufficiently close to their due date so that their market value is not sensitive to interest rate changes. Only investments purchased within three months of their due date usually satisfy these criteria. Examples of cash equivalents are short-term investments in assets such as U.S. Treasury bills and money market funds. To increase their return, many companies invest idle cash in cash equivalents. Most companies combine cash equivalents with cash as a single item on the balance sheet.

## Cash Management

When companies fail, one of the most common causes is their inability to manage cash. Companies must plan both cash receipts and cash payments. The goals of cash management are twofold:

1. Plan cash receipts to meet cash payments when due.
2. Keep a minimum level of cash necessary to operate.

The *treasurer* of the company is responsible for cash management. Effective cash management involves applying the following cash management principles.

- **Encourage collection of receivables.** The more quickly customers and others pay the company, the more quickly that company can use the money. Some companies have cash-only sales policies. Others might offer discounts for payments received early.
- **Delay payment of liabilities.** The more delayed a company is in paying others, the more time it has to use the money. Some companies regularly wait to pay their bills until the last possible day allowed—although, a company must take care not to hurt its credit standing.
- **Keep only necessary levels of assets.** The less money tied up in idle assets, the more money to invest in productive assets. Some companies maintain *just-in-time* inventory; meaning they plan inventory to be available at the same time orders are filled. Others might lease out excess warehouse space or rent equipment instead of buying it.
- **Plan expenditures.** Money should be spent only when it is available. Companies must look at seasonal and business cycles to plan expenditures.

## C2

Define cash and cash equivalents and explain how to report them.

**Point:** The most-liquid assets are usually reported first on a balance sheet; the least-liquid assets are reported last.

- **Invest excess cash.** Excess cash earns no return and should be invested. Excess cash from seasonal cycles can be placed in a bank account or other short-term investment for income. Excess cash beyond what's needed for regular business should be invested in productive assets like factories and inventories.

**Decision Insight**

**Days' Cash Expense Coverage** The ratio of *cash (and cash equivalents) to average daily cash expenses* indicates the number of days a company can operate without additional cash inflows. It reflects on company liquidity and on the potential of excess cash. ■

**Control of Cash Receipts**

Internal control of cash receipts ensures that cash received is properly recorded and deposited. Cash receipts can arise from transactions such as cash sales, collections of customer accounts, receipts of interest earned, bank loans, sales of assets, and owner investments. This section explains internal control over two important types of cash receipts: over-the-counter and by mail.

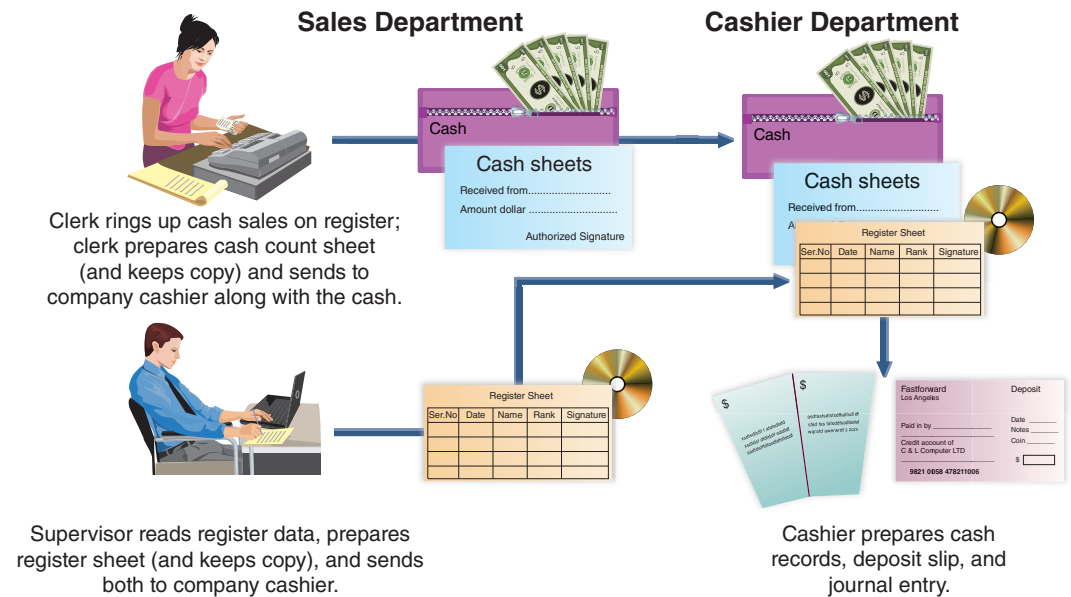

**Over-the-Counter Cash Receipts** For purposes of internal control, over-the-counter cash receipts from sales should be recorded on a cash register at the time of each sale. To help ensure that correct amounts are entered, each register should be located so customers can read the amounts entered. Clerks also should be required to enter each sale before wrapping merchandise and to give the customer a receipt for each sale. The design of each cash register should provide a permanent, locked-in record of each transaction. In many systems, the register is directly linked with computing and accounting services. Less advanced registers simply print a record of each transaction on a paper tape or electronic file locked inside the register.

Proper internal control prescribes that custody over cash should be separate from its record-keeping. For over-the-counter cash receipts, this separation begins with the cash sale. The clerk who has access to cash in the register should not have access to its locked-in record. At the end of the clerk's work period, the clerk should count the cash in the register, record the amount, and turn over the cash and a record of its amount to the company cashier. The cashier, like the clerk, has access to the cash but should not have access to accounting records (or the register tape or file). A third employee, often a supervisor, compares the record of total register transactions (or the register tape or file) with the cash receipts reported by the cashier. This record is the basis for a journal entry recording over-the-counter cash receipts. The third employee has access to the records for cash but not to the actual cash. The clerk and the cashier have access to cash but not to the accounting records. None of them can make a mistake or divert cash without the difference being revealed—see the following diagram.

**P1**  
Apply internal control to cash receipts and disbursements.

**Point:** Convenience stores sometimes display a sign: *Cashier has no access to cash in locked floor (or wall) safe.* Such signs help deter theft and holdups.

**Point:** Many businesses have signs that read: *If you receive no receipt, your purchase is free!* This helps ensure that clerks ring up all transactions on registers.

**Cash over and short.** Sometimes errors in making change are discovered from differences between the cash in a cash register and the record of the amount of cash receipts. Although a clerk is careful, one or more customers can be given too much or too little change. This means that at the end of a work period, the cash in a cash register might not equal the record of cash receipts. This difference is reported in the **Cash Over and Short** account, also called *Cash Short and Over*, which is an income statement account recording the income effects of cash overages and cash shortages. To illustrate, if a cash register's record shows \$550 but the count of cash in the register is \$555, the entry to record cash sales and its overage is

Cash .....	555	
<b>Cash Over and Short</b> .....		<b>5</b>
Sales .....		550
<i>To record cash sales and a cash overage.</i>		

**Point:** Retailers often require cashiers to restrictively endorse checks immediately on receipt by stamping them "For deposit only."

Assets =	Liabilities +	Equity
+555		+ 5
		+550

On the other hand, if a cash register's record shows \$625 but the count of cash in the register is \$621, the entry to record cash sales and its shortage is

Cash .....	621	
<b>Cash Over and Short</b> .....		<b>4</b>
Sales .....		625
<i>To record cash sales and a cash shortage.</i>		

Assets =	Liabilities +	Equity
+621		- 4
		+625

Since customers are more likely to dispute being shortchanged than being given too much change, the Cash Over and Short account usually has a debit balance at the end of an accounting period. A debit balance reflects an expense. It is reported on the income statement as part of selling, general and administrative expenses. (Since the amount is usually small, it is often combined with other small expenses and reported as part of *miscellaneous expenses*—or as part of *miscellaneous revenues* if it has a credit balance.)

**Point:** Merchants begin a business day with a *change fund* in their cash register. The accounting for a change fund is similar to that for petty cash, including that for cash shortages or overages.

**Cash Receipts by Mail** Control of cash receipts that arrive through the mail starts with the person who opens the mail. Preferably, two people are assigned the task of, and are present for, opening the mail. In this case, theft of cash receipts by mail requires collusion between these two employees. Specifically, the person(s) opening the mail enters a list (in triplicate) of money received. This list should contain a record of each sender's name, the amount, and an explanation of why the money is sent. The first copy is sent with the money to the cashier. A second copy is sent to the recordkeeper in the accounting area. A third copy is kept by the clerk(s) who opened the mail. The cashier deposits the money in a bank, and the recordkeeper records the amounts received in the accounting records.

**Point:** Collusion implies that two or more individuals are knowledgeable about or involved with the activities of the other(s).

This process reflects good internal control. That is, when the bank balance is reconciled by another person (explained later in the chapter), errors or acts of fraud by the mail clerks, the cashier, or the recordkeeper are revealed. They are revealed because the bank's record of cash deposited must agree with the records from each of the three. Moreover, if the mail clerks do not report all receipts correctly, customers will question their account balances. If the cashier does not deposit all receipts, the bank balance does not agree with the recordkeeper's cash balance. The recordkeeper and the person who reconciles the bank balance do not have access to cash and therefore have no opportunity to divert cash to themselves. This system makes errors and fraud highly unlikely. The exception is employee collusion.

### Decision Insight

**Rapid Accounting** Walmart uses a network of information links with its point-of-sale cash registers to coordinate sales, purchases, and distribution. Its stores ring up tens of thousands of separate sales on heavy days. By using cash register information, the company can fix pricing mistakes quickly and capitalize on sales trends. Interestingly, Sam Walton, the founder, was a self-described distruster of computers. ■

## Control of Cash Disbursements

Control of cash disbursements is especially important as most large thefts occur from payment of fictitious invoices. One key to controlling cash disbursements is to require all expenditures to be made by check. The only exception is small payments made from petty cash. Another key is to deny access to the accounting records to anyone other than the owner who has the authority to sign checks. A small-business owner often signs checks and knows from personal contact that the items being paid for are actually received. This arrangement is impossible in large businesses. Instead, internal control procedures must be substituted for personal contact. Such procedures are designed to assure the check signer that the obligations recorded are properly incurred and should be paid. This section describes these and other internal control procedures, including the voucher system and petty cash system. A method for management of cash disbursements for purchases is described in Appendix 8B.

**Cash Budget** Projected cash receipts and cash disbursements are often summarized in a *cash budget*. Provided that sufficient cash exists for effective operations, companies wish to minimize the cash they hold because of its risk of theft and its low return versus other investment opportunities.

### Decision Insight

**Lock Box** Some companies do not receive cash in the mail but, instead, elect to have customers send deposits directly to the bank using a *lock box* system. Bank employees are charged with receipting the cash and depositing it in the correct business bank account. ■

**Voucher System of Control** A **voucher system** is a set of procedures and approvals designed to control cash disbursements and the acceptance of obligations. The voucher system of control establishes procedures for

- Verifying, approving, and recording obligations for eventual cash disbursement.
- Issuing checks for payment of verified, approved, and recorded obligations.

A reliable voucher system follows standard procedures for every transaction. This applies even when multiple purchases are made from the same supplier.

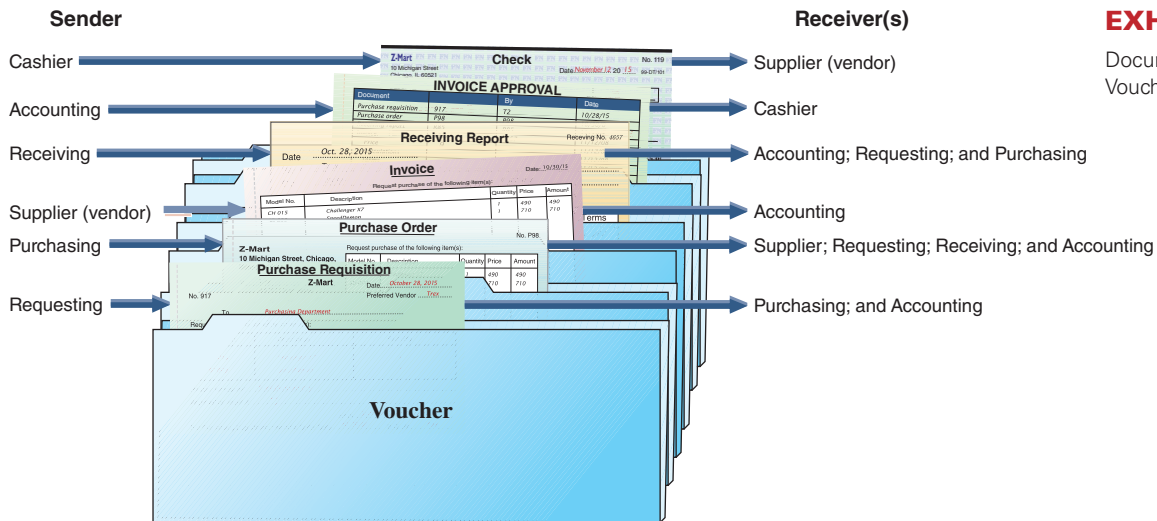

A voucher system's control over cash disbursements begins when a company incurs an obligation that will result in payment of cash. A key factor in this system is that only approved departments and individuals are authorized to incur such obligations. The system often limits the type of obligations that a department or individual can incur. In a large retail store, for instance, only a purchasing department should be authorized to incur obligations for merchandise inventory. Another key factor is that procedures for purchasing, receiving, and paying for merchandise are divided among several departments (or individuals). These departments include the one requesting the purchase, the purchasing department, the receiving department, and the accounting department. To coordinate and control responsibilities of these departments, a company uses several different business documents. Exhibit 8.1 shows how documents are accumulated in a **voucher**, which is an internal document (or file) used to accumulate information to control cash disbursements and to ensure that a transaction is properly recorded. This specific example begins with a *purchase requisition* and concludes with a *check* drawn against cash. Appendix 8A describes the documentation and verification necessary for a voucher system of control. It also describes the internal control objective served by each document.

A voucher system should be applied not only to purchases of inventory but to all expenditures. To illustrate, when a company receives a monthly telephone bill, it should review and verify the charges, prepare a voucher (file), and insert the bill. This transaction is then recorded with a journal entry. If the amount is currently due, a check is issued. If not, the voucher is filed for payment on its due date. If no voucher is prepared, verifying the invoice and its amount after several days or weeks can be difficult. Also, without records, a dishonest employee could collude with a dishonest supplier to get more than one payment for an obligation, payment for excessive amounts, or payment for goods and services not received. An effective voucher system helps prevent such frauds.

**Point:** MCI, formerly WorldCom, paid a whopping \$500 million in SEC fines for accounting fraud. Among the charges were that it inflated earnings by as much as \$10 billion. Its CEO, Bernard Ebbers, was sentenced to 25 years.

**Point:** A voucher is an internal document (or file).

**Point:** The basic purposes of paper and electronic documents are similar. However, the internal control system must change to reflect different risks, including confidential and competitive-sensitive information that is at greater risk in electronic systems.

**EXHIBIT 8.1**

Document Flow in a Voucher System

**Decision Insight**

**Cyber Setup** The FTC is on the cutting edge of cybersleuthing. Opportunists in search of easy money are lured to [www.wemarket4u.net/sundaestation/](http://www.wemarket4u.net/sundaestation/) and [www.wemarket4u.net/fatfoe/](http://www.wemarket4u.net/fatfoe/). Take the bait and you get warned. The top five fraud complaints as compiled by the Federal Trade Commission are shown to the right. ■

A good system of internal control for cash provides adequate procedures for protecting both cash receipts and cash disbursements. Which of the following statements is true regarding the control of cash receipts and cash disbursements?

- \_\_\_ 1. Over-the-counter cash receipts from sales should be recorded on a cash register at the time of each sale.
- \_\_\_ 2. Custody over cash should be separate from the recordkeeping of cash.
- \_\_\_ 3. For control of cash receipts that arrive through the mail, two people should be assigned the task of, and be present for, opening that mail.
- \_\_\_ 4. One key to controlling cash disbursements is to require that no expenditures be made by check; instead, all expenditures should be made from petty cash.
- \_\_\_ 5. A voucher system of control should be applied only to purchases of inventory and never to other expenditures.

**Solution**

1. True 2. True 3. True 4. False 5. False

**NEED-TO-KNOW 8-2**

Control of Cash Receipts and Payments

P1 C2

Do More: QS 8-3, E 8-2, E 8-4

**QC2**

**Petty Cash System of Control** A basic principle for controlling cash disbursements is that all payments must be made by check. An exception to this rule is made for *petty cash disbursements*, which are the small payments required for items such as postage, courier fees, minor repairs, and low-cost supplies. To avoid the time and cost of writing checks for small amounts, a company sets up a petty cash fund to make small payments. (**Petty cash** activities are part of an *imprest system*, which designates advance money to establish the fund, to withdraw from the fund, and to reimburse the fund.)

**P2**

Explain and record petty cash fund transactions.

**Operating a petty cash fund.** Establishing a petty cash fund requires estimating the total amount of small payments likely to be made during a short period such as a week or month. A check is then drawn by the company cashier for an amount slightly in excess of this estimate. This check is recorded with a debit to the Petty Cash account (an asset) and a credit to Cash. The check is cashed, and the currency is given to an employee designated as the *petty cashier* or *petty cash custodian*. The petty cashier is responsible for keeping this cash safe, making payments from the fund, and keeping records of it in a secure place referred to as the *petty cashbox*.

**Point:** A petty cash fund is used only for business expenses.

When each cash disbursement is made, the person receiving payment should sign a prenumbered *petty cash receipt*, also called *petty cash ticket*—see Exhibit 8.2. The petty cash receipt is then placed in the petty cashbox with the remaining money. Under this system, the sum of all receipts plus the remaining cash equals the total fund amount. A \$100 petty cash fund, for instance, contains any combination of cash and petty cash receipts that totals \$100 (examples are \$80 cash plus \$20 in receipts, or \$10 cash plus \$90 in receipts). Each disbursement reduces cash and increases the amount of receipts in the petty cashbox.

**EXHIBIT 8.2**

Petty Cash Receipt

<b>Z-Mart</b>		No. 9
<b>PETTY CASH RECEIPT</b>		
For	<u>Freight charges</u>	
Date	<u>November 5, 2015</u>	Approved by <u>[Signature]</u>
Charge to	<u>Merchandise Inventory</u>	Received by <u>[Signature]</u>
Amount	<u>\$6.75</u>	

**Point:** Petty cash receipts with either no signature or a forged signature usually indicate misuse of petty cash. Companies respond with surprise petty cash counts for verification.

The petty cash fund should be reimbursed when it is nearing zero and at the end of an accounting period when financial statements are prepared. For this purpose, the petty cashier sorts the paid receipts by the type of expense or account and then totals the receipts. The petty cashier presents all paid receipts to the company cashier, who stamps all receipts *paid* so they cannot be reused, files them for recordkeeping, and gives the petty cashier a check for their sum. When this check is cashed and the money placed in the cashbox, the total money in the cashbox is restored to its original amount. The fund is now ready for a new cycle of petty cash payments.

**Illustrating a petty cash fund.** To illustrate, assume Z-Mart establishes a petty cash fund on November 1 and designates one of its office employees as the petty cashier. A \$75 check is drawn, cashed, and the proceeds given to the petty cashier. The entry to record the setup of this petty cash fund is

Assets = Liabilities + Equity  
 +75  
 -75

Nov. 1	Petty Cash .....	75
	Cash .....	75
	<i>To establish a petty cash fund.</i>	

**Point:** Reducing or eliminating a petty cash fund requires a credit to Petty Cash.

**Point:** Although individual petty cash disbursements are not evidenced by a check, the initial petty cash fund is evidenced by a check, and later petty cash expenditures are evidenced by a check to replenish them in total.

**After the petty cash fund is established, the Petty Cash account is not debited or credited again unless the amount of the fund is changed.** (A fund should be increased if it requires reimbursement too frequently. On the other hand, if the fund is too large, some of its money should be redeposited in the Cash account.)

Next, assume that Z-Mart’s petty cashier makes several November payments from petty cash. Each person who received payment is required to sign a receipt. On November 27, after making a \$26.50 cash payment for tile cleaning, only \$3.70 cash remains in the fund. The petty cashier then summarizes and totals the petty cash receipts as shown in Exhibit 8.3.

Z-MART Petty Cash Payments Report			
<b>Miscellaneous Expenses</b>			
Nov. 2	Cleaning of LCD panels .....	\$20.00	
Nov. 27	Tile cleaning .....	<u>26.50</u>	\$ 46.50
<b>Merchandise Inventory (transportation-in)</b>			
Nov. 5	Transport of merchandise purchased .....	6.75	
Nov. 20	Transport of merchandise purchased .....	<u>8.30</u>	15.05
<b>Delivery Expense</b>			
Nov. 18	Customer's package delivered .....		5.00
<b>Office Supplies Expense</b>			
Nov. 15	Purchase of office supplies immediately used .....	<u>4.75</u>	
<b>Total</b> .....			<b><u>\$71.30</u></b>

**EXHIBIT 8.3**

Petty Cash Payments Report

**Point:** This report can also include receipt number and names of those who approved and received cash payment (see **Need-To-Know 8.3**).

The petty cash payments report and all receipts are given to the company cashier in exchange for a \$71.30 check to reimburse the fund. The petty cashier cashes the check and puts the \$71.30 cash in the petty cashbox. The company records this reimbursement as follows.

Nov. 27	Miscellaneous Expenses .....	46.50	
	Merchandise Inventory .....	15.05	
	Delivery Expense .....	5.00	
	Office Supplies Expense .....	4.75	
	Cash* .....		71.30
	To reimburse petty cash. *\$75 fund bal. - \$3.70 cash rem.		

Assets =	Liabilities +	Equity
-71.30		-46.50
		-15.05
		-5.00
		-4.75

A petty cash fund is usually reimbursed at the end of an accounting period so that expenses are recorded in the proper period, even if the fund is not low on money. If the fund is not reimbursed at the end of a period, the financial statements would show both an overstated cash asset and understated expenses (or assets) that were paid out of petty cash. Some companies do not reimburse the petty cash fund at the end of each period under the notion that this amount is immaterial to users of financial statements.

**Point:** To avoid errors in recording petty cash reimbursement, follow these steps: (1) prepare payments report, (2) compute cash needed by subtracting cash remaining from total fund amount, (3) record entry, and (4) check "Dr. = Cr." in entry. Any difference is Cash Over and Short.

**Increasing or decreasing a petty cash fund.** A decision to increase or decrease a petty cash fund is often made when reimbursing it. To illustrate, assume Z-Mart decides to *increase* its petty cash fund from \$75 to \$100 on November 27 when it reimburses the fund. The entries required are to (1) reimburse the fund as usual (see the preceding November 27 entry) and (2) increase the fund amount as follows.

Nov. 27	Petty Cash .....	25	
	Cash .....		25
	To increase the petty cash fund amount.		

Alternatively, if Z-Mart *decreases* the petty cash fund from \$75 to \$55 on November 27, the entry is to (1) credit Petty Cash for \$20 (decreasing the fund from \$75 to \$55) and (2) debit Cash for \$20 (reflecting the \$20 transfer from Petty Cash to Cash).

**Cash over and short.** Sometimes a petty cashier fails to get a receipt for payment or overpays for the amount due. When this occurs and the fund is later reimbursed, the petty cash payments report plus the cash remaining will not total to the fund balance. This mistake causes the fund to be *short*. This shortage is recorded as an expense in the reimbursing entry with a debit to the Cash Over and Short account. (An overage in the petty cash fund is recorded with a credit to Cash Over and Short in the reimbursing entry.) To illustrate,

Summary of Petty Cash Accounting			
Event	Petty Cash	Cash	Expenses
Set up fund .....	Dr.	Cr.	—
Reimburse fund .....	—	Cr.	Dr.
Increase fund .....	Dr.	Cr.	—
Decrease fund .....	Cr.	Dr.	—

**\$200 Petty Cash Fund** prepare the June 1 entry to reimburse a \$200 petty cash fund when its payments report shows \$178 in miscellaneous expenses and \$15 cash remains.

June 1			
Miscellaneous Expenses	.....	178	
<b>Cash Over and Short</b>	.....	<b>7</b>	
Cash*	.....		185
<i>To reimburse petty cash. *\$200 fund bal. - \$15 cash rem.</i>			

**Decision Insight**

**Warning Signs** There are clues to internal control violations. Warning signs from accounting include (1) an increase in customer refunds—could be fake, (2) missing documents—could be used for fraud, (3) differences between bank deposits and cash receipts—could be cash embezzled, and (4) delayed recording—could reflect fraudulent records. Warning signs from employees include (1) lifestyle change—could be embezzlement, (2) too close with suppliers—could signal fraudulent transactions, and (3) failure to leave job, even for vacations—could conceal fraudulent activities. ■

**NEED-TO-KNOW**

8-3

Bacardi Company established a \$150 petty cash fund with Eminem as the petty cashier. When the fund balance reached \$19 cash, Eminem prepared a petty cash payments report, which follows.

Petty Cash System

P2

Receipt No.	Account Charged		Approved by	Received by
12	Delivery Expense .....	\$ 29	Eminem	A. Smirnoff
13	Merchandise Inventory .....	18	Eminem	J. Daniels
15	(Omitted) .....	32	Eminem	C. Carlsberg
16	Miscellaneous Expense .....	41	(Omitted)	J. Walker
	Total .....	<u>\$120</u>		

**Required**

- Identify four internal control weaknesses from the petty cash payments report.
- Prepare general journal entries to record:
  - Establishment of the petty cash fund.
  - Reimbursement of the fund. (Assume for this part only that petty cash receipt no. 15 was issued for miscellaneous expenses.)
- What is the Petty Cash account balance immediately before reimbursement? Immediately after reimbursement?

**Solution**

- Four internal control weaknesses that are apparent from the payments report include:
  - Petty cash ticket no. 14 is missing. Its omission raises questions about the petty cashier’s management of the fund.
  - The \$19 cash balance means that \$131 has been withdrawn ( $\$150 - \$19 = \$131$ ). However, the total amount of the petty cash receipts is only \$120 ( $\$29 + \$18 + \$32 + \$41$ ). The fund is \$11 short of cash ( $\$131 - \$120 = \$11$ ). Was petty cash receipt no. 14 issued for \$11? Management should investigate.
  - The petty cashier (Eminem) did not sign petty cash receipt no. 16. This omission could have been an oversight on his part or he might not have authorized the payment. Management should investigate.
  - Petty cash receipt no. 15 does not indicate which account to charge. This omission could have been an oversight on the petty cashier’s part. Management could check with C. Carlsberg and the petty cashier (Eminem) about the transaction. Without further information, debit Miscellaneous Expense.

2. Petty cash general journal entries.

a. Entry to establish the petty cash fund.

Petty Cash .....	150	
Cash .....		150

b. Entry to reimburse the fund.

Delivery Expense .....	29	
Merchandise Inventory .....	18	
Miscellaneous Expense (\$41 + \$32) .....	73	
Cash Over and Short .....	11	
Cash (\$150 fund bal. - \$19 cash rem.) ..		131

Do More: QS 8-4, E 8-5,  
E 8-6, P 8-2

QC3

3. The Petty Cash account balance *always* equals its fund balance, in this case \$150. This account balance does not change unless the fund is increased or decreased.

## BANKING ACTIVITIES AS CONTROLS

Banks (and other financial institutions) provide many services, including helping companies control cash. Banks safeguard cash, provide detailed and independent records of cash transactions, and are a source of cash financing. This section describes these services and the documents provided by banking activities that increase managers' control over cash.

### Basic Bank Services

This section explains basic bank services—such as the bank account, the bank deposit, and checking—that contribute to the control of cash.

**Bank Account, Deposit, and Check** A *bank account* is a record set up by a bank for a customer. It permits a customer to deposit money for safekeeping and helps control withdrawals. To limit access to a bank account, all persons authorized to write checks on the account must sign a **signature card**, which bank employees use to verify signatures on checks. Many companies have more than one bank account to serve different needs and to handle special transactions such as payroll.

Each bank deposit is supported by a **deposit ticket**, which lists items such as currency, coins, and checks deposited along with their corresponding dollar amounts. The bank gives the customer a copy of the deposit ticket or a deposit receipt as proof of the deposit. Exhibit 8.4 shows one type of deposit ticket.

**Point:** Online banking services include the ability to stop payment on a check, move money between accounts, get up-to-date balances, and identify cleared checks and deposits.

To withdraw money from an account, the depositor can use a **check**, which is a document signed by the depositor instructing the bank to pay a specified amount of money to a designated recipient. A check involves three parties: a *maker* who signs the check, a *payee* who is the recipient, and a *bank* (or *payer*) on which the check is drawn. The bank provides a depositor the checks that are serially numbered and imprinted with the name and address of both the depositor and bank. Both checks and deposit tickets are imprinted with identification codes in magnetic ink for computer processing. Exhibit 8.5 shows one type of check. It is accompanied with an optional *remittance advice* explaining the payment. When a remittance advice is unavailable, the *memo* line is often used for a brief explanation.

VideoBuster Company, Hillcrest, NY

**Electronic Funds Transfer** Electronic funds transfer (EFT) is the electronic transfer of cash from one party to another. No paper documents are necessary. Banks simply transfer cash from one account to another with a journal entry. Companies are increasingly using EFT because of its convenience and low cost. For instance, it can cost up to 50 cents to process a check through the banking system, whereas EFT cost is near zero. We now commonly see items such as payroll, rent, utilities, insurance, and interest payments being handled by EFT. The bank statement lists cash withdrawals by EFT with the checks and other deductions. Cash receipts by EFT are listed with deposits and other additions. A bank statement is sometimes a depositor’s only notice of an EFT.

**Bank Statement**

Usually once a month, the bank sends each depositor a **bank statement** showing the activity in the account. Although a monthly statement is common, companies often regularly access information on their banking transactions. (Companies can choose to record any accounting adjustments required from the bank statement immediately or later, say, at the end of each day, week, month, or when reconciling a bank statement.) Different banks use different formats for their bank statements, but all of them include the following items of information:

1. Beginning-of-period balance of the depositor’s account.
2. Checks and other debits decreasing the account during the period.
3. Deposits and other credits increasing the account during the period.
4. End-of-period balance of the depositor’s account.

**Point:** Good internal control is to deposit all cash receipts daily and make all payments for goods and services by check. This controls access to cash and creates an independent record of all cash activities. Another good control is to send a copy of the bank statement directly to a party without access to cash or recordkeeping.

Bank's Liability to Video Buster	9/30 bal.	1,609.58
	CRs	1,163.42
DRs 723.00		
	10/31 bal.	2,050.00

**Point:** Many banks separately report other debits and credits apart from checks and deposits.

This information reflects the bank's records. Exhibit 8.6 shows one type of bank statement. Identify each of these four items in that statement. Part (A) of Exhibit 8.6 summarizes changes in the account. Part (B) lists paid checks along with other debits. Part (C) lists deposits and credits to the account, and part (D) shows the daily account balances.

In reading a bank statement note that a depositor's account is a liability on the bank's records. This is because the money belongs to the depositor, not the bank. When a depositor increases the account balance, the bank records it with a *credit* to that liability account. This means that **debit memos from the bank produce credits on the depositor's books, and credit memos from the bank produce debits on the depositor's books.**

Enclosed with a bank statement is a list of the depositor's canceled checks (or the actual canceled checks) along with any debit or credit memoranda affecting the account. Increasingly, banks are showing canceled checks electronically via online access to accounts. **Canceled checks** are checks the bank has paid and deducted from the customer's account during the period. We say such checks have *cleared the bank*. Other deductions that can appear on a bank statement include (1) service charges and fees assessed by the bank, (2) checks deposited that are uncollectible, (3) corrections of previous errors, (4) withdrawals through automated teller machines (ATMs), and (5) periodic payments arranged in advance by a depositor. (Most company checking accounts do not allow ATM withdrawals because of the company's desire to make all disbursements by check.) Except for service charges, the bank notifies the depositor of each deduction with a debit memorandum when the bank reduces the balance. A copy of each debit memorandum is usually sent with the statement (again, this information is often available earlier via online access and notifications).

Transactions that increase the depositor's account include amounts the bank collects on behalf of the depositor and the corrections of previous errors. Credit memoranda notify the depositor of all increases when they are recorded. A copy of each credit memorandum is often sent with the bank statement. Banks that pay interest on checking accounts often compute the amount of interest earned on the average cash balance and credit it to the depositor's account each period. In Exhibit 8.6, the bank credits \$8.42 of interest to the account.

**Point:** Your checking account is a liability from the bank's perspective (but an asset from yours). Credits increase the bank's liability to you. When you make a deposit, they "credit your account." Debits decrease the bank's liability to you. When you write a check, or use your debit card for a purchase, the bank decreases its liability to you; they "debit your account."

**Global:** If cash is in more than one currency, a company usually translates these amounts into U.S. dollars using the exchange rate as of the balance sheet date. Also, a company must disclose any restrictions on cash accounts located outside the U.S.

## Bank Reconciliation

### P3

Prepare a bank reconciliation.

When a company deposits all cash receipts and makes all cash payments (except petty cash) by check, it can use the bank statement for proving the accuracy of its cash records. This is done using a **bank reconciliation**, which is a report explaining any differences between the checking account balance according to the depositor’s records and the balance reported on the bank statement. The figure below reflects this process, which we describe in the following sections.

**Purpose of Bank Reconciliation** The balance of a checking account reported on the bank statement rarely equals the balance in the depositor’s accounting records. This is usually due to information that one party has that the other does not. We must therefore prove the accuracy of both the depositor’s records and those of the bank. This means we must *reconcile* the two balances and explain or account for any differences in them. Among the factors causing the bank statement balance to differ from the depositor’s book balance are these:

- **Outstanding checks.** [Adjust bank balance.] **Outstanding checks** are checks written (or drawn) by the depositor, deducted on the depositor’s records, and sent to the payees but not yet received by the bank for payment at the bank statement date.
- **Deposits in transit** (also called **outstanding deposits**). [Adjust bank balance.] **Deposits in transit** are deposits made and recorded by the depositor but not yet recorded on the bank statement. For example, companies can make deposits (in the night depository) at the end of a business day after the bank is closed. If such a deposit occurred on a bank statement date, it would not appear on this period’s statement. The bank would record such a deposit on the next business day, and it would appear on the next period’s bank statement. Deposits mailed to the bank near the end of a period also can be in transit and unrecorded when the statement is prepared.
- **Deductions for uncollectible items and for services.** [Adjust book balance.] A company sometimes deposits another party’s check that is uncollectible (usually meaning the balance in that party’s account is not large enough to cover the check). This check is called a *nonsufficient funds (NSF)* check. The bank would have initially credited the depositor’s account for the amount of the check. When the bank learns the check is uncollectible, it debits (reduces) the depositor’s account for the amount of that check. The bank may also charge the depositor a fee for processing an uncollectible check and notify the depositor of the deduction by sending a debit memorandum. The depositor should record each deduction when a debit memorandum is received, but an entry is sometimes not made until the bank reconciliation is prepared. Other possible bank charges to a depositor’s account that are first reported on a bank statement include printing new checks and service fees.
- **Additions for collections and for interest.** [Adjust book balance.] Banks sometimes act as collection agents for their depositors by collecting notes and other items. Banks can also receive electronic funds transfers to the depositor’s account. When a bank collects an item, it is added to the depositor’s account, less any service fee. The bank also sends a credit memorandum to notify the depositor of the transaction. When the memorandum is received, the depositor should record it; yet it sometimes remains unrecorded until the bank reconciliation is prepared. The bank statement also includes a credit for any interest earned.
- **Errors.** [Adjust bank or book balance.] Both banks and depositors can make errors. Bank errors might not be discovered until the depositor prepares the bank reconciliation. Also, depositor errors are sometimes discovered when the bank balance is reconciled. Error testing includes: (a) comparing deposits on the bank statement with deposits in the accounting records and (b) comparing canceled checks on the bank statement with checks recorded in the accounting records.

#### Forms of Check Fraud (CkFraud.org)

- Forged signatures—legitimate blank checks with fake payer signature
- Forged endorsements—stolen check that is endorsed and cashed by someone other than the payee
- Counterfeit checks—fraudulent checks with fake payer signature
- Altered checks—legitimate check altered (such as changed payee or amount) to benefit perpetrator
- Check kiting—deposit check from one bank account (without sufficient funds) into a second bank account

**Point:** Small businesses with few employees often allow recordkeepers to both write checks and keep the general ledger. If this is done, it is essential that the owner do the bank reconciliation.

**Point:** The person preparing the bank reconciliation should not be responsible for processing cash receipts, managing checks, or maintaining cash records.

**Timing differences.** The following lists common timing differences. Each of these items has already been recorded by either the bank, or the company, but not both.

Reconciling Item	Has Already Been:	Included on Bank Reconciliation as:
Outstanding checks . . . . .	Subtracted from book balance	Subtraction from bank balance
Deposits in transit . . . . .	Added to book balance	Addition to bank balance
Bank fees . . . . .	Subtracted from bank balance	Subtraction from book balance
NSF checks . . . . .	Subtracted from bank balance	Subtraction from book balance
Interest earned . . . . .	Added to bank balance	Addition to book balance

**Illustration of a Bank Reconciliation** We follow nine steps in preparing the bank reconciliation. It is helpful to refer to the bank reconciliation in Exhibit 8.7 when studying steps 1 through 9.

**EXHIBIT 8.7**

Bank Reconciliation

VIDEObUSTER Bank Reconciliation October 31, 2015					
①	Bank statement balance . . . . .	\$ 2,050.00	⑤	Book balance . . . . .	\$ 1,404.58
②	Add		⑥	Add	
	Deposit of Oct. 31 in transit . . .	145.00		Collect \$500 note less \$15 fee . . .	\$485.00
		2,195.00		Interest earned . . . . .	8.42
③	Deduct				493.42
	Outstanding checks		⑦	Deduct	
	No. 124 . . . . .	\$150.00		Check printing charge . . . . .	23.00
	No. 126 . . . . .	200.00		NSF check plus service fee . . . . .	30.00
		350.00			53.00
④	<b>Adjusted bank balance</b>	<b>\$1,845.00</b>	⑧	<b>Adjusted book balance</b> . . . . .	<b>\$1,845.00</b>
				⑨	Balances are equal (reconciled)

- 1 Identify the bank statement balance of the Cash account (*balance per bank*). VideoBuster's bank balance is \$2,050.
- 2 Identify and list any unrecorded deposits and any bank errors understating the bank balance. Add them to the bank balance. VideoBuster's \$145 deposit placed in the bank's night depository on October 31 is not recorded on its bank statement.
- 3 Identify and list any outstanding checks and any bank errors overstating the bank balance. Deduct them from the bank balance. VideoBuster's comparison of canceled checks with its books shows two checks outstanding: No. 124 for \$150 and No. 126 for \$200.
- 4 Compute the *adjusted bank balance*, also called the *corrected* or *reconciled balance*.
- 5 Identify the company's book balance of the Cash account (*balance per book*). VideoBuster's book balance is \$1,404.58.
- 6 Identify and list any unrecorded credit memoranda from the bank, any interest earned, and errors understating the book balance. Add them to the book balance. VideoBuster's bank statement includes a credit memorandum showing the bank collected a note receivable for the company on October 23. The note's proceeds of \$500 (minus a \$15 collection fee) are credited to the company's account. VideoBuster's bank statement also shows a credit of \$8.42 for interest earned on the average cash balance. There was no prior notification of this item, and it is not yet recorded.
- 7 Identify and list any unrecorded debit memoranda from the bank, any service charges, and errors overstating the book balance. Deduct them from the book balance. Debits on VideoBuster's bank statement that are not yet recorded include (a) a \$23 charge for check printing and (b) an NSF check for \$20 plus a related \$10 processing fee. (The NSF check is dated October 16 and was included in the book balance.)
- 8 Compute the *adjusted book balance*, also called *corrected* or *reconciled balance*.
- 9 Verify that the two adjusted balances from steps 4 and 8 are equal. If so, they are reconciled. If not, check for accuracy and missing data to achieve reconciliation.

**Point:** Outstanding checks are identified by comparing canceled checks on the bank statement with checks recorded. This includes identifying any outstanding checks listed on the *previous period's* bank reconciliation that are not included in the canceled checks on this period's bank statement.

**Point:** Adjusting entries can be combined into one compound entry.

**Adjusting Entries from a Bank Reconciliation** A bank reconciliation often identifies unrecorded items that need recording by the company. In VideoBuster’s reconciliation, the adjusted balance of \$1,845 is the correct balance as of October 31. But the company’s accounting records show a \$1,404.58 balance. We must prepare journal entries to adjust the book balance to the correct balance. **It is important to remember that only the items reconciling the book balance require adjustment.** A review of Exhibit 8.7 indicates that four entries are required for VideoBuster.

**Collection of note.** The first entry is to record the proceeds of its note receivable collected by the bank less the expense of having the bank perform that service.

Assets = Liabilities + Equity +485                      -15 -500	<table border="0" style="width: 100%;"> <tr> <td style="width: 10%; text-align: right;">Oct. 31</td> <td style="width: 60%;">Cash .....</td> <td style="width: 10%; text-align: right;">485</td> <td style="width: 20%;"></td> </tr> <tr> <td></td> <td>Collection Expense .....</td> <td style="text-align: right;">15</td> <td></td> </tr> <tr> <td></td> <td>Notes Receivable .....</td> <td></td> <td style="text-align: right;">500</td> </tr> <tr> <td></td> <td colspan="3"><i>To record the collection fee and proceeds for a note collected by the bank.</i></td> </tr> </table>	Oct. 31	Cash .....	485			Collection Expense .....	15			Notes Receivable .....		500		<i>To record the collection fee and proceeds for a note collected by the bank.</i>		
Oct. 31	Cash .....	485															
	Collection Expense .....	15															
	Notes Receivable .....		500														
	<i>To record the collection fee and proceeds for a note collected by the bank.</i>																

**Interest earned.** The second entry records interest credited to its account by the bank.

Assets = Liabilities + Equity +8.42                      +8.42	<table border="0" style="width: 100%;"> <tr> <td style="width: 10%; text-align: right;">Oct. 31</td> <td style="width: 60%;">Cash .....</td> <td style="width: 10%; text-align: right;">8.42</td> <td style="width: 20%;"></td> </tr> <tr> <td></td> <td>Interest Revenue .....</td> <td></td> <td style="text-align: right;">8.42</td> </tr> <tr> <td></td> <td colspan="3"><i>To record interest earned on the cash balance in the checking account.</i></td> </tr> </table>	Oct. 31	Cash .....	8.42			Interest Revenue .....		8.42		<i>To record interest earned on the cash balance in the checking account.</i>		
Oct. 31	Cash .....	8.42											
	Interest Revenue .....		8.42										
	<i>To record interest earned on the cash balance in the checking account.</i>												

**Check printing.** The third entry records expenses for the check printing charge.

Assets = Liabilities + Equity -23                              -23	<table border="0" style="width: 100%;"> <tr> <td style="width: 10%; text-align: right;">Oct. 31</td> <td style="width: 60%;">Miscellaneous Expenses .....</td> <td style="width: 10%; text-align: right;">23</td> <td style="width: 20%;"></td> </tr> <tr> <td></td> <td>Cash .....</td> <td></td> <td style="text-align: right;">23</td> </tr> <tr> <td></td> <td colspan="3"><i>Check printing charge.</i></td> </tr> </table>	Oct. 31	Miscellaneous Expenses .....	23			Cash .....		23		<i>Check printing charge.</i>		
Oct. 31	Miscellaneous Expenses .....	23											
	Cash .....		23										
	<i>Check printing charge.</i>												

**NSF check.** The fourth entry records the NSF check that is returned as uncollectible. The \$20 check was originally received from T. Woods in payment of his account and then deposited. The bank charged \$10 for handling the NSF check and deducted \$30 total from VideoBuster’s account. This means the entry must reverse the effects of the original entry made when the check was received and must record (add) the \$10 bank fee.

**Point:** The company will try to collect the entire NSF amount of \$30 from customer.

Assets = Liabilities + Equity +30 -30	<table border="0" style="width: 100%;"> <tr> <td style="width: 10%; text-align: right;">Oct. 31</td> <td style="width: 60%;">Accounts Receivable—T. Woods .....</td> <td style="width: 10%; text-align: right;">30</td> <td style="width: 20%;"></td> </tr> <tr> <td></td> <td>Cash .....</td> <td></td> <td style="text-align: right;">30</td> </tr> <tr> <td></td> <td colspan="3"><i>To charge Woods’ account for \$20 NSF check and \$10 bank fee.</i></td> </tr> </table>	Oct. 31	Accounts Receivable—T. Woods .....	30			Cash .....		30		<i>To charge Woods’ account for \$20 NSF check and \$10 bank fee.</i>		
Oct. 31	Accounts Receivable—T. Woods .....	30											
	Cash .....		30										
	<i>To charge Woods’ account for \$20 NSF check and \$10 bank fee.</i>												

**Point: Need-To-Know 8-4** shows an adjusting entry for an error correction.

Cash			
Unadj. bal.	1,404.58		
⑥	485.00	⑦	23.00
⑥	8.42	⑦	30.00
Adj. bal.	1,845.00		

After these four entries are recorded, the book balance of cash is adjusted to the correct amount of \$1,845 (the adjusted book balance). The Cash T-account to the side shows the same computation, where entries are keyed to the numerical codes in Exhibit 8.7.

### Decision Insight

**Fraud** A survey reports that 74% of employees had “personally seen” or had “first-hand knowledge of” fraud or misconduct within the past year. Another survey found that fraudsters exploited weak internal controls in 74% of the frauds—up from 49% four years earlier—see graphic (KPMG 2011). ■

**Percent Citing These Root Causes to Override Controls**

The following information is available to reconcile Gucci's book balance of cash with its bank statement cash balance as of December 31, 2016.

**NEED-TO-KNOW 8-4**

Bank Reconciliation

P3

- a. The December 31 cash balance according to the accounting records is \$1,610, and the bank statement cash balance for that date is \$1,900.
- b. Gucci's December 31 daily cash receipts of \$800 were placed in the bank's night depository on December 31 but do not appear on the December 31 bank statement.
- c. Check No. 6273 for \$400 and Check No. 6282 for \$100, both written and entered in the accounting records in December, are not among the canceled checks. Two checks, No. 6231 for \$2,000 and No. 6242 for \$200, were outstanding on the most recent November 30 reconciliation. Check No. 6231 is listed with the December canceled checks, but Check No. 6242 is not.
- d. When the December checks are compared with entries in the accounting records, it is found that Check No. 6267 had been correctly drawn for \$340 to pay for office supplies but was erroneously entered in the accounting records as \$430.
- e. A credit memorandum indicates that the bank collected \$500 cash on a note receivable for the company, deducted a \$30 collection fee, and credited the balance to the company's Cash account. Gucci had not recorded this transaction before receiving the statement.
- f. Two debit memoranda are enclosed with the statement and are unrecorded at the time of the reconciliation. One debit memorandum is for \$150 and dealt with an NSF check for \$140 received from a customer, Prada Inc., in payment of its account. The bank assessed a \$10 fee for processing it. The second debit memorandum is a \$20 charge for check printing. Gucci had not recorded these transactions before receiving the statement.

**Required**

1. Prepare the bank reconciliation for this company as of December 31, 2016.
2. Prepare the journal entries necessary to bring Gucci's book balance of cash into conformity with the reconciled cash balance as of December 31, 2016.

**Solutions**

**Part 1**

GUCCI Bank Reconciliation December 31, 2016

## GLOBAL VIEW

This section discusses similarities and differences between U.S. GAAP and IFRS regarding internal controls and in the accounting and reporting of cash.

**Internal Control Purposes, Principles, and Procedures** Both U.S. GAAP and IFRS aim for high-quality financial reporting. That aim translates into enhanced internal controls worldwide. Specifically, the purposes and principles of internal control systems are fundamentally the same across the globe. However, culture and other realities suggest different emphases on the mix of control procedures, and some sensitivity to different customs and environments when establishing that mix. Nevertheless, the discussion in this chapter applies internationally. **Nokia** provides the following description of its control activities.

### NOKIA

Nokia has an internal audit function that acts as an independent appraisal function by examining and evaluating the adequacy and effectiveness of the company's system of internal control.

**Control of Cash** Accounting definitions for cash are similar for U.S. GAAP and IFRS. The need for control of cash is universal and applies globally. This means that companies worldwide desire to apply cash management procedures as explained in this chapter and aim to control both cash receipts and disbursements. Accordingly, systems that employ tools such as cash monitoring mechanisms, verification of documents, and petty cash processes are applied worldwide. The basic techniques explained in this chapter are part of those control procedures.

**Banking Activities as Controls** There is a global demand for banking services, bank statements, and bank reconciliations. To the extent feasible, companies utilize banking services as part of their effective control procedures. Further, bank statements are similarly used along with bank reconciliations to control and monitor cash.

### IFRS

Internal controls are crucial to companies that convert from U.S. GAAP to IFRS. Major risks include misstatement of financial information and fraud. Other risks are ineffective communication of the impact of this change for investors, creditors and others, and management's inability to certify the effectiveness of controls over financial reporting. ■

Courtesy of Molly DeCoudreaux/Dandelion Chocolate

**Sustainability and Accounting** The founders, Todd and Cam, of **Dandelion Chocolate**, as introduced in this chapter's opening feature, explain that their entrepreneurial efforts include sustainable initiatives on two fronts. First, they support sustainable agricultural practices among the farmers who grow their cocoa beans. In this way they also focus on creating sustainable economies in those farming communities through dignified jobs with fair wages. Second, they support community nonprofits that help the disadvantaged and poor to achieve sustainable incomes and lifestyles.

## Decision Analysis

## Days' Sales Uncollected

**A1** Compute the days' sales uncollected ratio and use it to assess liquidity.

An important part of cash management is monitoring the receipt of cash from receivables. If customers and others who owe money to a company are delayed in payment, then that company can find it difficult to pay its obligations when they are due. A company's customers are crucial partners in its cash management. Many companies attract customers by selling to them on credit. This means that cash receipts from customers are delayed until accounts receivable are collected.

One measure of how quickly a company can convert its accounts receivable into cash is the **days' sales uncollected**, also called *days' sales in receivables*. This measure is computed by dividing the current

balance of receivables by net credit sales over the year just completed and then multiplying by 365 (number of days in a year). Since net credit sales usually are not reported to external users, the net sales (or revenues) figure is commonly used in the computation as in Exhibit 8.8.

$$\text{Days' sales uncollected} = \frac{\text{Accounts receivable}}{\text{Net sales}} \times 365$$

**EXHIBIT 8.8**

Days' Sales Uncollected

We use days' sales uncollected to estimate how much time is likely to pass before the current amount of accounts receivable is received in cash. For evaluation purposes, we need to compare this estimate to that for other companies in the same industry. We also make comparisons between current and prior periods.

To illustrate, we select data from the annual reports of two toy manufacturers, **Hasbro** and **Mattel**. Their days' sales uncollected figures are shown in Exhibit 8.9.

Company	Figure (\$ millions)	2013	2012	2011	2010	2009
<b>Hasbro</b>	Accounts receivable . . . . .	\$1,094	\$1,030	\$1,035	\$961	\$1,039
	Net sales . . . . .	\$4,082	\$4,089	\$4,286	\$4,002	\$4,068
	<b>Days' sales uncollected</b> . . . . .	<b>98 days</b>	<b>92 days</b>	<b>88 days</b>	<b>88 days</b>	<b>93 days</b>
<b>Mattel</b>	Accounts receivable . . . . .	\$1,260	\$1,227	\$1,247	\$1,146	\$749
	Net sales . . . . .	\$6,485	\$6,421	\$6,266	\$5,856	\$5,431
	<b>Days' sales uncollected</b> . . . . .	<b>71 days</b>	<b>70 days</b>	<b>73 days</b>	<b>71 days</b>	<b>50 days</b>

**EXHIBIT 8.9**

Analysis Using Days' Sales Uncollected

Days' sales uncollected for Hasbro in 2013 is computed as  $(\$1,094/\$4,082) \times 365 \text{ days} = 98 \text{ days}$ . This means that it will take about 98 days to collect cash from ending accounts receivable. This number reflects one or more of the following factors: a company's ability to collect receivables, customer financial health, customer payment strategies, and discount terms. To further assess days' sales uncollected for Hasbro, we compare it to its own four prior years and to those of Mattel. We see that Hasbro's days' sales uncollected has worsened since 2012 as it takes much longer to collect its receivables relative to all its prior years. In comparison, Mattel has also worsened from 50 days in 2009 up to 71 days in 2013. For all years, Mattel is superior to Hasbro on this measure of cash management. The less time that money is tied up in receivables often translates into increased profitability.

## Decision Maker

**Sales Representative** The sales staff is told to take action to help reduce days' sales uncollected for cash management purposes. What can you, a salesperson, do to reduce days' sales uncollected? ■ [Answers follow the chapter's Summary.]

Prepare a bank reconciliation for Jamboree Enterprises for the month ended November 30, 2015. The following information is available to reconcile Jamboree Enterprises's book balance of cash with its bank statement balance as of November 30, 2015:

- After all posting is complete on November 30, the company's book balance of Cash has a \$16,380 debit balance, but its bank statement shows a \$38,520 balance.
- Checks No. 2024 for \$4,810 and No. 2026 for \$5,000 are outstanding.
- In comparing the canceled checks on the bank statement with the entries in the accounting records, it is found that Check No. 2025 in payment of rent is correctly drawn for \$1,000 but is erroneously entered in the accounting records as \$880.

**NEED-TO-KNOW****COMPREHENSIVE**

**Point:** Generally, the party that is not the initial recorder of an item, but is later informed, includes that item on its "book" of the bank reconciliation. For example, the bank records an NSF check and then informs the company. The company, as not the initial recorder of the item, reports it on the book side of its reconciliation.

- d. The November 30 deposit of \$17,150 was placed in the night depository after banking hours on that date, and this amount does not appear on the bank statement.
- e. In reviewing the bank statement, a check written by Jumbo Enterprises in the amount of \$160 was erroneously drawn against Jamboree's account.
- f. A credit memorandum enclosed with the bank statement indicates that the bank collected a \$30,000 note and \$900 of related interest on Jamboree's behalf. This transaction was not recorded by Jamboree prior to receiving the statement.
- g. A debit memorandum for \$1,100 lists a \$1,100 NSF check received from a customer, Marilyn Welch. Jamboree had not recorded the return of this check before receiving the statement.
- h. Bank service charges for November total \$40. These charges were not recorded by Jamboree before receiving the statement.

**PLANNING THE SOLUTION**

- Set up a bank reconciliation with a bank side and a book side (as in Exhibit 8.7). Leave room to both add and deduct items. Each column will result in a reconciled, equal balance.
- Examine each item *a* through *h* to determine whether it affects the book or the bank balance and whether it should be added or deducted from the bank or book balance.
- After all items are analyzed, complete the reconciliation and arrive at a reconciled balance between the bank side and the book side.
- For each reconciling item on the book side, prepare an adjusting entry. Additions to the book side require an adjusting entry that debits Cash. Deductions on the book side require an adjusting entry that credits Cash.

**SOLUTION**

<b>JAMBOREE ENTERPRISES</b>

	<i>To record bank service charges.</i>		

**Point:** Error correction can alternatively involve (1) reversing the error entry, and (2) recording the correct entry. Auditors prefer this alternative.

## APPENDIX

# Documentation and Verification

## 8A

This appendix describes the important business documents of a voucher system of control.

**Purchase Requisition** Department managers are usually not allowed to place orders directly with suppliers for control purposes. Instead, a department manager must inform the purchasing department of its needs by preparing and signing a **purchase requisition**, which lists the merchandise needed and requests that it be purchased—see Exhibit 8A.1. Two copies of the purchase requisition are sent to the purchasing department, which then sends one copy to the accounting department. When the accounting department receives a purchase requisition, it creates and maintains a voucher for this transaction. The requesting department keeps the third copy.

P4

Describe the use of documentation and verification to control cash disbursements.

SD 099	SpeedDemon	1

Reason for Request Replenish inventory  
Approval for Request J.Z.

For Purchasing Department use only: Order Date 10/30/15 P.O. No. P98

### EXHIBIT 8A.1

Purchase Requisition

**Purchase Order** A **purchase order** is a document the purchasing department uses to place an order with a **vendor** (seller or supplier). A purchase order authorizes a vendor to ship ordered merchandise at the stated price and terms—see Exhibit 8A.2. When the purchasing department receives a purchase requisition, it prepares at least five copies of a purchase order. The copies are distributed as follows: *copy 1* to the vendor as a purchase request and as authority to ship merchandise; *copy 2*, along with a copy of the purchase requisition, to the accounting department, where it is entered in the voucher and used in approving payment of the invoice; *copy 3* to the requesting department to inform its manager that action is being taken; *copy 4* to the receiving department without order quantity so it can compare with goods received and provide independent count of goods received; and *copy 5* retained on file by the purchasing department.

**Point:** A voucher system is designed to uniquely meet the needs of a specific business. Thus, we should read this appendix as one example of a common voucher system design, but *not* the only design.

All shipments and invoices must include purchase order number

J.W.  
**ORDERED BY**

### EXHIBIT 8A.2

Purchase Order

**Point:** Shipping terms and credit terms are shown on the purchase order.

**Invoice** An **invoice** is an itemized statement of goods prepared by the vendor listing the customer's name, items sold, sales prices, and terms of sale. An invoice is also a bill sent to the buyer from the supplier. From the vendor's point of view, it is a *sales invoice*. The buyer, or **vendee**, treats it as a *purchase invoice*. When receiving a purchase order, the vendor ships the ordered merchandise to the buyer and includes or mails a copy of the invoice covering the shipment to the buyer. The invoice is sent to the buyer's accounting department where it is placed in the voucher. (Refer back to Exhibit 5.5, which shows Z-Mart's purchase invoice.)

**Receiving Report** Many companies maintain a separate department to receive all merchandise and purchased assets. When each shipment arrives, this receiving department counts the goods and checks them for damage and agreement with the purchase order. It then prepares four or more copies of a **receiving report**, which is used within the company to notify the appropriate persons that ordered goods have been received and to describe the quantities and condition of the goods. One copy is sent to accounting and placed in the voucher. Copies are also sent to the requesting department and the purchasing department to notify them that the goods have arrived. The receiving department retains a copy in its files.

**Invoice Approval** When a receiving report arrives, the accounting department should have copies of the following documents in the voucher: purchase requisition, purchase order, and invoice. With the information in these documents, the accounting department can record the purchase and approve its payment. In approving an invoice for payment, it checks and compares information across all documents. To facilitate this checking and to ensure that no step is omitted, it often uses an **invoice approval**, also called *check authorization*—see Exhibit 8A.3. An invoice approval is a checklist of steps necessary for approving an invoice for recording and payment. It is a separate document either filed in the voucher or preprinted (or stamped) on the voucher.

### EXHIBIT 8A.3

#### Invoice Approval

INVOICE APPROVAL			
DOCUMENT		BY	DATE
Purchase requisition	917	TZ	10/28/15
Purchase order	P98	JW	10/30/15
Receiving report	R85	SK	11/03/15
Invoice:	4657		11/12/15
Price		JK	11/12/15
Calculations		JK	11/12/15
Terms		JK	11/12/15
Approved for payment		BC	

**Point:** Recording a purchase is initiated by an invoice approval, not an invoice. An invoice approval verifies that the amount is consistent with that requested, ordered, and received. This controls and verifies purchases and related liabilities.

**Point:** Auditors, when auditing inventory, check a sampling of purchases by reviewing the purchase order, receiving report, and invoice.

As each step in the checklist is approved, the person initials the invoice approval and records the current date. Final approval implies the following steps have occurred:

1. **Requisition check:** Items on invoice are requested per purchase requisition.
2. **Purchase order check:** Items on invoice are ordered per purchase order.
3. **Receiving report check:** Items on invoice are received per receiving report.
4. **Invoice check: Price:** Invoice prices are as agreed with the vendor.

**Calculations:** Invoice has no mathematical errors.

**Terms:** Terms are as agreed with the vendor.

**Voucher** Once an invoice has been checked and approved, the voucher is complete. A complete voucher is a record summarizing a transaction. Once the voucher certifies a transaction, it authorizes recording an obligation. A voucher also contains approval for paying the obligation on an appropriate date. The physical form of a voucher varies across companies. Many are designed so that the invoice and other related source documents are placed inside the voucher, which can be a folder.

Completion of a voucher usually requires a person to enter certain information on both the inside and outside of the voucher. Typical information required on the inside of a voucher is shown in Exhibit 8A.4, and that for the outside is shown in Exhibit 8A.5. This information is taken from the invoice and the supporting documents filed in the voucher. A complete voucher is sent to an authorized individual (often called an *auditor*). This person performs a final review, approves the accounts and amounts for debiting (called the *accounting distribution*), and authorizes recording of the voucher.

Record of payment:  
 Paid \_\_\_\_\_  
 Check No. \_\_\_\_\_

**EXHIBIT 8A.5**

Outside of a Voucher

After a voucher is approved and recorded (in a journal called a **voucher register**), it is filed by its due date. A check is then sent on the payment date from the cashier, the voucher is marked “paid,” and the voucher is sent to the accounting department and recorded (in a journal called the **check register**). The person issuing checks relies on the approved voucher and its signed supporting documents as proof that an obligation has been incurred and must be paid. The purchase requisition and purchase order confirm the purchase was authorized. The receiving report shows that items have been received, and the invoice approval form verifies that the invoice has been checked for errors. There is little chance for error and even less chance for fraud without collusion unless all the documents and signatures are forged.

**APPENDIX**

# Control of Purchase Discounts

# 8B

This appendix explains how a company can better control its cash *disbursements* to take advantage of favorable purchases discounts. Chapter 5 described the entries to record the receipt and payment of an invoice for a merchandise purchase with and without discount terms. Those entries were prepared under what is called the **gross method** of recording purchases, which initially records the invoice at its *gross* amount ignoring any cash discount.

**P5**

Apply the net method to control purchase discounts.

**Point:** Most firms use the gross method as it is less expensive to administer and makes it easier to communicate with vendors.

The **net method** is another means of recording purchases, which initially records the invoice at its *net* amount of any cash discount. The net method gives management an advantage in controlling and monitoring cash payments involving purchase discounts.

To explain, when invoices are recorded at *gross* amounts, the amount of any discounts taken is deducted from the balance of the Merchandise Inventory account when cash payment is made. This means that the amount of any discounts lost is not reported in any account or on the income statement. Lost discounts recorded in this way are unlikely to come to the attention of management. When purchases are recorded at *net* amounts, a **Discounts Lost** expense account is recorded and brought to management’s attention. Management can then seek to identify the reason for discounts lost such as oversight, carelessness, or unfavorable terms. (Chapter 5 explains how managers assess whether a discount is favorable or not.)

**Perpetual Inventory System** To illustrate, assume that a company purchases merchandise on November 2 at a \$1,200 invoice price with terms of 2/10, n/30. Its November 2 entries under the gross and net methods are

<b>Gross Method—Perpetual</b>		<b>Net Method—Perpetual</b>	
Merchandise Inventory .....	1,200	Merchandise Inventory .....	1,176
Accounts Payable .....	1,200	Accounts Payable .....	1,176

If the invoice is paid on November 12 within the discount period, it records the following:

<b>Gross Method—Perpetual</b>		<b>Net Method—Perpetual</b>	
Accounts Payable .....	1,200	Accounts Payable .....	1,176
Merchandise Inventory .....	24	Cash .....	1,176
Cash .....	1,176		

If the invoice is *not* paid within the discount period, it records the following November 12 entry (which is the date corresponding to the end of the discount period):

<b>Gross Method—Perpetual</b>		<b>Net Method—Perpetual</b>	
No entry		<b>Discounts Lost</b> .....	24
		Accounts Payable .....	24

Then, when the invoice is later paid on December 2, outside the discount period, it records the following:

<b>Gross Method—Perpetual</b>		<b>Net Method—Perpetual</b>	
Accounts Payable .....	1,200	Accounts Payable .....	1,200
Cash .....	1,200	Cash .....	1,200

(The discount lost can be recorded when the cash payment is made with a single entry. However, in this case, when financial statements are prepared after a discount is lost and before the cash payment is made, an adjusting entry is required to recognize any unrecorded discount lost in the period when incurred.)

**Periodic Inventory System** The preceding entries assume a perpetual inventory system. If a company is using a periodic system, its November 2 entries under the gross and net methods are

<b>Gross Method—Periodic</b>		<b>Net Method—Periodic</b>	
Purchases .....	1,200	Purchases .....	1,176
Accounts Payable .....	1,200	Accounts Payable .....	1,176

If the invoice is paid on November 12 within the discount period, it records the following:

<b>Gross Method—Periodic</b>		<b>Net Method—Periodic</b>	
Accounts Payable .....	1,200	Accounts Payable .....	1,176
Purchases Discounts .....	24	Cash .....	1,176
Cash .....	1,176		

If the invoice is *not* paid within the discount period, it records the following November 12 entry:

Gross Method—Periodic		Net Method—Periodic	
No entry		Discounts Lost .....	24
		Accounts Payable .....	24

Then, when the invoice is later paid on December 2, outside the discount period, it records the following:

Gross Method—Periodic		Net Method—Periodic	
Accounts Payable .....	1,200	Accounts Payable .....	1,200
Cash .....	1,200	Cash .....	1,200

## Summary

- C1 Define internal control and identify its purpose and principles.** An internal control system consists of the policies and procedures managers use to protect assets, ensure reliable accounting, promote efficient operations, and urge adherence to company policies. It can prevent avoidable losses and help managers both plan operations and monitor company and human performance. Principles of good internal control include establishing responsibilities, maintaining adequate records, insuring assets and bonding employees, separating recordkeeping from custody of assets, dividing responsibilities for related transactions, applying technological controls, and performing regular independent reviews.
- C2 Define cash and cash equivalents and explain how to report them.** Cash includes currency, coins, and amounts on (or acceptable for) deposit in checking and savings accounts. Cash equivalents are short-term, highly liquid investment assets readily convertible to a known cash amount and sufficiently close to their maturity date so that market value is not sensitive to interest rate changes. Cash and cash equivalents are liquid assets because they are readily converted into other assets or can be used to pay for goods, services, or liabilities.
- A1 Compute the days' sales uncollected ratio and use it to assess liquidity.** Many companies attract customers by selling to them on credit. This means that cash receipts from customers are delayed until accounts receivable are collected. Users want to know how quickly a company can convert its accounts receivable into cash. The days' sales uncollected ratio, one measure reflecting company liquidity, is computed by dividing the ending balance of receivables by annual net sales, and then multiplying by 365.
- P1 Apply internal control to cash receipts and disbursements.** Internal control of cash receipts ensures that all cash received is properly recorded and deposited. Attention focuses on two important types of cash receipts: over-the-counter and by mail. Good internal control for over-the-counter cash receipts includes use of a cash register, customer review, use of receipts, a permanent transaction record, and separation of the custody of cash from its recordkeeping. Good internal control for cash receipts by mail includes at least two people assigned to open mail and a listing of each sender's name, amount, and

explanation. (Banks offer several services that promote the control and safeguarding of cash.)

**P2 Explain and record petty cash fund transactions.** Petty cash disbursements are payments of small amounts for items such as postage, courier fees, minor repairs, and supplies. A company usually sets up one or more petty cash funds. A petty cash fund cashier is responsible for safekeeping the cash, making payments from this fund, and keeping receipts and records. A Petty Cash account is debited only when the fund is established or increased in amount. When the fund is replenished, petty cash disbursements are recorded with debits to expense (or asset) accounts and a credit to Cash.

**P3 Prepare a bank reconciliation.** A bank reconciliation proves the accuracy of the depositor's and the bank's records. The bank statement balance is adjusted for items such as outstanding checks and unrecorded deposits made on or before the bank statement date but not reflected on the statement. The book balance is adjusted for items such as service charges, bank collections for the depositor, and interest earned on the account.

**P4A Describe the use of documentation and verification to control cash disbursements.** A voucher system is a set of procedures and approvals designed to control cash disbursements and acceptance of obligations. The voucher system of control relies on several important documents, including the voucher and its supporting files. A key factor in this system is that only approved departments and individuals are authorized to incur certain obligations.

**P5B Apply the net method to control purchase discounts.** The net method aids management in monitoring and controlling purchase discounts. When invoices are recorded at gross amounts, the amount of discounts taken is deducted from the balance of the Inventory account. This means that the amount of any discounts lost is not reported in any account and is unlikely to come to the attention of management. When purchases are recorded at net amounts, a Discounts Lost account is brought to management's attention as an operating expense. Management can then seek to identify the reason for discounts lost, such as oversight, carelessness, or unfavorable terms.

## Guidance Answers to Decision Maker

**Entrepreneur** To achieve proper separation of duties, a minimum of three employees are required. Transaction authorization, recording, and asset custody are ideally handled by three employees. Many small businesses do not employ three workers. In such cases, an owner must exercise more oversight to make sure that the lack of separation of duties does not result in fraudulent transactions.

**Sales Representative** A salesperson can take several steps to reduce days' sales uncollected. These include (1) decreasing the ratio of sales on account to total sales by encouraging more cash sales, (2) identifying customers most delayed in their payments and encouraging earlier payments or cash sales, and (3) applying stricter credit policies to eliminate credit sales to customers that never pay.

### Multiple Choice Quiz

### Answers at end of chapter

- A company needs to replenish its \$500 petty cash fund. Its petty cash box has \$75 cash and petty cash receipts of \$420. The journal entry to replenish the fund includes
  - A debit to Cash for \$75.
  - A credit to Cash for \$75.
  - A credit to Petty Cash for \$420.
  - A credit to Cash Over and Short for \$5.
  - A debit to Cash Over and Short for \$5.
- The following information is available for Hapley Company:
  - The November 30 bank statement shows a \$1,895 balance.
  - The general ledger shows a \$1,742 balance at November 30.
  - A \$795 deposit placed in the bank's night depository on November 30 does not appear on the November 30 bank statement.
  - Outstanding checks amount to \$638 at November 30.
  - A customer's \$335 note was collected by the bank in November. A collection fee of \$15 was deducted by the bank and the difference deposited in Hapley's account.
  - A bank service charge of \$10 is deducted by the bank and appears on the November 30 bank statement.
 How will the customer's note appear on Hapley's November 30 bank reconciliation?
  - \$320 appears as an addition to the book balance of cash.
  - \$320 appears as a deduction from the book balance of cash.
  - \$320 appears as an addition to the bank balance of cash.
  - \$320 appears as a deduction from the bank balance of cash.
  - \$335 appears as an addition to the bank balance of cash.
- Using the information from question 2, what is the reconciled balance on Hapley's November 30 bank reconciliation?
  - \$2,052
  - \$1,895
  - \$1,742
  - \$2,201
  - \$1,184
- A company had net sales of \$84,000 and accounts receivable of \$6,720. Its days' sales uncollected is
  - 3.2 days
  - 18.4 days
  - 230.0 days
  - 29.2 days
  - 12.5 days
- A company records its purchases using the net method. On August 1, it purchases merchandise on account for \$6,000 with terms of 2/10, n/30. The August 1 journal entry to record this transaction includes a
  - Debit to Merchandise Inventory for \$6,000.
  - Debit to Merchandise Inventory for \$5,880.
  - Debit to Merchandise Inventory for \$120.
  - Debit to Accounts Payable for \$5,880.
  - Credit to Accounts Payable for \$6,000.

A(B) *Superscript letter A (B) denotes assignments based on Appendix 8A (8B).*

 *Icon denotes assignments that involve decision making.*

## Discussion Questions

- List the seven broad principles of internal control.
-  Internal control procedures are important in every business, but at what stage in the development of a business do they become especially critical?
-  Why should responsibility for related transactions be divided among different departments or individuals?
-  Why should the person who keeps the records of an asset not be the person responsible for its custody?
-  When a store purchases merchandise, why are individual departments not allowed to directly deal with suppliers?
- What are the limitations of internal controls?
- Which of the following assets—inventory, building, accounts receivable, or cash—is most liquid? Which is least liquid?
- What is a petty cash receipt? Who should sign it?
- Why should cash receipts be deposited on the day of receipt?
- Apple's** statement of cash flows in Appendix A describes changes in cash and cash equivalents for the year ended September 28, 2013. What total amount is provided (used) by investing activities? What amount is provided (used) by financing activities?
- Refer to **Google's** financial statements in Appendix A. Identify Google's net earnings (income) for the year ended December 31, 2013. Is its net earnings equal to the increase in cash and cash equivalents for the year? Explain the difference between net earnings and the increase in cash and cash equivalents.
-  Refer to **Samsung's** balance sheet in Appendix A. How does its cash (titled "Cash and cash equivalents") compare with its other current assets (both in amount and percent) as of December 31, 2013? Compare and assess its cash at December 31, 2013, with its cash at December 31, 2012.
-  **Samsung's** balance sheet in Appendix A reports the change in cash and equivalents for the year ended December 31, 2013. Identify the cash generated (or used) by operating activities, by investing activities, and by financing (funding) activities.

An internal control system consists of all policies and procedures used to protect assets, ensure reliable accounting, promote efficient operations, and urge adherence to company policies. Evaluate each of the following statements and indicate which are true and which are false regarding the objectives of an internal control system.

- \_\_\_ 1. Separation of recordkeeping for assets from the custody over assets is intended to reduce theft and fraud.
- \_\_\_ 2. The primary objective of internal control procedures is to safeguard the business against theft from government agencies.
- \_\_\_ 3. The main objective of internal control procedures is best accomplished by designing an operational system with managerial policies that protect the assets from waste, fraud, and theft.
- \_\_\_ 4. Separating the responsibility for a transaction between two or more individuals or departments will not help prevent someone from creating a fictitious invoice and paying the money to herself or himself.

Choose from the following list of terms/phrases to best complete the following statements.

- |                     |                      |                        |
|---------------------|----------------------|------------------------|
| a. Cash             | c. Outstanding check | e. Bank reconciliation |
| b. Cash equivalents | d. Liquidity         | f. Current assets      |
- \_\_\_ 1. The \_\_\_\_\_ category includes currency and coins along with amounts on deposit in bank accounts, checking accounts, and savings accounts.
- \_\_\_ 2. The term \_\_\_\_\_ refers to a company's ability to pay for its near-term obligations.
- \_\_\_ 3. The \_\_\_\_\_ category includes short-term, highly liquid investment assets that are readily convertible to a known cash amount and sufficiently close to their due dates so that their market value is not sensitive to interest rate changes.

## QUICK STUDY

### QS 8-1

Internal control objectives

### QS 8-2

Cash and equivalents

**QS 8-3**

Internal control for cash

A good system of internal control for cash provides adequate procedures for protecting both cash receipts and cash disbursements. Identify each of the following statements as either true or false regarding this protection.

- \_\_\_ a. A basic guideline for safeguarding cash is that all cash receipts be deposited weekly or monthly.
- \_\_\_ b. A voucher system of control is a control system exclusively for cash receipts.
- \_\_\_ c. A basic guideline for safeguarding cash is to separate the duties of those who have custody of cash from those who keep cash records.
- \_\_\_ d. A petty cash system is not a control procedure for safeguarding cash.

**QS 8-4**

Petty cash accounting

1. The petty cash fund of the Brooks Agency is established at \$150. At the end of the current period, the fund contained \$28 and had the following receipts: film rentals, \$24; refreshments for meetings, \$46 (both expenditures to be classified as Entertainment Expense); postage, \$30; and printing, \$22. Prepare journal entries to record (a) establishment of the fund and (b) reimbursement of the fund at the end of the current period.
2. Identify the two events from the following that cause a Petty Cash account to be credited in a journal entry.
  - \_\_\_ a. Fund amount is being reduced
  - \_\_\_ b. Fund amount is being increased
  - \_\_\_ c. Fund is being eliminated
  - \_\_\_ d. Fund is being established

**QS 8-5**

Bank reconciliation

For each of the following items *a* through *g*, indicate whether its amount (1) affects the bank or book side of a bank reconciliation, (2) represents an addition or a subtraction in a bank reconciliation, and (3) requires an adjusting journal entry.

	Bank or Book Side	Add or Subtract	Adj. Entry or Not
a. Interest on cash balance . . . . .	_____	_____	_____
b. Bank service charges . . . . .	_____	_____	_____
c. Debit memos . . . . .	_____	_____	_____
d. Outstanding checks . . . . .	_____	_____	_____
e. Credit memos . . . . .	_____	_____	_____
f. NSF checks . . . . .	_____	_____	_____
g. Outstanding deposits . . . . .	_____	_____	_____

**QS 8-6**

Bank reconciliation

Nolan Company deposits all cash receipts on the day when they are received and it makes all cash payments by check. At the close of business on June 30, 2015, its Cash account shows a \$22,352 debit balance. Nolan's June 30 bank statement shows \$21,332 on deposit in the bank. Prepare a bank reconciliation for the company using the following information.

- a. Outstanding checks as of June 30 total \$3,713.
- b. The June 30 bank statement included a \$41 debit memorandum for bank services; the company has not yet recorded the cost of these services.
- c. In reviewing the bank statement, a \$90 check written by the company was mistakenly recorded in the company's books at \$99.
- d. June 30 cash receipts of \$4,724 were placed in the bank's night depository after banking hours and were not recorded on the June 30 bank statement.
- e. The bank statement included a \$23 credit for interest earned on the cash in the bank.

**QS 8-7**

Reviewing bank statements

An entrepreneur commented that a bank reconciliation may not be necessary as she regularly reviews her online bank statement for any unusual items and errors.

- a. Describe how a bank reconciliation and an online review (or reading) of the bank statement are not equivalent.
- b. Identify and explain at least two frauds or errors that would be uncovered through a bank reconciliation and that would *not* be uncovered through an online review of the bank statement.

The following annual account balances are taken from Armour Sports at December 31.

	2015	2014
Accounts receivable . . . . .	\$ 100,000	\$ 85,000
Net sales . . . . .	2,500,000	2,000,000

What is the change in the number of days' sales uncollected between years 2014 and 2015? (Round the number of days to one decimal.) According to this analysis, is the company's collection of receivables improving? Explain.

**QS 8-8**

Days' sales uncollected

Management uses a voucher system to help control and monitor cash disbursements. Which of the four documents listed below are prepared as part of a voucher system of control?

\_\_\_ **a.** Purchase order    \_\_\_ **b.** Outstanding check    \_\_\_ **c.** Invoice    \_\_\_ **d.** Voucher

**QS 8-9<sup>A</sup>**

Documents in a voucher system

P4

An important part of cash management is knowing when, and if, to take purchase discounts.

- Which accounting method uses a Discounts Lost account?
- What is the advantage of this method for management?

**QS 8-10<sup>B</sup>**

Purchase discounts

Answer each of the following related to international accounting standards.

- Explain how the purposes and principles of internal controls are different between accounting systems reporting under IFRS versus U.S. GAAP.
- Cash presents special internal control challenges. How do internal controls for cash differ for accounting systems reporting under IFRS versus U.S. GAAP? How do the procedures applied differ across those two accounting systems?

**QS 8-11**

International accounting and internal controls

C1 P1

Franco Company is a rapidly growing start-up business. Its recordkeeper, who was hired six months ago, left town after the company's manager discovered that a large sum of money had disappeared over the past three months. An audit disclosed that the recordkeeper had written and signed several checks made payable to her fiancé and then recorded the checks as salaries expense. The fiancé, who cashed the checks but never worked for the company, left town with the recordkeeper. As a result, the company incurred an uninsured loss of \$184,000. Evaluate Franco's internal control system and indicate which principles of internal control appear to have been ignored.

**EXERCISES****Exercise 8-1**

Analyzing internal control

What internal control procedures would you recommend in each of the following situations?

- A concession company has one employee who sells towels, coolers, and sunglasses at the beach. Each day, the employee is given enough towels, coolers, and sunglasses to last through the day and enough cash to make change. The money is kept in a box at the stand.
- An antique store has one employee who is given cash and sent to garage sales each weekend. The employee pays cash for any merchandise acquired that the antique store resells.

**Exercise 8-2**

Internal control recommendations

Good accounting systems help with the management and control of cash and cash equivalents.

- Define and contrast the terms *liquid asset* and *cash equivalent*.
- Why would companies invest their idle cash in cash equivalents?
- Identify five principles of effective cash management.

**Exercise 8-3**

Cash, liquidity, and return

C2

**Exercise 8-4**

Control of cash receipts by mail

Some of Crown Company’s cash receipts from customers are received by the company with the regular mail. The company’s recordkeeper opens these letters and deposits the cash received each day.

- a. Identify any internal control problem(s) in this arrangement.
- b. What changes to its internal control system do you recommend?

**Exercise 8-5**

Petty cash fund with a shortage P2

**Check** (2) Cr. Cash \$246 and (3) Cr. Cash \$50

Waupaca Company establishes a \$350 petty cash fund on September 9. On September 30, the fund shows \$104 in cash along with receipts for the following expenditures: transportation-in, \$40; postage expenses, \$123; and miscellaneous expenses, \$80. The petty cashier could not account for a \$3 shortage in the fund. The company uses the perpetual system in accounting for merchandise inventory. Prepare (1) the September 9 entry to establish the fund, (2) the September 30 entry to reimburse the fund, and (3) an October 1 entry to increase the fund to \$400.

**Exercise 8-6**

Petty cash fund accounting P2

**Check** (3) Cr. Cash \$162 & \$250

Palmona Co. establishes a \$200 petty cash fund on January 1. On January 8, the fund shows \$38 in cash along with receipts for the following expenditures: postage, \$74; transportation-in, \$29; delivery expenses, \$16; and miscellaneous expenses, \$43. Palmona uses the perpetual system in accounting for merchandise inventory. Prepare journal entries to (1) establish the fund on January 1, (2) reimburse it on January 8, and (3) both reimburse the fund and increase it to \$450 on January 8, assuming no entry in part 2. (*Hint:* Make two separate entries for part 3.)

**Exercise 8-7**

Voucher system P1

The voucher system of control is designed to control cash disbursements and the acceptance of obligations.

1. The voucher system of control establishes procedures for what two processes?
2. What types of expenditures should be overseen by a voucher system of control?
3. When is the voucher initially prepared? Explain.

**Exercise 8-8**

Bank reconciliation and adjusting entries P3

Prepare a table with the following headings for a monthly bank reconciliation dated September 30.

Bank Balance		Book Balance			Not Shown on the Reconciliation
Add	Deduct	Add	Deduct	Adjust	

For each item 1 through 12, place an *x* in the appropriate column to indicate whether the item should be added to or deducted from the book or bank balance, or whether it should not appear on the reconciliation. If the book balance is to be adjusted, place a *Dr.* or *Cr.* in the Adjust column to indicate whether the Cash balance should be debited or credited. At the left side of your table, number the items to correspond to the following list.

1. NSF check from customer is returned on September 25 but not yet recorded by this company.
2. Interest earned on the September cash balance in the bank.
3. Deposit made on September 5 and processed by the bank on September 6.
4. Checks written by another depositor but charged against this company’s account.
5. Bank service charge for September.
6. Checks outstanding on August 31 that cleared the bank in September.
7. Check written against the company’s account and cleared by the bank; erroneously not recorded by the company’s recordkeeper.
8. Principal and interest on a note receivable to this company is collected by the bank but not yet recorded by the company.
9. Checks written and mailed to payees on October 2.
10. Checks written by the company and mailed to payees on September 30.
11. Night deposit made on September 30 after the bank closed.
12. Special bank charge for collection of note in part 8 on this company’s behalf.

Del Gato Clinic deposits all cash receipts on the day when they are received and it makes all cash payments by check. At the close of business on June 30, 2015, its Cash account shows an \$11,589 debit balance. Del Gato Clinic's June 30 bank statement shows \$10,555 on deposit in the bank. Prepare a bank reconciliation for Del Gato Clinic using the following information:

- Outstanding checks as of June 30 total \$1,829.
- The June 30 bank statement included a \$16 debit memorandum for bank services.
- Check No. 919, listed with the canceled checks, was correctly drawn for \$467 in payment of a utility bill on June 15. Del Gato Clinic mistakenly recorded it with a debit to Utilities Expense and a credit to Cash in the amount of \$476.
- The June 30 cash receipts of \$2,856 were placed in the bank's night depository after banking hours and were not recorded on the June 30 bank statement.

**Exercise 8-9**

Bank reconciliation

P3

**Check** Reconciled bal.,  
\$11,582

Prepare the adjusting journal entries that Del Gato Clinic must record as a result of preparing the bank reconciliation in Exercise 8-9.

**Exercise 8-10**Adjusting entries from  
bank reconciliation P3

Wright Company deposits all cash receipts on the day when they are received and it makes all cash payments by check. At the close of business on May 31, 2015, its Cash account shows a \$27,500 debit balance. The company's May 31 bank statement shows \$25,800 on deposit in the bank. Prepare a bank reconciliation for the company using the following information.

- The May 31 bank statement included a \$100 debit memorandum for bank services; the company has not yet recorded the cost of these services.
- Outstanding checks as of May 31 total \$5,600.
- May 31 cash receipts of \$6,200 were placed in the bank's night depository after banking hours and were not recorded on the May 31 bank statement.
- In reviewing the bank statement, a \$400 check written by Smith Company was mistakenly drawn against Wright's account.
- A debit memorandum for \$600 refers to a \$600 NSF check from a customer; the company has not yet recorded this NSF check.

**Exercise 8-11**

Bank reconciliation

P3

**Check** Reconciled bal.,  
\$26,800

Barga Co. reported net sales for 2014 and 2015 of \$730,000 and \$1,095,000, respectively. Its year-end balances of accounts receivable follow: December 31, 2014, \$65,000; and December 31, 2015, \$123,000.

- Calculate its days' sales uncollected at the end of each year. Round the number of days to one decimal.
- Evaluate and comment on any changes in the amount of liquid assets tied up in receivables.

**Exercise 8-12**Liquid assets and  
accounts receivableA1 

Match each document in a voucher system in column one with its description in column two.

Document	Description
1. Purchase requisition	— <b>A.</b> An itemized statement of goods prepared by the vendor listing the customer's name, items sold, sales prices, and terms of sale.
2. Purchase order	— <b>B.</b> An internal file used to store documents and information to control cash disbursements and to ensure that a transaction is properly authorized and recorded.
3. Invoice	— <b>C.</b> A document used to place an order with a vendor that authorizes the vendor to ship ordered merchandise at the stated price and terms.
4. Receiving report	— <b>D.</b> A checklist of steps necessary for the approval of an invoice for recording and payment; also known as a check authorization.
5. Invoice approval	— <b>E.</b> A document used by department managers to inform the purchasing department to place an order with a vendor.
6. Voucher	— <b>F.</b> A document used to notify the appropriate persons that ordered goods have arrived, including a description of the quantities and condition of goods.

**Exercise 8-13<sup>A</sup>**Documents in a voucher  
system

P4

**Exercise 8-14<sup>B</sup>**

Record invoices at gross or net amounts

P5

Piere Imports uses the perpetual system in accounting for merchandise inventory and had the following transactions during the month of October. Prepare entries to record these transactions assuming that Piere Imports records invoices (a) at gross amounts and (b) at net amounts.

- Oct. 2 Purchased merchandise at a \$3,000 price, invoice dated October 2, terms 2/10, n/30.  
 10 Received a \$500 credit memorandum (at full invoice price) for the return of merchandise that it purchased on October 2.  
 17 Purchased merchandise at a \$5,400 price, invoice dated October 17, terms 2/10, n/30.  
 27 Paid for the merchandise purchased on October 17, less the discount.  
 31 Paid for the merchandise purchased on October 2. Payment was delayed because the invoice was mistakenly filed for payment today. This error caused the discount to be lost.

**PROBLEM SET A**

For each of these five separate cases, identify the principle(s) of internal control that is violated. Recommend what the business should do to ensure adherence to principles of internal control.

**Problem 8-1A**

Analyzing internal control

C1

- Chi Han records all incoming customer cash receipts for her employer and posts the customer payments to their respective accounts.
- At Tico Company, Julia and Trevor alternate lunch hours. Julia is the petty cash custodian, but if someone needs petty cash when she is at lunch, Trevor fills in as custodian.
- Nori Nozumi posts all patient charges and payments at the Hopeville Medical Clinic. Each night Nori backs up the computerized accounting system to a tape and stores the tape in a locked file at her desk.
- Benedict Shales prides himself on hiring quality workers who require little supervision. As office manager, Benedict gives his employees full discretion over their tasks and for years has seen no reason to perform independent reviews of their work.
- Carla Farah's manager has told her to reduce costs. Carla decides to raise the deductible on the plant's property insurance from \$5,000 to \$10,000. This cuts the property insurance premium in half. In a related move, she decides that bonding the plant's employees is a waste of money since the company has not experienced any losses due to employee theft. Carla saves the entire amount of the bonding insurance premium by dropping the bonding insurance.

**Problem 8-2A**

Establish, reimburse, and adjust petty cash

P2

Kiona Co. set up a petty cash fund for payments of small amounts. The following transactions involving the petty cash fund occurred in May (the last month of the company's fiscal year).

- May 1 Prepared a company check for \$300 to establish the petty cash fund.  
 15 Prepared a company check to replenish the fund for the following expenditures made since May 1.  
 a. Paid \$88 for janitorial services.  
 b. Paid \$53.68 for miscellaneous expenses.  
 c. Paid postage expenses of \$53.50.  
 d. Paid \$47.15 to *The County Gazette* (the local newspaper) for an advertisement.  
 e. Counted \$62.15 remaining in the petty cash box.  
 16 Prepared a company check for \$200 to increase the fund to \$500.  
 31 The petty cashier reports that \$288.20 cash remains in the fund. A company check is drawn to replenish the fund for the following expenditures made since May 15.  
 f. Paid postage expenses of \$147.36.  
 g. Reimbursed the office manager for business mileage, \$23.50.  
 h. Paid \$34.75 to deliver merchandise to a customer, terms FOB destination.  
 31 The company decides that the May 16 increase in the fund was too large. It reduces the fund by \$100, leaving a total of \$400.

**Required**

- Prepare journal entries (in dollars and cents) to establish the fund on May 1, to replenish it on May 15 and on May 31, and to reflect any increase or decrease in the fund balance on May 16 and May 31.

**Analysis Component**

- Explain how the company's financial statements are affected if the petty cash fund is not replenished and no entry is made on May 31.

**Check** (1) Cr. to Cash:  
 May 15, \$237.85; May 16,  
 \$200.00

Nakashima Gallery had the following petty cash transactions in February of the current year.

- Feb. 2 Wrote a \$400 check, cashed it, and gave the proceeds and the petty cashbox to Chloe Addison, the petty cashier.
- 5 Purchased bond paper for the copier for \$14.15 that is immediately used.
- 9 Paid \$32.50 COD shipping charges on merchandise purchased for resale, terms FOB shipping point. Nakashima uses the perpetual system to account for merchandise inventory.
- 12 Paid \$7.95 postage to express mail a contract to a client.
- 14 Reimbursed Adina Sharon, the manager, \$68 for business mileage on her car.
- 20 Purchased stationery for \$67.77 that is immediately used.
- 23 Paid a courier \$20 to deliver merchandise sold to a customer, terms FOB destination.
- 25 Paid \$13.10 COD shipping charges on merchandise purchased for resale, terms FOB shipping point.
- 27 Paid \$54 for postage expenses.
- 28 The fund had \$120.42 remaining in the petty cash box. Sorted the petty cash receipts by accounts affected and exchanged them for a check to reimburse the fund for expenditures.
- 28 The petty cash fund amount is increased by \$100 to a total of \$500.

### Required

1. Prepare the journal entry to establish the petty cash fund.
2. Prepare a petty cash payments report for February with these categories: delivery expense, mileage expense, postage expense, merchandise inventory (for transportation-in), and office supplies expense. Sort the payments into the appropriate categories and total the expenditures in each category.
3. Prepare the journal entries (in dollars and cents) for part 2 to both (a) reimburse and (b) increase the fund amount.

### Problem 8-3A

Establish, reimburse, and increase petty cash

P2

**Check** (3a & 3b) Total Cr. to Cash \$379.58

The following information is available to reconcile Branch Company's book balance of cash with its bank statement cash balance as of July 31, 2015.

- a. On July 31, the company's Cash account has a \$27,497 debit balance, but its July bank statement shows a \$27,233 cash balance.
- b. Check No. 3031 for \$1,482 and Check No. 3040 for \$558 were outstanding on the June 30 bank reconciliation. Check No. 3040 is listed with the July canceled checks, but Check No. 3031 is not. Also, Check No. 3065 for \$382 and Check No. 3069 for \$2,281, both written in July, are not among the canceled checks on the July 31 statement.
- c. In comparing the canceled checks on the bank statement with the entries in the accounting records, it is found that Check No. 3056 for July rent was correctly written and drawn for \$1,270 but was erroneously entered in the accounting records as \$1,250.
- d. A credit memorandum enclosed with the July bank statement indicates the bank collected \$8,000 cash on a noninterest-bearing note for Branch, deducted a \$45 collection fee, and credited the remainder to its account. Branch had not recorded this event before receiving the statement.
- e. A debit memorandum for \$805 lists a \$795 NSF check plus a \$10 NSF charge. The check had been received from a customer, Evan Shaw. Branch has not yet recorded this check as NSF.
- f. Enclosed with the July statement is a \$25 debit memorandum for bank services. It has not yet been recorded because no previous notification had been received.
- g. Branch's July 31 daily cash receipts of \$11,514 were placed in the bank's night depository on that date but do not appear on the July 31 bank statement.

### Required

1. Prepare the bank reconciliation for this company as of July 31, 2015.
2. Prepare the journal entries necessary to bring the company's book balance of cash into conformity with the reconciled cash balance as of July 31, 2015.

### Problem 8-4A

Prepare a bank reconciliation and record adjustments

P3

**Check** (1) Reconciled balance, \$34,602; (2) Cr. Notes Receivable \$8,000

### Analysis Component

3. Assume that the July 31, 2015, bank reconciliation for this company is prepared and some items are treated incorrectly. For each of the following errors, explain the effect of the error on (i) the adjusted bank statement cash balance and (ii) the adjusted Cash account book balance.
  - a. The company's unadjusted Cash account balance of \$27,497 is listed on the reconciliation as \$27,947.
  - b. The bank's collection of the \$8,000 note less the \$45 collection fee is added to the bank statement cash balance on the reconciliation.

**Problem 8-5A**

Prepare a bank reconciliation and record adjustments

Chavez Company most recently reconciled its bank statement and book balances of cash on August 31 and it reported two checks outstanding, No. 5888 for \$1,028.05 and No. 5893 for \$494.25. The following information is available for its September 30, 2015, reconciliation.

**From the September 30 Bank Statement**

PREVIOUS BALANCE		TOTAL CHECKS AND DEBITS	TOTAL DEPOSITS AND CREDITS	CURRENT BALANCE
16,800.45		9,620.05	11,272.85	18,453.25

CHECKS AND DEBITS			DEPOSITS AND CREDITS		DAILY BALANCE	
Date	No.	Amount	Date	Amount	Date	Amount
09/03	5888	1,028.05	09/05	1,103.75	08/31	16,800.45
09/04	5902	719.90	09/12	2,226.90	09/03	15,772.40
09/07	5901	1,824.25	09/21	4,093.00	09/04	15,052.50
09/17		600.25 NSF	09/25	2,351.70	09/05	16,156.25

	30	Total disbursements	D23		9,332.05	17,404.20

**Additional Information**

Check No. 5904 is correctly drawn for \$2,090 to pay for computer equipment; however, the recordkeeper misread the amount and entered it in the accounting records with a debit to Computer Equipment and a credit to Cash of \$2,060. The NSF check shown in the statement was originally received from a customer, S. Nilson, in payment of her account. Its return has not yet been recorded by the company. The

credit memorandum is from the collection of a \$1,500 note for Chavez Company by the bank. The bank deducted a \$15 collection fee. The collection and fee are not yet recorded.

### Required

1. Prepare the September 30, 2015, bank reconciliation for this company.
2. Prepare the journal entries (in dollars and cents) to adjust the book balance of cash to the reconciled balance.

**Check** (1) Reconciled balance, \$18,271.45; (2) Cr. Notes Receivable \$1,500.00

### Analysis Component

3. The bank statement reveals that some of the prenumbered checks in the sequence are missing. Describe three situations that could explain this.

For each of these five separate cases, identify the principle(s) of internal control that is violated. Recommend what the business should do to ensure adherence to principles of internal control.

1. Latisha Tally is the company's computer specialist and oversees its computerized payroll system. Her boss recently asked her to put password protection on all office computers. Latisha has put a password in place that allows only the boss access to the file where pay rates are changed and personnel are added or deleted from the payroll.
2. Marker Theater has a computerized order-taking system for its tickets. The system is active all week and backed up every Friday night.
3. Sutton Company has two employees handling acquisitions of inventory. One employee places purchase orders and pays vendors. The second employee receives the merchandise.
4. The owner of Super Pharmacy uses a check protector to perforate checks, making it difficult for anyone to alter the amount of the check. The check protector is on the owner's desk in an office that contains company checks and is normally unlocked.
5. Lavina Company is a small business that has separated the duties of cash receipts and cash disbursements. The employee responsible for cash disbursements reconciles the bank account monthly.

## PROBLEM SET B

### Problem 8-1B

Analyzing internal control

Moya Co. establishes a petty cash fund for payments of small amounts. The following transactions involving the petty cash fund occurred in January (the last month of the company's fiscal year).

- Jan. 3 A company check for \$150 is written and made payable to the petty cashier to establish the petty cash fund.
- 14 A company check is written to replenish the fund for the following expenditures made since January 3.
- a. Purchased office supplies for \$14.29 that are immediately used up.
  - b. Paid \$19.60 COD shipping charges on merchandise purchased for resale, terms FOB shipping point. Moya uses the perpetual system to account for inventory.
  - c. Paid \$38.57 to All-Tech for minor repairs to a computer.
  - d. Paid \$12.82 for items classified as miscellaneous expenses.
  - e. Counted \$62.28 remaining in the petty cash box.
- 15 Prepared a company check for \$50 to increase the fund to \$200.
- 31 The petty cashier reports that \$17.35 remains in the fund. A company check is written to replenish the fund for the following expenditures made since January 14.
- f. Paid \$50 to *The Smart Shopper* for an advertisement in January's newsletter.
  - g. Paid \$48.19 for postage expenses.
  - h. Paid \$78 to Smooth Delivery for delivery of merchandise, terms FOB destination.
- 31 The company decides that the January 15 increase in the fund was too little. It increases the fund by another \$50, leaving a total of \$250.

### Problem 8-2B

Establishing, reimbursing, and adjusting petty cash

P2

### Required

1. Prepare journal entries (in dollars and cents) to establish the fund on January 3, to replenish it on January 14 and January 31, and to reflect any increase or decrease in the fund balance on January 15 and 31.

**Check** (1) Cr. to Cash: Jan. 14, \$87.72; Jan. 31 (total), \$232.65

### Analysis Component

2. Explain how the company's financial statements are affected if the petty cash fund is not replenished and no entry is made on January 31.

**Problem 8-3B**

Establish, reimburse, and increase petty cash

P2

Blues Music Center had the following petty cash transactions in March of the current year.

- March 5 Wrote a \$250 check, cashed it, and gave the proceeds and the petty cashbox to Jen Rouse, the petty cashier.
- 6 Paid \$12.50 COD shipping charges on merchandise purchased for resale, terms FOB shipping point. Blues uses the perpetual system to account for merchandise inventory.
- 11 Paid \$10.75 delivery charges on merchandise sold to a customer, terms FOB destination.
- 12 Purchased file folders for \$14.13 that are immediately used.
- 14 Reimbursed Bob Geldof, the manager, \$11.65 for office supplies purchased and used.
- 18 Purchased printer paper for \$20.54 that is immediately used.
- 27 Paid \$45.10 COD shipping charges on merchandise purchased for resale, terms FOB shipping point.
- 28 Paid postage expenses of \$18.
- 30 Reimbursed Geldof \$56.80 for business car mileage.
- 31 Cash of \$61.53 remained in the fund. Sorted the petty cash receipts by accounts affected and exchanged them for a check to reimburse the fund for expenditures.
- 31 The petty cash fund amount is increased by \$50 to a total of \$300.

**Required**

1. Prepare the journal entry to establish the petty cash fund.
2. Prepare a petty cash payments report for March with these categories: delivery expense, mileage expense, postage expense, merchandise inventory (for transportation-in), and office supplies expense. Sort the payments into the appropriate categories and total the expenses in each category.
3. Prepare the journal entries (in dollars and cents) for part 2 to both (a) reimburse and (b) increase the fund amount.

**Check** (2) Total expenses  
\$189.47

(3a & 3b) Total Cr.  
to Cash \$238.47

**Problem 8-4B**

Prepare a bank reconciliation and record adjustments

P3

The following information is available to reconcile Severino Co.'s book balance of cash with its bank statement cash balance as of December 31, 2015.

- a. The December 31 cash balance according to the accounting records is \$32,878.30, and the bank statement cash balance for that date is \$46,822.40.
- b. Check No. 1273 for \$4,589.30 and Check No. 1282 for \$400, both written and entered in the accounting records in December, are not among the canceled checks. Two checks, No. 1231 for \$2,289 and No. 1242 for \$410.40, were outstanding on the most recent November 30 reconciliation. Check No. 1231 is listed with the December canceled checks, but Check No. 1242 is not.
- c. When the December checks are compared with entries in the accounting records, it is found that Check No. 1267 had been correctly drawn for \$3,456 to pay for office supplies but was erroneously entered in the accounting records as \$3,465.
- d. Two debit memoranda are enclosed with the statement and are unrecorded at the time of the reconciliation. One debit memorandum is for \$762.50 and dealt with an NSF check for \$745 received from a customer, Titus Industries, in payment of its account. The bank assessed a \$17.50 fee for processing it. The second debit memorandum is a \$99 charge for check printing. Severino did not record these transactions before receiving the statement.
- e. A credit memorandum indicates that the bank collected \$19,000 cash on a note receivable for the company, deducted a \$20 collection fee, and credited the balance to the company's Cash account. Severino did not record this transaction before receiving the statement.
- f. Severino's December 31 daily cash receipts of \$9,583.10 were placed in the bank's night depository on that date but do not appear on the December 31 bank statement.

**Required**

1. Prepare the bank reconciliation for this company as of December 31, 2015.
2. Prepare the journal entries (in dollars and cents) necessary to bring the company's book balance of cash into conformity with the reconciled cash balance as of December 31, 2015.

**Analysis Component**

3. Explain the nature of the communications conveyed by a bank when the bank sends the depositor (a) a debit memorandum and (b) a credit memorandum.

**Check** (1) Reconciled  
balance, \$51,005.80;  
(2) Cr. Notes Receivable  
\$19,000.00

Shamara Systems most recently reconciled its bank balance on April 30 and reported two checks outstanding at that time, No. 1771 for \$781 and No. 1780 for \$1,425.90. The following information is available for its May 31, 2015, reconciliation.

**Problem 8-5B**

Prepare a bank reconciliation and record adjustments

P3

**From the May 31 Bank Statement**

PREVIOUS BALANCE		TOTAL CHECKS AND DEBITS		TOTAL DEPOSITS AND CREDITS		CURRENT BALANCE

Date		Explanation	PR	Debit	Credit	Balance
Apr.	30	Balance				16,083.80
May	31	Total receipts	R7	11,944.10		28,027.90
	31	Total disbursements	D8		12,850.60	15,177.30

**Additional Information**

Check No. 1788 is correctly drawn for \$654 to pay for May utilities; however, the recordkeeper misread the amount and entered it in the accounting records with a debit to Utilities Expense and a credit to Cash for \$644. The bank paid and deducted the correct amount. The NSF check shown in the statement

was originally received from a customer, W. Sox, in payment of her account. The company has not yet recorded its return. The credit memorandum is from a \$7,400 note that the bank collected for the company. The bank deducted a \$50 collection fee and deposited the remainder in the company's account. The collection and fee have not yet been recorded.

### Required

1. Prepare the May 31, 2015, bank reconciliation for Shamara Systems.
2. Prepare the journal entries (in dollars and cents) to adjust the book balance of cash to the reconciled balance.

### Analysis Component

3. The bank statement reveals that some of the prenumbered checks in the sequence are missing. Describe three possible situations to explain this.

**Check** (1) Reconciled balance, \$22,071.50; (2) Cr. Notes Receivable \$7,400.00

## SERIAL PROBLEM

Business Solutions

P3

(This serial problem began in Chapter 1 and continues through most of the book. If previous chapter segments were not completed, the serial problem can begin at this point. It is helpful, but not necessary, to use the Working Papers that accompany the book.)

**SP 8** Santana Rey receives the March bank statement for Business Solutions on April 11, 2016. The March 31 bank statement shows an ending cash balance of \$67,566. A comparison of the bank statement with the general ledger Cash account, No. 101, reveals the following.

- a. S. Rey notices that the bank erroneously cleared a \$500 check against her account in March that she did not issue. The check documentation included with the bank statement shows that this check was actually issued by a company named Business Systems.
- b. On March 25, the bank issued a \$50 debit memorandum for the safety deposit box that Business Solutions agreed to rent from the bank beginning March 25.
- c. On March 26, the bank issued a \$102 debit memorandum for printed checks that Business Solutions ordered from the bank.
- d. On March 31, the bank issued a credit memorandum for \$33 interest earned on Business Solutions's checking account for the month of March.
- e. S. Rey notices that the check she issued for \$128 on March 31, 2016, has not yet cleared the bank.
- f. S. Rey verifies that all deposits made in March do appear on the March bank statement.
- g. The general ledger Cash account, No. 101, shows an ending cash balance per books of \$68,057 as of March 31 (prior to any reconciliation).

### Required

1. Prepare a bank reconciliation for Business Solutions for the month ended March 31, 2016.
2. Prepare any necessary adjusting entries. Use Miscellaneous Expenses, No. 677, for any bank charges. Use Interest Revenue, No. 404, for any interest earned on the checking account for the month of March.

**Check** (1) Adj. bank bal. \$67,938

## GL GENERAL LEDGER PROBLEM

Available only in Connect Plus

 **connect**<sup>plus</sup>  
ACCOUNTING

The **General Ledger** tool in *Connect* automates several of the procedural steps in the accounting cycle so that the financial professional can focus on the impacts of each transaction on the various financial reports.

**GL 8-1** General Ledger assignment GL 8-1, based on Problem 8-2A, focuses on transactions related to the petty cash fund and highlights the impact each transaction has on net income, if any. Prepare the journal entries related to the petty cash fund and assess the impact of each transaction on the company's net income, if any.

## Beyond the Numbers

**BTN 8-1** Refer to **Apple**'s financial statements in Appendix A to answer the following.

- For both fiscal years ended September 28, 2013, and September 29, 2012, identify the total amount of cash and cash equivalents. Determine the percent (rounded to one decimal) that this amount represents of total current assets, total current liabilities, total shareholders' equity, and total assets for both years. Comment on any trends.
- For fiscal years ended September 28, 2013, and September 29, 2012, use the information in the statement of cash flows to determine the percent change (rounded to one decimal) between the beginning and ending year amounts of cash and cash equivalents.
- Compute the days' sales uncollected (rounded to two decimals) as of September 28, 2013, and September 29, 2012. Has the collection of receivables improved? Are accounts receivable an important asset for Apple? Explain.

### Fast Forward

- Access Apple's financial statements for fiscal years ending after September 28, 2013, from its website ([Apple.com](http://Apple.com)) or the SEC's EDGAR database ([www.SEC.gov](http://www.SEC.gov)). Recompute its days' sales uncollected for years ending after September 28, 2013. Compare this to the days' sales uncollected for fiscal years ended September 28, 2013, and September 29, 2012.

## REPORTING IN ACTION

C2 A1 

## APPLE

**BTN 8-2** Key comparative figures for **Apple** and **Google** follow.

(\$ millions)	Apple		Google	
	Current Year	Prior Year	Current Year	Prior Year
Accounts receivable . . . . .	\$ 13,102	\$ 10,930	\$ 8,882	\$ 7,885
Net sales . . . . .	170,910	156,508	59,825	50,175

## COMPARATIVE ANALYSIS

A1 

## APPLE GOOGLE

### Required

Compute days' sales uncollected (rounded to two decimals) for these companies for each of the two years shown. Comment on any trends for the companies. Which company has the largest percent change (rounded to two decimals) in days' sales uncollected?

**BTN 8-3** Harriet Knox, Ralph Patton, and Marcia Diamond work for a family physician, Dr. Gwen Conrad, who is in private practice. Dr. Conrad is knowledgeable about office management practices and has segregated the cash receipt duties as follows. Knox opens the mail and prepares a triplicate list of money received. She sends one copy of the list to Patton, the cashier, who deposits the receipts daily in the bank. Diamond, the recordkeeper, receives a copy of the list and posts payments to patients' accounts. About once a month the office clerks have an expensive lunch they pay for as follows. First, Patton endorses a patient's check in Dr. Conrad's name and cashes it at the bank. Knox then destroys the remittance advice accompanying the check. Finally, Diamond posts payment to the customer's account as a miscellaneous credit. The three justify their actions by their relatively low pay and knowledge that Dr. Conrad will likely never miss the money.

## ETHICS CHALLENGE

C1  

### Required

- Who is the best person in Dr. Conrad's office to reconcile the bank statement?
- Would a bank reconciliation uncover this office fraud?
- What are some procedures to detect this type of fraud?
- Suggest additional internal controls that Dr. Conrad could implement.

**COMMUNICATING  
IN PRACTICE**

**BTN 8-4<sup>B</sup>** Assume you are a business consultant. The owner of a company sends you an e-mail expressing concern that the company is not taking advantage of its discounts offered by vendors. The company currently uses the gross method of recording purchases. The owner is considering a review of all invoices and payments from the previous period. Due to the volume of purchases, however, the owner recognizes that this is time-consuming and costly. The owner seeks your advice about monitoring purchase discounts in the future. Provide a response in memorandum form.

**TAKING IT TO  
THE NET**

**BTN 8-5** Visit the Association of Certified Fraud Examiners website at [acfe.com](http://acfe.com). Find and open the file “2014 Report to the Nation.” Read the two-page Executive Summary and fill in the following blanks. (The report is under its *Fraud Resources* tab or use the *Search* tab.)

1. The median loss caused by the frauds in our study was \_\_\_\_\_. Additionally, \_\_\_\_\_ of the cases involved losses of at least \$1 million.
2. The typical organization loses \_\_\_\_\_ of revenues each year to fraud; this translates to a potential projected global fraud loss of nearly \_\_\_\_\_.
3. The median duration—the amount of time from when the fraud commenced until it was detected—for the fraud cases reported to us was \_\_\_\_\_.
4. Asset misappropriations are the most common fraud, occurring in \_\_\_\_\_ of the cases in our study, as well as the least costly, causing a median loss of \_\_\_\_\_.
5. Only \_\_\_\_\_ of cases involved financial statement fraud, but those cases had the greatest financial impact, with a median loss of \_\_\_\_\_. Corruption schemes fell in the middle in terms of both frequency (\_\_\_\_\_ of cases) and median loss (\_\_\_\_\_).
6. Over \_\_\_\_\_ of all cases were detected by a tip—more than twice the rate of any other detection method.
7. Owners/executives only accounted for \_\_\_\_\_ of all cases, but they caused a median loss of \_\_\_\_\_. Employees committed \_\_\_\_\_ of occupational frauds but only caused a median loss of \_\_\_\_\_. Managers ranked in the middle, committing \_\_\_\_\_ of frauds with a median loss of \_\_\_\_\_.
8. Approximately \_\_\_\_\_ of the frauds in our study were committed by individuals working in one of seven departments: accounting, operations, sales, executive/upper management, customer service, purchasing, and finance.
9. The vast majority of occupational fraudsters are first-time offenders; only \_\_\_\_\_ had been convicted of a fraud-related offense prior to committing the crimes in our study. Furthermore, \_\_\_\_\_ of fraudsters had never previously been punished or terminated by an employer for fraud-related conduct.

**TEAMWORK IN  
ACTION**

C1

**BTN 8-6** Organize the class into teams. Each team must prepare a list of 10 internal controls a consumer could observe in a typical retail department store. When called upon, the team’s spokesperson must be prepared to share controls identified by the team that have not been shared by another team’s spokesperson.

**ENTREPRENEURIAL  
DECISION**

**BTN 8-7** Review the opening feature of this chapter that highlights Todd Masonis and Cameron Ring and their company **Dandelion Chocolate**. Their company has one retail store with plans to open at least one additional kiosk in the Ferry Building in San Francisco. Other retail outlets and expansion plans may be in the works.

**Required**

1. List the seven principles of internal control and explain how a retail outlet might implement each of the principles in its store.
2. Do you believe that a retail outlet will need to add controls to the business as it expands? Explain.

**BTN 8-8** Visit an area of your college that serves the student community with either products or services. Some examples are food services, libraries, and bookstores. Identify and describe between four and eight internal controls being implemented.

**HITTING THE ROAD**

**BTN 8-9** The following information is from **Samsung** ([www.Samsung.com](http://www.Samsung.com)) or its financial statements in Appendix A), which is a leading manufacturer of consumer electronic products.

**GLOBAL DECISION**

₩ in millions	Current Year	Prior Year
Cash .....	₩ 16,284,780	₩ 18,791,460
Accounts receivable .....	27,875,934	26,674,596
Current assets .....	110,760,271	87,269,017
Total assets .....	214,075,018	181,071,570
Current liabilities .....	51,315,409	46,933,052
Shareholders' equity .....	150,016,010	121,480,206
Net sales .....	228,692,667	201,103,613

**Samsung**

**Required**

- For each year, compute the percentage (rounded to one decimal) that cash represents of current assets, total assets, current liabilities, and shareholders' equity. Comment on any trends in these percentages.
- Determine the percentage change (rounded to one decimal) between the current and prior year cash balances.
- Compute the days' sales uncollected (rounded to one decimal) at the end of both the current year and the prior year. Has the collection of receivables improved? Explain.

**ANSWERS TO MULTIPLE CHOICE QUIZ**

1. e; The entry follows.

Debits to expenses (or assets) .....	420
Cash Over and Short .....	5
Cash .....	425

4. d:  $(\$6,720/\$84,000) \times 365 = \underline{29.2 \text{ days}}$

5. b; The entry follows.

Merchandise Inventory* .....	5,880
Accounts Payable .....	5,880

\* $\$6,000 \times 98\%$

2. a; recognizes cash collection of note by bank.

3. a; the bank reconciliation follows.

Bank Reconciliation November 30			
Balance per bank statement .....	\$1,895	Balance per books .....	\$1,742
Add: Deposit in transit .....	795	Add: Note collected less fee .....	320
Deduct: Outstanding checks .....	(638)	Deduct: Service charge .....	(10)
Reconciled balance .....	<u>\$2,052</u>	Reconciled balance .....	<u>\$2,052</u>

# Accounting for Receivables

## Chapter Preview

### ACCOUNTS RECEIVABLE

- C1** Recognizing accounts receivable
- P1** Valuing accounts receivable
- P2** Estimating and recording bad debts

### NOTES RECEIVABLE

- C2** Computing maturity and interest  
Recognizing notes receivable
- P3** Valuing and settling notes receivable

### DISPOSAL AND ANALYSIS OF RECEIVABLES

- C3** Selling and pledging receivables
- A1** Assessing accounts receivable turnover

## Learning Objectives

### CONCEPTUAL

- C1** Describe accounts receivable and how they occur and are recorded.
- C2** Describe a note receivable, the computation of its maturity date, and the recording of its existence.
- C3** Explain how receivables can be converted to cash before maturity.

### ANALYTICAL

- A1** Compute accounts receivable turnover and use it to help assess financial condition.

### PROCEDURAL

- P1** Apply the direct write-off method to account for accounts receivable.

- P2** Apply the allowance method and estimate uncollectibles based on sales and accounts receivable.
- P3** Record the honoring and dishonoring of a note and adjustments for interest.

PHILADELPHIA—"My parents were blue-collar workers and told me I could reach for the stars and do anything I wanted to do," explains Rakia Reynolds. With that backdrop, Rakia set out on a journey, a journey that included work as a college residential advisor, TV producer, and magazine editorial writer. "I want to be living proof that you can do everything you put your mind to."

Rakia eventually put her mind to launching **Skai Blue Media** ([SkaiBlueMedia.com](http://SkaiBlueMedia.com)), a multimedia public relations agency with an emphasis on lifestyle, technology, and fashion. As sales grew, she struggled. "I wish I could have found someone who could have guided me," says Rakia, "especially concerning the financial aspects of running a business." She spent many evenings and weekends learning about accounting and managing expenses. "It's exhausting for sure," admits Rakia. "But it's also super rewarding." Rakia's attention to detail carried over when she learned to monitor receivables, including decisions on credit sales and policies for extending credit.

"I was always more intrigued by the business side," explains Rakia. That business focus helped ensure that her credit sales were extended to customers in good credit standing. Rakia knows her clients, including who pays and when. Explains Rakia, we understand our customers—inside and out—including cash payment patterns that allow us to estimate uncollectibles and minimize bad debts. "Look at financial projections," insists Rakia. "Looking at projections is one of the key things for growing your business." Adding clients who are projected to pay is part of the recipe for success.

A commitment to quality customers is propelling Skai Blue Media's sales and shattering Rakia's most optimistic goals. "Every year you want to be bigger, you want to be better, you want to be more effective and efficient," explains Rakia. "When I took a risk, it was not a great feeling." Accordingly, Rakia manages all accounts and notes receivables, and reviews the allowance for doubtful accounts regularly. "Reconcile finances and cash flows," says Rakia. "See where you can improve."

When asked what her favorite tip is for a budding entrepreneur, Rakia says: "QuickBooks, QuickBooks, and QuickBooks."

Courtesy of Skai Blue Media

## PR Maven

*"Love what you do, live what you love"*

—Rakia Reynolds

She explains that accounting provides discipline for decisions and the information to make them. "When you're an entrepreneur, it is the most lonely road."

# ACCOUNTS RECEIVABLE

**C1** Describe accounts receivable and how they occur and are recorded.

A *receivable* is an amount due from another party. The two most common receivables are accounts receivable and notes receivable. Other receivables include interest receivable, rent receivable, tax refund receivable, and receivables from employees. **Accounts receivable** are amounts due from customers for credit sales. This section begins by describing how accounts receivable occur. It includes receivables that occur when customers use credit cards issued by third parties and when a company gives credit directly to customers. When a company does extend credit directly to customers, it (1) maintains a separate account receivable for each customer and (2) accounts for bad debts from credit sales.

## Recognizing Accounts Receivable

Accounts receivable occur from credit sales to customers. The amount of credit sales has increased in recent years, reflecting several factors including an efficient financial system. Retailers such as **Costco** and **Best Buy** hold millions of dollars in accounts receivable. Similar amounts are held by wholesalers such as **SUPERVALU** and **SYSCO**. Exhibit 9.1 shows recent dollar amounts of receivables and their percent of total assets for four well-known companies.

### EXHIBIT 9.1

Accounts Receivable for Selected Companies

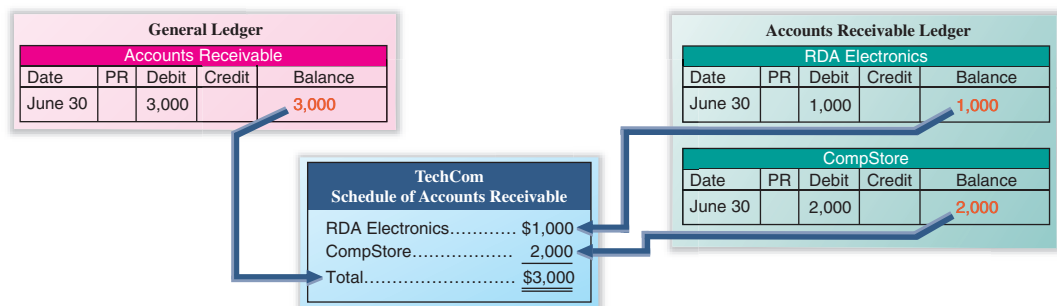

**Sales on Credit** Credit sales are recorded by increasing (debiting) Accounts Receivable. A company must also maintain a separate account for each customer that tracks how much that customer purchases, has already paid, and still owes. This information provides the basis for sending bills to customers and for other business analyses. To maintain this information, companies that extend credit directly to their customers keep a separate account receivable for each one of them. The general ledger continues to have a single Accounts Receivable account (called a *control* account) along with the other financial statement accounts, but a supplementary record is created to maintain a separate account for each customer. This supplementary record is called the *accounts receivable ledger* (or *accounts receivable subsidiary ledger*).

Exhibit 9.2 shows the relation between the Accounts Receivable account in the general ledger and its individual customer accounts in the accounts receivable ledger for TechCom, a small electronics wholesaler. This exhibit reports a \$3,000 ending balance of TechCom’s accounts receivable for June 30. TechCom’s transactions are mainly in cash, but it has two major credit

### EXHIBIT 9.2

General Ledger and the Accounts Receivable Ledger (before July 1 transactions)

customers: CompStore and RDA Electronics. Its *schedule of accounts receivable* shows that the \$3,000 balance of the Accounts Receivable account in the general ledger equals the total of its two customers' balances in the accounts receivable ledger.

To see how accounts receivable from credit sales are recognized in the accounting records, we look at two transactions on July 1 between TechCom and its credit customers—see Exhibit 9.3. The first is a credit sale of \$950 to CompStore. A credit sale is posted with both a debit to the Accounts Receivable account in the general ledger and a debit to the customer account in the accounts receivable ledger. The second transaction is a collection of \$720 from RDA Electronics from a prior credit sale. Cash receipts from a credit customer are posted with a credit to the Accounts Receivable account in the general ledger and flow through to credit the customer account in the accounts receivable ledger. (Posting debits or credits to Accounts Receivable in two separate ledgers does not violate the requirement that debits equal credits. The equality of debits and credits is maintained in the general ledger. The accounts receivable ledger is a *supplementary* record providing information on each customer.)

July 1	Accounts Receivable—CompStore.....	950	
	Sales .....		950
	<i>To record credit sales.*</i>		
July 1	Cash .....	720	
	Accounts Receivable—RDA Electronics .....		720
	<i>To record collection of credit sales.</i>		

\* We omit the entry to Dr. Cost of Sales and Cr. Merchandise Inventory to focus on sales and receivables.

Exhibit 9.4 shows the general ledger and the accounts receivable ledger after recording the two July 1 transactions. The general ledger shows the effects of the sale, the collection, and the resulting balance of \$3,230. These events are also reflected in the individual customer accounts: RDA Electronics has an ending balance of \$280, and CompStore's ending balance is \$2,950. The \$3,230 sum of the individual accounts equals the debit balance of the Accounts Receivable account in the general ledger.

### EXHIBIT 9.4

General Ledger and the Accounts Receivable Ledger (after July 1 transactions)

Like TechCom, many large retailers such as **Target** and **JCPenney** sell on credit. Many also maintain their own credit cards to grant credit to approved customers and to earn interest on any balance not paid within a specified period of time. This allows them to avoid the fee charged by credit card companies. The entries in this case are the same as those for TechCom except for the possibility of added interest revenue. If a customer owes interest on a bill, we debit Interest Receivable and credit Interest Revenue for that amount. (Many retailers require clerks to ask customers during checkout if they wish to apply for a store credit card—sweeteners are often used such as: *save 10% off today's purchases if you apply now.*)

**Credit Card Sales** Many companies allow their customers to pay for products and services using third-party credit cards such as **Visa**, **MasterCard**, or **American Express**, and debit cards (also called ATM or bank cards). This practice gives customers the ability to make purchases without cash or checks. Once credit is established with a credit card company or bank, the customer does not have to open an account with each store. Customers using these cards can make single monthly payments instead of several payments to different creditors and can defer their payments.

Ken Reid/Photographer's Choice/Getty Images

**Point:** Visa USA now transacts more than \$1 trillion from its credit, debit, and prepaid cards.

Many sellers allow customers to use third-party credit cards and debit cards instead of granting credit directly for several reasons. First, the seller does not have to evaluate each customer’s credit standing or make decisions about who gets credit and how much. Second, the seller avoids the risk of extending credit to customers who cannot or do not pay. This risk is transferred to the card company. Third, the seller typically receives cash from the card company sooner than had it granted credit directly to customers. Fourth, a variety of credit options for customers offers a potential increase in sales volume. **Sears** historically offered credit only to customers using a Sears card but later changed its policy to permit customers to charge purchases to third-party credit card companies in a desire to increase sales. It reported: “SearsCharge increased its share of Sears retail sales even as the company expanded the payment options available to its customers with the acceptance . . . of Visa, MasterCard, and American Express in addition to the [Sears] Card.”

There are guidelines for how companies account for credit card and debit card sales. Some credit cards, but nearly all debit cards, credit a seller’s Cash account immediately upon deposit, via electronic funds transfer. The majority of credit cards, however, require the seller to remit a copy electronically of each receipt to the card company. Until payment is received, the seller has an account receivable from the card company. In both cases, the seller pays a fee for services provided by the card company, often ranging from 1% to 5% of card sales. This charge is deducted from the credit to the seller’s account or the cash payment to the seller. (Many retailers accept MasterCard and Visa, but not American Express. The reason is that American Express usually charges retailers a higher percentage fee than other credit card companies.)

**Decision Insight**

**Debit Card vs. Credit Card** A buyer’s debit card purchase reduces the buyer’s cash account balance at the card company, which is often a bank. Since the buyer’s cash account balance is a liability (with a credit balance) for the card company to the buyer, the card company would debit that account for a buyer’s purchase—hence, the term *debit card*. A credit card reflects authorization by the card company of a line of credit for the buyer with preset interest rates and payment terms—hence, the term *credit card*. Most card companies waive interest charges if the buyer pays its balance each month. ■

The procedures used in accounting for credit card sales depend on whether cash is received immediately on deposit or cash receipt is delayed until the credit card company makes the payment.

**Cash Received Immediately on Deposit** To illustrate, if TechCom has \$100 of credit card sales with a 4% fee, and its \$96 cash is received immediately on deposit, the entry is

**Point:** Web merchants pay twice as much in credit card association fees as other retailers because they suffer 10 times as much fraud.

$$\begin{array}{r} \text{Assets} = \text{Liabilities} + \text{Equity} \\ +96 \qquad \qquad \qquad +100 \\ \qquad \qquad \qquad \qquad \qquad -4 \end{array}$$

	Credit Card Expense .....	4	
	Sales .....		100
	<i>To record credit card sales less a 4% credit card expense.*</i>		

\* We omit the entry to Dr. Cost of Sales and Cr. Merchandise Inventory to focus on credit card expense.

**Point:** Expense recognition principle requires that we record credit card expense when we record sales.

$$\begin{array}{r} \text{Assets} = \text{Liabilities} + \text{Equity} \\ +96 \qquad \qquad \qquad +100 \\ \qquad \qquad \qquad \qquad \qquad -4 \end{array}$$

**Cash Received Sometime after Deposit** However, if instead TechCom must remit electronically the credit card sales receipts to the credit card company and wait for the \$96 cash payment, the entry on the date of sale is

July 15	<b>Accounts Receivable—Credit Card Co.</b> .....	96	
	Credit Card Expense .....	4	
	Sales .....		100
	<i>To record credit card sales less 4% credit card expense.*</i>		

\* We omit the entry to Dr. Cost of Sales and Cr. Merchandise Inventory to focus on credit card expense.

When cash is later received from the credit card company, usually through electronic funds transfer, the entry is

$$\begin{array}{r} \text{Assets} = \text{Liabilities} + \text{Equity} \\ +96 \\ -96 \end{array}$$

July 20	Cash .....	96	
	Accounts Receivable—Credit Card Co. ....		96
	<i>To record cash receipt.</i>		

Some firms report credit card expense in the income statement as a type of discount deducted from sales to get net sales. Other companies classify it as a selling expense or even as an administrative expense. Arguments can be made for each approach. In this book we classify credit card expense as a selling expense.

**Point:** Third-party credit card costs can be large. JCPenney reported third-party credit card costs exceeding \$10 million.

**Installment Sales and Receivables** Many companies allow their credit customers to make periodic payments over several months. For example, **Ford Motor Company** reports more than \$70 billion in installment receivables. The seller refers to such assets as *installment accounts* (or *finance*) *receivable*, which are amounts owed by customers from credit sales for which payment is required in periodic amounts over an extended time period. Source documents for installment accounts receivable include sales slips or invoices describing the sales transactions. The customer is usually charged interest. Although installment accounts receivable can have credit periods of more than one year, they are classified as current assets if the seller regularly offers customers such terms.

## Decision Maker

**Entrepreneur** As a small retailer, you are considering allowing customers to buy merchandise using credit cards. Until now, your store accepted only cash and checks. What analysis do you use to make this decision? ■ [Answers follow the chapter's Summary.]

A small retailer allows customers to use two different credit cards in charging purchases. With the AA Bank Card, the retailer receives an immediate credit to its account when it deposits sales receipts. AA Bank assesses a 5% service charge for credit card sales. The second credit card that the retailer accepts is the VIZA Card. The retailer sends its accumulated receipts to VIZA on a weekly basis and is paid by VIZA about a week later. VIZA assesses a 3% charge on sales for using its card. Prepare journal entries to record the following selected credit card transactions for the retailer. (The retailer uses the perpetual inventory system for recording sales.)

- Jan. 2 Sold merchandise for \$1,000 (that had cost \$600) and accepted the customer's AA Bank Card. The AA receipts are immediately deposited in the retailer's bank account.
- Jan. 6 Sold merchandise for \$400 (that had cost \$300) and accepted the customer's VIZA Card. Transferred \$400 of credit card receipts to VIZA, requesting payment.
- Jan. 16 Received VIZA's check for the January 6 billing, less the service charge.

### Valuing Accounts Receivable—Direct Write-Off Method

**P1**  
Apply the direct write-off method to account for accounts receivable.

When a company directly grants credit to its customers, it expects that some customers will not pay what they promised. The accounts of these customers are *uncollectible accounts*, commonly called **bad debts**. The total amount of uncollectible accounts is an expense of selling on credit. Why do companies sell on credit if they expect some accounts to be uncollectible? The answer is that companies believe that granting credit will increase total sales and net income enough to offset bad debts. Companies use two methods to account for uncollectible accounts: (1) direct write-off method and (2) allowance method. We describe both.

**Point:** Managers realize that some portion of credit sales will be uncollectible, but which credit sales are uncollectible is unknown.

**Recording and Writing Off Bad Debts** The **direct write-off method** of accounting for bad debts records the loss from an uncollectible account receivable when it is determined to be uncollectible. No attempt is made to predict bad debts expense. To illustrate, if TechCom determines on January 23 that it cannot collect \$520 owed to it by its customer J. Kent, it recognizes the loss using the direct write-off method as follows:

Assets = Liabilities + Equity  
- 520                      - 520

Jan. 23	Bad Debts Expense .....	520	
	Accounts Receivable—J. Kent .....		520
	<i>To write off an uncollectible account.</i>		

The debit in this entry charges the uncollectible amount directly to the current period's Bad Debts Expense account. The credit removes its balance from the Accounts Receivable account in the general ledger (and its subsidiary ledger).

**Point:** If a customer fails to pay within the credit period, most companies send out repeated billings and make other efforts to collect.

**Recovering a Bad Debt** Although uncommon, sometimes an account written off is later collected. This can be due to factors such as continual collection efforts or a customer's good fortune. If the account of J. Kent that was written off directly to Bad Debts Expense is later collected in full, the following two entries record this recovery:

**Point:** Recovery of a bad debt always requires two journal entries.

Assets = Liabilities + Equity  
+ 520                      + 520

Mar. 11	Accounts Receivable—J. Kent .....	520	
	Bad Debts Expense .....		520
	<i>To reinstate account previously written off.</i>		

Assets = Liabilities + Equity  
+ 520  
- 520

Mar. 11	Cash .....	520	
	Accounts Receivable—J. Kent .....		520
	<i>To record full payment of account.</i>		

**Assessing the Direct Write-Off Method** Examples of companies that use the direct write-off method include **Rand Medical Billing, Gateway Distributors, Microwave Satellite Technologies, First Industrial Realty, New Frontier Energy,** and **Sub Surface Waste Management.** The following disclosure by **Pharma-Bio Serv** is typical of the justification for this method: Bad debts are accounted for using the direct write-off method whereby an expense is recognized only when a specific account is determined to be uncollectible. The effect of using this method approximates that of the allowance method. Companies must weigh at least two accounting concepts when considering the use of the direct write-off method: the (1) matching principle and (2) materiality constraint.

**Direct write-off method**

- Advantages:**
- Simple
  - No estimates required
- Disadvantages:**
- Receivables and income temporarily overstated
  - Bad debts expense often not matched with sales

**Matching principle applied to bad debts.** The **matching (expense recognition) principle** requires expenses to be reported in the same accounting period as the sales they helped produce. This means that if extending credit to customers helped produce sales, the bad debts expense linked to those sales is matched and reported in the same period. The direct write-off method usually does *not* best match sales and expenses because bad debts expense is not recorded until an account becomes uncollectible, which often occurs in a period after that of the credit sale. To match bad debts expense with the sales it produces therefore requires a company to estimate future uncollectibles.

**Point:** Under direct write-off, expense is recorded each time an account is written off. Under the allowance method, expense is recorded with an adjusting entry equal to the total estimated uncollectibles for that period's sales.

**Materiality constraint applied to bad debts.** The **materiality constraint** states that an amount can be ignored if its effect on the financial statements is unimportant to users' business decisions. The materiality constraint permits the use of the direct write-off method when bad debts expenses are very small in relation to a company's other financial statement items such as sales and net income.

A retailer applies the direct write-off method in accounting for uncollectible accounts. Prepare journal entries to record its following selected transactions.

- Feb. 14 The retailer determines that it cannot collect \$400 of its accounts receivable from a customer named ZZZ Company.
- Apr. 1 ZZZ Company unexpectedly pays its account in full to the retailer, which then records its recovery of this bad debt.

**NEED-TO-KNOW 9-2**

Do More: QS 9-2, QS 9-3, E 9-3

**Valuing Accounts Receivable—Allowance Method**

The **allowance method** of accounting for bad debts matches the *estimated* loss from uncollectible accounts receivable against the sales they helped produce. We must use estimated losses because when sales occur, management does not know which customers will not pay their bills. This means that at the end of each period, the allowance method requires an estimate of the total bad debts expected to result from that period’s sales. This method has two advantages over the direct write-off method: (1) it records estimated bad debts expense in the period when the related sales are recorded and (2) it reports accounts receivable on the balance sheet at the estimated amount of cash to be collected.

**P2**  
Apply the allowance method and estimate uncollectibles based on sales and accounts receivable.

**Recording Bad Debts Expense** The allowance method estimates bad debts expense at the end of each accounting period and records it with an adjusting entry. TechCom, for instance, had credit sales of \$300,000 during its first year of operations. At the end of the first year, \$20,000 of credit sales remained uncollected. Based on the experience of similar businesses, TechCom estimated that \$1,500 of its accounts receivable would be uncollectible. This estimated expense is recorded with the following adjusting entry:

	Bad Debts Expense Recognized in
Direct write-off method . . . . .	The future when account is deemed uncollectible.
Allowance method . . . . .	Current period to yield realizable Accts. Rec. bal.

Dec. 31	Bad Debts Expense . . . . .	1,500	
	Allowance for Doubtful Accounts . . . . .		1,500
	<i>To record estimated bad debts.</i>		

$$\begin{array}{r} \text{Assets} = \text{Liabilities} + \text{Equity} \\ -1,500 \qquad \qquad \qquad -1,500 \end{array}$$

The estimated bad debts expense of \$1,500 is reported on the income statement (as either a selling expense or an administrative expense) and offsets the \$300,000 credit sales it helped produce. The **Allowance for Doubtful Accounts** is a contra asset account. A contra account is used instead of reducing accounts receivable directly because at the time of the adjusting entry, the company does not know which customers will not pay. After the bad debts adjusting entry is posted, TechCom’s account balances (in T-account form) for Accounts Receivable and its Allowance for Doubtful Accounts are as shown in Exhibit 9.5.

- Allowance method**
- Advantages:
- Receivables fairly stated
  - Bad debts expense is matched with sales
  - Writing off bad debt does not affect net receivables nor net income
- Disadvantages:
- Estimates required

Accounts Receivable		Allowance for Doubtful Accounts	
Dec. 31	20,000	Dec. 31	1,500

**EXHIBIT 9.5**  
General Ledger after Bad Debts Adjusting Entry

The Allowance for Doubtful Accounts credit balance of \$1,500 has the effect of reducing accounts receivable to its estimated realizable value. **Realizable value** refers to the expected

proceeds from converting an asset into cash. Although credit customers owe \$20,000 to Tech-Com, only \$18,500 is expected to be realized in cash collections from these customers. (Tech-Com continues to bill its customers a total of \$20,000, the amounts from the subsidiary ledger.) In the balance sheet, the Allowance for Doubtful Accounts is subtracted from Accounts Receivable and is often reported as shown in Exhibit 9.6.

**EXHIBIT 9.6**

Balance Sheet for the Allowance for Doubtful Accounts

Current assets		
<b>Accounts receivable</b> .....	<b>\$20,000</b>	
<b>Less allowance for doubtful accounts</b> .....	<b>1,500</b>	<b>\$18,500</b>

Sometimes the Allowance for Doubtful Accounts is not reported separately. This alternative presentation is shown in Exhibit 9.7 (also see Appendix A).

**EXHIBIT 9.7**

Alternative Presentation of the Allowance for Doubtful Accounts

Current assets	
<b>Accounts receivable (net of \$1,500 doubtful accounts)</b> .....	<b>\$18,500</b>

**Writing Off a Bad Debt** When specific accounts are identified as uncollectible, they are written off against the Allowance for Doubtful Accounts. To illustrate, TechCom decides that J. Kent’s \$520 account is uncollectible and makes the following entry to write it off.

Assets = Liabilities + Equity  
+520  
–520

Jan. 23	Allowance for Doubtful Accounts .....	520	
	Accounts Receivable—J. Kent. ....		520
	<i>To write off an uncollectible account.</i>		

**Point:** The Bad Debts Expense is not debited in the write-off because it was recorded in the period when sales occurred.

Posting this write-off entry to the Accounts Receivable account removes the amount of the bad debt from the general ledger (it is also posted to the accounts receivable subsidiary ledger). The general ledger accounts now appear as in Exhibit 9.8 (assuming no other transactions affecting these accounts).

**EXHIBIT 9.8**

General Ledger after Write-Off

Accounts Receivable			Allowance for Doubtful Accounts		
Dec. 31	20,000		Jan. 23	520	
		Jan. 23			520

**Point:** In posting a write-off, the ledger’s Explanation column indicates the reason for this credit so it is not misinterpreted as payment in full.

The write-off does *not* affect the realizable value of accounts receivable as shown in Exhibit 9.9. Neither total assets nor net income is affected by the write-off of a specific account. Instead, both assets and net income are affected in the period when bad debts expense is predicted and recorded with an adjusting entry.

**EXHIBIT 9.9**

Realizable Value before and after Write-Off of a Bad Debt

	Before Write-Off	After Write-Off
Accounts receivable .....	\$ 20,000	\$ 19,480
Less allowance for doubtful accounts .....	1,500	980
<b>Estimated realizable accounts receivable</b> .....	<b>\$18,500</b>	<b>\$18,500</b>

**Recovering a Bad Debt** When a customer fails to pay and the account is written off as uncollectible, his or her credit standing is jeopardized. To help restore credit standing, a customer sometimes volunteers to pay all or part of the amount owed. A company makes two entries when collecting an account previously written off by the allowance method. The first is to reverse the write-off and reinstate the customer’s account. The second entry records the collection of the reinstated account. To illustrate, if on March 11 Kent pays in full his account previously written off, the entries are

Assets = Liabilities + Equity  
+520  
–520

Mar. 11	Accounts Receivable—J. Kent .....	520	
	Allowance for Doubtful Accounts .....		520
	<i>To reinstate account previously written off.</i>		
Mar. 11	Cash .....	520	
	Accounts Receivable—J. Kent .....		520
	<i>To record full payment of account.</i>		

Assets = Liabilities + Equity  
+520  
–520

In this illustration, Kent paid the entire amount previously written off, but sometimes a customer pays only a portion of the amount owed. A question then arises as to whether the entire balance of the account or just the amount paid is returned to accounts receivable. This is a matter of judgment. If we believe this customer will later pay in full, we return the entire amount owed to accounts receivable, but if we expect no further collection, we return only the amount paid.

**Example:** If TechCom used a collection agency and paid a 35% commission on \$520 collected from Kent, how is this recorded? *Answer:*  
 Cash 338  
 Collection Expense 182  
 Accts. Rec.—J. Kent 520

**Decision Insight**

**PayPal** PayPal is legally just a money transfer agent, but it is increasingly challenging big credit card brands—see chart. PayPal is successful because: (1) online credit card processing fees can exceed \$0.15 per dollar, but PayPal’s fees are under \$0.10 per dollar. (2) PayPal’s merchant fraud losses are under 0.2% of revenues, which compares to nearly 2% for online merchants using credit cards. ■

**Point:** Bad Debts Expense is also called *Uncollectible Accounts Expense*. The Allowance for Doubtful Accounts is also called *Allowance for Uncollectible Accounts*.

A retailer applies the allowance method in accounting for uncollectible accounts. Prepare journal entries to record its following selected transactions.

- 2014  
 Dec. 31 The retailer estimates \$3,000 of its accounts receivable are uncollectible.
- 2015  
 Feb. 14 The retailer determines that it cannot collect \$400 of its accounts receivable from a customer named ZZZ Company.  
 Apr. 1 ZZZ Company unexpectedly pays its account in full to the retailer, which then records its recovery of this bad debt.

**NEED-TO-KNOW 9-3**

**Estimating Bad Debts—Percent of Sales Method**

The allowance method requires an estimate of bad debts expense to prepare an adjusting entry at the end of each accounting period. There are two common methods. One is based on the income statement relation between bad debts expense and sales. The second is based on the balance sheet relation between accounts receivable and the allowance for doubtful accounts.

The *percent of sales method*, also referred to as the *income statement method*, is based on the idea that a given percent of a company’s credit sales for the period is uncollectible. To illustrate, assume that Musicland has credit sales of \$400,000 in year 2015. Based on past experience, Musicland estimates 0.6% of credit sales to be uncollectible. This implies that Musicland

**Point:** Focus is on *credit sales* because cash sales do not produce bad debts. If cash sales are a small or stable percent of credit sales, total sales can be used.

expects \$2,400 of bad debts expense from its sales (computed as \$400,000 × 0.006). The adjusting entry to record this estimated expense is

Assets = Liabilities + Equity	
-2,400	-2,400
Bad Debts Expense	
Unadj.	0
<b>Adj. (% Sales)</b>	<b>2,400</b>
Est. bal.	2,400

Dec. 31*	Bad Debts Expense . . . . .	2,400	
	Allowance for Doubtful Accounts . . . . .		2,400
	To record estimated bad debts.		

\*The adjusting entry above applies our 3-step adjusting entry process from Chapter 3:  
**Step 1:** Current balance for Bad Debts Expense is \$0 debit (as the expense account was closed in prior period).  
**Step 2:** Current balance for Bad Debts Expense should be \$2,400 debit.  
**Step 3:** Record entry to get from Step 1 to Step 2.

**Point:** When using the *percent of sales method* for estimating uncollectibles, and because the unadj. bal. in Bad Debts Expense is always \$0, the adjusting entry amt. always equals the % of sales.

The allowance account ending balance on the balance sheet for this method would rarely equal the bad debts expense on the income statement. This is because unless a company is in its first period of operations, its allowance account has a zero balance only if the prior amounts written off as uncollectible *exactly* equal the prior estimated bad debts expenses. (When computing bad debts expense as a percent of sales, managers monitor and adjust the percent so it is not too high or too low.)

### Estimating Bad Debts—Percent of Receivables Method

The *accounts receivable methods*, also referred to as *balance sheet methods*, use balance sheet relations to estimate bad debts—mainly the relation between accounts receivable and the allowance amount. The goal of the bad debts adjusting entry for these methods is to make the Allowance for Doubtful Accounts balance equal to the portion of accounts receivable that is estimated to be uncollectible. The estimated balance for the allowance account is obtained in one of two ways: (1) computing the percent uncollectible from the total accounts receivable or (2) aging accounts receivable.

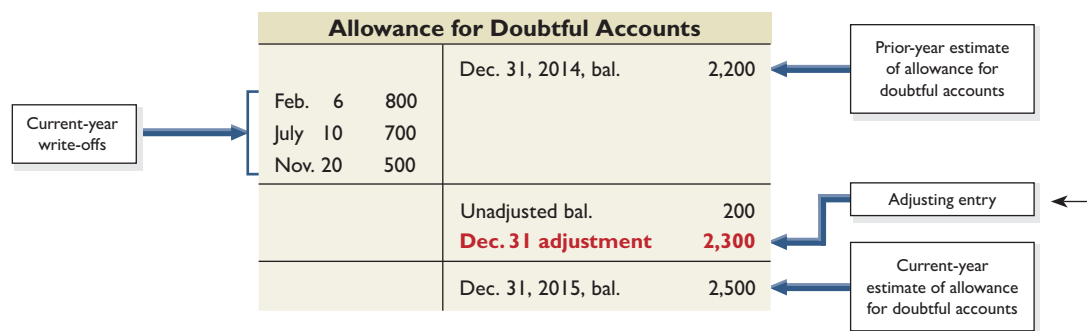

The *percent of accounts receivable method* assumes that a given percent of a company’s receivables is uncollectible. This percent is based on past experience and is impacted by current conditions such as economic trends and customer difficulties. The total dollar amount of all receivables is multiplied by this percent to get the estimated dollar amount of uncollectible accounts—reported in the balance sheet as the Allowance for Doubtful Accounts.

To illustrate, assume that Musicland has \$50,000 of accounts receivable on December 31, 2015. Experience suggests 5% of its receivables is uncollectible. This means that *after* the adjusting entry is posted, we want the Allowance for Doubtful Accounts to show a \$2,500 credit balance (5% of \$50,000). We are also told that its beginning balance is \$2,200, which is 5% of the \$44,000 accounts receivable on December 31, 2014—see Exhibit 9.10.

**Point:** When using an *accounts receivable method* for estimating uncollectibles, the allowance account balance is adjusted to equal the estimate of uncollectibles.

#### EXHIBIT 9.10

Allowance for Doubtful Accounts after Bad Debts Adjusting Entry

During 2015, accounts of customers are written off on February 6, July 10, and November 20. Thus, the account has a \$200 credit balance *before* the December 31, 2015, adjustment. The adjusting entry to give the allowance account the estimated \$2,500 balance is

Assets = Liabilities + Equity	
-2,300	-2,300

Dec. 31*	Bad Debts Expense . . . . .	2,300	
	Allowance for Doubtful Accounts . . . . .		2,300
	To record estimated bad debts.		

\*The adjusting entry above applies our 3-step adjusting entry process from Chapter 3:  
**Step 1:** Current balance for Allowance account is \$200 credit.  
**Step 2:** Current balance for Allowance account should be \$2,500 credit.  
**Step 3:** Record entry to get from Step 1 to Step 2.

**Decision Insight**

**Aging Pains** Unlike wine, accounts receivable do not improve with age. Experience shows that the longer a receivable is past due, the lower is the likelihood of its collection. An *aging schedule* uses this knowledge to estimate bad debts. The chart here is from a survey that reported estimates of bad debts for receivables grouped by how long they were past their due dates. Each company sets its own estimates based on its customers and its experiences with those customers' payment patterns. ■

**Estimating Bad Debts—Aging of Receivables Method**

The **aging of accounts receivable** method uses both past and current receivables information to estimate the allowance amount. Specifically, each receivable is classified by how long it is past its due date. Then estimates of uncollectible amounts are made assuming that the longer an amount is past due, the more likely it is to be uncollectible. Classifications are often based on 30-day periods. After the amounts are classified (or aged), experience is used to estimate the percent of each uncollectible class. These percents are applied to the amounts in each class and then totaled to get the estimated balance of the Allowance for Doubtful Ac-counts. This computation is performed by setting up a schedule such as Exhibit 9.11.

MUSICLAND Schedule of Accounts Receivable by Age December 31, 2015						
Customer	Totals	Not Yet Due	1 to 30 Days Past Due	31 to 60 Days Past Due	61 to 90 Days Past Due	Over 90 Days Past Due
Carlie Abbott.....	\$ 5,890	\$ 5,890				
Jamie Allen.....	710			\$ 710		
Chavez Andres.....	10,500	10,300	\$ 200			
Balicia Company.....	2,800				\$ 1,900	\$ 900
Texas Rawhide.....	9,100		6,110	2,990		
Zamora Services.....	21,000	20,810	190			
<b>Total receivables*</b> .....	<b>\$50,000</b>	<b>\$37,000</b>	<b>\$6,500</b>	<b>\$3,700</b>	<b>\$1,900</b>	<b>\$ 900</b>
Percent uncollectible.....		× 2%	× 5%	× 10%	× 25%	× 40%
<b>Estimated uncollectible...</b>	<b>\$ 2,270</b>	<b>\$ 740</b>	<b>\$ 325</b>	<b>\$ 370</b>	<b>\$ 475</b>	<b>\$ 360</b>

Each receivable is grouped by how long it is past its due date.

Each age group is multiplied by its estimated bad debts percent.

Estimated bad debts for each group are totaled.

**EXHIBIT 9.11**

Aging of Accounts Receivable

Exhibit 9.11 lists each customer's individual balances assigned to one of five classes based on its days past due. The amounts in each class are totaled and multiplied by the estimated percent of uncollectible accounts for each class. The percents used are regularly reviewed to reflect changes in the company and economy.

To explain, Musicland has \$3,700 in accounts receivable that are 31 to 60 days past due. Its management estimates 10% of the amounts in this age class are uncollectible, or a total of \$370 (computed as \$3,700 × 10%). Similar analysis is done for each of the other four classes. The final total of \$2,270 (\$740 + \$325 + 370 + \$475 + \$360) shown in the first column is the estimated balance for the Allowance for Doubtful Accounts. Exhibit 9.12 shows that since the

Step 1: Current account balance equals	Unadjusted balance .....	\$ 200 credit
Step 2: Determine what account balance should be	Estimated balance .....	2,270 credit
Step 3: Make adjustment to get from step 1 to step 2	<b>Required adjustment .....</b>	<b>\$2,070 credit</b>

**EXHIBIT 9.12**

Computation of the Required Adjustment for the Accounts Receivable Method

Allowance for Doubtful Accounts	
Unadj. bal.	200
<b>Req. adj.</b>	<b>2,070</b>
Estim. bal.	2,270

Assets = Liabilities + Equity  
 -2,070                      -2,070

allowance account has an unadjusted credit balance of \$200, the required adjustment to the Allowance for Doubtful Accounts is \$2,070. (We could also use a T-account for this analysis as shown in the margin.) This yields the following end-of-period adjusting entry:

Dec. 31	Bad Debts Expense . . . . .	2,070	
	Allowance for Doubtful Accounts . . . . .		2,070
	<i>To record estimated bad debts.</i>		

**Point:** A debit balance implies that write-offs for that period exceed the total allowance.

Alternatively, if the allowance account had an unadjusted *debit* balance of \$500 (instead of the \$200 credit balance), its required adjustment would be computed as follows. (Again, a T-account can be used for this analysis as shown in the margin.)

Allowance for Doubtful Accounts	
Unadj. bal.	500
<b>Req. adj.</b>	<b>2,770</b>
Estim. bal.	2,270

Assets = Liabilities + Equity  
 -2,770                      -2,770

Step 1: Current account balance equals  
 Step 2: Determine what account balance should be  
 Step 3: Make adjustment to get from step 1 to step 2

Unadjusted balance . . . . .	\$ 500 debit	
Estimated balance . . . . .	2,270 credit	← Current-year estimate of allowance for doubtful accounts
<b>Required adjustment . . . . .</b>	<b>\$ 2,770 credit</b>	

Adjusting entry amount

The entry to record the end-of-period adjustment for this alternative case is

Dec. 31	Bad Debts Expense . . . . .	2,770	
	Allowance for Doubtful Accounts . . . . .		2,770
	<i>To record estimated bad debts.</i>		

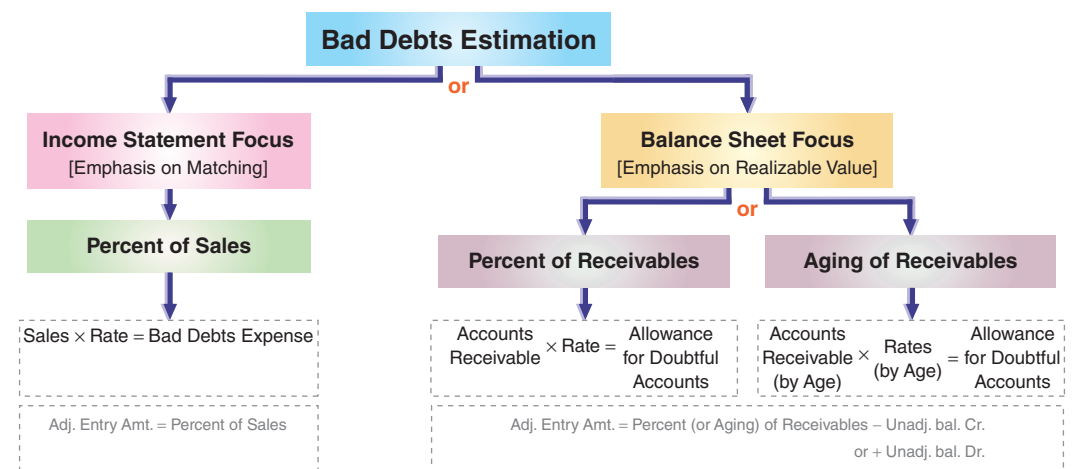

**Point:** Credit approval is usually not assigned to the selling dept. because its goal is to increase sales, and it may approve customers at the cost of increased bad debts. Instead, approval is assigned to a separate credit-granting or administrative dept.

The aging of accounts receivable method is an examination of specific accounts and is usually the most reliable of the estimation methods.

**Estimating Bad Debts—Summary of Methods** Exhibit 9.13 summarizes the principles guiding all three estimation methods and their focus of analysis. Percent of sales, with its income statement focus, does a good job at matching bad debts expense with sales. The accounts receivable methods, with their balance sheet focus, do a better job at reporting accounts receivable at realizable value.

**EXHIBIT 9.13**

Methods to Estimate Bad Debts

**Decision Maker**

**Labor Union Chief** One week prior to labor contract negotiations, financial statements are released showing no income growth. A 10% growth was predicted. Your analysis finds that the company increased its allowance for uncollectibles from 1.5% to 4.5% of receivables. Without this change, income would show a 9% growth. Does this analysis impact negotiations? ■ [Answers follow the chapter's Summary.]

At its December 31 year-end, a company estimates uncollectible accounts using the allowance method.

- It prepared the following aging of receivables analysis. (a) Estimate the balance of the Allowance for Doubtful Accounts using the aging of accounts receivable method. (b) Prepare the adjusting entry to record bad debts expense using the estimate from part *a*. Assume the unadjusted balance in the Allowance for Doubtful Accounts is a \$10 debit.

**NEED-TO-KNOW 9-4**  
**Estimating Bad Debts**  
**P2**

	Total	Days Past Due				
		0	1 to 30	31 to 60	61 to 90	Over 90
Accounts receivable	\$2,600	\$2,000	\$300	\$80	\$100	\$120
Percent uncollectible		1%	2%	5%	7%	10%

- (a) Estimate the balance of the Allowance for Doubtful Accounts assuming the company uses 2% of total accounts receivable to estimate uncollectibles, instead of the aging of receivables method in question 1. (b) Prepare the adjusting entry to record bad debts expense using the estimate from part *a*. Assume the unadjusted balance in the Allowance for Doubtful Accounts is a \$4 credit.
- (a) Estimate the balance of the uncollectibles assuming the company uses 0.5% of annual credit sales (annual credit sales were \$10,000). (b) Prepare the adjusting entry to record bad debts expense using the estimate from part *a*. Assume the unadjusted balance in the Allowance for Doubtful Accounts is a \$4 credit.

**Solutions**

- 1a.** Computation of the estimated balance of the allowance for uncollectibles:

Not due:	.....	$\$2,000 \times 0.01 =$	\$20
1 to 30:	.....	$300 \times 0.02 =$	6
31 to 60:	.....	$80 \times 0.05 =$	4
61 to 90:	.....	$100 \times 0.07 =$	7
Over 90:	.....	$120 \times 0.10 =$	<u>12</u>
			<u>\$49</u> credit

## NOTES RECEIVABLE

**C2**  
Describe a note receivable, the computation of its maturity date, and the recording of its existence.

A **promissory note** is a written promise to pay a specified amount of money, usually with interest, either on demand or at a definite future date. Promissory notes are used in many transactions, including paying for products and services, and lending and borrowing money. Sellers sometimes ask for a note to replace an account receivable when a customer requests additional time to pay a past-due account. For legal reasons, sellers generally prefer to receive notes when the credit period is long and when the receivable is for a large amount. If a lawsuit is needed to collect from a customer, a note is the buyer's written acknowledgment of the debt, its amount, and its terms.

Exhibit 9.14 shows a simple promissory note dated July 10, 2015. For this note, Julia Browne promises to pay TechCom or to its order (according to TechCom's instructions) a specified amount of money (\$1,000), called the **principal of a note**, at a definite future date (October 8, 2015). As the one who signed the note and promised to pay it at maturity, Browne is the **maker of the note**. As the person to whom the note is payable, TechCom is the **payee of the note**. To Browne, the note is a liability called a *note payable*. To TechCom, the same note is an asset called a *note receivable*. This note bears interest at 12%, as written on the note. **Interest** is the charge for using the money until its due date. To a borrower, interest is an expense. To a lender, it is revenue.

**EXHIBIT 9.14**

### Computing Maturity and Interest

This section describes key computations for notes including the determination of maturity date, period covered, and interest computation.

**Maturity Date and Period** The **maturity date of a note** is the day the note (principal and interest) must be repaid. The *period* of a note is the time from the note's (contract) date to its maturity date. Many notes mature in less than a full year, and the period they cover is often expressed in days. When the time of a note is expressed in days, its maturity date is the specified number of days after the note's date. As an example, a five-day note dated June 15 matures and is due on June 20. A 90-day note dated July 10 matures on October 8. This October 8 due date is computed as shown in Exhibit 9.15. The period of a note is sometimes expressed in months or years. When months are used, the note matures and is payable in the month of its maturity on the *same day of the month* as its original date. A nine-month note dated July 10, for instance, is payable on April 10. The same analysis applies when years are used.

**EXHIBIT 9.15**

Maturity Date Computation

Days in July .....	31	
Minus the date of the note .....	<u>10</u>	
Days remaining in July .....	21	← July 11–31
Add days in August .....	31	← Aug. 1–31
Add days in September .....	30	← Sept. 1–30
Days to equal 90 days, or <b>maturity date of October 8</b> .....	<u>8</u>	← Oct. 1–8
Period of the note in days .....	<u><u>90</u></u>	

**Interest Computation** *Interest* is the cost of borrowing money for the borrower or, alternatively, the profit from lending money for the lender. Unless otherwise stated, the rate of interest on a note is the rate charged for the use of the principal for one year. The formula for computing interest on a note is shown in Exhibit 9.16.

$$\text{Principal of the note} \times \text{Annual interest rate} \times \text{Time expressed in fraction of year} = \text{Interest}$$

**EXHIBIT 9.16**

Computation of Interest Formula

To simplify interest computations, a year is commonly treated as having 360 days (called the *banker’s rule* in the business world and widely used in commercial transactions). **We treat a year as having 360 days for interest computations in the examples and assignments.** Using the promissory note in Exhibit 9.14 where we have a 90-day, 12%, \$1,000 note, the total interest is computed as follows:

$$\$1,000 \times 12\% \times \frac{90}{360} = \$1,000 \times 0.12 \times 0.25 = \$30$$

**Point:** If the *banker’s rule* is not followed, interest is computed as:  
**\$1,000 × 12% × 90/365 = \$29.589041**  
 The *banker’s rule* would yield \$30, which is easier to account for than \$29.589041.

**Recognizing Notes Receivable**

Notes receivable are usually recorded in a single Notes Receivable account to simplify record-keeping. The original notes are kept on file, including information on the maker, rate of interest, and due date. (When a company holds a large number of notes, it sometimes sets up a controlling account and a subsidiary ledger for notes. This is similar to the handling of accounts receivable.) To illustrate the recording for the receipt of a note, we use the \$1,000, 90-day, 12% promissory note in Exhibit 9.14. TechCom received this note at the time of a product sale to Julia Browne. This transaction is recorded as follows:

July 10*	Notes Receivable .....	1,000	
	Sales .....		1,000
	Sold goods in exchange for a 90-day, 12% note.		

Assets = Liabilities + Equity  
 +1,000                                    +1,000

\* We omit the entry to Dr. Cost of Sales and Cr. Merchandise Inventory to focus on sales and receivables.

When a seller accepts a note from an overdue customer as a way to grant a time extension on a past-due account receivable, it will often collect part of the past-due balance in cash. This partial payment forces a concession from the customer, reduces the customer’s debt (and the seller’s risk), and produces a note for a smaller amount. To illustrate, assume that TechCom agreed to accept \$232 in cash along with a \$600, 60-day, 15% note from Jo Cook to settle her \$832 past-due account. TechCom made the following entry to record receipt of this cash and note:

Oct. 5	Cash .....	232	
	Notes Receivable .....	600	
	Accounts Receivable—J. Cook .....		832
	Received cash and note to settle account.		

Assets = Liabilities + Equity  
 +232  
 +600  
 –832

**Valuing and Settling Notes**

**Recording an Honored Note** The principal and interest of a note are due on its maturity date. The maker of the note usually *honors* the note and pays it in full. To illustrate, when J. Cook pays the note above on its due date, TechCom records it as follows:

Dec. 4	Cash .....	615	
	Notes Receivable .....		600
	Interest Revenue .....		15
	Collect note with interest of \$600 × 15% × 60/360.		

Assets = Liabilities + Equity  
 +615                                    +15  
 –600

Interest revenue, also called *interest earned*, is reported on the income statement.

**P3** Record the honoring and dishonoring of a note and adjustments for interest.

**Recording a Dishonored Note** When a note’s maker is unable or refuses to pay at maturity, the note is *dishonored*. The act of dishonoring a note does not relieve the maker of the obligation to pay. The payee should use every legitimate means to collect. How do companies report this event? The balance of the Notes Receivable account should include only those notes that have not matured. Thus, when a note is dishonored, we remove the amount of this note from the Notes Receivable account and charge it back to an account receivable from its maker. To illustrate, assume that J. Cook dishonors the note above at maturity. The journal entry to record the dishonoring of the note follows:

**Point:** When posting a dishonored note to a customer’s account, an explanation is included so as not to misinterpret the debit as a sale on account.

Assets = Liabilities + Equity  
 +615 +15  
 -600

Dec. 4	Accounts Receivable—J. Cook .....	615	
	Interest Revenue .....		15
	Notes Receivable .....		600
	<i>To charge account of J. Cook for a dishonored note and interest of \$600 × 15% × 60/360.</i>		

**Point:** Reporting the details of notes is consistent with the full disclosure principle, which requires financial statements (including footnotes) to report all relevant information.

Charging a dishonored note back to the account of its maker serves two purposes. First, it removes the amount of the note from the Notes Receivable account and records the dishonored note in the maker’s account. Second, and more important, if the maker of the dishonored note applies for credit in the future, his or her account will reveal all past dealings, including the dishonored note. Restoring the account also reminds the company to continue collection efforts from Hart for both principal and interest. The entry records the full amount, including interest, to ensure that it is included in collection efforts.

**Recording End-of-Period Interest Adjustment** When notes receivable are outstanding at the end of a period, any accrued interest earned is computed and recorded. To illustrate, on December 16, TechCom accepts a \$3,000, 60-day, 12% note from a customer in granting an extension on a past-due account. When TechCom’s accounting period ends on December 31, \$15 of interest has accrued on this note ( $\$3,000 \times 12\% \times 15/360$ ). The following adjusting entry records this revenue:

Assets = Liabilities + Equity  
 +15 +15

Dec. 31	Interest Receivable .....	15	
	Interest Revenue .....		15
	<i>To record accrued interest earned.</i>		

**Point:** Assume reversing entries are not made unless otherwise stated.

Interest revenue appears on the income statement, and interest receivable appears on the balance sheet as a current asset. When the December 16 note is collected on February 14, TechCom’s entry to record the cash receipt is

Assets = Liabilities + Equity  
 +3,060 +45  
 -15  
 -3,000

Feb. 14	Cash .....	3,060	
	Interest Revenue .....		45
	Interest Receivable .....		15
	Notes Receivable .....		3,000
	<i>Received payment of note and its interest.</i>		

Total interest earned on the 60-day note is \$60. The \$15 credit to Interest Receivable on February 14 reflects the collection of the interest accrued from the December 31 adjusting entry. The \$45 interest earned reflects TechCom’s revenue from holding the note from January 1 to February 14 of the current period.

- a. AA Company purchases \$1,400 of merchandise from ZZ on December 16, 2014. ZZ accepts AA's \$1,400, 90-day, 12% note as payment. ZZ's accounting period ends on December 31, and it does not make reversing entries. Prepare entries for ZZ on December 16, 2014, and December 31, 2014. (Assume reversing entries are not made.)
- b. Using the information in part a, prepare ZZ's March 16, 2015, entry if AA dishonors the note.
- c. Instead of the facts in part b, prepare ZZ's March 16, 2015, entry if AA honors the note.
- d. Assume the facts in part b above. Then, on March 31, ZZ decides to write-off the receivable from AA Company. Prepare that write-off entry assuming that ZZ uses the allowance method.

**Solution**

a.	Dec. 16	Note Receivable — AA .....	1,400	
		Sales .....		1,400
Dec. 31	Interest Receivable .....	7		
	Interest Revenue .....			7
	(\$1,400 × 12% × 15/360)			
b.	Mar. 16	Accounts Receivable — AA .....	1,442	
		Interest Revenue .....		35
		Interest Receivable .....		7
		Notes Receivable—AA .....		1,400
c.	Mar. 16	Cash .....	1,442	
		Interest Revenue .....		35
		Interest Receivable .....		7
		Notes Receivable—AA .....		1,400
d.	Mar. 31	Allowance for Doubtful Accounts .....	1,442	
		Accounts Receivable—AA Company .....		1,442

E 9-10, E 9-11

**QC3****DISPOSAL OF RECEIVABLES**

Companies can convert receivables to cash before they are due. Reasons for this include the need for cash or the desire not to be involved in collection activities. Converting receivables is usually done either by (1) selling them or (2) using them as security for a loan. A recent survey shows that about 20% of companies obtain cash from either selling receivables or pledging them as security. In some industries such as textiles, apparel, and furniture, this is common practice.

**Selling Receivables**

A company can sell all or a portion of its receivables to a finance company or bank. The buyer, called a *factor*, charges the seller a *factoring fee* and then the buyer takes ownership of the receivables and receives cash when they come due. By incurring a factoring fee, the seller receives cash earlier and can pass the risk of bad debts to the factor. The seller can also choose to avoid costs of billing and accounting for the receivables. To illustrate, if TechCom sells \$20,000 of its accounts receivable and is charged a 4% factoring fee, it records this sale as follows:

Aug. 15	Cash .....	19,200	
	Factoring Fee Expense .....	800	
	Accounts Receivable .....		20,000
	Sold accounts receivable for cash, less 4% fee.		

**C3**

Explain how receivables can be converted to cash before maturity.

**Global:** Firms in export sales increasingly sell their receivables to factors.

Assets = Liabilities + Equity  
+19,200                      −800  
−20,000

The accounting for sales of notes receivable is similar to that for accounts receivable. The detailed entries are covered in advanced courses. *Remember:* When factoring receivables, the company selling receivables always receives less cash than the amount of receivables sold due to factoring fees.

### Pledging Receivables

A company can raise cash by borrowing money and *pledging* its receivables as security for the loan. Pledging receivables does not transfer the risk of bad debts to the lender because the borrower retains ownership of the receivables. If the borrower defaults on the loan, the lender has a right to be paid from the cash receipts of the receivable when collected. To illustrate, when Tech-Com borrows \$35,000 and pledges its receivables as security, it records this transaction as follows:

Assets = Liabilities + Equity  
 +35,000 +35,000

Aug. 20	Cash .....	35,000	
	Notes Payable .....		35,000
	<i>To borrow with a note secured by pledging receivables.</i>		

Since pledged receivables are committed as security for a specific loan, the borrower’s financial statements disclose the pledging of them. TechCom, for instance, includes the following note with its statements: **Accounts receivable of \$40,000 are pledged as security for a \$35,000 note payable.** Inventory and accounts receivable are two assets commonly demanded by bankers as collateral when making business loans.

### Decision Maker

**Analyst/Auditor** You are reviewing accounts receivable. Over the past five years, the allowance account as a percentage of gross accounts receivable shows a steady downward trend. What does this finding suggest? ■  
 [Answers follow the chapter’s Summary.]

### GLOBAL VIEW

This section discusses similarities and differences between U.S. GAAP and IFRS regarding the recognition, measurement, and disposition of receivables.

**Recognition of Receivables** Both U.S. GAAP and IFRS have similar asset criteria that apply to recognition of receivables. Further, receivables that arise from revenue-generating activities are subject to broadly similar criteria for U.S. GAAP and IFRS. Specifically, both refer to the realization principle and an earnings process. The realization principle under U.S. GAAP implies an *arm’s-length transaction* occurs, whereas under IFRS this notion is applied in terms of reliable measurement and likelihood of economic benefits. Regarding U.S. GAAP’s reference to an earnings process, IFRS instead refers to risk transfer and ownership reward. While these criteria are broadly similar, differences do exist, and they arise mainly from industry-specific guidance under U.S. GAAP, which is very limited under IFRS.

**Valuation of Receivables** Both U.S. GAAP and IFRS require that receivables be reported net of estimated uncollectibles. Further, both systems require that the expense for estimated uncollectibles be recorded in the same period when any revenues from those receivables are recorded. This means that for accounts receivable, both U.S. GAAP and IFRS require the allowance method for uncollectibles (unless uncollectibles are immaterial). The allowance method using percent of sales, percent of receivables, and aging was explained in this chapter. **Nokia** reports the following for its allowance for uncollectibles:

**NOKIA**

Management specifically analyzes accounts receivables and historical bad debt, customer concentrations, customer creditworthiness, current economic trends and changes in our customer payment terms when evaluating the adequacy of the allowance.

**Disposition of Receivables** Both U.S. GAAP and IFRS apply broadly similar rules in recording dispositions of receivables. Those rules are discussed in this chapter. We should be aware of an important difference in terminology. Companies reporting under U.S. GAAP disclose Bad Debts Expense, which is also referred to as *Provision for Bad Debts* or the *Provision for Uncollectible Accounts*. For U.S. GAAP, *provision* here refers to expense. Under IFRS, the term *provision* usually refers to a liability whose amount or timing (or both) is uncertain.

**Sustainability and Accounting** The entrepreneur, Rakia Reynolds, of **Skai Blue Media**, as introduced in this chapter’s opening feature, explains that her company’s focus includes a sustainable initiative that involves helping others. “When someone comes to me, I need to make sure that I am paying that forward and helping other people,” explains Rakia. “I would say that mentorship is probably one of the most important things in a successful business.” Accordingly, Rakia works hard to instill a team attitude in her workforce, and a mentorship attitude with others. “Teamwork makes the dream work,” insists Rakia. And, “you’re a blessing to be a blessing to others.”

Courtesy of Skai Blue Media

Accounts Receivable Turnover ■ ■ ■ Decision Analysis

For a company selling on credit, we want to assess both the quality and liquidity of its accounts receivable. *Quality* of receivables refers to the likelihood of collection without loss. Experience shows that the longer receivables are outstanding beyond their due date, the lower the likelihood of collection. *Liquidity* of receivables refers to the speed of collection. **Accounts receivable turnover** is a measure of both the quality and liquidity of accounts receivable. It indicates how often, on average, receivables are received and collected during the period. The formula for this ratio is shown in Exhibit 9.17.

$$\text{Accounts receivable turnover} = \frac{\text{Net sales}}{\text{Average accounts receivable, net}}$$

We prefer to use net *credit* sales in the numerator because cash sales do not create receivables. However, since financial statements rarely report net credit sales, our analysis uses net sales. The denominator is the *average* accounts receivable balance, computed as (Beginning balance + Ending balance) ÷ 2. TechCom has an accounts receivable turnover of 5.1. This indicates its average accounts receivable balance is converted into cash 5.1 times during the period. Exhibit 9.18 shows graphically this turnover activity for TechCom.

Accounts receivable turnover also reflects how well management is doing in granting credit to customers in a desire to increase sales. A high turnover in comparison with competitors suggests that management should consider using more liberal credit terms to increase sales. A low turnover suggests management should consider stricter credit terms and more aggressive collection efforts to avoid having its resources tied up in accounts receivable.

To illustrate, we take fiscal year data from two competitors: **Dell** and **Hewlett-Packard (HP)**. Exhibit 9.19 shows accounts receivable turnover for both companies.

Company	Figure (\$ millions)	2013	2012	2011	2010
Dell	Net sales . . . . .	\$ 56,940	\$ 62,071	\$ 61,494	\$ 52,902
	Average accounts receivable, net . . . . .	\$ 6,553	\$ 6,485	\$ 6,165	\$ 5,284
	<b>Accounts receivable turnover</b> . . . . .	<b>8.7</b>	<b>9.6</b>	<b>10.0</b>	<b>10.0</b>
Hewlett-Packard	Net sales . . . . .	\$ 112,298	\$ 120,357	\$ 127,245	\$ 126,033
	Average accounts receivable, net . . . . .	\$ 16,142	\$ 17,316	\$ 18,353	\$ 17,509
	<b>Accounts receivable turnover</b> . . . . .	<b>7.0</b>	<b>7.0</b>	<b>6.9</b>	<b>7.2</b>

**A1** Compute accounts receivable turnover and use it to help assess financial condition.

**EXHIBIT 9.17**  
Accounts Receivable Turnover

**EXHIBIT 9.18**  
Rate of Accounts Receivable Turnover for TechCom

**Point: Credit risk ratio** is computed by dividing the Allowance for Doubtful Accounts by Accounts Receivable. The higher this ratio, the higher is credit risk.

**EXHIBIT 9.19**  
Analysis Using Accounts Receivable Turnover

Dell's 2013 turnover is 8.7, computed as  $\$56,940/\$6,553$  (\$ millions). This means that Dell's average accounts receivable balance was converted into cash 8.7 times in 2013. Its turnover declined in 2013 (8.7) compared with 2012 (9.6) and 2011 (10.0). However, Dell's turnover exceeds that for HP in each of the past four years. Is either company's turnover too high? Since sales are relatively flat over this time period, neither company's turnover rate appears to be too high. Instead, both Dell and HP seem to be doing an adequate job of managing receivables.<sup>1</sup>

### Decision Maker

**Family Physician** Your medical practice is barely profitable, so you hire a health care analyst. The analyst highlights several points including the following: "Accounts receivable turnover is too low. Tighter credit policies are recommended along with discontinuing service to those most delayed in payments." How do you interpret these recommendations? What actions do you take? ■ [Answers follow the chapter's Summary.]

### NEED-TO-KNOW

#### COMPREHENSIVE

Clayco Company completes the following selected transactions during year 2015.

- July 14 Writes off a \$750 account receivable arising from a sale to Briggs Company that dates to 10 months ago. (Clayco Company uses the allowance method.)
  - 30 Clayco Company receives a \$1,000, 90-day, 10% note in exchange for merchandise sold to Sumrell Company (the merchandise cost \$600).
- Aug. 15 Receives \$2,000 cash plus a \$10,000 note from JT Co. in exchange for merchandise that sells for \$12,000 (its cost is \$8,000). The note is dated August 15, bears 12% interest, and matures in 120 days.
- Nov. 1 Completed a \$200 credit card sale with a 4% fee (the cost of sales is \$150). The cash is received immediately from the credit card company.
  - 3 Sumrell Company refuses to pay the note that was due to Clayco Company on October 28. Prepare the journal entry to charge the dishonored note plus accrued interest to Sumrell Company's accounts receivable.
  - 5 Completed a \$500 credit card sale with a 5% fee (the cost of sales is \$300). The payment from the credit card company is received on Nov. 9.
  - 15 Received the full amount of \$750 from Briggs Company that was previously written off on July 14. Record the bad debts recovery.
- Dec. 13 Received payment of principal plus interest from JT for the August 15 note.

#### Required

1. Prepare journal entries to record these transactions on Clayco Company's books.
2. Prepare an adjusting journal entry as of December 31, 2015, assuming the following:
  - a. Bad debts are estimated to be \$20,400 by aging accounts receivable. The unadjusted balance of the Allowance for Doubtful Accounts is \$1,000 debit.
  - b. Alternatively, assume that bad debts are estimated using the percent of sales method. The Allowance for Doubtful Accounts had a \$1,000 debit balance before adjustment, and the company estimates bad debts to be 1% of its credit sales of \$2,000,000.

### PLANNING THE SOLUTION

- Examine each transaction to determine the accounts affected, and then record the entries.
- For the year-end adjustment, record the bad debts expense for the two approaches.

<sup>1</sup> As an estimate of *average days' sales uncollected*, we compute how many days (*on average*) it takes to collect receivables as follows:  $365 \text{ days} \div \text{accounts receivable turnover}$ . An increase in this *average collection period* can signal a decline in customers' financial condition.

**SOLUTION**

1.

July 14	Allowance for Doubtful Accounts .....	750	
	Accounts Receivable—Briggs Co. ....		750
	<i>Wrote off an uncollectible account.</i>		
July 30	Notes Receivable—Sumrell Co. ....	1,000	
	Sales .....		1,000
	<i>Sold merchandise for a 90-day, 10% note.</i>		
July 30	Cost of Goods Sold .....	600	
	Merchandise Inventory .....		600
	<i>To record the cost of July 30 sale.</i>		
Aug. 15	Cash .....	2,000	
	Notes Receivable—JT Co. ....	10,000	
	Sales .....		12,000
	<i>Sold merchandise to customer for \$2,000 cash and \$10,000 note.</i>		
Aug. 15	Cost of Goods Sold .....	8,000	
	Merchandise Inventory .....		8,000
	<i>To record the cost of Aug. 15 sale.</i>		
Nov. 1	Cash .....	192	
	Credit Card Expense .....	8	
	Sales .....		200
	<i>To record credit card sale less a 4% credit card expense.</i>		
Nov. 1	Cost of Goods Sold .....	150	
	Merchandise Inventory .....		150
	<i>To record the cost of Nov. 1 sale.</i>		
Nov. 3	Accounts Receivable—Sumrell Co. ....	1,025	
	Interest Revenue .....		25
	Notes Receivable—Sumrell Co. ....		1,000
	<i>To charge account of Sumrell Company for a \$1,000 dishonored note and interest of <math>\\$1,000 \times 10\% \times 90/360</math>.</i>		
Nov. 5	Accounts Receivable—Credit Card Co. ....	475	
	Credit Card Expense .....	25	
	Sales .....		500
	<i>To record credit card sale less a 5% credit card expense.</i>		
Nov. 5	Cost of Goods Sold .....	300	
	Merchandise Inventory .....		300
	<i>To record the cost of Nov. 5 sale.</i>		
Nov. 9	Cash .....	475	
	Accounts Receivable—Credit Card Co. ....		475
	<i>To record cash receipt from Nov. 5 sale.</i>		
Nov. 15	Accounts Receivable—Briggs Co. ....	750	
	Allowance for Doubtful Accounts .....		750
	<i>To reinstate the account of Briggs Company previously written off.</i>		
Nov. 15	Cash .....	750	
	Accounts Receivable—Briggs Co. ....		750
	<i>Cash received in full payment of account.</i>		
Dec. 13	Cash .....	10,400	
	Interest Revenue .....		400
	Note Receivable—JT Co. ....		10,000
	<i>Collect note with interest of <math>\\$10,000 \times 12\% \times 120/360</math>.</i>		

**2a.** Aging of accounts receivable method.

Dec. 31	Bad Debts Expense .....	21,400	
	Allowance for Doubtful Accounts .....		21,400
	<i>To adjust allowance account from a \$1,000 debit balance to a \$20,400 credit balance.</i>		

**2b.** Percent of sales method.\*

Dec. 31	Bad Debts Expense .....	20,000	
	Allowance for Doubtful Accounts .....		20,000
	<i>To provide for bad debts as <math>1\% \times \\$2,000,000</math> in credit sales.</i>		

\*For the income statement approach, which requires estimating bad debts as a percent of sales or credit sales, the Allowance account balance is *not* considered when making the adjusting entry.

## Summary

**C1 Describe accounts receivable and how they occur and are recorded.** Accounts receivable are amounts due from customers for credit sales. A subsidiary ledger lists amounts owed by each customer. Credit sales arise from at least two sources: (1) sales on credit and (2) credit card sales. *Sales on credit* refers to a company's granting credit directly to customers. Credit card sales involve customers' use of third-party credit cards.

**C2 Describe a note receivable, the computation of its maturity date, and the recording of its existence.** A note receivable is a written promise to pay a specified amount of money at a definite future date. The maturity date is the day the note (principal and interest) must be repaid. Interest rates are normally stated in annual terms. The amount of interest on the note is computed by expressing time as a fraction of one year and multiplying the note's principal by this fraction and the annual interest rate. A note received is recorded at its principal amount by debiting the Notes Receivable account. The credit amount is to the asset, product, or service provided in return for the note.

**C3 Explain how receivables can be converted to cash before maturity.** Receivables can be converted to cash before maturity in at least two ways. First, a company can sell accounts receivable to a factor, who charges a factoring fee. Second, a company can borrow money by signing a note payable that is secured by pledging the accounts receivable.

**A1 Compute accounts receivable turnover and use it to help assess financial condition.** Accounts receivable turnover is a measure of both the quality and liquidity of accounts receivable. The accounts receivable turnover measure

indicates how often, on average, receivables are received and collected during the period. Accounts receivable turnover is computed as net sales divided by average accounts receivable.

**P1 Apply the direct write-off method to account for accounts receivable.** The direct write-off method charges Bad Debts Expense when accounts are written off as uncollectible. This method is acceptable only when the amount of bad debts expense is immaterial.

**P2 Apply the allowance method and estimate uncollectibles based on sales and accounts receivable.** Under the allowance method, bad debts expense is recorded with an adjustment at the end of each accounting period that debits the Bad Debts Expense account and credits the Allowance for Doubtful Accounts. The uncollectible accounts are later written off with a debit to the Allowance for Doubtful Accounts. Uncollectibles are estimated by focusing on either (1) the income statement relation between bad debts expense and credit sales or (2) the balance sheet relation between accounts receivable and the allowance for doubtful accounts. The first approach emphasizes the matching principle using the income statement. The second approach emphasizes realizable value of accounts receivable using the balance sheet.

**P3 Record the honoring and dishonoring of a note and adjustments for interest.** When a note is honored, the payee debits the money received and credits both Notes Receivable and Interest Revenue. Dishonored notes are credited to Notes Receivable and debited to Accounts Receivable (to the account of the maker in an attempt to collect), and Interest Revenue is recorded for interest earned for the time the note is held.

### Guidance Answers to Decision Maker

**Entrepreneur** Analysis of credit card sales should weigh the benefits against the costs. The primary benefit is the potential to increase sales by attracting customers who prefer the convenience of credit cards. The primary cost is the fee charged by the credit card company for providing this service. Analysis should therefore

estimate the expected increase in dollar sales from allowing credit card sales and then subtract (1) the normal costs and expenses and (2) the credit card fees associated with this expected increase in dollar sales. If your analysis shows an increase in profit from allowing credit card sales, your store should probably accept them.

**Labor Union Chief** Yes, this information is likely to impact your negotiations. The obvious question is why the company markedly increased this allowance. The large increase in this allowance means a substantial increase in bad debts expense *and* a decrease in earnings. This change (coming immediately prior to labor contract discussions) also raises concerns since it reduces the union's bargaining power for increased compensation. You want to ask management for supporting documentation justifying this increase. You also want data for two or three prior years and similar data from competitors. These data should give you some sense of whether the change in the allowance for uncollectibles is justified.

**Analyst/Auditor** The downward trend suggests the company is reducing the relative amount charged to bad debts expense each year. This may reflect the company's desire to increase net income.

On the other hand, it might be that collections have improved and the lower provision for bad debts is justified. If this is not the case, the lower allowances might be insufficient for bad debts.

**Family Physician** The recommendations are twofold. First, the analyst suggests more stringent screening of patients' credit standing. Second, the analyst suggests dropping patients who are most overdue in payments. You are likely bothered by both suggestions. They are probably financially wise recommendations, but you are troubled by eliminating services to those less able to pay. One alternative is to follow the recommendations while implementing a care program directed at patients less able to pay for services. This allows you to continue services to patients less able to pay and lets you discontinue services to patients able but unwilling to pay.

## Key Terms

Accounts receivable	Direct write-off method	Payee of the note
Accounts receivable turnover	Interest	Principal of a note
Aging of accounts receivable	Maker of the note	Promissory note (or note)
Allowance for Doubtful Accounts	Matching (expense recognition) principle	Realizable value
Allowance method	Materiality constraint	
Bad debts	Maturity date of a note	

## Multiple Choice Quiz

## Answers at end of chapter

- A company's Accounts Receivable balance at its December 31 year-end is \$125,650, and its Allowance for Doubtful Accounts has a credit balance of \$328 before year-end adjustment. Its net sales are \$572,300. It estimates that 4% of outstanding accounts receivable are uncollectible. What amount of bad debts expense is recorded at December 31?
  - \$5,354
  - \$328
  - \$5,026
  - \$4,698
  - \$34,338
- A company's Accounts Receivable balance at its December 31 year-end is \$489,300, and its Allowance for Doubtful Accounts has a debit balance of \$554 before year-end adjustment. Its net sales are \$1,300,000. It estimates that 6% of outstanding accounts receivable are uncollectible. What amount of bad debts expense is recorded at December 31?
  - \$29,912
  - \$28,804
  - \$78,000
  - \$29,358
  - \$554
- Total interest to be earned on a \$7,500, 5%, 90-day note is
  - \$93.75
  - \$375.00
  - \$1,125.00
  - \$31.25
  - \$125.00
- A company receives a \$9,000, 8%, 60-day note. The maturity value of the note is
  - \$120
  - \$9,000
  - \$9,120
  - \$720
  - \$9,720
- A company has net sales of \$489,600 and average accounts receivable of \$40,800. What is its accounts receivable turnover?
  - 0.08
  - 30.41
  - 1,341.00
  - 12.00
  - 111.78

 Icon denotes assignments that involve decision making.

## Discussion Questions

-  How do sellers benefit from allowing their customers to use credit cards?
-  Why does the direct write-off method of accounting for bad debts usually fail to match revenues and expenses?
- Explain the accounting constraint of materiality.
- Why might a business prefer a note receivable to an account receivable?

5. Explain why writing off a bad debt against the Allowance for Doubtful Accounts does not reduce the estimated realizable value of a company's accounts receivable.
6.  Why does the Bad Debts Expense account usually not have the same adjusted balance as the Allowance for Doubtful Accounts?
7.  Refer to the financial statements and notes of **APPLE** in Appendix A. In its presentation of accounts receivable on the balance sheet, how does it title accounts receivable? What does it report for its allowance as of September 28, 2013?
8.  Refer to the balance sheet of **GOOGLE** in Appendix A. Does it use the direct write-off method or allowance method in accounting for its accounts receivable? What is the realizable value of its receivables balance as of December 31, 2013?
9. Refer to the financial statements of **Samsung** in Appendix A. What does Samsung title its accounts receivable on its consolidated balance sheet? What are Samsung's accounts receivable at December 31, 2013?
10. Refer to the December 31, 2013, financial statements of **Samsung** in Appendix A. Does Samsung report its accounts receivable as a current or noncurrent asset? Does Samsung report its accounts receivable net of an allowance?

## QUICK STUDY

### QS 9-1

Credit card sales

P1

Prepare journal entries for the following credit card sales transactions (the company uses the perpetual inventory system).

1. Sold \$20,000 of merchandise, that cost \$15,000, on MasterCard credit cards. The net cash receipts from sales are immediately deposited in the seller's bank account. MasterCard charges a 5% fee.
2. Sold \$5,000 of merchandise, that cost \$3,000, on an assortment of credit cards. Net cash receipts are received 5 days later, and a 4% fee is charged.

### QS 9-2

Direct write-off method

P1

Solstice Company determines on October 1 that it cannot collect \$50,000 of its accounts receivable from its customer P. Moore. Apply the direct write-off method to record this loss as of October 1.

### QS 9-3

Recovering a bad debt

P1

Solstice Company determines on October 1 that it cannot collect \$50,000 of its accounts receivable from its customer P. Moore. It uses the direct write-off method to record this loss as of October 1. On October 30, P. Moore unexpectedly paid his account in full to Solstice Company. Record Solstice's entry(ies) to reflect recovery of this bad debt.

### QS 9-4

Distinguish between the allowance method and direct write-off method

P1 P2

The following list describes aspects of either the allowance method or the direct write-off method to account for bad debts. For each item listed, indicate if the statement best describes either the allowance method or the direct write-off method.

- \_\_\_ 1. No attempt is made to predict bad debts expense.
- \_\_\_ 2. Accounts receivable on the balance sheet is reported at net realizable value.
- \_\_\_ 3. The write-off of a specific account does not affect net income.
- \_\_\_ 4. When an account is written off, the debit is to bad debts expense.
- \_\_\_ 5. Sales and any bad debt expense are usually not recorded in the same period, thus proper matching (of revenue and expense recognition) does not consistently occur.
- \_\_\_ 6. Requires a company to estimate bad debt expense related to the sales recorded in that period.

### QS 9-5

Allowance method for bad debts

P2

Gomez Corp. uses the allowance method to account for uncollectibles. On January 31, it wrote off an \$800 account of a customer, C. Green. On March 9, it receives a \$300 payment from Green.

1. Prepare the journal entry or entries for January 31.
2. Prepare the journal entry or entries for March 9; assume no additional money is expected from Green.

### QS 9-6

Percent of accounts receivable method

P2

Warner Company's year-end unadjusted trial balance shows accounts receivable of \$99,000, allowance for doubtful accounts of \$600 (credit), and sales of \$280,000. Uncollectibles are estimated to be 1.5% of accounts receivable.

1. Prepare the December 31 year-end adjusting entry for uncollectibles.
2. What amount would have been used in the year-end adjusting entry if the allowance account had a year-end unadjusted debit balance of \$300?

Warner Company's year-end unadjusted trial balance shows accounts receivable of \$99,000, allowance for doubtful accounts of \$600 (credit), and sales of \$280,000. Uncollectibles are estimated to be 0.5% of sales. Prepare the December 31 year-end adjusting entry for uncollectibles.

**QS 9-7**  
Percent of sales method  
**P2**

On August 2, 2015, Jun Co. receives a \$6,000, 90-day, 12% note from customer Ryan Albany as payment on his \$6,000 account. (1) Compute the maturity date for this note. (2) Prepare Jun's journal entry for August 2.

**QS 9-8**  
Note receivable **C2**

On August 2, 2015, Jun Co. receives a \$6,000, 90-day, 12% note from customer Ryan Albany as payment on his \$6,000 account. Prepare Jun's journal entry assuming the note is honored by the customer on October 31, 2015.

**QS 9-9**  
Note receivable **P3**

Daw Company's December 31 year-end unadjusted trial balance shows a \$10,000 balance in Notes Receivable. This balance is from one 6% note dated December 1, with a period of 45 days. Prepare any necessary journal entries for December 31 and for the note's maturity date assuming it is honored.

**QS 9-10**  
Note receivable **P3**

Record the sale by Balus Company of \$125,000 in accounts receivable on May 1. Balus is charged a 2.5% factoring fee.

**QS 9-11**  
Disposing receivables **C3**

The following data are taken from the comparative balance sheets of Ruggers Company. Compute and interpret its accounts receivable turnover for year 2015 (competitors average a turnover of 7.5).

**QS 9-12**  
Accounts receivable turnover  
**A1** 

	2015	2014
Accounts receivable, net . . . . .	\$153,400	\$138,500
Net sales . . . . .	861,105	910,600

Answer each of the following related to international accounting standards.

- a. Explain (in general terms) how the accounting for recognition of receivables is different between IFRS and U.S. GAAP.
- b. Explain (in general terms) how the accounting for valuation of receivables is different between IFRS and U.S. GAAP.

**QS 9-13**  
International accounting standards  
**C1** 

Vail Company recorded the following selected transactions during November 2015.

Nov. 5	Accounts Receivable—Ski Shop . . . . .	4,615	
	Sales . . . . .		4,615
10	Accounts Receivable—Welcome Enterprises . . . . .	1,350	
	Sales . . . . .		1,350
13	Accounts Receivable—Zia Natara . . . . .	832	
	Sales . . . . .		832
21	Sales Returns and Allowances . . . . .	209	
	Accounts Receivable—Zia Natara . . . . .		209
30	Accounts Receivable—Ski Shop . . . . .	2,713	
	Sales . . . . .		2,713

**EXERCISES**

**Exercise 9-1**  
Accounts receivable subsidiary ledger; schedule of accounts receivable  
**C1**

1. Open a general ledger having T-accounts for Accounts Receivable, Sales, and Sales Returns and Allowances. Also open an accounts receivable subsidiary ledger having a T-account for each customer. Post these entries to both the general ledger and the accounts receivable ledger.
2. Prepare a schedule of accounts receivable (see Exhibit 9.4) and compare its total with the balance of the Accounts Receivable controlling account as of November 30.

**Check** Accounts Receivable ending balance, \$9,301

**Exercise 9-2**

Accounting for credit card sales

C1

Levine Company uses the perpetual inventory system and allows customers to use two credit cards in charging purchases. With the Suntrust Bank Card, Levine receives an immediate credit to its account when it deposits sales receipts. Suntrust assesses a 4% service charge for credit card sales. The second credit card that Levine accepts is the Continental Card. Levine sends its accumulated receipts to Continental on a weekly basis and is paid by Continental about a week later. Continental assesses a 2.5% charge on sales for using its card. Prepare journal entries to record the following selected credit card transactions of Levine Company.

- Apr. 8 Sold merchandise for \$8,400 (that had cost \$6,000) and accepted the customer's Suntrust Bank Card. The Suntrust receipts are immediately deposited in Levine's bank account.  
 12 Sold merchandise for \$5,600 (that had cost \$3,500) and accepted the customer's Continental Card. Transferred \$5,600 of credit card receipts to Continental, requesting payment.  
 20 Received Continental's check for the April 12 billing, less the service charge.

**Exercise 9-3**

Direct write-off method

P1

Dexter Company applies the direct write-off method in accounting for uncollectible accounts. Prepare journal entries to record the following selected transactions of Dexter.

- March 11 Dexter determines that it cannot collect \$45,000 of its accounts receivable from its customer Lester Company.  
 29 Lester Company unexpectedly pays its account in full to Dexter Company. Dexter records its recovery of this bad debt.

**Exercise 9-4**

Percent of sales method; write-off

P2

At year-end (December 31), Chan Company estimates its bad debts as 0.5% of its annual credit sales of \$975,000. Chan records its bad debts expense for that estimate. On the following February 1, Chan decides that the \$580 account of P. Park is uncollectible and writes it off as a bad debt. On June 5, Park unexpectedly pays the amount previously written off. Prepare the journal entries of Chan to record these transactions and events of December 31, February 1, and June 5.

**Exercise 9-5**

Percent of accounts receivable method

P2

At each calendar year-end, Mazie Supply Co. uses the percent of accounts receivable method to estimate bad debts. On December 31, 2015, it has outstanding accounts receivable of \$55,000, and it estimates that 2% will be uncollectible. Prepare the adjusting entry to record bad debts expense for year 2015 under the assumption that the Allowance for Doubtful Accounts has (a) a \$415 credit balance before the adjustment and (b) a \$291 debit balance before the adjustment.

**Exercise 9-6**

Aging of receivables method

P2

Daley Company estimates uncollectible accounts using the allowance method at December 31. It prepared the following aging of receivables analysis.

	Total	Days Past Due				
		0	1 to 30	31 to 60	61 to 90	Over 90
Accounts receivable . . . . .	\$570,000	\$396,000	\$90,000	\$36,000	\$18,000	\$30,000
Percent uncollectible . . . . .		1%	2%	5%	7%	10%

- Estimate the balance of the Allowance for Doubtful Accounts using the aging of accounts receivable method.
- Prepare the adjusting entry to record bad debts expense using the estimate from part a. Assume the unadjusted balance in the Allowance for Doubtful Accounts is a \$3,600 credit.
- Prepare the adjusting entry to record bad debts expense using the estimate from part a. Assume the unadjusted balance in the Allowance for Doubtful Accounts is a \$100 debit.

**Exercise 9-7**

Percent of receivables method

P2

Refer to the information in Exercise 9-6 to complete the following requirements.

- Estimate the balance of the Allowance for Doubtful Accounts assuming the company uses 4.5% of total accounts receivable to estimate uncollectibles, instead of the aging of receivables method.
- Prepare the adjusting entry to record bad debts expense using the estimate from part a. Assume the unadjusted balance in the Allowance for Doubtful Accounts is a \$12,000 credit.
- Prepare the adjusting entry to record bad debts expense using the estimate from part a. Assume the unadjusted balance in the Allowance for Doubtful Accounts is a \$1,000 debit.

Refer to the information in Exercise 9-6 to complete the following requirements.

- On February 1 of the next period, the company determined that \$6,800 in customer accounts is uncollectible; specifically, \$900 for Oakley Co. and \$5,900 for Brookes Co. Prepare the journal entry to write off those accounts.
- On June 5 of that next period, the company unexpectedly received a \$900 payment on a customer account, Oakley Company, that had previously been written off in part *a*. Prepare the entries necessary to reinstate the account and to record the cash received.

**Exercise 9-8**

Writing off receivables  
P2

At December 31, Folgeys Coffee Company reports the following results for its calendar year.

Cash sales .....	\$900,000
Credit sales .....	300,000

**Exercise 9-9**

Estimating bad debts  
P2

Its year-end unadjusted trial balance includes the following items.

Accounts receivable .....	\$125,000 debit
Allowance for doubtful accounts .....	5,000 debit

- Prepare the adjusting entry to record bad debts expense assuming uncollectibles are estimated to be 3% of credit sales.
- Prepare the adjusting entry to record bad debts expense assuming uncollectibles are estimated to be 1% of total sales.
- Prepare the adjusting entry to record bad debts expense assuming uncollectibles are estimated to be 6% of year-end accounts receivable.

**Check** Dr. Bad Debts Expense: (a) \$9,000

(c) \$12,500

Prepare journal entries for the following selected transactions of Danica Company for 2014.

**2014**

- Dec. 13 Accepted a \$9,500, 45-day, 8% note dated December 13 in granting Miranda Lee a time extension on her past-due account receivable.
- 31 Prepared an adjusting entry to record the accrued interest on the Lee note.

**Exercise 9-10**

Notes receivable transactions

C2

**Check** Dec. 31, Cr. Interest Revenue \$38

Refer to the information in Exercise 9-10 and prepare the journal entries for the following selected transactions of Danica Company for 2015.

**2015**

- Jan. 27 Received Lee's payment for principal and interest on the note dated December 13.
- Mar. 3 Accepted a \$5,000, 10%, 90-day note dated March 3 in granting a time extension on the past-due account receivable of Tomas Company.
- 17 Accepted a \$2,000, 30-day, 9% note dated March 17 in granting H. Cheng a time extension on his past-due account receivable.
- Apr. 16 Cheng dishonors his note when presented for payment.
- May 1 Wrote off the Cheng account against the Allowance for Doubtful Accounts.
- June 1 Received the Tomas payment for principal and interest on the note dated March 3.

**Exercise 9-11**

Notes receivable transactions P3

**Check** Jan. 27, Dr. Cash \$9,595

June 1, Dr. Cash \$5,125

Prepare journal entries to record these selected transactions for Vitalo Company (assume that no reversing entries are recorded).

- Nov. 1 Accepted a \$6,000, 180-day, 8% note dated November 1 from Kelly White in granting a time extension on her past-due account receivable.
- Dec. 31 Adjusted the year-end accounts for the accrued interest earned on the White note.
- Apr. 30 White honors her note when presented for payment; February has 28 days for the current year.

**Exercise 9-12**

Honoring a note

P3

**Exercise 9-13**

Dishonoring a note

P3

Prepare journal entries to record the following selected transactions of Ridge Company.

- Mar. 21 Accepted a \$9,500, 180-day, 8% note dated March 21 from Tamara Jackson in granting a time extension on her past-due account receivable.
- Sept. 17 Jackson dishonors her note when it is presented for payment.
- Dec. 31 After exhausting all legal means of collection, Ridge Company writes off Jackson's account against the Allowance for Doubtful Accounts.

**Exercise 9-14**

Selling and pledging accounts receivable

C3

On June 30, Petrov Co. has \$128,700 of accounts receivable. Prepare journal entries to record the following selected July transactions. Also prepare any footnotes to the July 31 financial statements that result from these transactions. (The company uses the perpetual inventory system.)

- July 4 Sold \$7,245 of merchandise (that had cost \$5,000) to customers on credit.
- 9 Sold \$20,000 of accounts receivable to Main Bank. Main charges a 4% factoring fee.
- 17 Received \$5,859 cash from customers in payment on their accounts.
- 27 Borrowed \$10,000 cash from Main Bank, pledging \$12,500 of accounts receivable as security for the loan.

**Exercise 9-15**

Accounts receivable turnover

A1

The following information is from the annual financial statements of Raheem Company. Compute its accounts receivable turnover for 2014 and 2015. Compare the two years' results and give a possible explanation for any change (competitors average a turnover of 11).

	2015	2014	2013
Net sales . . . . .	\$405,140	\$335,280	\$388,000
Accounts receivable, net (year-end) . . . . .	44,800	41,400	34,800

**Exercise 9-16**

Accounting for bad debts following IFRS

P2

**Hitachi, Ltd.**, reports total revenues of ¥9,041,071 million for its fiscal year ending March 31, 2013, and its March 31, 2013, unadjusted trial balance reports a debit balance for trade receivables (gross) of ¥2,500,000 million.

- Prepare the adjusting entry to record its bad debts expense assuming uncollectibles are estimated to be 0.4% of total revenues and its unadjusted trial balance reports a credit balance of ¥10,000 million for the allowance for doubtful accounts.
- Prepare the adjusting entry to record bad debts expense assuming uncollectibles are estimated to be 2.0% of year-end trade receivables (gross) and its unadjusted trial balance reports a credit balance of ¥10,000 million for the allowance for doubtful accounts.

**PROBLEM SET A****Problem 9-1A**

Sales on account and credit card sales

C1

Mayfair Co. allows select customers to make purchases on credit. Its other customers can use either of two credit cards: Zisa or Access. Zisa deducts a 3% service charge for sales on its credit card and credits the bank account of Mayfair immediately when credit card receipts are deposited. Mayfair deposits the Zisa credit card receipts each business day. When customers use Access credit cards, Mayfair accumulates the receipts for several days before submitting them to Access for payment. Access deducts a 2% service charge and usually pays within one week of being billed. Mayfair completes the following transactions in June. (The terms of all credit sales are 2/15, n/30, and all sales are recorded at the gross price.)

- June 4 Sold \$650 of merchandise (that had cost \$400) on credit to Natara Morris.
- 5 Sold \$6,900 of merchandise (that had cost \$4,200) to customers who used their Zisa cards.
- 6 Sold \$5,850 of merchandise (that had cost \$3,800) to customers who used their Access cards.
- 8 Sold \$4,350 of merchandise (that had cost \$2,900) to customers who used their Access cards.
- 10 Submitted Access card receipts accumulated since June 6 to the credit card company for payment.
- 13 Wrote off the account of Abigail McKee against the Allowance for Doubtful Accounts. The \$429 balance in McKee's account stemmed from a credit sale in October of last year.
- 17 Received the amount due from Access.
- 18 Received Morris's check in full payment for the purchase of June 4.

**Check** June 17, Dr. Cash  
\$9,996

**Required**

Prepare journal entries to record the preceding transactions and events. (The company uses the perpetual inventory system. Round amounts to the nearest dollar.)

At December 31, 2015, Hawke Company reports the following results for its calendar year.

Cash sales .....	\$1,905,000
Credit sales .....	5,682,000

In addition, its unadjusted trial balance includes the following items.

Accounts receivable .....	\$1,270,100 debit
Allowance for doubtful accounts .....	16,580 debit

**Problem 9-2A**

Estimating and reporting bad debts

**Required**

- Prepare the adjusting entry for this company to recognize bad debts under each of the following independent assumptions.
  - Bad debts are estimated to be 1.5% of credit sales.
  - Bad debts are estimated to be 1% of total sales.
  - An aging analysis estimates that 5% of year-end accounts receivable are uncollectible.
- Show how Accounts Receivable and the Allowance for Doubtful Accounts appear on its December 31, 2015, balance sheet given the facts in part 1a.
- Show how Accounts Receivable and the Allowance for Doubtful Accounts appear on its December 31, 2015, balance sheet given the facts in part 1c.

**Check** Bad Debts Expense: (1a) \$85,230, (1c) \$80,085

Jarden Company has credit sales of \$3.6 million for year 2015. On December 31, 2015, the company's Allowance for Doubtful Accounts has an unadjusted credit balance of \$14,500. Jarden prepares a schedule of its December 31, 2015, accounts receivable by age. On the basis of past experience, it estimates the percent of receivables in each age category that will become uncollectible. This information is summarized here.

	A	B	C
	December 31, 2015 Accounts Receivable	Age of Accounts Receivable	Expected Percent Uncollectible
3	\$830,000	Not yet due	1.25%
4	254,000	1 to 30 days past due	2.00
5	86,000	31 to 60 days past due	6.50
6	38,000	61 to 90 days past due	32.75
7	12,000	Over 90 days past due	68.00
8			

**Problem 9-3A**

Aging accounts receivable and accounting for bad debts

**Required**

- Estimate the required balance of the Allowance for Doubtful Accounts at December 31, 2015, using the aging of accounts receivable method.
- Prepare the adjusting entry to record bad debts expense at December 31, 2015.

**Check** (2) Dr. Bad Debts Expense \$27,150

**Analysis Component**

- On June 30, 2016, Jarden Company concludes that a customer's \$4,750 receivable (created in 2015) is uncollectible and that the account should be written off. What effect will this action have on Jarden's 2016 net income? Explain.

Liang Company began operations on January 1, 2014. During its first two years, the company completed a number of transactions involving sales on credit, accounts receivable collections, and bad debts. These transactions are summarized as follows:

**2014**

- Sold \$1,345,434 of merchandise (that had cost \$975,000) on credit, terms n/30.
- Wrote off \$18,300 of uncollectible accounts receivable.
- Received \$669,200 cash in payment of accounts receivable.
- In adjusting the accounts on December 31, the company estimated that 1.5% of accounts receivable will be uncollectible.

**Problem 9-4A**

Accounts receivable transactions and bad debts adjustments

**Check** (d) Dr. Bad Debts Expense \$28,169

**2015**

- e. Sold \$1,525,634 of merchandise (that had cost \$1,250,000) on credit, terms n/30.
- f. Wrote off \$27,800 of uncollectible accounts receivable.
- g. Received \$1,204,600 cash in payment of accounts receivable.
- h. In adjusting the accounts on December 31, the company estimated that 1.5% of accounts receivable will be uncollectible.

(h) Dr. Bad Debts Expense \$32,199

**Required**

Prepare journal entries to record Liang's 2014 and 2015 summarized transactions and its year-end adjustments to record bad debts expense. (The company uses the perpetual inventory system and it applies the allowance method for its accounts receivable. Round amounts to the nearest dollar.)

**Problem 9-5A**

Analyzing and journalizing notes receivable transactions

The following selected transactions are from Ohlm Company.

**2014**

- Dec. 16 Accepted a \$10,800, 60-day, 8% note dated this day in granting Danny Todd a time extension on his past-due account receivable.
- 31 Made an adjusting entry to record the accrued interest on the Todd note.

**2015**

- Feb. 14 Received Todd's payment of principal and interest on the note dated December 16.
- Mar. 2 Accepted a \$6,100, 8%, 90-day note dated this day in granting a time extension on the past-due account receivable from Midnight Co.
- 17 Accepted a \$2,400, 30-day, 7% note dated this day in granting Ava Privet a time extension on her past-due account receivable.
- Apr. 16 Privet dishonored her note when presented for payment.
- May 31 Midnight Co. refuses to pay the note that was due to Ohlm Co. on May 31. Prepare the journal entry to charge the dishonored note plus accrued interest to Midnight Co.'s accounts receivable.
- July 16 Received payment from Midnight Co. for the maturity value of its dishonored note plus interest for 46 days beyond maturity at 8%.
- Aug. 7 Accepted a \$7,450, 90-day, 10% note dated this day in granting a time extension on the past-due account receivable of Mulan Co.
- Sept. 3 Accepted a \$2,100, 60-day, 10% note dated this day in granting Noah Carson a time extension on his past-due account receivable.
- Nov. 2 Received payment of principal plus interest from Carson for the September 3 note.
- Nov. 5 Received payment of principal plus interest from Mulan for the August 7 note.
- Dec. 1 Wrote off the Privet account against Allowance for Doubtful Accounts.

**Check** Feb. 14, Cr. Interest Revenue \$108

May 31, Cr. Interest Revenue \$122

Nov. 2, Cr. Interest Revenue \$35

**Required**

1. Prepare journal entries to record these transactions and events. (Round amounts to the nearest dollar.)

**Analysis Component**

2. What reporting is necessary when a business pledges receivables as security for a loan and the loan is still outstanding at the end of the period? Explain the reason for this requirement and the accounting principle being satisfied.

**PROBLEM SET B****Problem 9-1B**

Sales on account and credit card sales

Archer Co. allows select customers to make purchases on credit. Its other customers can use either of two credit cards: Commerce Bank or Aztec. Commerce Bank deducts a 3% service charge for sales on its credit card and immediately credits the bank account of Archer when credit card receipts are deposited. Archer deposits the Commerce Bank credit card receipts each business day. When customers use the Aztec card, Archer accumulates the receipts for several days and then submits them to Aztec for payment. Aztec deducts a 2% service charge and usually pays within one week of being billed. Archer completed the following transactions in August (terms of all credit sales are 2/10, n/30; and all sales are recorded at the gross price).

- Aug. 4 Sold \$3,700 of merchandise (that had cost \$2,000) on credit to McKenzie Carpenter.
- 10 Sold \$5,200 of merchandise (that had cost \$2,800) to customers who used their Commerce Bank credit cards.

- 11 Sold \$1,250 of merchandise (that had cost \$900) to customers who used their Aztec cards.
- 14 Received Carpenter's check in full payment for the purchase of August 4.
- 15 Sold \$3,240 of merchandise (that had cost \$1,758) to customers who used their Aztec cards.
- 18 Submitted Aztec card receipts accumulated since August 11 to the credit card company for payment.
- 22 Wrote off the account of Craw Co. against the Allowance for Doubtful Accounts. The \$498 balance in Craw Co.'s account stemmed from a credit sale in November of last year.
- 25 Received the amount due from Aztec.

**Check** Aug. 25, Dr. Cash  
\$4,400

### Required

Prepare journal entries to record the preceding transactions and events. (The company uses the perpetual inventory system. Round amounts to the nearest dollar.)

At December 31, 2015, Ingleton Company reports the following results for the year:

Cash sales .....	\$1,025,000
Credit sales .....	1,342,000

In addition, its unadjusted trial balance includes the following items:

Accounts receivable .....	\$575,000 debit
Allowance for doubtful accounts .....	7,500 credit

### Required

1. Prepare the adjusting entry for Ingleton Co. to recognize bad debts under each of the following independent assumptions.
  - a. Bad debts are estimated to be 2.5% of credit sales.
  - b. Bad debts are estimated to be 1.5% of total sales.
  - c. An aging analysis estimates that 6% of year-end accounts receivable are uncollectible.
2. Show how Accounts Receivable and the Allowance for Doubtful Accounts appear on its December 31, 2015, balance sheet given the facts in part 1a.
3. Show how Accounts Receivable and the Allowance for Doubtful Accounts appear on its December 31, 2015, balance sheet given the facts in part 1c.

Sherman Co. began operations on January 1, 2014, and completed several transactions during 2014 and 2015 that involved sales on credit, accounts receivable collections, and bad debts. These transactions are summarized as follows.

**2014**

- Sold \$685,350 of merchandise (that had cost \$500,000) on credit, terms n/30.
- Received \$482,300 cash in payment of accounts receivable.
- Wrote off \$9,350 of uncollectible accounts receivable.
- In adjusting the accounts on December 31, the company estimated that 1% of accounts receivable will be uncollectible.

**2015**

- Sold \$870,220 of merchandise (that had cost \$650,000) on credit, terms n/30.
- Received \$990,800 cash in payment of accounts receivable.
- Wrote off \$11,090 of uncollectible accounts receivable.
- In adjusting the accounts on December 31, the company estimated that 1% of accounts receivable will be uncollectible.

**Required**

Prepare journal entries to record Sherman's 2014 and 2015 summarized transactions and its year-end adjusting entry to record bad debts expense. (The company uses the perpetual inventory system and it applies the allowance method for its accounts receivable. Round amounts to the nearest dollar.)

**Problem 9-5B**

**Check** Jan. 30, Cr. Interest Revenue \$32

April 30, Cr. Interest Revenue \$124

Sep. 19, Cr. Interest Revenue \$190

The following selected transactions are from Springer Company.

**2014**

- Nov. 1 Accepted a \$4,800, 90-day, 8% note dated this day in granting Steve Julian a time extension on his past-due account receivable.
- Dec. 31 Made an adjusting entry to record the accrued interest on the Julian note.

**2015**

- Jan. 30 Received Julian's payment for principal and interest on the note dated November 1.
- Feb. 28 Accepted a \$12,600, 30-day, 8% note dated this day in granting a time extension on the past-due account receivable from King Co.
- Mar. 1 Accepted a \$6,200, 60-day, 12% note dated this day in granting Myron Shelley a time extension on his past-due account receivable.
- 30 The King Co. dishonored its note when presented for payment.
- Apr. 30 Received payment of principal plus interest from M. Shelley for the March 1 note.
- June 15 Accepted a \$2,000, 72-day, 8% note dated this day in granting a time extension on the past-due account receivable of Ryder Solon.
- 21 Accepted a \$9,500, 90-day, 8% note dated this day in granting J. Felton a time extension on his past-due account receivable.
- Aug. 26 Received payment of principal plus interest from R. Solon for the note of June 15.
- Sep. 19 Received payment of principal plus interest from J. Felton for the June 21 note.
- Nov. 30 Wrote off King's account against Allowance for Doubtful Accounts.

**Required**

- Prepare journal entries to record these transactions and events. (Round amounts to the nearest dollar.)

**Analysis Component**

- What reporting is necessary when a business pledges receivables as security for a loan and the loan is still outstanding at the end of the period? Explain the reason for this requirement and the accounting principle being satisfied.

(This serial problem began in Chapter 1 and continues through most of the book. If previous chapter segments were not completed, the serial problem can begin at this point. It is helpful, but not necessary, to use the Working Papers that accompany the book.)

**SP 9** Santana Rey, owner of Business Solutions, realizes that she needs to begin accounting for bad debts expense. Assume that Business Solutions has total revenues of \$44,000 during the first three months of 2016, and that the Accounts Receivable balance on March 31, 2016, is \$22,867.

### Required

- Prepare the adjusting entry needed for Business Solutions to recognize bad debts expense on March 31, 2016, under each of the following independent assumptions (assume a zero unadjusted balance in the Allowance for Doubtful Accounts at March 31).
  - Bad debts are estimated to be 1% of total revenues. (Round amounts to the dollar.)
  - Bad debts are estimated to be 2% of accounts receivable. (Round amounts to the dollar.)
- Assume that Business Solutions' Accounts Receivable balance at June 30, 2016, is \$20,250 and that one account of \$100 has been written off against the Allowance for Doubtful Accounts since March 31, 2016. If S. Rey uses the method prescribed in part 1b, what adjusting journal entry must be made to recognize bad debts expense on June 30, 2016?
- Should S. Rey consider adopting the direct write-off method of accounting for bad debts expense rather than one of the allowance methods considered in part 1? Explain.

The **General Ledger** tool in *Connect* automates several of the procedural steps in accounting so that the financial professional can focus on the impacts of each transaction on various financial reports and performance measures.

**GL 9-1** General Ledger assignment GL 9-1, based on Problem 9-1A, focuses on transactions related to accounts and notes receivable and highlights the impact each transaction has on interest revenue, if any. Prepare the journal entries related to accounts and notes receivable; the schedules of accounts receivable and notes receivable are automatically completed using the General Ledger tool. Next, compute both the amount and timing of interest revenue for each note receivable.

## GL GENERAL LEDGER PROBLEM

Available only in  
Connect Plus

## Beyond the Numbers

**BTN 9-1** Refer to **Apple's** financial statements in Appendix A to answer the following.

- What is the amount of Apple's accounts receivable as of September 28, 2013?
- Compute Apple's accounts receivable turnover as of September 28, 2013.
- How long does it take, *on average*, for the company to collect receivables?
- Apple's most liquid assets include (a) cash and cash equivalents, (b) short-term marketable securities, (c) receivables, and (d) inventory. Compute the percentage that these liquid assets make up of current liabilities as of September 28, 2013. Do the same computations for September 29, 2012. Comment on the company's ability to satisfy its current liabilities as of its fiscal 2013 year-end compared to its fiscal 2012 year-end.
- What criteria did Apple use to classify items as cash equivalents? (*Hint*: Refer to Apple's footnotes describing cash equivalents in Appendix A.)

### Fast Forward

- Access Apple's financial statements for fiscal years after September 28, 2013, at its website ([www.Apple.com](http://www.Apple.com)) or the SEC's EDGAR database ([www.SEC.gov](http://www.SEC.gov)). Recompute parts 2 and 4 and comment on any changes since September 28, 2013.

## REPORTING IN ACTION

A1

APPLE

## COMPARATIVE ANALYSIS

A1 P2 

## APPLE GOOGLE

**BTN 9-2** Comparative figures for **Apple** and **Google** follow.

(\$ millions)	Apple			Google		
	Current Year	One Year Prior	Two Years Prior	Current Year	One Year Prior	Two Years Prior
Accounts receivable, net . . .	\$ 13,102	\$ 10,930	\$ 5,369	\$ 8,882	\$ 7,885	\$ 5,427
Net sales . . . . .	170,910	156,508	108,249	59,825	50,175	37,905

### Required

1. Compute the accounts receivable turnover for Apple and Google for each of the two most recent years using the data shown.
2. Using results from part 1, compute how many days it takes each company, *on average*, to collect receivables. Compare the collection periods for Apple and Google, and suggest at least one explanation for the difference.
3. Which company is more efficient in collecting its accounts receivable? Explain.

**Hint:** Average collection period equals 365 divided by the accounts receivable turnover.

## ETHICS CHALLENGE

P2 

**BTN 9-3** Anton Blair is the manager of a medium-size company. A few years ago, Blair persuaded the owner to base a part of his compensation on the net income the company earns each year. Each December he estimates year-end financial figures in anticipation of the bonus he will receive. If the bonus is not as high as he would like, he offers several recommendations to the accountant for year-end adjustments. One of his favorite recommendations is for the controller to reduce the estimate of doubtful accounts.

### Required

1. What effect does lowering the estimate for doubtful accounts have on the income statement and balance sheet?
2. Do you believe Blair's recommendation to adjust the allowance for doubtful accounts is within his rights as manager, or do you believe this action is an ethics violation? Justify your response.
3. What type of internal control(s) might be useful for this company in overseeing the manager's recommendations for accounting changes?

## COMMUNICATING IN PRACTICE

P2 

**BTN 9-4** As the accountant for Pure-Air Distributing, you attend a sales managers' meeting devoted to a discussion of credit policies. At the meeting, you report that bad debts expense is estimated to be \$59,000 and accounts receivable at year-end amount to \$1,750,000 less a \$43,000 allowance for doubtful accounts. Sid Omar, a sales manager, expresses confusion over why bad debts expense and the allowance for doubtful accounts are different amounts. Write a one-page memorandum to him explaining why a difference in bad debts expense and the allowance for doubtful accounts is not unusual. The company estimates bad debts expense as 2% of sales.

## TAKING IT TO THE NET

C1 

**BTN 9-5** Access **eBay's**, January 31, 2014, filing of its 10-K report for the year ended December 31, 2013, at [www.SEC.gov](http://www.SEC.gov).

### Required

1. What is the amount of eBay's net accounts receivable at December 31, 2013, and at December 31, 2012?
2. "Financial Statement Schedule IP" to its financial statements lists eBay's allowance for doubtful accounts (including authorized credits). For the two years ended December 31, 2013 and 2012, compute its allowance for doubtful accounts (including authorized credits) as a percent of gross accounts receivable.
3. Do you believe that these percentages are reasonable based on what you know about eBay? Explain.

## TEAMWORK IN ACTION

P2

**BTN 9-6** Each member of a team is to participate in estimating uncollectibles using the aging schedule and percents shown in Problem 9-3A. The division of labor is up to the team. Your goal is to accurately complete this task as soon as possible. After estimating uncollectibles, check your estimate with the instructor. If the estimate is correct, the team then should prepare the adjusting entry and the presentation of accounts receivable (net) for the December 31, 2015, balance sheet.

**BTN 9-7** Rakia Reynolds of **Skai Blue Media** is introduced in the chapter's opening feature. Rakia has a client that currently sells his products through multiple outlets. The client asks Rakia for guidance as he is considering two possible plans, A or B, for expanding sales for his merchandising company.

**Plan A.** The client would begin selling additional products online directly to customers, which are only currently sold directly to stores. These new online customers would use their credit cards. It currently has the capability of selling through its website with no additional investment in hardware or software. Credit sales are expected to increase by \$250,000 per year. Costs associated with this plan are: cost of these sales will be \$135,500, credit card fees will be 4.75% of sales, and additional recordkeeping and shipping costs will be 6% of sales. These online sales will reduce the sales to stores by \$35,000 because some customers will now purchase items online. Sales to stores have a 25% gross margin percentage.

**Plan B.** The client would expand its market to more stores. It would make additional credit sales of \$500,000 to those stores. Costs associated with those sales are: cost of sales will be \$375,000, additional recordkeeping and shipping will be 4% of sales, and uncollectible accounts will be 6.2% of sales.

### Required

1. Compute the additional annual net income or loss expected under (a) Plan A and (b) Plan B.
2. Should the client pursue either plan? Discuss both the financial and nonfinancial factors relevant to this decision.

### ENTREPRENEURIAL DECISION

**Check** (1b) Additional net income, \$74,000

**BTN 9-8** Many commercials include comments similar to the following: "We accept **VISA**" or "We do not accept **American Express**." Conduct your own research by contacting at least five companies via interviews, phone calls, or the Internet to determine the reason(s) companies discriminate in their use of credit cards. Collect information on the fees charged by the different cards for the companies contacted. (The instructor can assign this as a team activity.)

### HITTING THE ROAD

**BTN 9-9** Key information from **Samsung** ([www.Samsung.com](http://www.Samsung.com)), which is a leading manufacturer of consumer electronic products, follows.

₩ in millions	Current Year	One Year Prior	Two Years Prior
Accounts receivable, net* . . . . .	₩ 27,875,934	₩ 26,674,596	₩ 24,153,028
Sales . . . . .	228,692,667	201,103,613	165,001,771

\*Samsung refers to it as "Trade and other receivables."

1. Compute the accounts receivable turnover for the current year.
2. How long does it take on average for Samsung to collect receivables?
3. Refer to BTN 9-2. How does Samsung compare to **Apple** and **Google** in terms of its accounts receivable turnover and its collection period?

### GLOBAL DECISION

**Samsung**  
**APPLE**  
**GOOGLE**

## ANSWERS TO MULTIPLE CHOICE QUIZ

1. d; Desired balance in Allowance for Doubtful Accounts = \$ 5,026 cr.  
 $(\$125,650 \times 0.04)$   
 Current balance in Allowance for Doubtful Accounts = (328) cr.  
 Bad Debts Expense to be recorded = \$ 4,698
2. a; Desired balance in Allowance for Doubtful Accounts = \$29,358 cr.  
 $(\$489,300 \times 0.06)$   
 Current balance in Allowance for Doubtful Accounts = 554 dr.  
 Bad Debts Expense to be recorded = \$29,912
3. a;  $\$7,500 \times 0.05 \times 90/360 = \underline{\underline{\$93.75}}$
4. c; Principal amount . . . . . \$9,000  
 Interest accrued . . . . . 120  $(\$9,000 \times 0.08 \times 60/360)$   
 Maturity value . . . . . \$9,120
5. d;  $\$489,600/\$40,800 = \underline{\underline{12}}$

chapter

# Plant Assets, Natural Resources, and Intangibles

## Chapter Preview

### PLANT ASSETS

- C1** Cost determination
- P1** Depreciation
- C2** Partial-years and changes in estimates
- C3** Additional expenditures
- P2** Disposal

### NATURAL RESOURCES

- P3** Cost determination
- Depletion
- Presentation
- Plant assets tied into extracting resources

### INTANGIBLE ASSETS

- P4** Cost determination
- Amortization
- Types of intangibles
- A1** Analyze asset usage

## Learning Objectives

### CONCEPTUAL

- C1** Explain the cost principle for computing the cost of plant assets.
- C2** Explain depreciation for partial years and changes in estimates.
- C3** Distinguish between revenue and capital expenditures, and account for them.

### ANALYTICAL

- A1** Compute total asset turnover and apply it to analyze a company's use of assets.

### PROCEDURAL

- P1** Compute and record depreciation using the straight-line, units-of-production, and declining-balance methods.

- P2** Account for asset disposal through discarding or selling an asset.
- P3** Account for natural resource assets and their depletion.
- P4** Account for intangible assets.
- P5** *Appendix 10A*—Account for asset exchanges.

## Crafting the Dream

NEW GLARUS, WI—“When I was 10, I was walking around saying, ‘Geez, I’d like to own a brewery;’” jokes Deb Carey. All kidding aside, Deb explains that “At a certain point I thought, ‘I’ll start a brewery.’” Deb describes how “One day, we were talking to a maltster in Wisconsin, and the person asked if we were bidding on the equipment for sale in Appleton. It was equipment for a 20-barrel stainless system for a brew pub.” She soon decided, “I’m going to bid on it!” Her husband Dan reminded her, “But we don’t have any money.” Deb then declared, “I’m going to sell the house.” Soon, she explains, “I put all the listing stuff together to sell the house, then I got on a train.” Such was the launch of **New Glarus Brewing Co. (NewGlarusBrewing.com)**.

From those modest beginnings, Deb has persevered. “In that first year, we took home \$16,000, with no health insurance and no time off,” explains Deb. “We had no money, and we were working from 5 a.m. to midnight. We were renting a house with no dishwasher where the basement leaked and the heater went out.” Moreover, long-term assets in the brewery such as brew houses, packaging lines, and fermentation cellars are expensive. Deb explains that financing that equipment, buildings, and other assets was challenging. She explains that one must be a little creative. For example, in the

case of one of her new buildings, she “got a grant for \$1.7 million for energy savings.” Creative indeed!

New Glarus Brewing is currently on a roll—employing nearly 100 workers, offering unique products such as Spotted Cow, and generating over 100,000 barrels of beer annually with more than \$31 million in yearly sales. Still, a constant chal-

*“Constantly strive to surpass yourself, not the competition”*  
—Deb Carey

lenge for Deb is maintaining the right kind and amount of assets to meet business demands and be profitable. “Machinery cannot be divorced from the process,” insists Dan. “Machinery has its own personality, its own temperament, and its own foibles. So you have to work with the strengths and weaknesses of your machinery.”

Deb explains that New Glarus Brewing Co.’s success depends on continued monitoring and control of the types and costs of long-term assets. Each of her tangible and intangible assets commands Deb’s attention. She accounts for, manages, and focuses on recovering all costs of those acquisitions, including her current \$11 million expansion plan. “It really is like having a big family,” says Deb. “I feel like I am giving something back to the community. The people who work here are the best on the planet, and I try to take care of them.”

# Section 1—Plant Assets

**Plant assets** are tangible assets used in a company’s operations that have a useful life of more than one accounting period. Plant assets are also called *plant and equipment*; *property, plant and equipment*; or *fixed assets*. For many companies, plant assets make up the single largest class of assets they own. Exhibit 10.1 shows plant assets as a percent of total assets for several companies. Not only do they make up a large percent of many companies’ assets, but their dollar values are large. **McDonald’s** plant assets, for instance, are reported at more than \$22 billion, and **Walmart** reports plant assets of more than \$107 billion.

**EXHIBIT 10.1**

Plant Assets of Selected Companies

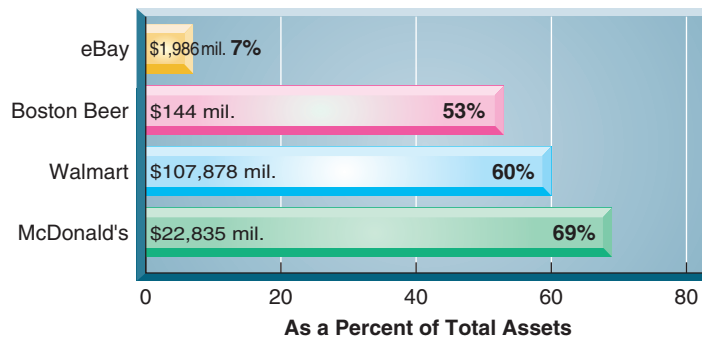

Exhibit 10.1 shows plant assets as a percent of total assets for several companies. Not only do they make up a large percent of many companies’ assets, but their dollar values are large. **McDonald’s** plant assets, for instance, are reported at more than \$22 billion, and **Walmart** reports plant assets of more than \$107 billion.

Plant assets are set apart from other assets by two important features. First, *plant assets are used in operations*. This makes them different from, for instance, inventory that is held for sale and not used in operations. The distinctive feature here is use, not type of asset. A company that purchases a computer to resell it reports it on the balance sheet as inventory. If the same company purchases this computer to use in operations, however, it is a plant asset. Another example is land held for future expansion, which is reported as a long-term investment. However, if this land holds a factory used in operations, the land is part of plant assets. Another example is equipment held for use in the event of a breakdown or for peak periods of production, which is reported in plant assets. If this same equipment is removed from use and held for sale, however, it is not reported in plant assets.

**Point:** The phrase *capital-intensive* refers to companies with large amounts invested in plant assets.

The second important feature is that *plant assets have useful lives extending over more than one accounting period*. This makes plant assets different from current assets such as supplies that are normally consumed in a short time period after they are placed in use.

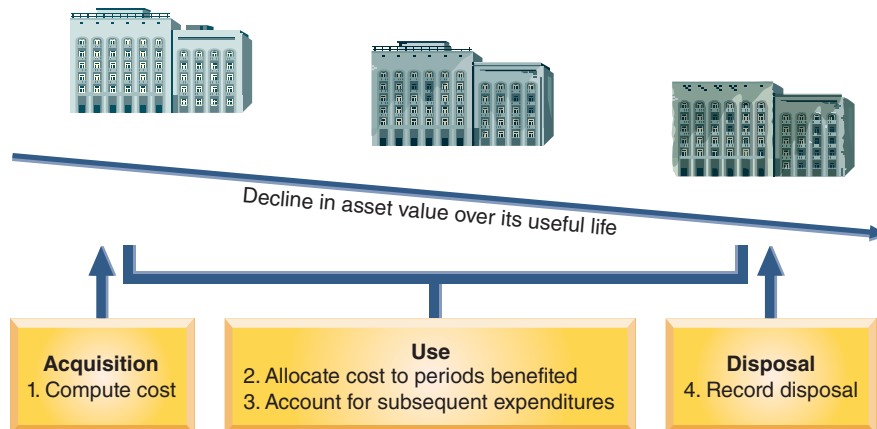

**Point:** It can help to view plant assets as prepaid expenses that benefit several future accounting periods.

The accounting for plant assets reflects these two features. Since plant assets are used in operations, we try to match their costs against the revenues they generate. Also, since their useful lives extend over more than one period, our matching of costs and revenues must extend over several periods. Specifically, we value plant assets (balance sheet effect) and then, for many of them, we allocate their costs to periods benefiting from their use (income statement effect). An important exception is land; land cost is not allocated to expense when we expect it to have an indefinite life.

Exhibit 10.2 shows four main issues in accounting for plant assets: (1) computing the costs of plant assets, (2) allocating the costs of most plant assets (less any salvage amounts) against

**EXHIBIT 10.2**

Issues in Accounting for Plant Assets

revenues for the periods they benefit, (3) accounting for expenditures such as repairs and improvements to plant assets, and (4) recording the disposal of plant assets. The following sections discuss these issues.

## COST DETERMINATION

Plant assets are recorded at cost when acquired. This is consistent with the *cost principle*. **Cost** includes all normal and reasonable expenditures necessary to get the asset in place and ready for its intended use. The cost of a factory machine, for instance, includes its invoice cost less any cash discount for early payment, plus any necessary freight, unpacking, assembling, installing, and testing costs. Examples are the costs of building a base or foundation for a machine, providing electrical hookups, and testing the asset before using it in operations.

To be recorded as part of the cost of a plant asset, an expenditure must be normal, reasonable, and necessary in preparing it for its intended use. If an asset is damaged during unpacking, the repairs are not added to its cost. Instead, they are charged to an expense account. Nor is a paid traffic fine for moving heavy machinery on city streets without a proper permit part of the machinery's cost; but payment for a proper permit is included in the cost of machinery. Charges are sometimes incurred to modify or customize a new plant asset. These charges are added to the asset's cost. We explain in this section how to determine the cost of plant assets for each of its four major classes.

**C1** Explain the cost principle for computing the cost of plant assets.

### Machinery and Equipment

The costs of machinery and equipment consist of all costs normal and necessary to purchase them and prepare them for their intended use. These include the purchase price, taxes, transportation charges, insurance while in transit, and the installing, assembling, and testing of the machinery and equipment.

### Buildings

A Building account is charged for the costs of purchasing or constructing a building that is used in operations. When purchased, a building's costs usually include its purchase price, brokerage fees, taxes, title fees, and attorney fees. Its costs also include all expenditures to ready it for its intended use, including any necessary repairs or renovations such as wiring, lighting, flooring, and wall coverings. When a company constructs a building or any plant asset for its own use, its costs include materials and labor plus a reasonable amount of indirect overhead cost. Overhead includes the costs of items such as heat, lighting, power, and depreciation on machinery used to construct the asset. Costs of construction also include design fees, building permits, and insurance during construction. However, costs such as insurance to cover the asset *after* it is placed in use are operating expenses.

PhotoLink/Getty Images

### Land Improvements

**Land improvements** are additions to land and have limited useful lives. Examples are parking lot surfaces, driveways, walkways, fences, landscaping, and sprinkling and lighting systems. Costs of land improvements include expenditures necessary to make those improvements ready for their intended use. While the costs of these improvements increase the usefulness of the land, they are charged to a separate Land Improvement account so that their costs can be allocated to the periods they benefit.

### Land

Land is the earth's surface and has an indefinite (unlimited) life. Costs of land include expenditures necessary to make that property ready for its intended use. When land is purchased for a building site, its cost includes the total amount paid for the land, including any real estate commissions, title insurance fees, legal fees, and any accrued property taxes paid by the

purchaser. Payments for surveying, clearing, grading, and draining also are included in the cost of land. Other costs include government assessments, whether incurred at the time of purchase or later, for items such as public roadways, sewers, and sidewalks. These assessments are included because they permanently add to the land’s value. Land purchased as a building site sometimes includes structures that must be removed. In such cases, the total purchase price is charged to the Land account as is the cost of removing the structures, less any amounts recovered through sale of salvaged materials. To illustrate, assume that **Starbucks** paid \$167,000 cash to acquire land for a retail store. This land had an old service garage that was removed at a net cost of \$13,000 (\$15,000 in costs less \$2,000 proceeds from salvaged materials). Additional closing costs total \$10,000, consisting of brokerage fees (\$8,000), legal fees (\$1,500), and title costs (\$500). The cost of this land to Starbucks is \$190,000 and is computed as shown in Exhibit 10.3.

**EXHIBIT 10.3**

Computing Cost of Land

Cash price of land .....	\$ 167,000
Net cost of garage removal .....	13,000
Closing costs .....	<u>10,000</u>
<b>Cost of land</b> .....	<b><u>\$190,000</u></b>

**Example:** If appraised values in Exhibit 10.4 are building, \$84,000; land improvements, \$12,000; and land, \$24,000, what cost is assigned to the building? Answer:

- (1)  $\$84,000 + \$12,000 + \$24,000 = \$120,000$   
(total appraisal)
- (2)  $\$84,000 / \$120,000 = 70\%$   
(building’s percent of total)
- (3)  $70\% \times \$90,000 = \$63,000$   
(building’s apportioned cost)

**Lump-Sum Purchase**

Plant assets sometimes are purchased as a group in a single transaction for a lump-sum price. This transaction is called a *lump-sum purchase*, or *group*, *bulk*, or *basket purchase*. When this occurs, we allocate the cost of the purchase among the different types of assets acquired based on their *relative market values*, which can be estimated by appraisal or by using the tax-assessed valuations of the assets. To illustrate, assume **CarMax** paid \$90,000 cash to acquire a group of items consisting of a building appraised at \$60,000, land improvements appraised at \$10,000, and land appraised at \$30,000. The \$90,000 cost is allocated on the basis of these appraised values as shown in Exhibit 10.4.

**EXHIBIT 10.4**

Computing Costs in a Lump-Sum Purchase

	Appraised Value	Percent of Total	Apportioned Cost
Building .....	\$ 60,000	60% (\$60,000/\$100,000)	<b>\$54,000</b> (\$90,000 × 60%)
Land improvements .....	10,000	10 (\$10,000/\$100,000)	<b>9,000</b> (\$90,000 × 10%)
Land .....	<u>30,000</u>	<u>30</u> (\$30,000/\$100,000)	<b><u>27,000</u></b> (\$90,000 × 30%)
Totals .....	<u>\$100,000</u>	<u>100%</u>	<u>\$ 90,000</u>

**NEED-TO-KNOW 10-1**

Cost Determination  
C1

Do More: QS 10-1, QS 10-2, E 10-1, E 10-2, E 10-3

**QC1**

Compute the amount recorded as the cost of a new machine given the following payments related to its purchase: gross purchase price, \$700,000; sales tax, \$49,000; purchase discount taken, \$21,000; freight cost—terms FOB shipping point, \$3,500; normal assembly costs, \$3,000; cost of necessary machine platform, \$2,500; cost of parts used in maintaining machine, \$4,200.

**Solution**

$$\underline{\$737,000} = \$700,000 + \$49,000 - \$21,000 + \$3,500 + \$3,000 + \$2,500$$

**DEPRECIATION**

**Depreciation** is the process of allocating the cost of a plant asset to expense in the accounting periods benefiting from its use. Depreciation does not measure the decline in the asset’s market value each period, nor does it measure the asset’s physical deterioration. Since depreciation reflects the cost of using a plant asset, depreciation charges are only recorded when the asset is actually in service. This section describes the factors we must consider in computing

**Point:** Depreciation is cost allocation, not asset valuation.

depreciation, the depreciation methods used, revisions in depreciation, and depreciation for partial periods.

## Factors in Computing Depreciation

Factors that determine depreciation are (1) cost, (2) salvage value, and (3) useful life.

**Cost** The **cost** of a plant asset consists of all necessary and reasonable expenditures to acquire it and to prepare it for its intended use.

**Salvage Value** The total amount of depreciation to be charged off over an asset's benefit period equals the asset's cost minus its salvage value. **Salvage value**, also called *residual value* or *scrap value*, is an estimate of the asset's value at the end of its benefit period. This is the amount the owner expects to receive from disposing of the asset at the end of its benefit period. If the asset is expected to be traded in on a new asset, its salvage value is the expected trade-in value.

**Useful Life** The **useful life** of a plant asset is the length of time it is productively used in a company's operations. Useful life, also called *service life*, might not be as long as the asset's total productive life. For example, the productive life of a computer can be eight years or more. Some companies, however, trade in old computers for new ones every two years. In this case, these computers have a two-year useful life, meaning the cost of these computers (less their expected trade-in values) is charged to depreciation expense over a two-year period.

Several variables often make the useful life of a plant asset difficult to predict. A major variable is the wear and tear from use in operations. Two other variables, inadequacy and obsolescence, also require consideration. **Inadequacy** refers to the insufficient capacity of a company's plant assets to meet its growing productive demands. **Obsolescence** refers to the condition of a plant asset that is no longer useful in producing goods or services with a competitive advantage because of new inventions and improvements. Both inadequacy and obsolescence are difficult to predict because of demand changes, new inventions, and improvements. A company usually disposes of an inadequate or obsolete asset before it wears out.

A company is often able to better predict a new asset's useful life when it has past experience with a similar asset. When it has no such experience, a company relies on the experience of others or on engineering studies and judgment. In note 1 of its annual report, **Tootsie Roll**, a snack food manufacturer, reports the following useful lives:

Buildings .....	20–35 years
Machinery and Equipment .....	5–20 years

## Decision Insight

**Life Line** Life expectancy of plant assets is often in the eye of the beholder. For instance, **Hershey Foods** and **Tootsie Roll** are competitors and apply similar manufacturing processes, yet their equipment's life expectancies are different. Hershey depreciates equipment over 3 to 15 years, but Tootsie Roll depreciates them over 5 to 20 years. Such differences markedly impact financial statements. ■

Sergey Lavrentev/iStock/360/Getty Images

## Depreciation Methods

Depreciation methods are used to allocate a plant asset's cost over the accounting periods in its useful life. The most frequently used method of depreciation is the straight-line method. Another common depreciation method is the units-of-production method. We explain both of these methods in this section. This section also describes accelerated depreciation methods, with a focus on the declining-balance method.

The computations in this section use information about a machine that inspects athletic shoes before packaging. Manufacturers such as **Converse**, **Reebok**, **adidas**, and **Fila** use this machine. Data for this machine are in Exhibit 10.5.

## P1

Compute and record depreciation using the straight-line, units-of-production, and declining-balance methods.

**Point:** If we expect additional costs in preparing a plant asset for disposal, the salvage value equals the expected amount from disposal less any disposal costs.

**Point:** Useful life and salvage value are estimates. Estimates require judgment based on all available information.

**Point:** Land is recorded at cost but not depreciated because it is assumed to have an indefinite life.

**EXHIBIT 10.5**

Data for Athletic Shoe-Inspecting Machine

Cost .....	\$10,000	Useful life	
Salvage value .....	<u>1,000</u>	Accounting periods .....	5 years
Depreciable cost .....	\$ 9,000	Units inspected .....	36,000 shoes

**Straight-Line Method** Straight-line depreciation charges the same amount of expense to each period of the asset’s useful life. A two-step process is used. We first compute the *depreciable cost* of the asset, also called the *cost to be depreciated*. It is computed by subtracting the asset’s salvage value from its total cost. Second, depreciable cost is divided by the number of accounting periods in the asset’s useful life. The formula for straight-line depreciation, along with its computation for the inspection machine just described, is shown in Exhibit 10.6.

**EXHIBIT 10.6**

Straight-Line Depreciation Formula and Example

$$\frac{\text{Cost} - \text{Salvage value}}{\text{Useful life in periods}} = \frac{\$10,000 - \$1,000}{5 \text{ years}} = \$1,800 \text{ per year}$$

If this machine is purchased on December 31, 2014, and used throughout its predicted useful life of five years, the straight-line method allocates an equal amount of depreciation to each of the years 2015 through 2019. We make the following adjusting entry at the end of each of the five years to record straight-line depreciation of this machine.

Assets = Liabilities + Equity  
-1,800 = -1,800

Dec. 31	Depreciation Expense .....	1,800	
	Accumulated Depreciation—Machinery .....		1,800
	To record annual depreciation.		

The \$1,800 Depreciation Expense is reported on the income statement among operating expenses. The \$1,800 Accumulated Depreciation is a contra asset account to the Machinery account in the balance sheet. The graph on the left in Exhibit 10.7 shows the \$1,800 per year expenses reported in each of the five years. The graph on the right shows the amounts reported on each of the six December 31 balance sheets.

**Example:** If salvage value of the machine is \$2,500, what is the annual depreciation?  
Answer:  $(\$10,000 - \$2,500) / 5 \text{ years} = \$1,500$

**EXHIBIT 10.7**

Financial Statement Effects of Straight-Line Depreciation

Book value = Cost - Accumulated depreciation

The net balance sheet amount is the **asset book value**, or simply *book value*, and is computed as the asset’s total cost less its accumulated depreciation. For example, at the end of year 2 (December 31, 2016), its book value is \$6,400 and is reported in the balance sheet as follows:

Machinery .....	\$10,000	
Less accumulated depreciation .....	<u>3,600</u>	\$6,400 ← Book value

The book value of this machine declines by \$1,800 each year due to depreciation. The left-side graphic in Exhibit 10.7 reveals why this method is called straight-line.

We also can compute the *straight-line depreciation rate*, defined as 100% divided by the number of periods in the asset’s useful life. For the inspection machine, this rate is

**Point:** Once an asset’s book value equals its salvage value, depreciation stops.

20% (100% ÷ 5 years, or 1/5 per period). We use this rate, along with other information, to compute the machine's *straight-line depreciation schedule* shown in Exhibit 10.8. Note three points in this exhibit. First, depreciation expense is the same each period. Second, accumulated depreciation is the sum of current and prior periods' depreciation expense. Third, book value declines each period until it equals salvage value at the end of the machine's useful life.

Annual Period	Depreciation for the Period			End of Period	
	Depreciable Cost*	Depreciation Rate	Depreciation Expense	Accumulated Depreciation	Book Value†
2014	—	—	—	—	\$10,000
2015	\$9,000	20%	\$1,800	\$1,800	8,200
2016	9,000	20	1,800	3,600	6,400
2017	9,000	20	1,800	5,400	4,600
2018	9,000	20	1,800	7,200	2,800
2019	9,000	20	1,800	9,000	1,000
			\$9,000		

Salvage value (not depreciated)  
(\$10,000 cost - \$1,000 salvage)

**EXHIBIT 10.8**

Straight-Line Depreciation Schedule

\* \$10,000 - \$1,000. † Book value is total cost minus accumulated depreciation.

**Units-of-Production Method** The straight-line method charges an equal share of an asset's cost to each period. If plant assets are used up in about equal amounts each accounting period, this method produces a reasonable matching of expenses with revenues. However, the use of some plant assets varies greatly from one period to the next. A builder, for instance, might use a piece of construction equipment for a month and then not use it again for several months. When equipment use varies from period to period, the units-of-production depreciation method can better match expenses with revenues. **Units-of-production depreciation** charges a varying amount to expense for each period of an asset's useful life depending on its *usage*.

A two-step process is used to compute units-of-production depreciation. We first compute *depreciation per unit* by subtracting the asset's salvage value from its total cost and then dividing by the total number of units expected to be produced during its useful life. Units of production can be expressed in product or other units such as hours used or miles driven. The second step is to compute depreciation expense for the period by multiplying the units produced in the period by the depreciation per unit. The formula for units-of-production depreciation, along with its computation for the machine described in Exhibit 10.5, is shown in Exhibit 10.9. (7,000 shoes are inspected and sold in its first year.)

**Step 1**

$$\text{Depreciation per unit} = \frac{\text{Cost} - \text{Salvage value}}{\text{Total units of production}} = \frac{\$10,000 - \$1,000}{36,000 \text{ shoes}} = \$0.25 \text{ per shoe}$$

**Step 2**

$$\text{Depreciation expense} = \text{Depreciation per unit} \times \text{Units produced in period}$$

$$\$0.25 \text{ per shoe} \times 7,000 \text{ shoes} = \$1,750$$

**EXHIBIT 10.9**

Units-of-Production Depreciation Formula and Example

Using data on the number of shoes inspected by the machine, we can compute the *units-of-production depreciation schedule* shown in Exhibit 10.10. For example, depreciation for the first year is \$1,750 (7,000 shoes at \$0.25 per shoe). Depreciation for the second year is \$2,000 (8,000 shoes at \$0.25 per shoe). Other years are similarly computed. Exhibit 10.10 shows that (1) depreciation expense depends on unit output, (2) accumulated depreciation is the sum of current and prior periods' depreciation expense, and (3) book value declines each period until it

**Example:** Refer to Exhibit 10.10. If the number of shoes inspected in 2019 is 5,500, what is depreciation for 2019? Answer: \$1,250 (never depreciate below salvage value)

**EXHIBIT 10.10**

Units-of-Production Depreciation Schedule

Annual Period	Depreciation for the Period			End of Period	
	Number of Units	Depreciation per Unit	Depreciation Expense	Accumulated Depreciation	Book Value
2014	—	—	—	—	\$10,000
2015	7,000	\$0.25	\$1,750	\$1,750	8,250
2016	8,000	0.25	2,000	3,750	6,250
2017	9,000	0.25	2,250	6,000	4,000
2018	7,000	0.25	1,750	7,750	2,250
2019	5,000	0.25	1,250	9,000	1,000
	36,000 units		\$9,000		

(\$10,000 cost - \$1,000 salvage)  
Salvage value (not depreciated)

**Declining-Balance Method** An accelerated depreciation method yields larger depreciation expenses in the early years of an asset’s life and less depreciation in later years. The most common accelerated method is the **declining-balance method** of depreciation, which uses a depreciation rate that is a multiple of the straight-line rate and applies it to the asset’s beginning-of-period book value. The amount of depreciation declines each period because book value declines each period.

A common depreciation rate for the declining-balance method is double the straight-line rate. This is called the *double-declining-balance (DDB)* method. This method is applied in three steps: (1) compute the asset’s straight-line depreciation rate, (2) double the straight-line rate, and (3) compute depreciation expense by multiplying this rate by the asset’s beginning-of-period book value. To illustrate, let’s return to the machine in Exhibit 10.5 and apply the double-declining-balance method to compute depreciation expense. Exhibit 10.11 shows the first-year depreciation computation for the machine. The three-step process is to (1) divide 100% by five years to determine the straight-line rate of 20%, or 1/5, per year, (2) double this 20% rate to get the declining-balance rate of 40%, or 2/5, per year, and (3) compute depreciation expense as 40%, or 2/5, multiplied by the beginning-of-period book value.

**Point:** In the DDB method, *double* refers to the rate and *declining balance* refers to book value. The rate is applied to beginning book value each period.

**EXHIBIT 10.11**

Double-Declining-Balance Depreciation Formula\*

**Step 1**  
Straight-line rate = 100% ÷ Useful life = 100% ÷ 5 years = 20%

**Step 2**  
Double-declining-balance rate = 2 × Straight-line rate = 2 × 20% = 40%

**Step 3**  
Depreciation expense = Double-declining-balance rate × Beginning-period book value  
40% × \$10,000 = \$4,000 (for 2015)

\* To simplify: DDB depreciation = (2 × Beginning-period book value)/Useful life.

SL rate =  $\frac{100\%}{\text{Useful life}}$   
DDB rate =  $\frac{200\%}{\text{Useful life}}$

**Example:** What is the DDB depreciation in year 2018 if salvage value is \$2,000? Answer: \$2,160 - \$2,000 = \$160

The *double-declining-balance depreciation schedule* is shown in Exhibit 10.12. The schedule follows the formula except for year 2019, when depreciation expense is \$296. This \$296 is not equal to 40% × \$1,296, or \$518.40. If we had used the \$518.40 for depreciation expense in 2019, the ending book value would equal \$777.60, which is less than the \$1,000 salvage value. Instead, the \$296 is computed by subtracting the \$1,000 salvage value from the \$1,296 book value at the beginning of the fifth year (the year when DDB depreciation cuts into salvage value).

Annual Period	Depreciation for the Period			End of Period	
	Beginning of Period Book Value	Depreciation Rate	Depreciation Expense	Accumulated Depreciation	Book Value
2014	—	—	—	—	\$10,000
2015	\$10,000	40%	\$4,000	\$4,000	6,000
2016	6,000	40	2,400	6,400	3,600
2017	3,600	40	1,440	7,840	2,160
2018	2,160	40	864	8,704	1,296
2019	1,296	40	296*	9,000	1,000
			\$9,000		

**EXHIBIT 10.12**  
Double-Declining-Balance Depreciation Schedule

\* Year 2019 depreciation is \$1,296 - \$1,000 = \$296 (never depreciate book value below salvage value).

Salvage value (not depreciated)  
(\$10,000 cost - \$1,000 salvage)

**Comparing Depreciation Methods** Exhibit 10.13 shows depreciation expense for each year of the machine’s useful life under each of the three depreciation methods. While depreciation expense per period differs for different methods, total depreciation expense of \$9,000 is the same over the machine’s useful life.

	A	B	C	D
1	Period	Straight-Line	Units-of-Production	Double-Declining-Balance
2	2015	\$1,800	\$1,750	\$4,000
3	2016	1,800	2,000	2,400
4	2017	1,800	2,250	1,440
5	2018	1,800	1,750	864

8				

**EXHIBIT 10.13**  
Depreciation Expense for the Different Methods

Each method starts with a total cost of \$10,000 and ends with a salvage value of \$1,000. The difference is the pattern in depreciation expense over the useful life. The book value of the asset when using straight-line is always greater than the book value from using double-declining-balance, except at the beginning and end of the asset’s useful life, when it is the same. Also, the straight-line method yields a steady pattern of depreciation expense while the units-of-production depreciation depends on the number of units produced. Each of these methods is acceptable because it allocates cost in a systematic and rational manner.

**Decision Insight**

**In Vogue** About 85% of companies use straight-line depreciation for plant assets, 5% use units-of-production, and 4% use declining-balance. Another 6% use an unspecified accelerated method—most likely declining-balance. ■

**Depreciation for Tax Reporting** The records a company keeps for financial accounting purposes are usually separate from the records it keeps for tax accounting purposes. This is so because financial accounting aims to report useful information on financial performance and position, whereas tax accounting reflects government objectives in raising revenues. Differences between these two accounting systems are normal and expected. Depreciation is a common example of how the records differ. For example, many companies use accelerated depreciation in computing taxable income. Reporting higher depreciation expense in the early years of an asset’s life reduces the company’s taxable income in those years and increases it in later years, when the depreciation expense is lower. The company’s goal here is to *postpone* its tax payments.

**Point:** Understanding depreciation for financial accounting will help in learning MACRS for tax accounting. Rules for MACRS are available from [www.irs.gov](http://www.irs.gov).

## C2

Explain depreciation for partial years and changes in estimates.

**Point:** Assets purchased on days 1 through 15 of a month are usually recorded as purchased on the 1st of that month. Assets purchased on days 16 to the month-end are recorded as if purchased on the 1st of the next month.

**Point:** Many firms use a “half-year convention,” which records 6 months’ depreciation in the year of purchase, regardless of the purchase date.

**Example:** If the machine’s salvage value is zero and purchase occurs on Oct. 8, 2014, how much depreciation is recorded at Dec. 31, 2014? Answer:  $\$10,000/5 \times 3/12 = \$500$

**Point:** Remaining depreciable cost equals book value less revised salvage value at the point of revision.

### EXHIBIT 10.14

Computing Revised Straight-Line Depreciation

**Example:** If at the start of its second year the machine’s remaining useful life changes from 4 to 3 years and salvage value from \$1,000 to \$400, how much straight-line depreciation is recorded in remaining years? Answer: Revised depreciation =  $(\$8,200 - \$400)/3 = \$2,600$

The U.S. federal income tax law has rules for depreciating assets. These rules include the **Modified Accelerated Cost Recovery System (MACRS)**, which allows straight-line depreciation for some assets but requires accelerated depreciation for most kinds of assets. MACRS separates depreciable assets into different classes and defines the depreciable life and rate for each class. MACRS is *not* acceptable for financial reporting because it often allocates costs over an arbitrary period that is less than the asset’s useful life and it fails to estimate salvage value. Details of MACRS are covered in tax accounting courses.

## Partial-Year Depreciation

Plant assets are purchased and disposed of at various times. When an asset is purchased (or disposed of) at a time other than the beginning or end of an accounting period, depreciation is recorded for part of a year. This is done so that the year of purchase or the year of disposal is charged with its share of the asset’s depreciation.

To illustrate, assume that the machine in Exhibit 10.5 is purchased and placed in service on October 8, 2014, and the annual accounting period ends on December 31. Since this machine is purchased and used for nearly three months in 2014, the calendar-year income statement should report depreciation expense on the machine for that part of the year. Normally, depreciation assumes that the asset is purchased on the first day of the month nearest the actual date of purchase. In this case, since the purchase occurred on October 8, we assume an October 1 purchase date. This means that three months’ depreciation is recorded in 2014. Using straight-line depreciation, we compute three months’ depreciation of \$450 as follows.

$$\frac{\$10,000 - \$1,000}{5 \text{ years}} \times \frac{3}{12} = \$450$$

A similar computation is necessary when an asset disposal occurs during a period. To illustrate, assume that the machine is sold on June 24, 2019. Depreciation is recorded for the period January 1 through June 24 when it is disposed of. This partial year’s depreciation, computed to the nearest whole month, is

$$\frac{\$10,000 - \$1,000}{5 \text{ years}} \times \frac{6}{12} = \$900$$

## Change in Estimates for Depreciation

Depreciation is based on estimates of salvage value and useful life. During the useful life of an asset, new information may indicate that these estimates are inaccurate. If our estimate of an asset’s useful life and/or salvage value changes, what should we do? The answer is to use the new estimate to compute depreciation for current and future periods. This means that we revise the depreciation expense computation by spreading the cost yet to be depreciated over the remaining useful life. This approach is used for all depreciation methods.

Let’s return to the machine described in Exhibit 10.8 using straight-line depreciation. At the beginning of this asset’s third year, its book value is \$6,400, computed as \$10,000 minus \$3,600. Assume that at the beginning of its third year, the estimated number of years remaining in its useful life changes from three to four years *and* its estimate of salvage value changes from \$1,000 to \$400. Straight-line depreciation for each of the four remaining years is computed as shown in Exhibit 10.14.

$$\frac{\text{Book value} - \text{Revised salvage value}}{\text{Revised remaining useful life}} = \frac{\$6,400 - \$400}{4 \text{ years}} = \$1,500 \text{ per year}$$

Thus, \$1,500 of depreciation expense is recorded for the machine at the end of the third through sixth years—each year of its remaining useful life. Since this asset was depreciated at \$1,800 per year for the first two years, it is tempting to conclude that depreciation expense was overstated in the first two years. However, these expenses reflected the best information available at that time. We do not go back and restate prior years’ financial statements for this type of new information. Instead, we adjust the current and future periods’ statements to reflect this new information. Revising an estimate of the useful life or salvage value of a plant asset is referred

to as a **change in an accounting estimate** and is reflected in current and future financial statements, not in prior statements.

### Reporting Depreciation

Both the cost and accumulated depreciation of plant assets are reported on the balance sheet or in its notes. **Dale Jarrett Racing Adventure**, for instance, reports the following.

Race vehicles and other . . . . .	\$1,027,026
Furniture, software, DJ Graphics, and equipment . . . . .	105,478
Shop and track equipment. . . . .	173,739
Property and equipment, gross . . . . .	1,306,243
Less accumulated depreciation . . . . .	901,767
Property and equipment, net. . . . .	<u>\$ 404,476</u>

Chris Trotman/NASCAR/Getty Images

Many companies also show plant assets on one line with the net amount of cost less accumulated depreciation. When this is done, the amount of accumulated depreciation is disclosed in a note. **Apple** reports only the net amount of its property, plant and equipment in its balance sheet. To satisfy the full-disclosure principle, Apple describes its depreciation methods in its Note 1 and the amounts comprising plant assets in its Note 3—see its 10-K at [www.SEC.gov](http://www.SEC.gov).

Reporting both the cost and accumulated depreciation of plant assets helps users compare the assets of different companies. For example, a company holding assets costing \$50,000 and accumulated depreciation of \$40,000 is likely in a situation different from a company with new assets costing \$10,000. While the net undepreciated cost of \$10,000 is the same in both cases, the first company may have more productive capacity available but likely is facing the need to replace older assets. These insights are not provided if the two balance sheets report only the \$10,000 book values.

Users must remember that plant assets are reported on a balance sheet at their undepreciated costs (book value), not at fair (market) values. This emphasis on costs rather than fair values is based on the *going-concern assumption* described in Chapter 1. This assumption states that, unless there is evidence to the contrary, we assume that a company continues in business. This implies that plant assets are held and used long enough to recover their cost through the sale of products and services. Because plant assets are not for sale, their fair values are not reported. An exception is when there is a *permanent decline* in the fair value of an asset relative to its book value, called an asset **impairment**. In this case the company writes the asset down to this fair value (details for the two-step process for assessing and computing the impairment loss are in advanced courses).

Accumulated Depreciation is a contra asset account with a normal credit balance. It does *not* reflect funds accumulated to buy new assets when the assets currently owned are replaced. If a company has funds available to buy assets, the funds are shown on the balance sheet among liquid assets such as cash or investments.

**Point:** A company usually keeps records for each asset showing its cost and depreciation to date. The combined records for individual assets are a type of plant asset subsidiary ledger.

**Example:** Assume equipment carries a book value of \$800 (\$900 cost less \$100 accumulated depreciation) and a fair (market) value of \$750, and this \$50 decline in value meets the 2-step impairment test. The entry to record this impairment is:  
 Impairment Loss      \$50  
     Accum Depr-Equip.      \$50

### Decision Ethics

**Controller** You are the controller for a struggling company. Its operations require regular investments in equipment, and depreciation is its largest expense. Its competitors frequently replace equipment—often depreciated over three years. The company president instructs you to revise useful lives of equipment from three to six years and to use a six-year life on all new equipment. What actions do you take? ■ [Answers follow the chapter's Summary.]

**Part 1.** A machine costing \$22,000 with a five-year life and an estimated \$2,000 salvage value is installed on January 1. The manager estimates the machine will produce 1,000 units of product during its life. It actually produces the following units: 200 in 1st year, 400 in 2nd year, 300 in 3rd year, 80 in 4th year, 30 in 5th year. The total units produced by the end of year 5 exceeds the original estimate—this difference was not predicted. (The machine must not be depreciated below its estimated salvage value.) Prepare a table with the following column headings—Year, Straight-Line, Units-of-Production, Double-Declining-Balance—and then compute depreciation expense for each year (and total depreciation for all years combined) under each method.

**Part 2.** In early January 2013, a company acquires equipment for \$3,800. The company estimates this equipment to have a useful life of three years and a salvage value of \$200. Early in 2015, the company

### NEED-TO-KNOW 10-2

Depreciation Computations

P1 C2

changes its estimates to a total four-year useful life and zero salvage value. Using the straight-line method, what is depreciation expense for the year ended 2015?

**Solution—Part 1**

Year	Straight-Line <sup>a</sup>	Units-of-Production <sup>b</sup>	Double-Declining-Balance <sup>c</sup>
1 .....	\$ 4,000	\$ 4,000	\$ 8,800
2 .....	4,000	8,000	5,280
3 .....	4,000	6,000	3,168
4 .....	4,000	1,600	1,901
5 .....	4,000	400	851
Totals .....	<u>\$20,000</u>	<u>\$20,000</u>	<u>\$20,000</u>

<sup>a</sup>Straight-line: Cost per year =  $(\$22,000 - \$2,000) / 5 \text{ years} = \$4,000 \text{ per year}$

<sup>b</sup>Units-of-production: Cost per unit =  $(\$22,000 - \$2,000) / 1,000 \text{ units} = \$20 \text{ per unit}$

Year	Units	Depreciation per Unit	Depreciation
1 .....	200	\$20	\$ 4,000
2 .....	400	20	8,000
3 .....	300	20	6,000
4 .....	80	20	1,600
5 .....	30	20	400*
Total .....			<u>\$20,000</u>

\*Set depreciation in year 5 to reduce book value to the \$20,000 salvage value; namely, instead of \$600 (30 × \$20), we use the maximum of \$400 (\$20,000 – \$19,600 accum depr).

<sup>c</sup>Double-declining-balance:  $(100\% / 5) \times 2 = 40\% \text{ depreciation rate}$

Year	Beginning Book Value	Annual Depreciation (40% of Book Value)	Accumulated Depreciation at the End of the Year	Ending Book Value (\$22,000 Cost less Accumulated Depreciation)
1 .....	\$22,000	\$ 8,800	\$ 8,800	\$13,200
2 .....	13,200	5,280	14,080	7,920
3 .....	7,920	3,168	17,248	4,752
4 .....	4,752	1,901*	19,149	2,851
5 .....	2,851	851**	20,000	2,000
Total .....		<u>\$20,000</u>		

\*Rounded to the nearest dollar.

\*\*Set depreciation in year 5 to reduce book value to the \$20,000 salvage value; namely, instead of \$1,140 (2,851 × 40%), we use the maximum of \$851 (\$2,851 – \$2,000).

**Solution—Part 2**

$(\$3,800 - \$200) / 3 \text{ years} = \$1,200 \text{ (original depreciation per year)}$

$\$1,200 \times 2 \text{ years} = \$2,400 \text{ (accumulated depreciation at date of change in estimate)}$

$(\$3,800 - \$2,400) / 2 \text{ years} = \underline{\underline{\$700}} \text{ (revised depreciation)}$

## ADDITIONAL EXPENDITURES

### C3

Distinguish between revenue and capital expenditures, and account for them.

After a company acquires a plant asset and puts it into service, it often makes additional expenditures for that asset’s operation, maintenance, repair, and improvement. In recording these expenditures, it must decide whether to capitalize or expense them (to capitalize an expenditure is to debit the asset account). The issue is whether these expenditures are reported as current-period expenses or added to the plant asset’s cost and depreciated over its remaining useful life.

**Revenue expenditures**, also called *income statement expenditures*, are additional costs of plant assets that do not materially increase the asset’s life or productive capabilities. They are recorded as expenses and deducted from revenues in the current period’s income statement. Examples of revenue expenditures are cleaning, repainting, adjustments, and lubricants. **Capital expenditures**, also called *balance sheet expenditures*, are additional costs of plant assets that provide benefits extending beyond the current period. They are debited to asset accounts and reported on the balance sheet. Capital expenditures increase or improve the type or amount of service an asset provides. Examples are roofing replacement, plant expansion, and major overhauls of machinery and equipment.

	Financial Statement Effect	
	Accounting	Expense Timing
Revenue expenditure	Income stmt. account debited	Expensed currently
Capital expenditure	Balance sheet account debited	Expensed in future

Financial statements are affected for several years by the accounting choice of recording costs as either revenue expenditures or capital expenditures. This decision is based on whether the expenditures are identified as ordinary repairs or as betterments and extraordinary repairs.

**Decision Maker** 

**Entrepreneur** Your start-up Internet services company needs cash, and you are preparing financial statements to apply for a short-term loan. A friend suggests that you treat as many expenses as possible as capital expenditures. What are the impacts on financial statements of this suggestion? What do you think is the aim of this suggestion? ■ [Answers follow the chapter’s Summary.]

**Ordinary Repairs**

**Ordinary repairs** are expenditures to keep an asset in normal, good operating condition. They are necessary if an asset is to perform to expectations over its useful life. Ordinary repairs do not extend an asset’s useful life beyond its original estimate or increase its productivity beyond original expectations. Examples are normal costs of cleaning, lubricating, adjusting, oil changing, and replacing small parts of a machine. Ordinary repairs are treated as *revenue expenditures*. This means their costs are reported as expenses on the current-period income statement. Following this rule, **Brunswick** reports that “maintenance and repair costs are expensed as incurred.” If Brunswick’s current-year repair costs are \$9,500, it makes the following entry.

**Point:** Many companies apply the *materiality constraint* to treat low-cost plant assets (say, less than \$500) as revenue expenditures. This practice is referred to as a “capitalization policy.”

Dec. 31	Repairs Expense .....	9,500	
	Cash .....		9,500
	To record ordinary repairs of equipment.		

Assets	=	Liabilities	+	Equity
-9,500				-9,500

**Betterments and Extraordinary Repairs**

Accounting for betterments and extraordinary repairs is similar—both are treated as *capital expenditures*.

**Betterments (Improvements)** **Betterments**, also called *improvements*, are expenditures that make a plant asset more efficient or productive. A betterment often involves adding a component to an asset or replacing one of its old components with a better one and does not always increase an asset’s useful life. An example is replacing manual controls on a machine with automatic controls. One special type of betterment is an *addition*, such as adding a new wing or dock to a warehouse. Since a betterment benefits future periods, it is debited to the asset account as a capital expenditure. The new book value (less salvage value) is then depreciated over the asset’s remaining useful life. To illustrate, suppose a company pays \$8,000 for a machine with an eight-year useful life and no salvage value. After three years and \$3,000 of depreciation, it adds an automated control system to the machine at a cost of \$1,800. This results in reduced labor costs in future periods. The cost of the betterment is added to the Machinery account with this entry.

**Example:** Assume a firm owns a web server. Identify each cost as a revenue or capital expenditure: (1) purchase price, (2) necessary wiring, (3) platform for operation, (4) circuits to increase capacity, (5) cleaning after each month of use, (6) repair of a faulty switch, and (7) replaced a worn fan. Answer: Capital expenditures: 1, 2, 3, 4; revenue expenditures: 5, 6, 7.

Jan. 2	Machinery .....	1,800	
	Cash .....		1,800
	To record installation of automated system.		

Assets	=	Liabilities	+	Equity
+1,800				
-1,800				

After the betterment is recorded, the remaining cost to be depreciated is \$6,800, computed as \$8,000 – \$3,000 + \$1,800. Depreciation expense for the remaining five years is \$1,360 per year, computed as \$6,800/5 years.

**Point:** Both extraordinary repairs and betterments require revising future depreciation.

**Extraordinary Repairs (Replacements)** Extraordinary repairs are expenditures extending the asset’s useful life beyond its original estimate. Extraordinary repairs are *capital expenditures* because they benefit future periods. Their costs are debited to the asset account (or to accumulated depreciation). For example, **Delta Air Lines** reports, “modifications that . . . extend the useful lives of airframes or engines are capitalized and amortized [depreciated] over the remaining estimated useful life of the asset.”

**Decision Insight**

**Extraordinary Bombers** If we owned a 20-year-old truck and planned to use it in our work for another 40 years, we would expect some extraordinary repairs in future years. A similar situation confronts Whiteman Air Force Base, home to the B-2 stealth bomber, which rolled out of a **Northrop Grumman** hangar in the 1980s. The plan is to keep those bat-winged bombers flying until 2058. The Pentagon is moving forward with a \$2 billion, 10-year effort to modernize the bombers’ defensive capabilities. ■

Purestock/Superstock

**DISPOSALS OF PLANT ASSETS**

**P2**  
Account for asset disposal through discarding or selling an asset.

Plant assets are disposed of for several reasons. Some are discarded because they wear out or become obsolete. Others are sold because of changing business plans. Regardless of the reason, disposals of plant assets occur in one of three basic ways: discarding, sale, or exchange. The general steps in accounting for a disposal of plant assets are described in Exhibit 10.15.

**EXHIBIT 10.15**  
Accounting for Disposals of Plant Assets

1. Record depreciation up to the date of disposal—this also updates Accumulated Depreciation.
2. Record the removal of the disposed asset’s account balances—including its Accumulated Depreciation.
3. Record any cash (and/or other assets) received or paid in the disposal.
4. Record any gain or loss—computed by comparing the disposed asset’s book value with the market value of any assets received.\*

\* An exception to step 4 is the case of an exchange that lacks *commercial substance*—see Appendix 10A.

**Discarding Plant Assets**

A plant asset is *discarded* when it is no longer useful to the company and it has no market value. To illustrate, assume that a machine costing \$9,000 with accumulated depreciation of \$9,000 is discarded. When accumulated depreciation equals the asset’s cost, it is said to be *fully depreciated* (zero book value). The entry to record the discarding of this asset is

Assets = Liabilities + Equity  
+9,000  
–9,000

June 5	Accumulated Depreciation—Machinery . . . . .	9,000	
	Machinery . . . . .		9,000
	<i>To discard fully depreciated machinery.</i>		

This entry reflects all four steps of Exhibit 10.15. Step 1 is unnecessary since the machine is fully depreciated. Step 2 is reflected in the debit to Accumulated Depreciation and credit to Machinery. Since no other asset is involved, step 3 is irrelevant. Finally, since book value is zero and no other asset is involved, no gain or loss is recorded in step 4.

How do we account for discarding an asset that is not fully depreciated or one whose depreciation is not up-to-date? To answer this, consider equipment costing \$8,000 with accumulated depreciation of \$6,000 on December 31 of the prior fiscal year-end. This equipment is being depreciated using the straight-line method over eight years with zero salvage. On July 1 of the current year it is discarded. Step 1 is to bring depreciation up-to-date.

**Point:** Recording depreciation expense up-to-date gives an up-to-date book value for determining gain or loss.

Assets = Liabilities + Equity  
–500                      –500

July 1	Depreciation Expense . . . . .	500	
	Accumulated Depreciation—Equipment . . . . .		500
	<i>To record 6 months’ depreciation (\$1,000 × 6/12).</i>		

Steps 2 through 4 of Exhibit 10.15 are reflected in the second (and final) entry.

July 1	Accumulated Depreciation—Equipment .....	6,500	
	Loss on Disposal of Equipment .....	1,500	
	Equipment .....		8,000
	<i>To discard equipment with a \$1,500 book value.</i>		

Assets = Liabilities + Equity	
+6,500	−1,500
−8,000	

This loss is computed by comparing the equipment's \$1,500 book value (\$8,000 − \$6,000 − \$500) with the zero net cash proceeds. The loss is reported in the Other Expenses and Losses section of the income statement. Discarding an asset can sometimes require a cash payment that would increase the loss.

**Point:** Gain or loss is determined by comparing "value given" (book value) to "value received."

## Selling Plant Assets

Companies often sell plant assets when they restructure or downsize operations. To illustrate the accounting for selling plant assets, we consider BTO's March 31 sale of equipment that cost \$16,000 and has accumulated depreciation of \$12,000 at December 31 of the prior calendar year-end. Annual depreciation on this equipment is \$4,000 computed using straight-line depreciation. Step 1 of this sale is to record depreciation expense and update accumulated depreciation to March 31 of the current year.

March 31	Depreciation Expense .....	1,000	
	Accumulated Depreciation—Equipment .....		1,000
	<i>To record 3 months' depreciation (\$4,000 × 3/12).</i>		

Assets = Liabilities + Equity	
−1,000	−1,000

Steps 2 through 4 of Exhibit 10.15 can be reflected in one final entry that depends on the amount received from the asset's sale. We consider three different possibilities.

**Sale at Book Value** If BTO receives \$3,000 cash, an amount equal to the equipment's book value as of March 31 (book value = \$16,000 − \$12,000 − \$1,000), no gain or loss occurs on disposal. The entry is

Sale price = Book value → No gain or loss

March 31	Cash .....	3,000	
	Accumulated Depreciation—Equipment .....	13,000	
	Equipment .....		16,000
	<i>To record sale of equipment for no gain or loss.</i>		

Assets = Liabilities + Equity	
+3,000	
+13,000	
−16,000	

**Sale above Book Value** If BTO receives \$7,000, an amount that is \$4,000 above the equipment's \$3,000 book value as of March 31, a gain on disposal occurs. The entry is

Sale price > Book value → Gain

March 31	Cash .....	7,000	
	Accumulated Depreciation—Equipment .....	13,000	
	Gain on Disposal of Equipment .....		4,000
	Equipment .....		16,000
	<i>To record sale of equipment for a \$4,000 gain.</i>		

Assets = Liabilities + Equity	
+7,000	+4,000
+13,000	
−16,000	

**Sale below Book Value** If BTO receives \$2,500, an amount that is \$500 below the equipment's \$3,000 book value as of March 31, a loss on disposal occurs. The entry is

Sale price < Book value → Loss

March 31	Cash .....	2,500	
	Loss on Disposal of Equipment .....	500	
	Accumulated Depreciation—Equipment .....	13,000	
	Equipment .....		16,000
	<i>To record sale of equipment for a \$500 loss.</i>		

Assets = Liabilities + Equity	
+2,500	−500
+13,000	
−16,000	

Unlike U.S. GAAP, IFRS requires an annual review of useful life and salvage value estimates. IFRS also permits revaluation of plant assets to market value if market value is reliably determined. ■

**NEED-TO-KNOW** 10-3

Additional Expenditures and Asset Disposals

C3 P2

**Part 1.** A company pays \$1,000 for equipment expected to last four years and have a \$200 salvage value. Prepare journal entries to record the following costs related to the equipment.

- a. During the second year of the equipment’s life, \$400 cash is paid for a new component expected to increase the equipment’s productivity by 20% a year.
- b. During the third year, \$250 cash is paid for normal repairs necessary to keep the equipment in good working order.
- c. During the fourth year, \$500 is paid for repairs expected to increase the useful life of the equipment from four to five years.

**Part 2.** A company owns a machine that cost \$500 and has accumulated depreciation of \$400. Prepare the entry to record the disposal of the machine on January 2 under each of the following independent situations.

- a. The machine needed extensive repairs, and it was not worth repairing. The company disposed of the machine, receiving nothing in return.
- b. The company sold the machine for \$80 cash.
- c. The company sold the machine for \$100 cash.
- d. The company sold the machine for \$110 cash.

**Solutions—Part 1**

a.	Year 2	Equipment .....	400	
		Cash .....		400
		<i>To record betterment.</i>		
b.	Year 3	Repairs Expense .....	250	
		Cash .....		250
		<i>To record ordinary repairs.</i>		
c.	Year 4	Equipment .....	500	
		Cash .....		500
		<i>To record extraordinary repairs.</i>		

**Solutions—Part 2** [Note: Book value of machine = \$500 – \$400 = \$100]

a. Disposed of at no value

Jan. 2	Loss on Disposal of Machine .....	100	
	Accumulated Depreciation—Machine .....	400	
	Machine .....		500
	<i>To record disposal of machine.</i>		

b. Sold for \$80 cash

Jan. 2	Cash .....	80	
	Loss on Sale of Machine .....	20	
	Accumulated Depreciation—Machine .....	400	
	Machine .....		500

## Section 2—Natural Resources

**Natural resources** are assets that are physically consumed when used. Examples are standing timber, mineral deposits, and oil and gas fields. Since they are consumed when used, they are often called *wasting assets*. These assets represent soon-to-be inventories of raw materials that will be converted into one or more products by cutting, mining, or pumping. Until that conversion takes place, they are noncurrent assets and are shown in a balance sheet using titles such as *Timberlands*, *Mineral deposits*, or *Oil reserves*. Natural resources are reported under either plant assets or their own separate category. **Alcoa**, for instance, reports its natural resources under the balance sheet title *Properties, plants and equipment*. In a note to its financial statements, Alcoa reports a separate amount for *Land and land rights, including mines*. **Weyerhaeuser**, on the other hand, reports its timber holdings in a separate balance sheet category titled *Timber and timberlands*.

**P3**

Account for natural resource assets and their depletion.

### Cost Determination and Depletion

Natural resources are recorded at cost, which includes all expenditures necessary to acquire the resource and prepare it for its intended use. **Depletion** is the process of allocating the cost of a natural resource to the period when it is consumed. Natural resources are reported on the balance sheet at cost less *accumulated depletion*. The depletion expense per period is usually based on units extracted from cutting, mining, or pumping. This is similar to units-of-production depreciation. **Exxon Mobil** uses this approach to amortize the costs of discovering and operating its oil wells.

To illustrate depletion of natural resources, let's consider a mineral deposit with an estimated 250,000 tons of available ore. It is purchased for \$500,000, and we expect zero salvage value. The depletion charge per ton of ore mined is \$2, computed as \$500,000 ÷ 250,000 tons. If 85,000 tons are mined and sold in the first year, the depletion charge for that year is \$170,000. These computations are detailed in Exhibit 10.16.

Digital Vision/Getty Images

**Step 1**

$$\text{Depletion per unit} = \frac{\text{Cost} - \text{Salvage value}}{\text{Total units of capacity}} = \frac{\$500,000 - \$0}{250,000 \text{ tons}} = \$2 \text{ per ton}$$

**Step 2**

$$\begin{aligned} \text{Depletion expense} &= \text{Depletion per unit} \times \text{Units extracted and sold in period} \\ &= \$2 \times 85,000 = \$170,000 \end{aligned}$$

**EXHIBIT 10.16**

Depletion Formula and Example

Depletion expense for the first year is recorded as follows.

Dec. 31	Depletion Expense—Mineral Deposit . . . . .	170,000	
	Accumulated Depletion—Mineral Deposit . . . . .		170,000
	<i>To record depletion of the mineral deposit.</i>		

$$\begin{array}{l} \text{Assets} = \text{Liabilities} + \text{Equity} \\ -170,000 \qquad \qquad \qquad -170,000 \end{array}$$

The period-end balance sheet reports the mineral deposit as shown in Exhibit 10.17.

Mineral deposit . . . . .	\$500,000	
<b>Less accumulated depletion . . . . .</b>	<b>170,000</b>	\$330,000

**EXHIBIT 10.17**

Balance Sheet Presentation of Natural Resources

Since all 85,000 tons of the mined ore are sold during the year, the entire \$170,000 of depletion is reported on the income statement. If some of the ore remains unsold at year-end, however, the depletion related to the unsold ore is carried forward on the balance sheet and reported as Ore Inventory, a current asset. To illustrate, and continuing with our example, assume that 40,000

tons are mined in the second year, but only 34,000 tons are sold. We record depletion of \$68,000 (34,000 tons × \$2 depletion per unit) and the remaining Ore Inventory of \$12,000 (6,000 tons × \$2 depletion per unit) as follows.

Assets = Liabilities + Equity  
 -80,000                                -68,000  
 +12,000

Dec. 31	Depletion Expense—Mineral Deposit . . . . .	68,000	
	Ore Inventory . . . . .	12,000	
	Accumulated Depletion—Mineral Deposit . . . . .		80,000
	<i>To record depletion and inventory of mineral deposit.</i>		

### Plant Assets Tied into Extracting

The conversion of natural resources by mining, cutting, or pumping usually requires machinery, equipment, and buildings. When the usefulness of these plant assets is directly related to the depletion of a natural resource, their costs are depreciated using the units-of-production method in proportion to the depletion of the natural resource. For example, if a machine is permanently installed in a mine and 10% of the ore is mined and sold in the period, then 10% of the machine's cost (less any salvage value) is allocated to depreciation expense. The same procedure is used when a machine is abandoned once resources have been extracted. If, however, a machine will be moved to and used at another site when extraction is complete, the machine is depreciated over its own useful life.

#### Decision Insight

**Asset Control** Long-term assets must be safeguarded against theft, misuse, and other damages. Controls take many forms depending on the asset, including use of security tags, the legal monitoring of rights infringements, and approvals of all asset disposals. A study reports that 43% of employees in operations and service areas witnessed the wasting, mismanaging, or abusing of assets in the past year (KPMG 2011).

#### NEED-TO-KNOW 10-4

Depletion Accounting  
 P3

A company acquires a zinc mine at a cost of \$750,000 on January 1. At that same time it incurs additional costs of \$100,000 to access the mine, which is estimated to hold 200,000 tons of zinc. The estimated value of the land after the zinc is removed is \$50,000.

1. Prepare the January 1 entry(ies) to record the cost of the zinc mine.
2. Prepare the December 31 year-end adjusting entry if 50,000 tons of zinc are mined, but only 40,000 tons are sold the first year.

#### Solution

1.	Jan. 1	Zinc Mine . . . . .	850,000	
		Cash . . . . .		850,000
		<i>To record cost of zinc mine.</i>		

2. Depletion per unit =  $(\$750,000 + \$100,000 - \$50,000) / 200,000 \text{ tons} = \$4.00 \text{ per ton}$

Dec. 31	Depletion Expense—Zinc Mine. . . . .	160,000	
	Zinc Inventory . . . . .	40,000	
	Accumulated Depletion—Zinc Mine. . . . .		200,000
	<i>To record depletion of zinc mine (50,000 × \$4.00).</i>		

Do More: QS 10-10, E 10-18

## Section 3—Intangible Assets

**P4**  
 Account for intangible assets.

**Intangible assets** are nonphysical assets (used in operations) that confer on their owners long-term rights, privileges, or competitive advantages. Examples are patents, copyrights, licenses, leaseholds, franchises, goodwill, and trademarks. Lack of physical substance does not necessarily imply an intangible asset. Notes and accounts receivable, for instance, lack physical substance, but they are not intangibles. This section identifies the more common types of intangible assets and explains the accounting for them.

## Cost Determination and Amortization

An intangible asset is recorded at cost when purchased. Intangibles are then separated into those with limited lives or indefinite lives. If an intangible has a **limited life**, its cost is systematically allocated to expense over its estimated useful life through the process of **amortization**. If an intangible asset has an **indefinite life**—meaning that no legal, regulatory, contractual, competitive, economic, or other factors limit its useful life—it should not be amortized. (If an intangible with an indefinite life is later judged to have a limited life, it is amortized over that limited life.) Amortization of intangible assets is similar to depreciation of plant assets and the depletion of natural resources in that it is a process of cost allocation. However, only the straight-line method is used for amortizing intangibles *unless* the company can show that another method is preferred. The effects of amortization are recorded in a contra account (Accumulated Amortization). The gross acquisition cost of intangible assets is disclosed in the balance sheet along with their accumulated amortization (these disclosures are new). The eventual disposal of an intangible asset involves removing its book value, recording any other asset(s) received or given up, and recognizing any gain or loss for the difference.

Many intangibles have limited lives due to laws, contracts, or other asset characteristics. Examples are patents, copyrights, and leaseholds. Other intangibles such as goodwill, trademarks, and trade names have lives that cannot be easily determined. The cost of intangible assets is amortized over the periods expected to benefit by their use, but in no case can this period be longer than the asset’s legal existence. The values of some intangible assets such as goodwill continue indefinitely into the future and are not amortized. (An intangible asset that is not amortized is tested annually for **impairment**—if necessary, an impairment loss is recorded. Details for this test are in advanced courses.)

Intangible assets are often shown in a separate section of the balance sheet immediately after plant assets. **Callaway Golf**, for instance, follows this approach in reporting nearly \$90 million of intangible assets in its balance sheet, plus nearly \$30 million in goodwill. Companies usually disclose their amortization periods for intangibles. The remainder of our discussion focuses on accounting for specific types of intangible assets.

### Types of Intangibles

**Patents** The federal government grants patents to encourage the invention of new technology, mechanical devices, and production processes. A **patent** is an exclusive right granted to its owner to manufacture and sell a patented item or to use a process for 20 years. When patent rights are purchased, the cost to acquire the rights is debited to an account called Patents. If the owner engages in lawsuits to successfully defend a patent, the cost of lawsuits is debited to the Patents account; if the defense was unsuccessful, the book value of the patent is expensed. However, the costs of research and development leading to a new patent are expensed when incurred.

A patent’s cost is amortized over its estimated useful life (not to exceed 20 years). If we purchase a patent costing \$25,000 with a useful life of 10 years, we make the following adjusting entry at the end of each of the 10 years to amortize one-tenth of its cost.

Dec. 31	Amortization Expense—Patents .....	2,500	
	Accumulated Amortization—Patents .....		2,500
	<i>To amortize patent costs over its useful life.</i>		

The \$2,500 debit to Amortization Expense appears on the income statement as a cost of the product or service provided under protection of the patent. The Accumulated Amortization—Patents account is a contra asset account to Patents.

### Decision Insight

Mention “drug war” and most people think of illegal drug trade. But another drug war is under way: Brand-name drugmakers are fighting to stop generic copies of their products from hitting the market once patents expire. Delaying a generic rival can yield millions in extra sales. One way drugmakers fight patent expirations is to alter *drug delivery*. The first patent might require a patient to take a pill 4×/day. When that patent expires, the drugmaker can “improve” the drug’s delivery release system to 2×/day, and then 1×/day, and so forth. ■

**Point:** Depreciation, depletion, and amortization are related in that each describes cost allocation.

**Point:** Goodwill is not amortized; instead, it is annually tested for impairment.

Hunter Martin/Getty Images

$$\begin{array}{r} \text{Assets} = \text{Liabilities} + \text{Equity} \\ -2,500 \qquad \qquad \qquad -2,500 \end{array}$$

**Copyrights** A **copyright** gives its owner the exclusive right to publish and sell a musical, literary, or artistic work during the life of the creator plus 70 years, although the useful life of most copyrights is much shorter. The costs of a copyright are amortized over its useful life. The only identifiable cost of many copyrights is the fee paid to the Copyright Office of the federal government or international agency granting the copyright. If this fee is immaterial, it is charged directly to an expense account; but if the identifiable costs of a copyright are material, they are capitalized (recorded in an asset account) and periodically amortized by debiting an account called Amortization Expense—Copyrights.

### Decision Insight

**Mickey Mouse Protection Act** The Walt Disney Company successfully lobbied Congress to extend copyright protection from the life of the creator plus 50 years to life of the creator plus 70 years. This extension allows the company to protect its characters for 20 additional years before the right to use them enters the public domain. Mickey Mouse is now protected by copyright law until 2023. The law is officially termed the Copyright Term Extension Act (CTEA) but it is also known as the Mickey Mouse Protection Act. ■

Yoshikazu Tsuno/AFP/Getty Images

**Franchises and Licenses** **Franchises and licenses** are rights that a company or government grants an entity to deliver a product or service under specified conditions. Many organizations grant franchise and license rights—**McDonald's**, **Pizza Hut**, and **Major League Baseball** are just a few examples. The costs of franchises and licenses are debited to a Franchises and Licenses asset account and are amortized over the lives of the agreements. If an agreement is for an indefinite or perpetual period, those costs are not amortized.

**Trademarks and Trade Names** Companies often adopt unique symbols or select unique names and brands in marketing their products. A **trademark or trade (brand) name** is a symbol, name, phrase, or jingle identified with a company, product, or service. Examples are Nike swoosh, Marlboro Man, Big Mac, Coca-Cola, and Corvette. Ownership and exclusive right to use a trademark or trade name is often established by showing that one company used it before another. Ownership is best established by registering a trademark or trade name with the government's Patent Office. The cost of developing, maintaining, or enhancing the value of a trademark or trade name (such as advertising) is charged to expense when incurred. If a trademark or trade name is purchased, however, its cost is debited to an asset account and then amortized over its expected life. If the company plans to renew indefinitely its right to the trademark or trade name, the cost is not amortized.

**Goodwill** **Goodwill** has a specific meaning in accounting. Goodwill is the amount by which a company's value exceeds the value of its individual assets and liabilities. This usually implies that the company as a whole has certain valuable attributes not measured among its individual assets and liabilities. These can include superior management, skilled workforce, good supplier or customer relations, quality products or services, good location, or other competitive advantages.

To keep accounting information from being too subjective, goodwill is not recorded unless an entire company or business segment is purchased. Purchased goodwill is measured by taking the purchase price of the company and subtracting the market value of its individual net assets (excluding goodwill). For instance, **Google** paid \$1.19 billion to acquire **YouTube**; about \$1.13 of the \$1.19 billion was for goodwill. Goodwill was also a major portion of the \$19 billion that **Facebook** paid to acquire **WhatsApp**.

Goodwill is measured as the excess of the cost of an acquired entity over the value of the acquired net assets. Goodwill is recorded as an asset, and it is *not* amortized. Instead, goodwill is annually tested for impairment. If the book value of goodwill does not exceed its fair (market) value, goodwill is not impaired. However, if the book value of goodwill does exceed its fair value, an impairment loss is recorded equal to that excess. (Details of this test are in advanced courses.)

**Point:** McDonald's "golden arches" are one of the world's most valuable trademarks, yet this asset is not shown on McDonald's balance sheet.

**Point:** Amortization of goodwill is different for financial accounting and tax accounting. The IRS requires the amortization of goodwill over 15 years.

**Example:** Assume goodwill carries a book value of \$500 and has an implied fair value of \$475, and this \$25 decline in value meets the 2-step impairment test. The entry to record this impairment is:

Impairment Loss . . . . .	\$25
Goodwill . . . . .	\$25

**Leaseholds** Property is rented under a contract called a **lease**. The property's owner, called the **lessor**, grants the lease. The one who secures the right to possess and use the property is called the **lessee**. A **leasehold** refers to the rights the lessor grants to the lessee under the terms of the lease. A leasehold is an intangible asset for the lessee.

Certain leases require no advance payment from the lessee but require monthly rent payments. In this case, we do not set up a Leasehold account. Instead, the monthly payments are debited to a Rent Expense account. If a long-term lease requires the lessee to pay the final period's rent in advance when the lease is signed, the lessee records this advance payment with a debit to the Leasehold account. Since the advance payment is not used until the final period, the Leasehold account balance remains intact until that final period when its balance is transferred to Rent Expense. (Some long-term leases give the lessee essentially the same rights as a purchaser. This results in a tangible asset and a liability reported by the lessee. Chapter 14 describes these so-called *capital leases*.)

A long-term lease can increase in value when current rental rates for similar property rise while the required payments under the lease remain constant. This increase in value of a lease is not reported on the lessee's balance sheet. However, if the property is subleased and the new tenant makes a cash payment to the original lessee for the rights under the old lease, the new tenant debits this payment to a Leasehold account, which is amortized to Rent Expense over the remaining life of the lease.

**Point:** A leasehold account implies existence of future benefits that the lessee controls because of a prepayment. It also meets the definition of an asset.

**Leasehold Improvements** A lessee sometimes pays for alterations or improvements to the leased property such as partitions, painting, and storefronts. These alterations and improvements are called **leasehold improvements**, and the lessee debits these costs to a Leasehold Improvements account. Since leasehold improvements become part of the property and revert to the lessor at the end of the lease, the lessee amortizes these costs over the life of the lease or the life of the improvements, whichever is shorter. The amortization entry debits Amortization Expense—Leasehold Improvements and credits Accumulated Amortization—Leasehold Improvements.

**Other Intangibles** There are other types of intangible assets such as *software*, *noncompete covenants*, *customer lists*, and so forth. Our accounting for them is the same. First, we record the intangible asset's costs. Second, we determine whether the asset has a limited or indefinite life. If limited, we allocate its costs over that period. If indefinite, its costs are not amortized.

**Part 1.** A publisher purchases the copyright on a book for \$1,000 on January 1 of this year. The copyright legally protects its owner for five more years. The company plans to market and sell prints of the original for seven years. Prepare entries to record the purchase of the copyright on January 1 of this year, and its annual amortization on December 31 of this year.

**Part 2.** On January 3 of this year, a retailer incurs a \$9,000 cost to modernize its store. Improvements include lighting, partitions, and sound system. These improvements are estimated to yield benefits for five years. The retailer leases its store and has three years remaining on its lease. Prepare the entry to record (a) the cost of modernization and (b) amortization at the end of this current year.

**Part 3.** On January 6 of this year, a company pays \$6,000 for a patent with a remaining 12-year legal life to produce a supplement expected to be marketable for 3 years. Prepare entries to record its acquisition and the December 31 amortization entry for this current year.

## NEED-TO-KNOW 10-5

Accounting for Intangibles

Do More: QS 10-12, E 10-19, E 10-20

**GLOBAL VIEW**

This section discusses similarities and differences between U.S. GAAP and IFRS in accounting and reporting for plant assets and intangible assets.

**Accounting for Plant Assets** Issues involving cost determination, depreciation, additional expenditures, and disposals of plant assets are subject to broadly similar guidance for both U.S. GAAP and IFRS. Although differences exist, the similarities vastly outweigh the differences. **Nokia** describes its accounting for plant assets as follows:

Property, plant and equipment are stated at cost less accumulated depreciation. Depreciation is recorded on a straight-line basis over the expected useful lives of the assets. Maintenance, repairs and renewals are generally charged to expense during the financial period in which they are incurred. However, major renovations are capitalized and included in the carrying amount of the asset . . . Major renovations are depreciated over the remaining useful life of the related asset.

One area where notable differences exist is in accounting for changes in the value of plant assets (between the time they are acquired and when disposed of). Namely, how do IFRS and U.S. GAAP treat decreases and increases in the value of plant assets subsequent to acquisition?

**Decreases in the Value of Plant Assets** When the value of plant assets declines after acquisition, but before disposition, both U.S. GAAP and IFRS require companies to record those decreases as *impairment losses*. While the *test for impairment* uses a different base between U.S. GAAP and IFRS, a more fundamental difference is that U.S. GAAP revalues impaired plant assets to *fair value* whereas IFRS revalues them to a *recoverable amount* (defined as fair value less costs to sell).

**Increases in the Value of Plant Assets** U.S. GAAP prohibits companies from recording increases in the value of plant assets. However, IFRS permits upward *asset revaluations*. Namely, under IFRS, if an impairment was previously recorded, a company would reverse that impairment to the extent necessary and record that increase in income. If the increase is beyond the original cost, that increase is recorded in comprehensive income.

**Accounting for Intangible Assets** For intangible assets, the accounting for cost determination, amortization, additional expenditures, and disposals is subject to broadly similar guidance for U.S. GAAP and IFRS. Although differences exist, the similarities vastly outweigh differences. Again, and consistent with

the accounting for plant assets, U.S. GAAP and IFRS handle decreases and increases in the value of intangible assets differently. However, IFRS requirements for recording increases in the value of intangible assets are so restrictive that such increases are rare. **Nokia** describes its accounting for intangible assets as follows:

[Intangible assets] are capitalized and amortized using the straight-line method over their useful lives. Where an indication of impairment exists, the carrying amount of the related intangible asset is assessed for recoverability. Any resulting impairment losses are recognized immediately in the income statement.

**NOKIA**

**Sustainability and Accounting** Entrepreneur Deb Carey, of **New Glarus Brewing Co.**, as introduced in this chapter’s opening feature, explains that her company is committed to a green footprint. For example, five years ago, she put in her own on-site wastewater treatment system that reduced the demands placed on the community’s sewer system. She then uses the treated wastewater for irrigation. She is currently attempting to reroute the brewery’s cooling system outside during the winter season to take advantage of nature’s cooling system. This would save considerable refrigeration costs. Her goal is to be in the top 10% of most energy-efficient breweries in the world.

**Total Asset Turnover** ■ ■ ■ **Decision Analysis**

A company’s assets are important in determining its ability to generate sales and earn income. Managers devote much attention to deciding what assets a company acquires, how much it invests in assets, and how to use assets most efficiently and effectively. One important measure of a company’s ability to use its assets is **total asset turnover**, defined in Exhibit 10.18.

**A1** Compute total asset turnover and apply it to analyze a company’s use of assets.

$$\text{Total asset turnover} = \frac{\text{Net sales}}{\text{Average total assets}}$$

**EXHIBIT 10.18**  
Total Asset Turnover

The numerator reflects the net amounts earned from the sale of products and services. The denominator reflects the average total resources devoted to operating the company and generating sales.

To illustrate, let’s look at total asset turnover in Exhibit 10.19 for two competing companies: **Molson Coors** and **Boston Beer**.

Company	Figure (\$ millions)	2013	2012	2011	2010	2009
<b>Molson Coors</b>	Net sales . . . . .	\$ 4,206.1	\$ 3,916.5	\$ 3,515.7	\$ 3,254.4	\$ 3,032.4
	Average total assets . . . . .	\$15,896.2	\$14,318.0	\$12,560.7	\$12,359.4	\$11,203.9
	<b>Total asset turnover</b> . . . . .	<b>0.26</b>	<b>0.27</b>	<b>0.28</b>	<b>0.26</b>	<b>0.27</b>
<b>Boston Beer</b>	Net sales . . . . .	\$ 739.1	\$ 580.2	\$ 513.0	\$ 463.8	\$ 415.1
	Average total assets . . . . .	\$ 401.8	\$ 316.0	\$ 265.5	\$ 260.7	\$ 241.3
	<b>Total asset turnover</b> . . . . .	<b>1.84</b>	<b>1.84</b>	<b>1.93</b>	<b>1.78</b>	<b>1.72</b>

**EXHIBIT 10.19**  
Analysis Using Total Asset Turnover

To show how we use total asset turnover, let’s look at Molson Coors. We express Molson Coors’s use of assets in generating net sales by saying “it turned its assets over 0.26 times during 2013.” This means that each \$1.00 of assets produced \$0.26 of net sales. Is a total asset turnover of 0.26 good or bad? It is safe to say that all companies desire a high total asset turnover. Like many ratio analyses, however, a company’s total asset turnover must be interpreted in comparison with those of prior years and of its competitors. Interpreting the total asset turnover also requires an understanding of the company’s operations. Some operations are capital-intensive, meaning that a relatively large amount is invested in assets to generate sales. This suggests a relatively lower total asset turnover. Other companies’ operations are labor-intensive, meaning that they generate sales more by the efforts of people than the use of assets. In that case, we expect a higher total asset turnover. Companies with low total asset turnover require higher profit margins (examples are hotels and real estate); companies with high total asset turnover can succeed with lower profit margins (examples are food stores and toy merchandisers). Molson Coors’s turnover is much lower than that for Boston Beer and many other competitors. Total asset turnover for Molson Coors’s competitors, available in industry publications such as Dun & Bradstreet, is generally in the range of 0.5 to 1.0 over this same period. Overall, Molson Coors must improve relative to its competitors on total asset turnover.

**Point:** An estimate of plant asset useful life equals the plant asset cost divided by depreciation expense.

**Point:** The plant asset age is estimated by dividing accumulated depreciation by depreciation expense. Older plant assets can signal needed asset replacements; they may also signal less efficient assets.

## Decision Maker

**Environmentalist** A paper manufacturer claims it cannot afford more environmental controls. It points to its low total asset turnover of 1.9 and argues that it cannot compete with companies whose total asset turnover is much higher. Examples cited are food stores (5.5) and auto dealers (3.8). How do you respond? [Answers follow the chapter's Summary.]

## NEED-TO-KNOW

### COMPREHENSIVE

On July 14, 2015, Tulsa Company pays \$600,000 to acquire a fully equipped factory. The purchase involves the following assets and information.

Asset	Appraised Value	Salvage Value	Useful Life	Depreciation Method
Land	\$160,000			Not depreciated
Land improvements	80,000	\$ 0	10 years	Straight-line
Building	320,000	100,000	10 years	Double-declining-balance
Machinery	240,000	20,000	10,000 units	Units-of-production*
Total	<u>\$800,000</u>			

\* The machinery is used to produce 700 units in 2015 and 1,800 units in 2016.

### Required

- Allocate the total \$600,000 purchase cost among the separate assets.
- Compute the 2015 (six months) and 2016 depreciation expense for each asset, and compute the company's total depreciation expense for both years.
- On the last day of calendar year 2017, Tulsa discarded machinery that had been on its books for five years. The machinery's original cost was \$12,000 (estimated life of five years) and its salvage value was \$2,000. No depreciation had been recorded for the fifth year when the disposal occurred. Journalize the fifth year of depreciation (straight-line method) and the asset's disposal.
- At the beginning of year 2017, Tulsa purchased a patent for \$100,000 cash. The company estimated the patent's useful life to be 10 years. Journalize the patent acquisition and its amortization for the year 2017.
- Late in the year 2017, Tulsa acquired an ore deposit for \$600,000 cash. It added roads and built mine shafts for an additional cost of \$80,000. Salvage value of the mine is estimated to be \$20,000. The company estimated 330,000 tons of available ore. In year 2017, Tulsa mined and sold 10,000 tons of ore. Journalize the mine's acquisition and its first year's depletion.
- <sup>A</sup>(This question applies this chapter's Appendix coverage.) On the first day of 2017, Tulsa exchanged the machinery that was acquired on July 14, 2015, along with \$5,000 cash for machinery with a \$210,000 market value. Journalize the exchange of these assets assuming the exchange lacked commercial substance. (Refer to background information in parts 1 and 2.)

### PLANNING THE SOLUTION

- Complete a three-column table showing the following amounts for each asset: appraised value, percent of total value, and apportioned cost.
- Using allocated costs, compute depreciation for 2015 (only one-half year) and 2016 (full year) for each asset. Summarize those computations in a table showing total depreciation for each year.
- Depreciation must be recorded up-to-date before discarding an asset. Calculate and record depreciation expense for the fifth year using the straight-line method. Since salvage value is not received at the end of a discarded asset's life, the salvage value becomes a loss on disposal. Record the loss on the disposal as well as the removal of the discarded asset and its related accumulated depreciation.
- Record the patent (an intangible asset) at its purchase price. Use straight-line amortization over its useful life to calculate amortization expense.
- Record the ore deposit (a natural resource asset) at its cost, including any added costs to ready the mine for use. Calculate depletion per ton using the depletion formula. Multiply the depletion per ton by the amount of tons mined and sold to calculate depletion expense for the year.
- Remember that gains and losses on asset exchanges that lack commercial substance are not recognized. Make a journal entry to add the acquired machinery to the books and to remove the old machinery, along with its accumulated depreciation, and to record the cash given in the exchange.

**SOLUTION**

1. Allocation of the total cost of \$600,000 among the separate assets.

Asset	Appraised Value	Percent of Total Value	Apportioned Cost
Land .....	\$160,000	20%	<b>\$120,000</b> (\$600,000 × 20%)
Land improvements .....	80,000	10	<b>60,000</b> (\$600,000 × 10%)
Building .....	320,000	40	<b>240,000</b> (\$600,000 × 40%)
Machinery .....	240,000	30	<b>180,000</b> (\$600,000 × 30%)
Total .....	<u>\$800,000</u>	<u>100%</u>	<u>\$ 600,000</u>

2. Depreciation for each asset. (Land is not depreciated.)

<b>Land Improvements</b>	
Cost .....	\$ 60,000
Salvage value .....	0
Depreciable cost .....	<u>\$ 60,000</u>
Useful life .....	10 years
Annual depreciation expense (\$60,000/10 years) .....	\$ 6,000
<b>2015 depreciation</b> (\$6,000 × 6/12) .....	<b>\$ 3,000</b>
<b>2016 depreciation</b> .....	<b>\$ 6,000</b>
<b>Building</b>	
Straight-line rate = 100%/10 years = 10%	
Double-declining-balance rate = 10% × 2 = 20%	
<b>2015 depreciation</b> (\$240,000 × 20% × 6/12) .....	<b>\$ 24,000</b>
<b>2016 depreciation</b> [(\$240,000 – \$24,000) × 20%] .....	<b>\$ 43,200</b>
<b>Machinery</b>	
Cost .....	\$180,000
Salvage value .....	20,000
Depreciable cost .....	<u>\$160,000</u>
Total expected units of production .....	10,000 units
Depreciation per unit (\$160,000/10,000 units) .....	\$ 16
<b>2015 depreciation</b> (\$16 × 700 units) .....	<b>\$ 11,200</b>
<b>2016 depreciation</b> (\$16 × 1,800 units) .....	<b>\$ 28,800</b>

Total depreciation expense for each year:

	2015	2016
Land improvements .....	\$ 3,000	\$ 6,000
Building .....	24,000	43,200
Machinery .....	11,200	28,800
Total .....	<u>\$38,200</u>	<u>\$78,000</u>

3. Record the depreciation up-to-date on the discarded asset.

Depreciation Expense—Machinery .....	2,000	
Accumulated Depreciation—Machinery .....		2,000
<i>To record depreciation on date of disposal: (\$12,000 – \$2,000)/5</i>		

Record the removal of the discarded asset and its loss on disposal.

Accumulated Depreciation—Machinery .....	10,000	
Loss on Disposal of Machinery .....	2,000	
Machinery .....		12,000
<i>To record the discarding of machinery with a \$2,000 book value.</i>		

4.

Patent .....	100,000	
Cash .....		100,000
<i>To record patent acquisition.</i>		

Amortization Expense—Patent .....	10,000	
Accumulated Amortization—Patent .....		10,000
<i>To record amortization expense: \$100,000/10 years = \$10,000.</i>		

5.

Ore Deposit .....	680,000	
Cash .....		680,000
<i>To record ore deposit acquisition and its related costs.</i>		

Depletion Expense—Ore Deposit .....	20,000	
Accumulated Depletion—Ore Deposit .....		20,000
<i>To record depletion expense: (\$680,000 - \$20,000)/330,000 tons = \$2 per ton. 10,000 tons mined and sold × \$2 = \$20,000 depletion.</i>		

6. Record the asset exchange: The book value on the exchange date is \$180,000 (cost) – \$40,000 (accumulated depreciation). The book value of the machinery given up in the exchange (\$140,000) plus the \$5,000 cash paid is less than the \$210,000 value of the machine acquired. The entry to record this exchange of assets that lacks commercial substance does not recognize the \$65,000 “gain.”

Machinery (new) .....	145,000*	
Accumulated Depreciation—Machinery (old) .....	40,000	
Machinery (old) .....		180,000
Cash .....		5,000
<i>To record asset exchange that lacks commercial substance.</i>		

\* Market value of the acquired asset of \$210,000 minus \$65,000 “gain.”

APPENDIX

10A

Exchanging Plant Assets

P5A

Account for asset exchanges.

Many plant assets such as machinery, automobiles, and office equipment are disposed of by exchanging them for newer assets. In a typical exchange of plant assets, a *trade-in allowance* is received on the old asset and the balance is paid in cash. Accounting for the exchange of assets depends on whether the transaction has *commercial substance* (per *SFAS 153*, commercial substance implies that it alters the company’s future cash flows). If an asset exchange has commercial substance, a gain or loss is recorded based on the difference between the book value of the asset(s) given up and the market value of the asset(s) received. If an asset exchange lacks commercial substance, no gain or loss is recorded, and the asset(s) received is recorded based on the book value of the asset(s) given up. An exchange has commercial substance if the company’s future cash flows change as a result of the transaction. This section describes the accounting for the exchange of assets.

**Exchange with Commercial Substance: A Loss** A company acquires \$42,000 in new equipment. In exchange, the company pays \$33,000 cash and trades in old equipment. The old equipment originally cost \$36,000 and has accumulated depreciation of \$20,000, which implies a \$16,000 book value at the time of exchange. We are told this exchange has commercial substance and that the old equipment has a trade-in allowance of \$9,000. This exchange yields a loss as computed in the middle (Loss) columns of Exhibit 10A.1; the loss is computed as Asset received – Assets given = \$42,000 – \$49,000 = \$(7,000). We can also compute the loss as Trade-in allowance – Book value of asset given = \$9,000 – \$16,000 = \$(7,000).

Asset Exchange Has Commercial Substance	Loss	Gain
Market value of asset received . . . . .	\$ 42,000	\$ 52,000
Book value of assets given:		
Equipment (\$36,000 – \$20,000) . . . . .	\$16,000	\$16,000
Cash . . . . .	33,000	33,000
	<u>49,000</u>	<u>49,000</u>
<b>Gain (loss) on exchange</b> . . . . .	<b><u>\$(7,000)</u></b>	<b><u>\$ 3,000</u></b>

**EXHIBIT 10A.1**

Computing Gain or Loss on Asset Exchange with Commercial Substance

The entry to record this asset exchange is

Jan. 3	Equipment ( <b>new</b> ) . . . . .	42,000	
	Loss on Exchange of Assets . . . . .	7,000	
	Accumulated Depreciation—Equipment ( <b>old</b> ) . . . . .	20,000	
	Equipment ( <b>old</b> ) . . . . .		36,000
	Cash . . . . .		33,000
	<i>To record exchange (with commercial substance) of old equipment and cash for new equipment.</i>		

Assets	=	Liabilities	+	Equity
+42,000				–7,000
+20,000				
–36,000				
–33,000				

**Point:** Parenthetical notes to “new” and “old” equipment are for illustration only. Both the debit and credit are to the same Equipment account.

**Exchange with Commercial Substance: A Gain** Let’s assume the same facts as in the preceding asset exchange *except* that the new equipment received has a market value of \$52,000 instead of \$42,000. We are told that this exchange has commercial substance and that the old equipment has a trade-in allowance of \$19,000. This exchange yields a gain as computed in the right-most (Gain) columns of Exhibit 10A.1; the gain is computed as Asset received – Assets given = \$52,000 – \$49,000 = \$3,000. We can also compute the gain as Trade-in allowance – Book value of asset given = \$19,000 – \$16,000 = \$3,000. The entry to record this asset exchange is

Jan. 3	Equipment ( <b>new</b> ) . . . . .	52,000	
	Accumulated Depreciation—Equipment ( <b>old</b> ) . . . . .	20,000	
	Equipment ( <b>old</b> ) . . . . .		36,000
	Cash . . . . .		33,000
	Gain on Exchange of Assets . . . . .		3,000
	<i>To record exchange (with commercial substance) of old equipment and cash for new equipment.</i>		

Assets	=	Liabilities	+	Equity
+52,000				+3,000
+20,000				
–36,000				
–33,000				

**Exchanges without Commercial Substance** Let’s assume the same facts as in the preceding asset exchange involving new equipment received with a market value of \$52,000, but let’s instead assume the transaction *lacks commercial substance*. The entry to record this asset exchange is

Jan. 3	Equipment ( <b>new</b> ) . . . . .	49,000	
	Accumulated Depreciation—Equipment ( <b>old</b> ) . . . . .	20,000	
	Equipment ( <b>old</b> ) . . . . .		36,000
	Cash . . . . .		33,000
	<i>To record exchange (without commercial substance) of old equipment and cash for new equipment.</i>		

Assets	=	Liabilities	+	Equity
+49,000				
+20,000				
–36,000				
–33,000				

The \$3,000 gain recorded when the transaction has commercial substance is *not* recognized in this entry because of the rule prohibiting recording a gain or loss on asset exchanges without commercial substance. The \$49,000 recorded for the new equipment equals its cash price (\$52,000) less the unrecognized gain (\$3,000) on the exchange. The \$49,000 cost recorded is called the *cost basis* of the new machine. This cost basis is the amount we use to compute depreciation and its book value. The cost basis of the new asset also can be computed by summing the book values of the assets given up as shown in Exhibit 10A.2. The same analysis and approach are taken for a loss on an asset exchange without commercial substance.

Cost of old equipment . . . . .	\$ 36,000
Less accumulated depreciation . . . . .	<u>20,000</u>
Book value of old equipment . . . . .	16,000
Cash paid in the exchange . . . . .	<u>33,000</u>
<b>Cost recorded for new equipment</b> . . . . .	<b><u>\$49,000</u></b>

**Point:** No gain or loss is recorded for exchanges *without commercial substance*.

**EXHIBIT 10A.2**

Cost Basis of New Asset When Gain Not Recorded on Asset Exchange without Commercial Substance

**NEED-TO-KNOW** 10-6

## Asset Exchanges

P5

A company trades an old web server for a new one. The cost of the old server is \$30,000, and its accumulated depreciation at the time of the trade is \$23,400. The new server has a cash price of \$45,000. Prepare entries to record the trade under two different assumptions where the company receives a trade-in allowance of (a) \$3,000 and the exchange has commercial substance, and (b) \$7,000 and the exchange lacks commercial substance.

**Solution**

(a) Equipment (new) . . . . .	45,000	
Loss on Exchange of Assets . . . . .	3,600	
Accumulated Depreciation—Equipment (old) . . . . .	23,400	
Equipment (old) . . . . .		30,000
Cash (\$45,000 – \$3,000) . . . . .		42,000

(b) Equipment (new)* . . . . .	44,600	
Accumulated Depreciation—Equipment (old) . . . . .	23,400	
Equipment (old) . . . . .		30,000
Cash (\$45,000 – \$7,000) . . . . .		38,000

Do More: QS 10-23

\* Includes \$400 unrecognized gain.

# Summary

**C1 Explain the cost principle for computing the cost of plant assets.** Plant assets are set apart from other tangible assets by two important features: use in operations and useful lives longer than one period. Plant assets are recorded at cost when purchased. Cost includes all normal and reasonable expenditures necessary to get the asset in place and ready for its intended use. The cost of a lump-sum purchase is allocated among its individual assets.

**C2 Explain depreciation for partial years and changes in estimates.** Partial-year depreciation is often required because assets are bought and sold throughout the year. Depreciation is revised when changes in estimates such as salvage value and useful life occur. If the useful life of a plant asset changes, for instance, the remaining cost to be depreciated is spread over the remaining (revised) useful life of the asset.

**C3 Distinguish between revenue and capital expenditures, and account for them.** Revenue expenditures expire in the current period and are debited to expense accounts and matched with current revenues. Ordinary repairs are an example of revenue expenditures. Capital expenditures benefit future periods and are debited to asset accounts. Examples of capital expenditures are extraordinary repairs and betterments.

**A1 Compute total asset turnover and apply it to analyze a company's use of assets.** Total asset turnover measures a company's ability to use its assets to generate sales. It is defined as net sales divided by average total assets. While all companies desire a high total asset turnover, it must be interpreted in comparison with those for prior years and its competitors.

**P1 Compute and record depreciation using the straight-line, units-of-production, and declining-balance methods.** Depreciation is the process of allocating to expense

the cost of a plant asset over the accounting periods that benefit from its use. Depreciation does not measure the decline in a plant asset's market value or its physical deterioration. Three factors determine depreciation: cost, salvage value, and useful life. Salvage value is an estimate of the asset's value at the end of its benefit period. Useful (service) life is the length of time an asset is productively used. The straight-line method divides cost less salvage value by the asset's useful life to determine depreciation expense per period. The units-of-production method divides cost less salvage value by the estimated number of units the asset will produce over its life to determine depreciation per unit. The declining-balance method multiplies the asset's beginning-of-period book value by a factor that is often double the straight-line rate.

**P2 Account for asset disposal through discarding or selling an asset.** When a plant asset is discarded or sold, its cost and accumulated depreciation are removed from the accounts. Any cash proceeds from discarding or selling an asset are recorded and compared to the asset's book value to determine gain or loss.

**P3 Account for natural resource assets and their depletion.** The cost of a natural resource is recorded in a noncurrent asset account. Depletion of a natural resource is recorded by allocating its cost to depletion expense using the units-of-production method. Depletion is credited to an Accumulated Depletion account.

**P4 Account for intangible assets.** An intangible asset is recorded at the cost incurred to purchase it. The cost of an intangible asset with a definite useful life is allocated to expense using the straight-line method, and is called *amortization*. Goodwill and intangible assets with an indefinite useful life are

not amortized—they are annually tested for impairment. Intangible assets include patents, copyrights, leaseholds, goodwill, and trademarks.

**P5A Account for asset exchanges.** For an asset exchange with commercial substance, a gain or loss is recorded based on

the difference between the book value of the asset given up and the market value of the asset received. For an asset exchange without commercial substance, no gain or loss is recorded, and the asset received is recorded based on the book value of the asset given up.

## Guidance Answers to Decision Maker and Decision Ethics

**Controller** The president's instructions may reflect an honest and reasonable prediction of the future. Since the company is struggling financially, the president may have concluded that the normal pattern of replacing assets every three years cannot continue. Perhaps the strategy is to avoid costs of frequent replacements and stretch use of equipment a few years longer until financial conditions improve. However, if you believe the president's decision is unprincipled, you might confront the president with your opinion that it is unethical to change the estimate to increase income. Another possibility is to wait and see whether the auditor will prohibit this change in estimate. In either case, you should insist that the statements be based on reasonable estimates.

**Entrepreneur** Treating an expense as a capital expenditure means that reported expenses will be lower and income higher in the short run. This is so because a capital expenditure is not

expensed immediately but is spread over the asset's useful life. Treating an expense as a capital expenditure also means that asset and equity totals are reported at larger amounts in the short run. This continues until the asset is fully depreciated. Your friend is probably trying to help, but the suggestion is misguided. Only an expenditure benefiting future periods is a capital expenditure.

**Environmentalist** The paper manufacturer's comparison of its total asset turnover with food stores and auto dealers is misdirected. These other industries' turnovers are higher because their profit margins are lower (about 2%). Profit margins for the paper industry are usually 3% to 3.5%. You need to collect data from competitors in the paper industry to show that a 1.9 total asset turnover is about the norm for this industry. You might also want to collect data on this company's revenues and expenses, along with compensation data for its high-ranking officers and employees.

## Key Terms

Accelerated depreciation method	Impairment	Natural resources
Amortization	Inadequacy	Obsolescence
Asset book value	Indefinite life	Ordinary repairs
Betterments	Intangible assets	Patent
Capital expenditures	Land improvements	Plant asset age
Change in an accounting estimate	Lease	Plant assets
Copyright	Leasehold	Revenue expenditures
Cost	Leasehold improvements	Salvage value
Declining-balance method	Lessee	Straight-line depreciation
Depletion	Lessor	Total asset turnover
Depreciation	Licenses	Trademark or trade (brand) name
Extraordinary repairs	Limited life	Units-of-production depreciation
Franchises	Modified Accelerated Cost Recovery System (MACRS)	Useful life

## Multiple Choice Quiz

Answers at end of chapter

- A company paid \$326,000 for property that included land, land improvements, and a building. The land was appraised at \$175,000, the land improvements were appraised at \$70,000, and the building was appraised at \$105,000. What is the allocation of property costs to the three assets purchased?

  - Land, \$150,000; Land Improvements, \$60,000; Building, \$90,000
  - Land, \$163,000; Land Improvements, \$65,200; Building, \$97,800
  - Land, \$150,000; Land Improvements, \$61,600; Building, \$92,400
  - Land, \$159,000; Land Improvements, \$65,200; Building, \$95,400
  - Land, \$175,000; Land Improvements, \$70,000; Building, \$105,000

2. A company purchased a truck for \$35,000 on January 1, 2015. The truck is estimated to have a useful life of four years and an estimated salvage value of \$1,000. Assuming that the company uses straight-line depreciation, what is the depreciation expense on the truck for the year ended December 31, 2016?
  - a. \$8,750
  - b. \$17,500
  - c. \$8,500
  - d. \$17,000
  - e. \$25,500
3. A company purchased machinery for \$10,800,000 on January 1, 2015. The machinery has a useful life of 10 years and an estimated salvage value of \$800,000. What is the depreciation expense on the machinery for the year ended December 31, 2016, assuming that the double-declining-balance method is used?
  - a. \$2,160,000
  - b. \$3,888,000
  - c. \$1,728,000
  - d. \$2,000,000
  - e. \$1,600,000
4. A company sold a machine that originally cost \$250,000 for \$120,000 when accumulated depreciation on the machine was \$100,000. The gain or loss recorded on the sale of this machine is
  - a. \$0 gain or loss.
  - b. \$120,000 gain.
  - c. \$30,000 loss.
  - d. \$30,000 gain.
  - e. \$150,000 loss.
5. A company had average total assets of \$500,000, gross sales of \$575,000, and net sales of \$550,000. The company's total asset turnover is
  - a. 1.15
  - b. 1.10
  - c. 0.91
  - d. 0.87
  - e. 1.05

<sup>A</sup> *Superscript letter A denotes assignments based on Appendix 10A.*

 *Icon denotes assignments that involve decision making.*

## Discussion Questions

1.  What characteristics of a plant asset make it different from other assets?
2. What is the general rule for cost inclusion for plant assets?
3. What is different between land and land improvements?
4. Why is the cost of a lump-sum purchase allocated to the individual assets acquired?
5.  Does the balance in the Accumulated Depreciation—Machinery account represent funds to replace the machinery when it wears out? If not, what does it represent?
6. Why is the Modified Accelerated Cost Recovery System not generally accepted for financial accounting purposes?
7.  What accounting concept justifies charging low-cost plant asset purchases immediately to an expense account?
8. What is the difference between ordinary repairs and extraordinary repairs? How should each be recorded?
9.  Identify events that might lead to disposal of a plant asset.
10. What is the process of allocating the cost of natural resources to expense as they are used?
11. Is the declining-balance method an acceptable way to compute depletion of natural resources? Explain.
12. What are the characteristics of an intangible asset?
13. What general procedures are applied in accounting for the acquisition and potential cost allocation of intangible assets?
14.  When do we know that a company has goodwill? When can goodwill appear in a company's balance sheet?
15.  Assume that a company buys another business and pays for its goodwill. If the company plans to incur costs each year to maintain the value of the goodwill, must it also amortize this goodwill?
16.  How is total asset turnover computed? Why would a financial statement user be interested in total asset turnover?
17. On its recent balance sheet in Appendix A, **APPLE** lists its plant assets as "Property, plant and equipment, net." What does "net" mean in this title?
18. Refer to **Google's** recent balance sheet in Appendix A. What property, plant and equipment assets does Google list on its balance sheet? What is the book value of its total net property, plant and equipment assets at December 31, 2013?
19.  Refer to **Samsung's** balance sheet in Appendix A. What does it title its plant assets? What is the book value of its plant assets at December 31, 2013?
20. Refer to the December 31, 2013, balance sheet of **Samsung** in Appendix A. What long-term assets discussed in this chapter are reported by the company?
21. Identify the main difference between (a) plant assets and current assets, (b) plant assets and inventory, and (c) plant assets and long-term investments.

## QUICK STUDY

### QS 10-1

Cost of plant assets

Kegler Bowling installs automatic scorekeeping equipment with an invoice cost of \$190,000. The electrical work required for the installation costs \$20,000. Additional costs are \$4,000 for delivery and \$13,700 for sales tax. During the installation, a component of the equipment is carelessly left on a lane and hit by the automatic lane-cleaning machine. The cost of repairing the component is \$1,850. What is the total recorded cost of the automatic scorekeeping equipment?

Listed below are certain costs (or discounts) incurred in the purchase or construction of new plant assets. (1) Indicate whether the costs should be *expensed* or *capitalized* (meaning they are included in the cost of the plant assets on the balance sheet). (2) For costs that should be included in plant assets, indicate in which category of plant assets (Equipment, Building, or Land) the related costs should be recorded on the balance sheet.

Expensed or Capitalized	Asset Category	
_____	_____	1. Charges incurred to train employees to use new equipment
_____	_____	2. Invoice cost to purchase new equipment
_____	_____	3. Deduction for an early payment discount taken on the purchase of new equipment
_____	_____	4. Real estate commissions incurred on land purchased for a new plant
_____	_____	5. Property taxes on land incurred after it was purchased
_____	_____	6. Costs of tune-up for the truck used to deliver new equipment
_____	_____	7. Costs to lay foundation for a new building
_____	_____	8. Insurance on a new building during the construction phase

**QS 10-2**

Assigning costs to plant assets

On January 2, 2015, the Matthews Band acquires sound equipment for concert performances at a cost of \$65,800. The band estimates it will use this equipment for four years, during which time it anticipates performing about 200 concerts. It estimates that after four years it can sell the equipment for \$2,000. During year 2015, the band performs 45 concerts. Compute the year 2015 depreciation using the straight-line method.

**QS 10-3**

Straight-line depreciation P1

On January 2, 2015, the Matthews Band acquires sound equipment for concert performances at a cost of \$65,800. The band estimates it will use this equipment for four years, during which time it anticipates performing about 200 concerts. It estimates that after four years it can sell the equipment for \$2,000. During year 2015, the band performs 45 concerts. Compute the year 2015 depreciation using the units-of-production method.

**QS 10-4**

Units-of-production depreciation P1

On January 2, 2015, the Matthews Band acquires sound equipment for concert performances at a cost of \$65,800. The band estimates it will use this equipment for four years. It estimates that after four years it can sell the equipment for \$2,000. Matthews Band uses straight-line depreciation but realizes at the start of the second year that due to concert bookings beyond expectations, this equipment will last only a total of three years. The salvage value remains unchanged. Compute the revised depreciation for both the second and third years.

**QS 10-5**

Computing revised depreciation C2

A fleet of refrigerated delivery trucks is acquired on January 5, 2015, at a cost of \$830,000 with an estimated useful life of eight years and an estimated salvage value of \$75,000. Compute the depreciation expense for the first three years using the double-declining-balance method.

**QS 10-6**

Double-declining-balance method P1

Assume a company's equipment carries a book value of \$16,000 (\$16,500 cost less \$500 accumulated depreciation) and a fair value of \$14,750, and that the \$1,250 decline in fair value in comparison to the book value meets the two-step impairment test. Prepare the entry to record this \$1,250 impairment.

**QS 10-7**

Recording plant asset impairment C2

- Classify the following as either a revenue expenditure or a capital expenditure.
  - Paid \$40,000 cash to replace a compressor on a refrigeration system that extends its useful life by four years.
  - Paid \$200 cash per truck for the cost of their annual tune-ups.
  - Paid \$175 for the monthly cost of replacement filters on an air-conditioning system.
  - Completed an addition to an office building for \$225,000 cash.
- Prepare the journal entries to record transactions *a* and *d* of part 1.

**QS 10-8**

Revenue and capital expenditures

Garcia Co. owns equipment that cost \$76,800, with accumulated depreciation of \$40,800. Garcia sells the equipment for cash. Record the sale of the equipment assuming Garcia sells the equipment for (1) \$47,000 cash, (2) \$36,000 cash, and (3) \$31,000 cash.

**QS 10-9**

Disposal of assets P2

**QS 10-10**

Natural resources and depletion

P3

Perez Company acquires an ore mine at a cost of \$1,400,000. It incurs additional costs of \$400,000 to access the mine, which is estimated to hold 1,000,000 tons of ore. The estimated value of the land after the ore is removed is \$200,000.

1. Prepare the entry(ies) to record the cost of the ore mine.
2. Prepare the year-end adjusting entry if 180,000 tons of ore are mined and sold the first year.

**QS 10-11**

Classify assets

P3 P4 

Identify the following assets *a* through *h* as reported on the balance sheet as intangible assets (IA), natural resources (NR), or other (O).

- |                  |                  |                   |
|------------------|------------------|-------------------|
| ___ a. Oil well  | ___ d. Gold mine | ___ g. Franchise  |
| ___ b. Trademark | ___ e. Building  | ___ h. Timberland |
| ___ c. Leasehold | ___ f. Copyright |                   |

**QS 10-12**

Intangible assets and amortization

P4

On January 4 of this year, Diaz Boutique incurs a \$105,000 cost to modernize its store. Improvements include new floors, ceilings, wiring, and wall coverings. These improvements are estimated to yield benefits for 10 years. Diaz leases its store and has eight years remaining on the lease. Prepare the entry to record (1) the cost of modernization and (2) amortization at the end of this current year.

**QS 10-13**Computing total asset turnover A1 

Aneko Company reports the following (\$000s): net sales of \$14,800 for 2015 and \$13,990 for 2014; end-of-year total assets of \$19,100 for 2015 and \$17,900 for 2014. Compute its total asset turnover for 2015, and assess its level if competitors average a total asset turnover of 2.0 times.

**QS 10-14<sup>A</sup>**

Asset exchange

P5

Caleb Co. owns a machine that costs \$42,400 with accumulated depreciation of \$18,400. Caleb exchanges the machine for a newer model that has a market value of \$52,000. (1) Record the exchange assuming Caleb paid \$30,000 cash and the exchange has commercial substance. (2) Record the exchange assuming Caleb pays \$22,000 cash and the exchange lacks commercial substance.

**QS 10-15**

International accounting standards

C1 C3 

Answer each of the following related to international accounting standards.

- a. Accounting for plant assets involves cost determination, depreciation, additional expenditures, and disposals. Is plant asset accounting broadly similar or dissimilar between IFRS and U.S. GAAP? Identify one notable difference between IFRS and U.S. GAAP in accounting for plant assets.
- b. Describe how IFRS and U.S. GAAP treat increases in the value of plant assets subsequent to their acquisition (but before their disposition).

**EXERCISES****Exercise 10-1**

Cost of plant assets

C1 

Rizio Co. purchases a machine for \$12,500, terms 2/10, n/60, FOB shipping point. The seller prepaid the \$360 freight charges, adding the amount to the invoice and bringing its total to \$12,860. The machine requires special steel mounting and power connections costing \$895. Another \$475 is paid to assemble the machine and get it into operation. In moving the machine to its steel mounting, \$180 in damages occurred. Materials costing \$40 are used in adjusting the machine to produce a satisfactory product. The adjustments are normal for this machine and are not the result of the damages. Compute the cost recorded for this machine. (Rizio pays for this machine within the cash discount period.)

**Exercise 10-2**

Recording costs of assets

C1

Cala Manufacturing purchases a large lot on which an old building is located as part of its plans to build a new plant. The negotiated purchase price is \$280,000 for the lot plus \$110,000 for the old building. The company pays \$33,500 to tear down the old building and \$47,000 to fill and level the lot. It also pays a total of \$1,540,000 in construction costs—this amount consists of \$1,452,200 for the new building and \$87,800 for lighting and paving a parking area next to the building. Prepare a single journal entry to record these costs incurred by Cala, all of which are paid in cash.

**Exercise 10-3**

Lump-sum purchase of plant assets C1

Rodriguez Company pays \$375,280 for real estate plus \$20,100 in closing costs. The real estate consists of land appraised at \$157,040; land improvements appraised at \$58,890; and a building appraised at \$176,670. Allocate the total cost among the three purchased assets and prepare the journal entry to record the purchase.

Ramirez Company installs a computerized manufacturing machine in its factory at the beginning of the year at a cost of \$43,500. The machine's useful life is estimated at 10 years, or 385,000 units of product, with a \$5,000 salvage value. During its second year, the machine produces 32,500 units of product. Determine the machine's second-year depreciation under the straight-line method.

**Exercise 10-4**  
Straight-line depreciation  
P1

Ramirez Company installs a computerized manufacturing machine in its factory at the beginning of the year at a cost of \$43,500. The machine's useful life is estimated at 10 years, or 385,000 units of product, with a \$5,000 salvage value. During its second year, the machine produces 32,500 units of product. Determine the machine's second-year depreciation using the units-of-production method.

**Exercise 10-5**  
Units-of-production  
depreciation P1

Ramirez Company installs a computerized manufacturing machine in its factory at the beginning of the year at a cost of \$43,500. The machine's useful life is estimated at 10 years, or 385,000 units of product, with a \$5,000 salvage value. During its second year, the machine produces 32,500 units of product. Determine the machine's second-year depreciation using the double-declining-balance method.

**Exercise 10-6**  
Double-declining-balance  
depreciation P1

In early January 2015, NewTech purchases computer equipment for \$154,000 to use in operating activities for the next four years. It estimates the equipment's salvage value at \$25,000. Prepare a table showing depreciation and book value for each of the four years assuming straight-line depreciation.

**Exercise 10-7**  
Straight-line depreciation  
P1

In early January 2015, NewTech purchases computer equipment for \$154,000 to use in operating activities for the next four years. It estimates the equipment's salvage value at \$25,000. Prepare a table showing depreciation and book value for each of the four years assuming double-declining-balance depreciation.

**Exercise 10-8**  
Double-declining-balance  
depreciation P1

Tory Enterprises pays \$238,400 for equipment that will last five years and have a \$43,600 salvage value. By using the equipment in its operations for five years, the company expects to earn \$88,500 annually, after deducting all expenses except depreciation. Prepare a table showing income before depreciation, depreciation expense, and net (pretax) income for each year and for the total five-year period, assuming straight-line depreciation.

**Exercise 10-9**  
Straight-line depreciation  
and income effects  
P1 

Tory Enterprises pays \$238,400 for equipment that will last five years and have a \$43,600 salvage value. By using the equipment in its operations for five years, the company expects to earn \$88,500 annually, after deducting all expenses except depreciation. Prepare a table showing income before depreciation, depreciation expense, and net (pretax) income for each year and for the total five-year period, assuming double-declining-balance depreciation is used.

**Exercise 10-10**  
Double-declining-balance  
depreciation P1   
**Check** Year 3 NI, \$54,170

On April 1, 2014, Cyclone's Backhoe Co. purchases a trencher for \$280,000. The machine is expected to last five years and have a salvage value of \$40,000. Compute depreciation expense for both 2014 and 2015 assuming the company uses the straight-line method.

**Exercise 10-11**  
Straight-line, partial-year  
depreciation C2

On April 1, 2014, Cyclone's Backhoe Co. purchases a trencher for \$280,000. The machine is expected to last five years and have a salvage value of \$40,000. Compute depreciation expense for both 2014 and 2015 assuming the company uses the double-declining-balance method.

**Exercise 10-12**  
Double-declining-  
balance, partial-year  
depreciation C2

Apex Fitness Club uses straight-line depreciation for a machine costing \$23,860, with an estimated four-year life and a \$2,400 salvage value. At the beginning of the third year, Apex determines that the machine has three more years of remaining useful life, after which it will have an estimated \$2,000 salvage value. Compute (1) the machine's book value at the end of its second year and (2) the amount of depreciation for each of the final three years given the revised estimates.

**Exercise 10-13**  
Revising depreciation  
C2  
**Check** (2) \$3,710

Oki Company pays \$264,000 for equipment expected to last four years and have a \$29,000 salvage value. Prepare journal entries to record the following costs related to the equipment.

1. During the second year of the equipment's life, \$22,000 cash is paid for a new component expected to increase the equipment's productivity by 10% a year.
2. During the third year, \$6,250 cash is paid for normal repairs necessary to keep the equipment in good working order.
3. During the fourth year, \$14,870 is paid for repairs expected to increase the useful life of the equipment from four to five years.

**Exercise 10-14**  
Ordinary repairs,  
extraordinary repairs,  
and betterments  
C3

**Exercise 10-15**Extraordinary repairs;  
plant asset age

C3

Martinez Company owns a building that appears on its prior year-end balance sheet at its original \$572,000 cost less \$429,000 accumulated depreciation. The building is depreciated on a straight-line basis assuming a 20-year life and no salvage value. During the first week in January of the current calendar year, major structural repairs are completed on the building at a \$68,350 cost. The repairs extend its useful life for 5 years beyond the 20 years originally estimated.

1. Determine the building's age (plant asset age) as of the prior year-end balance sheet date.
2. Prepare the entry to record the cost of the structural repairs that are paid in cash.
3. Determine the book value of the building immediately after the repairs are recorded.
4. Prepare the entry to record the current calendar year's depreciation.

**Check** (3) \$211,350**Exercise 10-16**

Disposal of assets

P2

Diaz Company owns a milling machine that cost \$250,000 and has accumulated depreciation of \$182,000. Prepare the entry to record the disposal of the milling machine on January 3 under each of the following independent situations.

1. The machine needed extensive repairs, and it was not worth repairing. Diaz disposed of the machine, receiving nothing in return.
2. Diaz sold the machine for \$35,000 cash.
3. Diaz sold the machine for \$68,000 cash.
4. Diaz sold the machine for \$80,000 cash.

**Exercise 10-17**Partial-year depreciation;  
disposal of plant asset

P2

Rayya Co. purchases and installs a machine on January 1, 2015, at a total cost of \$105,000. Straight-line depreciation is taken each year for four years assuming a seven-year life and no salvage value. The machine is disposed of on July 1, 2019, during its fifth year of service. Prepare entries to record the partial year's depreciation on July 1, 2019, and to record the disposal under the following separate assumptions:

1. The machine is sold for \$45,500 cash.
2. An insurance settlement of \$25,000 is received due to the machine's total destruction in a fire.

**Exercise 10-18**Depletion of natural  
resources

P1 P3

On April 2, 2015, Montana Mining Co. pays \$3,721,000 for an ore deposit containing 1,525,000 tons. The company installs machinery in the mine costing \$213,500, with an estimated seven-year life and no salvage value. The machinery will be abandoned when the ore is completely mined. Montana begins mining on May 1, 2015, and mines and sells 166,200 tons of ore during the remaining eight months of 2015. Prepare the December 31, 2015, entries to record both the ore deposit depletion and the mining machinery depreciation. Mining machinery depreciation should be in proportion to the mine's depletion.

**Exercise 10-19**Amortization of  
intangible assets P4

Milano Gallery purchases the copyright on an oil painting for \$418,000 on January 1, 2015. The copyright legally protects its owner for 10 more years. The company plans to market and sell prints of the original for 11 years. Prepare entries to record the purchase of the copyright on January 1, 2015, and its annual amortization on December 31, 2015.

**Exercise 10-20**

Goodwill

P4

On January 1, 2015, Robinson Company purchased Franklin Company at a price of \$2,500,000. The fair market value of the net assets purchased equals \$1,800,000.

1. What is the amount of goodwill that Robinson records at the purchase date?
2. Explain how Robinson would determine the amount of goodwill amortization for the year ended December 31, 2015.
3. Robinson Company believes that its employees provide superior customer service, and through their efforts, Robinson Company believes it has created \$900,000 of goodwill. How would Robinson Company record this goodwill?

**Exercise 10-21**Cash flows related to  
assets

C1

**GOOGLE**

Refer to the statement of cash flows for **Google** in Appendix A for the fiscal year ended December 31, 2013, to answer the following.

1. What amount of cash is used to purchase property and equipment?
2. How much depreciation and amortization of property and equipment are recorded?
3. What total amount of net cash is used in investing activities?

**Exercise 10-22**Evaluating efficient use  
of assets A1

Lok Co. reports net sales of \$5,856,480 for 2014 and \$8,679,690 for 2015. End-of-year balances for total assets are 2013, \$1,686,000; 2014, \$1,800,000; and 2015, \$1,982,000. (a) Compute Lok's total asset turnover for 2014 and 2015. (b) Comment on Lok's efficiency in using its assets if its competitors average a total asset turnover of 3.0.

Gilly Construction trades in an old tractor for a new tractor, receiving a \$29,000 trade-in allowance and paying the remaining \$83,000 in cash. The old tractor had cost \$96,000, and straight-line accumulated depreciation of \$52,500 had been recorded to date under the assumption that it would last eight years and have a \$12,000 salvage value. Answer the following questions assuming the exchange has commercial substance.

1. What is the book value of the old tractor at the time of exchange?
2. What is the loss on this asset exchange?
3. What amount should be recorded (debited) in the asset account for the new tractor?

**Exercise 10-23<sup>A</sup>**

Exchanging assets

**Check** (2) \$14,500

On January 2, 2015, Bering Co. disposes of a machine costing \$44,000 with accumulated depreciation of \$24,625. Prepare the entries to record the disposal under each of the following separate assumptions.

1. The machine is sold for \$18,250 cash.
2. The machine is traded in for a newer machine having a \$60,200 cash price. A \$25,000 trade-in allowance is received, and the balance is paid in cash. Assume the asset exchange lacks commercial substance.
3. The machine is traded in for a newer machine having a \$60,200 cash price. A \$15,000 trade-in allowance is received, and the balance is paid in cash. Assume the asset exchange has commercial substance.

**Exercise 10-24<sup>A</sup>**

Recording plant asset disposals P2 P5

**Check** (2) Dr. Machinery (new), \$54,575

**Volkswagen Group** reports the following information for property, plant, and equipment as of December 31, 2013, along with additions, disposals, depreciation, and impairments for the year ended December 31, 2013 (euros in millions):

Property, plant, and equipment, net . . . . .	€42,389
Additions to property, plant, and equipment . . . . .	11,061
Disposals of property, plant, and equipment . . . . .	2,362
Depreciation on property, plant, and equipment . . . . .	6,689
Impairments to property, plant, and equipment . . . . .	118

**Exercise 10-25**

Accounting for plant assets under IFRS

C2 P1 P2

1. Prepare Volkswagen's journal entry to record its depreciation for 2013.
2. Prepare Volkswagen's journal entry to record its additions for 2013 assuming they are paid in cash and are treated as "betterments (improvements)" to the assets.
3. Prepare Volkswagen's journal entry to record its €2,362 in disposals for 2013 assuming it receives €700 cash in return and the accumulated depreciation on the disposed assets totals €1,162.
4. Volkswagen reports €118 of impairments. Do these impairments increase or decrease the Property, Plant and Equipment account? By what amount?

Timberly Construction negotiates a lump-sum purchase of several assets from a company that is going out of business. The purchase is completed on January 1, 2015, at a total cash price of \$900,000 for a building, land, land improvements, and four vehicles. The estimated market values of the assets are building, \$508,800; land, \$297,600; land improvements, \$28,800; and four vehicles, \$124,800. The company's fiscal year ends on December 31.

**Required**

1. Prepare a table to allocate the lump-sum purchase price to the separate assets purchased (round percents to the nearest 1%). Prepare the journal entry to record the purchase.
2. Compute the depreciation expense for year 2015 on the building using the straight-line method, assuming a 15-year life and a \$27,000 salvage value.
3. Compute the depreciation expense for year 2015 on the land improvements assuming a five-year life and double-declining-balance depreciation.

**Analysis Component**

4. Defend or refute this statement: Accelerated depreciation results in payment of less taxes over the asset's life.

**PROBLEM SET A****Problem 10-1A**

Plant asset costs; depreciation methods

C1 P1 **Check** (2) \$30,000

(3) \$10,800

**Problem 10-2A**

Depreciation methods

P1

A machine costing \$257,500 with a four-year life and an estimated \$20,000 salvage value is installed in Luther Company’s factory on January 1. The factory manager estimates the machine will produce 475,000 units of product during its life. It actually produces the following units: 220,000 in 1st year, 124,600 in 2nd year, 121,800 in 3rd year, 15,200 in 4th year. The total number of units produced by the end of year 4 exceeds the original estimate—this difference was not predicted. (The machine must not be depreciated below its estimated salvage value.)

**Required**

Prepare a table with the following column headings and compute depreciation for each year (and total depreciation of all years combined) for the machine under each depreciation method.

**Check** Year 4: units-of-production depreciation, \$4,300; DDB depreciation, \$12,187

Year	Straight-Line	Units-of-Production	Double-Declining-Balance

**Problem 10-3A**

Asset cost allocation; straight-line depreciation

C1 P1

In January 2015, Mitzu Co. pays \$2,600,000 for a tract of land with two buildings on it. It plans to demolish Building 1 and build a new store in its place. Building 2 will be a company office; it is appraised at \$644,000, with a useful life of 20 years and a \$60,000 salvage value. A lighted parking lot near Building 1 has improvements (Land Improvements 1) valued at \$420,000 that are expected to last another 12 years with no salvage value. Without the buildings and improvements, the tract of land is valued at \$1,736,000. The company also incurs the following additional costs:

Cost to demolish Building 1 .....	\$ 328,400
Cost of additional land grading .....	175,400
Cost to construct new building (Building 3), having a useful life of 25 years and a \$392,000 salvage value .....	2,202,000
Cost of new land improvements (Land Improvements 2) near Building 2 having a 20-year useful life and no salvage value .....	164,000

**Required**

1. Prepare a table with the following column headings: Land, Building 2, Building 3, Land Improvements 1, and Land Improvements 2. Allocate the costs incurred by Mitzu to the appropriate columns and total each column (round percents to the nearest 1%).
2. Prepare a single journal entry to record all the incurred costs assuming they are paid in cash on January 1, 2015.
3. Using the straight-line method, prepare the December 31 adjusting entries to record depreciation for the 12 months of 2015 when these assets were in use.

**Check** (1) Land costs, \$2,115,800; Building 2 costs, \$598,000

(3) Depr.—Land Improv. 1 and 2, \$32,500 and \$8,200

**Problem 10-4A**

Computing and revising depreciation; revenue and capital expenditures

C1 C2 C3

Champion Contractors completed the following transactions and events involving the purchase and operation of equipment in its business.

**2014**

- Jan. 1 Paid \$287,600 cash plus \$11,500 in sales tax and \$1,500 in transportation (FOB shipping point) for a new loader. The loader is estimated to have a four-year life and a \$20,600 salvage value. Loader costs are recorded in the Equipment account.
- Jan. 3 Paid \$4,800 to enclose the cab and install air-conditioning in the loader to enable operations under harsher conditions. This increased the estimated salvage value of the loader by another \$1,400.
- Dec. 31 Recorded annual straight-line depreciation on the loader.

**2015**

- Jan. 1 Paid \$5,400 to overhaul the loader’s engine, which increased the loader’s estimated useful life by two years.
- Feb. 17 Paid \$820 to repair the loader after the operator backed it into a tree.
- Dec. 31 Recorded annual straight-line depreciation on the loader.

**Check** Dec. 31, 2014, Dr. Depr. Expense—Equip., \$70,850

**Check** Dec. 31, 2015, Dr. Depr. Expense—Equip., \$43,590

**Required**

Prepare journal entries to record these transactions and events.

Yoshi Company completed the following transactions and events involving its delivery trucks.

### 2014

- Jan. 1 Paid \$20,515 cash plus \$1,485 in sales tax for a new delivery truck estimated to have a five-year life and a \$2,000 salvage value. Delivery truck costs are recorded in the Trucks account.  
Dec. 31 Recorded annual straight-line depreciation on the truck.

### 2015

- Dec. 31 Due to new information obtained earlier in the year, the truck's estimated useful life was changed from five to four years, and the estimated salvage value was increased to \$2,400. Recorded annual straight-line depreciation on the truck.

### 2016

- Dec. 31 Recorded annual straight-line depreciation on the truck.  
Dec. 31 Sold the truck for \$5,300 cash.

### Required

Prepare journal entries to record these transactions and events.

### Problem 10-5A

Computing and revising depreciation; selling plant assets

**Check** Dec. 31, 2015,  
Dr. Depr. Expense—Trucks,  
\$5,200

Dec. 31, 2016,  
Dr. Loss on Disposal of  
Trucks, \$2,300

Onslow Co. purchases a used machine for \$178,000 cash on January 2 and readies it for use the next day at an \$2,840 cost. On January 3, it is installed on a required operating platform costing \$1,160, and it is further readied for operations. The company predicts the machine will be used for six years and have a \$14,000 salvage value. Depreciation is to be charged on a straight-line basis. On December 31, at the end of its fifth year in operations, it is disposed of.

### Required

1. Prepare journal entries to record the machine's purchase and the costs to ready and install it. Cash is paid for all costs incurred.
2. Prepare journal entries to record depreciation of the machine at December 31 of (a) its first year in operations and (b) the year of its disposal.
3. Prepare journal entries to record the machine's disposal under each of the following separate assumptions: (a) it is sold for \$15,000 cash; (b) it is sold for \$50,000 cash; and (c) it is destroyed in a fire and the insurance company pays \$30,000 cash to settle the loss claim.

\$38,400

On July 1, 2010, Falk Company signed a contract to lease space in a building for 15 years. The lease contract calls for annual (prepaid) rental payments of \$80,000 on each July 1 throughout the life of the lease and for the lessee to pay for all additions and improvements to the leased property. On June 25, 2015, Falk decides to sublease the space to Ryan & Associates for the remaining 10 years of the lease—Ryan pays \$200,000 to Falk for the right to sublease and it agrees to assume the obligation to pay the \$80,000 annual rent to the building owner beginning July 1, 2015. After taking possession of the leased space, Ryan pays for improving the office portion of the leased space at a \$130,000 cost. The improvements are paid for by Ryan on July 5, 2015, and are estimated to have a useful life equal to the 16 years remaining in the life of the building.

### Problem 10-8A

Intangible assets

P4 

**Required**

1. Prepare entries for Ryan to record (a) its payment to Falk for the right to sublease the building space, (b) its payment of the 2015 annual rent to the building owner, and (c) its payment for the office improvements.
2. Prepare Ryan’s year-end adjusting entries required at December 31, 2015, to (a) amortize the \$200,000 cost of the sublease, (b) amortize the office improvements, and (c) record rent expense.

**Check** Dr. Rent Expense for (2a) \$10,000, (2c) \$40,000

**PROBLEM SET B**

**Problem 10-1B**

Plant asset costs; depreciation methods

C1 P1

**Check** (2) \$65,000

(3) \$50,400

Nagy Company negotiates a lump-sum purchase of several assets from a contractor who is relocating. The purchase is completed on January 1, 2015, at a total cash price of \$1,800,000 for a building, land, land improvements, and five trucks. The estimated market values of the assets are building, \$890,000; land, \$427,200; land improvements, \$249,200; and five trucks, \$213,600. The company’s fiscal year ends on December 31.

**Required**

1. Prepare a table to allocate the lump-sum purchase price to the separate assets purchased (round percents to the nearest 1%). Prepare the journal entry to record the purchase.
2. Compute the depreciation expense for year 2015 on the building using the straight-line method, assuming a 12-year life and a \$120,000 salvage value.
3. Compute the depreciation expense for year 2015 on the land improvements assuming a 10-year life and double-declining-balance depreciation.

**Analysis Component**

4. Defend or refute this statement: Accelerated depreciation results in payment of more taxes over the asset’s life.

**Problem 10-2B**

Depreciation methods

P1

On January 2, Manning Co. purchases and installs a new machine costing \$324,000 with a five-year life and an estimated \$30,000 salvage value. Management estimates the machine will produce 1,470,000 units of product during its life. Actual production of units is as follows: 355,600 in 1st year, 320,400 in 2nd year, 317,000 in 3rd year, 343,600 in 4th year, 138,500 in 5th year. The total number of units produced by the end of year 5 exceeds the original estimate—this difference was not predicted. (The machine must not be depreciated below its estimated salvage value.)

**Required**

Prepare a table with the following column headings and compute depreciation for each year (and total depreciation of all years combined) for the machine under each depreciation method.

Year	Straight-Line	Units-of-Production	Double-Declining-Balance

**Check** DDB Depreciation, year 3, \$46,656; U-of-P Depreciation, year 4, \$68,720

**Problem 10-3B**

Asset cost allocation; straight-line depreciation

C1 P1

In January 2015, ProTech Co. pays \$1,550,000 for a tract of land with two buildings. It plans to demolish Building A and build a new shop in its place. Building B will be a company office; it is appraised at \$482,800, with a useful life of 15 years and a \$99,500 salvage value. A lighted parking lot near Building B has improvements (Land Improvements B) valued at \$142,000 that are expected to last another five years with no salvage value. Without the buildings and improvements, the tract of land is valued at \$795,200. The company also incurs the following additional costs.

Cost to demolish Building A . . . . .	\$ 122,000
Cost of additional land grading . . . . .	174,500
Cost to construct new building (Building C), having a useful life of 20 years and a \$258,000 salvage value . . . . .	1,458,000
Cost of new land improvements (Land Improvements C) near Building C, having a 10-year useful life and no salvage value . . . . .	103,500

**Required**

1. Prepare a table with the following column headings: Land, Building B, Building C, Land Improvements B, and Land Improvements C. Allocate the costs incurred by ProTech to the appropriate columns and total each column (round percents to the nearest 1%).
2. Prepare a single journal entry to record all incurred costs assuming they are paid in cash on January 1, 2015.
3. Using the straight-line method, prepare the December 31 adjusting entries to record depreciation for the 12 months of 2015 when these assets were in use.

**Check** (1) Land costs, \$1,164,500; Building B costs, \$527,000

(3) Depr.—Land Improv. B and C, \$31,000 and \$10,350

Mercury Delivery Service completed the following transactions and events involving the purchase and operation of equipment for its business.

### 2014

- Jan. 1 Paid \$25,860 cash plus \$1,810 in sales tax for a new delivery van that was estimated to have a five-year life and a \$3,670 salvage value. Van costs are recorded in the Equipment account.
- Jan. 3 Paid \$1,850 to install sorting racks in the van for more accurate and quicker delivery of packages. This increases the estimated salvage value of the van by another \$230.
- Dec. 31 Recorded annual straight-line depreciation on the van.

### 2015

- Jan. 1 Paid \$2,064 to overhaul the van's engine, which increased the van's estimated useful life by two years.
- May 10 Paid \$800 to repair the van after the driver backed it into a loading dock.
- Dec. 31 Record annual straight-line depreciation on the van. (Round to the nearest dollar.)

### Required

Prepare journal entries to record these transactions and events.

### Problem 10-4B

Computing and revising depreciation; revenue and capital expenditures

C1 C2 C3

**Check** Dec. 31, 2014,  
Dr. Depr. Expense—Equip.,  
\$5,124

**Check** Dec. 31, 2015,  
Dr. Depr. Expense—Equip.,  
\$3,760

York Instruments completed the following transactions and events involving its machinery.

### 2014

- Jan. 1 Paid \$107,800 cash plus \$6,470 in sales tax for a new machine. The machine is estimated to have a six-year life and a \$9,720 salvage value.
- Dec. 31 Recorded annual straight-line depreciation on the machinery.

### 2015

- Dec. 31 Due to new information obtained earlier in the year, the machine's estimated useful life was changed from six to four years, and the estimated salvage value was increased to \$14,345. Recorded annual straight-line depreciation on the machinery.

### 2016

- Dec. 31 Recorded annual straight-line depreciation on the machinery.
- Dec. 31 Sold the machine for \$25,240 cash.

### Required

Prepare journal entries to record these transactions and events.

### Problem 10-5B

Computing and revising depreciation; selling plant assets

C2 P1 P2

**Check** Dec. 31, 2015, Dr.  
Depr. Expense—Machinery,  
\$27,500

Dec. 31, 2016,  
Dr. Loss on Disposal of  
Machinery, \$16,605

On January 1, Walker purchases a used machine for \$150,000 and readies it for use the next day at a cost of \$3,510. On January 4, it is mounted on a required operating platform costing \$4,600, and it is further readied for operations. Management estimates the machine will be used for seven years and have an \$18,110 salvage value. Depreciation is to be charged on a straight-line basis. On December 31, at the end of its sixth year of use, the machine is disposed of.

### Required

1. Prepare journal entries to record the machine's purchase and the costs to ready and install it. Cash is paid for all costs incurred.
2. Prepare journal entries to record depreciation of the machine at December 31 of (a) its first year in operations and (b) the year of its disposal.
3. Prepare journal entries to record the machine's disposal under each of the following separate assumptions: (a) it is sold for \$28,000 cash; (b) it is sold for \$52,000 cash; and (c) it is destroyed in a fire and the insurance company pays \$25,000 cash to settle the loss claim.

### Problem 10-6B

Disposal of plant assets

**Check** (2b) Depr. Exp.,  
\$20,000

(3c) Dr. Loss from  
Fire, \$13,110

On February 19 of the current year, Quartzite Co. pays \$5,400,000 for land estimated to contain 4 million tons of recoverable ore. It installs machinery costing \$400,000 that has a 16-year life and no salvage value and is capable of mining the ore deposit in 12 years. The machinery is paid for on March 21, eleven days before mining operations begin. The company removes and sells 254,000 tons of ore during its first nine months of operations ending on December 31. Depreciation of the machinery is in proportion to the mine's depletion as the machinery will be abandoned after the ore is mined.

### Problem 10-7B

Natural resources

P3

**Required**

Prepare entries to record (a) the purchase of the land, (b) the cost and installation of the machinery, (c) the first nine months' depletion assuming the land has a net salvage value of zero after the ore is mined, and (d) the first nine months' depreciation on the machinery.

**Check** (c) Depletion, \$342,900;  
(d) Depreciation, \$25,400

**Analysis Component**

Describe both the similarities and differences in amortization, depletion, and depreciation.

**Problem 10-8B**

Intangible assets

On January 1, 2008, Mason Co. entered into a 12-year lease on a building. The lease contract requires (1) annual (prepaid) rental payments of \$36,000 each January 1 throughout the life of the lease and (2) for the lessee to pay for all additions and improvements to the leased property. On January 1, 2015, Mason decides to sublease the space to Stewart Co. for the remaining five years of the lease—Stewart pays \$40,000 to Mason for the right to sublease and agrees to assume the obligation to pay the \$36,000 annual rent to the building owner beginning January 1, 2015. After taking possession of the leased space, Stewart pays for improving the office portion of the leased space at a \$20,000 cost. The improvements are paid for by Stewart on January 3, 2015, and are estimated to have a useful life equal to the 13 years remaining in the life of the building.

**Required**

1. Prepare entries for Stewart to record (a) its payment to Mason for the right to sublease the building space, (b) its payment of the 2015 annual rent to the building owner, and (c) its payment for the office improvements.
2. Prepare Stewart's year-end adjusting entries required on December 31, 2015, to (a) amortize the \$40,000 cost of the sublease, (b) amortize the office improvements, and (c) record rent expense.

**Check** Dr. Rent Expense: (2a) \$8,000, (2c) \$36,000

**SERIAL PROBLEM**

Business Solutions

P1 A1

(This serial problem began in Chapter 1 and continues through most of the book. If previous chapter segments were not completed, the serial problem can begin at this point. It is helpful, but not necessary, to use the Working Papers that accompany the book.)

**SP 10** Selected ledger account balances for Business Solutions follow.

	For Three Months Ended December 31, 2015	For Three Months Ended March 31, 2016
Office equipment .....	\$ 8,000	\$ 8,000
Accumulated depreciation— Office equipment .....	400	800
Computer equipment .....	20,000	20,000
Accumulated depreciation— Computer equipment .....	1,250	2,500
Total revenue .....	31,284	44,000
Total assets .....	83,460	120,268

**Required**

1. Assume that Business Solutions does not acquire additional office equipment or computer equipment in 2016. Compute amounts for *the year ended* December 31, 2016, for Depreciation Expense—Office Equipment and for Depreciation Expense—Computer Equipment (assume use of the straight-line method).
2. Given the assumptions in part 1, what is the book value of both the office equipment and the computer equipment as of December 31, 2016?
3. Compute the three-month total asset turnover for Business Solutions as of March 31, 2016. Use total revenue for the numerator and average the December 31, 2015, total assets and the March 31, 2016, total assets for the denominator. Interpret its total asset turnover if competitors average 2.5 for annual periods. (Round turnover to two decimals.)

**Check** (3) Three-month (annual) turnover = 0.43 (1.73 annual)

## Beyond the Numbers

**BTN 10-1** Refer to the financial statements of **Apple** in Appendix A to answer the following.

1. What percent of the original cost of Apple's property and equipment remains to be depreciated as of September 28, 2013 and September 29, 2012? Assume these assets have no salvage value.
2. Over what length(s) of time is Apple depreciating its major categories of property and equipment?
3. What is the change in total property, plant, and equipment (before accumulated depreciation) for the year ended September 28, 2013? What is the amount of cash provided (used) by investing activities for property and equipment for the year ended September 28, 2013? What is one possible explanation for the difference between these two amounts?
4. Compute its total asset turnover for the year ended September 28, 2013, and the year ended September 29, 2012. Assume total assets at September 24, 2011, are \$116,371 (\$ millions).

### Fast Forward

5. Access Apple's financial statements for fiscal years ending after September 28, 2013, at its website ([Apple.com](http://Apple.com)) or the SEC's EDGAR database ([www.SEC.gov](http://www.SEC.gov)). Recompute Apple's total asset turnover for the additional years' data you collect. Comment on any differences relative to the turnover computed in part 4.

## REPORTING IN ACTION

A1 

## APPLE

**BTN 10-2** Comparative figures for **Apple** and **Google** follow.

(\$ millions)	Apple			Google		
	Current Year	One Year Prior	Two Years Prior	Current Year	One Year Prior	Two Years Prior
Total assets	\$207,000	\$176,064	\$116,371	\$110,920	\$93,798	\$72,574
Net sales	170,910	156,508	108,249	59,825	50,175	37,905

## COMPARATIVE ANALYSIS

A1

## APPLE

## GOOGLE

### Required

1. Compute total asset turnover for the most recent two years for Apple and Google using the data shown.
2. Which company is more efficient in generating net sales given the total assets it employs? Assume an industry average of 1.0 for asset turnover.

**BTN 10-3** Flo Choi owns a small business and manages its accounting. Her company just finished a year in which a large amount of borrowed funds was invested in a new building addition as well as in equipment and fixture additions. Choi's banker requires her to submit semiannual financial statements so he can monitor the financial health of her business. He has warned her that if profit margins erode, he might raise the interest rate on the borrowed funds to reflect the increased loan risk from the bank's point of view. Choi knows profit margin is likely to decline this year. As she prepares year-end adjusting entries, she decides to apply the following depreciation rule: All asset additions are considered to be in use on the first day of the following month. (The previous rule assumed assets are in use on the first day of the month nearest to the purchase date.)

### Required

1. Identify decisions that managers like Choi must make in applying depreciation methods.
2. Is Choi's rule an ethical violation, or is it a legitimate decision in computing depreciation?
3. How will Choi's new depreciation rule affect the profit margin of her business?

## ETHICS CHALLENGE

C1  

**BTN 10-4** Teams are to select an industry, and each team member is to select a different company in that industry. Each team member is to acquire the financial statements (Form 10-K) of the company selected—see the company's website or the SEC's EDGAR database ([www.SEC.gov](http://www.SEC.gov)). Use the financial statements to compute total asset turnover. Communicate with teammates via a meeting, e-mail, or telephone to discuss the meaning of this ratio, how different companies compare to each other, and the industry norm. The team must prepare a one-page report that describes the ratios for each company and identifies the conclusions reached during the team's discussion.

## COMMUNICATING IN PRACTICE

A1 

## TAKING IT TO THE NET

P4

**BTN 10-5** Access the **Yahoo!** (ticker: YHOO) 10-K report for the year ended December 31, 2013, filed on February 28, 2014, at [www.SEC.gov](http://www.SEC.gov).

### Required

1. What amount of goodwill is reported on Yahoo!'s balance sheet? What percentage of total assets does its goodwill represent? Is goodwill a major asset for Yahoo!/? Explain.
2. Locate Note 5 to its financial statements. Identify the change in goodwill from December 31, 2012, to December 31, 2013. Comment on the change in goodwill over this period.
3. Locate Note 6 to its financial statements. What are the three categories of intangible assets that Yahoo! reports at December 31, 2013? What proportion of total assets do the intangibles represent?
4. What does Yahoo! indicate is the life of "Trade names, trademarks, and domain names" according to its Note 6? Comment on the difference between the estimated useful life and the legal life of Yahoo!'s trademark.

## TEAMWORK IN ACTION

P1

**BTN 10-6** Each team member is to become an expert on one depreciation method to facilitate teammates' understanding of that method. Follow these procedures:

- a. Each team member is to select an area for expertise from one of the following depreciation methods: straight-line, units-of-production, or double-declining-balance.
- b. Expert teams are to be formed from those who have selected the same area of expertise. The instructor will identify the location where each expert team meets.
- c. Using the following data, expert teams are to collaborate and develop a presentation answering the requirements. Expert team members must write the presentation in a format they can show to their learning teams.

**Data and Requirements** On January 8, 2013, Whitewater Riders purchases a van to transport rafters back to the point of departure at the conclusion of the rafting adventures they operate. The cost of the van is \$44,000. It has an estimated salvage value of \$2,000 and is expected to be used for four years and driven 60,000 miles. The van is driven 12,000 miles in 2013, 18,000 miles in 2014, 21,000 in 2015, and 10,000 in 2016.

1. Compute the annual depreciation expense for each year of the van's estimated useful life.
  2. Explain when and how annual depreciation is recorded.
  3. Explain the impact on income of this depreciation method versus others over the van's life.
  4. Identify the van's book value for each year of its life and illustrate the reporting of this amount for any one year.
- d. Re-form original learning teams. In rotation, experts are to present to their teams the results from part c. Experts are to encourage and respond to questions.

**Point:** This activity can follow an overview of each method. Step 1 allows for three areas of expertise. Larger teams will have some duplication of areas, but the straight-line choice should not be duplicated. Expert teams can use the book and consult with the instructor.

## ENTREPRENEURIAL DECISION

A1

**BTN 10-7** Review the chapter's opening feature involving Deb Carey and her company, **New Glarus Brewing Co.** Assume that the company currently has net sales of \$8,000,000, and that it is planning an expansion that will increase net sales by \$4,000,000. To accomplish this expansion, New Glarus Brewing Co. must increase its average total assets from \$2,500,000 to \$3,000,000.

### Required

1. Compute the company's total asset turnover under (a) current conditions and (b) proposed conditions.
2. Evaluate and comment on the merits of the proposal given your analysis in part 1. Identify any concerns you would express about the proposal.

## HITTING THE ROAD

P3 P4

**BTN 10-8** Team up with one or more classmates for this activity. Identify companies in your community or area that must account for at least one of the following assets: natural resource; patent; lease; leasehold improvement; copyright; trademark; or goodwill. You might find a company having more than one type of asset. Once you identify a company with a specific asset, describe the accounting this company uses to allocate the cost of that asset to the periods benefited from its use.

**BTN 10-9** Samsung ([www.Samsung.com](http://www.Samsung.com)), Apple, and Google are all competitors in the global marketplace. Comparative figures for these companies' recent annual accounting periods follow.

**GLOBAL  
DECISION**

A1

(in millions, except turnover)	Samsung (KRW millions)			Apple		Google	
	Current Year	Prior Year	Two Years Prior	Current Year	Prior Year	Current Year	Prior Year
Total assets .....	₩214,075,018	₩181,071,570	₩155,800,263	\$207,000	\$176,064	\$110,920	\$93,798
Net sales .....	228,692,667	201,103,613	165,001,771	170,910	156,508	59,825	50,175
Total asset turnover ...	?	?	—	0.89	1.07	0.58	0.60

**Required**

1. Compute total asset turnover for the most recent two years for Samsung using the data shown.
2. Which company is most efficient in generating net sales given the total assets it employs?

**Samsung**  
**APPLE**  
**GOOGLE**

**ANSWERS TO MULTIPLE CHOICE QUIZ**

1. b;

	Appraisal Value	%	Total Cost	Allocated
Land .....	\$175,000	50%	\$326,000	\$163,000
Land improvements .....	70,000	20	326,000	65,200
Building .....	105,000	30	326,000	97,800
Totals .....	\$350,000			\$326,000

2. c:  $(\$35,000 - \$1,000)/4 \text{ years} = \$8,500 \text{ per year}$
3. c: 2015:  $\$10,800,000 \times (2 \times 10\%) = \$2,160,000$   
2016:  $(\$10,800,000 - \$2,160,000) \times (2 \times 10\%) = \$1,728,000$
4. c;

Cost of machine .....	\$250,000
Accumulated depreciation .....	100,000
Book value .....	150,000
Cash received .....	120,000
Loss on sale .....	<u>\$ 30,000</u>

5. b:  $\$550,000/\$500,000 = 1.10$

chapter

# Current Liabilities and Payroll Accounting

## Chapter Preview

### CHARACTERISTICS OF LIABILITIES

- C1** Reporting liabilities based on:
- Definition
  - Classification
  - Uncertainty

### KNOWN LIABILITIES

- C2** Accounts payable, sales taxes payable, and unearned revenues
- P1** Short-term notes
- P2** Employee deductions
- P3** Employer payroll

### ESTIMATED LIABILITIES

- P4** Reporting for:
- Health and pension benefits
  - Vacation benefits
  - Bonus plans
  - Warranty liabilities

### CONTINGENCIES AND ANALYSIS

- C3** Accounting for contingencies based on notions of probable, possible, remote
- A1** Times interest earned ratio

## Learning Objectives

### CONCEPTUAL

- C1** Describe current and long-term liabilities and their characteristics.
- C2** Identify and describe known current liabilities.
- C3** Explain how to account for contingent liabilities.

### ANALYTICAL

- A1** Compute the times interest earned ratio and use it to analyze liabilities.

### PROCEDURAL

- P1** Prepare entries to account for short-term notes payable.
- P2** Compute and record *employee* payroll deductions and liabilities.

- P3** Compute and record *employer* payroll expenses and liabilities.
- P4** Account for estimated liabilities, including warranties and bonuses.
- P5** *Appendix 11A*—Identify and describe the details of payroll reports, records, and procedures.

## Power Play

NEW YORK—"I knew it would be a good product," insists Jessica O. Matthews. "I was very persistent in my belief the SOCKET would matter to people in a way that made it worth continuing." The "SOCKET" is a soccer ball that contains a gyroscope that generates and stores energy. "Each SOCKET comes with an LED lamp that can be plugged into the ball when the sun goes down." The ball is ideal for use in the developing world where use of kerosene lamps and diesel generators presents many risks. With 30 minutes of play, it provides about three hours of light. Jessica's start-up, **Uncharted Play** ([UnchartedPlay.com](http://UnchartedPlay.com)), has produced more than 10,000 SOCKETS for Africa and Central/South America.

Jessica's commitment to help people in the developing world better manage their lives carries over to her own business. "I taught myself accounting," explains Jessica. "I find understanding numbers and the financial system as valuable skills." To increase her odds of success, she applies those skills to the important task of managing liabilities for payroll, supplies, employee wages, training, and taxes. Jessica insists that effective management of liabilities, especially payroll and employee benefits, is crucial. "During the initial start-up," says Jessica, "my team worked for free for several months." She stresses that monitoring and controlling liabilities in creative ways is a must.

*"Work hard and be authentic"*  
— Jessica O. Matthews

To help control liabilities, Jessica points to how she began by working out of office space donated by her father. "The world of business is not a playground," explains Jessica. "Sometimes things were inefficient, money was periodically lost, and on occasion, relationships were ruined. Not everyone that was involved knew what it would take to run an effective business." By focusing on efficiencies and controlling liabilities, she was able to grow her company and witness financial success. Creative reduction of liabilities has been part of that success.

Jessica continues to monitor liabilities and payment patterns. "Working on an international scale with international vendors and clients can lead to unexpected barriers in communication and scheduling," explains Jessica. She insists that accounting for and monitoring liabilities is a key to a successful start-up. Her company now generates sufficient income to pay for liabilities and it produces revenue growth for expansion. "We want to create the Google of factories," insists Jessica. "[A plant] where people love to be there and are learning to be innovators regardless of where they are in the company." And she adds: "It's not a power company, it's a play company."

Sources: *Uncharted Play website*, September 2014; *Birchbox*, 2013; *OIC*, November 2013; *Huffington Post*, November 2011; *Shero of the Week*, February 2014; *Forbes*, January 2014; *Spur*, December 2013

# CHARACTERISTICS OF LIABILITIES

**C1**  
Describe current and long-term liabilities and their characteristics.

This section discusses important characteristics of liabilities and how liabilities are classified and reported.

## Defining Liabilities

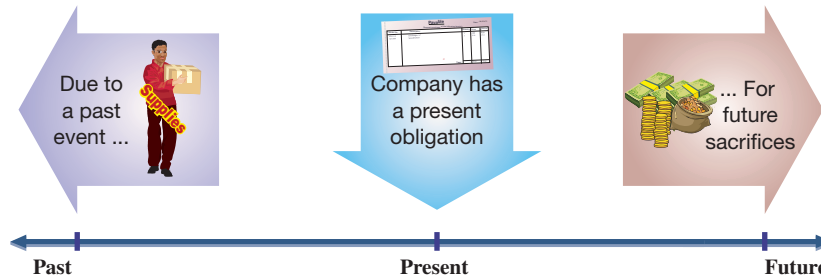

A *liability* is a probable future payment of assets or services that a company is presently obligated to make as a result of past transactions or events. This definition includes three crucial factors:

1. A past transaction or event.
2. A present obligation.
3. A future payment of assets or services.

These three important elements are portrayed visually in Exhibit 11.1. Liabilities reported in financial statements exhibit those characteristics. No liability is reported when one or more of those characteristics is absent. For example, most companies expect to pay wages to their employees in upcoming months and years, but these future payments are *not* liabilities because no past event such as employee work resulted in a present obligation. Instead, such liabilities arise when employees perform their work and earn the wages.

### EXHIBIT 11.1

Characteristics of a Liability

## Classifying Liabilities

Information about liabilities is more useful when the balance sheet identifies them as either current or long term. Decision makers need to know when obligations are due so they can plan for them and take appropriate action.

**Point:** Account titles using “payable” and “unearned” refer to liabilities. Unearned accounts are liabilities that must be fulfilled, rather than repaid.

**Current Liabilities** **Current liabilities**, also called *short-term liabilities*, are obligations due within one year or the company’s operating cycle, whichever is longer. They are expected to be paid using current assets or by creating other current liabilities. Common examples of current liabilities are accounts payable, short-term notes payable, wages payable, warranty liabilities, lease liabilities, taxes payable, and unearned revenues.

**Point:** Improper classification of liabilities can distort ratios used in financial statement analysis and business decisions.

Current liabilities differ across companies because they depend on the type of company operations. **MGM Resorts**, for instance, included the following current liabilities related to its gaming, hospitality, and entertainment operations (\$000s):

Advance deposits and ticket sales . . . . .	\$104,504
Casino outstanding chip liability . . . . .	409,917
Casino front money deposits . . . . .	125,180

**Harley-Davidson** reports a much different set of current liabilities. It discloses current liabilities made up of items such as warranty, recall, and dealer incentive liabilities.

**Long-Term Liabilities** A company’s obligations not expected to be paid within the longer of one year or the company’s operating cycle are reported as **long-term liabilities**. They can include long-term notes payable, warranty liabilities, lease liabilities, and bonds payable. They are sometimes reported on the balance sheet in a single long-term liabilities total or in multiple categories.

**Domino's Pizza**, for instance, reports long-term liabilities of \$1,584 million. They are reported after current liabilities. A single liability also can be divided between the current and noncurrent sections if a company expects to make payments toward it in both the short and long term. Domino's reports long-term debt, \$1,536 million; and current portion of long-term debt, \$24 million, which is less than 2%. The second item is reported in current liabilities. We sometimes see liabilities that do not have a fixed due date but instead are payable on the creditor's demand. These are reported as current liabilities because of the possibility of payment in the near term. Exhibit 11.2 shows amounts of current liabilities and as a percent of total liabilities for selected companies.

**Point:** The current portion of any long-term debt is a current liability.

### EXHIBIT 11.2

Current Liabilities of Selected Companies

## Uncertainty in Liabilities

Accounting for liabilities involves addressing three important questions: Whom to pay? When to pay? How much to pay? Answers to these questions are often decided when a liability is incurred. For example, if a company has a \$100 account payable to a specific individual, payable on March 15, the answers are clear. The company knows whom to pay, when to pay, and how much to pay. However, the answers to one or more of these questions are uncertain for some liabilities.

**Uncertainty in Whom to Pay** Liabilities can involve uncertainty in whom to pay. For instance, a company can create a liability with a known amount when issuing a note that is payable to its holder. In this case, a specific amount is payable to the note's holder at a specified date, but the company does not know who the holder is until that date. Despite

this uncertainty, the company reports this liability on its balance sheet.

**Point:** An accrued expense is an unpaid expense and is also called an accrued liability.

**Uncertainty in When to Pay** A company can have an obligation of a known amount to a known creditor but not know when it must be paid. For example, a legal services firm can accept fees in advance from a client who plans to use the firm's services in the future. This means that the firm has a liability that it settles by providing services at an unknown future date. Although this uncertainty exists, the legal firm's balance sheet must report

this liability. These types of obligations are reported as current liabilities because they are likely to be settled in the short term.

**Uncertainty in How Much to Pay** A company can be aware of an obligation but not know how much will be required to settle it. For example, a company using electrical power is billed only after the meter has been read. This cost is incurred and the liability created before a bill is received. A liability to the power company is reported as an estimated amount if the balance sheet is prepared before a bill arrives.

IFRS records a contingent liability when an obligation exists from a past event if there is a "probable" outflow of resources and the amount can be estimated reliably. However, IFRS defines probable as "more likely than not" while U.S. GAAP defines it as "likely to occur." ■

## KNOWN LIABILITIES

**C2**  
Identify and describe known current liabilities.

Most liabilities arise from situations with little uncertainty. They are set by agreements, contracts, or laws and are measurable. These liabilities are **known liabilities**, also called *definitely determinable liabilities*. Known liabilities include accounts payable, notes payable, payroll, sales taxes, unearned revenues, and leases. We describe how to account for these known liabilities in this section.

### Accounts Payable

Accounts payable, or trade accounts payable, are amounts owed to suppliers, also called *vendors*, for products or services purchased on credit. Accounting for accounts payable is primarily explained and illustrated in our discussion of merchandising activities in Chapters 5 and 6.

### Sales Taxes Payable

Nearly all states and many cities levy taxes on retail sales. Sales taxes are stated as a percent of selling prices. The seller collects sales taxes from customers when sales occur and remits these collections (often monthly) to the proper government agency. Since sellers currently owe these collections to the government, this amount is a current liability. **Home Depot**, for instance, reports sales taxes payable of \$396 million in its recent annual report. To illustrate, if Home Depot sells materials on August 31 for \$6,000 cash that are subject to a 5% sales tax, the revenue portion of this transaction is recorded as follows. (The entry for cost of sales is omitted for simplicity.)

Assets = Liabilities + Equity  
+6,300    +300    +6,000

Aug. 31	Cash .....	6,300	
	Sales .....		6,000
	Sales Taxes Payable (\$6,000 × 0.05) .....		300
	To record cash sales and 5% sales tax.		

Sales Taxes Payable is debited and Cash credited when it remits these collections to the government. Sales Taxes Payable is not an expense. It arises because laws require sellers to collect this cash from customers for the government.<sup>1</sup>

**Point:** To defer a revenue means to postpone recognition of a revenue collected in advance until it is earned. Sports teams must defer recognition of ticket sales until games are played.

Cameron Spencer/Getty Images

### Unearned Revenues

*Unearned revenues* (also called *deferred revenues*, *collections in advance*, and *prepayments*) are amounts received in advance from customers for future products or services. Advance ticket sales for sporting events or music concerts are examples. **Rihanna**, for instance, has “deferred revenues” from advance ticket sales. To illustrate, assume that Rihanna sells \$5 million in tickets for eight concerts; the entry is

Assets = Liabilities + Equity  
+5,000,000    +5,000,000

June 30	Cash .....	5,000,000	
	Unearned Ticket Revenue .....		5,000,000
	To record sale of concert tickets.		

When a concert is played, Rihanna would record revenue for the portion earned.

Assets = Liabilities + Equity  
-625,000    +625,000

Oct. 31	Unearned Ticket Revenue .....	625,000	
	Ticket Revenue <sup>a</sup> .....		625,000
	To record concert ticket revenues earned. <sup>a</sup> \$5,000,000 × 1/8		

<sup>1</sup> Sales taxes can be computed from total sales receipts when sales taxes are not separately identified on the register. To illustrate, assume a 5% sales tax and \$420 in total sales receipts (which includes sales taxes). Sales are computed as follows:

$$\text{Sales} = \text{Total sales receipts} / (1 + \text{Sales tax percentage}) = \$420 / 1.05 = \$400$$

Thus, the sales tax amount equals total sales receipts minus sales, or \$420 - \$400 = \$20. Sellers are required to act as “agents” for the government and collect sales tax. This extra work can be offset by the sellers’ ability to use or invest that cash until it must be paid to the government.

Unearned Ticket Revenue is an unearned revenue account and is reported as a current liability. Unearned revenues also arise with airline ticket sales, magazine subscriptions, construction projects, hotel reservations, gift card sales, and custom orders.

**Decision Insight**

**Reward Programs** Gift card sales now exceed \$100 billion annually, and reward (also called loyalty) programs are growing. There are no exact rules for how retailers account for rewards. When **Best Buy** launched its “Reward Zone,” shoppers earned \$5 on each \$125 spent and had 90 days to spend it. Retailers make assumptions about how many reward program dollars will be spent and how to report it. Best Buy sets up a liability and reduces revenue by the same amount. **Talbots** does not reduce revenue but instead increases selling expense. **Men’s Wearhouse** records rewards in cost of goods sold, whereas **Neiman Marcus** subtracts them from revenue. The FASB continues to review reward programs. ■

**Short-Term Notes Payable**

A **short-term note payable** is a written promise to pay a specified amount on a definite future date within one year or the company’s operating cycle, whichever is longer. These promissory notes are negotiable (as are checks), meaning they can be transferred from party to party by endorsement. The written documentation provided by notes is helpful in resolving disputes and for pursuing legal actions involving these liabilities. Most notes payable bear interest to compensate for use of the money until payment is made. Short-term notes payable can arise from many transactions. A company that purchases merchandise on credit can sometimes extend the credit period by signing a note to replace an account payable. Such notes also can arise when money is borrowed from a bank. We describe both of these cases.

**Note Given to Extend Credit Period** A company can replace an account payable with a note payable. A common example is a creditor that requires the substitution of an interest-bearing note for an overdue account payable that does not bear interest. A less common situation occurs when a debtor’s weak financial condition motivates the creditor to accept a note, sometimes for a lesser amount, and to close the account to ensure that this customer makes no additional credit purchases.

To illustrate, let’s assume that on August 23, Brady Company asks to extend its past-due \$600 account payable to McGraw. After some negotiations, McGraw agrees to accept \$100 cash and a 60-day, 12%, \$500 note payable to replace the account payable. Brady records the transaction with this entry:

Aug. 23	Accounts Payable—McGraw .....	600	
	Cash .....		100
	Notes Payable—McGraw .....		500
	<i>Gave \$100 cash and a 60-day, 12% note for payment on account.</i>		

**P1** Prepare entries to account for short-term notes payable.

**Point:** Required characteristics for negotiability of a note: (1) unconditional promise, (2) in writing, (3) specific amount, and (4) definite due date.

Assets = Liabilities + Equity		
-100	-600	
		+500

Signing the note does not resolve Brady’s debt. Instead, the form of debt is changed from an account payable to a note payable. McGraw prefers the note payable over the account payable because it earns interest and it is written documentation of the debt’s existence, term, and amount. When the note comes due, Brady pays the note and interest by giving McGraw a check for \$510. Brady records that payment with this entry:

Oct. 22	Notes Payable—McGraw .....	500	
	Interest Expense .....	10	
	Cash .....		510
	<i>Paid note with interest (\$500 × 12% × 60/360).</i>		

Assets = Liabilities + Equity		
-510	-500	-10

**Interest expense is computed by multiplying the principal of the note (\$500) by the annual interest rate (12%) for the fraction of the year the note is outstanding (60 days/360 days).**

**Point:** Commercial companies commonly compute interest using a 360-day year. This is known as the *banker’s rule*.

**Note Given to Borrow from Bank** A bank nearly always requires a borrower to sign a promissory note when making a loan. When the note matures, the borrower repays the note with an amount larger than the amount borrowed. The difference between the amount borrowed and the amount repaid is *interest*. This section considers a type of note whose signer promises to pay

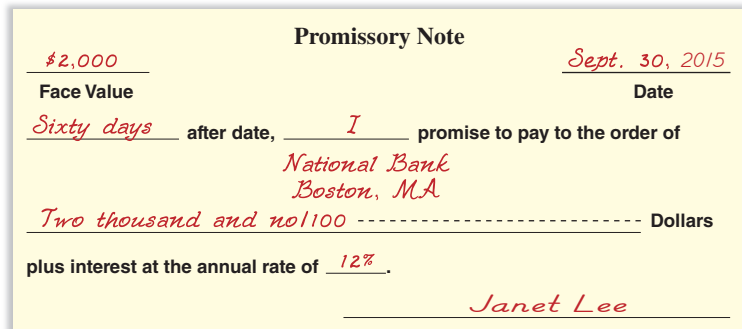

**Point:** When money is borrowed from a bank, the loan is reported as an asset (receivable) on the bank's balance sheet.

*principal* (the amount borrowed) plus interest. In this case, the *face value* of the note equals principal. Face value is the value shown on the face (front) of the note. To illustrate, assume that a company needs \$2,000 for a project and borrows this money from a bank at 12% annual interest. The loan is made on September 30, 2015, and is due in 60 days. Specifically, the borrowing company signs a note with a face value equal to the amount borrowed. The note includes a statement similar to this: "I promise to pay \$2,000 plus interest at 12% within 60 days after September 30." This simple note is shown in Exhibit 11.3.

**EXHIBIT 11.3**

Note with Face Value Equal to Amount Borrowed

The borrower records its receipt of cash and the new liability with this entry:

Assets = Liabilities + Equity  
+2,000    +2,000

Sept. 30	Cash .....	2,000	
	Notes Payable .....		2,000
	<i>Borrowed \$2,000 cash with a 60-day, 12%, \$2,000 note.</i>		

When principal and interest are paid, the borrower records payment with this entry:

Assets = Liabilities + Equity  
-2,040    -2,000    -40

Nov. 29	Notes Payable .....	2,000	
	Interest Expense .....	40	
	Cash .....		2,040
	<i>Paid note with interest (\$2,000 × 12% × 60/360).</i>		

**End-of-period interest adjustment.** When the end of an accounting period occurs between the signing of a note payable and its maturity date, the *expense recognition (matching) principle* requires us to record the accrued but unpaid interest on the note. To illustrate, return to the note in Exhibit 11.3, but assume that the company borrows \$2,000 cash on December 16, 2015, instead of September 30. This 60-day note matures on February 14, 2016, and the company's fiscal year ends on December 31. Thus, we need to record interest expense for the final 15 days in December. This means that one-fourth (15 days/60 days) of the \$40 total interest is an expense of year 2015. The borrower records this expense (assuming no reversing entries were made) with the following adjusting entry:

Assets = Liabilities + Equity  
+10    -10

2015 Dec. 31	Interest Expense .....	10	
	Interest Payable .....		10
	<i>To record accrued interest (\$2,000 × 12% × 15/360).</i>		

**Example:** If this note is dated Dec. 1 instead of Dec. 16, how much expense is recorded on Dec. 31? Answer: \$2,000 × 12% × 30/360 = \$20

When this note matures on February 14, the borrower must recognize 45 days of interest expense for year 2016 and remove the balances of the two liability accounts:

Assets = Liabilities + Equity  
-2,040    -10    -30  
-2,000

2016 Feb. 14	Interest Expense* .....	30	
	Interest Payable .....	10	
	Notes Payable .....	2,000	
	Cash .....		2,040
	<i>Paid note with interest. *\$2,000 × 12% × 45/360</i>		

## Decision Insight

Many franchisors, such as **Baskin-Robbins**, **Dunkin' Donuts**, and **Cold Stone Creamery**, use notes to help entrepreneurs acquire their own franchises, including using notes to pay for the franchise fee and any equipment. Payments on these notes are usually collected monthly and often are secured by the franchisees' assets. For example, a **McDonald's** franchise can cost from under \$200,000 to over \$2 million, depending on the type selected, see [FranchiseFoundations.com](http://FranchiseFoundations.com). ■

Adam Gault/OJO Images/Getty Images

**Part 1.** A retailer sells merchandise for \$500 cash on June 30 (cost of merchandise is \$300). The sales tax law requires the retailer to collect 7% sales tax on every dollar of merchandise sold. Record the entry for the \$500 sale and its applicable sales tax. Also record the entry that shows the remittance of the 7% tax on this sale to the state government on July 15.

**Part 2.** A ticket agency receives \$40,000 cash in advance ticket sales for a four-date tour of Haim. Record the advance ticket sales on April 30. Record the revenue earned for the first concert date of May 15, assuming it represents one-fourth of the advance ticket sales.

**Part 3.** On November 25 of the current year, a company borrows \$8,000 cash by signing a 90-day, 5% note payable with a face value of \$8,000. (a) Compute the accrued interest payable on December 31 of the current year, (b) prepare the journal entry to record the accrued interest expense at December 31 of the current year, and (c) prepare the journal entry to record payment of the note at maturity.

### Solution—Part 1

June 30	Cash .....	535	
	Sales .....		500
	Sales Taxes Payable .....		35
	<i>To record cash sales and 5% sales tax.</i>		
June 30	Cost of Goods Sold .....	300	
	Merchandise Inventory .....		300
	<i>To record cost of June 30 sales.</i>		
July 15	Sales Taxes Payable .....	35	
	Cash .....		35
	<i>To record remittance of sales taxes to govt.</i>		

### Solution—Part 2

April 30	Cash .....	40,000	
	Unearned Ticket Revenue .....		40,000
	<i>To record sales in advance of concerts.</i>		
May 15	Unearned Ticket Revenue .....	10,000	
	Earned Ticket Revenue .....		10,000
	<i>To record concert revenues earned.</i>		

### Solution—Part 3

**a.**

Computation of interest payable at December 31:	
Days from November 25 to December 31 .....	36 days
Accrued interest ( $5\% \times \$8,000 \times 36/360$ ) .....	<u>\$40</u>

**b.**

Dec. 31	Interest Expense .....	40	
	Interest Payable .....		40
	<i>To record accrued interest (<math>5\% \times \\$8,000 \times 36/360</math>).</i>		

**c.**

Feb. 23	Interest Expense .....	60	
	Interest Payable .....	40	
	Notes Payable .....	8,000	
	Cash .....		8,100
	<i>To record payment of note plus interest</i>		
	<i>(<math>5\% \times \\$8,000 \times 90/360 = \\$100</math> total interest).</i>		
	<i>(<math>5\% \times \\$8,000 \times 54/360 = \\$60</math> interest expense).</i>		

## NEED-TO-KNOW 11-1

Accounting for Known Liabilities

## Payroll Liabilities

An employer incurs several expenses and liabilities from having employees. These expenses and liabilities are often large and arise from salaries and wages earned, from employee benefits, and from payroll taxes levied on the employer. **Boston Beer**, for instance, reports payroll-related current liabilities of more than \$14.8 million from accrued “employee wages, benefits and reimbursements.” We discuss payroll liabilities and related accounts in this section. Appendix 11A describes details about payroll reports, records, and procedures.

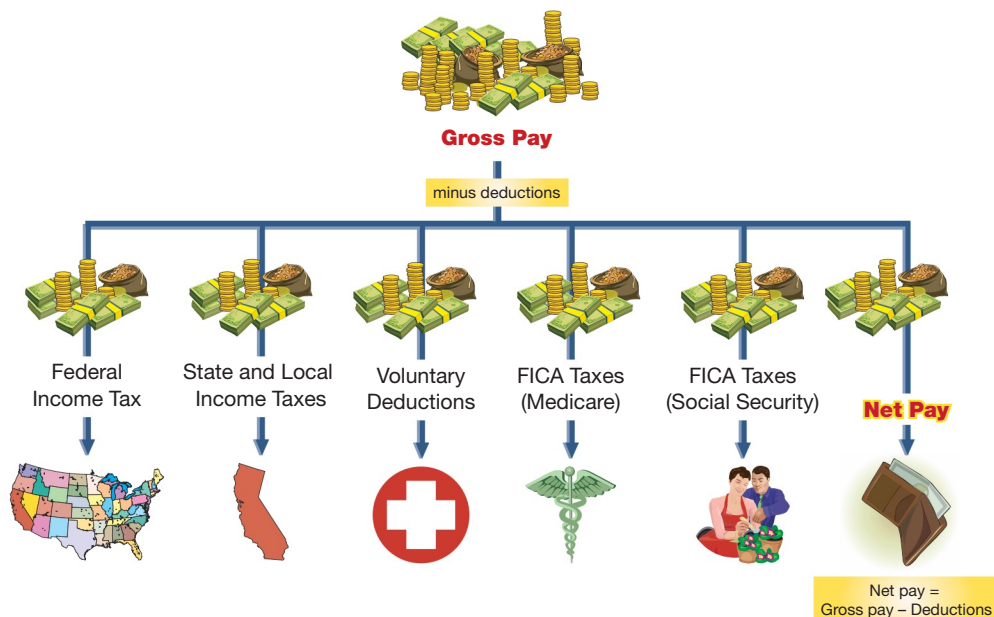

**P2** Compute and record employee payroll deductions and liabilities.

**Point:** Deductions at some companies, such as those for insurance coverage, are “required” under its own labor contracts.

**Employee Payroll Deductions** **Gross pay** is the total compensation an employee earns including wages, salaries, commissions, bonuses, and any compensation earned before deductions such as taxes. (Wages usually refer to payments to employees at an hourly rate. *Salaries* usually refer to payments to employees at a monthly or yearly rate.) **Net pay**, also called *take-home pay*, is gross pay less all deductions. **Payroll deductions**, commonly called *withholdings*, are amounts withheld from an employee’s gross pay, either required or voluntary. Required deductions result from laws and include income taxes and Social Security taxes. Voluntary deductions, at an employee’s option, include pension and health contributions, health and life insurance premiums, union dues, and charitable giving. Exhibit 11.4 shows the typical payroll deductions of an employee. The employer withholds payroll deductions from employees’ pay and is obligated to transmit this money to the designated organization. The employer records payroll deductions as current liabilities until these amounts are transmitted. This section discusses the major payroll deductions.

### EXHIBIT 11.4

Payroll Deductions

**Employee FICA taxes.** The federal Social Security system provides retirement, disability, survivorship, and medical benefits to qualified workers. Laws *require* employers to withhold **Federal Insurance Contributions Act (FICA) taxes** from employees’ pay to cover costs of the system. Employers usually separate FICA taxes into two groups: (1) retirement, disability, and survivorship and (2) medical. For the first group, the Social Security system provides monthly cash payments to qualified retired workers for the rest of their lives. These payments are often called *Social Security benefits*. Taxes related to this group are often called *Social Security taxes*. For the second group, the system provides monthly payments to deceased workers’ surviving families and to disabled workers who qualify for assistance. These payments are commonly called *Medicare benefits*; like those in the first group, they are paid with *Medicare taxes* (part of FICA taxes).

Law requires employers to withhold FICA taxes from each employee’s salary or wages on each payday. The taxes for Social Security and Medicare are computed separately. For example, for 2014, the amount scheduled to be withheld from each employee’s pay for Social Security tax is 6.2% of the first \$117,000 the employee earns in the calendar year. The Medicare tax is 1.45% of *all* amounts the employee earns; there is no maximum limit to Medicare tax. A 0.9%

*Additional Medicare Tax* is imposed on the employee for pay in excess of \$200,000 (this additional tax is *not* imposed on the employer).

Employers must pay withheld taxes to the Internal Revenue Service (IRS) on specific filing dates during the year. Employers who fail to send the withheld taxes to the IRS on time can be assessed substantial penalties. Until all the taxes are sent to the IRS, they are included in employers' current liabilities. For any changes in rates or with the maximum earnings level, check the IRS website at [www.IRS.gov](http://www.IRS.gov) or the SSA website at [www.SSA.gov](http://www.SSA.gov).

**Point:** The sources of U.S. tax receipts are roughly as follows:

50%	Personal income tax
35	FICA and FUTA taxes
10	Corporate income tax
5	Other taxes

**Employee income tax.** Most employers are required to withhold federal income tax from each employee's paycheck. The amount withheld is computed using tables published by the IRS. The amount depends on the employee's annual earnings rate and the number of *withholding allowances* the employee claims. Allowances reduce the amount of taxes one owes the government. The more allowances one claims, the less tax the employer will withhold. Employees can claim allowances for themselves and their dependents. They also can claim additional allowances if they expect major declines in their taxable income for medical expenses. (An employee who claims more allowances than appropriate is subject to a fine.) Most states and many local governments require employers to withhold income taxes from employees' pay and to remit them promptly to the proper government agency. Until they are paid, withholdings are reported as a current liability on the employer's balance sheet.

**Point:** Part-time employees may claim "exempt from withholding" if they did not have any income tax liability in the prior year and do not expect any in the current year.

**Point:** IRS withholding tables are based on projecting weekly (or other period) pay into an annual figure.

**Point:** Is there a maximum to the withholding allowances one can claim? Recall, the more allowances, the lower the withholding. However, an employee that claims, say, over 10 allowances on the W-4 is likely to receive an IRS inquiry asking to justify the number of allowances.

**Employee voluntary deductions.** Beyond Social Security, Medicare, and income taxes, employers often withhold other amounts from employees' earnings. These withholdings arise from employee requests, contracts, unions, or other agreements. They can include amounts for charitable giving, medical and life insurance premiums, pension contributions, and union dues. Until they are paid, such withholdings are reported as part of employers' current liabilities.

**Recording employee payroll deductions.** Employers must accrue payroll expenses and liabilities at the end of each pay period. To illustrate, assume that an employee earns a salary of \$2,000 per month. At the end of January, the employer's entry to accrue payroll expenses and liabilities for this employee is

Jan. 31	Salaries Expense .....	2,000	
	FICA—Social Security Taxes Payable (6.2%) .....		124
	FICA—Medicare Taxes Payable (1.45%) .....		29
	Employee Federal Income Taxes Payable* .....		213
	Employee Medical Insurance Payable* .....		85
	Employee Union Dues Payable* .....		25
	Salaries Payable .....		1,524
	<i>To record accrued payroll for January.</i>		

Assets = Liabilities + Equity		
	+124	-2,000
	+29	
	+213	
	+85	
	+25	
	+1,524	

\* Amounts taken from employer's accounting records.

Salaries Expense (debit) shows that the employee earns a gross salary of \$2,000. The first five payables (credits) show the liabilities the employer owes on behalf of this employee to cover FICA taxes, income taxes, medical insurance, and union dues. The Salaries Payable account (credit) records the \$1,524 net pay the employee receives from the \$2,000 gross pay earned. When the employee is paid, another entry (or a series of entries) is required to record the check written and distributed (or funds transferred). The entry to record cash payment to this employee is to debit Salaries Payable and credit Cash for \$1,524.

Salaries Payable ..	1,524
Cash .....	1,524

**Decision Insight**

**Pay or Else** "Failure to pay employment taxes is stealing from the employees of the business," alleges former IRS Commissioner Mark W. Everson. "The IRS pursues business owners who don't follow the law, and those who embrace these schemes face civil or criminal sanctions." There are many reasons employers do not withhold or pay employment taxes. Some attempt to use the government as a "bank to borrow money for a short time," some collect the taxes and keep it, and still others object to U.S. tax laws. Regardless, federal law requires employment tax withholding and payment by employers (IRS.gov/newsroom). ■

### P3

Compute and record employer payroll expenses and liabilities.

**Employer Payroll Taxes** Employers must pay payroll taxes in addition to those required of employees. Employer taxes include FICA and unemployment taxes.

**Employer FICA tax.** Employers must pay FICA taxes on their payroll to employees. For 2014, the employer must pay Social Security tax of 6.2% on the first \$117,000 earned by each employee, and 1.45% Medicare tax on all earnings of each employee. An employer’s tax is credited to the same FICA Taxes Payable accounts used to record the Social Security and Medicare taxes withheld from employees. (A self-employed person must pay both the employee and employer FICA taxes.)

**Federal and state unemployment taxes.** The federal government participates with states in a joint federal and state unemployment insurance program. Each state administers its program. These programs provide unemployment benefits to qualified workers. The federal government approves state programs and pays a portion of their administrative expenses.

**Federal Unemployment Tax Act (FUTA).** Employers are subject to a federal unemployment tax on wages and salaries paid to their employees. For the recent year, employers were required to pay FUTA taxes of as much as 6.0% of the first \$7,000 earned by each employee. This federal tax can be reduced by a credit of up to 5.4% for taxes paid to a state program. As a result, the net federal unemployment tax is often only 0.6%.

**State Unemployment Tax Act (SUTA).** All states support their unemployment insurance programs by placing a payroll tax on employers. (A few states require employees to make a contribution. In the book’s assignments, we assume that this tax is only on the employer.) In most states, the base rate for SUTA taxes is 5.4% of the first \$7,000 paid each employee. This base rate is adjusted according to an employer’s merit rating. The state assigns a **merit rating** that reflects a company’s stability or instability in employing workers. A good rating reflects stability in employment and means an employer can pay less than the 5.4% base rate. A low rating reflects high turnover or seasonal hirings and layoffs. To illustrate, an employer with 50 employees, each of whom earns \$7,000 or more per year, saves \$15,400 annually if it has a merit rating of 1.0% versus 5.4%. This is computed by comparing taxes of \$18,900 at the 5.4% rate to only \$3,500 at the 1.0% rate.

**Recording employer payroll taxes.** Employer payroll taxes are an added expense beyond the wages and salaries earned by employees. These taxes are often recorded in an entry separate from the one recording payroll expenses and deductions. To illustrate, assume that the \$2,000 recorded salaries expense from the previous example is earned by an employee whose earnings have not yet reached \$5,000 for the year. This means the entire salaries expense for this period is subject to tax because year-to-date pay is under \$7,000. Also assume that the federal unemployment tax rate is 0.6% and the state unemployment tax rate is 5.4%. Consequently, the FICA portion of the employer’s tax is \$153, computed by multiplying both the 6.2% and 1.45% by the \$2,000 gross pay. Moreover, state unemployment (SUTA) taxes are \$108 (5.4% of the \$2,000 gross pay), and federal unemployment (FUTA) taxes are \$12 (0.6% of \$2,000). The entry to record the employer’s payroll tax expense and related liabilities is

**Example:** If the employer’s merit rating in this example reduces its SUTA rate to 2.9%, what is its SUTA liability? Answer: SUTA payable = \$2,000 × 2.9% = \$58

Jan. 31	Payroll Taxes Expense . . . . .	273	
	FICA—Social Security Taxes Payable (6.2%) . . . . .		124
	FICA—Medicare Taxes Payable (1.45%) . . . . .		29
	State Unemployment Taxes Payable . . . . .		108
	Federal Unemployment Taxes Payable . . . . .		12
	<i>To record employer payroll taxes.</i>		

**Point:** Internal control is important for payroll accounting. Managers must monitor (1) employee hiring, (2) timekeeping, (3) payroll listings, and (4) payroll payments. Poor controls led the U.S. Army to pay nearly \$10 million to deserters, fictitious soldiers, and other unauthorized entities.

### Decision Ethics

**Web Designer** You take a summer job working for a family friend who runs a small IT service. On your first payday, the owner slaps you on the back, gives you full payment in cash, winks, and adds: “No need to pay those high taxes, eh.” What action, if any, do you take? ■ [Answers follow the chapter’s Summary.]

## Multi-Period Known Liabilities

Many known liabilities extend over multiple periods. These often include unearned revenues and notes payable. For example, if **Sports Illustrated** sells a four-year magazine subscription, it records amounts received for this subscription in an Unearned Subscription Revenues account. Amounts in this account are liabilities, but are they current or long term? They are *both*. The portion of the Unearned Subscription Revenues account that will be fulfilled in the next year is reported as a current liability. The remaining portion is reported as a long-term liability.

The same analysis applies to notes payable. For example, a borrower reports a three-year note payable as a long-term liability in the first two years it is outstanding. In the third year, the borrower reclassifies this note as a current liability since it is due within one year or the operating cycle, whichever is longer. The **current portion of long-term debt** refers to that part of long-term debt due within one year or the operating cycle, whichever is longer. Long-term debt is reported under long-term liabilities, but the *current portion due* is reported under current liabilities. To illustrate, assume that a \$7,500 debt is paid in installments of \$1,500 per year for five years. The \$1,500 due within the year is reported as a current liability. No journal entry is necessary for this reclassification. Instead, we simply classify the amounts for debt as either current or long term when the balance sheet is prepared.

Some known liabilities are rarely reported in long-term liabilities. These include accounts payable, sales taxes, and wages and salaries.

**Point:** If *Sports Illustrated* offers you a sweatshirt of your favorite team if you subscribe, it must account for the sweatshirts using a *Promotions Liability* account if, and when, you subscribe.

**Point:** Some accounting systems do make an entry to transfer the current amount due out of Long-Term Debt and into the Current Portion of Long-Term Debt as follows:

Long-Term Debt ..	1,500	
Current Portion		
of L-T Debt ..		1,500

### Decision Insight

**Liability Limits** Probably the greatest number of frauds involve payroll. Companies must safeguard payroll activities. Controls include proper approvals and processes for employee additions, deletions, and pay rate changes. A common fraud is a manager adding a fictitious employee to the payroll and then cashing the fictitious employee's check. A study reports that 28% of employees in operations and service areas witnessed violations of employee wage, overtime, or benefit rules in the past year (KPMG 2009). Another 21% observed falsifying of time and expense reports. ■

*Ceridian Connection* reports: **8.5%** of fraud is tied to payroll. **\$72,000** is the median loss per payroll fraud. **24 months** is the median time to uncover payroll fraud.

A company's first weekly pay period of the year ends on January 8. On that date, the column totals in its payroll register show that sales employees earned \$30,000 and office employees earned \$20,000 in salaries. The employees are to have withheld from their salaries FICA Social Security taxes at the rate of 6.2%, FICA Medicare taxes at the rate of 1.45%, \$9,000 of federal income taxes, \$2,000 of medical insurance deductions, and \$1,000 of pension contributions. No employee earned more than \$7,000 in the first pay period.

**Part 1.** Compute FICA Social Security taxes payable and FICA Medicare taxes payable. Prepare the journal entry to record the company's January 8 (employee) payroll expenses and liabilities. (Round amounts to cents.)

**Part 2.** Prepare the journal entry to record the company's (employer) payroll taxes resulting from the January 8 payroll. Its merit rating reduces its state unemployment tax rate to 3.4% of the first \$7,000 paid to each employee. The federal unemployment tax rate is 0.6%. (Round amounts to cents.)

### Solution—Part 1

Jan. 8	Sales Salaries Expense .....	30,000.00
	Office Salaries Expense .....	20,000.00
	FICA—Social Security Taxes Payable* .....	3,100.00
	FICA—Medicare Taxes Payable** .....	725.00
	Employee Fed. Income Taxes Payable .....	9,000.00
	Employee Med. Insurance Payable .....	2,000.00
	Employee Pensions Payable .....	1,000.00
	Salaries Payable .....	34,175.00
	<i>To record payroll for period.</i>	

\*\$50,000 × 6.2% = \$3,100.00

\*\*\$50,000 × 1.45% = \$725.00

	FICA—Medicare Taxes Payable . . . . .		725.00
	State Unemployment Taxes Payable* . . . . .		1,700.00
	Federal Unemployment Taxes Payable** . . . . .		300.00
	<i>To record employer payroll taxes.</i>		

\*\$50,000 × 0.034 = \$1,700.00  
 \*\*\$50,000 × 0.006 = \$300.00

**ESTIMATED LIABILITIES**

**P4**  
 Account for estimated liabilities, including warranties and bonuses.

An **estimated liability** is a known obligation that is of an uncertain amount but that can be reasonably estimated. Common examples are employee benefits such as pensions, health care and vacation pay, and warranties offered by a seller. We discuss each of these in this section. Other examples of estimated liabilities include property taxes and certain contracts to provide future services.

**Health and Pension Benefits**

Many companies provide **employee benefits** beyond salaries and wages. An employer often pays all or part of medical, dental, life, and disability insurance. Many employers also contribute to *pension plans*, which are agreements by employers to provide benefits (payments) to employees after retirement. Many companies also provide medical care and insurance benefits to their retirees. When payroll taxes and charges for employee benefits are totaled, payroll cost often exceeds employees' gross earnings by 25% or more.

To illustrate, assume that an employer agrees to (1) pay an amount for medical insurance equal to \$8,000 and (2) contribute an additional 10% of the employees' \$120,000 gross salaries to a retirement program. The entry to record these accrued benefits is

Assets = Liabilities + Equity  
 +8,000    -20,000  
 +12,000

Dec. 31	Employee Benefits Expense . . . . .	20,000	
	Employee Medical Insurance Payable . . . . .		8,000
	Employee Retirement Program Payable . . . . .		12,000
	<i>To record costs of employee benefits.</i>		

**Decision Insight**

**Postgame Spoils** Baseball was the first pro sport to set up a pension, originally up to \$100 per month depending on years played. Many former players now take home six-figure pensions. Cal Ripken Jr.'s pension when he reaches 62 is estimated at \$160,000 per year (he played 21 seasons). The requirement is only 43 games for a full pension and just one game for full medical benefits. ■

Jeff Zelevansky/Getty Images

**Vacation Benefits**

Many employers offer paid vacation benefits, also called *paid absences* or *compensated absences*. To illustrate, assume that salaried employees earn 2 weeks' vacation per year. This benefit increases employers' payroll expenses because employees are paid for 52 weeks but work for only 50 weeks. Total annual salary is the same, but the cost per week worked is greater than the amount paid per week. For example, if an employee is paid \$20,800 for 52 weeks but works only 50 weeks, the total weekly expense to the employer is \$416 (\$20,800/50 weeks) instead of the \$400 cash paid weekly to the employee (\$20,800/52 weeks). The \$16 difference between these two amounts is recorded weekly as follows:

Assets = Liabilities + Equity  
 +16    -16

	Vacation Benefits Expense . . . . .	16	
	Vacation Benefits Payable . . . . .		16
	<i>To record vacation benefits accrued.</i>		

Vacation Benefits Expense is an operating expense, and Vacation Benefits Payable is a current liability. When the employee takes a vacation, the employer reduces (debits) the Vacation Benefits Payable and credits Cash (no additional expense is recorded).

Vacation Benefits Payable . . . #	
Cash . . . . . #	

### Bonus Plans

Many companies offer bonuses to employees, and many of the bonuses depend on net income. To illustrate, assume that an employer offers a bonus to its employees equal to 5% of the company’s annual net income (to be equally shared by all). The company’s expected annual *pre-bonus* net income is \$210,000. The year-end adjusting entry to record this benefit is

Dec. 31	Employee Bonus Expense* . . . . .	10,000	
	Bonus Payable . . . . .		10,000
	<i>To record expected bonus costs.</i>		

Assets = Liabilities + Equity  
 +10,000      -10,000

\* Bonus Expense (B) equals 5% of net income, where net income equals \$210,000 minus the bonus; the bonus is computed as:

$$\begin{aligned}
 B &= 0.05 (\$210,000 - B) \\
 B &= \$10,500 - 0.05B \\
 1.05B &= \$10,500 \\
 B &= \$10,500 / 1.05 = \$10,000
 \end{aligned}$$

When the bonus is paid, Bonus Payable is debited and Cash is credited for \$10,000.

### Warranty Liabilities

A **warranty** is a seller’s obligation to replace or correct a product (or service) that fails to perform as expected within a specified period. Most new cars, for instance, are sold with a warranty covering parts for a specified period of time. **Ford Motor Company** reported almost \$8 billion in “dealer and dealers’ customer allowances and claims” in its annual report. To comply with the *full disclosure* and *matching principles*, the seller reports the expected warranty expense in the period when revenue from the sale of the product or service is reported. The seller reports this warranty obligation as a liability, although the existence, amount, payee, and date of future sacrifices are uncertain. This is because such warranty costs are probable and the amount can be estimated using, for instance, past experience with warranties.

**Point:** Fiat, maker of the Ferrari, recently reported about \$5 billion in warranty claims.

To illustrate, a dealer sells a used car for \$16,000 on December 1, 2015, with a maximum one-year or 12,000-mile warranty covering parts. This dealer’s experience shows that warranty expense averages about 4% of a car’s selling price, or \$640 in this case (\$16,000 × 4%). The dealer records the estimated expense and liability related to this sale with this entry:

2015			
Dec. 1	Warranty Expense . . . . .	640	
	Estimated Warranty Liability . . . . .		640
	<i>To record estimated warranty expense.</i>		

Assets = Liabilities + Equity  
 +640      -640

This entry alternatively could be made as part of end-of-period adjustments. Either way, the estimated warranty expense is reported on the 2015 income statement and the warranty liability on the 2015 balance sheet. To further extend this example, suppose the customer returns the car for warranty repairs on January 9, 2016. The dealer performs this work by replacing parts costing \$200. The entry to record partial settlement of the estimated warranty liability is

**Point:** Recognition of warranty liabilities is necessary to comply with the expense recognition (matching) and full disclosure principles.

2016			
Jan. 9	Estimated Warranty Liability . . . . .	200	
	Auto Parts Inventory . . . . .		200
	<i>To record costs of warranty repairs.</i>		

Assets = Liabilities + Equity  
 -200      -200

This entry reduces the balance of the estimated warranty liability. Warranty expense was previously recorded in 2015, the year the car was sold with the warranty. Finally, what happens if total warranty expenses are more or less than the estimated 4%, or \$640? The answer is that management should monitor actual warranty expenses to see whether the 4% rate is accurate. If experience reveals a large difference from the estimate, the rate for current and future sales should be changed. Differences are expected, but they should be small.

**Point:** Both U.S. GAAP and IFRS account for restructuring costs in a manner similar to accounting for warranties.

### Decision Insight

**Warranty Profits** When we purchase a new laptop at **Best Buy**, a sales clerk commonly asks: “*Want the Geek Squad Protection Plan?*” Best Buy earns about a 60% profit margin on such warranty contracts, and those contracts are a large part of its profit—see table to the side [*BusinessWeek*]. ■

Warranty contracts as a percentage of sales . . . .	4%
Warranty contracts as a percentage of operating profit . . . . .	45%
Profit margin on warranty contracts . . . . .	60%

### Multi-Period Estimated Liabilities

Estimated liabilities can be both current and long term. For example, pension liabilities to employees are long term to workers who will not retire within the next period. For employees who are retired or will retire within the next period, a portion of pension liabilities is current. Other examples include employee health benefits and warranties. Specifically, many warranties are for 30 or 60 days in length. Estimated costs under these warranties are properly reported in current liabilities. Many other automobile warranties are for three years or 36,000 miles. A portion of these warranties is reported as long term.

QC3

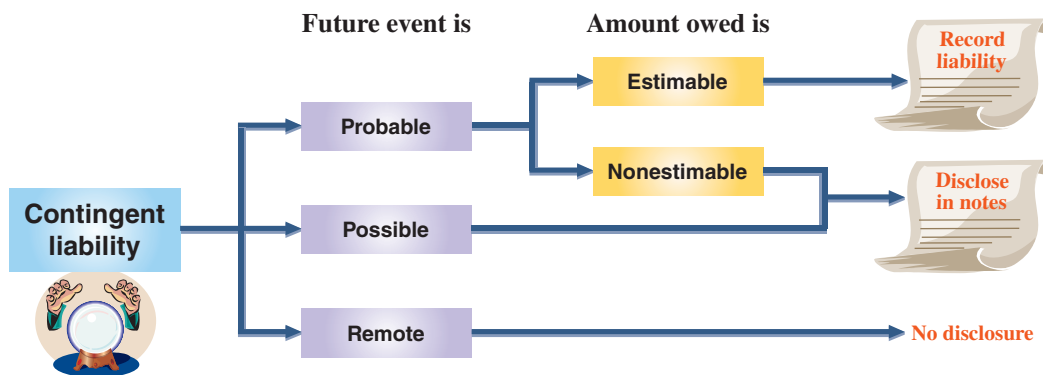

## CONTINGENT LIABILITIES

**C3** Explain how to account for contingent liabilities.

A **contingent liability** is a potential obligation that depends on a future event arising from a past transaction or event. An example is a pending lawsuit. Here, a past transaction or event leads to a lawsuit whose result depends on the outcome of the suit. Future payment of a contingent liability depends on whether an uncertain future event occurs.

### Accounting for Contingent Liabilities

Accounting for contingent liabilities depends on the likelihood that a future event will occur and the ability to estimate the future amount owed if this event occurs. Three different possibilities are identified in the following chart: record liability, disclose in notes, or no disclosure.

The conditions that determine each of these three possibilities follow:

1. The future event is *probable* (likely) and the amount owed can be *reasonably estimated*. We then record this amount as a liability. Examples are the estimated liabilities described earlier such as warranties, vacation pay, and income taxes.
2. The future event is *reasonably possible* (could occur). We disclose information about this type of contingent liability in notes to the financial statements.
3. The future event is *remote* (unlikely). We do not record or disclose information on remote contingent liabilities.

**Point:** A contingency is an *if*. Namely, if a future event occurs, then financial consequences are likely for the entity.

### Reasonably Possible Contingent Liabilities

This section identifies and discusses contingent liabilities that commonly fall in the second category—when the future event is reasonably possible. Disclosing information about

contingencies in this category is motivated by the *full disclosure principle*, which requires information relevant to decision makers be reported and not ignored.

**Potential Legal Claims** Many companies are sued or at risk of being sued. The accounting issue is whether the defendant should recognize a liability on its balance sheet or disclose a contingent liability in its notes while a lawsuit is outstanding and not yet settled. The answer is that a potential claim is recorded in the accounts *only* if payment for damages is probable and the amount can be reasonably estimated. If the potential claim cannot be reasonably estimated or is less than probable but reasonably possible, it is disclosed. **Ford Motor Company**, for example, includes the following note in its annual report: “Various legal actions, proceedings, and claims are pending . . . arising out of alleged defects in our products.”

**Debt Guarantees** Sometimes a company guarantees the payment of debt owed by a supplier, customer, or another company. The guarantor usually discloses the guarantee in its financial statement notes as a contingent liability. If it is probable that the debtor will default, the guarantor needs to record and report the guarantee in its financial statements as a liability. The **Boston Celtics** report a unique guarantee when it comes to coaches and players: “Certain of the contracts provide for guaranteed payments which must be paid even if the employee [player] is injured or terminated.”

**Other Contingencies** Other examples of contingencies include environmental damages, possible tax assessments, insurance losses, and government investigations. **Sunoco**, for instance, reports that “federal, state and local laws . . . result in liabilities and loss contingencies. Sunoco accrues . . . cleanup costs [that] are probable and reasonably estimable. Management believes it is reasonably possible (i.e., less than probable but greater than remote) that additional . . . losses will be incurred.” Many of Sunoco’s contingencies are revealed only in notes.

**Point:** A sale of a note receivable “with recourse” is a contingent liability. It becomes a liability if the original signer of the note fails to pay it at maturity.

**Point:** Auditors and managers often have different views about whether a contingency is recorded, disclosed, or omitted.

## Decision Insight

**Pricing Priceless** What’s it worth to see from one side of the Grand Canyon to the other? What’s the cost when Gulf Coast beaches are closed due to an oil well disaster? A method to measure environmental liabilities is *contingent valuation*, by which people answer such questions. Regulators use their answers to levy fines and assess punitive damages. ■

John Burcham/National Geographic/Getty Images

## Uncertainties That Are Not Contingencies

All organizations face uncertainties from future events such as natural disasters and the development of new competing products or services. These uncertainties are not contingent liabilities because they are future events *not* arising from past transactions. Accordingly, they are not disclosed.

**Part 1.** A company’s salaried employees earn two weeks’ vacation per year. It pays \$208,000 in total employee salaries for 52 weeks, but its employees work only 50 weeks. This means its total weekly expense is \$4,160 ( $\$208,000/50$  weeks) instead of the \$4,000 cash paid weekly to the employees ( $\$208,000/52$  weeks). Record the company’s regular weekly vacation benefits expense.

**Part 2.** For the current year ended December 31, a company has implemented an employee bonus program equal to 5% of its net income, which employees share equally. Its net income (pre-bonus) is expected to be \$840,000, and bonus expense is deducted in computing net income. (a) Compute the bonus payable to the employees at year-end using the method described in the chapter and round to the nearest dollar; then prepare the journal entry at December 31 of the current year to record the bonus due. (b) Prepare the journal entry at January 20 of the following year to record payment of that bonus to employees.

**Part 3.** On June 11 of the current year, a retailer sells a trimmer for \$400 with a one-year warranty that covers parts. Warranty expense is estimated at 5% of sales. On March 24 of the next year, the trimmer is brought in for repairs covered under the warranty requiring \$15 in materials taken from the Repair Parts

### NEED-TO-KNOW 11-3

Estimated and Contingent Liabilities

P4 C3

Inventory. Prepare the (a) June 11 entry to record the trimmer sale—ignore the cost of sales part of this sales entry, and (b) March 24 entry to record warranty repairs.

**Part 4.** The following legal claims exist for a company. Identify the accounting treatment for each claim as either (i) a liability that is recorded or (ii) an item described in notes to its financial statements. If an item is to be recorded, prepare the entry (date any entry Dec. 31).

- a. The company (defendant) estimates that a pending lawsuit could result in damages of \$500,000; it is reasonably possible that the plaintiff will win the case.
- b. The company faces a probable loss on a pending lawsuit; the amount is not reasonably estimable.
- c. The company estimates environmental damages in a pending case at \$900,000 with a high probability of losing the case.

**Solution—Part 1**

Weekly	Vacation Benefits Expense* .....	160	
	Vacation Benefits Payable .....		160
	<i>To record vacation benefits accrued. *\$4,160 – \$4,000</i>		

**Solution—Part 2**

- a.  $B = 0.05 (\$840,000 - B)$

## GLOBAL VIEW

This section discusses similarities and differences between U.S. GAAP and IFRS in accounting and reporting for current liabilities.

**Characteristics of Liabilities** The definitions and characteristics of current liabilities are broadly similar for both U.S. GAAP and IFRS. Although differences exist, the similarities vastly outweigh any differences. Remembering that “provision” is typically used under IFRS to refer to what is titled “liability” under U.S. GAAP, **Nokia** describes its recognition of liabilities as follows:

Provisions are recognized when the Group has a present legal or constructive obligation as a result of past events, it is probable that an outflow of resources will be required to settle the obligation and a reliable estimate of the amount can be made.

**NOKIA**

**Known (Determinable) Liabilities** When there is little uncertainty surrounding current liabilities, both U.S. GAAP and IFRS require companies to record them in a similar manner. This correspondence in accounting applies to accounts payable, sales taxes payable, unearned revenues, short-term notes, and payroll liabilities. Of course, tax regulatory systems of countries are different, which implies use of different rates and levels. Still, the basic approach is the same.

**Estimated Liabilities** When there is a known current obligation that involves an uncertain amount, but one that can be reasonably estimated, both U.S. GAAP and IFRS require similar treatment. This treatment extends to many obligations such as those arising from vacations, warranties, restructurings, pensions, and health care. Both accounting systems require that companies record estimated expenses related to these obligations when they can reasonably estimate the amounts. **Nokia** reports wages, salaries, and bonuses of €6,080 million. It also reports pension expenses of €375 million.

**Sustainability and Accounting** Entrepreneur Jessica O. Matthews of **Uncharted Play**, as introduced in this chapter’s opening feature, explains that her company’s focus involves a sustainable initiative. “As people start seeing that this means long-term economic and environmental sustainability, the global community will start to wholly embrace the concept.” Jessica goes on to articulate her own “Impact Model,” which follows:

- Joyful, renewable sources of power for resource-poor communities.
- An inspirational product to inspire social invention.
- Tangible, fun tools for STEM education globally.
- A platform to motivate organic physical activity.

Courtesy of Uncharted Play

### Times Interest Earned Ratio

### Decision Analysis

A company incurs interest expense on many of its current and long-term liabilities. Examples extend from its short-term notes and the current portion of long-term liabilities to its long-term notes and bonds. Interest expense is often viewed as a *fixed expense* because the amount of these liabilities is likely to remain in one form or another for a substantial period of time. This means that the amount of interest is unlikely to vary due to changes in sales or other operating activities. While fixed expenses can be advantageous when a company is growing, they create risk. This risk stems from the possibility that a company might be unable to pay fixed expenses if sales decline. To illustrate, consider Diego Co.’s results for 2015 and two possible outcomes for year 2016 in Exhibit 11.5.

**A1** Compute the times interest earned ratio and use it to analyze liabilities.

(\$ thousands)	2015	2016 Projections	
		Sales Increase	Sales Decrease
Sales	\$600	\$900	\$300
Expenses (75% of sales)	450	675	225
Income before interest	150	225	75
Interest expense (fixed)	60	60	60
Net income	\$ 90	\$165	\$ 15

### EXHIBIT 11.5

Actual and Projected Results

### EXHIBIT 11.6

Times Interest Earned

Expenses excluding interest are at, and expected to remain at, 75% of sales. Expenses such as these that change with sales volume are called *variable expenses*. However, interest expense is at, and expected to remain at, \$60,000 per year due to its fixed nature.

The middle numerical column of Exhibit 11.5 shows that Diego's income increases by 83% to \$165,000 if sales increase by 50% to \$900,000. In contrast, the far right column shows that income decreases by 83% if sales decline by 50%. These results reveal that the amount of fixed interest expense affects a company's risk of its ability to pay interest, which is numerically reflected in the **times interest earned** ratio in Exhibit 11.6.

$$\text{Times interest earned} = \frac{\text{Income before interest expense and income taxes}}{\text{Interest expense}}$$

For 2015, Diego's times interest earned is computed as \$150,000/\$60,000, or 2.5 times. This ratio suggests that Diego faces low to moderate risk because its sales must decline sharply before it would be unable to cover its interest expenses. (Diego is an LLC and does not pay income taxes.)

Experience shows that when times interest earned falls below 1.5 to 2.0 and remains at that level or lower for several periods, the default rate on liabilities increases sharply. This reflects increased risk for companies and their creditors. We also must interpret the times interest earned ratio in light of information about the variability of a company's income before interest. If income is stable from year to year or if it is growing, the company can afford to take on added risk by borrowing. If its income greatly varies from year to year, fixed interest expense can increase the risk that it will not earn enough income to pay interest.

### Decision Maker

**Entrepreneur** You wish to invest in a franchise for either one of two national chains. Each franchise has an expected annual net income *after* interest and taxes of \$100,000. Net income for the first franchise includes a regular fixed interest charge of \$200,000. The fixed interest charge for the second franchise is \$40,000. Which franchise is riskier to you if sales forecasts are not met? Does your decision change if the first franchise has more variability in its income stream? ■ [Answers follow the chapter's Summary.]

### NEED-TO-KNOW

#### COMPREHENSIVE

The following transactions and events took place at Kern Company during its recent calendar-year reporting period (Kern does not use reversing entries).

- In September 2015, Kern sold \$140,000 of merchandise covered by a 180-day warranty. Prior experience shows that costs of the warranty equal 5% of sales. Compute September's warranty expense and prepare the adjusting journal entry for the warranty liability as recorded at September 30. Also prepare the journal entry on October 8 to record a \$300 cash expenditure to provide warranty service on an item sold in September.
- On October 12, 2015, Kern arranged with a supplier to replace Kern's overdue \$10,000 account payable by paying \$2,500 cash and signing a note for the remainder. The note matures in 90 days and has a 12% interest rate. Prepare the entries recorded on October 12, December 31, and January 10, 2016, related to this transaction.
- In late December, Kern learns it is facing a product liability suit filed by an unhappy customer. Kern's lawyer advises that although it will probably suffer a loss from the lawsuit, it is not possible to estimate the amount of damages at this time.
- Sally Bline works for Kern. For the pay period ended November 30, her gross earnings are \$3,000. Bline has \$800 deducted for federal income taxes and \$200 for state income taxes from each paycheck. Additionally, a \$35 premium for her health care insurance and a \$10 donation to the United Way are deducted. Bline pays FICA Social Security taxes at a rate of 6.2% and FICA Medicare taxes at a rate of 1.45%. She has not earned enough this year to be exempt from any FICA taxes. Journalize the accrual of salaries expense of Bline's wages by Kern.
- On November 1, Kern borrows \$5,000 cash from a bank in return for a 60-day, 12%, \$5,000 note. Record the note's issuance on November 1 and its repayment with interest on December 31.

- f<sup>B</sup>** (Part *f* covers Appendix 11B.) Kern has estimated and recorded its quarterly income tax payments. In reviewing its year-end tax adjustments, it identifies an additional \$5,000 of income tax expense that should be recorded. A portion of this additional expense, \$1,000, is deferrable to future years. Record this year-end income taxes expense adjusting entry.
- g.** For this calendar year, Kern's net income is \$1,000,000, its interest expense is \$275,000, and its income taxes expense is \$225,000. Calculate Kern's times interest earned ratio.

## PLANNING THE SOLUTION

- For *a*, compute the warranty expense for September and record it with an estimated liability. Record the October expenditure as a decrease in the liability.
- For *b*, eliminate the liability for the account payable and create the liability for the note payable. Compute interest expense for the 80 days that the note is outstanding in 2015 and record it as an additional liability. Record the payment of the note, being sure to include the interest for the 10 days in 2016.
- For *c*, decide whether the company's contingent liability needs to be disclosed or accrued (recorded) according to the two necessary criteria: probable loss and reasonably estimable.
- For *d*, set up payable accounts for all items in Bline's paycheck that require deductions. After deducting all necessary items, credit the remaining amount to Salaries Payable.
- For *e*, record the issuance of the note. Calculate 60 days' interest due using the 360-day convention in the interest formula.
- For *f*, determine how much of the income taxes expense is payable in the current year and how much needs to be deferred.
- For *g*, apply and compute times interest earned.

## SOLUTION

- a.** Warranty expense =  $5\% \times \$140,000 = \$7,000$

Sept. 30	Warranty Expense .....	7,000	
	Estimated Warranty Liability .....		7,000
	<i>To record warranty expense for the month.</i>		
Oct. 8	Estimated Warranty Liability .....	300	
	Cash .....		300
	<i>To record the cost of the warranty service.</i>		

- b.** Interest expense for 2015 =  $12\% \times \$7,500 \times 80/360 = \$200$   
Interest expense for 2016 =  $12\% \times \$7,500 \times 10/360 = \$25$

Oct. 12	Accounts Payable .....	10,000	
	Notes Payable .....		7,500
	Cash .....		2,500
<i>Paid \$2,500 cash and gave a 90-day, 12% note to extend the due date on the account.</i>			
Dec. 31	Interest Expense .....	200	
	Interest Payable .....		200
	<i>To accrue interest on note payable.</i>		
Jan. 10	Interest Expense .....	25	
	Interest Payable .....	200	
	Notes Payable .....	7,500	
	Cash .....		7,725
<i>Paid note with interest, including the accrued interest payable.</i>			

- c.** Disclose the pending lawsuit in the financial statement notes. Although the loss is probable, no liability can be accrued since the loss cannot be reasonably estimated.

d.	Nov. 30	Salaries Expense .....	3,000.00	
		FICA—Social Security Taxes Payable (6.2%) .....		186.00
		FICA—Medicare Taxes Payable (1.45%) .....		43.50
		Employee Federal Income Taxes Payable .....		800.00
		Employee State Income Taxes Payable .....		200.00
		Employee Medical Insurance Payable .....		35.00
		Employee United Way Payable .....		10.00
		Salaries Payable .....		1,725.50
		<i>To record Bline's accrued payroll.</i>		

e.	Nov. 1	Cash .....	5,000	
		Notes Payable .....		5,000
	<i>Borrowed cash with a 60-day, 12% note.</i>			

When the note and interest are paid 60 days later, Kern Company records this entry:

f.	Dec. 31	Notes Payable .....	5,000	
		Interest Expense .....	100	
		Cash .....		5,100
		<i>Paid note with interest (\$5,000 × 12% × 60/360).</i>		

f.	Dec. 31	Income Taxes Expense .....	5,000	
		Income Taxes Payable .....		4,000
		Deferred Income Tax Liability .....		1,000
	<i>To record added income taxes expense and the deferred tax liability.</i>			

$$g. \text{ Times interest earned} = \frac{\$1,000,000 + \$275,000 + \$225,000}{\$275,000} = \underline{\underline{5.45 \text{ times}}}$$

## APPENDIX

# 11A

## Payroll Reports, Records, and Procedures

Understanding payroll procedures and keeping adequate payroll reports and records are essential to a company's success. This appendix focuses on payroll accounting and its reports, records, and procedures.

**Payroll Reports** Most employees and employers are required to pay local, state, and federal payroll taxes. Payroll expenses involve liabilities to individual employees, to federal and state governments, and to other organizations such as insurance companies. Beyond paying these liabilities, employers are required to prepare and submit reports explaining how they computed these payments.

**Reporting FICA Taxes and Income Taxes** The Federal Insurance Contributions Act (FICA) requires each employer to file an Internal Revenue Service (IRS) **Form 941**, the *Employer's Quarterly Federal Tax Return*, within one month after the end of each calendar quarter. A sample Form 941 is shown in Exhibit 11A.1 for Phoenix Sales & Service, a landscape design company. Accounting information and software are helpful in tracking payroll transactions and reporting the accumulated information on Form 941. Specifically, the employer reports total wages subject to income tax withholding on line 2 of Form 941. (For simplicity, this appendix uses *wages* to refer to both wages and salaries.) The income tax withheld is reported on line 3. The combined amount of employee and employer FICA (Social Security) taxes for Phoenix Sales & Service is reported on line 5a (taxable Social Security wages,

### P5

Identify and describe the details of payroll reports, records, and procedures.

**Report for this Quarter ...**  
 (Check one.)  
 1: January, February, March  
 2: April, May, June  
 3: July, August, September  
 4: October, November, December

**Part 1: Answer these questions for this quarter.**

**1** Number of employees who received wages, tips, or other compensation for the pay period including: *Mar. 12* (Quarter 1), *June 12* (Quarter 2), *Sept. 12* (Quarter 3), *Dec. 12* (Quarter 4) **1** **2**

**2** Wages, tips, and other compensation **2** **36,599.00**

**3** Total income tax withheld from wages, tips, and other compensation **3** **3,056.47**

**4** If no wages, tips, and other compensation are subject to social security or Medicare tax  Check and go to line 6.

**5** Taxable social security and Medicare wages and tips:

	Column 1	Column 2	
<b>5a</b> Taxable social security wages	<b>36,599.00</b> × .124 =	<b>4,538.28</b>	
<b>5b</b> Taxable social security tips	× .124 =		
<b>5c</b> Taxable Medicare wages & tips	<b>36,599.00</b> × .029 =	<b>1,061.37</b>	
<b>5d</b> Total social security and Medicare taxes (Column 2, lines 5a + 5b + 5c = line 5d)			<b>5d</b> <b>5,599.65</b>
<b>6</b> Total taxes before adjustments (lines 3 + 5d = line 6)			<b>6</b> <b>8,656.12</b>

**7 TAX ADJUSTMENTS** (Read the instructions for line 7 before completing lines 7a through 7h.):

**7a** Current quarter's fractions of cents **7a** \_\_\_\_\_

**7b** Current quarter's sick pay **7b** \_\_\_\_\_

**7c** Current quarter's adjustments for tips and group-term life insurance **7c** \_\_\_\_\_

**7d** Current year's income tax withholding (attach Form 941c) **7d** \_\_\_\_\_

**7e** Prior quarters' social security and Medicare taxes (attach Form 941c) **7e** \_\_\_\_\_

**7f** Special additions to federal income tax (attach Form 941c) **7f** \_\_\_\_\_

**7g** Special additions to social security and Medicare (attach Form 941c) **7g** \_\_\_\_\_

**7h** TOTAL ADJUSTMENTS (Combine all amounts: lines 7a through 7g.) **7h** **0.00**

**8** Total taxes after adjustments (Combine lines 6 and 7h.) **8** **8,656.12**

**9** Advance earned income credit (EIC) payments made to employees **9** \_\_\_\_\_

**10** Total taxes after adjustment for advance EIC (lines 8 – line 9 = line 10) **10** **8,656.12**

**11** Total deposits for this quarter, including overpayment applied from a prior quarter **11** **8,656.12**

**12** Balance due (If line 10 is more than line 11, write the difference here.) **12** **0.00**  
 Make checks payable to *United States Treasury*.

**13** Overpayment (If line 11 is more than line 10, write the difference here.) **13** **0.00** Check one  Apply to next return.  
 Send a refund.

**Part 2: Tell us about your deposit schedule and tax liability for this quarter.**

If you are unsure about whether you are a monthly schedule depositor or a semiweekly schedule depositor, see *Pub. 15 (Circular E)*, section 11.

**14**  **A**  **Z** Write the state abbreviation for the state where you made your deposits OR write "MU" if you made your deposits in *multiple* states.

**15** Check one:  Line 10 is less than \$2,500. Go to Part 3.  
 You were a monthly schedule depositor for the entire quarter. Fill out your tax liability for each month. Then go to Part 3.

Tax liability: Month 1 **3,079.11**  
 Month 2 **2,049.77**  
 Month 3 **3,527.24**  
 Total liability for quarter **8,656.12** Total must equal line 10.

You were a semiweekly schedule depositor for any part of this quarter. Fill out *Schedule B (Form 941): Report of Tax Liability for Semiweekly Schedule Depositors*, and attach it to this form.

**Part 3: Tell us about your business. If a question does NOT apply to your business, leave it blank.**

**16** If your business has closed or you stopped paying wages  Check here, and enter the final date you paid wages **/ /**.

**17** If you are a seasonal employer and you do not have to file a return for every quarter of the year  Check here.

**Part 4: May we speak with your third-party designee?**

Do you want to allow an employee, a paid tax preparer, or another person to discuss this return with the IRS? See the instructions for details.  
 Yes. Designee's name \_\_\_\_\_  
 Phone ( ) - \_\_\_\_\_ Personal Identification Number (PIN)        
 No.

**Part 5: Sign here. You MUST fill out both sides of this form and SIGN it.**

Under penalties of perjury, I declare that I have examined this return, including accompanying schedules and statements, and to the best of my knowledge and belief, it is true, correct, and complete.

Sign your name here \_\_\_\_\_  
 Print name and title \_\_\_\_\_  
 Date **/ /** Phone ( ) - \_\_\_\_\_

**Point:** Line 5a shows the matching nature of the FICA tax as 6.2% × 2, or 12.4%; which is shown as 0.124.

**Point:** Auditors rely on the four 941 forms filed during a year when auditing a company's annual wages and salaries expense account.

\$36,599 × 12.4% = \$4,538.28). The 12.4% is the sum of the Social Security tax withheld, computed as 6.2% tax withheld from the employee wages for the quarter plus the 6.2% tax levied on the employer. The combined amount of employee Medicare wages is reported on line 5c. The 2.9% is the sum of 1.45% withheld from employee wages for the quarter plus 1.45% tax levied on the employer. Total FICA taxes are reported on line 5d and are added to the total income taxes withheld of \$3,056.47 to yield a total of \$8,656.12. For this year, assume that income up to \$117,000 is subject to Social Security tax. There is no income limit on amounts subject to Medicare tax. Congress sets rates owed for Social Security tax (and it typically changes each year).

**Federal depository banks** are authorized to accept deposits of amounts payable to the federal government. Deposit requirements depend on the amount of tax owed. For example, when the sum of FICA taxes plus the employee income taxes is less than \$2,500 for a quarter, the taxes can be paid when Form 941 is filed. Companies with large payrolls are often required to pay monthly or even semiweekly.

**Point:** Deposits for federal payroll taxes must be made by electronic funds transfer (EFT).

**Reporting FUTA Taxes and SUTA Taxes** An employer’s federal unemployment taxes (FUTA) are reported on an annual basis by filing an *Annual Federal Unemployment Tax Return, IRS Form 940*. It must be mailed on or before January 31 following the end of each tax year. Ten more days are allowed if all required tax deposits are filed on a timely basis and the full amount of tax is paid on or before January 31. FUTA payments are made quarterly to a federal depository bank if the total amount due exceeds \$500. If \$500 or less is due, the taxes are remitted annually. Requirements for paying and reporting state unemployment taxes (SUTA) vary depending on the laws of each state. Most states require quarterly payments and reports.

**Reporting Wages and Salaries** Employers are required to give each employee an annual report of his or her wages subject to FICA and federal income taxes along with the amounts of these taxes withheld. This report is called a *Wage and Tax Statement*, or **Form W-2**. It must be given to employees before January 31 following the year covered by the report. Exhibit 11A.2 shows Form W-2 for one of the employees at Phoenix Sales & Service. Copies of the W-2 Form must be sent to the Social Security Administration, where the amount of the employee’s wages subject to FICA taxes and FICA taxes withheld are posted to each employee’s Social Security account. These posted amounts become the basis for determining an employee’s retirement and survivors’ benefits. The Social Security Administration also transmits to the IRS the amount of each employee’s wages subject to federal income taxes and the amount of taxes withheld.

**Payroll Register** A payroll register usually shows the pay period dates, hours worked, gross pay, deductions, and net pay of each employee for each pay period. Exhibit 11A.3 shows a payroll register for Phoenix Sales & Service. It is organized into nine columns:

- Col. 1 Employee identification (ID); Employee name; Social Security number (SS No.); Reference (check number); and Date (date check issued)
- Col. 2 Pay Type (regular and overtime)
- Col. 3 Pay Hours (number of hours worked as regular and overtime)
- Col. 4 Gross Pay (amount of gross pay)<sup>2</sup>
- Col. 5 FIT (federal income taxes withheld); FUTA (federal unemployment taxes)
- Col. 6 SIT (state income taxes withheld); SUTA (state unemployment taxes)
- Col. 7 FICA-SS\_EE (social security taxes withheld, employee); FICA-SS\_ER (social security taxes, employer)
- Col. 8 FICA-Med\_EE (medicare tax withheld, employee); FICA-Med\_ER (medicare tax, employer)
- Col. 9 Net pay (Gross pay less amounts withheld from employees)

Net pay for each employee is computed as gross pay minus the items on the first line of columns 5–8. The employer's payroll tax for each employee is computed as the sum of items on the third line of columns 5–8. A payroll register includes all data necessary to record payroll. In some software programs the entries to record payroll are made in a special *payroll journal*.

<sup>2</sup> The Gross Pay column shows regular hours worked on the first line multiplied by the regular pay rate—this equals regular pay. Overtime hours multiplied by the overtime premium rate equals overtime premium pay reported on the second line. If employers are engaged in interstate commerce, federal law sets a minimum overtime rate of pay to employees. For this company, workers earn 150% of their regular rate for hours in excess of 40 per week.

**Payroll Check** Payment of payroll is usually done by check or electronic funds transfer. Exhibit 11A.4 shows a *payroll check* for a Phoenix employee. This check is accompanied with a detachable *statement of earnings* (at top) showing gross pay, deductions, and net pay.

**EXHIBIT 11A.4**

**Employee Earnings Report** An **employee earnings report** is a cumulative record of an employee’s hours worked, gross earnings, deductions, and net pay. Payroll information on this report is taken from the payroll register. The employee earnings report for R. Austin at Phoenix Sales & Service is shown in Exhibit 11A.5. An employee earnings report accumulates information that can show when an employee’s earnings reach the tax-exempt points for FICA, FUTA, and SUTA taxes. It also gives data an employer needs to prepare Form W-2.

**Payroll Procedures** Employers must be able to compute federal income tax for payroll purposes. This section explains how we compute this tax and how to use a payroll bank account.

**Computing Federal Income Taxes** To compute the amount of taxes withheld from each employee’s wages, we need to determine both the employee’s wages earned and the employee’s number of *withholding allowances*. Each employee records the number of withholding allowances claimed on a withholding allowance certificate, **Form W-4**, filed with the employer. When the number of withholding allowances increases, the amount of income taxes withheld decreases.

Employers often use a **wage bracket withholding table** similar to the one shown in Exhibit 11A.6 to compute the federal income taxes withheld from each employee’s gross pay. The table in Exhibit 11A.6 is for a single employee paid weekly. Tables are also provided for married employees and for biweekly, semimonthly, and monthly pay periods (most payroll software includes these tables). When using a wage bracket withholding table to compute federal income tax withheld from an employee’s gross wages, we need to locate an employee’s wage bracket within the first two columns. We then find the amount withheld by looking in the Withholding Allowance column for that employee.

**Payroll Bank Account** Companies with few employees often pay them with checks drawn on the company’s regular bank account. Companies with many employees often use a special **payroll bank account** to pay employees. When this account is used, a company either (1) draws one check for total payroll on the regular bank account and deposits it in the payroll bank account or (2) executes an *electronic funds transfer* to the payroll bank account. Individual payroll checks are then drawn on this payroll bank account. Since only one check for the total payroll is drawn on the regular bank account each payday, use of a special payroll bank account helps with internal control. It also helps in reconciling the regular bank account. When companies use a payroll bank account, they usually include check numbers in the payroll register. The payroll register in Exhibit 11A.3 shows check numbers in column 1. For instance, Check No.

9001 is issued to Robert Austin. With this information, the payroll register serves as a supplementary record of wages earned by and paid to employees.

**Who Pays What Payroll Taxes and Benefits** We conclude this appendix with the following table identifying who pays which payroll taxes and which common employee benefits such as medical, disability, pension, charitable, and union costs. Who pays which employee benefits, and what portion, is subject to agreements between companies and their workers. Also, self-employed workers must pay both the employer and employee FICA taxes for Social Security and Medicare.

**Point:** IRS Statistics of Income Bulletin (Winter 2012) reports the following average (effective) income tax rate for different categories of U.S. income earners:

Top 1% . . . . .	24%
Top 5% . . . . .	20%
Top 10% . . . . .	18%
Bottom 50% . . . . .	1.85%

**APPENDIX**

# 11B

## Corporate Income Taxes

This appendix explains current liabilities involving income taxes for corporations.

**Income Tax Liabilities** Corporations are subject to income taxes and must estimate their income tax liability when preparing financial statements. Since income tax expense is created by earning income, a liability is incurred when income is earned. This tax must be paid quarterly under federal regulations. To illustrate, consider a corporation that prepares monthly financial statements. Based on its income in January 2015, this corporation estimates that it owes income taxes of \$12,100. The following adjusting entry records this estimate:

$$\begin{array}{r} \text{Assets} = \text{Liabilities} + \text{Equity} \\ +12,100 \quad -12,100 \end{array}$$

Jan. 31	Income Taxes Expense . . . . .	12,100	
	Income Taxes Payable . . . . .		12,100
	<i>To accrue January income taxes.</i>		

The tax liability is recorded each month until the first quarterly payment is made. If the company's estimated taxes for this first quarter total \$30,000, the entry to record its payment is

$$\begin{array}{r} \text{Assets} = \text{Liabilities} + \text{Equity} \\ -30,000 \quad -30,000 \end{array}$$

Apr. 10	Income Taxes Payable . . . . .	30,000	
	Cash . . . . .		30,000
	<i>Paid estimated quarterly income taxes based on first-quarter income.</i>		

This process of accruing and then paying estimated income taxes continues through the year. When annual financial statements are prepared at year-end, the corporation knows its actual total income and the actual amount of income taxes it must pay. This information allows it to properly record income taxes expense for the fourth quarter so that the total of the four quarters' expense amounts equals the actual taxes paid to the government.

**Deferred Income Tax Liabilities** An income tax liability for corporations can arise when the amount of income before taxes that the corporation reports on its income statement is not the same as the amount of income reported on its income tax return. This difference occurs because income tax laws and GAAP measure income differently. (Differences between tax laws and GAAP arise because Congress uses tax laws to generate receipts, stimulate the economy, and influence behavior, whereas GAAP are intended to provide financial information useful for business decisions. Also, tax accounting often follows the cash basis, whereas GAAP follows the accrual basis.)

Some differences between tax laws and GAAP are temporary. *Temporary differences* arise when the tax return and the income statement report a revenue or expense in different years. As an example, companies are often able to deduct higher amounts of depreciation in the early years of an asset's life and smaller amounts in later years for tax reporting in comparison to GAAP. This means that in the early years, depreciation for tax reporting is often more than depreciation on the income statement. In later

years, depreciation for tax reporting is often less than depreciation on the income statement. When temporary differences exist between taxable income on the tax return and the income before taxes on the income statement, corporations compute income taxes expense based on the income reported on the income statement. The result is that income taxes expense reported in the income statement is often different from the amount of income taxes payable to the government. This difference is the **deferred income tax liability**.

To illustrate, assume that in recording its usual quarterly income tax payments, a corporation computes \$25,000 of income taxes expense. It also determines that only \$21,000 is currently due and \$4,000 is deferred to future years (a timing difference). The entry to record this end-of-period adjustment is

Dec. 31	Income Taxes Expense .....	25,000		
	Income Taxes Payable .....		21,000	
	Deferred Income Tax Liability .....		4,000	
	To record tax expense and deferred tax liability.			
				Assets = Liabilities + Equity
				+21,000 -25,000
				+4,000

The credit to Income Taxes Payable reflects the amount currently due to be paid. The credit to Deferred Income Tax Liability reflects tax payments deferred until future years when the temporary difference reverses.

Temporary differences also can cause a company to pay income taxes *before* they are reported on the income statement as expense. If so, the company reports a *Deferred Income Tax Asset* on its balance sheet.

## Summary

**C1 Describe current and long-term liabilities and their characteristics.** Liabilities are probable future payments of assets or services that past transactions or events obligate an entity to make. Current liabilities are due within one year or the operating cycle, whichever is longer. All other liabilities are long term.

**C2 Identify and describe known current liabilities.** Known (determinable) current liabilities are set by agreements or laws and are measurable with little uncertainty. They include accounts payable, sales taxes payable, unearned revenues, notes payable, payroll liabilities, and the current portion of long-term debt.

**C3 Explain how to account for contingent liabilities.** If an uncertain future payment depends on a probable future event and the amount can be reasonably estimated, the payment is recorded as a liability. The uncertain future payment is reported as a contingent liability (in the notes) if (a) the future event is reasonably possible but not probable or (b) the event is probable but the payment amount cannot be reasonably estimated.

**A1 Compute the times interest earned ratio and use it to analyze liabilities.** Times interest earned is computed by dividing a company's net income before interest expense and income taxes by the amount of interest expense. The times interest earned ratio reflects a company's ability to pay interest obligations.

**P1 Prepare entries to account for short-term notes payable.** Short-term notes payable are current liabilities; most bear

interest. When a short-term note's face value equals the amount borrowed, it identifies a rate of interest to be paid at maturity.

**P2 Compute and record employee payroll deductions and liabilities.** Employee payroll deductions include FICA taxes, income taxes, and voluntary deductions such as for pensions and charities. They make up the difference between gross and net pay.

**P3 Compute and record employer payroll expenses and liabilities.** An employer's payroll expenses include employees' gross earnings, any employee benefits, and the payroll taxes levied on the employer. Payroll liabilities include employees' net pay amounts, withholdings from employee wages, any employer-promised benefits, and the employer's payroll taxes.

**P4 Account for estimated liabilities, including warranties and bonuses.** Liabilities for health and pension benefits, warranties, and bonuses are recorded with estimated amounts. These items are recognized as expenses when incurred and matched with revenues generated.

**P5A Identify and describe the details of payroll reports, records, and procedures.** Employers report FICA taxes and federal income tax withholdings using Form 941. FUTA taxes are reported on Form 940. Earnings and deductions are reported to each employee and the federal government on Form W-2. An employer's payroll records often include a payroll register for each pay period, payroll checks and statements of earnings, and individual employee earnings reports.

### Guidance Answers to Decision Maker and Decision Ethics

**Web Designer** You need to be concerned about being an accomplice to unlawful payroll activities. Not paying federal and state taxes on wages earned is illegal and unethical. Such payments also will not provide the employee with Social Security

and some Medicare credits. The best course of action is to request payment by check. If this fails to change the owner's payment practices, you must consider quitting this job.

**Entrepreneur** Risk is partly reflected by the times interest earned ratio. This ratio for the first franchise is 1.5  $[(\$100,000 + \$200,000)/\$200,000]$ , whereas the ratio for the second franchise is 3.5  $[(\$100,000 + \$40,000)/\$40,000]$ . This analysis shows that the first franchise is more at risk of incurring a loss if its sales

decline. The second question asks about variability of income. If income greatly varies, this increases the risk an owner will not earn sufficient income to cover interest. Since the first franchise has the greater variability, it is a riskier investment.

## Key Terms

Contingent liability	Federal Unemployment Tax Act (FUTA)	Net pay
Current liabilities	Form 940	Payroll bank account
Current portion of long-term debt	Form 941	Payroll deductions
Deferred income tax liability	Form W-2	Payroll register
Employee benefits	Form W-4	Short-term note payable
Employee earnings report	Gross pay	State Unemployment Tax Act (SUTA)
Estimated liability	Known liabilities	Times interest earned
Federal depository bank	Long-term liabilities	Wage bracket withholding table
Federal Insurance Contributions Act (FICA) taxes	Merit rating	Warranty

## Multiple Choice Quiz

Answers at end of chapter

- On December 1, a company signed a \$6,000, 90-day, 5% note payable, with principal plus interest due on March 1 of the following year. What amount of interest expense should be accrued at December 31 on the note?
  - \$300
  - \$25
  - \$100
  - \$75
  - \$0
- An employee earned \$50,000 during the year. FICA tax for Social Security is 6.2% and FICA tax for Medicare is 1.45%. The employer's share of FICA taxes is
  - Zero, since the employee's pay exceeds the FICA limit.
  - Zero, since FICA is not an employer tax.
  - \$3,100
  - \$725
  - \$3,825
- Assume the FUTA tax rate is 0.6% and the SUTA tax rate is 5.4%. Both taxes are applied to the first \$7,000 of an employee's pay. What is the total unemployment tax an employer must pay on an employee's annual wages of \$40,000?
  - \$2,400
  - \$420
  - \$42
  - \$378
- Zero; the employee's wages exceed the \$7,000 maximum.
- A company sells big-screen televisions for \$3,000 each. Each television has a two-year warranty that covers the replacement of defective parts. It is estimated that 1% of all televisions sold will be returned under warranty at an average cost of \$250 each. During July, the company sold 10,000 big screen televisions, and 80 were serviced under the warranty during July at a total cost of \$18,000. The credit balance in the Estimated Warranty Liability account at July 1 was \$26,000. What is the company's warranty expense for the month of July?
  - \$51,000
  - \$1,000
  - \$25,000
  - \$33,000
  - \$18,000
- Employees earn vacation pay at the rate of one day per month. During October, 150 employees qualify for one vacation day each. Their average daily wage is \$175 per day. What is the amount of vacation benefit expense for October?
  - \$26,250
  - \$175
  - \$2,100
  - \$63,875
  - \$150

<sup>A(B)</sup> *Superscript letter A (B) denotes assignments based on Appendix 11A (11B).*

 *Icon denotes assignments that involve decision making.*

## Discussion Questions

-  What is the difference between a current and a long-term liability?
- What is an estimated liability?
-  What are the three important questions concerning the uncertainty of liabilities?
- If \$988 is the total of a sale that includes its sales tax of 4%, what is the selling price of the item only?
- What is the combined amount (in percent) of the employee and employer Social Security tax rate? (Assume wages do not exceed \$200,000 per year.)

6. What is the current Medicare tax rate? This rate is applied to what maximum level of salary and wages?
7. Which payroll taxes are the employee's responsibility and which are the employer's responsibility?
8. What determines the amount deducted from an employee's wages for federal income taxes?
9. What is an employer's unemployment merit rating? How are these ratings assigned to employers?
10.  Why are warranty liabilities usually recognized on the balance sheet as liabilities even when they are uncertain?
11.  Suppose that a company has a facility located where disastrous weather conditions often occur. Should it report a probable loss from a future disaster as a liability on its balance sheet? Explain.
- 12<sup>A</sup> What is a wage bracket withholding table?
- 13<sup>A</sup> What amount of income tax is withheld from the salary of an employee who is single with two withholding allowances and earning \$725 per week? What if the employee earned \$625 and has no withholding allowances? (Use Exhibit 11A.6.)
14. Refer to **Apple's** balance sheet in Appendix A. What is the amount of Apple's accounts payable as of September 28, 2013? **APPLE**
15.  Refer to **Google's** balance sheet in Appendix A. What accrued expenses (liabilities) does Google report at December 31, 2013? **GOOGLE**
16.  Refer to **Samsung's** balance sheet in Appendix A. List Samsung's current liabilities as of December 31, 2013. **Samsung**
17.  Refer to **Samsung's** recent balance sheet in Appendix A. What current liabilities related to income taxes are on its balance sheet? Explain the meaning of each income tax account identified. **Samsung**

Which of the following items are normally classified as current liabilities for a company that has a 15-month operating cycle?

- |   |  |
|---|--|
| <input type="checkbox"/> 1. Portion of long-term note due in 15 months. | <input type="checkbox"/> 4. Note payable due in 11 months. |
| <input type="checkbox"/> 2. Note payable maturing in 2 years.           | <input type="checkbox"/> 5. FICA taxes payable.            |
| <input type="checkbox"/> 3. Note payable due in 18 months.              | <input type="checkbox"/> 6. Salaries payable.              |

### QUICK STUDY

#### QS 11-1

Classifying liabilities

Dextra Computing sells merchandise for \$6,000 cash on September 30 (cost of merchandise is \$3,900). The sales tax law requires Dextra to collect 5% sales tax on every dollar of merchandise sold. Record the entry for the \$6,000 sale and its applicable sales tax. Also record the entry that shows the remittance of the 5% tax on this sale to the state government on October 15.

#### QS 11-2

Accounting for sales taxes

Ticketsales, Inc., receives \$5,000,000 cash in advance ticket sales for a four-date tour of Bon Jovi. Record the advance ticket sales on October 31. Record the revenue earned for the first concert date of November 5, assuming it represents one-fourth of the advance ticket sales.

#### QS 11-3

Unearned revenue **C2**

On November 7, 2015, Mura Company borrows \$160,000 cash by signing a 90-day, 8% note payable with a face value of \$160,000. (1) Compute the accrued interest payable on December 31, 2015, (2) prepare the journal entry to record the accrued interest expense at December 31, 2015, and (3) prepare the journal entry to record payment of the note at maturity.

#### QS 11-4

Interest-bearing note transactions **P1**

On January 15, the end of the first biweekly pay period of the year, North Company's payroll register showed that its employees earned \$35,000 of sales salaries. Withholdings from the employees' salaries include FICA Social Security taxes at the rate of 6.2%, FICA Medicare taxes at the rate of 1.45%, \$6,500 of federal income taxes, \$772.50 of medical insurance deductions, and \$120 of union dues. No employee earned more than \$7,000 in this first period. Prepare the journal entry to record North Company's January 15 (employee) payroll expenses and liabilities. (Round amounts to cents.)

#### QS 11-5

Record employee payroll taxes

Merger Co. has 10 employees, each of whom earns \$2,000 per month and has been employed since January 1. FICA Social Security taxes are 6.2% of the first \$117,000 paid to each employee, and FICA Medicare taxes are 1.45% of gross pay. FUTA taxes are 0.6% and SUTA taxes are 5.4% of the first \$7,000 paid to each employee. Prepare the March 31 journal entry to record the March payroll taxes expenses. (Round amounts to cents.)

#### QS 11-6

Record employer payroll taxes

Noura Company offers an annual bonus to employees if the company meets certain net income goals. Prepare the journal entry to record a \$15,000 bonus owed to its workers (to be shared equally) at calendar year-end.

#### QS 11-7

Accounting for bonuses

**QS 11-8**  
Accounting for vacations  
P4

Chavez Co.'s salaried employees earn four weeks' vacation per year. It pays \$312,000.00 in total employee salaries for 52 weeks, but its employees work only 48 weeks. This means Chavez's total weekly expense is \$6,500 (\$312,000/48 weeks) instead of the \$6,000 cash paid weekly to the employees (\$312,000/52 weeks). Record Chavez's weekly vacation benefits expense.

**QS 11-9**  
Recording warranty repairs P4

On September 11, 2014, Home Store sells a mower for \$500 with a one-year warranty that covers parts. Warranty expense is estimated at 8% of sales. On July 24, 2015, the mower is brought in for repairs covered under the warranty requiring \$35 in materials taken from the Repair Parts Inventory. Prepare the September 11, 2014, entry to record the mower sale, and the July 24, 2015, entry to record the warranty repairs.

**QS 11-10**  
Accounting for contingent liabilities

The following legal claims exist for Huprey Co. Identify the accounting treatment for each claim as either (a) a liability that is recorded or (b) an item described in notes to its financial statements.

- \_\_\_ 1. Huprey (defendant) estimates that a pending lawsuit could result in damages of \$1,250,000; it is reasonably possible that the plaintiff will win the case.
- \_\_\_ 2. Huprey faces a probable loss on a pending lawsuit; the amount is not reasonably estimable.
- \_\_\_ 3. Huprey estimates damages in a case at \$3,500,000 with a high probability of losing the case.

**QS 11-11**  
Times interest earned A1

Compute the times interest earned for Park Company, which reports income before interest expense and income taxes of \$1,885,000 and interest expense of \$145,000. Interpret its times interest earned (assume that its competitors average a times interest earned of 4.0).

**QS 11-12<sup>A</sup>**  
Net pay and tax computations  
P5

The payroll records of Speedy Software show the following information about Marsha Gottschalk, an employee, for the weekly pay period ending September 30, 2015. Gottschalk is single and claims one allowance. Compute her Social Security tax (6.2%), Medicare tax (1.45%), federal income tax withholding, state income tax (1.0%), and net pay for the current pay period. (Use the withholding table in Exhibit 11A.6 and round tax amounts to the nearest cent.)

Total (gross) earnings for current pay period . . . . .	\$ 740
Cumulative earnings of previous pay periods . . . . .	\$9,700

**Check** Net pay, \$579.99

**QS 11-13<sup>B</sup>**  
Record deferred income tax liability P4

Sera Corporation has made and recorded its quarterly income tax payments. After a final review of taxes for the year, the company identifies an additional \$40,000 of income tax expense that should be recorded. A portion of this additional expense, \$6,000, is deferred for payment in future years. Record Sera's year-end adjusting entry for income tax expense.

**QS 11-14**  
International accounting standards

Answer each of the following related to international accounting standards.

- a. In general, how similar or different are the definitions and characteristics of current liabilities between IFRS and U.S. GAAP?
- b. Companies reporting under IFRS often reference a set of current liabilities with the title *financial liabilities*. Identify two current liabilities that would be classified under financial liabilities per IFRS. (Hint: **Nokia** provides examples in this chapter.)

**EXERCISES**

**Exercise 11-1**  
Classifying liabilities

The following items appear on the balance sheet of a company with a two-month operating cycle. Identify the proper classification of each item as follows: *C* if it is a current liability, *L* if it is a long-term liability, or *N* if it is not a liability.

- \_\_\_ 1. Notes payable (due in 13 to 24 months).
- \_\_\_ 2. Notes payable (due in 6 to 12 months).
- \_\_\_ 3. Notes payable (mature in five years).
- \_\_\_ 4. Current portion of long-term debt.
- \_\_\_ 5. Notes payable (due in 120 days).
- \_\_\_ 6. FUTA taxes payable.
- \_\_\_ 7. Accounts receivable.
- \_\_\_ 8. Sales taxes payable.
- \_\_\_ 9. Salaries payable.
- \_\_\_ 10. Wages payable.

**Exercise 11-2**  
Recording known current liabilities

Prepare any necessary adjusting entries at December 31, 2015, for Piper Company's year-end financial statements for each of the following separate transactions and events.

- 1. Piper Company records an adjusting entry for \$10,000,000 of previously unrecorded cash sales (costing \$5,000,000) and its sales taxes at a rate of 4%.
- 2. The company earned \$50,000 of \$125,000 previously received in advance for services.

Sylvester Systems borrows \$110,000 cash on May 15, 2015, by signing a 60-day, 12% note.

1. On what date does this note mature?
2. Suppose the face value of the note equals \$110,000, the principal of the loan. Prepare the journal entries to record (a) issuance of the note and (b) payment of the note at maturity.

**Exercise 11-3**

Accounting for note payable **P1**  
**Check** (2b) Interest expense, \$2,200

Keesha Co. borrows \$200,000 cash on November 1, 2015, by signing a 90-day, 9% note with a face value of \$200,000.

1. On what date does this note mature? (Assume that February of 2015 has 28 days.)
2. How much interest expense results from this note in 2015? (Assume a 360-day year.)
3. How much interest expense results from this note in 2016? (Assume a 360-day year.)
4. Prepare journal entries to record (a) issuance of the note, (b) accrual of interest at the end of 2015, and (c) payment of the note at maturity. (Assume no reversing entries are made.)

**Exercise 11-4**

Interest-bearing notes payable with year-end adjustments **P1**  
**Check** (2) \$3,000  
 (3) \$1,500

BMX Company has one employee. FICA Social Security taxes are 6.2% of the first \$117,000 paid to its employee, and FICA Medicare taxes are 1.45% of gross pay. For BMX, its FUTA taxes are 0.6% and SUTA taxes are 2.9% of the first \$7,000 paid to its employee. Compute BMX's amounts for each of these four taxes as applied to the employee's gross earnings for September under each of three separate situations (a), (b), and (c). (Round amounts to cents.)

	Gross Pay through August	Gross Pay for September
a.	\$ 6,400	\$ 800
b.	18,200	2,100
c.	110,700	8,000

**Exercise 11-5**

Computing payroll taxes **P2 P3**

**Check** (a) FUTA, \$3.60; SUTA, \$17.40

Using the data in *situation a* of Exercise 11-5, prepare the employer's September 30 journal entries to record salary expense and its related payroll liabilities for this employee. The employee's federal income taxes withheld by the employer are \$80 for this pay period. (Round amounts to cents.)

**Exercise 11-6**

Payroll-related journal entries **P2**

Using the data in *situation a* of Exercise 11-5, prepare the employer's September 30 journal entries to record the employer's payroll taxes expense and its related liabilities. (Round amounts to cents.)

**Exercise 11-7**

Payroll-related journal entries **P3**

The following monthly data are taken from Ramirez Company at July 31: sales salaries, \$200,000; office salaries, \$160,000; federal income taxes withheld, \$90,000; state income taxes withheld, \$20,000; Social Security taxes withheld, \$22,320; Medicare taxes withheld, \$5,220; medical insurance premiums, \$7,000; life insurance premiums, \$4,000; union dues deducted, \$1,000; and salaries subject to unemployment taxes, \$50,000. The employee pays 40% of medical and life insurance premiums.

Prepare journal entries to record: (1) accrued payroll, including employee deductions, for July; (2) cash payment of the net payroll (salaries payable) for July; (3) accrued employer payroll taxes, and other related employment expenses, for July—assume that FICA taxes are identical to those on employees and that SUTA taxes are 5.4% and FUTA taxes are 0.6%; and (4) cash payment of all liabilities related to the July payroll.

**Exercise 11-8**

Recording payroll **P2 P3**

Mester Company has 10 employees. FICA Social Security taxes are 6.2% of the first \$117,000 paid to each employee, and FICA Medicare taxes are 1.45% of gross pay. FUTA taxes are 0.6% and SUTA taxes are 5.4% of the first \$7,000 paid to each employee. Cumulative pay for the current year for each of its employees follows.

Employee	Cumulative Pay	Employee	Cumulative Pay	Employee	Cumulative Pay
Ken S. . . . .	\$ 6,000	Ann T. . . . .	\$146,500	Lori K. . . . .	\$119,500
Tim V. . . . .	60,200	Kathleen K. . . . .	106,900	Kitty O. . . . .	36,900
Steve S. . . . .	87,000	Michelle H. . . . .	117,000	John W. . . . .	4,000

**Exercise 11-9**

Computing payroll taxes **P2 P3**

- a. Prepare a table with the following column headings: Employee; Cumulative Pay; Pay Subject to FICA Social Security Taxes; Pay Subject to FICA Medicare Taxes; Pay Subject to FUTA Taxes; Pay Subject to SUTA Taxes. Compute the amounts in this table for each employee and total the columns.
- b. For the company, compute each total for: FICA Social Security taxes, FICA Medicare taxes, FUTA taxes, and SUTA taxes. (*Hint*: Remember to include in those totals any employee share of taxes that the company must collect.) (Round amounts to cents.)

**Exercise 11-10**  
Warranty expense and liability computations and entries P4

Hitzu Co. sold a copier costing \$4,800 with a two-year parts warranty to a customer on August 16, 2015, for \$6,000 cash. Hitzu uses the perpetual inventory system. On November 22, 2016, the copier requires on-site repairs that are completed the same day. The repairs cost \$209 for materials taken from the Repair Parts Inventory. These are the only repairs required in 2016 for this copier. Based on experience, Hitzu expects to incur warranty costs equal to 4% of dollar sales. It records warranty expense with an adjusting entry at the end of each year.

**Check** (1) \$240

(4) \$31

1. How much warranty expense does the company report in 2015 for this copier?
2. How much is the estimated warranty liability for this copier as of December 31, 2015?
3. How much warranty expense does the company report in 2016 for this copier?
4. How much is the estimated warranty liability for this copier as of December 31, 2016?
5. Prepare journal entries to record (a) the copier's sale; (b) the adjustment on December 31, 2015, to recognize the warranty expense; and (c) the repairs that occur in November 2016.

**Exercise 11-11**  
Computing and recording bonuses P4

For the year ended December 31, 2015, Lopez Company has implemented an employee bonus program equal to 3% of Lopez's net income, which employees will share equally. Lopez's net income (pre-bonus) is expected to be \$500,000, and bonus expense is deducted in computing net income.

**Check** (1) \$14,563

1. Compute the amount of the bonus payable to the employees at year-end (use the method described in the chapter and round to the nearest dollar).
2. Prepare the journal entry at December 31, 2015, to record the bonus due the employees.
3. Prepare the journal entry at January 19, 2016, to record payment of the bonus to employees.

**Exercise 11-12**  
Accounting for estimated liabilities P4

Prepare any necessary adjusting entries at December 31, 2015, for Maxum Company's year-end financial statements for each of the following separate transactions and events.

1. Employees earn vacation pay at a rate of one day per month. During December, 20 employees qualify for one vacation day each. Their average daily wage is \$160 per employee.
2. During December, Maxum Company sold 12,000 units of a product that carries a 60-day warranty. December sales for this product total \$460,000. The company expects 10% of the units to need warranty repairs, and it estimates the average repair cost per unit will be \$15.

**Exercise 11-13**  
Accounting for contingent liabilities C3

Prepare any necessary adjusting entries at December 31, 2015, for Melbourn Company's year-end financial statements for each of the following separate transactions and events.

1. Melbourn Company guarantees the \$100,000 debt of a supplier. The supplier will probably not default on the debt.
2. A disgruntled employee is suing Melbourn Company. Legal advisers believe that the company will probably need to pay damages, but the amount cannot be reasonably estimated.

**Exercise 11-14**  
Computing and interpreting times interest earned A1 

Use the following information from separate companies *a* through *f* to compute times interest earned. Which company indicates the strongest ability to pay interest expense as it comes due? (Round ratios to two decimals.)

	Net Income (Loss)	Interest Expense	Income Taxes
a.	\$115,000	\$44,000	\$ 35,000
b.	110,000	16,000	50,000
c.	100,000	12,000	70,000
d.	235,000	14,000	130,000
e.	59,000	14,000	30,000
f.	(5,000)	10,000	0

**Check** (b) 11.00

**Exercise 11-15<sup>B</sup>**  
Accounting for income taxes P4

Nishi Corporation prepares financial statements for each month-end. As part of its accounting process, estimated income taxes are accrued each month for 30% of the current month's net income. The income taxes are paid in the first month of each quarter for the amount accrued for the prior quarter. The following information is available for the fourth quarter of year 2015. When tax computations are completed on January 20, 2016, Nishi determines that the quarter's Income Taxes Payable account balance should be \$28,300 on December 31, 2015 (its unadjusted balance is \$24,690).

October 2015 net income . . . . .	\$28,600
November 2015 net income . . . . .	19,100
December 2015 net income . . . . .	34,600

1. Determine the amount of the accounting adjustment (dated as of December 31, 2015) to produce the proper ending balance in the Income Taxes Payable account.
2. Prepare journal entries to record (a) the December 31, 2015, adjustment to the Income Taxes Payable account and (b) the January 20, 2016, payment of the fourth-quarter taxes.

**Check** (1) \$3,610

Lenny Florita, an unmarried employee, works 48 hours in the week ended January 12. His pay rate is \$14 per hour, and his wages are subject to no deductions other than FICA Social Security, FICA Medicare, and federal income taxes. He claims two withholding allowances. Compute his regular pay, overtime pay (for this company, workers earn 150% of their regular rate for hours in excess of 40 per week), and gross pay. Then compute his FICA tax deduction (use 6.2% for the Social Security portion and 1.45% for the Medicare portion), income tax deduction (use the wage bracket withholding table from Exhibit 11A.6), total deductions, and net pay. (Round tax amounts to the nearest cent.)

**Exercise 11-16<sup>A</sup>**

Gross and net pay computation

P5

**Check** Net pay, \$596.30

Stark Company has five employees. Employees paid by the hour receive a \$10 per hour pay rate for the regular 40-hour workweek plus one and one-half times the hourly rate for each overtime hour beyond the 40 hours per week. Hourly employees are paid every two weeks, but salaried employees are paid monthly on the last biweekly payday of each month. FICA Social Security taxes are 6.2% of the first \$117,000 paid to each employee, and FICA Medicare taxes are 1.45% of gross pay. FUTA taxes are 0.6% and SUTA taxes are 5.4% of the first \$7,000 paid to each employee. The company has a benefits plan that includes medical insurance, life insurance, and retirement funding for employees. Under this plan, employees must contribute 5 percent of their gross income as a payroll withholding, which the company matches with double the amount. Following is the partially completed payroll register for the biweekly period ending August 31, which is the last payday of August.

**Exercise 11-17**

Preparing payroll register and related entries

P5

Employee	Cumulative Pay (Excludes Current Period)	Current Period Gross Pay			FIT	FUTA	FICA-SS_EE	FICA-Med_EE	EE-Ben_Plan Withholding	Employee Net Pay
		Pay Type	Pay Hours	Gross Pay	SIT	SUTA	FICA-SS_ER	FICA-Med_ER	ER-Ben_Plan Expense	
Kathleen	\$115,200.00	Salary	---	\$7,000.00	\$2,000.00					
					300.00					
Anthony	6,800.00	Salary	---	500.00	80.00					
					20.00					
Nichole	15,000.00	Regular	80		110.00					
		Overtime	8		25.00					
Zoey	6,500.00	Regular	80		100.00					
		Overtime	4		22.00					
Gracie	5,000.00	Regular	74	740.00	90.00					
		Overtime	0	0.00	21.00					
Totals	\$148,500.00				2,380.00					
					388.00					

\* Table abbreviations follow those in Exhibit 11A.3; and "Ben\_Plan" refers to employee (EE) withholding or the employer (ER) expense for the benefits plan.

- a. Complete this payroll register by filling in all cells for the pay period ended August 31. *Hint:* See Exhibit 11A.5 for guidance. (Round amounts to cents.)
- b. Prepare the August 31 journal entry to record the accrued biweekly payroll and related liabilities for deductions.
- c. Prepare the August 31 journal entry to record the employer's cash payment of the net payroll of part b.
- d. Prepare the August 31 journal entry to record the employer's payroll taxes including the contribution to the benefits plan.
- e. Prepare the August 31 journal entry to pay all liabilities (except for the net payroll in part c) for this biweekly period.

**Volvo Group** reports the following information for its product warranty costs as of December 31, 2013, along with provisions and utilizations of warranty liabilities for the year ended December 31, 2013 (SEK in millions).

**Provision for product warranty** Warranty provisions are estimated with consideration of historical claims statistics, the warranty period, the average time-lag between faults occurring and claims to the company and anticipated changes in quality indexes. Estimated costs for product warranties are recognized as cost

**Exercise 11-18**

Accounting for current liabilities under IFRS

P4

of sales when the products are sold . . . Differences between actual warranty claims and the estimated claims generally affect the recognized expense and provisions in future periods. Refunds from suppliers, that decrease the Volvo Group’s warranty costs, are recognized to the extent these are considered to be certain. As of December 31, 2013 (2012) warranty cost provisions amount to 9,881 (8,852).

Product warranty liabilities, December 31, 2012 . . . . .	SEK 8,852
Additional provisions to product warranty liabilities . . . . .	7,706
Utilizations and reductions of product warranty liabilities . . . . .	(6,677)
Product warranty liabilities, December 31, 2013 . . . . .	9,881

1. Prepare Volvo’s journal entry to record its estimated warranty liabilities (provisions) for 2013.
2. Prepare Volvo’s journal entry to record its costs (utilizations) related to its warranty program for 2013. Assume those costs involve replacements taken out of Inventory, with no cash involved.
3. How much warranty expense does Volvo report for 2013?

**PROBLEM SET A**

Tyrell Co. entered into the following transactions involving short-term liabilities in 2014 and 2015.

**Problem 11-1A**

Short-term notes payable transactions and entries

P1

**2014**

- Apr. 20 Purchased \$40,250 of merchandise on credit from Locust, terms are 1/10, n/30. Tyrell uses the perpetual inventory system.
- May 19 Replaced the April 20 account payable to Locust with a 90-day, \$35,000 note bearing 10% annual interest along with paying \$5,250 in cash.
- July 8 Borrowed \$80,000 cash from National Bank by signing a 120-day, 9% interest-bearing note with a face value of \$80,000.
- ? Paid the amount due on the note to Locust at the maturity date.
- ? Paid the amount due on the note to National Bank at the maturity date.
- Nov. 28 Borrowed \$42,000 cash from Fargo Bank by signing a 60-day, 8% interest-bearing note with a face value of \$42,000.
- Dec. 31 Recorded an adjusting entry for accrued interest on the note to Fargo Bank.

**2015**

- ? Paid the amount due on the note to Fargo Bank at the maturity date.

**Required**

1. Determine the maturity date for each of the three notes described.
2. Determine the interest due at maturity for each of the three notes. (Assume a 360-day year.)
3. Determine the interest expense to be recorded in the adjusting entry at the end of 2014.
4. Determine the interest expense to be recorded in 2015.
5. Prepare journal entries for all the preceding transactions and events for years 2014 and 2015.

**Check** (2) Locust, \$875

(3) \$308

(4) \$252

**Problem 11-2A**

Entries for payroll transactions

P2 P3

On January 8, the end of the first weekly pay period of the year, Regis Company’s payroll register showed that its employees earned \$22,760 of office salaries and \$65,840 of sales salaries. Withholdings from the employees’ salaries include FICA Social Security taxes at the rate of 6.2%, FICA Medicare taxes at the rate of 1.45%, \$12,860 of federal income taxes, \$1,340 of medical insurance deductions, and \$840 of union dues. No employee earned more than \$7,000 in this first period.

**Required**

1. Calculate FICA Social Security taxes payable and FICA Medicare taxes payable. Prepare the journal entry to record Regis Company’s January 8 (employee) payroll expenses and liabilities. (Round amounts to cents.)
2. Prepare the journal entry to record Regis’s (employer) payroll taxes resulting from the January 8 payroll. Regis’s merit rating reduces its state unemployment tax rate to 4% of the first \$7,000 paid each employee. The federal unemployment tax rate is 0.6%. (Round amounts to cents.)

**Check** (1) Cr. Salaries Payable, \$66,782.10

(2) Dr. Payroll Taxes Expense, \$10,853.50

Paloma Co. Stars has four employees. FICA Social Security taxes are 6.2% of the first \$117,000 paid to each employee, and FICA Medicare taxes are 1.45% of gross pay. Also, for the first \$7,000 paid to each employee, the company's FUTA taxes are 0.6% and SUTA taxes are 2.15%. The company is preparing its payroll calculations for the week ended August 25. Payroll records show the following information for the company's four employees.

**Problem 11-3A**  
Payroll expenses,  
withholdings, and taxes  
**P2 P3**

	A	B	C	D
1		<b>Gross Pay</b>		<b>Current Week</b>
2	<b>Name</b>	<b>through Aug. 18</b>	<b>Gross Pay</b>	<b>Income Tax Withholding</b>
3	Dahlia	\$115,900	\$2,000	\$284
4	Trey	116,100	900	145
5	Kiesha	7,100	450	39
6	Chee	1,050	400	30
7				

In addition to gross pay, the company must pay one-half of the \$60 per employee weekly health insurance; each employee pays the remaining one-half. The company also contributes an extra 8% of each employee's gross pay (at no cost to employees) to a pension fund.

### Required

Compute the following for the week ended August 25 (round amounts to the nearest cent):

- Each employee's FICA withholdings for Social Security.
- Each employee's FICA withholdings for Medicare.
- Employer's FICA taxes for Social Security. **Check (3) \$176.70**
- Employer's FICA taxes for Medicare. **(4) \$54.38**
- Employer's FUTA taxes. **(5) \$2.40**
- Employer's SUTA taxes.
- Each employee's net (take-home) pay. **(7) Total net pay,**
- Employer's total payroll-related expense for each employee. **\$2,900.92**

On October 29, 2014, Lobo Co. began operations by purchasing razors for resale. Lobo uses the perpetual inventory method. The razors have a 90-day warranty that requires the company to replace any nonworking razor. When a razor is returned, the company discards it and mails a new one from Merchandise Inventory to the customer. The company's cost per new razor is \$20 and its retail selling price is \$75 in both 2014 and 2015. The manufacturer has advised the company to expect warranty costs to equal 8% of dollar sales. The following transactions and events occurred.

**Problem 11-4A**  
Warranty expense and  
liability estimation  
**P4**

### 2014

- Nov. 11 Sold 105 razors for \$7,875 cash.  
30 Recognized warranty expense related to November sales with an adjusting entry.
- Dec. 9 Replaced 15 razors that were returned under the warranty.  
16 Sold 220 razors for \$16,500 cash.  
29 Replaced 30 razors that were returned under the warranty.  
31 Recognized warranty expense related to December sales with an adjusting entry.

### 2015

- Jan. 5 Sold 150 razors for \$11,250 cash.  
17 Replaced 50 razors that were returned under the warranty.  
31 Recognized warranty expense related to January sales with an adjusting entry.

### Required

- Prepare journal entries to record these transactions and adjustments for 2014 and 2015.
- How much warranty expense is reported for November 2014 and for December 2014?
- How much warranty expense is reported for January 2015? **Check (3) \$900**
- What is the balance of the Estimated Warranty Liability account as of December 31, 2014? **(4) \$1,050 Cr.**
- What is the balance of the Estimated Warranty Liability account as of January 31, 2015? **(5) \$950 Cr.**

**Problem 11-5A**

Computing and analyzing times interest earned

Shown here are condensed income statements for two different companies (both are organized as LLCs and pay no income taxes).

Miller Company	
Sales .....	\$1,000,000
Variable expenses (80%) .....	800,000
Income before interest .....	200,000
Interest expense (fixed) .....	60,000
Net income .....	<u>\$ 140,000</u>

Weaver Company	
Sales .....	\$1,000,000
Variable expenses (60%) .....	600,000
Income before interest .....	400,000
Interest expense (fixed) .....	260,000
Net income .....	<u>\$ 140,000</u>

**Required**

1. Compute times interest earned for Miller Company.
2. Compute times interest earned for Weaver Company.
3. What happens to each company's net income if sales increase by 30%?
4. What happens to each company's net income if sales increase by 50%?
5. What happens to each company's net income if sales increase by 80%?
6. What happens to each company's net income if sales decrease by 10%?
7. What happens to each company's net income if sales decrease by 20%?
8. What happens to each company's net income if sales decrease by 40%?

**Analysis Component**

9. Comment on the results from parts 3 through 8 in relation to the fixed-cost strategies of the two companies and the ratio values you computed in parts 1 and 2.

**Check** (3) Miller net income, \$200,000 (43% increase)

(6) Weaver net income, \$100,000 (29% decrease)

**Problem 11-6A<sup>A</sup>**

Entries for payroll transactions

Francisco Company has 10 employees, each of whom earns \$2,800 per month and is paid on the last day of each month. All 10 have been employed continuously at this amount since January 1. On March 1, the following accounts and balances exist in its general ledger:

- a. FICA—Social Security Taxes Payable, \$3,472; FICA—Medicare Taxes Payable, \$812. (The balances of these accounts represent total liabilities for both the employer's and employees' FICA taxes for the February payroll only.)
- b. Employees' Federal Income Taxes Payable, \$4,000 (liability for February only).
- c. Federal Unemployment Taxes Payable, \$336 (liability for January and February together).
- d. State Unemployment Taxes Payable, \$2,240 (liability for January and February together).

During March and April, the company had the following payroll transactions.

- Mar. 15 Issued check payable to Swift Bank, a federal depository bank authorized to accept employers' payments of FICA taxes and employee income tax withholdings. The \$8,284 check is in payment of the February FICA and employee income taxes.
- 31 Recorded the journal entry for the March salaries payable. Then recorded the cash payment of the March payroll (the company issued checks payable to each employee in payment of the March payroll). The payroll register shows the following summary totals for the March pay period.

Salaries			FICA Taxes*	Federal Income Taxes	Net Pay
Office Salaries	Shop Salaries	Gross Pay			
\$11,200	\$16,800	\$28,000	\$1,736	\$4,000	\$21,858
			\$ 406		

\* FICA taxes are Social Security and Medicare, respectively.

**Check** March 31: Salaries Payable, \$21,858

March 31: Dr. Payroll Taxes Expenses, \$2,786

April 15: Cr. Cash, \$8,284 (Swift Bank)

- 31 Recorded the employer's payroll taxes resulting from the March payroll. The company has a merit rating that reduces its state unemployment tax rate to 4.0% of the first \$7,000 paid each employee. The federal rate is 0.6%.
- Apr. 15 Issued check to Swift Bank in payment of the March FICA and employee income taxes.
- 15 Issued check to the State Tax Commission for the January, February, and March state unemployment taxes. Mailed the check and the first-quarter tax return to the Commission.
- 30 Issued check payable to Swift Bank in payment of the employer's FUTA taxes for the first quarter of the year.

- 30 Mailed Form 941 to the IRS, reporting the FICA taxes and the employees' federal income tax withholdings for the first quarter.

**Required**

Prepare journal entries to record the transactions and events for both March and April.

Warner Co. entered into the following transactions involving short-term liabilities in 2014 and 2015.

**2014**

- Apr. 22 Purchased \$5,000 of merchandise on credit from Fox Products, terms are 1/10, n/30. Warner uses the perpetual inventory system.
- May 23 Replaced the April 22 account payable to Fox Products with a 60-day, \$4,600 note bearing 15% annual interest along with paying \$400 in cash.
- July 15 Borrowed \$12,000 cash from Spring Bank by signing a 120-day, 10% interest-bearing note with a face value of \$12,000.
- \_\_\_\_\_ ? Paid the amount due on the note to Fox Products at maturity.
- \_\_\_\_\_ ? Paid the amount due on the note to Spring Bank at maturity.
- Dec. 6 Borrowed \$8,000 cash from City Bank by signing a 45-day, 9% interest-bearing note with a face value of \$8,000.
- 31 Recorded an adjusting entry for accrued interest on the note to City Bank.

**2015**

- \_\_\_\_\_ ? Paid the amount due on the note to City Bank at maturity.

**Required**

- Determine the maturity date for each of the three notes described.
- Determine the interest due at maturity for each of the three notes. (Assume a 360-day year.)
- Determine the interest expense to be recorded in the adjusting entry at the end of 2014.
- Determine the interest expense to be recorded in 2015.
- Prepare journal entries for all the preceding transactions and events for years 2014 and 2015.

On November 10, 2015, Lee Co. began operations by purchasing coffee grinders for resale. Lee uses the perpetual inventory method. The grinders have a 60-day warranty that requires the company to replace any nonworking grinder. When a grinder is returned, the company discards it and mails a new one from Merchandise Inventory to the customer. The company's cost per new grinder is \$24 and its retail selling price is \$50 in both 2015 and 2016. The manufacturer has advised the company to expect warranty costs to equal 10% of dollar sales. The following transactions and events occurred.

**2015**

- Nov. 16 Sold 50 grinders for \$2,500 cash.
- 30 Recognized warranty expense related to November sales with an adjusting entry.
- Dec. 12 Replaced six grinders that were returned under the warranty.
- 18 Sold 200 grinders for \$10,000 cash.
- 28 Replaced 17 grinders that were returned under the warranty.
- 31 Recognized warranty expense related to December sales with an adjusting entry.

**2016**

- Jan. 7 Sold 40 grinders for \$2,000 cash.
- 21 Replaced 36 grinders that were returned under the warranty.
- 31 Recognized warranty expense related to January sales with an adjusting entry.

**Required**

1. Prepare journal entries to record these transactions and adjustments for 2015 and 2016.
2. How much warranty expense is reported for November 2015 and for December 2015?
3. How much warranty expense is reported for January 2016?
4. What is the balance of the Estimated Warranty Liability account as of December 31, 2015?
5. What is the balance of the Estimated Warranty Liability account as of January 31, 2016?

- Check** (3) \$200  
 (4) \$698 Cr.  
 (5) \$34 Cr.

**Problem 11-5B**

Computing and analyzing times interest earned

A1 

Shown here are condensed income statements for two different companies (both are organized as LLCs and pay no income taxes).

Ellis Company	
Sales .....	\$240,000
Variable expenses (50%) .....	<u>120,000</u>
Income before interest .....	120,000
Interest expense (fixed) .....	<u>90,000</u>
Net income .....	<u>\$ 30,000</u>

Seidel Company	
Sales .....	\$240,000
Variable expenses (75%) .....	<u>180,000</u>
Income before interest .....	60,000
Interest expense (fixed) .....	<u>30,000</u>
Net income .....	<u>\$ 30,000</u>

**Required**

1. Compute times interest earned for Ellis Company.
2. Compute times interest earned for Seidel Company.
3. What happens to each company's net income if sales increase by 10%?
4. What happens to each company's net income if sales increase by 40%?
5. What happens to each company's net income if sales increase by 90%?
6. What happens to each company's net income if sales decrease by 20%?
7. What happens to each company's net income if sales decrease by 50%?
8. What happens to each company's net income if sales decrease by 80%?

**Check** (4) Ellis net income, \$78,000 (160% increase)

(6) Seidel net income, \$18,000 (40% decrease)

**Analysis Component**

9. Comment on the results from parts 3 through 8 in relation to the fixed-cost strategies of the two companies and the ratio values you computed in parts 1 and 2.

MLS Company has five employees, each of whom earns \$1,600 per month and is paid on the last day of each month. All five have been employed continuously at this amount since January 1. On June 1, the following accounts and balances exist in its general ledger:

- a. FICA—Social Security Taxes Payable, \$992; FICA—Medicare Taxes Payable, \$232. (The balances of these accounts represent total liabilities for *both* the employer's and employees' FICA taxes for the May payroll only.)
- b. Employees' Federal Income Taxes Payable, \$1,050 (liability for May only).
- c. Federal Unemployment Taxes Payable, \$66 (liability for April and May together).
- d. State Unemployment Taxes Payable, \$440 (liability for April and May together).

During June and July, the company had the following payroll transactions.

- June 15 Issued check payable to Security Bank, a federal depository bank authorized to accept employers' payments of FICA taxes and employee income tax withholdings. The \$2,274 check is in payment of the May FICA and employee income taxes.
- 30 Recorded the journal entry for the June salaries payable. Then recorded the cash payment of the June payroll (the company issued checks payable to each employee in payment of the June payroll). The payroll register shows the following summary totals for the June pay period.

**Problem 11-6B<sup>A</sup>**  
Entries for payroll transactions

P2 P3 P5

**Check** June 30: Cr. Salaries Payable, \$6,338

Salaries			FICA Taxes*	Federal Income Taxes	Net Pay
Office Salaries	Shop Salaries	Gross Pay			
\$3,800	\$4,200	\$8,000	\$496	\$1,050	\$6,338
			\$116		

\* FICA taxes are Social Security and Medicare, respectively.

- 30 Recorded the employer's payroll taxes resulting from the June payroll. The company has a merit rating that reduces its state unemployment tax rate to 4.0% of the first \$7,000 paid each employee. The federal rate is 0.6%.
- July 15 Issued check payable to Security Bank in payment of the June FICA and employee income taxes.
- 15 Issued check to the State Tax Commission for the April, May, and June state unemployment taxes. Mailed the check and the second-quarter tax return to the State Tax Commission.
- 31 Issued check payable to Security Bank in payment of the employer's FUTA taxes for the first quarter of the year.
- 31 Mailed Form 941 to the IRS, reporting the FICA taxes and the employees' federal income tax withholdings for the second quarter.

**Check** June 30: Dr. Payroll Taxes Expenses, \$612

July 15: Cr. Cash \$2,274 (Security Bank)

**Required**

Prepare journal entries to record the transactions and events for both June and July.

**SERIAL PROBLEM**

Business Solutions

P2 P3 C2

(This serial problem began in Chapter 1 and continues through most of the book. If previous chapter segments were not completed, the serial problem can begin at this point. It is helpful, but not necessary, to use the Working Papers that accompany the book.)

**SP 11** Review the February 26 and March 25 transactions for Business Solutions (SP 5) from Chapter 5.

**Required**

1. Assume that Lyn Addie is an unmarried employee. Her \$1,000 of wages are subject to no deductions other than FICA Social Security taxes, FICA Medicare taxes, and federal income taxes. Her federal income taxes for this pay period total \$159. Compute her net pay for the eight days' work paid on February 26. (Round amounts to the nearest cent.)
2. Record the journal entry to reflect the payroll payment to Lyn Addie as computed in part 1.
3. Record the journal entry to reflect the (employer) payroll tax expenses for the February 26 payroll payment. Assume Lyn Addie has not met earnings limits for FUTA and SUTA—the FUTA rate is 0.6% and the SUTA rate is 4% for Business Solutions. (Round amounts to the nearest cent.)
4. Record the entry(ies) for the merchandise sold on March 25 if a 4% sales tax rate applies.

**COMPREHENSIVE PROBLEM**

Bug-Off Exterminators  
(Review of Chapters 1–11)

**CP 11** Bug-Off Exterminators provides pest control services and sells extermination products manufactured by other companies. The following six-column table contains the company's unadjusted trial balance as of December 31, 2015.

BUG-OFF EXTERMINATORS December 31, 2015					
	Unadjusted Trial Balance	Adjustments	Adjusted Trial Balance		
Cash . . . . .	\$ 17,000				
Accounts receivable . . . . .	4,000				
Allowance for doubtful accounts . . . . .		\$ 828			
Merchandise inventory . . . . .	11,700				
Trucks . . . . .	32,000				
Accum. depreciation—Trucks . . . . .		0			
Equipment . . . . .	45,000				
Accum. depreciation—Equipment . . . . .		12,200			
Accounts payable . . . . .		5,000			
Estimated warranty liability . . . . .		1,400			
Unearned services revenue . . . . .		0			
Interest payable . . . . .		0			
Long-term notes payable . . . . .		15,000			
D. Buggs, Capital . . . . .		59,700			
D. Buggs, Withdrawals . . . . .	10,000				
Extermination services revenue . . . . .		60,000			
Interest revenue . . . . .		872			
Sales (of merchandise) . . . . .		71,026			
Cost of goods sold . . . . .	46,300				
Depreciation expense—Trucks . . . . .	0				
Depreciation expense—Equipment . . . . .	0				
Wages expense . . . . .	35,000				
Interest expense . . . . .	0				
Rent expense . . . . .	9,000				
Bad debts expense . . . . .	0				
Miscellaneous expense . . . . .	1,226				
Repairs expense . . . . .	8,000				
Utilities expense . . . . .	6,800				
Warranty expense . . . . .	0				
Totals . . . . .	<u>\$226,026</u>	<u>\$226,026</u>			

The following information in *a* through *h* applies to the company at the end of the current year.

- a.** The bank reconciliation as of December 31, 2015, includes the following facts.

Cash balance per bank .....	\$15,100
Cash balance per books .....	17,000
Outstanding checks .....	1,800
Deposit in transit .....	2,450
Interest earned (on bank account) .....	52
Bank service charges (miscellaneous expense) .....	15

Reported on the bank statement is a canceled check that the company failed to record. (Information from the bank reconciliation allows you to determine the amount of this check, which is a payment on an account payable.)

- b.** An examination of customers' accounts shows that accounts totaling \$679 should be written off as uncollectible. Using an aging of receivables, the company determines that the ending balance of the Allowance for Doubtful Accounts should be \$700.
- c.** A truck is purchased and placed in service on January 1, 2015. Its cost is being depreciated with the straight-line method using the following facts and estimates.

Original cost .....	\$32,000
Expected salvage value .....	8,000
Useful life (years) .....	4

- d.** Two items of equipment (a sprayer and an injector) were purchased and put into service in early January 2013. They are being depreciated with the straight-line method using these facts and estimates.

	Sprayer	Injector
Original cost .....	\$27,000	\$18,000
Expected salvage value .....	3,000	2,500
Useful life (years) .....	8	5

- e.** On August 1, 2015, the company is paid \$3,840 cash in advance to provide monthly service for an apartment complex for one year. The company began providing the services in August. When the cash was received, the full amount was credited to the Extermination Services Revenue account.
- f.** The company offers a warranty for the services it sells. The expected cost of providing warranty service is 2.5% of the extermination services revenue of \$57,760 for 2015. No warranty expense has been recorded for 2015. All costs of servicing warranties in 2015 were properly debited to the Estimated Warranty Liability account.
- g.** The \$15,000 long-term note is an 8%, five-year, interest-bearing note with interest payable annually on December 31. The note was signed with First National Bank on December 31, 2015.
- h.** The ending inventory of merchandise is counted and determined to have a cost of \$11,700. Bug-Off uses a perpetual inventory system.

### Required

- 1.** Use the preceding information to determine amounts for the following items.
- Correct (reconciled) ending balance of Cash, and the amount of the omitted check.
  - Adjustment needed to obtain the correct ending balance of the Allowance for Doubtful Accounts.
  - Depreciation expense for the truck used during year 2015.
  - Depreciation expense for the two items of equipment used during year 2015.
  - The adjusted 2015 ending balances of the Extermination Services Revenue and Unearned Services Revenue accounts.
  - The adjusted 2015 ending balances of the accounts for Warranty Expense and Estimated Warranty Liability.
  - The adjusted 2015 ending balances of the accounts for Interest Expense and Interest Payable. (Round amounts to nearest whole dollar.)

**Check** (1a) Cash bal.  
\$15,750  
(1b) \$551 credit

(1f) Estimated  
Warranty Liability, \$2,844 Cr.

(2) Adjusted trial balance totals, \$238,207

(4) Net income, \$9,274; Total assets, \$82,771

2. Use the results of part 1 to complete the six-column table by first entering the appropriate adjustments for items *a* through *g* and then completing the adjusted trial balance columns. (*Hint:* Item *b* requires two adjustments.)
3. Prepare journal entries to record the adjustments entered on the six-column table. Assume Bug-Off's adjusted balance for Merchandise Inventory matches the year-end physical count.
4. Prepare a single-step income statement, a statement of owner's equity (cash withdrawals during 2015 were \$10,000), and a classified balance sheet.

## GL GENERAL LEDGER PROBLEM

Available only in Connect Plus

**GL 11-1** General Ledger assignment GL 11-1, based on Problem 11-1A, focuses on transactions related to accounts and notes payable and highlights the impact each transaction has on interest expense, if any. Prepare the journal entries related to accounts and notes payable; the schedules for accounts payable and notes payable are automatically completed using the General Ledger tool. Compute both the amount and timing of interest expense for each note. Prepare the subsequent period journal entries related to accrued interest.

## Beyond the Numbers

### REPORTING IN ACTION

A1 P4

### APPLE

**BTN 11-1** Refer to the financial statements of **Apple** in Appendix A to answer the following.

1. Compute times interest earned for the fiscal years ended 2013, 2012, and 2011. Apple reports that 2013 interest expense was \$136 million, and during 2012 and 2011 it “had no debt outstanding and accordingly did not incur any related interest expense”; however, for purposes of learning from this assignment, assume that Apple had interest expense of \$100 million for each of 2012 and 2011. Comment on Apple’s ability to cover its interest expense for this period. Assume an industry average of 10 for times interest earned.
2. Apple’s current liabilities include “Deferred revenue”; assume that this account reflects “Loyalty reward liabilities.” Is this a known or an estimated liability? Explain how this liability is created.
3. Identify its total of accrued expenses and search its footnotes to list the six accounts that make up accrued expenses.

#### Fast Forward

4. Access Apple’s financial statements for fiscal years ending after September 28, 2013, at its website ([Apple.com](http://Apple.com)) or the SEC’s EDGAR database ([www.SEC.gov](http://www.SEC.gov)). Compute its times interest earned for years ending after September 28, 2013, and compare your results to those in part 1. If no interest expense is reported, assume \$100 million of interest expense in each year.

### COMPARATIVE ANALYSIS

A1

### APPLE GOOGLE

**BTN 11-2** Key figures for **Apple** and **Google** follow.

(\$ millions)	Apple			Google		
	Current Year	One Year Prior	Two Years Prior	Current Year	One Year Prior	Two Years Prior
Net income.....	\$37,037	\$41,733	\$25,922	\$12,920	\$10,737	\$9,737
Income taxes.....	13,118	14,030	8,283	2,282	2,598	2,589
Interest expense.....	136	100*	100*	83	84	58

\*Apple did not report interest expense for these periods. Amounts included here are assumed for purposes of this analysis.

**Required**

1. Compute times interest earned for the three years' data shown for each company.
2. Comment on which company appears stronger in its ability to pay interest obligations if income should decline. Assume an industry average of 10.

**BTN 11-3** Cameron Bly is a sales manager for an automobile dealership. He earns a bonus each year based on revenue from the number of autos sold in the year less related warranty expenses. Actual warranty expenses have varied over the prior 10 years from a low of 3% of an automobile's selling price to a high of 10%. In the past, Bly has tended to estimate warranty expenses on the high end to be conservative. He must work with the dealership's accountant at year-end to arrive at the warranty expense accrual for cars sold each year.

1. Does the warranty accrual decision create any ethical dilemma for Bly?
2. Since warranty expenses vary, what percent do you think Bly should choose for the current year? Justify your response.

**ETHICS CHALLENGE**

**BTN 11-4** Dusty Johnson is the accounting and finance manager for a manufacturer. At year-end, he must determine how to account for the company's contingencies. His manager, Tom Pretti, objects to Johnson's proposal to recognize an expense and a liability for warranty service on units of a new product introduced in the fourth quarter. Pretti comments, "There's no way we can estimate this warranty cost. We don't owe anyone anything until a product fails and it is returned. Let's report an expense if and when we do any warranty work."

**Required**

Prepare a one-page memorandum for Johnson to send to Pretti defending his proposal.

**COMMUNICATING IN PRACTICE**

**BTN 11-5** Access the February 24, 2014, filing of the December 31, 2013, annual 10-K report of **McDonald's Corporation** (Ticker: MCD), which is available from [www.SEC.gov](http://www.SEC.gov).

**Required**

1. Identify the current liabilities on McDonald's balance sheet as of December 31, 2013.
2. What portion (in percent) of McDonald's long-term debt matures within the next 12 months?
3. Use the consolidated statement of income for the year ended December 31, 2013, to compute McDonald's times interest earned ratio. Comment on the result. Assume an industry average of 15.0.

**TAKING IT TO THE NET**

**BTN 11-6** Assume that your team is in business and you must borrow \$6,000 cash for short-term needs. You have been shopping banks for a loan, and you have the following two options.

- A. Sign a \$6,000, 90-day, 10% interest-bearing note dated June 1.
- B. Sign a \$6,000, 120-day, 8% interest-bearing note dated June 1.

**TEAMWORK IN ACTION****Required**

1. Discuss these two options and determine the best choice. Ensure that all teammates concur with the decision and understand the rationale.
2. Each member of the team is to prepare *one* of the following journal entries.
  - a. Option A—at date of issuance.
  - b. Option B—at date of issuance.
  - c. Option A—at maturity date.
  - d. Option B—at maturity date.
3. In rotation, each member is to explain the entry he or she prepared in part 2 to the team. Ensure that all team members concur with and understand the entries.

4. Assume that the funds are borrowed on December 1 (instead of June 1) and your business operates on a calendar-year reporting period. Each member of the team is to prepare *one* of the following entries.
  - a. Option A—the year-end adjustment.
  - b. Option B—the year-end adjustment.
  - c. Option A—at maturity date.
  - d. Option B—at maturity date.
5. In rotation, each member is to explain the entry he or she prepared in part 4 to the team. Ensure that all team members concur with and understand the entries.

**ENTREPRENEURIAL DECISION**

**BTN 11-7** Review the chapter’s opening feature about Jessica Matthews and her start-up company, **Uncharted Play**. Assume that she is considering expanding her business to open a location in Europe. Assume her current income statement appears as follows.

UNCHARTED PLAY Income Statement For Year Ended December 31, 2015	
Sales .....	\$ 1,000,000
Operating expenses (55%) .....	<u>550,000</u>
Net income .....	<u>\$ 450,000</u>

Uncharted Play currently has no interest-bearing debt. If it expands to open a European location, it will require a \$300,000 loan. Uncharted Play has found a bank that will loan it the money on a 7% note payable. The company believes that, at least for the first few years, sales at its European location will equal \$250,000, and that all expenses at both locations will continue to equal 55% of sales.

**Required**

1. Prepare an income statement (showing three separate columns for current operations, European, and total) for the company assuming that it borrows the funds and expands to Europe. Annual revenues for current operations are expected to remain at \$1,000,000.
2. Compute the company’s times interest earned under the expansion assumptions in part 1.
3. Assume sales at its European location are \$400,000. Prepare an income statement (with columns for current operations, European, and total) for the company and compute times interest earned.
4. Assume sales at its European location are \$100,000. Prepare an income statement (with columns for current operations, European, and total) for the company and compute times interest earned.
5. Comment on your results from parts 1 through 4.

**HITTING THE ROAD**

P2

**BTN 11-8** Check your phone book or the Social Security Administration website ([www.SSA.gov](http://www.SSA.gov)) to locate the Social Security office near you. Visit the office to request a personal earnings and estimate form. Fill out the form and mail according to the instructions. You will receive a statement from the Social Security Administration regarding your earnings history and future Social Security benefits you can receive. (Formerly the request could be made online. The online service has been discontinued and is now under review by the Social Security Administration due to security concerns.) It is good to request an earnings and benefit statement every 5 to 10 years to make sure you have received credit for all wages earned and for which you and your employer have paid taxes into the system.

**GLOBAL DECISION**

**Samsung**  
**APPLE**  
**GOOGLE**

**BTN 11-9** **Samsung, Apple, and Google** are all competitors in the global marketplace. Comparative figures for Samsung ([www.Samsung.com](http://www.Samsung.com)), along with selected figures from Apple and Google, follow.

Key Figures	Samsung (₩ millions)		Apple		Google	
	Current Year	Prior Year	Current Year	Prior Year	Current Year	Prior Year
Net income .....	₩30,474,764	₩23,845,285	—	—	—	—
Income taxes .....	7,889,515	6,069,732	—	—	—	—
Interest expense .....	7,754,972	7,934,450	—	—	—	—
Times interest earned .....	?	?	369.79	558.63	184.16	159.75

**Required**

1. Compute the times interest earned ratio for the most recent two years for Samsung using the data shown.
2. Which company of the three presented provides the best coverage of interest expense? Explain.

---

**ANSWERS TO MULTIPLE CHOICE QUIZ**

1. b;  $\$6,000 \times 0.05 \times 30/360 = \$25$
2. e;  $\$50,000 \times (0.062 + 0.0145) = \$3,825$
3. b;  $\$7,000 \times (0.006 + 0.054) = \$420$
4. c;  $10,000 \text{ television sets} \times 0.01 \times \$250 = \$25,000$
5. a;  $150 \text{ employees} \times \$175 \text{ per day} \times 1 \text{ vacation day earned} = \$26,250$

#### P4 No capital deficiency

Capital deficiency

#### A1 Analyze partner return on equity

## Learning Objectives

### CONCEPTUAL

**C1** Identify characteristics of partnerships and similar organizations.

### ANALYTICAL

**A1** Compute partner return on equity and use it to evaluate partnership performance.

### PROCEDURAL

**P1** Prepare entries for partnership formation.

**P2** Allocate and record income and loss among partners.

**P3** Account for the admission and withdrawal of partners.

**P4** Prepare entries for partnership liquidation.

## Partners Getting Dirty

SANDY, UT—“We recycle [toss] over 40% of all food that is grown,” bemoans Daniel Blake. “That is disgusting and irresponsible.” He points out that we throw away more than 30 million tons of food each year in America alone, which makes up about 25% of all landfill waste. “We started talking about ways to monetize on people’s food waste,” says Daniel. “One idea led to another, and eventually we developed our own system of composting food waste.” He, along with partner Craig Martineau, launched **EcoScraps, LLC (EcoScraps.com)**. Their partnership turns used and leftover food into natural and organic compost.

Although the young partners deal with the smelly and rotting side of business, they also focus on the accounting and financial side. “I thought that if I could get my raw materials at no cost,” insists Daniel, “my margins would be fantastic.” Daniel explains that to further save costs and help the bottom line, the partners learned to collect their own raw materials. “I just jumped in [to dumpsters]. . . . eventually we bought boots and plumber outfits and gloves, and I got a lot better at jumping into trash cans.” Eventually, the owners collaborated with Waste Management to collect their raw materials so they could focus on manufacturing the best compost mix.

Daniel and Craig also set up a partnership arrangement for EcoScraps. Daniel describes how they organized their business as a limited liability company (LLC), which is a partnership with some protection against liability claims. The partners

stress the importance of partnership formation, partnership agreements, and financial reports to stay afloat, especially in the early stages. They refer to the partners’ return on equity and establishing the proper organizational form as key inputs to partnership strategies and decisions.

Success is causing their partnership to evolve. Daniel explains that their compost is now carried in more than 5,000 stores in just three years of operation. “Our goal at EcoScraps is to offer people products at the same quality as the top tier brands, at essentially price parity,” explains Daniel, “but in a way that is more sustainable.” Today, EcoScraps recycles more than 10,000 tons of food waste annually. Daniel says they “make a premium compost mix that adds value to consumers, the environment, and the business.”

The partners continue to monitor the accounting fundamentals for their business. They insist that the partnership, and their environmental goals, cannot survive unless EcoScraps is profitable. To that end, the partners review their accounting results and regularly assess the partnership’s costs and revenues. “Consumers don’t know what they want until you offer it to them,” explains Daniel. Nevertheless, he emphasizes the goal is “reducing food waste and bettering the environment.”

*“Surround yourself with the right people”*

—Daniel Blake

## PARTNERSHIP FORM OF ORGANIZATION

### C1

Identify characteristics of partnerships and similar organizations.

A **partnership** is an unincorporated association of two or more people to pursue a business for profit as co-owners. Many businesses are organized as partnerships. They are especially common in small retail and service businesses. Many professional practitioners, including physicians, lawyers, investors, and accountants, also organize their practices as partnerships.

### Characteristics of Partnerships

Partnerships are an important type of organization because they offer certain advantages with their unique characteristics. We describe these characteristics in this section.

**Voluntary Association** A partnership is a voluntary association between partners. Joining a partnership increases the risk to one's personal financial position. Some courts have ruled that partnerships are created by the actions of individuals even when there is no *express agreement* to form one. Daniel Blake and Craig Martineau are partners who voluntarily created the company **EcoScraps**.

**Partnership Agreement** Forming a partnership requires that two or more legally competent people (who are of age and of sound mental capacity) agree to be partners. Their agreement becomes a **partnership contract**, also called *articles of copartnership*. Although it should be in writing, the contract is binding even if it is only expressed verbally. Partnership agreements normally include details of the partners' (1) names and contributions, (2) rights and duties, (3) sharing of income and losses, (4) withdrawal arrangement, (5) dispute procedures, (6) admission and withdrawal of partners, and (7) rights and duties in the event a partner dies.

**Limited Life** The life of a partnership is limited. Death, bankruptcy, or any event taking away the ability of a partner to enter into or fulfill a contract ends a partnership. Any one of the partners can also terminate a partnership at will.

**Taxation** A partnership is not subject to taxes on its income. The income or loss of a partnership is allocated to the partners according to the partnership agreement, and it is included in determining the taxable income for each partner's tax return. Partnership income or loss is allocated each year whether or not cash is distributed to partners.

**Mutual Agency** **Mutual agency** implies that each partner is a fully authorized agent of the partnership. As its agent, a partner can commit or bind the partnership to any contract within the scope of the partnership business. For instance, a partner in a merchandising business can sign contracts binding the partnership to buy merchandise, lease a store building, borrow money, or hire employees. These activities are all within the scope of a merchandising firm. A partner in a law firm, acting alone, however, cannot bind the other partners to a contract to buy snowboards for resale or rent an apartment for parties. These actions are outside the normal scope of a law firm's business. Partners also can agree to limit the power of any one or more of the partners to negotiate contracts for the partnership. This agreement is binding on the partners and on outsiders who know it exists. It is not binding on outsiders who do not know it exists. Outsiders unaware of the agreement have the right to assume each partner has normal agency powers for the partnership. Mutual agency exposes partners to the risk of unwise actions by any one partner.

**Unlimited Liability** **Unlimited liability** implies that each partner can be called on to pay a partnership's debts. When a partnership cannot pay its debts, creditors usually can apply their claims to partners' *personal* assets. If a partner does not have enough assets to meet his or her share of the partnership debt, the creditors can apply their claims to the assets of the other partners. A partnership in which all partners have *mutual agency* and *unlimited liability* is called a **general partnership**. Mutual agency and unlimited liability are two main reasons that most general partnerships have only a few members.

**Co-Ownership of Property** Partnership assets are owned jointly by all partners. Any investment by a partner becomes the joint property of all partners. Partners have a claim on partnership assets based on their capital account and the partnership contract.

**Point:** When a new partner is admitted, all parties usually must agree to the admission.

**Point:** The end of a partnership is referred to as its *dissolution*.

**Point:** Total partnership income is reported to the IRS on Form 1065. Partners are taxed on their share of partnership income, not on their withdrawals. Partners receive a "K-1" form each year showing their share of income, which is reported on their personal tax return.

**Point:** The majority of states adhere to the Uniform Partnership Act for the basic rules of partnership formation, operation, and dissolution.

**Point:** Limited life, mutual agency, and unlimited liability are disadvantages of a partnership.

## Organizations with Partnership Characteristics

Organizations exist that combine certain characteristics of partnerships with other forms of organizations. We discuss several of these forms in this section.

**Limited Partnerships** Some individuals who want to invest in a partnership are unwilling to accept the risk of unlimited liability. Their needs can be met with a **limited partnership**. This type of organization is identified in its name with the words “Limited Partnership” or “Ltd.” or “LP.” A limited partnership has two classes of partners, general and limited. At least one partner must be a **general partner**, who assumes management duties and unlimited liability for the debts of the partnership. The **limited partners** have no personal liability beyond the amounts they invest in the partnership. Limited partners have no active role except as specified in the partnership agreement. A limited partnership agreement often specifies unique procedures for allocating income and losses between general and limited partners. The accounting procedures are similar for both limited and general partnerships.

**Limited Liability Partnerships** Most states allow individuals to form a **limited liability partnership**. This is identified in its name with the words “Limited Liability Partnership” or by “LLP.” This type of partnership is designed to protect innocent partners from malpractice or negligence claims resulting from the acts of another partner. When a partner provides service resulting in a malpractice claim, that partner has personal liability for the claim. The remaining partners who were not responsible for the actions resulting in the claim are not personally liable for it. However, most states hold all partners personally liable for other partnership debts. Accounting for a limited liability partnership is the same as for a general partnership.

**Point:** Many accounting, law, consulting, and architectural firms are set up as LLPs.

### Decision Insight

**Chief Partners** Most states allow any business to form as a limited liability partnership (LLP); however, some states only allow approved professional service companies to form them. Of the four largest CPA firms in the United States (KPMG, Deloitte, PricewaterhouseCoopers, and Ernst & Young), all are set up as LLPs. ■

Ingram Publishing

**S Corporations** Certain corporations with 100 or fewer stockholders can elect to be treated as a partnership for income tax purposes. These corporations are called *Sub-Chapter S* or simply **S corporations**. This distinguishes them from other corporations, called *Sub-Chapter C* or simply **C corporations**. S corporations provide stockholders the same limited liability feature that C corporations do. The advantage of an S corporation is that it does not pay income taxes. If stockholders work for an S corporation, their salaries are treated as expenses of the corporation. The remaining income or loss of the corporation is allocated to stockholders for inclusion on their personal tax returns. Except for C corporations having to account for income tax expenses and liabilities, the accounting procedures are the same for both S and C corporations.

**Global:** Forms of business organizations allowed vary by country.

**Limited Liability Companies** A relatively new form of business organization is the **limited liability company**. The names of these businesses usually include the words “Limited Liability Company” or an abbreviation such as “LLC” or “LC.” This form of business has certain features similar to a corporation and others similar to a limited partnership. The owners, who are called *members*, are protected with the same limited liability feature as owners of corporations. While limited partners cannot actively participate in the management of a limited partnership, the members of a limited liability company can assume an active management role. A limited liability company usually has a limited life. For income tax purposes, a limited liability company is typically treated as a partnership. This treatment depends on factors such as whether the members’ equity interests are freely transferable and whether the company has continuity of life. A limited liability company’s accounting system is designed to help management comply with the dictates of the articles of organization and company regulations adopted by its members. The accounting system also must provide information to support the company’s compliance with state and federal laws, including taxation. The company **EcoScraps** is an LLC.

**Point:** The majority of proprietorships and partnerships that are organized today are set up as LLCs.

**Point:** Accounting for LLCs is similar to that for partnerships (and proprietorships). One difference is that Owner (Partner), Capital is usually called *Members*, *Capital* for LLCs.

## Choosing a Business Form

Choosing the proper business form is crucial. Many factors should be considered, including taxes, liability risk, tax and fiscal year-end, ownership structure, estate planning, business risks, and earnings and property distributions. The following table summarizes several important characteristics of business organizations:

	Proprietorship	Partnership	LLP	LLC	S Corp.	Corporation
Business entity . . . . .	Yes	Yes	Yes	Yes	Yes	Yes
Legal entity . . . . .	No	No	No	Yes	Yes	Yes
Limited liability . . . . .	No	No	Limited*	Yes	Yes	Yes
Business taxed . . . . .	No	No	No	No	No	Yes
One owner allowed . . . . .	Yes	No	No	Yes	Yes	Yes

\* A partner’s personal liability for LLP debts is limited. Most LLPs carry insurance to protect against malpractice.

**Point:** The Small Business Administration provides suggestions and information on setting up the proper form for your organization—see [SBA.gov](http://SBA.gov).

We must remember that this table is a summary, not a detailed list. Many details underlie each of these business forms, and several details differ across states. Also, state and federal laws change, and a body of law is still developing around LLCs. Business owners should look at these details and consider unique business arrangements such as organizing various parts of their businesses in different forms.

## BASIC PARTNERSHIP ACCOUNTING

Since ownership rights in a partnership are divided among partners, partnership accounting

- Uses a capital account for each partner.
- Uses a withdrawals account for each partner.
- Allocates net income or loss to partners according to the partnership agreement.

This section describes partnership accounting for organizing a partnership, distributing income and loss, and preparing financial statements.

### Organizing a Partnership

When partners invest in a partnership, their capital accounts are credited for the invested amounts. Partners can invest both assets and liabilities. Each partner’s investment is recorded at an agreed-on value, normally the market values of the contributed assets and liabilities at the date of contribution. To illustrate, Kayla Zayn and Hector Perez organize a partnership on January 11 called BOARDS that offers year-round facilities for skateboarding and snowboarding. Zayn’s initial net investment in BOARDS is \$30,000, made up of cash (\$7,000), boarding facilities (\$33,000), and a note payable reflecting a bank loan for the new business (\$10,000). Perez’s initial investment is cash of \$10,000. These amounts are the values agreed on by both partners. The entries to record these investments follow.

**P1**  
Prepare entries for partnership formation.

Assets	=	Liabilities	+	Equity
+7,000		+10,000		+30,000
+33,000				
<b>K. Zayn, Capital</b>				
				30,000

Assets	=	Liabilities	+	Equity
+10,000				+10,000
<b>H. Perez, Capital</b>				
				10,000

#### Zayn’s Investment

Jan. 11	Cash . . . . .	7,000	
	Boarding facilities . . . . .	33,000	
	Note payable . . . . .		10,000
	K. Zayn, Capital . . . . .		30,000
	<i>To record the investment of Zayn.</i>		

#### Perez’s Investment

Jan. 11	Cash . . . . .	10,000	
	H. Perez, Capital . . . . .		10,000
	<i>To record the investment of Perez.</i>		

In accounting for a partnership, the following additional relations hold true: (1) Partners' withdrawals are debited to their own separate withdrawals accounts. (2) Partners' capital accounts are credited (or debited) for their shares of net income (or net loss) when closing the accounts at the end of a period. (3) Each partner's withdrawals account is closed to that partner's capital account. Separate capital and withdrawals accounts are kept for each partner.

**Point:** Both equity and cash are reduced when a partner withdraws cash from a partnership.

**Decision Insight**

**Star Gazing** **Starz, LLC** is a limited liability company, which is a type of partnership. Starz is a leading global media and entertainment company that competes with services such as HBO, Showtime, and EPIX. For a recent year, its income was roughly \$250 million from a total revenue base of almost \$1,800 million. ■

Jerod Harris/Getty Images

LeBron and Durant organize a partnership on January 1. LeBron's initial net investment is \$1,500, consisting of cash (\$350), equipment (\$1,650), and a note payable reflecting a bank loan for the new business (\$500). Durant's initial investment is cash of \$800. These amounts are the values agreed on by both partners. Prepare journal entries to record (1) LeBron's investment and (2) Durant's investment.

**Dividing Income or Loss**

Partners are not employees of the partnership but are its owners. If partners devote their time and services to their partnership, they are understood to do so for profit, not for salary. This means there are no salaries to partners that are reported as expenses on the partnership income statement. However, when net income or loss of a partnership is allocated among partners, the partners can agree to allocate "salary allowances" reflecting the relative value of services provided. Partners also can agree to allocate "interest allowances" based on the amount invested. For instance, since Zayn contributes three times the investment of Perez, it is only fair that this be considered when allocating income between them. Like salary allowances, these interest allowances are not expenses on the income statement.

Partners can agree to any method of dividing income or loss. In the absence of an agreement, the law says that the partners share income or loss of a partnership equally. If partners agree on how to share income but say nothing about losses, they share losses the same way they share income. Three common methods to divide income or loss use (1) a stated ratio basis, (2) the ratio of capital balances, or (3) salary and interest allowances and any remainder according to a fixed ratio. We explain each of these methods in this section.

**Allocation on Stated Ratios** The *stated ratio* (also called the *income-and-loss-sharing ratio*, the *profit and loss ratio*, or the *P&L ratio*) method of allocating partnership income or loss gives each partner a fraction of the total. Partners must agree on the fractional share each receives. To illustrate, assume the partnership agreement of K. Zayn and H. Perez says Zayn receives

**P2**

Allocate and record income and loss among partners.

**Point:** Partners can agree on a ratio to divide income and another ratio to divide a loss.

**Point:** The fractional basis can be stated as a proportion, ratio, or percent. For example, a 3:2 basis is the same as  $\frac{3}{5}$  and  $\frac{2}{5}$ , or 60% and 40%.

two-thirds and Perez one-third of partnership income and loss. If their partnership’s net income is \$60,000, it is allocated to the partners when the Income Summary account is closed as follows.

Assets = Liabilities + Equity  
 -60,000  
 +40,000  
 +20,000

Dec. 31	Income Summary . . . . .	60,000	
	K. Zayn, Capital . . . . .		40,000
	H. Perez, Capital . . . . .		20,000
	<i>To allocate income and close Income Summary.</i>		

**Point:** To determine the percent of income received by each partner, divide an individual partner's share by total net income.

**Allocation on Capital Balances** The *capital balances* method of allocating partnership income or loss assigns an amount based on the ratio of each partner’s relative capital balance. If Zayn and Perez agree to share income and loss on the ratio of their beginning capital balances—Zayn’s \$30,000 and Perez’s \$10,000—Zayn receives three-fourths of any income or loss (\$30,000/\$40,000) and Perez receives one-fourth (\$10,000/\$40,000). The journal entry follows the same format as that using stated ratios (see the preceding entries).

**Allocation on Services, Capital, and Stated Ratios** The *services, capital, and stated ratio* method of allocating partnership income or loss recognizes that service and capital contributions of partners often are not equal. Salary allowances can make up for differences in service contributions. Interest allowances can make up for unequal capital contributions. Also, the allocation of income and loss can include *both* salary and interest allowances. To illustrate, assume that the partnership agreement of K. Zayn and H. Perez reflects differences in service and capital contributions as follows: (1) annual salary allowances of \$36,000 to Zayn and \$24,000 to Perez, (2) annual interest allowances of 10% of a partner’s beginning-year capital balance, and (3) equal share of any remaining balance of income or loss. These salaries and interest allowances are *not* reported as expenses on the income statement. They are simply a means of dividing partnership income or loss. The remainder of this section provides two illustrations using this three-point allocation agreement.

**Illustration when income exceeds allowance.** If BOARDS has first-year net income of \$70,000, and Zayn and Perez apply the three-point partnership agreement described in the prior paragraph, income is allocated as shown in Exhibit 12.1. Zayn gets \$42,000 and Perez gets \$28,000 of the \$70,000 total.

**Point:** When allowances exceed income, the amount of this negative balance often is referred to as a *sharing agreement loss or deficit*.

**Illustration when allowances exceed income.** The sharing agreement between Zayn and Perez must be followed even if net income is less than the total of the allowances. For example, if BOARDS’ first-year net income is \$50,000 instead of \$70,000, it is allocated to the partners as shown in Exhibit 12.2. Computations for salaries and interest are identical to those in Exhibit

**EXHIBIT 12.1**

Income of each partner	<u>\$32,000</u>	<u>\$18,000</u>	

**EXHIBIT 12.2**

Dividing Income When Allowances Exceed Income

**Point:** See that total salary and interest allowances remain the same for Exh 12.1 and 12.2, regardless of net income (loss).

**Point:** Check to make sure the sum of the dollar amounts allocated to each partner equals net income or loss.

**Point:** When a loss occurs, it is possible for a specific partner's capital to increase (when closing income summary) if that partner's allowance is in excess of his or her share of the negative balance. This implies that decreases to the capital balances of other partners exceed the partnership's loss amount.

12.1. However, when we apply the total allowances against income, the balance of income is negative. This \$(14,000) negative balance is allocated equally to the partners per their sharing agreement. This means that a negative \$(7,000) is allocated to each partner. In this case, Zayn ends up with \$32,000 and Perez with \$18,000. If BOARDS had experienced a net loss, Zayn and Perez would share it in the same manner as the \$50,000 income. The only difference is that they would have begun with a negative amount because of the loss. Specifically, the partners would still have been allocated their salary and interest allowances, further adding to the negative balance of the loss. This *total* negative balance *after* salary and interest allowances would have been allocated equally between the partners. These allocations would have been applied against the positive numbers from any allowances to determine each partner's share of the loss.

Merkel and Putin began a partnership by investing \$6,000 and \$4,000, respectively. During its first year, the partnership earned \$80,000. Prepare calculations showing how the \$80,000 income is allocated to the partners under each of the following three separate plans for sharing income and loss: (1) the partners failed to agree on a method to share income; (2) the partners agreed to share income and loss in proportion to their initial investments; and (3) the partners agreed to share income by granting a \$35,000 per year salary allowance to Merkel, a \$13,000 per year salary allowance to Putin, 20% interest on their initial capital investments, and any remaining balance shared 70% to Merkel and 30% to Putin.

**NEED-TO-KNOW 12-2**

## Partnership Financial Statements

Partnership financial statements are similar to those of other organizations. The **statement of partners' equity**, also called *statement of partners' capital*, is one exception. It shows *each* partner's beginning capital balance, additional investments, allocated income or loss, withdrawals, and ending capital balance. To illustrate, Exhibit 12.3 shows the statement of partners' equity for BOARDS prepared using the sharing agreement of Exhibit 12.1. Recall that BOARDS's income was \$70,000; also, assume that Zayn withdrew \$20,000 and Perez \$12,000 at year-end.

### EXHIBIT 12.3

Statement of Partners' Equity

K. Zayn, Capital	
	30,000
	42,000
20,000	<b>52,000</b>
H. Perez, Capital	
	10,000
	28,000
12,000	<b>26,000</b>

BOARDS Statement of Partners' Equity For Year Ended December 31, 2015			
	Zayn	Perez	Total
Beginning capital balances . . . . .	\$ 0	\$ 0	\$ 0
Plus			
Investments by owners . . . . .	30,000	10,000	40,000
Net income			
Salary allowances . . . . .	\$36,000	\$24,000	
Interest allowances . . . . .	3,000	1,000	
Balance allocated . . . . .	3,000	3,000	
Total net income . . . . .	42,000	28,000	70,000
	72,000	38,000	110,000
Less partners' withdrawals . . . . .	(20,000)	(12,000)	(32,000)
<b>Ending capital balances . . . . .</b>	<b>\$52,000</b>	<b>\$26,000</b>	<b>\$78,000</b>

The equity section of the balance sheet of a partnership usually shows the separate capital account balance of each partner. In the case of BOARDS, both K. Zayn, Capital, and H. Perez, Capital, are listed in the equity section along with their balances of \$52,000 and \$26,000, respectively.

### Decision Insight

**Double Draw** Partnerships sometimes use two accounts to reflect a partner's withdrawal of cash from a partnership. For example, a "Drawing" account might be used for regular withdrawals such as a monthly salary allowance. A second "Withdrawals" account might be used for infrequent or personal draws such as for a daughter/son's wedding or a lake home. ■

Vincent Ricardel/The Image Bank/Getty Images

## ADMISSION AND WITHDRAWAL OF PARTNERS

### P3

Account for the admission and withdrawal of partners.

A partnership is based on a contract between individuals. When a partner is admitted or withdraws, the present partnership ends. Still, the business can continue to operate as a new partnership consisting of the remaining partners. This section considers how to account for the admission and withdrawal of partners.

### Admission of a Partner

A new partner is admitted in one of two ways: by purchasing an interest from one or more current partners or by investing cash or other assets in the partnership.

**Purchase of Partnership Interest** The purchase of partnership interest is a *personal transaction between one or more current partners and the new partner*. To become a partner, the current partners must accept the purchaser. Accounting for the purchase of partnership interest involves reallocating current partners' capital to reflect the transaction. To illustrate, at the end of BOARDS' first year, H. Perez sells one-half of his partnership interest to Tyrell Rasheed for \$18,000. This means that

Perez gives up a \$13,000 recorded interest ( $\$26,000 \times 1/2$ ) in the partnership (see the ending capital balance in Exhibit 12.3). The partnership records this January 4 transaction as follows.

Jan. 4	H. Perez, Capital .....	13,000	
	T. Rasheed, Capital .....		13,000
	To record admission of Rasheed by purchase.		

$$\begin{aligned} \text{Assets} &= \text{Liabilities} + \text{Equity} \\ & & & -13,000 \\ & & & +13,000 \end{aligned}$$

After this entry is posted, BOARDS' equity shows K. Zayn, Capital; H. Perez, Capital; and T. Rasheed, Capital, and their respective balances of \$52,000, \$13,000, and \$13,000.

Two aspects of this transaction are important. First, the partnership does *not* record the \$18,000 Rasheed paid Perez. The partnership's assets, liabilities, and *total equity* are unaffected by this transaction among partners. Second, Zayn and Perez must agree that Rasheed is to become a partner. If they agree to accept Rasheed, a new partnership is formed and a new contract with a new income-and-loss-sharing agreement is prepared. If Zayn or Perez refuses to accept Rasheed as a partner, then (under the Uniform Partnership Act) Rasheed gets Perez's sold share of partnership income and loss. If the partnership is liquidated, Rasheed gets Perez's sold share of partnership assets. Rasheed gets no voice in managing the company unless Rasheed is admitted as a partner.

**Point:** Partners' withdrawals are not constrained by the partnership's annual income or loss.

**Investing Assets in a Partnership** Admitting a partner by accepting assets is a *transaction between the new partner and the partnership*. The invested assets become partnership property. To illustrate, if Zayn (with a \$52,000 interest) and Perez (with a \$26,000 interest) agree to accept Rasheed as a partner in BOARDS after an investment of \$22,000 cash, this is recorded as follows.

Jan. 4	Cash .....	22,000	
	T. Rasheed, Capital .....		22,000
	To record admission of Rasheed by investment.		

$$\begin{aligned} \text{Assets} &= \text{Liabilities} + \text{Equity} \\ +22,000 & & & +22,000 \end{aligned}$$

After this entry is posted, both assets (cash) and equity (T. Rasheed, Capital) increase by \$22,000. Rasheed now has a 22% equity in the assets of the business, computed as \$22,000 divided by the entire partnership equity ( $\$52,000 + \$26,000 + \$22,000$ ). Rasheed does not necessarily have a right to 22% of income. Dividing income and loss is a separate matter on which partners must agree.

**Bonus to old partners.** When the current value of a partnership is greater than the recorded amounts of equity, the partners usually require a new partner to pay a bonus for the privilege of joining. When the balance in the new partner's capital account does not equal the amount of net assets invested, the difference is called a *bonus* either to or from the current partners. To illustrate, assume that Zayn and Perez agree to accept Rasheed as a partner with a 25% interest in BOARDS if Rasheed invests \$42,000. Recall that the partnership's accounting records show that Zayn's recorded equity in the business is \$52,000 and Perez's recorded equity is \$26,000 (see Exhibit 12.3). Rasheed's equity is determined as follows.

Equities of existing partners ( $\$52,000 + \$26,000$ ) .....	\$ 78,000
Investment of new partner .....	42,000
Total partnership equity .....	<u>\$120,000</u>
Equity of Rasheed ( $25\% \times \$120,000$ ) .....	<u>\$ 30,000</u>

<b>K. Zayn, Capital</b>	
	52,000
	6,000
	<b>58,000</b>
<b>H. Perez, Capital</b>	
	26,000
	6,000
	<b>32,000</b>
<b>T. Rasheed, Capital</b>	
	30,000
	<b>30,000</b>
<b>Total Capital = \$120,000</b>	

Although Rasheed invests \$42,000, the equity attributed to Rasheed in the new partnership is only \$30,000. The \$12,000 difference is called a *bonus* and is allocated to existing partners (Zayn and Perez) according to their income-and-loss-sharing agreement. A bonus is shared in this way because it is viewed as reflecting a higher value of the partnership that is not yet reflected in income. The entry to record this transaction follows.

Jan. 4	Cash .....	42,000	
	T. Rasheed, Capital .....		30,000
	K. Zayn, Capital ( $\$12,000 \times 1/2$ ) .....		6,000
	H. Perez, Capital ( $\$12,000 \times 1/2$ ) .....		6,000
	To record admission of Rasheed and bonus.		

$$\begin{aligned} \text{Assets} &= \text{Liabilities} + \text{Equity} \\ +42,000 & & & +30,000 \\ & & & +6,000 \\ & & & +6,000 \end{aligned}$$

**Bonus to new partner.** Alternatively, existing partners can grant a bonus to a new partner. This usually occurs when they need additional cash or the new partner has exceptional talents. The bonus to the new partner is in the form of a larger share of equity than the amount invested. To illustrate, assume that Zayn and Perez agree to accept Rasheed as a partner with a 25% interest in the partnership, but they require Rasheed to invest only \$18,000. Rasheed's equity is determined as follows.

K. Zayn, Capital	
3,000	52,000
	<b>49,000</b>
H. Perez, Capital	
3,000	26,000
	<b>23,000</b>
T. Rasheed, Capital	
	24,000
	<b>24,000</b>
<b>Total Capital = \$96,000</b>	

Equities of existing partners (\$52,000 + \$26,000) .....	\$78,000
Investment of new partner .....	18,000
Total partnership equity .....	<u>\$96,000</u>
Equity of Rasheed (25% × \$96,000) .....	<u>\$24,000</u>

The old partners contribute the \$6,000 bonus (computed as \$24,000 minus \$18,000) to Rasheed according to their income-and-loss-sharing ratio. Moreover, Rasheed's 25% equity does not necessarily entitle Rasheed to 25% of future income or loss. This is a separate matter for agreement by the partners. The entry to record the admission and investment of Rasheed is

Assets	=	Liabilities	+	Equity
+18,000				-3,000
				-3,000
				+24,000

Jan. 4	Cash .....	18,000	
	K. Zayn, Capital (\$6,000 × 1/2) .....	3,000	
	H. Perez, Capital (\$6,000 × 1/2) .....	3,000	
	T. Rasheed, Capital .....		24,000
	<i>To record Rasheed's admission and bonus.</i>		

**NEED-TO-KNOW 12-3**

Partner Admission

P3

Anne, Portia, and Hedison are partners and share income and losses in a 2:3:5 ratio. The partnership's capital balances are as follows: Anne, \$300; Portia, \$150; and Hedison, \$450. Ellen is admitted to the partnership on May 1 with a 25% equity. Prepare journal entries to record Ellen's entry into the partnership under each of the following separate assumptions: Ellen invests (a) \$300; (b) \$100; and (c) \$700.

**Solution**

**a.**

May 1	Cash .....	300	
	Ellen, Capital* .....		300
	<i>To record admission of Ellen, with no bonus.</i>		

\*(\$900 + \$300) × 25% = \$300

**b.**

May 1	Cash .....	100	
	Anne, Capital ([\$250 - \$100] × 2/10) .....	30	
	Portia, Capital ([\$250 - \$100] × 3/10) .....	45	
	Hedison, Capital ([\$250 - \$100] × 5/10) .....	75	
	Ellen, Capital ([\$900 + \$100] × .25) .....		250
	<i>To record Ellen's admission, with bonus to new partner.</i>		

**c.**

May 1	Cash .....	700	
	Anne, Capital ([\$700 - \$400] × 2/10) .....	60	
	Portia, Capital ([\$700 - \$400] × 3/10) .....	90	
	Hedison, Capital ([\$700 - \$400] × 5/10) .....	150	
	Ellen, Capital ([\$900 + \$700] × .25) .....		400
	<i>To record admission of Ellen, with bonus to old partners.</i>

### Withdrawal of a Partner

A partner generally withdraws from a partnership in one of two ways. (1) First, the withdrawing partner can sell his or her interest to another person who pays for it in cash or other assets. For this, we need only debit the withdrawing partner’s capital account and credit the new partner’s capital account. (2) The second case is when cash or other assets of the partnership are distributed to the withdrawing partner in settlement of his or her interest. To illustrate these cases, assume that Perez withdraws from the partnership of BOARDS in some future period. The partnership shows the following capital balances at the date of Perez’s withdrawal: K. Zayn, \$84,000; H. Perez, \$38,000; and T. Rasheed, \$38,000. The partners (Zayn, Perez, and Rasheed) share income and loss equally. Accounting for Perez’s withdrawal depends on whether a bonus is paid. We describe three possibilities.

**No Bonus** If Perez withdraws and takes cash equal to Perez’s capital balance, the entry is

Oct. 31	H. Perez, Capital .....	38,000	
	Cash .....		38,000
	<i>To record withdrawal of Perez from partnership with no bonus.</i>		

Assets	=	Liabilities	+	Equity
-38,000				-38,000

Perez can take any combination of assets to which the partners agree to settle Perez’s equity. Perez’s withdrawal creates a new partnership between the remaining partners. A new partnership contract and a new income-and-loss-sharing agreement are required.

**Bonus to Remaining Partners** A withdrawing partner is sometimes willing to take less than the recorded value of his or her equity to get out of the partnership or because the recorded value is overstated. Whatever the reason, when this occurs, the withdrawing partner in effect gives the remaining partners a bonus equal to the equity left behind. The remaining partners share this unwithdrawn equity according to their income-and-loss-sharing ratio. To illustrate, if Perez withdraws and agrees to take \$34,000 cash in settlement of Perez’s capital balance, the entry is

Oct. 31	H. Perez, Capital .....	38,000	
	Cash .....		34,000
	K. Zayn, Capital .....		2,000
	T. Rasheed, Capital .....		2,000
	<i>To record withdrawal of Perez and bonus to remaining partners.</i>		

Assets	=	Liabilities	+	Equity
-34,000				-38,000
				+2,000
				+2,000

Perez withdrew \$4,000 less than Perez’s recorded equity of \$38,000. This \$4,000 is divided between Zayn and Rasheed according to their income-and-loss-sharing ratio.

**Bonus to Withdrawing Partner** A withdrawing partner may be able to receive more than his or her recorded equity for at least two reasons. First, the recorded equity may be understated. Second, the remaining partners may agree to remove this partner by giving assets of greater value than this partner’s recorded equity. In either case, the withdrawing partner receives a bonus. The remaining partners reduce their equity by the amount of this bonus according to their income-and-loss-sharing ratio. To illustrate, if Perez withdraws and receives \$40,000 cash in settlement of Perez’s capital balance, the entry is

Oct. 31	H. Perez, Capital .....	38,000	
	K. Zayn, Capital .....	1,000	
	T. Rasheed, Capital .....	1,000	
	Cash .....		40,000
	<i>To record Perez’s withdrawal from partnership with a bonus to Perez.</i>		

Assets	=	Liabilities	+	Equity
-40,000				-38,000
				-1,000
				-1,000

**Falcon Cable Communications** set up a partnership withdrawal agreement. Falcon owns and operates cable television systems and had two managing general partners. The partnership agreement stated that either partner “can offer to sell to the other partner the offering partner’s entire partnership interest . . . for a negotiated price. If the partner receiving such an offer rejects it, the offering partner may elect to cause [the partnership] . . . to be liquidated and dissolved.”

### Death of a Partner

A partner’s death dissolves a partnership. A deceased partner’s estate is entitled to receive his or her equity. The partnership contract should contain provisions for settlement in this case. These provisions usually require (1) closing the books to determine income or loss since the end of the previous period and (2) determining and recording current market values for both assets and liabilities. The remaining partners and the deceased partner’s estate then must agree to a settlement of the deceased partner’s equity. This can involve selling the equity to remaining partners or to an outsider, or it can involve withdrawing assets.

### Decision Ethics

**Financial Planner** You are hired by the two remaining partners of a three-member partnership after the third partner’s death. The partnership agreement states that a deceased partner’s estate is entitled to a “share of partnership assets equal to the partner’s relative equity balance” (partners’ equity balances are equal). The estate argues that it is entitled to one-third of the current value of partnership assets. The remaining partners say the distribution should use asset book values, which are 75% of current value. They also point to partnership liabilities, which equal 40% of total asset book value and 30% of current value. How would you resolve this situation? ■ [Answers follow the chapter’s Summary.]

### NEED-TO-KNOW 12-4

#### Partner Withdrawal

P3

Fluffy, Anjelah, and Lopez are partners and share income and losses in a 2:3:5 ratio. The partnership’s capital balances are as follows: Fluffy, \$330; Anjelah, \$270; and Lopez, \$400. Lopez decides to withdraw from the partnership, and the partners agree not to revalue the assets upon Lopez’s retirement. Prepare journal entries to record Lopez’s May 1 withdrawal from the partnership under each of the following separate assumptions:

- a. Lopez sells his interest to Mencia for \$500 after Fluffy and Anjelah approve the entry of Mencia as a partner.
- b. Lopez gives his interest to a son-in-law, Madrigal, and thereafter Fluffy and Anjelah accept Madrigal as a partner.
- c. Lopez is paid \$400 in partnership cash for his equity.
- d. Lopez is paid \$600 in partnership cash for his equity.
- e. Lopez is paid \$70 in partnership cash plus equipment recorded on the partnership books at \$40 less its accumulated depreciation of \$10.

#### Solution

a.

May 1	Lopez, Capital. . . . .	400	
	Mencia, Capital. . . . .		400
	<i>To record Lopez withdrawal and Mencia admission.</i>		

b.

May 1	Lopez, Capital. . . . .	400	
	Madrigal, Capital. . . . .		400
	<i>To record Lopez withdrawal and Madrigal admission.</i>		

c.

May 1	Lopez, Capital. . . . .	400	
	Cash . . . . .		400
	<i>To record Lopez withdrawal with no bonus.</i>		

d.

May 1	Lopez, Capital .....	400	
	Fluffy, Capital* .....	80	
	Anjelah, Capital** .....	120	
	Cash .....		600
	<i>To record Lopez withdrawal with bonus to Lopez.</i>		

\*(\$600 - \$400) × 2/5    \*\*(\$600 - \$400) × 3/5

e.

May 1	Lopez, Capital .....	400	
	Accumulated Depreciation—Equipment .....	10	
	Fluffy, Capital* .....		120
	Anjelah, Capital** .....		180
	Equipment .....	40	
	Cash .....		70
	<i>To record Lopez withdrawal with bonus to rem. partners.</i>		

\*[\$400 - (\$40 - \$10 + \$70)] × 2/5    \*\*[\$400 - (\$40 - \$10 + \$70)] × 3/5

After Lopez's withdrawal, Fluffy and Anjelah share income and loss in a 2:3 ratio.

Do More: E 12-9, P 12-4

## LIQUIDATION OF A PARTNERSHIP

When a partnership is liquidated, its business ends and three concluding steps are required.

1. Record the sale of noncash assets for cash, and any gain or loss from liquidation is allocated to partners *using their income-and-loss-sharing agreement*.
2. Pay or settle all partner liabilities.
3. Distribute any remaining cash to partners *based on their capital balances*.

**P4** Prepare entries for partnership liquidation.

**Partnership liquidation** usually falls into one of two cases, as described in this section.

### No Capital Deficiency

*No capital deficiency* means that all partners have a zero or credit balance in their capital accounts for final distribution of cash. To illustrate, assume that Zayn, Perez, and Rasheed operate their partnership in BOARDS for several years, sharing income and loss equally. The partners then decide to liquidate. On the liquidation date, the current period's income or loss is transferred to the partners' capital accounts according to the sharing agreement. After that transfer, assume the partners' recorded account balances (immediately prior to liquidation) are:

Cash .....	\$178,000	Accounts payable .....	\$20,000	H. Perez, Capital .....	\$66,000
Land .....	40,000	K. Zayn, Capital .....	70,000	T. Rasheed, Capital .....	62,000

We apply three steps for liquidation. ① *The partnership sells its noncash assets, and any losses or gains from liquidation are shared among partners according to their income-and-loss-sharing agreement* (equal for these partners). Assume that BOARDS sells its noncash assets consisting of \$40,000 in land for \$46,000 cash, yielding a net gain of \$6,000. In a liquidation, gains or losses usually result from the sale of noncash assets, which are called *losses and gains from liquidation*. The entry to sell its assets for \$46,000 follows.

Jan. 15	Cash .....	46,000	
	Land .....		40,000
	Gain from Liquidation .....		6,000
	<i>Sold noncash assets at a gain.</i>		

Assets	=	Liabilities	+	Equity
-40,000				+6,000
+46,000				

Allocation of the gain from liquidation per the partners' income-and-loss-sharing agreement follows.

Jan. 15	Gain from Liquidation .....	6,000	
	K. Zayn, Capital .....		2,000
	H. Perez, Capital .....		2,000
	T. Rasheed, Capital .....		2,000
	<i>To allocate liquidation gain to partners.</i>		

Assets	=	Liabilities	+	Equity
				-6,000
				+2,000
				+2,000
				+2,000

② *The partnership pays its liabilities, and any losses or gains from liquidation of liabilities are shared among partners according to their income-and-loss-sharing agreement. BOARDS's only liability is \$20,000 in accounts payable, and no gain or loss occurred.*

Assets = Liabilities + Equity  
 -20,000      -20,000

Jan. 15	Accounts Payable .....	20,000	
	Cash .....		20,000
	<i>To pay claims of creditors.</i>		

After step 2, we have the following capital balances along with the remaining cash balance.

K. Zayn		H. Perez, Capital		T. Rasheed, Capital		Cash	
Bal.	70,000	Bal.	66,000	Bal.	62,000	Bal.	178,000
(2)	2,000	(2)	2,000	(2)	2,000	(1)	46,000
Bal.	72,000	Bal.	68,000	Bal.	64,000	Bal.	204,000

③ *Any remaining cash is divided among the partners according to their capital account balances.* The entry to record the final distribution of cash to partners follows.

Assets = Liabilities + Equity  
 -204,000      -72,000  
                   -68,000  
                   -64,000

Jan. 15	K. Zayn, Capital .....	72,000	
	H. Perez, Capital .....	68,000	
	T. Rasheed, Capital .....	64,000	
	Cash .....		204,000
	<i>To distribute remaining cash to partners.</i>		

It is important to remember that the final cash payment is distributed to partners according to their capital account balances, whereas gains and losses from liquidation are allocated according to the income-and-loss-sharing ratio. The following *statement of liquidation* summarizes the three steps in this section.

Statement of Liquidation	Cash	Noncash Assets	= Liabilities	K. Zayn, Capital	H. Perez, Capital	T. Rasheed, Capital
Balances prior to liquidation. . . . .	\$ 178,000	\$ 40,000	\$ 20,000	\$ 70,000	\$ 66,000	\$ 62,000
① Sale of noncash assets. . . . .	46,000	(40,000)		2,000	2,000	2,000
② Payment of liabilities . . . . .	(20,000)		(20,000)	0	0	0
Balances for distribution . . . . .	204,000	\$ 0	\$ 0	72,000	68,000	64,000
③ Distribution of cash to partners	(204,000)			(72,000)	(68,000)	(64,000)
	\$ 0			\$ 0	\$ 0	\$ 0

### Capital Deficiency

*Capital deficiency* means that at least one partner has a debit balance in his or her capital account at the point of final cash distribution (during step ③ as explained in the prior section). This can arise from liquidation losses, excessive withdrawals before liquidation, or recurring losses in prior periods. A partner with a capital deficiency must, if possible, cover the deficit by paying cash into the partnership.

To illustrate, assume that Zayn, Perez, and Rasheed operate their partnership in BOARDS for several years, sharing income and losses equally. The partners then decide to liquidate. Immediately prior to the final distribution of cash, the partners' recorded capital balances are Zayn, \$19,000; Perez, \$8,000; and Rasheed, \$(3,000). Rasheed's capital deficiency means that Rasheed owes the partnership \$3,000. Both Zayn and Perez have a legal claim against Rasheed's personal assets. The final distribution of cash in this case depends on how this capital deficiency is handled. Two possibilities exist: the partner pays the deficiency or the partner cannot pay the deficiency.

K. Zayn, Capital	
	19,000
	<b>19,000</b>
H. Perez, Capital	
	8,000
	<b>8,000</b>
T. Rasheed, Capital	
3,000	3,000
	<b>0</b>

**Partner Pays Deficiency** Rasheed is obligated to pay \$3,000 into the partnership to cover the deficiency. If Rasheed is willing and able to pay, the entry to record receipt of payment from Rasheed follows.

Assets = Liabilities + Equity  
 +3,000      +3,000

Jan. 15	Cash .....	3,000	
	T. Rasheed, Capital .....		3,000
	<i>To record payment of deficiency by Rasheed.</i>		

After the \$3,000 payment, the partners' capital balances are Zayn, \$19,000; Perez, \$8,000; and Rasheed, \$0. The entry to record the final cash distributions to partners is

Jan. 15	K. Zayn, Capital .....	19,000	
	H. Perez, Capital .....	8,000	
	Cash .....		27,000
	<i>To distribute remaining cash to partners.</i>		

Assets	=	Liabilities	+	Equity
-27,000				-19,000
				-8,000

**Partner Cannot Pay Deficiency** The remaining partners with credit balances absorb any partner's unpaid deficiency according to their income-and-loss-sharing ratio. To illustrate, if Rasheed is unable to pay the \$3,000 deficiency, Zayn and Perez absorb it. Since they share income and loss equally, Zayn and Perez each absorb \$1,500 of the deficiency. This is recorded as follows.

Jan. 15	K. Zayn, Capital .....	1,500	
	H. Perez, Capital .....	1,500	
	T. Rasheed, Capital .....		3,000
	<i>To transfer Rasheed deficiency to Zayn and Perez.</i>		

<b>K. Zayn, Capital</b>	
	19,000
1,500	
	<b>17,500</b>
<b>H. Perez, Capital</b>	
	8,000
1,500	
	<b>6,500</b>

Assets	=	Liabilities	+	Equity
				-1,500
				-1,500
				+3,000

After Zayn and Perez absorb Rasheed's deficiency, the capital accounts of the partners are Zayn, \$17,500; Perez, \$6,500; and Rasheed, \$0. The entry to record the final cash distribution to the partners is

Jan. 15	K. Zayn, Capital .....	17,500	
	H. Perez, Capital .....	6,500	
	Cash .....		24,000
	<i>To distribute remaining cash to partners.</i>		

<b>T. Rasheed, Capital</b>	
3,000	
	3,000
	<b>0</b>

Assets	=	Liabilities	+	Equity
-24,000				-17,500
				-6,500

Rasheed's inability to cover this deficiency does not relieve Rasheed of the liability. If Rasheed becomes able to pay at a future date, Zayn and Perez can each collect \$1,500 from Rasheed.

The Danica, Gaga & Oprah partnership was begun with investments by the partners as follows: Danica, \$190; Gaga, \$340; and Oprah, \$550. Danica, Gaga, and Oprah share income and losses in a 1:1:2 ratio. The operations did not go well, and the partners eventually decided to liquidate the partnership. On July 31, after all assets were converted to cash and all creditors were paid, only \$80 in partnership cash remained.

1. Compute the capital account balance of each partner after the liquidation of assets and the payment of creditors.
2. Assume that any partner with a deficit agrees to pay cash to the partnership to cover the deficit. Prepare the journal entries on July 31 to record (a) the cash receipt from the deficient partner(s) and (b) the final disbursement of cash to the partners.
3. Assume that any partner with a deficit is not able to reimburse the partnership. Prepare journal entries (a) to transfer the deficit of any deficient partners to the other partners and (b) to record the final disbursement of cash to the partners.

**Solution**

1.		<b>Danica</b>	<b>Gaga</b>	<b>Oprah</b>	<b>Total</b>
	Initial investments .....	\$ 190	\$ 340	\$ 550	\$ 1,080
	Allocation of liquidation share:				
	(\$1,080 - \$80) using 1:1:2 .....	(250)	(250)	(500)	(1,000)
	Capital balances .....	<u>\$ (60)</u>	<u>\$ 90</u>	<u>\$ 50</u>	<u>\$ 80</u>

2. a.	July 31	Cash .....	60	
		Danica, Capital .....		60
		<i>To record payment of deficiency.</i>		

**NEED-TO-KNOW 12-5**

**Partnership Liquidation P4**

**b.**

July 31	Gaga, Capital . . . . .	90	
	Oprah, Capital . . . . .	50	
	Cash . . . . .		140
	<i>To distribute remaining cash.</i>		

**3. a.**

July 31	Gaga, Capital (\$60 × 1/3) . . . . .	20	
	Oprah, Capital (\$60 × 2/3) . . . . .	40	
	Danica, Capital . . . . .		60
	<i>To transfer deficiency to other partners (1:2).</i>		

**b.**

July 31	Gaga, Capital . . . . .	70	
	Oprah, Capital . . . . .	10	
	Cash . . . . .		80

## GLOBAL VIEW

Partnership accounting according to U.S. GAAP is similar, but not identical, to that under IFRS. This section discusses broad differences in partnership accounting, organization, admission, withdrawal, and liquidation.

Both U.S. GAAP and IFRS include broad and similar guidance for partnership accounting. Further, partnership organization is similar worldwide; however, different legal and tax systems dictate different implications and motivations for how a partnership is effectively set up.

The accounting for partnership admission, withdrawal, and liquidation is likewise similar worldwide. Specifically, procedures for admission, withdrawal, and liquidation depend on the partnership agreements constructed by all parties involved. However, different legal and tax systems impact those agreements and their implications to the parties.

**problem:**  
decomposing food fills up 1/5 of all landfill space.

**solution:**  
We partner with retailers like Costco to collect and recycle their food waste into organic compost.

**problem:**  
rotting food creates methane gas, 20X more harmful to the environment than carbon dioxide.

**solution:**  
Composted food waste reduces the methane gas production by half (aerobic composting).

**problem:**  
less than 5% of all uneaten food is recycled

**solution:**  
We've recycled over 60 million pounds (and counting) of food waste into organic garden products.

Courtesy of Eco-Scraps.  
Source: <http://ecoscraps.com/our-mission/>

**Sustainability and Accounting** The founders, Daniel Blake and Craig Martineau of **EcoScraps**, as introduced in this chapter's opening feature, assert that their company's focus involves a sustainable initiative. Daniel explains: "EcoScraps focuses on the full circle of organics management. Everything from the measuring of food waste to recycling food waste to composting the food waste and then selling the composted food waste back into retail outlets. We can come up with innovative solutions that take this waste and recycle it into useful products." Their sustainable mission is graphically portrayed on their website using the image shown in the margin.

## Decision Analysis

### Partner Return on Equity

**A1** Compute partner return on equity and use it to evaluate partnership performance.

An important role of partnership financial statements is to aid current and potential partners in evaluating partnership success compared with other opportunities. One measure of this success is the **partner return on equity** ratio:

$$\text{Partner return on equity} = \frac{\text{Partner net income}}{\text{Average partner equity}}$$

This measure is separately computed for each partner. To illustrate, Exhibit 12.4 reports selected data from the **Boston Celtics LP**. The return on equity for the *total* partnership is computed as  $\$216 / [(\$85 + \$253) / 2] = 127.8\%$ . However, return on equity is quite different across the partners. For example, the **Boston Celtics LP I** partner return on equity is computed as  $\$44 / [(\$122 + \$166) / 2] = 30.6\%$ , whereas the **Celtics LP** partner return on equity is computed as  $\$111 / [(\$270 + \$333) / 2] = 36.8\%$ . Partner return on equity provides *each* partner an assessment of its return on its equity invested in the partnership. A specific partner

**EXHIBIT 12.4**Selected Data from  
Boston Celtics LP

(\$ thousands)	Total*	Boston Celtics LP I	Boston Celtics LP II	Celtics LP
Beginning-year balance .....	\$ 85	\$122	\$(307)	\$270
Net income (loss) for year .....	216	44	61	111
Cash distribution .....	(48)	—	—	(48)
Ending-year balance .....	<u>\$253</u>	<u>\$166</u>	<u>\$(246)</u>	<u>\$333</u>
<b>Partner return on equity .....</b>	<b>127.8%</b>	<b>30.6%</b>	<b>n.a.</b>	<b>36.8%</b>

\* Totals may not add up due to rounding.

often uses this return to decide whether additional investment or withdrawal of resources is best for that partner. Exhibit 12.4 reveals that the year shown produced good returns for all partners (the **Boston Celtics LP II** return is not computed because its average equity is negative due to an unusual and large distribution in the prior year).

The following transactions and events affect the partners' capital accounts in several successive partnerships. Prepare a table with six columns, one for each of the five partners along with a total column to show the effects of the following events on the five partners' capital accounts.

**NEED-TO-KNOW****COMPREHENSIVE****Part 1**

- 4/13/2013 Ries and Bax create R&B Company. Each invests \$10,000, and they agree to share income and losses equally.
- 12/31/2013 R&B Co. earns \$15,000 in income for its first year. Ries withdraws \$4,000 from the partnership, and Bax withdraws \$7,000.
- 1/1/2014 Royce is made a partner in RB&R Company after contributing \$12,000 cash. The partners agree that a 10% interest allowance will be given on each partner's beginning-year capital balance. In addition, Bax and Royce are to receive \$5,000 salary allowances. The remainder of the income or loss is to be divided evenly.
- 12/31/2014 The partnership's income for the year is \$40,000, and withdrawals at year-end are Ries, \$5,000; Bax, \$12,500; and Royce, \$11,000.
- 1/1/2015 Ries sells her interest for \$20,000 to Murdock, whom Bax and Royce accept as a partner in the new BR&M Co. Income or loss is to be shared equally after Bax and Royce receive \$25,000 salary allowances.
- 12/31/2015 The partnership's income for the year is \$35,000, and year-end withdrawals are Bax, \$2,500, and Royce, \$2,000.
- 1/1/2016 Elway is admitted as a partner after investing \$60,000 cash in the new Elway & Associates partnership. He is given a 50% interest in capital after the other partners transfer \$3,000 to his account from each of theirs. A 20% interest allowance (on the beginning-year capital balances) will be used in sharing any income or loss, there will be no salary allowances, and Elway will receive 40% of the remaining balance—the other three partners will each get 20%.
- 12/31/2016 Elway & Associates earns \$127,600 in income for the year, and year-end withdrawals are Bax, \$25,000; Royce, \$27,000; Murdock, \$15,000; and Elway, \$40,000.
- 1/1/2017 Elway buys out Bax and Royce for the balances of their capital accounts after a revaluation of the partnership assets. The revaluation gain is \$50,000, which is divided using a 1:1:1:2 ratio (Bax:Royce:Murdock:Elway). Elway pays the others from personal funds. Murdock and Elway will share income on a 1:9 ratio.
- 2/28/2017 The partnership earns \$10,000 of income since the beginning of the year. Murdock retires and receives partnership cash equal to her capital balance. Elway takes possession of the partnership assets in his own name, and the partnership is dissolved.

**Part 2**

Journalize the events affecting the partnership for the year ended December 31, 2014.

**PLANNING THE SOLUTION**

- Evaluate each transaction's effects on the capital accounts of the partners.
- Each time a new partner is admitted or a partner withdraws, allocate any bonus based on the income-or-loss-sharing agreement.

- Each time a new partner is admitted or a partner withdraws, allocate subsequent net income or loss in accordance with the new partnership agreement.
- Prepare entries to (1) record Royce's initial investment; (2) record the allocation of interest, salaries, and remainder; (3) show the cash withdrawals from the partnership; and (4) close the withdrawal accounts on December 31, 2014.

## SOLUTION

### Part 1

Event	Ries	Bax	Royce	Murdock	Elway	Total
<b>4/13/2013</b>						
Initial investment .....	\$10,000	\$10,000				\$ 20,000
<b>12/31/2013</b>						
Income (equal) .....	7,500	7,500				15,000

## Summary

**C1 Identify characteristics of partnerships and similar organizations.** Partnerships are voluntary associations, involve partnership agreements, have limited life, are not subject to income tax, include mutual agency, and have unlimited liability. Organizations that combine selected characteristics of partnerships and corporations include limited partnerships, limited liability partnerships, S corporations, and limited liability companies.

**A1 Compute partner return on equity and use it to evaluate partnership performance.** Partner return on equity provides each partner an assessment of his or her return on equity invested in the partnership.

**P1 Prepare entries for partnership formation.** A partner's initial investment is recorded at the market value of the assets contributed to the partnership.

**P2 Allocate and record income and loss among partners.** A partnership agreement should specify how to allocate partnership income or loss among partners. Allocation can be based on a stated ratio, capital balances, or salary and interest

allowances to compensate partners for differences in their service and capital contributions.

**P3 Account for the admission and withdrawal of partners.** When a new partner buys a partnership interest directly from one or more existing partners, the amount of cash paid from one partner to another does not affect the partnership total recorded equity. When a new partner purchases equity by investing additional assets in the partnership, the new partner's investment can yield a bonus either to existing partners or to the new partner. The entry to record a withdrawal can involve payment from either (1) the existing partners' personal assets or (2) partnership assets. The latter can yield a bonus to either the withdrawing or remaining partners.

**P4 Prepare entries for partnership liquidation.** When a partnership is liquidated, losses and gains from selling partnership assets are allocated to the partners according to their income-and-loss-sharing ratio. If a partner's capital account has a deficiency that the partner cannot pay, the other partners share the deficit according to their relative income-and-loss-sharing ratio.

### Guidance Answers to Decision Ethics

**Financial Planner** The partnership agreement apparently fails to mention liabilities or use the term *net assets*. To give the estate one-third of total assets is not fair to the remaining partners because if the partner had lived and the partners had decided to liquidate, the liabilities would need to be paid out of assets before any liquidation. Also, a settlement based on the

deceased partner's recorded equity would fail to recognize excess of current value over book value. This value increase would be realized if the partnership were liquidated. A fair settlement would seem to be a payment to the estate for the balance of the deceased partner's equity based on the *current value of net assets*.

## Key Terms

<b>C corporation</b>	<b>Limited partners</b>	<b>Partnership contract</b>
<b>General partner</b>	<b>Limited partnership</b>	<b>Partnership liquidation</b>
<b>General partnership</b>	<b>Mutual agency</b>	<b>S corporation</b>
<b>Limited liability company (LLC)</b>	<b>Partner return on equity</b>	<b>Statement of partners' equity</b>
<b>Limited liability partnership</b>	<b>Partnership</b>	<b>Unlimited liability</b>

## Multiple Choice Quiz

Answers at end of chapter

- Stokely and Leder are forming a partnership. Stokely invests a building that has a market value of \$250,000; and the partnership assumes responsibility for a \$50,000 note secured by a mortgage on that building. Leder invests \$100,000 cash. For the partnership, the amounts recorded for the building and for Stokely's Capital account are these:
  - Building, \$250,000; Stokely, Capital, \$250,000.
  - Building, \$200,000; Stokely, Capital, \$200,000.
  - Building, \$200,000; Stokely, Capital, \$100,000.
  - Building, \$200,000; Stokely, Capital, \$250,000.
  - Building, \$250,000; Stokely, Capital, \$200,000.
- Katherine, Alliah, and Paulina form a partnership. Katherine contributes \$150,000, Alliah contributes \$150,000, and Paulina contributes \$100,000. Their partnership agreement calls for the income or loss division to be based on the ratio of capital invested. If the partnership reports income of \$90,000 for its first year of operations, what amount of income is credited to Paulina's capital account?
  - \$22,500
  - \$25,000
  - \$45,000
  - \$30,000
  - \$90,000
- Jamison and Blue form a partnership with capital contributions of \$600,000 and \$800,000, respectively. Their partnership agreement calls for Jamison to receive \$120,000 per year in salary. Also, each partner is to receive an interest allowance equal to 10% of the partner's beginning capital contributions, with any remaining income or loss divided equally. If net income for its initial year is \$270,000, then Jamison's and Blue's respective shares are
  - \$135,000; \$135,000.
  - \$154,286; \$115,714.
  - \$120,000; \$150,000.
  - \$185,000; \$85,000.
  - \$85,000; \$185,000.
- Hansen and Fleming are partners and share equally in income or loss. Hansen's current capital balance in the partnership is \$125,000 and Fleming's is \$124,000. Hansen and Fleming agree to accept Black with a 20% interest. Black invests \$75,000 in the partnership. The bonus granted to Hansen and Fleming equals
  - \$13,000 each.
  - \$5,100 each.
  - \$4,000 each.
  - \$5,285 to Hansen; \$4,915 to Fleming.
  - \$0; Hansen and Fleming grant a bonus to Black.
- Mee Su is a partner in Hartford Partners, LLC. Her partnership capital balance at the beginning of the current year was \$110,000, and her ending balance was \$124,000. Her share of the partnership income is \$10,500. What is her partner return on equity?
  - 8.97%
  - 1060.00%
  - 9.54%
  - 1047.00%
  - 8.47%

 Icon denotes assignments that involve decision making.

## Discussion Questions

-  If a partnership contract does not state the period of time the partnership is to exist, when does the partnership end?
- Apple** began as a partnership. What does the term *mutual agency* mean when applied to a partnership? **APPLE**
- How does a general partnership differ from a limited partnership?
-  Can partners limit the right of a partner to commit their partnership to contracts? Would such an agreement be binding (a) on the partners and (b) on outsiders?
-  Assume that Amey and Lacey are partners. Lacey dies, and her son claims the right to take his mother's place in the partnership. Does he have this right? Why or why not?
-  Assume that the Barnes and Ardmore partnership agreement provides for a two-third/one-third sharing of income but says nothing about losses. The first year of partnership operation resulted in a loss, and Barnes argues that the loss should be shared equally because the partnership agreement said nothing about sharing losses. Is Barnes correct? Explain.
- Allocation of partnership income among the partners appears on what financial statement?
- What does the term *unlimited liability* mean when it is applied to partnership members?
-  George, Burton, and Dillman have been partners for three years. The partnership is being dissolved. George is

leaving the firm, but Burton and Dillman plan to carry on the business. In the final settlement, George places a \$75,000 salary claim against the partnership. He contends that he has a claim for a salary of \$25,000 for each year because he devoted all of his time for three years to the affairs of the partnership. Is his claim valid? Why or why not?

10.  Kay, Kat, and Kim are partners. In a liquidation, Kay's share of partnership losses exceeds her capital account balance. Moreover, she is unable to meet the deficit from her

personal assets, and her partners shared the excess losses. Does this relieve Kay of liability?

11. After all partnership assets have been converted to cash and all liabilities paid, the remaining cash should equal the sum of the balances of the partners' capital accounts. Why?
12. Assume a partner withdraws from a partnership and receives assets of greater value than the book value of his equity. Should the remaining partners share the resulting reduction in their equities in the ratio of their relative capital balances or according to their income-and-loss-sharing ratio?

Amy and Lester are partners in operating a store. Without consulting Amy, Lester enters into a contract to purchase merchandise for the store. Amy contends that she did not authorize the order and refuses to pay for it. The vendor sues the partners for the contract price of the merchandise.

- a. Must the partnership pay for the merchandise? Why?
- b. Does your answer to part *a* differ if Amy and Lester are partners in a public accounting firm? Explain.

## QUICK STUDY

### QS 12-1

Partnership liability

C1

Fancher organized a limited partnership and is the only general partner. Carley invested \$20,000 in the partnership and was admitted as a limited partner with the understanding that she would receive 10% of the profits. After two unprofitable years, the partnership ceased doing business. At that point, partnership liabilities were \$85,000 larger than partnership assets. How much money can the partnership's creditors obtain from Carley's personal assets to satisfy the unpaid partnership debts?

### QS 12-2

Liability in limited partnerships

P1

Ann Stolton and Susie Bright are partners in a business they started two years ago. The partnership agreement states that Stolton should receive a salary allowance of \$15,000 and that Bright should receive a \$20,000 salary allowance. Any remaining income or loss is to be shared equally. Determine each partner's share of the current year's net income of \$52,000.

### QS 12-3

Partnership income allocation P2

Blake and Matthew are partners who agree that Blake will receive a \$100,000 salary allowance and that any remaining income or loss will be shared equally. If Matthew's capital account is credited for \$2,000 as his share of the net income in a given period, how much net income did the partnership earn in that period?

### QS 12-4

Partnership income allocation P2

Jules and Johnson are partners, each with \$40,000 in their partnership capital accounts. Kwon is admitted to the partnership by investing \$40,000 cash. Make the entry to show Kwon's admission to the partnership.

### QS 12-5

Admission of a partner

P3

Stein agrees to pay Choi and Amal \$10,000 each for a one-third ( $33\frac{1}{3}\%$ ) interest in the Choi and Amal partnership. Immediately prior to Stein's admission, each partner had a \$30,000 capital balance. Make the journal entry to record Stein's purchase of the partners' interest.

### QS 12-6

Partner admission through purchase of interest P3

The Field, Brown & Snow partnership was begun with investments by the partners as follows: Field, \$131,250; Brown, \$165,000; and Snow, \$153,750. The operations did not go well, and the partners eventually decided to liquidate the partnership, sharing all losses equally. On May 31, after all assets were converted to cash and all creditors were paid, only \$45,000 in partnership cash remained.

### QS 12-7

Liquidation of partnership

P4

1. Compute the capital account balance of each partner after the liquidation of assets and the payment of creditors.
2. Assume that any partner with a deficit agrees to pay cash to the partnership to cover the deficit. Present the journal entries on May 31 to record (a) the cash receipt from the deficient partner(s) and (b) the final disbursement of cash to the partners.
3. Assume that any partner with a deficit is not able to reimburse the partnership. Present journal entries (a) to transfer the deficit of any deficient partners to the other partners and (b) to record the final disbursement of cash to the partners.

**Check** (1) Field, \$(3,750)

**QS 12-8**

Partner return on equity

Howe and Duley’s company is organized as a partnership. At the prior year-end, partnership equity totaled \$150,000 (\$100,000 from Howe and \$50,000 from Duley). For the current year, partnership net income is \$24,990 (\$20,040 allocated to Howe and \$4,950 allocated to Duley), and year-end total partnership equity is \$200,000 (\$140,000 from Howe and \$60,000 from Duley). Compute the total partnership return on equity *and* the individual partner return on equity ratios.

**EXERCISES**

Next to the following list of eight characteristics of business organizations, enter a brief description of how each characteristic applies to general partnerships.

**Exercise 12-1**

Characteristics of partnerships

Characteristic	Application to General Partnerships
1. Life .....	
2. Owners' liability .....	
3. Legal status .....	
4. Tax status of income .....	
5. Owners' authority .....	
6. Ease of formation .....	
7. Transferability of ownership .....	
8. Ability to raise large amounts of capital .....	

**Exercise 12-2**

Forms of organization

For each of the following separate cases, recommend a form of business organization. With each recommendation, explain how business income would be taxed if the owners adopt the form of organization recommended. Also list several advantages that the owners will enjoy from the form of business organization that you recommend.

- a. Sharif, Henry, and Korb are recent college graduates in computer science. They want to start a website development company. They all have college debts and currently do not own any substantial computer equipment needed to get the company started.
- b. Dr. Ward and Dr. Liu are recent graduates from medical residency programs. Both are family practice physicians and would like to open a clinic in an underserved rural area. Although neither has any funds to bring to the new venture, an investor has expressed interest in making a loan to provide start-up funds for their practice.
- c. Munson has been out of school for about five years and has become quite knowledgeable about the residential real estate market. He would like to organize a company that buys and sells real estate. Munson believes he has the expertise to manage the company but needs funds to invest in residential property.

**Exercise 12-3**

Journalizing partnership formation

Angela Moss and Autumn Barber organize a partnership on January 1. Moss’s initial net investment is \$75,000, consisting of cash (\$17,500), equipment (\$82,500), and a note payable reflecting a bank loan for the new business (\$25,000). Barber’s initial investment is cash of \$31,250. These amounts are the values agreed on by both partners. Prepare journal entries to record (1) Moss’s investment and (2) Barber’s investment.

**Exercise 12-4**

Income allocation in a partnership

**Check** Plan 3, Kramer, \$84,000

Kramer and Knox began a partnership by investing \$60,000 and \$80,000, respectively. During its first year, the partnership earned \$160,000. Prepare calculations showing how the \$160,000 income should be allocated to the partners under each of the following three separate plans for sharing income and loss: (1) the partners failed to agree on a method to share income; (2) the partners agreed to share income and loss in proportion to their initial investments (round amounts to the nearest dollar); and (3) the partners agreed to share income by granting a \$50,000 per year salary allowance to Kramer, a \$40,000 per year salary allowance to Knox, 10% interest on their initial capital investments, and the remaining balance shared equally.

**Exercise 12-5**

Income allocation in a partnership **P2**

**Check** (2) Kramer, \$(4,400)

Kramer and Knox began a partnership by investing \$60,000 and \$80,000, respectively. The partners agreed to share net income and loss by granting annual salary allowances of \$50,000 to Kramer and \$40,000 to Knox, 10% interest allowances on their investments, and any remaining balance shared equally.

- 1. Determine the partners’ shares of Kramer and Knox given a first-year net income of \$98,800.
- 2. Determine the partners’ shares of Kramer and Knox given a first-year net loss of \$16,800.

On March 1, 2015, Eckert and Kelley formed a partnership. Eckert contributed \$82,500 cash and Kelley contributed land valued at \$60,000 and a building valued at \$100,000. The partnership also assumed responsibility for Kelley's \$92,500 long-term note payable associated with the land and building. The partners agreed to share income as follows: Eckert is to receive an annual salary allowance of \$25,000, both are to receive an annual interest allowance of 10% of their beginning-year capital investment, and any remaining income or loss is to be shared equally. On October 20, 2015, Eckert withdrew \$34,000 cash and Kelley withdrew \$20,000 cash. After the adjusting and closing entries are made to the revenue and expense accounts at December 31, 2015, the Income Summary account had a credit balance of \$90,000.

1. Prepare journal entries to record (a) the partners' initial capital investments, (b) their cash withdrawals, and (c) the December 31 closing of both the Withdrawals and Income Summary accounts.
2. Determine the balances of the partners' capital accounts as of December 31, 2015.

**Exercise 12-6**  
Journalizing partnership transactions  
P2

**Check** (2) Kelley, \$79,250

The partners in the Biz Partnership have agreed that partner Mandy may sell her \$100,000 equity in the partnership to Brittney, for which Brittney will pay Mandy \$85,000. Present the partnership's journal entry to record the sale of Mandy's interest to Brittney on September 30.

**Exercise 12-7**  
Sale of partnership interest P3

The Struter Partnership has total partners' equity of \$510,000, which is made up of Main, Capital, \$400,000, and Frist, Capital, \$110,000. The partners share net income and loss in a ratio of 80% to Main and 20% to Frist. On November 1, Madison is admitted to the partnership and given a 15% interest in equity and a 15% share in any income and loss. Prepare the journal entry to record the admission of Madison under each of the following separate assumptions: Madison invests cash of (1) \$90,000; (2) \$120,000; and (3) \$80,000.

**Exercise 12-8**  
Admission of new partner  
P3

Hunter, Folgers, and Tulip have been partners while sharing net income and loss in a 5:3:2 ratio. On January 31, the date Tulip retires from the partnership, the equities of the partners are Hunter, \$150,000; Folgers, \$90,000; and Tulip, \$60,000. Present journal entries to record Tulip's retirement under each of the following separate assumptions: Tulip is paid for her equity using partnership cash of (1) \$60,000; (2) \$80,000; and (3) \$30,000.

**Exercise 12-9**  
Retirement of partner  
P3

Turner, Roth, and Lowe are partners who share income and loss in a 1:4:5 ratio. After lengthy disagreements among the partners and several unprofitable periods, the partners decide to liquidate the partnership. Immediately before liquidation, the partnership balance sheet shows total assets, \$126,000; total liabilities, \$78,000; Turner, Capital, \$2,500; Roth, Capital, \$14,000; and Lowe, Capital, \$31,500. The cash proceeds from selling the assets were sufficient to repay all but \$28,000 to the creditors.

- a. Calculate the loss from selling the assets.
- b. Allocate the loss from part a to the partners.
- c. Determine how much, if any, each partner should contribute to the partnership to cover any remaining capital deficiency.

**Exercise 12-10**  
Liquidation of partnership  
P4

**Check** (b) Lowe, Capital after allocation, \$(6,500)

Assume that the Turner, Roth, and Lowe partnership of Exercise 12-10 is a limited partnership. Turner and Roth are general partners and Lowe is a limited partner. Determine how much, if any, each partner should contribute to the partnership to cover any remaining capital deficiency. (Round amounts to the nearest dollar.)

**Exercise 12-11**  
Liquidation of limited partnership P4

Rugged Sports Enterprises LP is organized as a limited partnership consisting of two individual partners: Hockey LP and Football LP. Both partners separately operate a minor league hockey team and a semipro football team. Compute partner return on equity for each limited partnership (and the total) for the year ended June 30, 2015, using the following selected data on partner capital balances from Rugged Sports Enterprises LP.

**Exercise 12-12**  
Partner return on equity  
A1 

	Hockey LP	Football LP	Total
Balance at 6/30/2014 . . . . .	\$189,000	\$ 758,000	\$ 947,000
Annual net income . . . . .	22,208	445,473	467,681
Cash distribution . . . . .	—	(50,000)	(50,000)
Balance at 6/30/2015 . . . . .	<u>\$211,208</u>	<u>\$1,153,473</u>	<u>\$1,364,681</u>

**PROBLEM SET A**

**Problem 12-1A**

Allocating partnership income and loss; sequential years

P2

Irene Watts and John Lyon are forming a partnership to which Watts will devote one-half time and Lyon will devote full time. They have discussed the following alternative plans for sharing income and loss: (a) in the ratio of their initial capital investments, which they have agreed will be \$42,000 for Watts and \$63,000 for Lyon; (b) in proportion to the time devoted to the business; (c) a salary allowance of \$6,000 per month to Lyon and the balance in accordance with the ratio of their initial capital investments; or (d) a salary allowance of \$6,000 per month to Lyon, 10% interest on their initial capital investments, and the balance shared equally. The partners expect the business to perform as follows: year 1, \$36,000 net loss; year 2, \$90,000 net income; and year 3, \$150,000 net income.

**Required**

Prepare three tables with the following column headings.

Income (Loss) Sharing Plan	Year _____		
	Calculations	Watts	Lyon

Complete the tables, one for each of the first three years, by showing how to allocate partnership income or loss to the partners under each of the four plans being considered. (Round answers to the nearest whole dollar.)

**Check** Plan d, year 1, Lyon's share, \$19,050

**Problem 12-2A**

Allocating partnership income P2

Kara Ries, Tammy Bax, and Joe Thomas invested \$80,000, \$112,000, and \$128,000, respectively, in a partnership. During its first calendar year, the firm earned \$249,000.

**Required**

Prepare the entry to close the firm's Income Summary account as of its December 31 year-end and to allocate the \$249,000 net income to the partners under each of the following separate assumptions:

1. The partners have no agreement on the method of sharing income and loss.
2. The partners agreed to share income and loss in the ratio of their beginning capital investments.
3. The partners agreed to share income and loss by providing annual salary allowances of \$66,000 to Ries, \$56,000 to Bax, and \$80,000 to Thomas; granting 10% interest on the partners' beginning capital investments; and sharing the remainder equally.

**Check** (3) Thomas, Capital, \$97,800

**Problem 12-3A**

Partnership income allocation, statement of partners' equity, and closing entries

P2

Bill Beck, Bruce Beck, and Barb Beck formed the BBB Partnership by making capital contributions of \$67,500, \$262,500, and \$420,000, respectively. They predict annual partnership net income of \$450,000 and are considering the following alternative plans of sharing income and loss: (a) equally; (b) in the ratio of their initial capital investments; or (c) salary allowances of \$80,000 to Bill, \$60,000 to Bruce, and \$90,000 to Barb; interest allowances of 10% on their initial capital investments; and the balance shared as follows: 20% to Bill, 40% to Bruce, and 40% to Barb.

**Required**

1. Prepare a table with the following column headings.

Income (Loss) Sharing Plan	Calculations	Year _____			Total
		Bill	Bruce	Barb	

Use the table to show how to distribute net income of \$450,000 for the calendar year under each of the alternative plans being considered. (Round answers to the nearest whole dollar.)

2. Prepare a statement of partners' equity showing the allocation of income to the partners assuming they agree to use plan (c), that income earned is \$209,000, and that Bill, Bruce, and Barb withdraw \$34,000, \$48,000, and \$64,000, respectively, at year-end.
3. Prepare the December 31 journal entry to close Income Summary assuming they agree to use plan (c) and that net income is \$209,000. Also close the withdrawals accounts.

**Check** (2) Barb, Ending Capital, \$449,600

**Part 1.** Meir, Benson, and Lau are partners and share income and loss in a 3:2:5 ratio. The partnership's capital balances are as follows: Meir, \$168,000; Benson, \$138,000; and Lau, \$294,000. Benson decides to withdraw from the partnership, and the partners agree not to have the assets revalued upon Benson's retirement. Prepare journal entries to record Benson's February 1 withdrawal from the partnership under each of the following separate assumptions: Benson (a) sells her interest to North for \$160,000 after Meir and Lau approve the entry of North as a partner; (b) gives her interest to a son-in-law, Schmidt, and thereafter Meir and Lau accept Schmidt as a partner; (c) is paid \$138,000 in partnership cash for her equity; (d) is paid \$214,000 in partnership cash for her equity; and (e) is paid \$30,000 in partnership cash plus equipment recorded on the partnership books at \$70,000 less its accumulated depreciation of \$23,200.

**Problem 12-4A**  
Partner withdrawal and admission **P3**

**Part 2.** Assume that Benson does not retire from the partnership described in part 1. Instead, Rhode is admitted to the partnership on February 1 with a 25% equity. Prepare journal entries to record Rhode's entry into the partnership under each of the following separate assumptions: Rhode invests (a) \$200,000; (b) \$145,000; and (c) \$262,000.

**Check** (1a) Cr. Lau, Capital, \$38,250  
(2c) Cr. Benson, Capital, \$9,300

Kendra, Cogley, and Mei share income and loss in a 3:2:1 ratio. The partners have decided to liquidate their partnership. On the day of liquidation their balance sheet appears as follows.

**Problem 12-5A**  
Liquidation of a partnership **P4**

KENDRA, COGLEY, AND MEI Balance Sheet May 31			
Assets		Liabilities and Equity	
Cash .....	\$180,800	Accounts payable .....	\$245,500
Inventory .....	537,200	Kendra, Capital .....	93,000
		Cogley, Capital .....	212,500
		Mei, Capital .....	167,000
Total assets .....	<u>\$718,000</u>	Total liabilities and equity .....	<u>\$718,000</u>

**Required**

Prepare journal entries for (a) the sale of inventory, (b) the allocation of its gain or loss, (c) the payment of liabilities at book value, and (d) the distribution of cash in each of the following separate cases: Inventory is sold for (1) \$600,000; (2) \$500,000; (3) \$320,000 and any partners with capital deficits pay in the amount of their deficits; and (4) \$250,000 and the partners have no assets other than those invested in the partnership. (Round to the nearest dollar.)

**Check** (4) Cash distribution: Mei, \$102,266

Maria Bell and J.R. Green are forming a partnership to which Bell will devote one-third time and Green will devote full time. They have discussed the following alternative plans for sharing income and loss: (a) in the ratio of their initial capital investments, which they have agreed will be \$104,000 for Bell and \$156,000 for Green; (b) in proportion to the time devoted to the business; (c) a salary allowance of \$4,000 per month to Green and the balance in accordance with the ratio of their initial capital investments; or (d) a salary allowance of \$4,000 per month to Green, 10% interest on their initial capital investments, and the balance shared equally. The partners expect the business to perform as follows: year 1, \$36,000 net loss; year 2, \$76,000 net income; and year 3, \$188,000 net income.

**PROBLEM SET B**

**Problem 12-1B**  
Allocating partnership income and loss; sequential years **P2**

**Required**

Prepare three tables with the following column headings.

Income (Loss) Sharing Plan	Year _____		
	Calculations	Bell	Green

Complete the tables, one for each of the first three years, by showing how to allocate partnership income or loss to the partners under each of the four plans being considered. (Round answers to the nearest whole dollar.)

**Check** Plan d, year 1, Green's share, \$8,600

**Problem 12-2B**

Allocating partnership income

P2

Mark Albin, Roland Peters, and Sam Ramsey invested \$164,000, \$98,400, and \$65,600, respectively, in a partnership. During its first calendar year, the firm earned \$270,000.

**Required**

Prepare the entry to close the firm's Income Summary account as of its December 31 year-end and to allocate the \$270,000 net income to the partners under each of the following separate assumptions. (Round answers to whole dollars.)

1. The partners have no agreement on the method of sharing income and loss.
2. The partners agreed to share income and loss in the ratio of their beginning capital investments.
3. The partners agreed to share income and loss by providing annual salary allowances of \$96,000 to Albin, \$72,000 to Peters, and \$50,000 to Ramsey; granting 10% interest on the partners' beginning capital investments; and sharing the remainder equally.

**Check** (3) Ramsey, Capital, \$62,960

**Problem 12-3B**

Partnership income allocation, statement of partners' equity, and closing entries

P2

Sally Cook, Lin Xi, and Ken Schwartz formed the CXS Partnership by making capital contributions of \$144,000, \$216,000, and \$120,000, respectively. They predict annual partnership net income of \$240,000 and are considering the following alternative plans of sharing income and loss: (a) equally; (b) in the ratio of their initial capital investments; or (c) salary allowances of \$40,000 to Cook, \$30,000 to Xi, and \$80,000 to Schwartz; interest allowances of 12% on their initial capital investments; and the balance shared equally.

**Required**

1. Prepare a table with the following column headings.

Income (Loss) Sharing Plan	Calculations	Cook	Xi	Schwartz	Total

Use the table to show how to distribute net income of \$240,000 for the calendar year under each of the alternative plans being considered. (Round answers to the nearest whole dollar.)

2. Prepare a statement of partners' equity showing the allocation of income to the partners assuming they agree to use plan (c), that income earned is \$87,600, and that Cook, Xi, and Schwartz withdraw \$18,000, \$38,000, and \$24,000, respectively, at year-end.
3. Prepare the December 31 journal entry to close Income Summary assuming they agree to use plan (c) and that net income is \$87,600. Also close the withdrawals accounts.

**Check** (2) Schwartz, Ending Capital, \$150,400

**Problem 12-4B**

Partner withdrawal and admission

P3

**Part 1.** Gibbs, Cook, and Chan are partners and share income and loss in a 5:1:4 ratio. The partnership's capital balances are as follows: Gibbs, \$606,000; Cook, \$148,000; and Chan, \$446,000. Gibbs decides to withdraw from the partnership, and the partners agree not to have the assets revalued upon Gibbs's retirement. Prepare journal entries to record Gibbs's April 30 withdrawal from the partnership under each of the following separate assumptions: Gibbs (a) sells her interest to Brady for \$250,000 after Cook and Chan approve the entry of Brady as a partner; (b) gives her interest to a daughter-in-law, Cannon, and thereafter Cook and Chan accept Cannon as a partner; (c) is paid \$606,000 in partnership cash for her equity; (d) is paid \$350,000 in partnership cash for her equity; and (e) is paid \$200,000 in partnership cash plus manufacturing equipment recorded on the partnership books at \$538,000 less its accumulated depreciation of \$336,000.

**Part 2.** Assume that Gibbs does not retire from the partnership described in part 1. Instead, Chip is admitted to the partnership on April 30 with a 20% equity. Prepare journal entries to record the entry of Chip under each of the following separate assumptions: Chip invests (a) \$300,000; (b) \$196,000; and (c) \$426,000.

**Check** (1e) Cr. Chan, Capital, \$163,200

**Check** (2c) Cr. Cook, Capital, \$10,080

Lasure, Ramirez, and Toney, who share income and loss in a 2:1:2 ratio, plan to liquidate their partnership. At liquidation, their balance sheet appears as follows.

LASURE, RAMIREZ, AND TONEY			
Balance Sheet			
January 18			
<b>Assets</b>		<b>Liabilities and Equity</b>	
Cash .....	\$348,600	Accounts payable .....	\$342,600
Equipment .....	617,200	Lasure, Capital .....	300,400
		Ramirez, Capital .....	195,800
		Toney, Capital .....	127,000
Total assets .....	<u>\$965,800</u>	Total liabilities and equity .....	<u>\$965,800</u>

**Problem 12-5B**

Liquidation of a partnership

P4

**Required**

Prepare journal entries for (a) the sale of equipment, (b) the allocation of its gain or loss, (c) the payment of liabilities at book value, and (d) the distribution of cash in each of the following separate cases: Equipment is sold for (1) \$650,000; (2) \$530,000; (3) \$200,000 and any partners with capital deficits pay in the amount of their deficits; and (4) \$150,000 and the partners have no assets other than those invested in the partnership. (Round amounts to the nearest dollar.)

**Check** (4) Cash distribution: Lasure, \$73,600

(This serial problem began in Chapter 1 and continues through most of the book. If previous chapter segments were not completed, the serial problem can begin at this point. It is helpful, but not necessary, to use the Working Papers that accompany the book.)

**SERIAL PROBLEM**

Business Solutions

P3

**SP 12** At the start of 2014, Santana Rey is considering adding a partner to her business. She envisions the new partner taking the lead in generating sales of both services and merchandise for Business Solutions. S. Rey's equity in Business Solutions as of January 1, 2014, is reflected in the following capital balance.

S. Rey, Capital .....	\$80,360
-----------------------	----------

**Required**

- S. Rey is evaluating whether the prospective partner should be an equal partner with respect to capital investment and profit sharing (1:1) or whether the agreement should be 4:1 with Rey retaining four-fifths interest with rights to four-fifths of the net income or loss. What factors should she consider in deciding which partnership agreement to offer?
- Prepare the January 1, 2014, journal entry(ies) necessary to admit a new partner to Business Solutions through the purchase of a partnership interest for each of the following two separate cases: (a) 1:1 sharing agreement and (b) 4:1 sharing agreement.
- Prepare the January 1, 2014, journal entry(ies) required to admit a new partner if the new partner invests cash of \$20,090.
- After posting the entry in part 3, what would be the new partner's equity percentage?

**Beyond the Numbers**

**BTN 12-1** Take a step back in time and imagine **Apple** in its infancy as a company. The year is 1976, and Steve Wozniak, Steve Jobs, and Ron Wayne are the organizing partners.

**Required**

- Read the history of Apple from 1976 to 1980 at [http://en.wikipedia.org/wiki/Apple\\_Computer](http://en.wikipedia.org/wiki/Apple_Computer). Identify the founders of the company. The Apple 1 went on sale in July 1976 at what price?
- Apple was originally organized as a partnership, but was later incorporated on January 3, 1977. Its income statement in Appendix A varies in several key ways from what it would look like for a

**REPORTING IN ACTION**

C1

**APPLE**

partnership. Identify at least two ways in which the Apple corporate income statement differs from a partnership income statement. (Apple's original partnership agreement is available at [http://apple2online.com/web\\_documents/apple\\_partnership\\_agreement.pdf](http://apple2online.com/web_documents/apple_partnership_agreement.pdf).)

3. Compare the Apple balance sheet in Appendix A to what a partnership balance sheet would have shown. Identify at least two accounts in the Apple corporate balance sheet that would not appear in a partnership balance sheet.

## COMPARATIVE ANALYSIS

### APPLE GOOGLE

**BTN 12-2** Over the years **Apple** and **Google** have evolved into large corporations. Today it is difficult to imagine them as fledgling start-ups. Research each company's history online.

#### Required

1. In what year was each company first organized/started as a business?
2. In what years did each company have its first public offering of stock?
3. Which stock exchange is each company listed under?
4. What is the total equity for each company?

## ETHICS CHALLENGE

**BTN 12-3** Doctors Mobey, Oak, and Chesterfield have been in a group practice for several years. Mobey and Oak are family practice physicians, and Chesterfield is a general surgeon. Chesterfield receives many referrals for surgery from his family practice partners. Upon the partnership's original formation, the three doctors agreed to a two-part formula to share income. Every month each doctor receives a salary allowance of \$3,000. Additional income is divided according to a percent of patient charges the doctors generate for the month. In the current month, Mobey generated 10% of the billings, Oak 30%, and Chesterfield 60%. The group's income for this month is \$50,000. Chesterfield has expressed dissatisfaction with the income-sharing formula and asks that income be split entirely on patient charge percents.

#### Required

1. Compute the income allocation for the current month using the original agreement.
2. Compute the income allocation for the current month using Chesterfield's proposed agreement.
3. Identify the ethical components of this partnership decision for the doctors.

## COMMUNICATING IN PRACTICE

C1

**BTN 12-4** Assume that you are studying for an upcoming accounting exam with a good friend. Your friend says that she has a solid understanding of general partnerships but is less sure that she understands organizations that combine certain characteristics of partnerships with other forms of business organization. You offer to make some study notes for your friend to help her learn about limited partnerships, limited liability partnerships, S corporations, and limited liability companies. Prepare a one-page set of well-organized, complete study notes on these four forms of business organization.

## TAKING IT TO THE NET

**BTN 12-5** Access the January 14, 2014, filing of the 2013 10-K of **Advanced BioEnergy, LLC** (look for the *unconsolidated statements*, on pages 64–66 of the 10-K filing). This company's business consists of producing ethanol and co-products, including wet, modified, and dried distillers grains and corn oil.

1. Locate its September 30, 2013, balance sheet and list the account titles reported in the equity section of that balance sheet.
2. Locate the members' (partners') equity section of its balance sheet. How many units of partnership are issued and outstanding at September 30, 2013 and 2012?
3. What is the partnership's largest asset and its amount at September 30, 2013?

## TEAMWORK IN ACTION

P2

**BTN 12-6** This activity requires teamwork to reinforce understanding of accounting for partnerships.

#### Required

1. Assume that Baker, Warner, and Rice form the BWR Partnership by making capital contributions of \$200,000, \$300,000, and \$500,000, respectively. BWR predicts annual partnership net income of \$450,000. The partners are considering various plans for sharing income and loss. Assign a different team member to compute how the projected \$450,000 income would be shared under each of the following separate plans:

- a. Shared equally.
  - b. In the ratio of the partners' initial capital investments.
  - c. Salary allowances of \$50,000 to Baker, \$60,000 to Warner, and \$70,000 to Rice, with the remaining balance shared equally.
  - d. Interest allowances of 10% on the partners' initial capital investments, with the remaining balance shared equally.
2. In sequence, each member is to present his or her income-sharing calculations with the team.
  3. As a team, identify and discuss at least one other possible way that income could be shared.

**BTN 12-7** Daniel Blake and Craig Martineau are founding partners of their company, **EcoScraps, LLC**. Assume that Daniel and Craig decide to expand their business with the help of general partners.

**ENTREPRENEURIAL DECISION**

**Required**

1. What *details* should Daniel, Craig, and their future partners specify in the general partnership agreements?
2. What *advantages* should Daniel, Craig, and their future partners be aware of with respect to organizing as a general partnership?
3. What *disadvantages* should Daniel, Craig, and their future partners be aware of with respect to organizing as a general partnership?

**BTN 12-8** Access **Samsung's** website <http://www.samsung.com/us/aboutsamsung/corporateprofile/history06.html> and research the company's history. Also, review its 1938 to 1970 history at <http://en.wikipedia.org/wiki/Samsung>.

**GLOBAL DECISION**

1. Byung-Chull Lee, the founder, organized/started the company in what year? What was the original name?
2. What was the original company's operating focus?
3. Samsung lists its affiliated companies on its website and groups them into five areas. List those five areas.

**Samsung**

**ANSWERS TO MULTIPLE CHOICE QUIZ**

1. e; Capital = \$250,000 – \$50,000
2. a;  $\$90,000 \times [\$100,000 / (\$150,000 + \$150,000 + \$100,000)] = \$22,500$
3. d;
4. b; Total partnership equity = \$125,000 + \$124,000 + \$75,000 = \$324,000  
Equity of Black = \$324,000 × 20% = \$64,800  
Bonus to old partners = \$75,000 – \$64,800 = \$10,200, split equally
5. a;  $\$10,500 / [(\$110,000 + \$124,000) / 2] = \underline{8.97\%}$

	Jamison	Blue	Total
Net income . . . . .			\$ 270,000
Salary allowance . . . . .	\$120,000		(120,000)
Interest allowance . . . . .	60,000	\$80,000	(140,000)
Balance of income . . . . .			10,000
Balance divided equally . . .	5,000	5,000	(10,000)
Totals . . . . .	<u>\$185,000</u>	<u>\$85,000</u>	<u>\$ 0</u>

# chapter 13

# Accounting for Corporations

## Chapter Preview

### COMMON STOCK

- C1** Stock basics
- P1** Issuance at:
  - Par value
  - No-par value
  - Stated value
  - Noncash assets

### DIVIDENDS

- P2** Cash dividends
  - Stock dividends
  - Stock splits

### PREFERRED STOCK

- C2** Issuance
  - Dividend preferences
  - Convertible and callable
  - Rationale

### TREASURY STOCK

- P3** Purchasing treasury stock
  - Reissuing treasury stock
  - Retiring stock

### REPORTING AND ANALYSIS

- C3** Statements of retained earnings and equity
- A1** EPS
- A2** PE ratio
- A3** Dividend yield
- A4** Book value

## Learning Objectives

### CONCEPTUAL

- C1** Identify characteristics of corporations and their organization.
- C2** Explain characteristics of, and distribute dividends between, common and preferred stock.
- C3** Explain the items reported in retained earnings.

### ANALYTICAL

- A1** Compute earnings per share and describe its use.
- A2** Compute price-earnings ratio and describe its use in analysis.
- A3** Compute dividend yield and explain its use in analysis.
- A4** Compute book value and explain its use in analysis.

### PROCEDURAL

- P1** Record the issuance of corporate stock.
- P2** Record transactions involving cash dividends, stock dividends, and stock splits.
- P3** Record purchases and sales of treasury stock and the retirement of stock.

## Open Sesame

HANGZHOU, CHINA—"In 1995 a friend showed me the Internet for the first time," recalls Jack Ma. "We searched the word *beer* . . . [then we] discovered that there was no data about China. We decided to launch a website." Jack never looked back. "My dream was to set up my own e-commerce company," explains Jack. "I gathered 17 people in my apartment and spoke to them for two hours about my vision. Everyone put their money on the table."

Jack then needed a company name. "I was in San Francisco in a coffee shop, and I was thinking *Alibaba* is a good name. Then a waitress came, and I said do you know about Alibaba? And she said yes. I said what do you know about Alibaba, and she said 'Open Sesame.' And I said yes, this is the name! Then I went onto the street and found 30 people and asked them, 'Do you know Alibaba?' People from India, people from Germany, people from Tokyo and China . . . They all knew about Alibaba." Thus, the **Alibaba Group (AlibabaGroup.com)** was born.

The success of Alibaba would not have been possible without good decisions regarding creditor vs. equity financing. To make it happen, the new company had to deal with corporate formation, equity issuance, stock types, retaining earnings, and dividend policies. Jack eventually set up the Alibaba Group as a corporate-type entity. With his structure in place, Jack was

ready to attack the market. "You've got to make your team have value, innovation, and vision," insists Jack. "When you are small, you have to be very focused and rely on your brain."

The success of Alibaba's corporate-type structure and its mix of creditor vs. equity financing brought both opportunities and challenges. Jack explains the empowering of consumers.

"It's customers number one, employees two, and shareholders three," declares Jack. "It's the shareholders who when the crisis comes . . .

ran away. My customers and my people stayed." The challenge is staying the course. "Nobody believed in me," admits Jack. "[Moreover] do not allow your colleagues and employees to work for you. Instead, let them work for a common goal."

There are new challenges on the horizon for Jack. One is effectively leveraging accounting to achieve his current task: issuing Alibaba stock on the NYSE. This demands knowledge of corporate formation, stock types, and equity transactions. Jack's company is setting the stage for potentially the largest initial public offering since Facebook.

Through it all, Jack remains humble. "I call myself 'blind man riding on the back of a blind tiger.'"

*"Think about what social problem you could solve"*

— Jack Ma

## CORPORATE FORM OF ORGANIZATION

### C1

Identify characteristics of corporations and their organization.

A **corporation** is an entity created by law that is separate from its owners. It has most of the rights and privileges granted to individuals. Owners of corporations are called *stockholders* or *shareholders*. Corporations can be separated into two types. A *privately held* (or *closely held*) corporation does not offer its stock for public sale and usually has few stockholders. A *publicly held* corporation offers its stock for public sale and can have thousands of stockholders. *Public sale* usually refers to issuance of stock and trading on an organized stock market.

### Characteristics of Corporations

Corporations represent an important type of organization. Their unique characteristics offer advantages and disadvantages.

#### Advantages of Corporate Form

- **Separate legal entity:** A corporation conducts its affairs with the same rights, duties, and responsibilities of a person. It takes actions through its agents, who are its officers and managers.
- **Limited liability of stockholders:** Stockholders are liable for neither corporate acts nor corporate debt.
- **Transferable ownership rights:** The transfer of shares from one stockholder to another usually has no effect on the corporation or its operations except when this causes a change in the directors who control or manage the corporation.
- **Continuous life:** A corporation's life continues indefinitely because it is not tied to the physical lives of its owners.
- **Lack of mutual agency for stockholders:** A corporation acts through its agents, who are its officers and managers. Stockholders, who are not its officers and managers, do not have the power to bind the corporation to contracts—referred to as *lack of mutual agency*.
- **Ease of capital accumulation:** Buying stock is attractive to investors because (1) stockholders are not liable for the corporation's acts and debts, (2) stocks usually are transferred easily, (3) the life of the corporation is unlimited, and (4) stockholders are not corporate agents. These advantages enable corporations to accumulate large amounts of capital from the combined investments of many stockholders.

#### Disadvantages of Corporate Form

- **Government regulation:** A corporation must meet requirements of a state's incorporation laws, which subject the corporation to state regulation and control. Proprietorships and partnerships avoid many of these regulations and governmental reports.
- **Corporate taxation:** Corporations are subject to the same property and payroll taxes as proprietorships and partnerships plus *additional* taxes. The most burdensome of these are federal and state income taxes that together can take 40% or more of corporate pretax income. Moreover, corporate income is usually taxed a second time as part of stockholders' personal income when they receive cash distributed as dividends. This is called *double taxation*. (Dividends are normally taxed at the individual's income tax rate; for "qualified" dividends, the tax rate is 0%, 15%, or 20%, depending on the individual's tax bracket.)

**Point:** The *business entity assumption* requires a corporation to be accounted for separately from its owners (shareholders).

**Point:** Proprietorships and partnerships are not subject to income taxes. Their income is taxed as the personal income of their owners.

**Point:** Double taxation is less severe when a corporation's owner-manager collects a salary that is taxed only once as part of his or her personal income. At year-end, many small corporations distribute *bonuses* to owner-managers equal to the corporation's income. This reduces corporate income to \$0 and avoids double taxation.

### Decision Insight

**Stock Financing** Mark Zuckerberg took his company, **Facebook**, public by issuing its first shares on the Nasdaq exchange. The initial public offering (IPO) of Facebook shares raised billions in equity financing. It also raised the importance of accounting reports versus market hype. The IPO of Facebook shares came eight years after the company was founded by Zuckerberg in his college dorm room. ■

## Corporate Organization and Management

This section describes the incorporation, costs, and management of corporate organizations.

**Incorporation** A corporation is created by obtaining a charter from a state government. A charter application usually must be signed by the prospective stockholders called *incorporators* or *promoters* and then filed with the proper state official. When the application process is complete and fees paid, the charter is issued and the corporation is formed. Investors then purchase the corporation’s stock, meet as stockholders, and elect a board of directors. Directors oversee a corporation’s affairs.

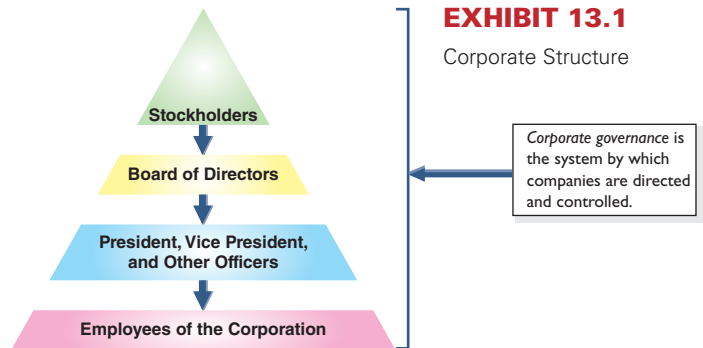

**Point:** A corporation is not required to have an office in its state of incorporation. Delaware is viewed as having favorable corporate laws and about half of all corporations listed on the NYSE are incorporated there.

**Organization Expenses** **Organization expenses** (also called *organization costs*) are the costs to organize a corporation; they include legal fees, promoters’ fees, and amounts paid to obtain a charter. The corporation records (debits) these costs to an expense account called *Organization Expenses*. Organization costs are expensed as incurred because it is difficult to determine the amount and timing of their future benefits.

**Management of a Corporation** The ultimate control of a corporation rests with stockholders who control a corporation by electing its *board of directors*, or simply, *directors*. Each stockholder usually has one vote for each share of stock owned. This control relation is shown in Exhibit 13.1. Directors are responsible for and have final authority for managing corporate activities. A board can act only as a collective body and usually limits its actions to setting general policy.

A corporation usually holds a stockholder meeting at least once a year to elect directors and transact business as its bylaws require. A group of stockholders owning or controlling votes of more than a 50% share of a corporation’s stock can elect the board and control the corporation. Stockholders who do not attend stockholders’ meetings must have an opportunity to delegate their voting rights to an agent by signing a **proxy**, a document that gives a designated agent the right to vote the stock.

Day-to-day direction of corporate business is delegated to executive officers appointed by the board. A corporation’s chief executive officer (CEO) is often its president. Several vice presidents, who report to the president, are commonly assigned specific areas of management responsibility such as finance, production, and marketing. One person often has the dual role of chairperson of the board of directors and CEO. In this case, the president is usually designated the chief operating officer (COO).

### Decision Insight

**Seed Money** Sources for start-up money include (1) “angel” investors such as family, friends, or anyone who believes in a company, (2) employees, investors, and even suppliers who can be paid with stock, and (3) venture capitalists (investors) who have a record of entrepreneurial success. See the National Venture Capital Association ([NVCA.org](http://NVCA.org)) for information. ■

## Stockholders of Corporations

This section explains stockholder rights, stock purchases and sales, and the role of registrars and transfer agents.

**Rights of Stockholders** When investors buy stock, they acquire all *specific* rights the corporation’s charter grants to stockholders. They also acquire *general* rights granted stockholders by the laws of the state in which the company is incorporated. When a corporation has only one

**Point:** Bylaws are guidelines that govern the behavior of individuals employed by and managing the corporation.

**Global:** Some corporate labels are:

Country	Label
United States	Inc.
France	SA
United Kingdom	
Public	PLC
Private	Ltd
Germany & Austria	
Public	AG
Private	GmbH
Sweden & Finland	AB
Italy	SpA
Netherlands	NV
Australia	AG
Mexico	SA
Bahamas	IBC

class of stock, it is identified as **common stock**. State laws vary, but common stockholders usually have the general right to

1. Vote at stockholders' meetings (or register proxy votes electronically).
2. Sell or otherwise dispose of their stock.
3. Purchase their proportional share of any common stock later issued by the corporation. This **preemptive right** protects stockholders' proportionate interest in the corporation. For example, a stockholder who owns 25% of a corporation's common stock has the first opportunity to buy 25% of any new common stock issued.
4. Receive the same dividend, if any, on each common share of the corporation.
5. Share in any assets remaining after creditors and preferred stockholders are paid when, and if, the corporation is liquidated. Each common share receives the same amount.

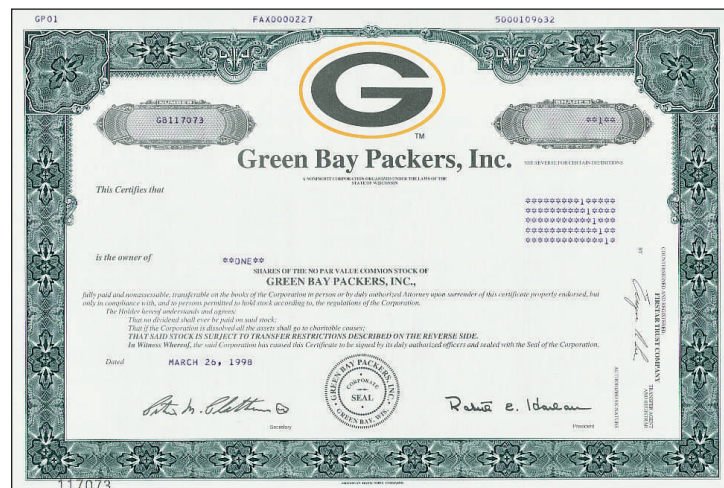

Stockholders also have the right to receive timely financial reports.

**Stock Certificates and Transfer** Investors who buy a corporation's stock sometimes receive a *stock certificate* as proof of share ownership. Many corporations issue only one certificate

### EXHIBIT 13.2

#### Stock Certificate

**Point:** The Green Bay Packers is the only nonprofit, community-owned major league professional sports team. The NFL now prohibits any other teams from becoming community-owned.

Courtesy of JJW Images

for each block of stock purchased. A certificate can be for any number of shares. Exhibit 13.2 shows a stock certificate of the **Green Bay Packers**. A certificate shows the company name, stockholder name, number of shares, and other crucial information. Issuance of certificates is becoming less common. Instead, many stockholders maintain accounts with the corporation or their stockbrokers and never receive actual certificates.

**Registrar and Transfer Agents** If a corporation's stock is traded on a major stock exchange, the corporation must have a registrar and a transfer agent. A *registrar* keeps stockholder records and prepares official lists of stockholders for stockholder meetings and dividend payments. A *transfer agent* assists with purchases and sales of shares by receiving and issuing certificates as necessary. Registrars and transfer agents are usually large banks or trust companies with computer facilities and staff to do this work.

### Decision Insight

**Pricing Stock** A prospectus accompanies a stock's initial public offering (IPO), giving financial information about the company issuing the stock. A prospectus should help answer these questions to price an IPO: (1) Is the underwriter reliable? (2) Is there growth in revenues, profits, and cash flows? (3) What is management's view of operations? (4) Are current owners selling? (5) What are the risks? ■

## Basics of Capital Stock

**Capital stock** is a general term that refers to any shares issued to obtain capital (owner financing). This section introduces terminology and accounting for capital stock.

**Authorized Stock** **Authorized stock** is the number of shares that a corporation's charter allows it to sell. The number of authorized shares usually exceeds the number of shares issued (and outstanding), often by a large amount. (*Outstanding stock* refers to issued stock held by

stockholders.) No formal journal entry is required for stock authorization. A corporation must apply to the state for a change in its charter if it wishes to issue more shares than previously authorized. A corporation discloses the number of shares authorized in the equity section of its balance sheet or notes. **Apple**'s balance sheet reports 1.8 billion common shares authorized as of the start of its 2014 fiscal year.

**Selling (Issuing) Stock** A corporation can sell stock directly or indirectly. To *sell directly*, it advertises its stock issuance to potential buyers. This type of issuance is most common with privately held corporations. To *sell indirectly*, a corporation pays a brokerage house (investment banker) to issue its stock. Some brokerage houses *underwrite* an indirect issuance of stock; that is, they buy the stock from the corporation and take all gains or losses from its resale.

**Market Value of Stock** **Market value per share** is the price at which a stock is bought and sold. Expected future earnings, dividends, growth, and other company and economic factors influence market value. Traded stocks' market values are available daily in newspapers such as *The Wall Street Journal* and online. The current market value of previously issued shares (for example, the price of stock in trades between investors) does not impact the issuing corporation's stockholders' equity.

**Classes of Stock** When all authorized shares have the same rights and characteristics, the stock is called *common stock*. A corporation is sometimes authorized to issue more than one class of stock, including preferred stock and different classes of common stock. **American Greetings**, for instance, has two types of common stock: Class A stock has 1 vote per share and Class B stock has 10 votes per share.

**Par Value Stock** **Par value stock** is stock that is assigned a **par value**, which is an amount assigned per share by the corporation in its charter. For example, **Monster Worldwide, Inc.**'s common stock has a par value of \$0.001. Other commonly assigned par values are \$10, \$5, \$1 and \$0.01. There is no restriction on the assigned par value. In many states, the par value of a stock establishes **minimum legal capital**, which refers to the least amount that the buyers of stock must contribute to the corporation or be subject to paying at a future date. For example, if a corporation issues 1,000 shares of \$10 par value stock, the corporation's minimum legal capital in these states would be \$10,000. Minimum legal capital is intended to protect a corporation's creditors. Since creditors cannot demand payment from stockholders' personal assets, their claims are limited to the corporation's assets and any minimum legal capital. At liquidation, creditor claims are paid before any amounts are distributed to stockholders.

**No-Par Value Stock** **No-par value stock**, or simply *no-par stock*, is stock *not* assigned a value per share by the corporate charter. Its advantage is that it can be issued at any price without the possibility of a minimum legal capital deficiency.

**Stated Value Stock** **Stated value stock** is no-par stock to which the directors assign a "stated" value per share. Stated value per share becomes the minimum legal capital per share in this case.

**Stockholders' Equity** A corporation's equity is known as **stockholders' equity**, also called *shareholders' equity* or *corporate capital*. Stockholders' equity consists of (1) paid-in (or contributed) capital and (2) retained earnings; see Exhibit 13.3. **Paid-in capital** is the total amount of cash and other assets the corporation receives from its stockholders in exchange for its stock. **Retained earnings** is the cumulative net income (and loss) not distributed as dividends to its stockholders.

**Subcategories of Authorized Stock**

The innermost box shows that shares issued decline if a company buys back its previously issued stock.

**Point:** Managers are motivated to set a low par value when minimum legal capital or state issuance taxes are based on par value.

**Point:** Minimum legal capital was intended to protect creditors by requiring a minimum level of net assets.

**Point:** Par, no-par, and stated value do *not* set the stock's market value.

<b>Corporation</b>		Total Paid-In Capital
<b>Common Stock</b>		
	Normal bal.	
<b>Paid-In Capital in Excess of Par</b>		
	Normal bal.	
<b>Retained Earnings</b>		
	Normal bal.	

**EXHIBIT 13.3**

Equity Composition

**Point:** Paid-in capital comes from stock-related transactions, whereas retained earnings comes from operations; if Retained Earnings has a debit balance, it is often titled *Accumulated Deficit*.

**Decision Insight**

**Stock Quote** The **Target** stock quote is interpreted as (left to right): **Hi**, highest price in past 52 weeks; **Lo**, lowest price in past 52 weeks; **Sym**, company exchange symbol;

52 Weeks		Yld		Vol		Net				
Hi	Lo	Sym	Div	%	PE	mil.	Hi	Lo	Close	Chg
58.95	45.28	TGT	1.20	2.07	13.5	668	58.06	57.40	57.63	-0.30

**Div**, dividends paid per share in past year; **Yld %**, dividend divided by closing price; **PE**, stock price per share divided by earnings per share; **Vol mil.**, number (in millions) of shares traded; **Hi**, highest price for the day; **Lo**, lowest price for the day; **Close**, closing price for the day; **Net Chg**, change in closing price from prior day. ■

**QC1**

**COMMON STOCK**

**P1**  
Record the issuance of corporate stock.

Accounting for the issuance of common stock affects only paid-in (contributed) capital accounts; no retained earnings accounts are affected.

**Issuing Par Value Stock**

Par value stock can be issued at par, at a premium (above par), or at a discount (below par). In each case, stock can be exchanged for either cash or noncash assets.

**Issuing Par Value Stock at Par** When common stock is issued at par value, we record amounts for both the asset(s) received and the par value stock issued. To illustrate, the entry to record Dillon Snowboards’s issuance of 30,000 shares of \$10 par value stock for \$300,000 cash on June 5, 2015, follows:

Assets = Liabilities + Equity +300,000                      +300,000 \$10 par value × 30,000 shares	June 5	Cash ..... 300,000 → Common Stock, \$10 Par Value ..... 300,000 <i>Issued 30,000 shares of \$10 par value common stock at par.</i>	300,000  300,000
---	--------	--	------------------------

Exhibit 13.4 shows the stockholders’ equity of Dillon Snowboards at year-end 2015 (its first year of operations) after income of \$65,000 and no dividend payments.

**EXHIBIT 13.4**  
Stockholders’ Equity for Stock Issued at Par

Stockholders’ Equity	
Common Stock—\$10 par value; 50,000 shares authorized; 30,000 shares issued and outstanding .....	\$300,000
Retained earnings .....	65,000
<b>Total stockholders’ equity .....</b>	<b><u>\$365,000</u></b>

**Point:** A premium is the amount by which issue price exceeds par (or stated) value. It is recorded in the “Paid-In Capital in Excess of Par Value, Common Stock” account; also called “Additional Paid-In Capital, Common Stock.”

**Issuing Par Value Stock at a Premium** A premium on stock occurs when a corporation sells its stock for more than par (or stated) value. To illustrate, if Dillon Snowboards issues its \$10 par value common stock at \$12 per share, its stock is sold at a \$2 per share premium. The premium, known as **paid-in capital in excess of par value**, is reported as part of equity; it is not revenue and is not listed on the income statement. The entry to record Dillon Snowboards’s issuance of 30,000 shares of \$10 par value stock for \$12 per share on June 5, 2015, follows:

Assets = Liabilities + Equity +360,000                      +300,000 +60,000 \$10 par value × 30,000 shares [\$12 issue price – \$10 par value] × 30,000 shares	June 5	Cash ..... 360,000 → Common Stock, \$10 Par Value ..... 300,000 → <b>Paid-In Capital in Excess of Par Value, Common Stock</b> ..... <b>60,000</b> <i>Sold and issued 30,000 shares of \$10 par value common stock at \$12 per share.</i>	360,000  300,000  <b>60,000</b>
---	--------	---	---

The Paid-In Capital in Excess of Par Value account is added to the par value of the stock in the equity section of the balance sheet as shown in Exhibit 13.5.

**Point:** The *paid-in capital* terminology is interchangeable with *contributed capital*.

Stockholders' Equity	
Common Stock—\$10 par value; 50,000 shares authorized; 30,000 shares issued and outstanding	\$300,000
<b>Paid-in capital in excess of par value, common stock</b>	<b>60,000</b>
Retained earnings	65,000
<b>Total stockholders' equity</b>	<b>\$425,000</b>

**EXHIBIT 13.5**

Stockholders' Equity for Stock Issued at a Premium

**Issuing Par Value Stock at a Discount** A **discount on stock** occurs when a corporation sells its stock for less than par (or stated) value. Most states prohibit the issuance of stock at a discount. In states that allow stock to be issued at a discount, its buyers usually become contingently liable to creditors for the discount. If stock is issued at a discount, the amount by which issue price is less than par is debited to a *Discount on Common Stock* account, a contra to the Common Stock account, and its balance is subtracted from the par value of stock in the equity section of the balance sheet. This discount is not an expense and does not appear on the income statement.

**Point:** Retained earnings can be negative, reflecting accumulated losses. **Pandora Media** had an accumulated deficit of \$167 million at the start of 2014.

**Issuing No-Par Value Stock**

When no-par stock is issued and is not assigned a stated value, the amount the corporation receives becomes legal capital and is recorded as common stock. This means that the entire proceeds are credited to a no-par stock account. To illustrate, a corporation records its October 20 issuance of 1,000 shares of no-par stock for \$40 cash per share as follows:

Oct. 20	Cash	40,000	
	Common Stock, No-Par Value		40,000
	<i>Issued 1,000 shares of no-par value common stock at \$40 per share.</i>		

Assets = Liabilities + Equity  
 +40,000 = +40,000

$\$40 \text{ issue price} \times 1,000 \text{ no-par shares}$

**Issuing Stated Value Stock**

When no-par stock is issued and assigned a stated value, its stated value becomes legal capital and is credited to a stated value stock account. Assuming that stated value stock is issued at an amount in excess of stated value (the usual case), the excess is credited to Paid-In Capital in Excess of Stated Value, Common Stock, which is reported in the stockholders' equity section. To illustrate, a corporation that issues 1,000 shares of no-par common stock having a stated value of \$40 per share in return for \$50 cash per share records this as follows:

Frequency of Stock Types

Oct. 20	Cash	50,000	
	Common Stock, \$40 Stated Value		40,000
	Paid-In Capital in Excess of Stated Value, Common Stock		10,000
	<i>Issued 1,000 shares of \$40 per share stated value stock at \$50 per share.</i>		

Assets = Liabilities + Equity  
 +50,000 = +40,000 + 10,000

$\$40 \text{ stated value} \times 1,000 \text{ shares}$

$[\$50 \text{ issue price} - \$40 \text{ stated value}] \times 1,000 \text{ shares}$

**Issuing Stock for Noncash Assets**

A corporation can receive assets other than cash in exchange for its stock. (It can also assume liabilities on the assets received such as a mortgage on property received.) The corporation records the assets received at their market values as of the date of the transaction. The stock given in exchange is recorded at its par (or stated) value with any excess recorded in the Paid-In Capital in Excess of Par (or Stated) Value account. (If no-par stock is issued, the stock is

**Point:** Stock issued for non-cash assets should be recorded at the market value of either the stock or the noncash asset, whichever is more clearly determinable.

# DIVIDENDS

This section describes both cash and stock dividend transactions.

**P2** Record transactions involving cash dividends, stock dividends, and stock splits.

## Cash Dividends

The decision to pay cash dividends rests with the board of directors and involves more than evaluating the amounts of retained earnings and cash. The directors, for instance, may decide to keep the cash to invest in the corporation's growth, to meet emergencies, to take advantage of unexpected opportunities, or to pay off debt. Alternatively, many corporations pay cash dividends to their stockholders at regular dates. These cash flows provide a return to investors and almost always affect the stock's market value.

**Accounting for Cash Dividends** Dividend payment involves three important dates: declaration, record, and payment. **Date of declaration** is the date the directors vote to declare and pay a dividend. This creates a legal liability of the corporation to its stockholders. **Date of record** is the future date specified by the directors for identifying those stockholders listed in the corporation's records to receive dividends. The date of record usually follows the date of declaration by at least two weeks. Persons who own stock on the date of record receive dividends. **Date of payment** is the date when the corporation makes payment; it follows the date of record by enough time to allow the corporation to arrange checks, money transfers, or other means to pay dividends.

To illustrate, the entry to record a January 9 declaration of a \$1 per share cash dividend by the directors of Z-Tech, Inc., with 5,000 outstanding shares is

Date of Declaration		
Jan. 9	Retained Earnings .....	5,000
	Common Dividend Payable .....	5,000
	<i>Declared \$1 per common share cash dividend.<sup>1</sup></i>	

Assets = Liabilities + Equity  
 +5,000      -5,000

\$1 per share declared dividend × 5,000 outstanding shares

Common Dividend Payable is a current liability. The date of record for the Z-Tech dividend is January 22. *No formal journal entry is needed on the date of record.* The February 1 date of payment requires an entry to record both the settlement of the liability and the reduction of the cash balance, as follows:

Date of Payment		
Feb. 1	Common Dividend Payable .....	5,000
	Cash .....	5,000
	<i>Paid \$1 per common share cash dividend.</i>	

Assets = Liabilities + Equity  
 -5,000      -5,000

**Deficits and Cash Dividends** A corporation with a debit (abnormal) balance for Retained Earnings is said to have a **retained earnings deficit**, which arises when a company incurs cumulative losses and/or pays more dividends than total earnings from current and prior years. A deficit is reported as a deduction on the balance sheet, as shown in Exhibit 13.6. Most states prohibit a corporation with a deficit from paying a cash dividend to its stockholders. This legal restriction is designed to protect creditors by preventing distribution of assets to stockholders when the company may be in financial difficulty.

**Point:** It is often said a dividend is a distribution of retained earnings, but it is more precise to describe a dividend as a distribution of assets to satisfy stockholder claims.

**Point:** The Retained Earnings Deficit account is also called *Accumulated Deficit*.

<sup>1</sup> An alternative entry is to debit Dividends instead of Retained Earnings. The balance in Dividends is then closed to Retained Earnings at the end of the reporting period. The effect is the same: Retained Earnings is decreased and a Dividend Payable is increased. For simplicity, all assignments in this chapter use the Retained Earnings account to record dividend declarations.

**EXHIBIT 13.6**

Stockholders' Equity with a Deficit

Common stock—\$10 par value, 5,000 shares authorized, issued, and outstanding . . . . .	\$50,000
<b>Retained earnings deficit</b> . . . . .	<b>(6,000)</b>
Total stockholders' equity . . . . .	<u>\$44,000</u>

**Point:** Amazon.com has never declared a cash dividend.

Some state laws allow cash dividends to be paid by returning a portion of the capital contributed by stockholders. This type of dividend is called a **liquidating cash dividend**, or simply *liquidating dividend*, because it returns a part of the original investment back to the stockholders. This requires a debit entry to one of the contributed capital accounts instead of Retained Earnings at the declaration date.

**Stock Dividends**

A **stock dividend**, declared by a corporation's directors, is a distribution of additional shares of the corporation's own stock to its stockholders without the receipt of any payment in return. Stock dividends and cash dividends are different. A stock dividend does not reduce assets and equity but instead transfers a portion of equity from retained earnings to contributed capital.

**Reasons for Stock Dividends** Stock dividends exist for at least two reasons. First, directors are said to use stock dividends to keep the market price of the stock affordable. For example, if a corporation continues to earn income but does not issue cash dividends, the price of its common stock likely increases. The price of such a stock may become so high that it discourages some investors from buying the stock (especially in lots of 100 and 1,000). When a corporation has a stock dividend, it increases the number of outstanding shares and lowers the per share stock price. Another reason for a stock dividend is to provide evidence of management's confidence that the company is doing well and will continue to do well.

**Accounting for Stock Dividends** A stock dividend affects the components of equity by transferring part of retained earnings to contributed capital accounts, sometimes described as *capitalizing* retained earnings. Accounting for a stock dividend depends on whether it is a small or large stock dividend. A **small stock dividend** is a distribution of 25% or less of previously outstanding shares. It is recorded by capitalizing retained earnings for an amount equal to the market value of the shares to be distributed. A **large stock dividend** is a distribution of more than 25% of previously outstanding shares. A large stock dividend is recorded by capitalizing retained earnings for the minimum amount required by state law governing the corporation. Most states require capitalizing retained earnings equal to the par or stated value of the stock.

To illustrate stock dividends, we use the equity section of Quest's balance sheet shown in Exhibit 13.7 just *before* its declaration of a stock dividend on December 31.

Five Steps to Record Stock Dividends

- Step 1:** Identify number of shares outstanding
- Step 2:** Identify the stock dividend percentage
- Step 3:** Compute number of new shares (Step 1 × Step 2)
- Step 4:** Value new shares at market (small stock dividend) or par (large stock dividend)
- Step 5:** Determine debit (reduction) to Retained Earnings (Step 3 × Step 4)

**EXHIBIT 13.7**

Stockholders' Equity before a Stock Dividend

Stockholders' Equity	Before Dividend
Common stock—\$10 par value, 15,000 shares authorized, 10,000 shares issued and outstanding . . . . .	\$100,000
Paid-in capital in excess of par value, common stock . . . . .	8,000
Retained earnings . . . . .	<u>35,000</u>
Total stockholders' equity . . . . .	<u>\$143,000</u>

**Point:** Small stock dividends are recorded at market value.

$$\begin{aligned} \text{Assets} &= \text{Liabilities} + \text{Equity} \\ & \quad -15,000 \\ & \quad +10,000 \\ & \quad +5,000 \end{aligned}$$

**Recording a small stock dividend.** Assume that Quest's directors declare a 10% stock dividend on December 31. This stock dividend of 1,000 shares, computed as 10% of its 10,000 outstanding shares, is to be distributed on January 20 to the stockholders of record on January 15. Since the market price of Quest's stock on December 31 is \$15 per share, this small stock dividend declaration is recorded as follows:

Date of Declaration—Small Stock Dividend

<div style="border: 1px solid black; padding: 5px; width: fit-content;">                     10% dividend × 10,000 outstanding shares × \$10 par value                 </div>	Dec. 31	Retained Earnings . . . . .	15,000	
		Common Stock Dividend Distributable . . . . . Paid-In Capital in Excess of Par Value, Common Stock . . . . .		10,000 5,000
<div style="border: 1px solid black; padding: 5px; width: fit-content;">                     10% dividend × 10,000 outstanding shares × [\$15 market price - \$10 par value]                 </div>		Declared a 1,000-share (10%) stock dividend.		

The \$10,000 credit in the declaration entry equals the par value of the shares and is recorded in *Common Stock Dividend Distributable*, an equity account. Its balance exists only until the shares are issued. The \$5,000 credit equals the amount by which market value exceeds par value. This amount increases the Paid-In Capital in Excess of Par Value account in anticipation of the issuance of shares. In general, the balance sheet changes in three ways when a stock dividend is declared. First, the amount of equity attributed to common stock increases; for Quest, from \$100,000 to \$110,000 for 1,000 additional declared shares. Second, paid-in capital in excess of par increases by the excess of market value over par value for the declared shares. Third, retained earnings decreases, reflecting the transfer of amounts to both common stock and paid-in capital in excess of par. The impact on stockholders' equity of Quest is shown in Exhibit 13.8 when its 10% stock dividend is declared on December 31— see the “declaration” column.

**Point:** The term *Distributable* (not *Payable*) is used for stock dividends. A stock dividend is never a liability because it never reduces assets.

**Point:** The credit to Paid-In Capital in Excess of Par Value is recorded when the stock dividend is declared. This account is not affected when stock is later distributed.

**EXHIBIT 13.8**

Stockholders' Equity after a Stock Dividend

Stockholders' Equity	Before Dividend	Declaration	Issuance	After Dividend
Common stock—\$10 par value, 15,000 shares authorized, 10,000 shares issued and outstanding . . . . .	\$100,000	\$ —	\$ 10,000	\$110,000
Common stock dividend distributable—1,000 shares . . . . .	—	10,000	(10,000)	0
Paid-in capital in excess of par value, common stock . . . . .	8,000	5,000	—	13,000
Retained earnings . . . . .	35,000	(15,000)	—	20,000
Total stockholders' equity . . . . .	\$143,000	\$ 0	\$ 0	\$143,000

No entry is made on the date of record for a stock dividend. On January 20, the date of payment, Quest distributes the new shares to stockholders and records this entry (this entry is reflected in the “issuance” column of Exhibit 13.8):

**Date of Payment—Small Stock Dividend**

Jan. 20	Common Stock Dividend Distributable . . . . .	10,000	
	Common Stock, \$10 Par Value . . . . .		10,000
	<i>To record issuance of common stock dividend.</i>		

Assets = Liabilities + Equity  
 - 10,000  
 + 10,000

The combined effect of these stock dividend entries is to transfer (or capitalize) \$15,000 of retained earnings to paid-in capital accounts (see far-right column of Exhibit 13.8). The amount of capitalized retained earnings equals the market value of the 1,000 issued shares (\$15 × 1,000 shares). A stock dividend has no effect on the ownership percentage of individual stockholders.

**Point:** A stock dividend does not affect total assets nor total equity.

**Recording a large stock dividend.** A corporation capitalizes retained earnings equal to the minimum amount required by state law for a large stock dividend. For most states, this amount is the par or stated value of the newly issued shares. To illustrate, suppose Quest's board declares a stock dividend of 30% instead of 10% on December 31. Since this dividend is more than 25%, it is treated as a large stock dividend. Thus, the par value of the 3,000 (computed as 10,000 outstanding shares × 30%) dividend shares is capitalized at the date of declaration with this entry:

**Date of Declaration—Large Stock Dividend**

Dec. 31	Retained Earnings . . . . .	30,000	
	Common Stock Dividend Distributable . . . . .		30,000
	<i>Declared a 3,000-share (30%) stock dividend.</i>		

Assets = Liabilities + Equity  
 - 30,000  
 + 30,000

30% dividend × 10,000 outstanding shares × \$10 par value

This transaction decreases retained earnings and increases contributed capital by \$30,000. On the date of payment the company debits Common Stock Dividend Distributable and credits Common Stock for \$30,000. The effects from a large stock dividend on balance sheet accounts are similar to those for a small stock dividend except for the absence of any effect on paid-in capital in excess of par.

**Stock Splits**

A **stock split** is the distribution of additional shares to stockholders according to their percent ownership. When a stock split occurs, the corporation “calls in” its outstanding shares and issues more than one new share in exchange for each old share. Splits can be done in any ratio,

**Before 5:1 Split: 1 share, \$50 par**

**After 5:1 Split: 5 shares, \$10 par**

**Point:** Berkshire Hathaway has resisted a stock split. Its recent stock price was \$170,000 per share.

**Point:** A reverse stock split is the opposite of a stock split. It increases both the market value per share and the par or stated value per share with a split ratio less than 1-for-1, such as 1-for-2. A reverse split results in fewer shares. Markets often read bad news into reverse splits.

including 2-for-1, 3-for-1, or higher. In 2012, **Google** directors approved a 2-for-1 stock split. Stock splits reduce the par or stated value per share. The reasons for stock splits are similar to those for stock dividends.

To illustrate, CompTec has 100,000 outstanding shares of \$20 par value common stock with a current market value of \$88 per share. A 2-for-1 stock split cuts par value in half as it replaces 100,000 shares of \$20 par value stock with 200,000 shares of \$10 par value stock. Market value is reduced from \$88 per share to about \$44 per share. The split does not affect any equity amounts reported on the balance sheet or any individual stockholder's percent ownership. Both the Paid-In Capital and Retained Earnings accounts are unchanged by a split, and *no journal entry is made*. The only effect on the accounts is a change in the stock account description. CompTec's 2-for-1 split on its \$20 par value stock means that after the split, it changes its stock account title to *Common Stock, \$10 Par Value*. This stock's description on the balance sheet also changes to reflect the additional authorized, issued, and outstanding shares and the new par value.

The difference between stock splits and large stock dividends is often blurred. Many companies report stock splits in their financial statements without calling in the original shares by simply changing their par value. This type of "split" is really a large stock dividend and results in additional shares issued to stockholders by capitalizing retained earnings or transferring other paid-in capital to Common Stock. This approach avoids administrative costs of splitting the stock. **Harley-Davidson** recently declared a 2-for-1 stock split executed in the form of a 100% stock dividend.

**Decision Maker**

**Entrepreneur** A company you co-founded and own stock in announces a 50% stock dividend. Has the value of your stock investment increased, decreased, or remained the same? Would it make a difference if it was a 3-for-2 stock split executed in the form of a dividend? ■ [Answers follow the chapter's Summary.]

**NEED-TO-KNOW 13-2**

A company began the current year with the following balances in its stockholders' equity accounts.

Recording Dividends

P2

Common stock—\$10 par, 500 shares authorized, 200 shares issued and outstanding	\$2,000
Paid-in capital in excess of par, common stock	1,000
Retained earnings	5,000
<b>Total</b>	<b>\$8,000</b>

All outstanding common stock was issued for \$15 per share when the company was created. Prepare journal entries to account for the following transactions during the current year.

- Jan. 10 The board declared a \$0.10 cash dividend per share to shareholders of record Jan. 28.
- Feb. 15 Paid the cash dividend declared on January 10.
- Mar. 31 Declared a 20% stock dividend. The market value of the stock is \$18 per share.
- May 1 Distributed the stock dividend declared on March 31.
- Dec. 1 Declared a 40% stock dividend. The market value of the stock is \$25 per share.
- Dec. 31 Distributed the stock dividend declared on December 1.

Jan. 10	Retained Earnings <sup>a</sup>	20	
	Common Dividend Payable		20
	<i>Declared a \$0.10 per share cash dividend.</i>		
	<sup>a</sup> 200 outstanding shares × \$0.10		
Feb. 15	Common Dividend Payable	20	
	Cash		20
	<i>Paid \$0.10 per share cash dividend.</i>

## PREFERRED STOCK

A corporation can issue two basic kinds of stock, common and preferred. **Preferred stock** has special rights that give it priority (or senior status) over common stock in one or more areas. Special rights typically include a preference for receiving dividends and for the distribution of assets if the corporation is liquidated. Preferred stock carries all rights of common stock unless the corporate charter nullifies them. Most preferred stock, for instance, does not confer the right to vote. Exhibit 13.9 shows that preferred stock is issued by about one-fourth of corporations. All corporations issue common stock. (While rare, not all common stock carries voting rights; Google’s C Class common shares are nonvoting.)

C2

Explain characteristics of, and distribute dividends between, common and preferred stock.

### EXHIBIT 13.9

Corporations and Preferred Stock

### Issuance of Preferred Stock

Preferred stock usually has a par value. Like common stock, it can be sold at a price different from par. Preferred stock is recorded in its own separate capital accounts. To illustrate, if Dillon Snowboards issues 50 shares of \$100 par value preferred stock for \$6,000 cash on July 1, 2015, the entry is

July 1	Cash .....	6,000		
	Preferred Stock, \$100 Par Value .....		5,000	
	Paid-In Capital in Excess of Par Value, Preferred Stock .....			1,000
	<i>Issued preferred stock for cash.</i>			

Assets = Liabilities + Equity

+6,000		+5,000
		+1,000

\$100 par value × 50 shares

\$6,000 cash – [\$100 par value × 50 shares]

The equity section of the year-end balance sheet for Dillon Snowboards, including preferred stock, is shown in Exhibit 13.10. (This exhibit assumes that common stock was issued at par.) Issuing no-par preferred stock is similar to issuing no-par common stock. Also, the entries for issuing preferred stock for noncash assets are similar to those for common stock.

**EXHIBIT 13.10**

Stockholders' Equity with  
Common and Preferred  
Stock

<b>Stockholders' Equity</b>	
Common stock—\$10 par value; 50,000 shares authorized; 30,000 shares issued and outstanding	\$300,000
<b>Preferred stock—\$100 par value; 1,000 shares authorized; 50 shares issued and outstanding</b>	<b>5,000</b>
<b>Paid-in capital in excess of par value, preferred stock</b>	<b>1,000</b>
Retained earnings	65,000
Total stockholders' equity	<u>\$371,000</u>

**Dividend Preference of Preferred Stock**

Preferred stock usually carries a preference for dividends, meaning that preferred stockholders are allocated their dividends before any dividends are allocated to common stockholders. The dividends allocated to preferred stockholders are usually expressed as a dollar amount per share or a percent applied to par value. A preference for dividends does *not* ensure dividends. If the directors do not declare a dividend, neither the preferred nor the common stockholders receive one.

**Cumulative or Noncumulative Dividend** Most preferred stocks carry a cumulative dividend right. **Cumulative preferred stock** gives its owners a right to be paid both the current and all prior periods' unpaid dividends before any dividend is paid to common stockholders. When preferred stock is cumulative and the directors either do not declare a dividend to preferred stockholders or declare one that does not cover the total amount of cumulative dividend, the unpaid dividend amount is called **dividend in arrears**. Accumulation of dividends in arrears on cumulative preferred stock does not guarantee they will be paid. **Noncumulative preferred stock** confers no right to prior periods' unpaid dividends if they were not declared in those prior periods.
