

*Advanced Hydropower (Mini Project on Small Hydro System Analysis using RETScreen)*

*A list of possible table of contents is shown below for your reference. You are, however, encouraged to prepare your own list of tables.*

<b>Table of Contents</b>	<b>Page</b>
Acknowledgement .....	
1. Introduction .....	
2. Brief Description of the Project.....	
2.1. Description .....	
2.2. Site Information.....	
2.3. Financial Information .....	
2.4. Objective of the Project.....	
3. Manual Analysis .....	
3.1. Introduction .....	
3.2. Flow Duration Curve.....	
3.3. Calculation of the Net Head for the Given Design Flow .....	
3.4. Selection of the Most Suitable Turbine for the Given Conditions .....	
3.5. Determination of the Turbine Runner Size and Specific Speed.....	
3.6. Determination of the Turbine Efficiency at Design Flow .....	
3.7. Determination of the Power Output at Design Conditions.....	
3.8. Calculation of the Power Output for Each Flow.....	
3.9. Determination of the Renewable Energy Available .....	
3.10. Green House Gas Emission Analysis .....	
4. RETScreen Analysis Results of the Project.....	
4.1. Small Hydro Project Model.....	
4.2. RETScreen Analysis Results.....	
4.2.1. Energy Model.....	
4.2.2. Hydrology Analysis and Load Calculation .....	
4.2.3. Equipment Data .....	

4.2.4.	Cost Analysis .....
4.2.5.	Green House Gas (GHG) Emission Reduction Analysis .....
4.2.6.	Financial Summary .....
4.2.7.	Sensitivity and Risk Analysis .....
5.	Comparison of Manual and RETScreen Analysis Results .....
6.	Conclusions and Recommendations.....
	References .....
